10. DEVELOPER CHECK LIST..... 10-1

1. Preface

This document provides the steps to install extensible Open Development tool and initial administration activities.

1.1 Audience

This document is intended for FLEXCUBE UBS Application developers who are required to the following:

- Install and setup Open Development Tool development environment

1.2 Related documents

For more information, see following documents.

- Development Overview Guide.docx
- Getting Started.docx
- Reference.docx

1.3 Conventions

The following text conventions are used in this document:

Convention Meaning

boldface	Boldface type indicates graphical user interface elements (for example, menus and menu items, buttons, tabs, dialog controls), including options that you select.
<i>italic</i>	italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates language and syntax elements, directory and File name, URLs, text that appears on the screen, or text that you enter.
	Indicates important information

2. Introduction

This document is a guide for installation of Open Development Tool Version 11.1. Detailed steps have been mentioned for generation of WAR file from the Open Development Tool Source and deployment of Open Development Tool application to Apache Tomcat and OC4J server.

2.1 How to Use This Guide

The information in this guide includes:

- [Chapter 2, “Introduction”](#)
- [Chapter 3, “Pre-requisites”](#)
- [Chapter 4, “Open Development Tool 11.1 installation”](#)
- [Chapter 5, “How to run Installer”](#)
- [Chapter 6, “Troubleshooting”](#)
- [Chapter 7, “How to deploy WAR file”](#)
- [Chapter 8, “IE settings”](#)
- [Chapter 9, “Administration”](#)
- [Chapter 10, “Developer check list”](#)

3. Pre-requisites

3.1 JDK

3.1.1 License Information

JDK is distributed by Sun Microsystems, Inc under Java Development Kit Binary Code License Agreement.

3.1.2 Instructions

Installer requires JDK 1.6 update 16 version to be downloaded in the system and the same should be set as environmental variable (explained later in this document).

3.2 Apache Ant 1.7.1

3.2.1 License Information

Apache License version 2.0. This is available for reference at
<http://www.apache.org/licenses/LICENSE-2.0>

3.2.2 Download Instructions

Apache Ant 1.7.1 is available in the archives at <http://www.apache.org/dist/ant/binaries/>.
The file to be downloaded is **apache-ant-1.7.1-bin.zip**.

3.2.3 Post Download Instructions

Extract the apache-ant-1.7.1-bin.zip distribution to a directory. And provide this path for setting the environmental variable which is explained later in this document.

3.3 ActiveX settings:

Tools -> Internet Options -> Security -> Local intranet -> Custom Level -> ActiveX controls and Plug-ins -> Initialize and script ActiveX controls not marked as safe -> Select Enable.

3.4 Msxml:

Msxml 4.0 to be available on client machine.

3.5 Oracle Client (Database Installation)

In order to carry out Database Installation, Installer requires **Oracle 11g Client** or later version to be installed in the system.

3.6 Swing Layout

3.6.1 License Information

Lesser General Public License (LGPL 2.1)

3.6.2 Download Instructions

Swing Layout is available in the archives at <https://swing-layout.dev.java.net/> . In the website under 'project tools' section, select 'Documents and files' section. The file to be downloaded is swing-layout-1.0.jar.

3.6.3 Post Download Instructions

Extract the Swing-layout-1.0 distribution to a directory. Copy the following file

swing-layout-1.0.jar

Into the directory {INSTALLER_DIR}\lib

3.7 Log4J 1.2.15

3.7.1 License Information

Apache License 2.0. This is available for reference at
<http://www.apache.org/licenses/LICENSE-2.0>

3.7.2 Download Instructions

Log4j 1.2.15 is available in the archives at
<http://archive.apache.org/dist/logging/log4j/1.2.15/> .The file to be downloaded is apache-log4j-1.2.15.zip.

3.7.3 Post Download Instructions

Extract the Log4j 1.2.15 distribution to a directory. Copy the following file

log4j-1.2.15.jar

Into the directory {INSTALLER_DIR}\lib

3.8 Oracle 11g Database Driver (11.1.0.7) (Database Installation)

3.8.1 License Information

Oracle Corporation

3.8.2 Download Instructions:

ojdbc6.jar is available in the archives at

http://www.oracle.com/technology/software/tech/java/sqlj_jdbc/htdocs/jdbc_11106_0.html

The file to be downloaded is **ojdbc6.jar**.

Post Download Instructions:

Extract the ojdbc6.jar distribution to a directory. Copy the following file

ojdbc6.jar

Into the directory {INSTALLER_DIR}\lib

3.9 Setup for installer Open Development Applications

3.9.1 Step1

Navigate to Control Panel

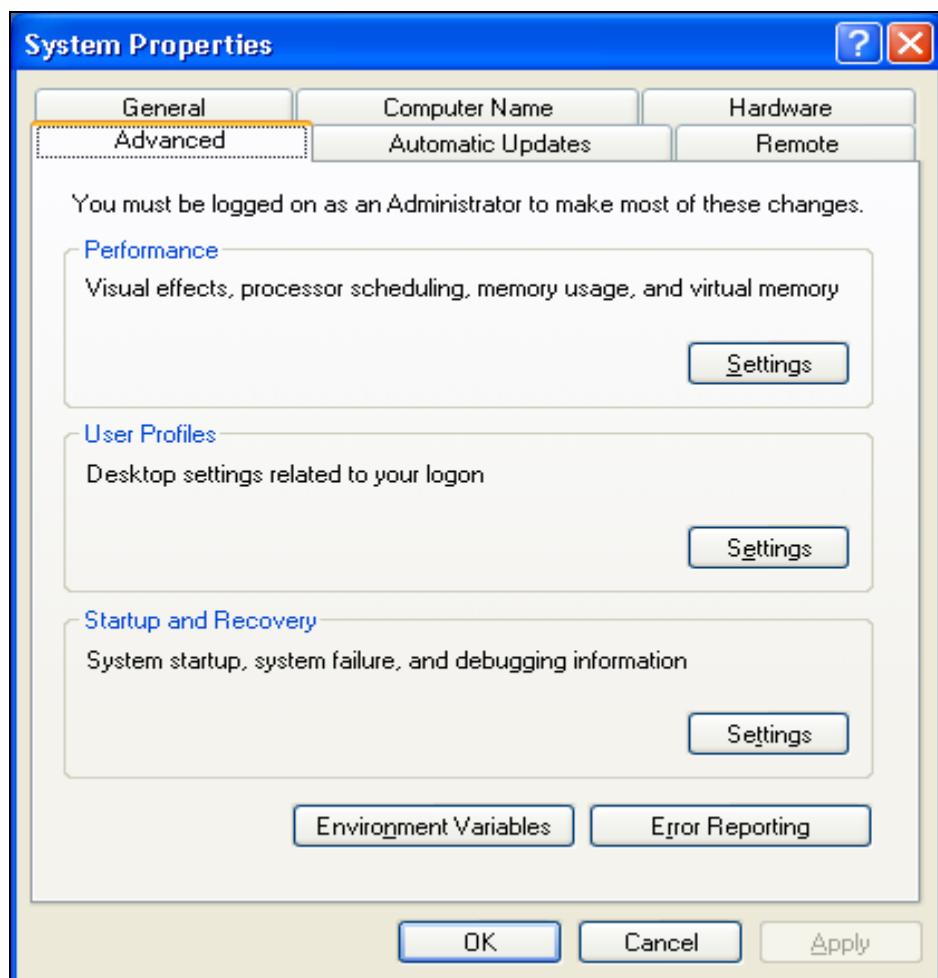

3.9.2 Step2

Double Click System icon to launch System Properties screen as shown below.

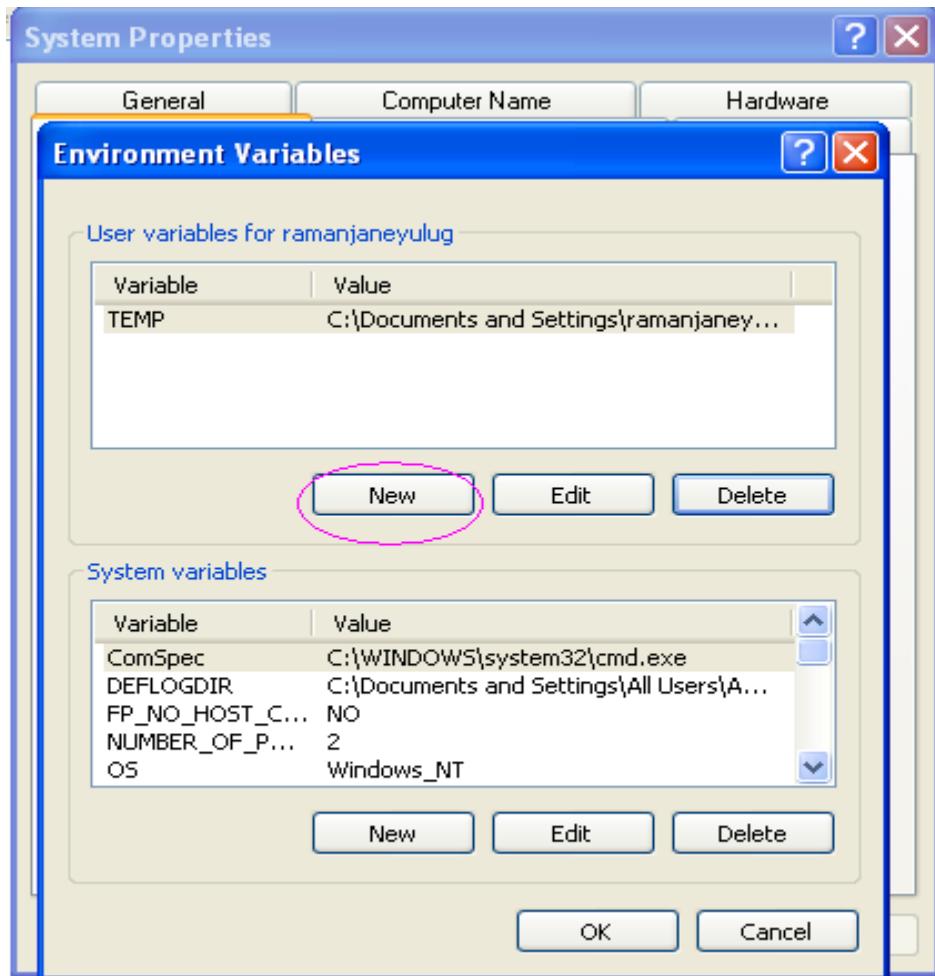

3.9.3 Step 3

Click Advanced Tab button and then click Environment Variables as shown below.

3.9.4 Step 4

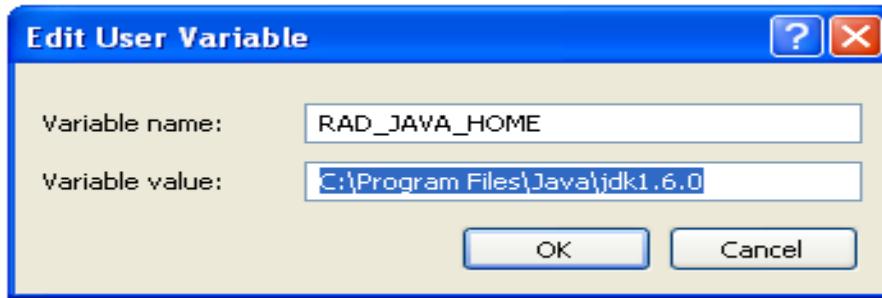

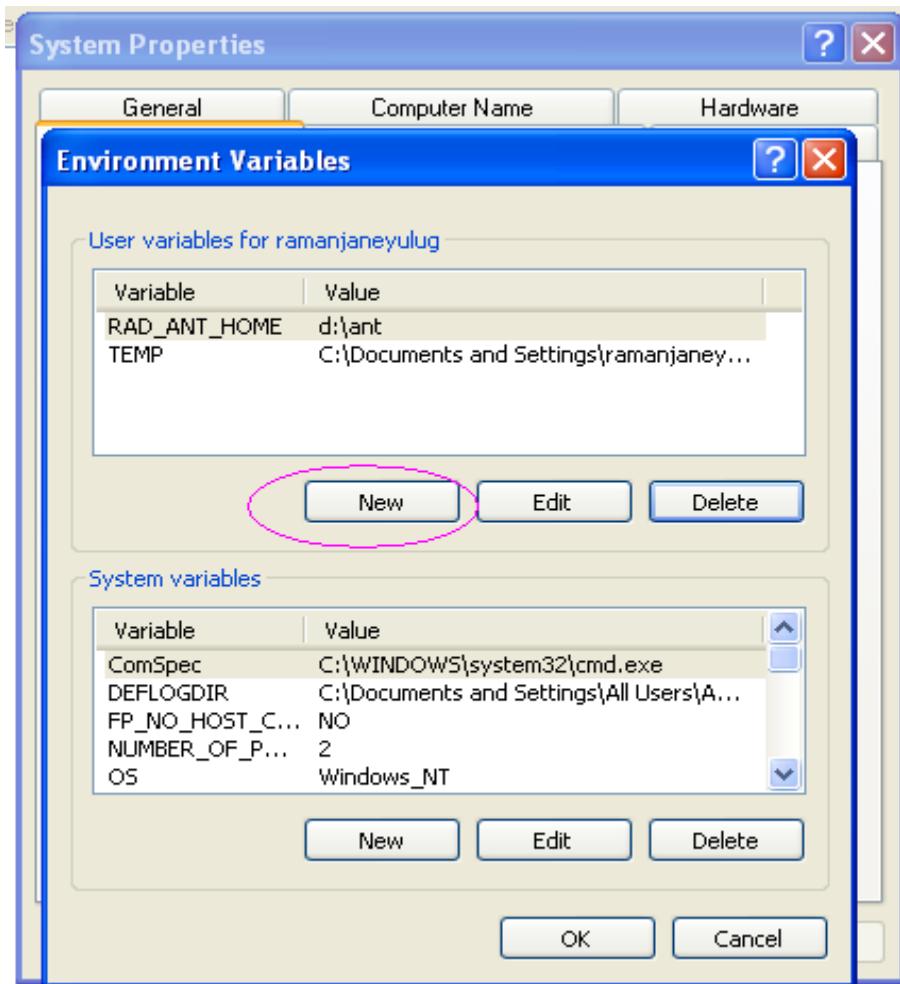

In User variables click New and in Variable name type **RAD_ANT_HOME**. In the value field give the path of Apache Ant root directory as shown below.

 The Ant provider supported by Installer is Apache and the version should be 1.7.1.

3.9.5 Step 5

Repeat **Step 4** and **Step 5** to set **RAD_JAVA_HOME** environment variable to jdk directory as shown below.

