License Restrictions Warranty/Consequential Damages Disclaimer

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

Warranty Disclaimer

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

Restricted Rights Notice

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

Hazardous Applications Notice

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Third Party Content, Products, and Services Disclaimer

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Alpha and Beta Draft Documentation Notice

If this document is in preproduction status:

This documentation is in preproduction status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

Preface.

Understanding the PeopleSoft Online Help and PeopleBooks

The PeopleSoft Online Help is a website that enables you to view all help content for PeopleSoft Applications and PeopleTools. The help provides standard navigation and full-text searching, as well as context-sensitive online help for PeopleSoft users.

PeopleSoft Hosted Documentation

You access the PeopleSoft Online Help on Oracle's PeopleSoft Hosted Documentation website, which enables you to access the full help website and context-sensitive help directly from an Oracle hosted server. The hosted documentation is updated on a regular schedule, ensuring that you have access to the most current documentation. This reduces the need to view separate documentation posts for application maintenance on My Oracle Support, because that documentation is now incorporated into the hosted website content. The Hosted Documentation website is available in English only.

Locally Installed Help

If your organization has firewall restrictions that prevent you from using the Hosted Documentation website, you can install the PeopleSoft Online Help locally. If you install the help locally, you have more control over which documents users can access and you can include links to your organization's custom documentation on help pages.

In addition, if you locally install the PeopleSoft Online Help, you can use any search engine for full-text searching. Your installation documentation includes instructions about how to set up Oracle Secure Enterprise Search for full-text searching.

See *PeopleTools 8.53 Installation* for your database platform, "Installing PeopleSoft Online Help." If you do not use Secure Enterprise Search, see the documentation for your chosen search engine.

Note: Before users can access the search engine on a locally installed help website, you must enable the Search portlet and link. Click the Help link on any page in the PeopleSoft Online Help for instructions.

Downloadable PeopleBook PDF Files

You can access downloadable PDF versions of the help content in the traditional PeopleBook format. The content in the PeopleBook PDFs is the same as the content in the PeopleSoft Online Help, but it has a different structure and it does not include the interactive navigation features that are available in the online help.

Common Help Documentation

Common help documentation contains information that applies to multiple applications. The two main types of common help are:

- Application Fundamentals

- Using PeopleSoft Applications

Most product lines provide a set of application fundamentals help topics that discuss essential information about the setup and design of your system. This information applies to many or all applications in the PeopleSoft product line. Whether you are implementing a single application, some combination of applications within the product line, or the entire product line, you should be familiar with the contents of the appropriate application fundamentals help. They provide the starting points for fundamental implementation tasks.

In addition, the *PeopleTools: PeopleSoft Applications User's Guide* introduces you to the various elements of the PeopleSoft Pure Internet Architecture. It also explains how to use the navigational hierarchy, components, and pages to perform basic functions as you navigate through the system. While your application or implementation may differ, the topics in this user's guide provide general information about using PeopleSoft Applications.

Field and Control Definitions

PeopleSoft documentation includes definitions for most fields and controls that appear on application pages. These definitions describe how to use a field or control, where populated values come from, the effects of selecting certain values, and so on. If a field or control is not defined, then it either requires no additional explanation or is documented in a common elements section earlier in the documentation. For example, the Date field rarely requires additional explanation and may not be defined in the documentation for some pages.

Typographical Conventions

The following table describes the typographical conventions that are used in the online help.

<i>Typographical Convention</i>	<i>Description</i>
Key+Key	Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For Alt+W, hold down the Alt key while you press the W key.
... (ellipses)	Indicate that the preceding item or series can be repeated any number of times in PeopleCode syntax.
{ } (curly braces)	Indicate a choice between two options in PeopleCode syntax. Options are separated by a pipe ().
[] (square brackets)	Indicate optional items in PeopleCode syntax.
& (ampersand)	When placed before a parameter in PeopleCode syntax, an ampersand indicates that the parameter is an already instantiated object. Ampersands also precede all PeopleCode variables.
⇒	This continuation character has been inserted at the end of a line of code that has been wrapped at the page margin. The code should be viewed or entered as a single, continuous line of code without the continuation character.

ISO Country and Currency Codes

PeopleSoft Online Help topics use International Organization for Standardization (ISO) country and currency codes to identify country-specific information and monetary amounts.

ISO country codes may appear as country identifiers, and ISO currency codes may appear as currency identifiers in your PeopleSoft documentation. Reference to an ISO country code in your documentation does not imply that your application includes every ISO country code. The following example is a country-specific heading: "(FRA) Hiring an Employee."