Ensure that the Variable value for Variable name RAD_JAVA_HOME eliminates space

4. Open Development Tool 11.1 Installation

Open Development Tool 11.1 installation includes below mentioned activities

- Deployment of Front-end Units or WAR File to Apache Tomcat or OC4J Server
- Loading of Back-end units(PLSQL Packages) to an existing FCUBS schema in Oracle Database
- RADTool.properties file configuration

The next section explains these two activities in detail

4.1 WAR File generation

To generate WAR file follow the below mentioned steps

4.1.1 Step 1

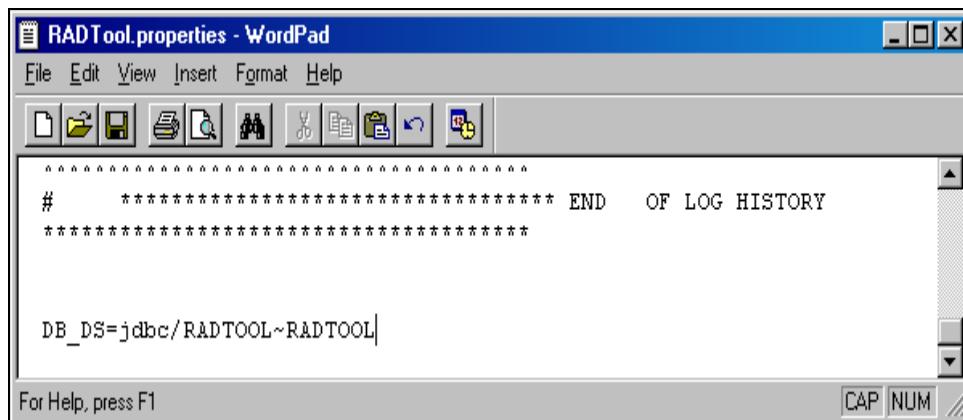

Copy all the contents from \\IFLBLW-BPD-12\Vercon_IP-BPD-01\SOFT\FLEXCUBE_Kernel\FC_UBS_VUM_11.1.0.0.0.0\TOOLS\RAD\SOURCE

To RADTool_11.1

4.1.2 Step 2

RADTool. Properties file configuration

Open RADTool.properties file from **RADTool_11.1** folder. Refer the screen shot shown below and enter appropriate values

4.1.3 Step 3

Open Web.xml add the JNDI reference for backend Database.

Ex: <resource-ref>

```
<res-auth>Container</res-auth>
```

```
<res-ref-name>jdbc/RADTOOL</res-ref-name>
<res-type>javax.sql.DataSource</res-type>
</resource-ref>
```

4.1.4 Step 4

Please Use the Installer To Prepare Warfile.

Installer sources will be available in the following location.

\\IFLBLW-BPD-12\Vercon_IP-BPD-01\SOFT\FLEXCUBE Kernel\FC_UBS_V.UM_11.1.0.0.0.0\TOOLS\RAD\INSTALLER\SOURCE

5. How to Run Installer

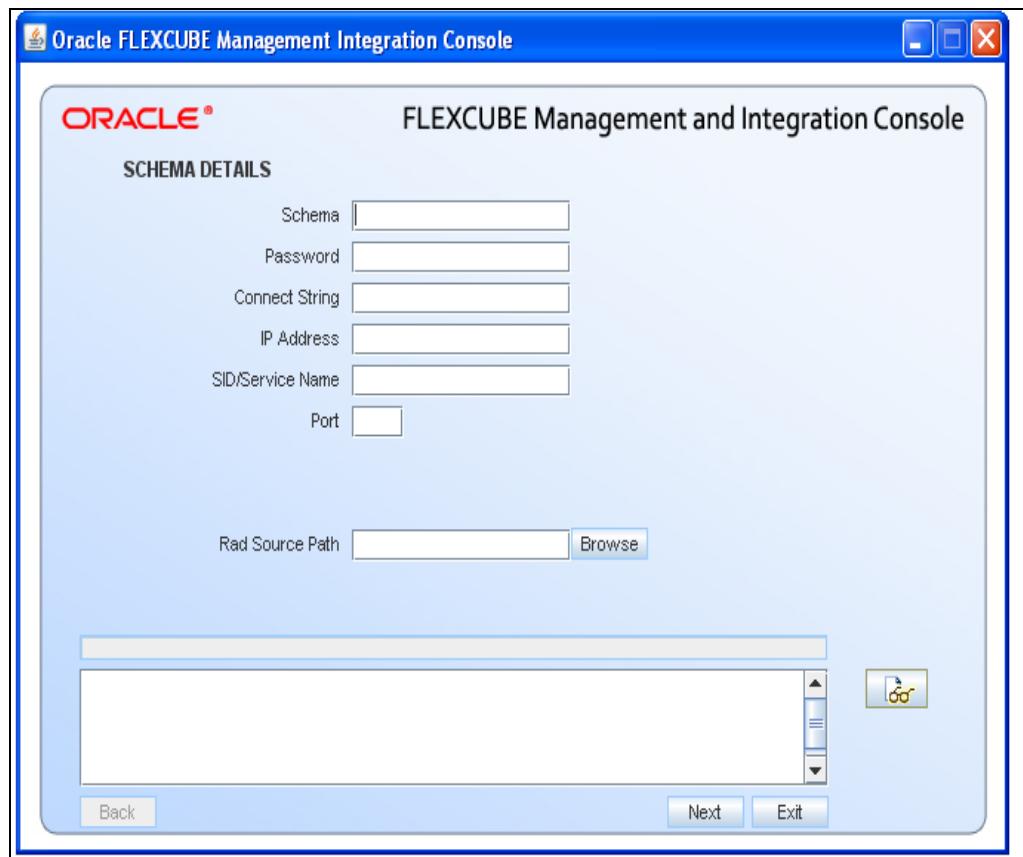

After copying the installer sources and library folder to your local system, make sure you uncheck the read only check box in source properties and apply the same to all the sub folders.

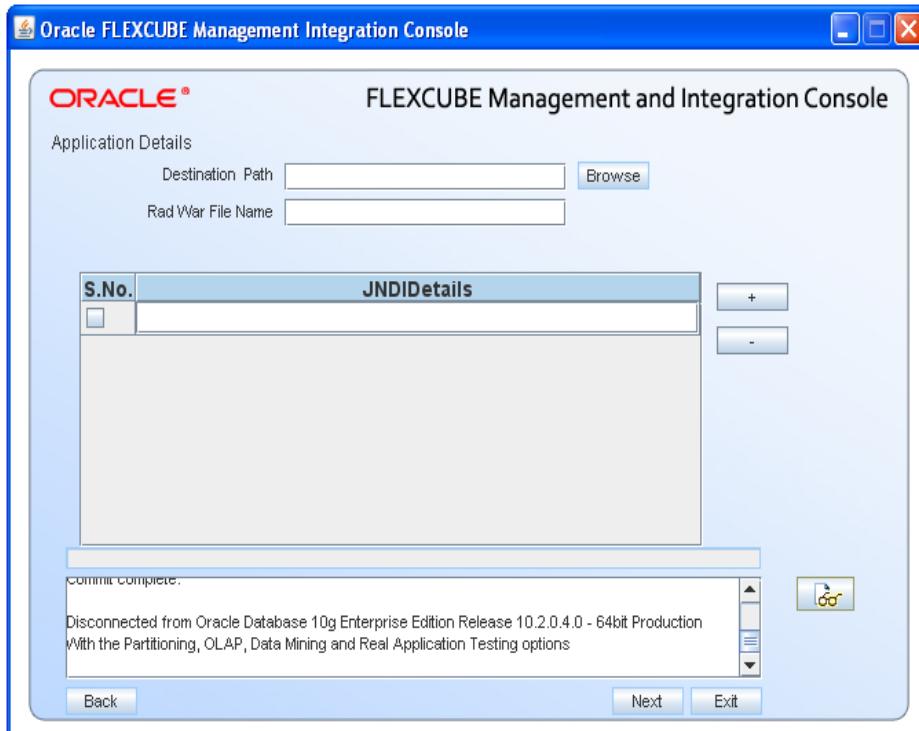

The screen shot below shows how the source folder in your local system should look like.

To run the installer, double click the batch file (RADInstaller11.1.bat) present in the installer source.

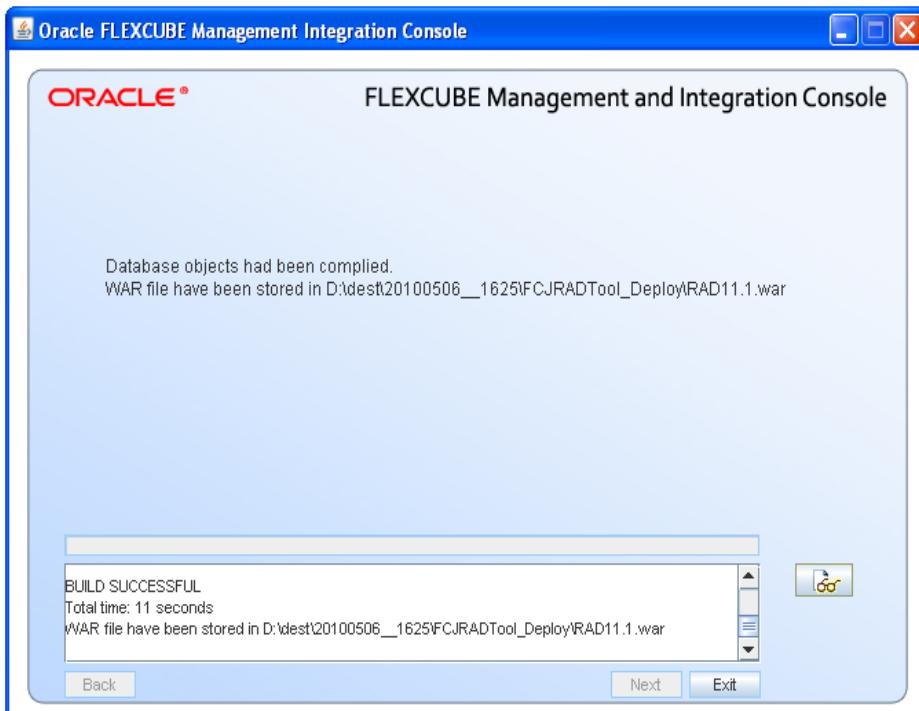

This displays the screen as follows.

If you want create the war component, please enter the Destination path and War file Name otherwise it will compile only db object display the screen as follows

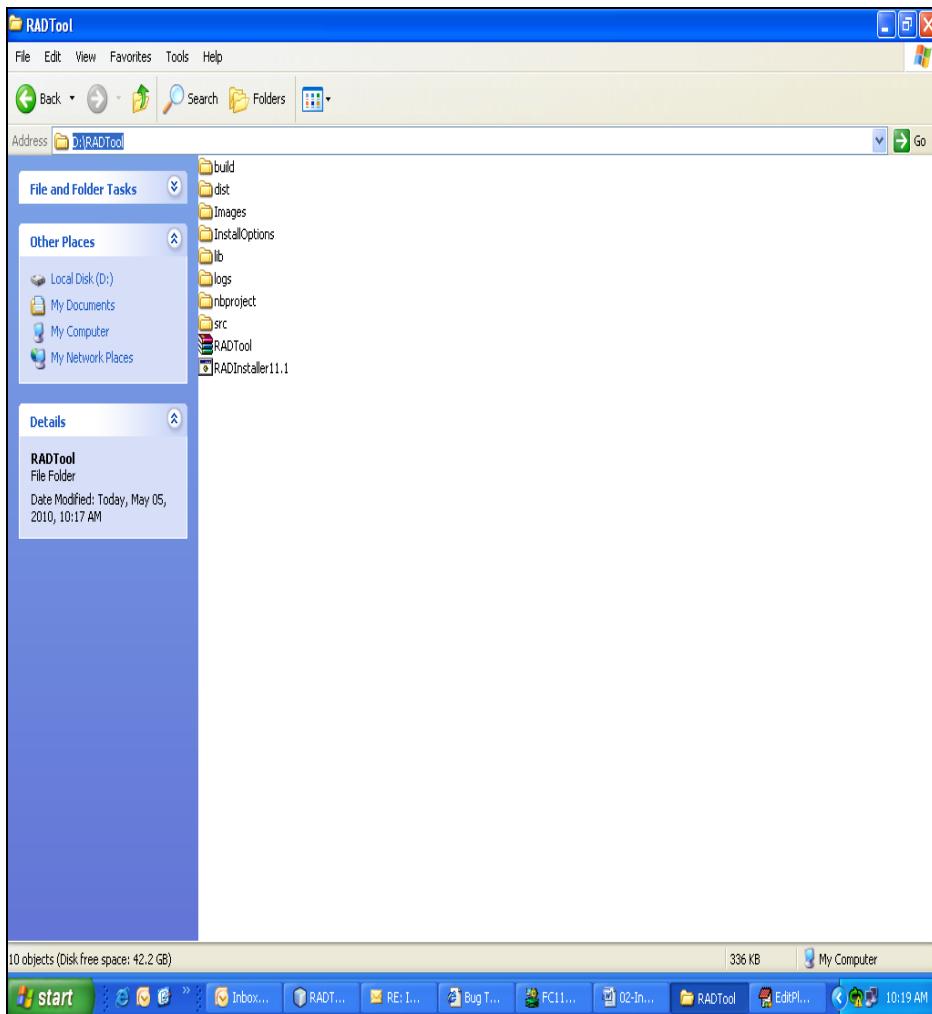

After generation of war file you can deploy war file in Application Server /Web server from destination path.

6. Troubleshooting

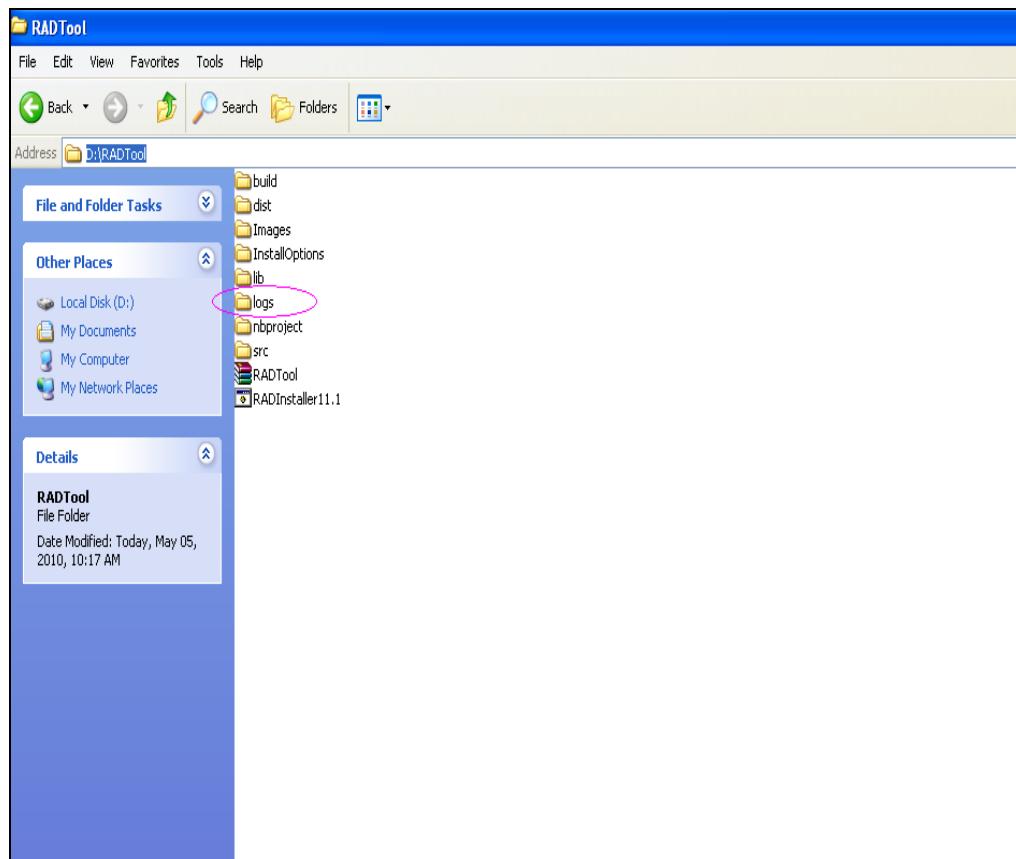

6.1 Checking Logs

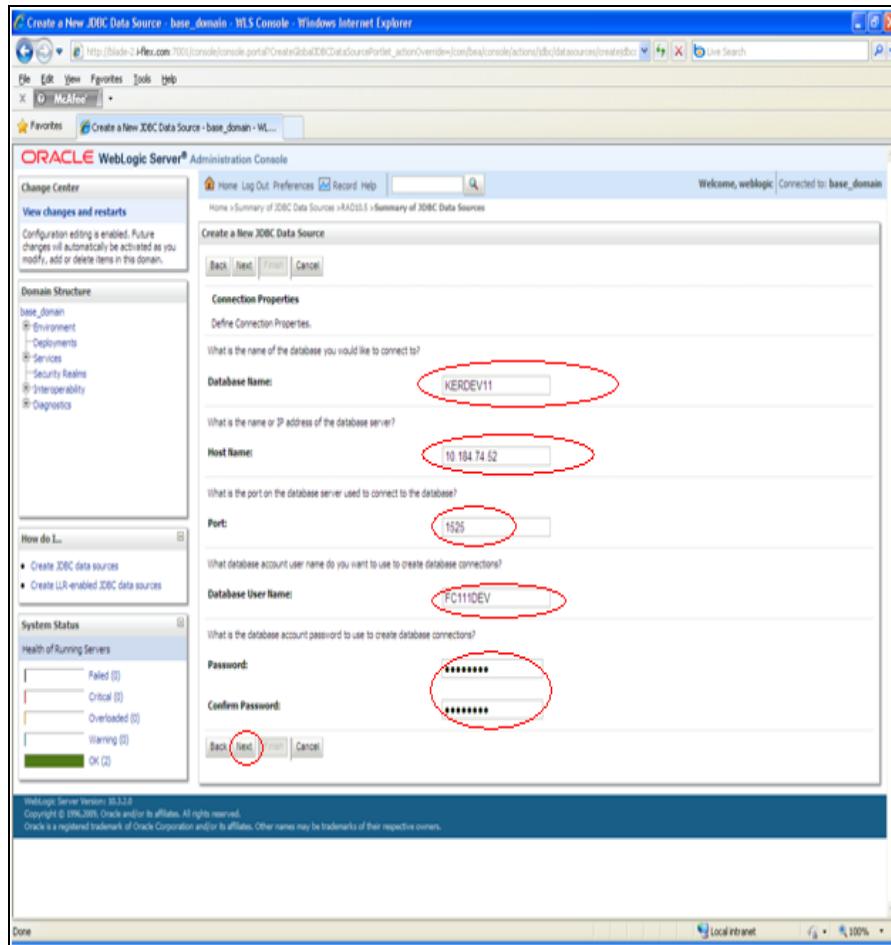

In case an error occurs while doing a particular Open Development activity and the user wants to know the exception, he can look at the log file which contains detailed information about executed and the type of error thrown if any.

To check the log file open the logs folder in the installer source of your local system.

Please Enter the Open Development Schem detail where you are going to connect the Open Development schema and select the Open Development source which you are copied from vercon area and press next button .display the screen as follows

FCJRADTool.war file is generated at specified “destPath” i.e. in this case at RADTool_11.1

This completes WAR file generation and Database installation .

7. Deployment of WAR file to Application Server

7.1 Apache Tomcat 5.5 Server

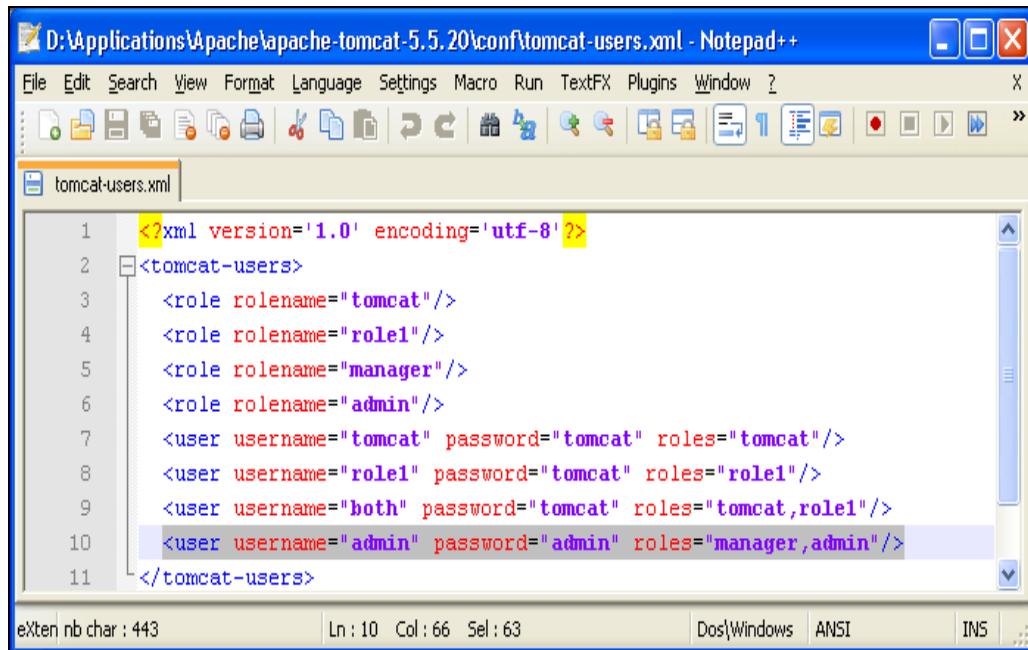

To deploy **FCJRADTool.war** to Apache Tomcat 5.5 Server follow the below mentioned steps

7.1.1 Step 1

Open tomcat-users.xml from <apache-tomcat-5.5.20_home>\conf folder.

Add <user username="admin" password="admin" roles="manager,admin"/>

As shown in highlighted section of the below screenshot.

```
<?xml version='1.0' encoding='utf-8'?>
<tomcat-users>
    <role rolename="tomcat"/>
    <role rolename="role1"/>
    <role rolename="manager"/>
    <role rolename="admin"/>
    <user username="tomcat" password="tomcat" roles="tomcat"/>
    <user username="role1" password="tomcat" roles="role1"/>
    <user username="both" password="tomcat" roles="tomcat,role1"/>
    <user username="admin" password="admin" roles="manager,admin"/>
</tomcat-users>
```

7.1.2 Step 2

Open Server.xml from <apache-tomcat-5.5.20_home>\conf folder.

Refer the highlighted section of screenshot below and add corresponding Datasource between <GlobalNamingResources></GlobalNamingResources> tags.

```
<!-- Global JNDI resources -->
<GlobalNamingResources>

    <!-- Test entry for demonstration purposes -->
    <Environment name="simpleValue" type="java.lang.Integer" value="30"/>

    <!-- Editable user database that can also be used by
        UserDatabaseRealm to authenticate users -->
    <Resource name="UserDatabase" auth="Container"
              type="org.apache.catalina.UserDatabase"
              description="User database that can be updated and saved"
              factory="org.apache.catalina.users.MemoryUserDatabaseFactory"
              pathname="conf/tomcat-users.xml" />

    <!-- Database Connection- FC80L3DEV1@FCJDEV -->
    <Resource name="jdbc/fcjdevDS"
              auth="Container"
              type="oracle.jdbc.pool.OracleDataSource"
              driverClassName="oracle.jdbc.driver.OracleDriver"
              factory="oracle.jdbc.pool.OracleDataSourceFactory"
              url="jdbc:oracle:thin:@10.80.50.202:1521:fcjdev"
              user="FC80L3DEV1"
              password="FC80L3DEV1"
              maxActive="20"
              maxIdle="10"
              maxWait="-1" />

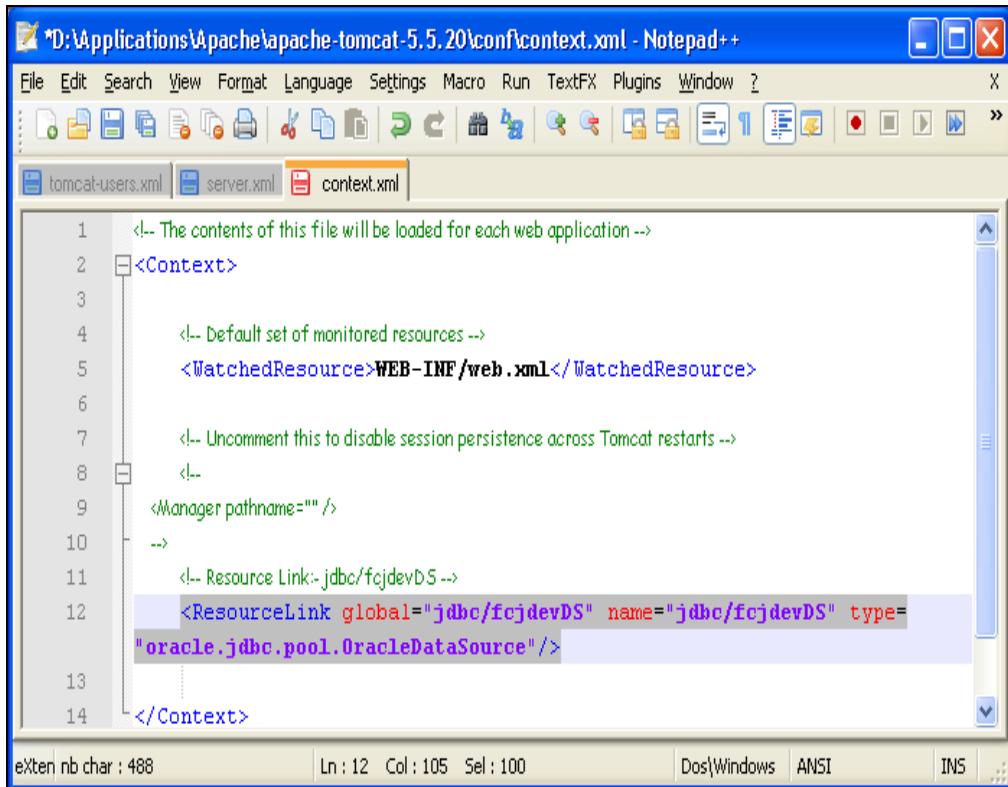

</GlobalNamingResources>

<!-- A "Service" is a collection of one or more "Connectors" that share
    a single "Container" (and therefore the web applications visible
    within that Container). Normally, that Container is an "Engine",
    but this is not required. -->
```

7.1.3 Step 3

Open context.xml from <apache-tomcat-5.5.20_home>\conf folder.

Refer the highlighted section of screenshot below and add corresponding Resource Link

```
*D:\Applications\Apache\apache-tomcat-5.5.20\conf\context.xml - Notepad++
File Edit Search View Format Language Settings Macro Run TextFX Plugins Window ?
tomcat-users.xml server.xml context.xml
1   <!-- The contents of this file will be loaded for each web application -->
2   <Context>
3
4       <!-- Default set of monitored resources -->
5       <WatchedResource>WEB-INF/web.xml</WatchedResource>
6
7           <!-- Uncomment this to disable session persistence across Tomcat restarts -->
8           <!--
9               <Manager pathname="" />
10
11           <!-- Resource Link: jdbc/fcjdevDS -->
12           <ResourceLink global="jdbc/fcjdevDS" name="jdbc/fcjdevDS" type=
13               "oracle.jdbc.pool.OracleDataSource" />
14
</Context>
```

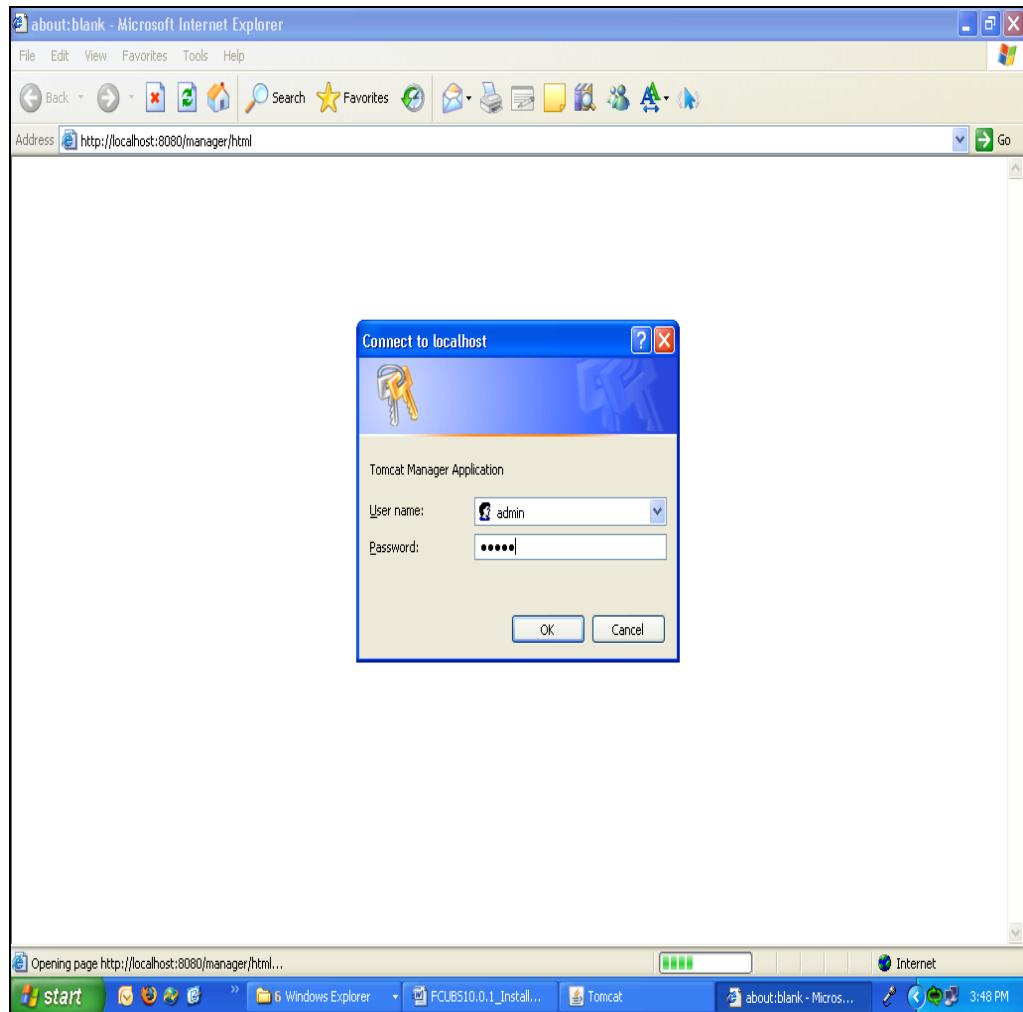

7.1.4 Step 4

Start Apache Tomcat 5.5 Server by double-clicking **startup.bat** from <**apache-tomcat-5.5.20_home**>\bin folder

7.1.5 Step 5

Launch Internet Explorer with URL Error! Hyperlink reference not valid.

Refer the screenshot below and enter **User Id** as **admin** and **password** as **admin**

7.1.6 Step 6

Upload the generated **FCJRADTool.war** file from RADTool_11.1 folder as shown Below in the screen shot and then click **Deploy**.