The PeopleSoft Currency Code table (CURRENCY_CD_TBL) contains sample currency code data. The Currency Code table is based on ISO Standard 4217, "Codes for the representation of currencies," and also relies on ISO country codes in the Country table (COUNTRY_TBL). The navigation to the pages where you maintain currency code and country information depends on which PeopleSoft applications you are using. To access the pages for maintaining the Currency Code and Country tables, consult the online help for your applications for more information.

Region and Industry Identifiers

Information that applies only to a specific region or industry is preceded by a standard identifier in parentheses. This identifier typically appears at the beginning of a section heading, but it may also appear at the beginning of a note or other text.

Example of a region-specific heading: "(Latin America) Setting Up Depreciation"

Region Identifiers

Regions are identified by the region name. The following region identifiers may appear in the PeopleSoft Online Help:

- Asia Pacific
- Europe
- Latin America
- North America

Industry Identifiers

Industries are identified by the industry name or by an abbreviation for that industry. The following industry identifiers may appear in the PeopleSoft Online Help:

- USF (U.S. Federal)
- E&G (Education and Government)

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Using and Managing the PeopleSoft Online Help

Click the Help link in the universal navigation header of any page in the PeopleSoft Online Help to see information on the following topics:

- What's new in the PeopleSoft Online Help.
 - PeopleSoft Online Help accessibility.
 - Accessing, navigating, and searching the PeopleSoft Online Help.
 - Managing a locally installed PeopleSoft Online Help website.
-

Chapter 1

Getting Started with PeopleSoft Real Time Bottom Line

Getting Started with Financial Allocations Analyzer

PeopleSoft In-Memory Financial Allocations Analyzer provides the ability to model and assess the impact of “what-if” allocations on your bottom line in real time without impacting your production environment. Once you configure your system, you can see the impact of various scenarios by running key reports and inquiries after processing the model allocations.

The Financial Allocations Analyzer then allows you to compare the financial impact of two or more different scenarios and implement the most favorable scenario in your production environment.

This section discusses the following topics:

- PeopleSoft Companion Documentation.
- Common Elements and Terminology.
- Understanding Financial Allocations Analyzer.
- Financial Allocations Analyzer Business Processes.

PeopleSoft Companion Documentation

The *PeopleSoft In-Memory Real-Time Bottom Line Fundamentals* documentation provides implementation and processing information for your PeopleSoft Real-Time Bottom Line system. However, information describing the required installation process is documented in the *PeopleSoft Financials and Supply Chain Management In-Memory Real-Time Bottom Line Installation* guide.

You can also find information regarding setup and design of your production system in companion documentation. The companion documentation consists of important topics that apply to PeopleSoft applications across the Financials, Enterprise Service Automation, and Supply Chain Management product lines.

You should be familiar with the contents of the following companion documentation:

- PeopleSoft General Ledger (*PeopleSoft FSCM 9.2: General Ledger*)
- PeopleSoft Application Fundamentals (*PeopleSoft FSCM 9.2: Application Fundamentals*)
- PeopleSoft Global Options and Reports (*PeopleSoft FSCM 9.2: Global Options and Reports*)
- [PeopleSoft In-Memory Financial Allocations Analyzer](#)

- PeopleSoft In-Memory Financial Position Analyzer (*PeopleSoft FSCM 9.2: In-Memory Financial Position Analyzer*)

Common Elements and Terminology Used in Financial Allocations Analyzer

The following table describes elements and terminology that are commonly used in PeopleSoft In-Memory Financial Allocations Analyzer.

Terminology	Description
RTBL Real Time Bottom Line	PeopleSoft Real Time Bottom Line is a robust In-Memory solution set that can quickly process large volumes of production data and business configurations to simulate the impact of changes without touching the actual production environment or data. Based on simulation analysis and comparisons, selected scenarios for the financial period can be deployed to the production environment. This solutions set includes PeopleSoft In-Memory Financial Allocations Analyzer and In-Memory Financial Position Analyzer.
Scenario	Create allocation scenarios to determine the impact of a proposed (what-if) business rule or definition without impacting the production system. A scenario consists of a set of source data (ledger or table), elements (such as allocation groups and steps) and scenario results (journals, ledger, or table). Results may be compared to the original source data as well as the results of other scenarios.
Element	An element is a <i>what-if</i> definition (for example, an allocation group) that you create in Real Time Bottom Line to support a scenario(s). An element can be modified based on the requirements of the scenario and may be created new or copied from an existing production or <i>what-if</i> element.
Subelement	A subelement is a <i>what-if</i> definition that is part of an element (for example, an allocation step) created in Real Time Bottom Line to support a scenario(s). You can create new subelements or copy them from existing production or <i>what-if</i> subelements. You can also modify subelements based on the requirements of the scenario.
Checkpoint	A checkpoint is an element that is identified within a scenario after which processing will stop so that you can review the results of the preceding elements. You can then resume processing from that point or rerun the scenario from the beginning after making desired modifications to the scenario or source data.
Production Business Rule	Production business rules are definitions (for example, an allocation group or step) that are defined in the production PeopleSoft database which may also be used in Real Time Bottom Line scenarios. These business rules can only be modified in the production system. Changes that you make to the production business rules are automatically reflected in any Real Time Bottom Line scenario in which they are included.
<i>What if</i> Posting	This posting is a process by which you can see the ledger impact of posting a journal or journals without updating the production ledger. This process edits and posts journals that are created by scenarios and those that you create to populate source data that is required by a scenario (for example, a statistical journal).