This completes Deployment of FCJRADTool.war file to Apache Tomcat 5.5 Server.

RADTool 11.1 Application can be launched with the URL.

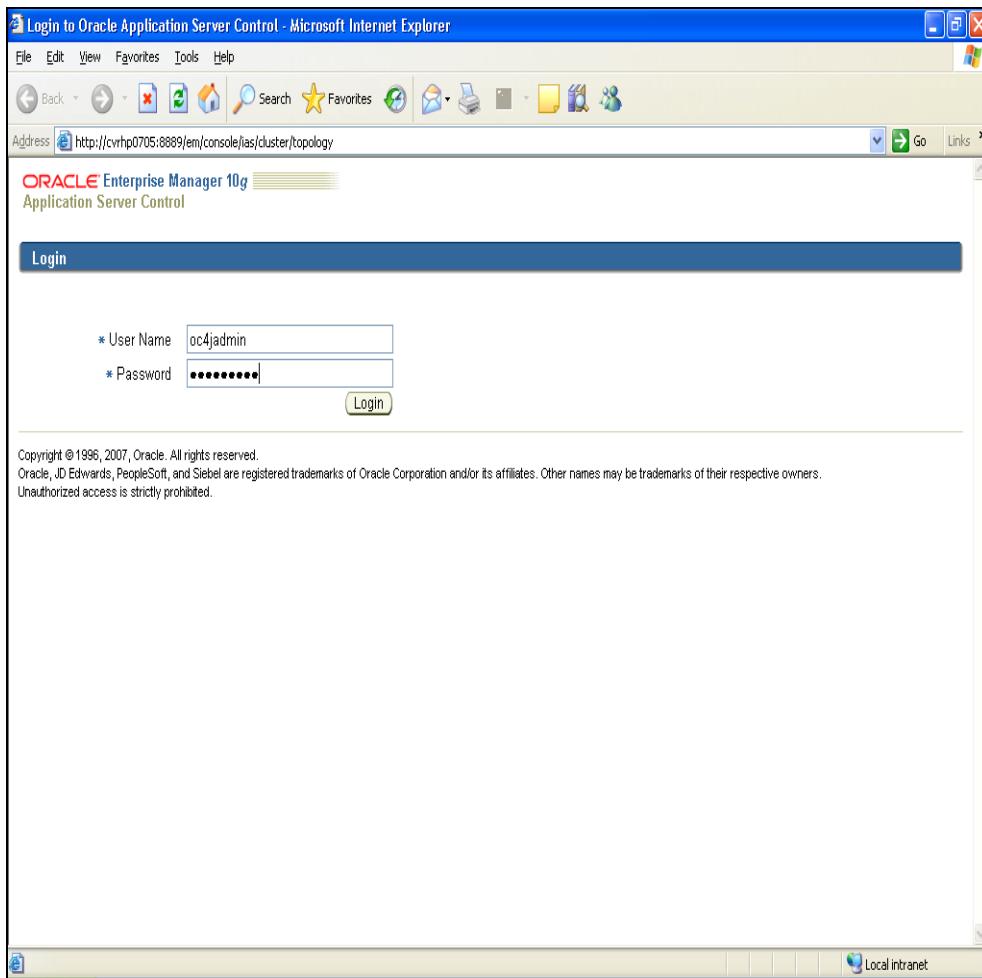

7.2 OC4J Application server

To deploy **FCJRADTool.war** to OC4J 10.1.3.X Application Server follow the below mentioned steps

Steps 1-15 explain creation of Connection Pool and Data Source. Skip these steps if Connection pool and data source already exists in the OC4J Application server.

7.2.1 Step 1

Login to Oracle 10g Application server's Administration console as shown below

7.2.2 Step 2

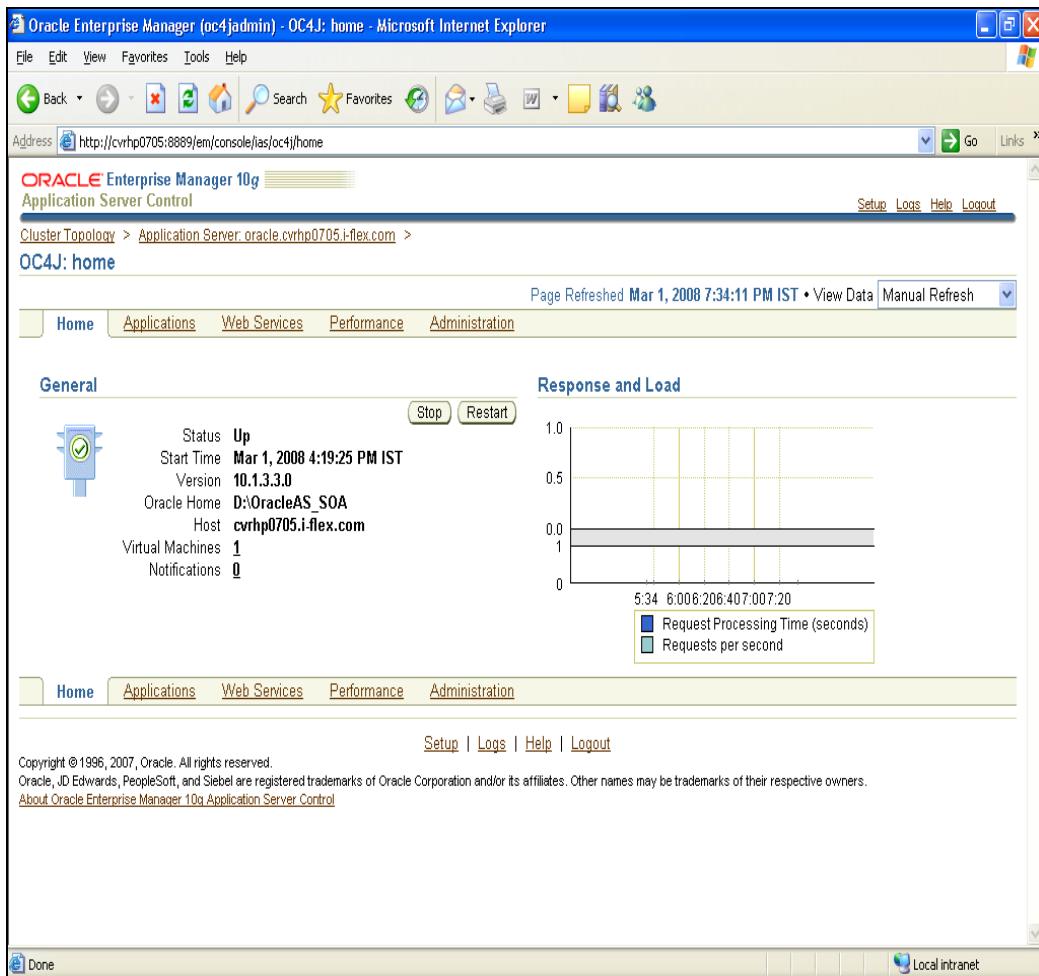

Click **Home** as shown below

The screenshot shows the Oracle Enterprise Manager 10g Cluster Topology interface. The browser title bar reads "Oracle Enterprise Manager (oc4jadmin) - Cluster Topology - Microsoft Internet Explorer". The address bar shows the URL "http://cvrhp0705:8889/em/console/jas/cluster/topology". The main content area is titled "Cluster Topology". It displays the following information:

- Overview:** Hosts 1, Application Servers 1, OC4J Instances 1, HTTP Server Instances 0.
- Members:** A table showing the status of application servers. One row is selected: "oracle.cvrhp0705.i-flex.com" (Status: Application Server, Host: cvrhp0705, OC4J: home (JVMs: 1), CPU: 0.84, Memory: 225.42 MB). A note indicates that a green triangle icon next to the server name means it is the active ASControl instance.
- TIP:** If a parent topology member is selected all contained members are implicitly selected.
- Groups:** A group named "default_group" is listed, containing the "home" OC4J instance.
- Administration:** A section for managing groups.

7.2.3 Step 3

Click Administration tab as shown below

7.2.4 Step 4

Click JDBC Resources as shown below

The screenshot shows the Oracle Enterprise Manager 10g Administration interface in Microsoft Internet Explorer. The title bar reads "Oracle Enterprise Manager (oc4jadmin) - OC4J: home - Microsoft Internet Explorer". The address bar shows the URL "http://cvrhp0705:8889/em/console/as/oc4j/administration". The main menu includes File, Edit, View, Favorites, Tools, and Help. Below the menu is a toolbar with icons for Back, Forward, Stop, Home, Search, Favorites, and others. The navigation bar shows "Cluster Topology > Application Server oracle.cvrhp0705.i-flex.com > OC4J: home". The top right has links for Setup, Logs, Help, and Logout. A message at the top right says "Page Refreshed Mar 1, 2008 7:35:58 PM IST". The main content area has a table titled "Task Name" with columns "Task Name", "Go to Task", and "Description". The table lists various administration tasks under "Administration Tasks" and "Services". The "Services" section contains the "JDBC Resources" link, which is highlighted in blue and underlined, indicating it is the target for Step 4.

Task Name	Go to Task	Description
▼ Administration Tasks		
▼ Properties		
EJB Compiler Settings		Configure the EJB Compiler.
J2EE Websites		Manage the J2EE websites in this OC4J instance.
JSP Properties		Set JSP container properties.
Logger Configuration		Set log levels for all Loggers.
Thread Pool Configuration		Configure the thread pools of this OC4J instance.
Shared Libraries		Manage the shared libraries of this OC4J instance.
Server Properties		Configure server properties for this OC4J instance.
▼ Services		
JDBC Resources		Create/delete/view data sources and connection pools.
▼ Enterprise Messaging Service		
JMS Destinations		Create/delete/edit JMS destinations.
JMS Connection Factories		Configure JMS connection factories.
In-Memory and File Based Persistence		Configure settings for in-memory and file based persistence.
Database Persistence		Configure settings for database persistence.
OracleAS JMS Router		Configure the JMS Router.

7.2.5 Step 5

Click Create Connection Pool as shown below

The screenshot shows the Oracle Enterprise Manager (oc4) JDBC Resources interface in Microsoft Internet Explorer. The address bar shows the URL: http://cvrnp0705:8889/em/console/jas/oc4/admin/jdbc?infokey=id4_11869f8fa97. The page was last refreshed on Mar 1, 2008 at 7:37:19 PM IST.

Data Sources

7.2.6 Step 6

Click **Continue** as shown below

7.2.7 Step 7

Refer the screen shots shown below. Provide equivalent information and click Finish

Create Connection Pool

Attributes

* Name: FCUBS10.0ConnectionPool

* Connection Factory Class: oracle.jdbc.pool.OracleDataSource

URL
You can either specify a URL directly or have it generated from connection information. When you test a connection, the connection factory class and credentials specified on this page will be used to perform the test.

(JDBC URL: jdbc:oracle:thin:@/10.80.150.202:1521/FCJDEV) (

(Generate URL from Connection Information) (

Driver Type: Thin
 DB Host Name:
 DB Listener Port:
 DB Identifier Type: Service Name
 SID/Service Name:
 TNS Alias:

Credentials
 TIP For OracleDataSources, credentials must be entered if not already specified in the URL.
 Username: FC80L3DEV1

Create Connection Pool

* Connection Factory Class: oracle.jdbc.pool.OracleDataSource

URL
You can either specify a URL directly or have it generated from connection information. When you test a connection, the connection factory class and credentials specified on this page will be used to perform the test.

(JDBC URL: jdbc:oracle:thin:@/10.80.150.202:1521/mydb.com) (

(Generate URL from Connection Information) (

Driver Type: Thin
 DB Host Name:
 DB Listener Port:
 DB Identifier Type: Service Name
 SID/Service Name:
 TNS Alias:

Credentials
 TIP For OracleDataSources, credentials must be entered if not already specified in the URL.
 Username: FC80L3DEV1

Use Cleartext Password
 Password:
 Use Indirect Password
 Indirect Password:
example: Scott, customers/Scott

Connection Factory Properties
Specify any properties needed by the connection factory here.

Name	Value	Delete

This creates the connection pool as shown below

Oracle Enterprise Manager (oc4jadmin) - JDBC Resources - Microsoft Internet Explorer

[About Oracle Enterprise Manager 10g Application Server Control](#)

Local intranet

7.2.9 Step 9

Click **Test** as shown below

7.2.10 Step 10

Click **Create Data Sources** as shown below

Name	Application	JNDI Location	Attributes	Managed by OC4J	Test Connection	Delete
"BPELSamplesDataSource"	default	jdbc/BPELSamplesDataSource	"BPELPM_CONNECTION_POOL"	✓		
"BPELServerDataSource"	default	jdbc/BPELServerDataSource	"BPELPM_CONNECTION_POOL"	✓		
"BPELServerDataSourceWorkflow"	default	jdbc/BPELServerDataSourceWorkflow	"BPELPM_CONNECTION_POOL"	✓		
"ESBDataSource"	default	jdbc/esb	"ESBPool"	✓		
"OracleDS"	default	jdbc/OracleDS	"Example Connection Pool"	✓		

Name	Application	Connection Factory Class	Monitor Performance	Test Connection	Refresh Connection Pool	Delete
"BPELPM_CONNECTION_POOL"	default	oracle.lite.jdbc.POJODBCDriver				
"ESBPool"	default	oracle.lite.jdbc.POJODBCDriver				
"Example Connection Pool"	default	oracle.jdbc.pool.OracleDataSource				

7.2.11 Step 11

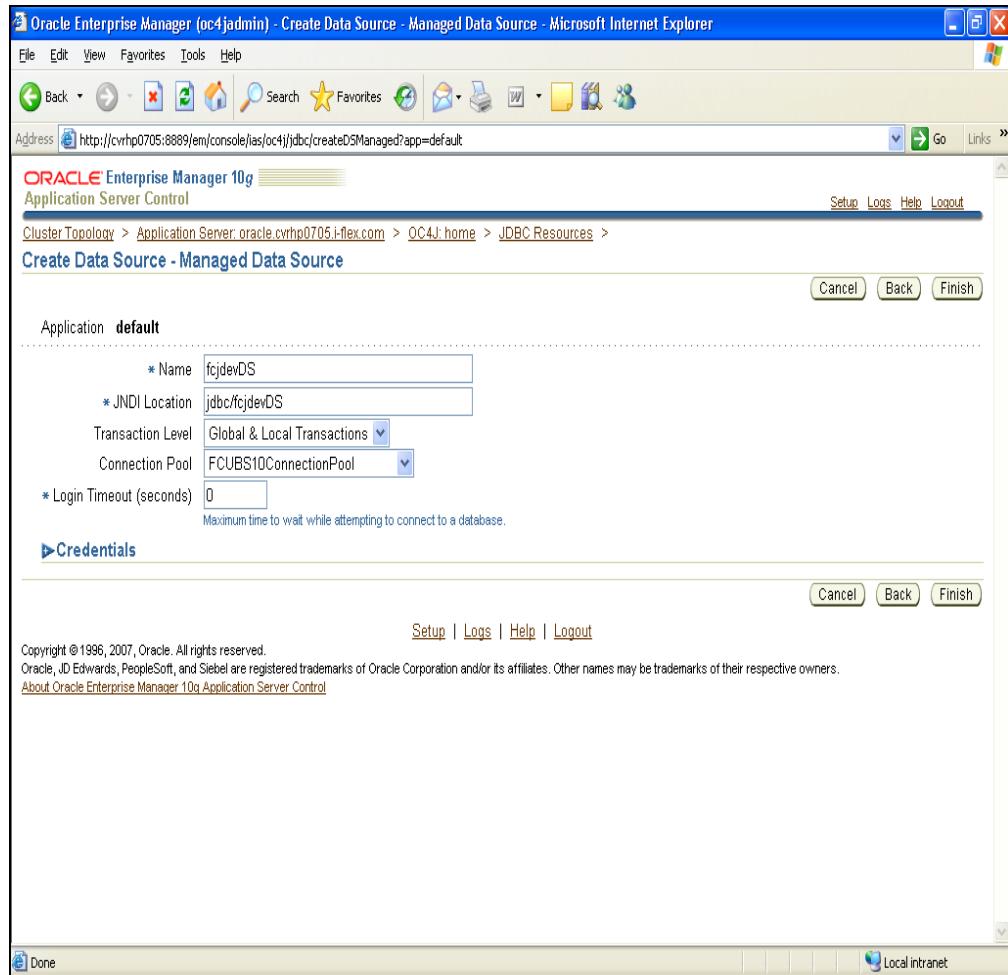

Click **Continue** as shown below

The screenshot shows the 'Create Data Source - Application & Type' page in Oracle Enterprise Manager 10g. The URL in the address bar is <http://cvrhp0705:8889/em/console/ias/oc4j/jdbc/createDS?app=&dsType=managed>. The page title is 'Create Data Source - Application & Type'. The 'Application' section shows 'default' selected in a dropdown. The 'Data Source Type' section has 'Managed Data Source' selected (radio button is checked). A detailed description of a managed data source is provided. Below it, 'Native Data Source' and 'New Data Source from Existing Data Source' options are listed with their descriptions. An 'Existing Data Source' dropdown contains the entry '"BPELSamplesDataSource"'. At the bottom of the page, there are links for 'Setup', 'Logs', 'Help', and 'Logout', along with a 'Cancel' and 'Continue' button.

7.2.12 Step 12

Refer the **screen shot** below. Provide **equivalent information** as shown below and click Finish.

Select the **Connection Pool** that was created from the combo box

This creates Data Source as shown below.

The screenshot shows the Oracle Enterprise Manager 10g Application Server Control interface. The URL in the address bar is `http://cvrhp0705:8889/em/console/jas/oc4j/admin/jdbc?infoKey=234_11869f8fa97`. The main content area displays a confirmation message: "Data Source fcjdevDS has been created." Below this, the "JDBC Resources" section is visible, containing two tables: "Data Sources" and "Connection Pools".

Data Sources

Name	Application	JNDI Location	Attributes	Managed by OC4J	Test Connection	Delete
"BPELSamplesDataSource"	default	jdbc/BPELSamplesDataSource	"BPELPM_CONNECTION_POOL"	✓		
"BPELServerDataSource"	default	jdbc/BPELServerDataSource	"BPELPM_CONNECTION_POOL"	✓		
"BPELServerDataSourceWorkflow"	default	jdbc/BPELServerDataSourceWorkflow	"BPELPM_CONNECTION_POOL"	✓		
"ESBDataSource"	default	jdbc/esb	"ESBPool"	✓		
"fcjdevDS"	default	jdbc/fcjdevDS	"FCUBS10ConnectionPool"	✓		
"OracleDS"	default	jdbc/OracleDS	"Example Connection Pool"	✓		

Connection Pools

Name	Application	Connection Factory Class	Monitor Performance	Test Connection	Refresh Connection Pool	Delete
"BPELPM_CONNECTION_POOL"	default	oracle.lite.poljdbc.POLJDBCDriver				

7.2.13 Step 13

Click Test Connection as shown below

The screenshot shows the Oracle Enterprise Manager 10g Application Server Control interface. The URL is http://cvrhp0705:8889/em/console/jas/oc4j/admin/jdbc?infoKey=234_11869f8fa97. The page title is "JDBC Resources". A confirmation message at the top states "Data Source fcjdevDS has been created." Below this, there are two tables: "Data Sources" and "Connection Pools". The "Data Sources" table lists several entries, including "BPELServerDataSourceWorkflow", "ESBDataSource", "fcjdevDS", and "OracleDS". The "Connection Pools" table lists "BPELPM_CONNECTION_POOL" with its connection factory class set to "oracle.lite.poljdbc.POLJDBCDriver".

7.2.14 Step 14

Click **Test** as shown below

The screenshot shows the "Test Connection: fcjdevDS" dialog box. It contains fields for "Username" (Not Specified), "Password" (Not Specified), "URL" (jdbc:oracle:thin:@//10.80.50.202:1521/FCJDEV), and "SQL Statement" (select * from dual). At the bottom, there is a note: "TIP Certain JDBC drivers require restarting the OC4J instance before a change to the URL is reflected in the driver's cache." There are "Test" and "OK" buttons at the top right.

This completes Data source creation

7.2.15 Step 15

Click **Applications Tab** to navigate to the screen shown and then click **Deploy**

The screenshot shows the Oracle Enterprise Manager 10g Application Server Control interface in Microsoft Internet Explorer. The title bar reads "Oracle Enterprise Manager (oc4jadmin) - OC4J: home - Microsoft Internet Explorer". The main content area is titled "OC4J: home" and displays the "Applications" tab. A table lists deployed J2EE applications, including "ascontrol", "default", and "Middleware Services". The "default" application is currently running. A tip message at the bottom left states: "TIP If you stop a parent application (such as the default application), then Enterprise Manager automatically stops any child applications that depend upon the parent application. Similarly, if you start a child application, Enterprise Manager automatically starts the required parent application." The bottom right corner shows "Local intranet".

Select	Name	Status	Start Time	Active Requests	Request Processing Time (seconds)	Active EJB Methods	Application Defined MBeans
<input type="checkbox"/>	All Applications						
<input type="checkbox"/>	ascontrol		Apr 20, 2009 4:14:55 PM IST	1	0.06	0	
<input type="checkbox"/>	default		Apr 20, 2009 4:14:54 PM IST	0	0.00	0	
<input type="checkbox"/>	Middleware Services						

7.2.16 Step 16

Upload **FCJRADTool.war** file as shown below and click Next

The screenshot shows the Oracle Enterprise Manager 10g interface for deploying an application. The title bar reads "Oracle Enterprise Manager (oc4admin) - Deploy: Select Archive - Microsoft Internet Explorer". The address bar shows the URL "http://localhost:8888/em/console/jas/j2ee/deploy/deploySelectArchive?command=startWizard&appViewName=apps". The main content area is titled "Deploy: Select Archive". It has two main sections: "Archive" and "Deployment Plan".

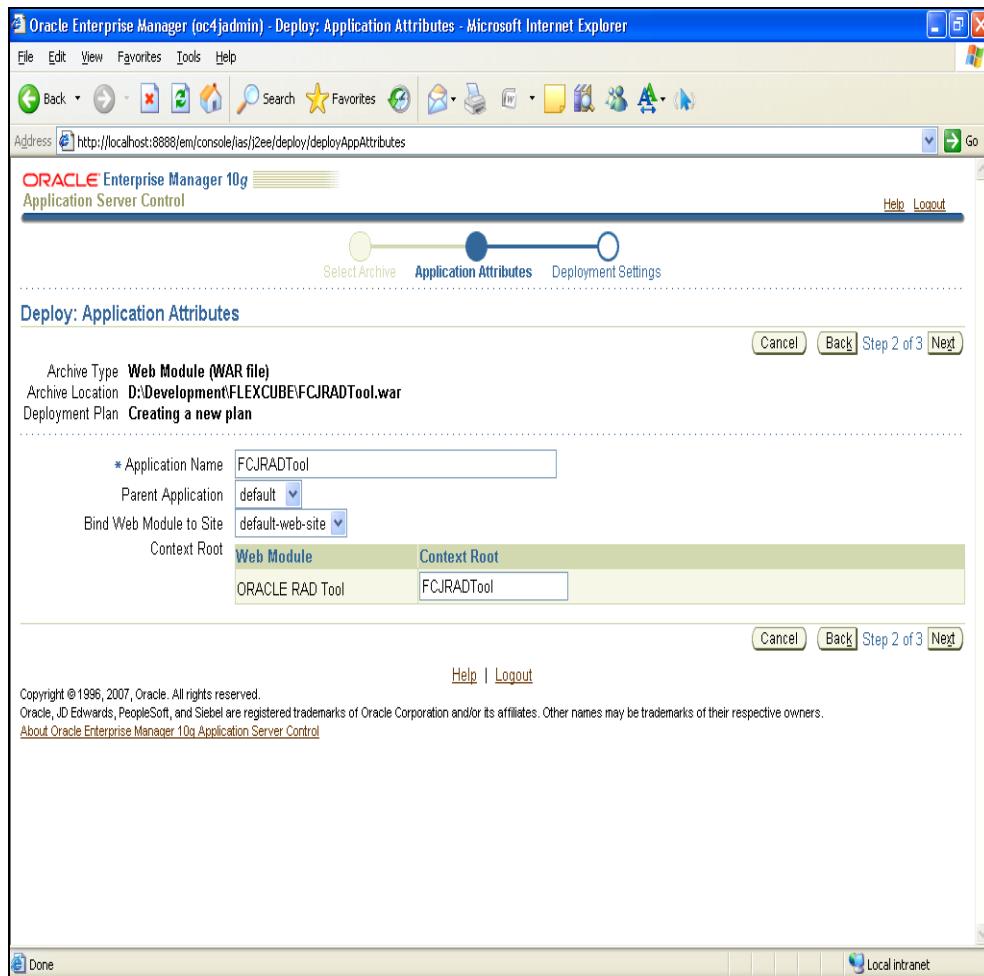

Archive: This section asks if the archive is present on the local host or on the server where Application Server Control is running. The "Archive is present on local host" option is selected, with the path "D:\Development\FLEXCUBE\FCJRADTool.war" entered in the "Archive Location" field. There is also a "Location on Server" field with a note: "The location on server must be the absolute path or the relative path from j2ee\home".

Deployment Plan: This section asks if a deployment plan is present on the local host or on the server where Application Server Control is running. The "Automatically create a new deployment plan" option is selected, with a note: "The deployment plan settings will be based on OC4J defaults and information contained in the archive". There is also a "Plan Location" field with a note: "The location on server must be the absolute path or the relative path from j2ee\home".

At the bottom of the page, there are links for "Setup | Logs | Help | Logout" and a note: "Copyright © 1996, 2007, Oracle. All rights reserved. Oracle, J2EE, JavaServer Faces, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners." The status bar at the bottom right says "Local intranet".

7.2.17 Step 17

Refer the screen shot below and click Next

7.2.18 Step 18

Click **Go To Task** for Map Environment Reference as shown below

The screenshot shows the Oracle Enterprise Manager 10g Deployment Settings page. At the top, there are tabs: Select Archive, Application Attributes, and Deployment Settings. The Deployment Settings tab is selected. Below the tabs, there are deployment parameters:

Archive Type	Web Module (WAR file)
Archive Location	D:\Development\FLEXCUBE\FCJRADTool.war
Deployment Plan	Creating a new plan
Application Name	FCJRADTool
Parent Application	default
Bind Web Module to Site	default-web-site
Context Root	FCJRADTool

Below these parameters is a section titled "Deployment Tasks" with a table:

Task Name	Go To Task	Description
Map Environment References		Map any environment references in your application (for example, data sources) to physical entities currently present on the operational environment.
Select Security Provider		A security provider acts as the source for available users and groups when mapping security roles.
Map Security Roles		Map any security roles exposed by your application to existing users and groups. The list of users and groups is obtained from the security provider you selected for this application.
Configure EJBs		Configure the Enterprise JavaBeans in your application.
Configure Clustering		Configure clustering of your application.
Configure Class Loading		Manipulate the classpath of your application.

At the bottom of the page, there is a "Save Deployment Plan" section with a note: "After you make changes, you can save the deployment plan to your local disk. You can also click the 'Edit Deployment Plan' button to view or change the deployment plan." There is also a "Edit Deployment Plan" button.

7.2.19 Step 19

Refer the screen shot below and enter corresponding details and then click OK.

The screenshot shows the Oracle Enterprise Manager 10g Application Server Control interface. The title bar reads "Oracle Enterprise Manager (oc4jadmin) - Deployment Settings: Map Environment References - Microsoft Internet Explorer". The main content area is titled "Deployment Settings: Map Environment References". It displays deployment settings for a Web Module (WAR file) named "FCJRADTool.war" located at "D:\Development\FLEXCUBE\FCJRADTool.war". The deployment plan is "Creating a new plan". The application name is "FCJRADTool", parent application is "default", bind web module to site is "default-web-site", and context root is "FCJRADTool". Below this, there are two sections: "Map Resource References" and "Map URL Resource References". The "Map Resource References" section contains a table with three rows, each mapping a JDBC resource reference to an ORACLE RAD Tool module. The "Map URL Resource References" section shows a table with one row indicating no resource references were found. At the bottom right, there are "Cancel" and "OK" buttons, and a status bar showing "Local intranet".

Resource Reference	Description	Type ▾	Referenced By		Map to JNDI Location
			Module	Enterprise Bean	
jdbc/fccdev		javax.sql.DataSource	ORACLE RAD Tool	n/a	jdbc/fccdev <input type="button" value="✎"/>
jdbc/fcdev		javax.sql.DataSource	ORACLE RAD Tool	n/a	jdbc/fcdev <input type="button" value="✎"/>
jdbc/fcjdevDS		javax.sql.DataSource	ORACLE RAD Tool	n/a	jdbc/fcjdevDS <input type="button" value="✎"/>

Resource Reference	Description	Referenced By		
		Module	Enterprise Bean	Map to URL
No resource references were				

7.2.20 Step 20

Click Deploy

The screenshot shows the Oracle Enterprise Manager 10g Application Server Control interface. The title bar reads "Oracle Enterprise Manager (oc4jadmin) - Deploy: Deployment Settings - Microsoft Internet Explorer". The address bar shows the URL "http://localhost:8888/em/console/jas/j2ee/deploy/deploymentSettings". The main content area displays the "Deploy: Deployment Settings" page for the application "FCJRADTool". The deployment plan is set to "Creating a new plan". The "Deployment Tasks" section lists several tasks with icons: Map Environment References, Select Security Provider, Map Security Roles, Configure EJBs, Configure Clustering, and Configure Class Loading. At the bottom, there is a link "Click Edit Deployment Plan to set more advanced deployment options." and a "Local intranet" icon.