Financial Allocations Analyzer Business Processes

This section presents high-level process flow of PeopleSoft In-Memory Financial Allocations Analyzer solution as well as a list of the business processes that are included

High Level Business Process

The following represents a high-level business process flow for PeopleSoft In-Memory Financial Allocations Analyzer solution::

1. Review Prerequisites and Implementation Considerations (*PeopleSoft FSCM 9.2: In-Memory Real Time Bottom Line*).
2. Refer to the *PeopleSoft Financials and Supply Chain Management In-Memory Real-Time Bottom Line Installation* guide for installation steps.
3. Review and modify configuration settings as needed to ensure that the In-Memory Financial Allocations Analyzer product is installed and enabled, processing options and defaults are correct, RTBL partitioned records are defined, and that the reports that you want to use for analyzing results are registered
4. Define: From the Scenario Dashboard, Scenario Activity Guide, define the scenario(s):
5. Configure: From the Scenario Dashboard, Scenario Activity Guide, configure the scenario(s):
6. Process: From the Scenario Dashboard, Scenario Activity Guide, process the scenario(s) for the specified business units. Required Source data is copied from the production tables, if needed. If the process stops at a defined checkpoint in the scenario, use the desired reporting tool to review the results. Modify subsequent elements or post additional journals, if necessary, and then resume processing from the checkpoint. Alternatively, modify previous elements or post additional journals, then rerun scenario from the beginning. In this case, indicate whether or not the source data should be refreshed from production.
7. Analyze: From the Scenario Dashboard, Scenario Activity Guide, analyze the scenario(s). Upon completion of the scenario processing, use the desired reporting tool(s) to review the scenario results and compare scenarios against each other and against production actuals. If necessary, modify previous elements or post additional journals, then rerun scenario from the beginning. In this case, indicate whether or not source data should be refreshed from production.
8. Deploy: From the Scenario Dashboard, Scenario Activity Guide, deploy the scenario(s). Select scenario elements to be moved to the production environment. Specify a production definition name and effective date. Definitions that already exist in production will be replaced upon deployment.

Business Processes in PeopleSoft In-Memory Financial Allocations Analyzer

The business processes listed below are included in the PeopleSoft Real Time Bottom Line solutions:

- Run General Ledger background processes.
- Monitor background processes.

- Review Ledger Scenario Inquiry summary and detail.
- Generate queries and reports (PS/nVision, BI Publisher, PS Query, and so on).
- Create and process allocations.

Chapter 2

Financial Allocations Analyzer: Analyzing Your Real Time Bottom Line Data

Analyzing Results Using Inquiries

To analyze a scenario in the Real-Time Bottom Line schema, use the following components:

- EMBED_PGLT_COMP
- LED_SCE_INQ_PE

This topic discusses how to analyze a scenario.

Analyzing Results Using Your PeopleSoft Reporting Tools

This topic discusses analyzing your scenarios using the delivered PeopleSoft reporting tools:

- OBIEE — You may define a scenario with one or more checkpoints which allows processing to stop so that you can analyze the results and output of the scenario to that point before continuing further processing of the scenario. One of the options for performing this analysis is to run a predefined OBIEE report. Customers will define the reports they wish to use to perform this analysis. The following simple Departmental Profit and Loss Statements are examples of reports that could be defined to analyze the impact of an allocation scenario that allocates rent expense or benefits, for example, to selected departments.
- Trial Balance — utilize delivered reports like the Trial Balance to analyze their scenario results.
- Pivot Grid and Query — define queries in Query Manager against Ledger or other tables containing scenario results to conduct analysis.
- Delivered PS/nVision reports