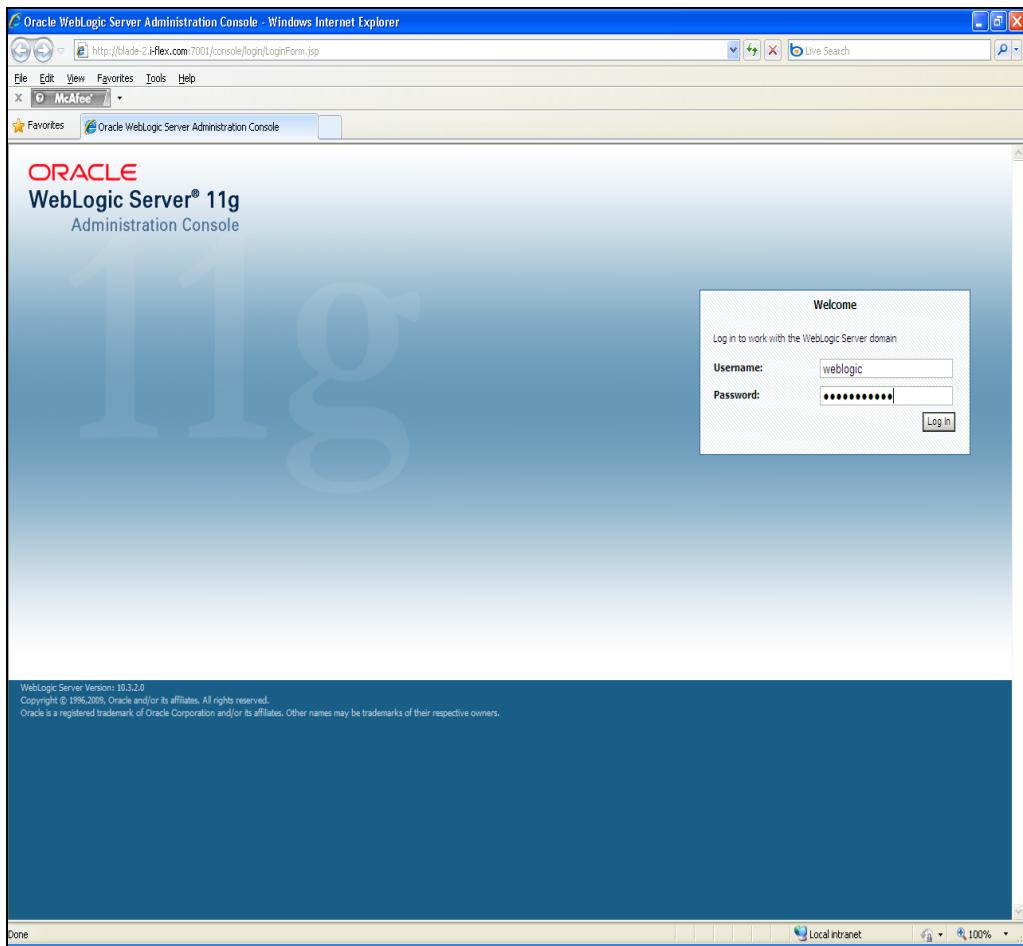

This completes Deployment of FCJRADTool.war file to OC4J 10.1.3.x Application server.

7.3 WebLogic Application server

To deploy **FCJRADTool.war** to WebLogic Application Server follow the below mentioned steps

Steps 1-18 explain creation of Connection Pool and Data source. Skip these steps if Connection pool and data source already exists in the WebLogic Application server.

Login to the Weblogic Server with <Username> and <Password>

7.3.1 Step 1

Under Domain Configurations→Services→JDBC, Click on Data Sources

The screenshot shows the Oracle WebLogic Server Administration Console interface. On the left, there's a navigation sidebar with sections like 'Domain Structure', 'How do I...', and 'System Status'. The main content area has a tree view under 'Domain Configurations'. The 'JDBC' node is expanded, and its child 'Data Sources' is circled in red. Other visible nodes under JDBC include 'Multi-Data Sources' and 'Data Source Factories'. To the right of the JDBC section, there are other collapsed categories like 'Services', 'Interoperability', and 'Diagnostics'.

7.3.2 Step 2

JDBC Data Sources shows a list of available Data Sources. To create a new DS, Click on New

The screenshot shows the Oracle WebLogic Server Administration Console interface. The title bar reads "Summary of JDBC Data Sources - base_domain - WLS Console - Windows Internet Explorer". The main content area is titled "Summary of JDBC Data Sources". It contains a brief description of what a JDBC data source is and a table listing existing data sources. The table has columns for Name, JNDI Name, and Targets. Five entries are listed:

Name	JNDI Name	Targets
fcpschedulerDS	jdbc/fcpschedulerDS	ManagedServer_1
FCU8511.1	jdbc/fcu8511	ManagedServer_1
HDFC	jdbc/fcpc05	ELCManaged
RAD10.5	jdbc/FCDEV	ManagedServer_1

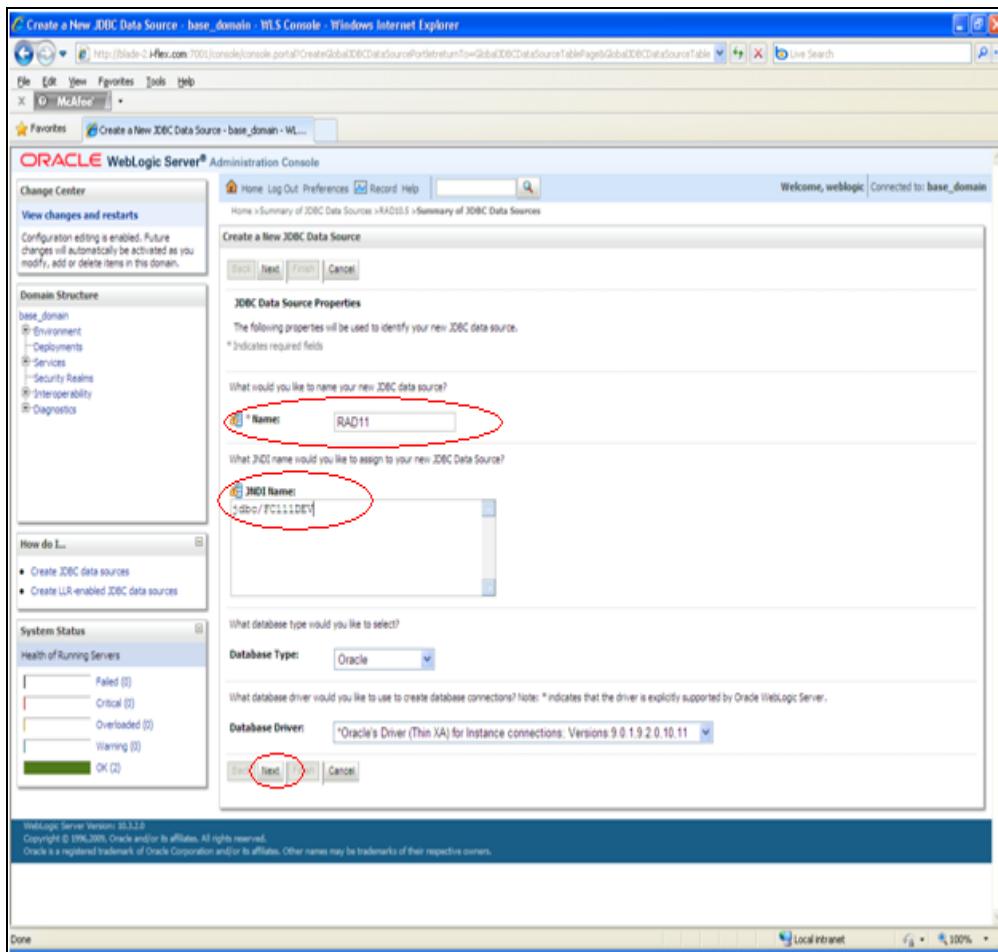

At the bottom left of the main content area, there is a "New" button highlighted with a red circle. The bottom of the screen shows the standard Windows taskbar with icons for Start, Task View, File Explorer, and others.

7.3.3 Step 3

- Give a suitable name for the Data Source. The JNDI Name(Case Sensitive) should match the name as given in Open Development web.xml. Click Next.
- JNDI Name Should be like jdbc/<Schema-Name>

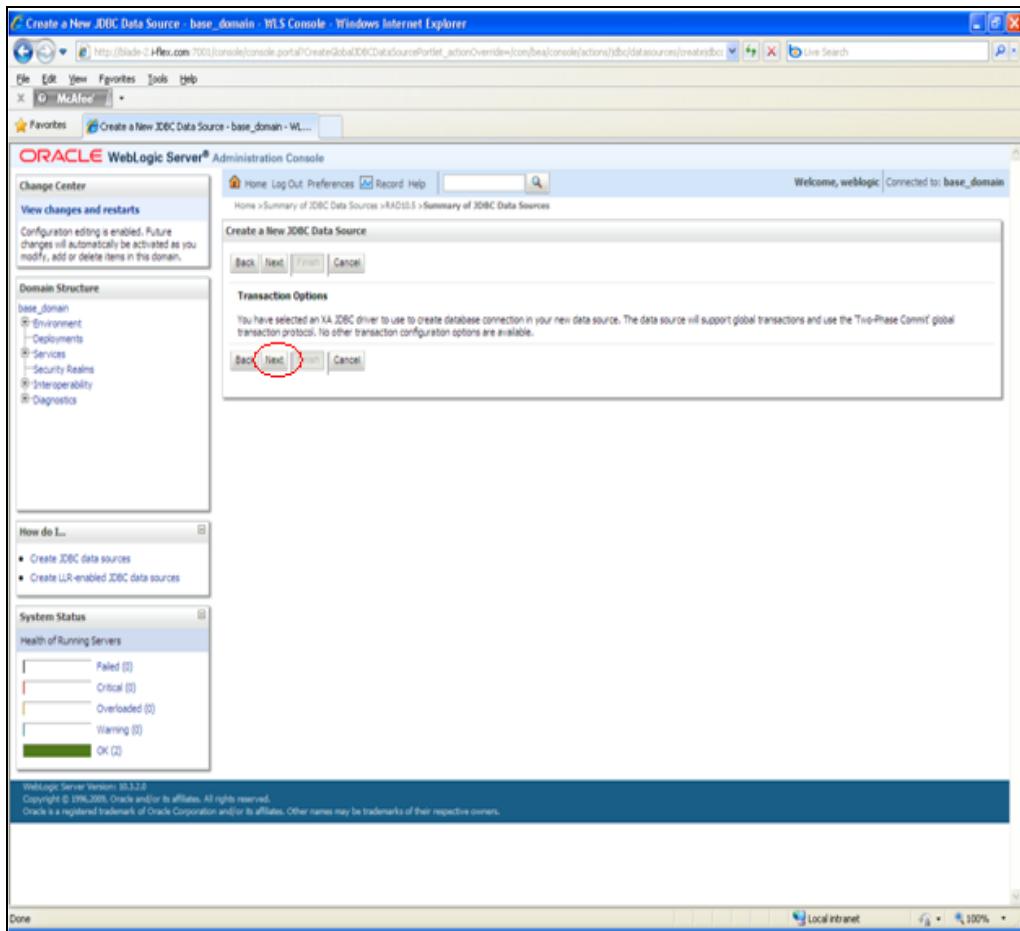

Schema Name is same added while adding environment details.

7.3.4 Step 4

Click Next

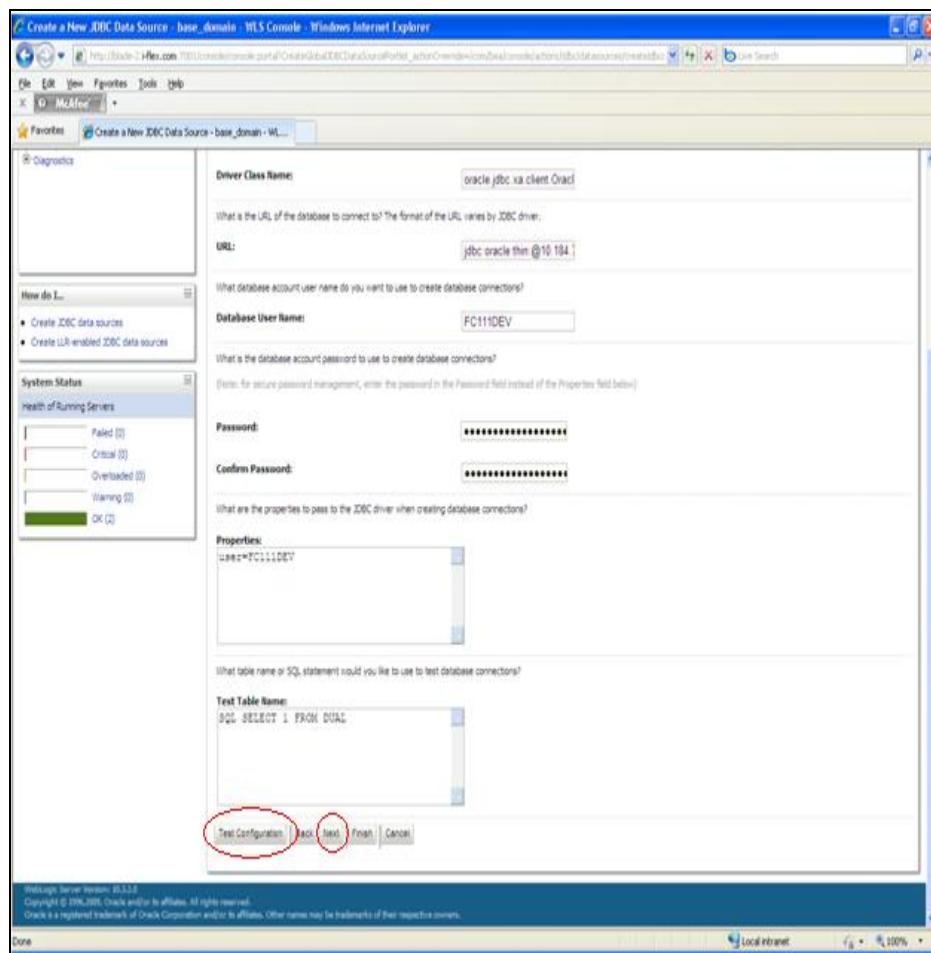

7.3.5 Step 5

Fill in the Marked Fields in Connection Properties. Click Next

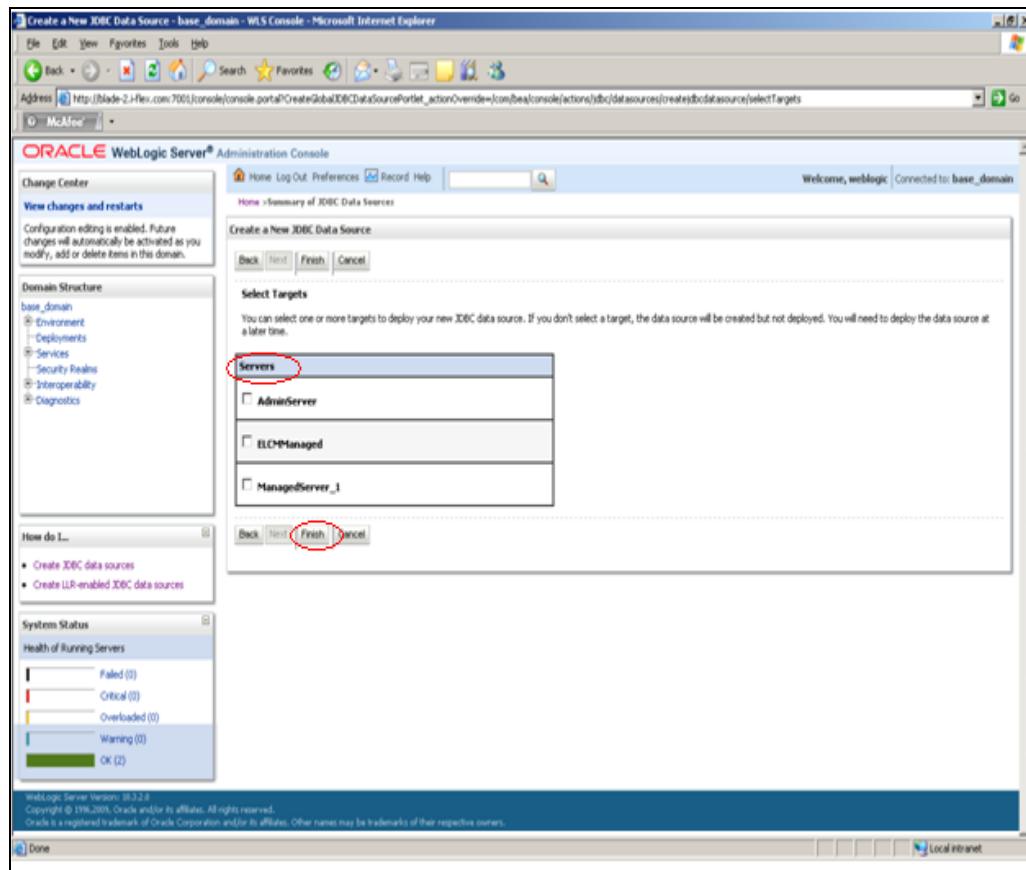

7.3.6 Step 6

Click on Test Configuration to test if connection is being made to the data source. Click next.

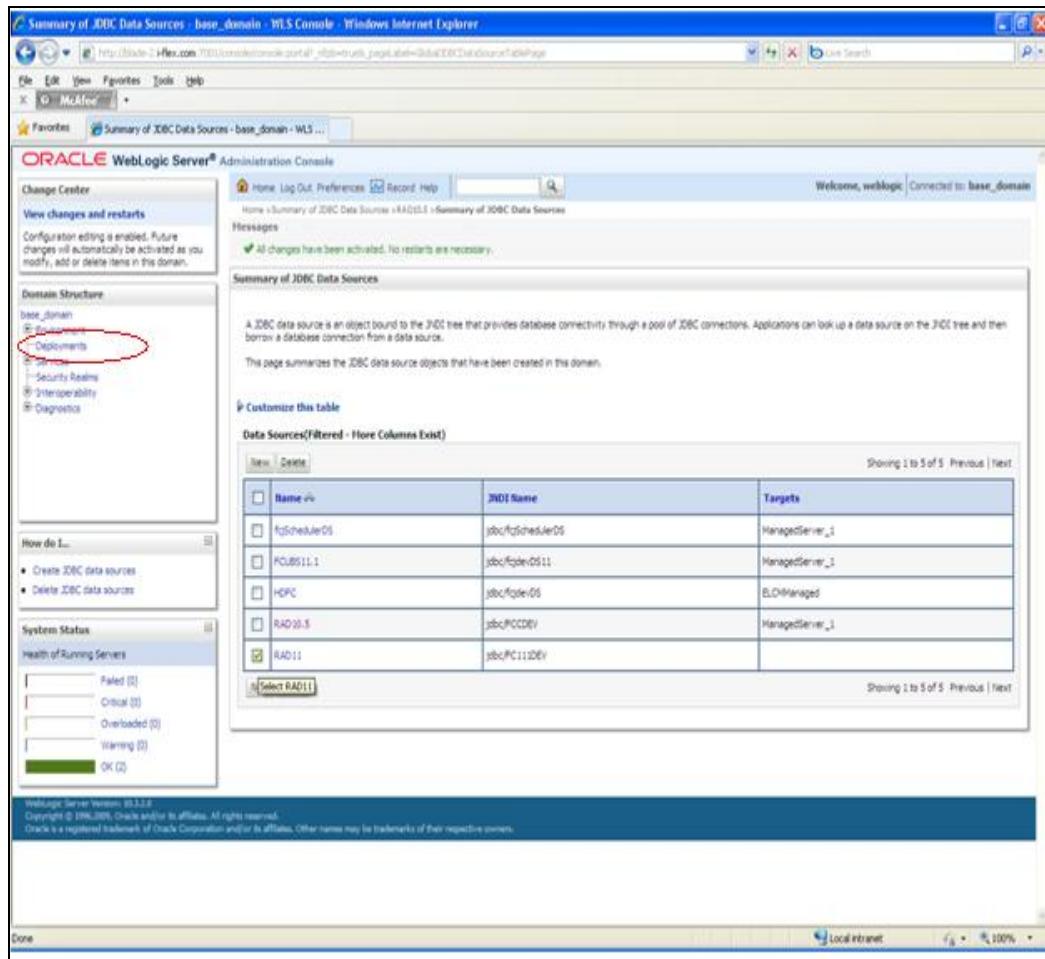

7.3.7 Step 7

Choose a Target where you wish to deploy the new Data source and Click Finish.

7.3.8 Step 8

This completes the creation of Datasources. Now to deploy the War file click on Deployments under Domain Structure.

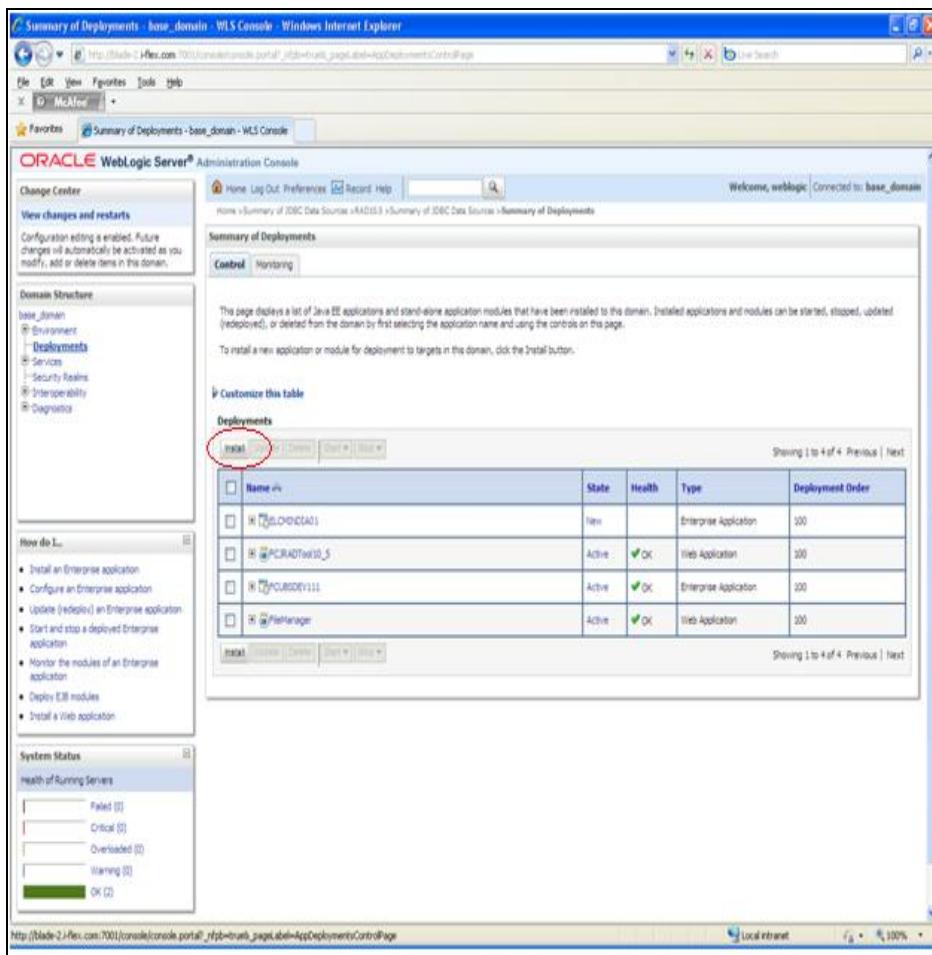

The screenshot shows the Oracle WebLogic Server Administration Console interface. The left sidebar has a 'Domain Structure' tree with 'base_domain' expanded, showing 'Deployments' (which is circled in red), 'Security Realms', 'Interoperability', and 'Diagonistics'. Below the tree is a 'How do I...' section with 'Create JDBC data sources' and 'Delete JDBC data sources'. A 'System Status' section shows server health levels: Paired (0), Critical (0), Overloaded (0), Warning (0), and OK (2). The main content area is titled 'Summary of JDBC Data Sources' and contains a table of data sources. The table has columns: Name, JNDI Name, and Targets. The data is as follows:

Name	JNDI Name	Targets
fcScheduler05	jdbc/fcScheduler05	ManagedServer_1
FC08511.1	jdbc/fcde08511.1	ManagedServer_1
HPC	jdbc/fcde05	EDBManaged
RA030.5	jdbc/FCDE05	ManagedServer_1
RAD11	jdbc/FC1120EV	

7.3.9 Step 9

To install a new application or module for deployment click the Install button.

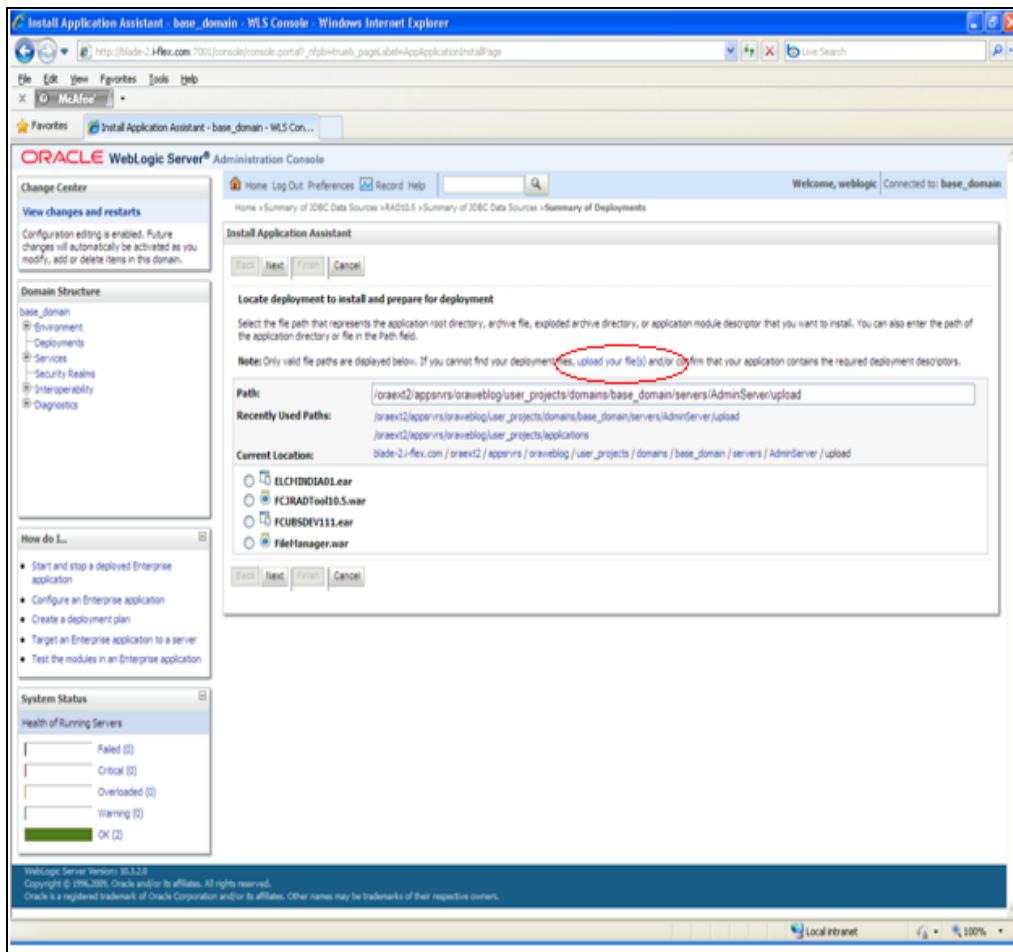

The screenshot shows the Oracle WebLogic Server Administration Console interface. The title bar reads "Summary of Deployments - base_domain - WLS Console - Windows Internet Explorer". The left sidebar includes sections for "Domain Structure" (base_domain, Environment, Deployments), "New changes and restarts", and "How do I...". The main content area is titled "Summary of Deployments" and contains a table of deployed applications. The table has columns for Name, State, Health, Type, and Deployment Order. Four entries are listed: "E:\JBOJDIC101" (State: New, Type: Enterprise Application, Deployment Order: 100), "E:\ACRADTool10_5" (State: Active, Health: OK, Type: Web Application, Deployment Order: 100), "E:\POURSEY111" (State: Active, Health: OK, Type: Enterprise Application, Deployment Order: 100), and "E:\FileManager" (State: Active, Health: OK, Type: Web Application, Deployment Order: 100). Below the table are "Control" and "Monitoring" tabs. A toolbar at the top of the main content area includes buttons for "Install", "Delete", "Start", and "Stop". The "Install" button is highlighted with a red circle. The status bar at the bottom shows the URL "Http://(Machine-IP)/Console/console.portal?_nfpb=true&pagelet=AppDeploymentsControlPage".

Name	State	Health	Type	Deployment Order
E:\JBOJDIC101	New		Enterprise Application	100
E:\ACRADTool10_5	Active	OK	Web Application	100
E:\POURSEY111	Active	OK	Enterprise Application	100
E:\FileManager	Active	OK	Web Application	100

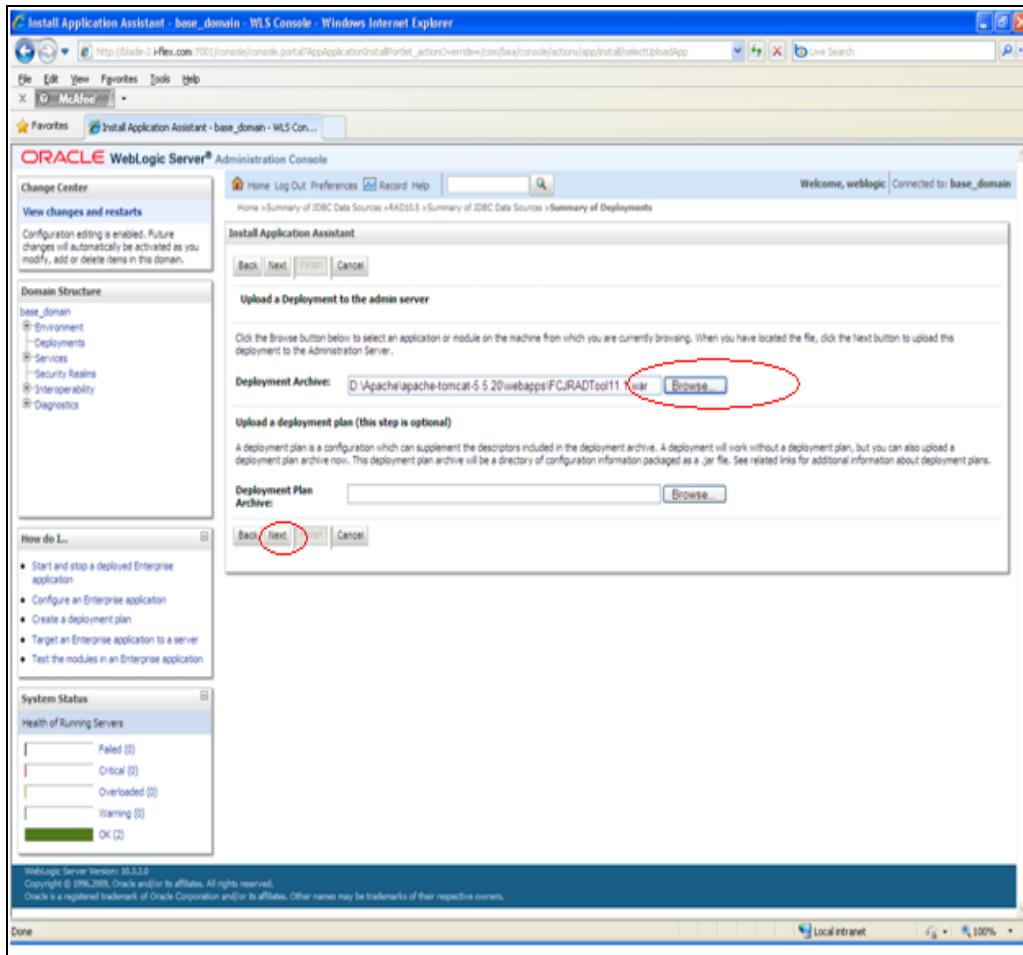

7.3.10 Step 10

The Open Development war file first needs to be uploaded to weblogic local machine. Click on upload your file(s) hyperlink.

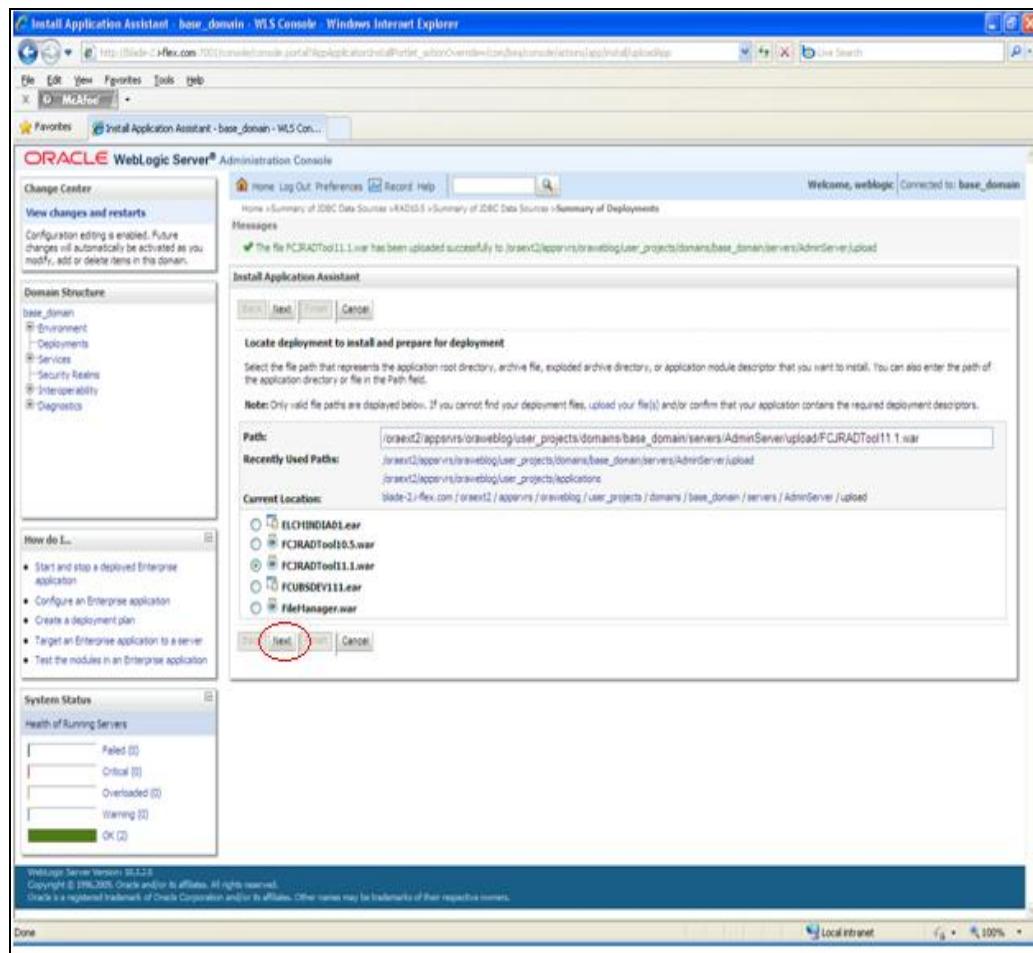

7.3.11 Step 11

Choose the deployment archive by click on Browse Button. Skip the optional step of uploading a deployment plan. Click Next.

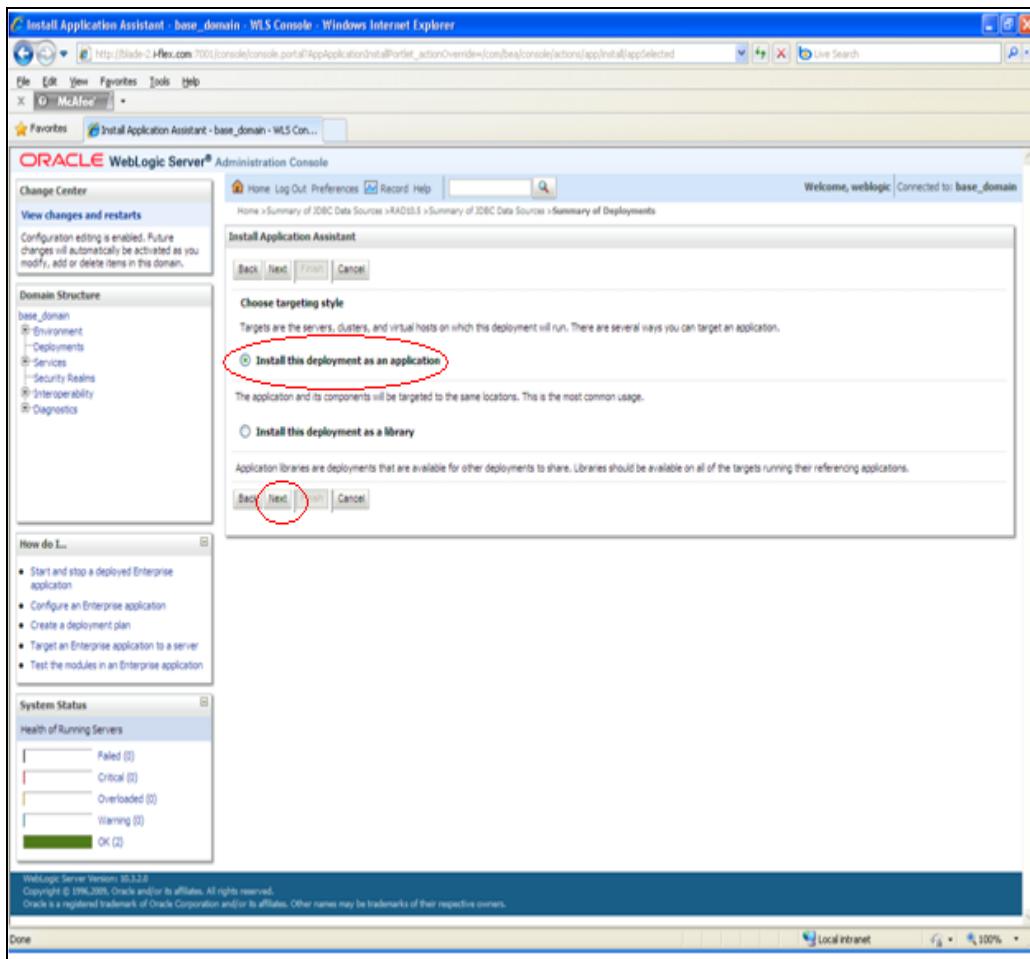

7.3.12 Step 12

Click Next

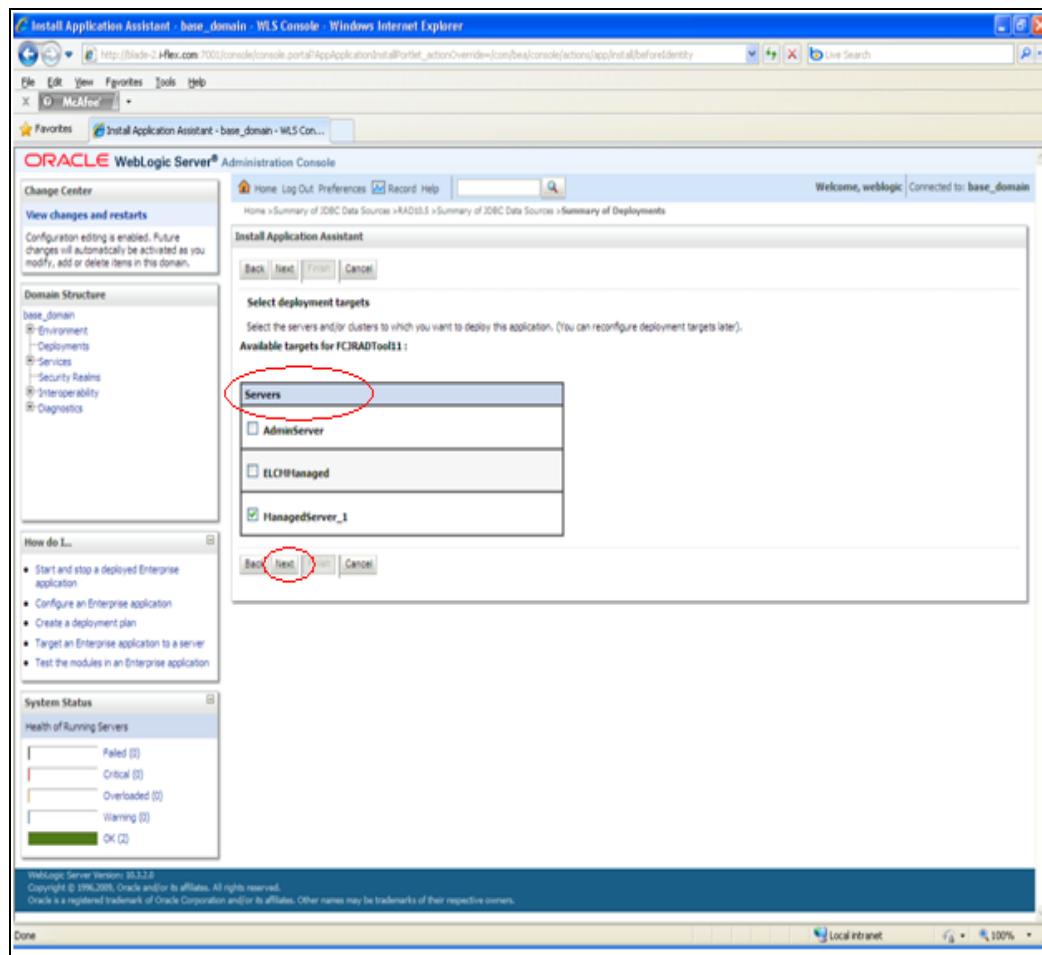

7.3.13 Step 13

Choose the option Install the deployment as an application and Click on Next.

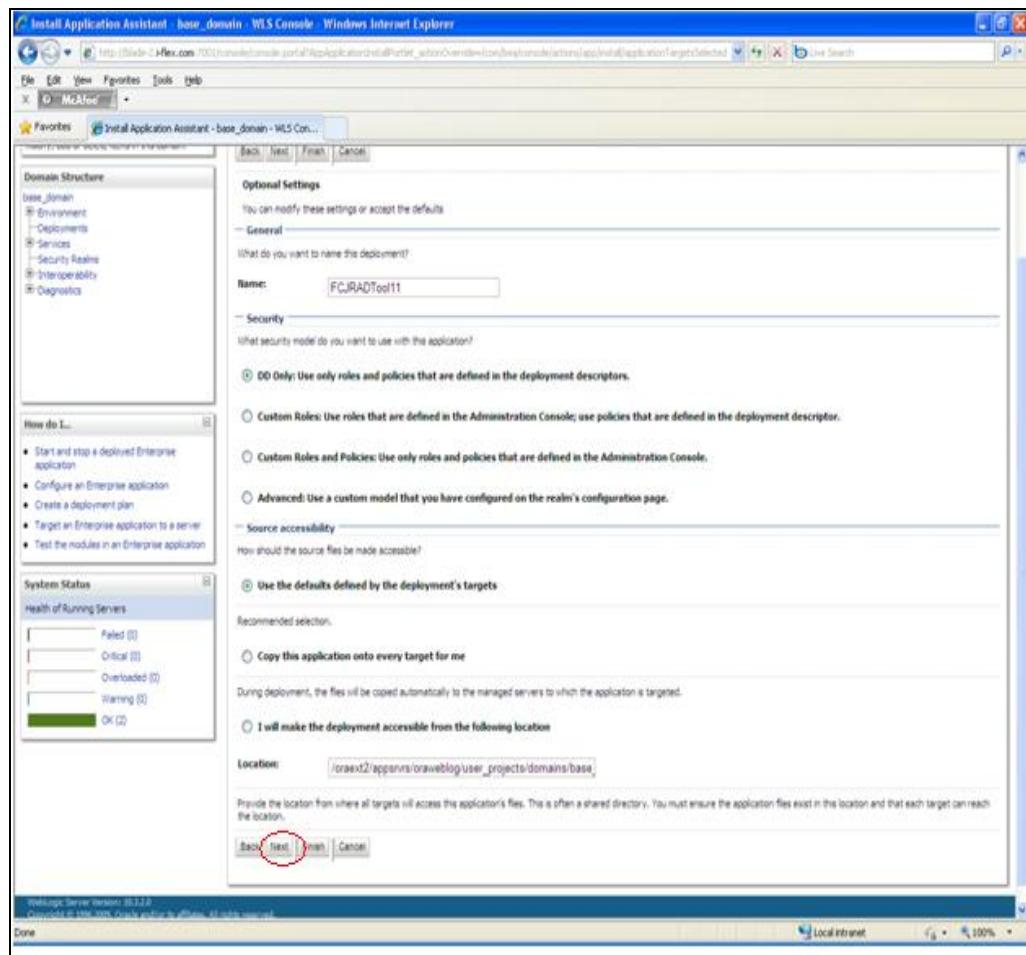

7.3.14 Step 14

Choose the target server where the deployment will be located and Click on Next.

7.3.15 Step 15

Click Next.

7.3.16 Step 16

This completes the deployment of War File. The Open Development Deployment will now be seen under the list of Deployments. Click on the Hyperlink marked in Red.

The screenshot shows the Oracle WebLogic Server Administration Console interface. The left sidebar has 'Deployments' selected. The main content area is titled 'Summary of Deployments'. It displays a table of deployed applications:

Name	State	Health	Type	Deployment Order
WTPCRADTest10_5	New	OK	Enterprise Application	300
WTPCRADTest11	Active	OK	Web Application	300
WTPCRADTest11	Active	OK	Enterprise Application	300
FileManager	Active	OK	Web Application	300

A red circle highlights the second row, which corresponds to the application 'WTPCRADTest11'.

7.3.17 Step 17

Go to the Testing Tab.

The screenshot shows the Oracle WebLogic Server Administration Console interface. The URL in the browser is http://localhost:7001/console/console.portal?_nfp=true&pagelet=WebAppDeploymentOverviewPageletHandler#con-tab=AppDeployer. The main title is "Settings for FCRADTool11 - base_domain - WLSConsole". The left sidebar includes sections for Change Center, Domain Structure (base_domain), How do I..., and System Status (Health of Running Servers). The main content area shows the "Testing" tab selected under "Settings for FCRADTool11". The "Testing" tab displays configuration details for the deployment:

Name	FCRADTool11	Description
Context Root	/FCRADTool11	The specific path at which this web application is found by a servlet.
Path	/oraeis2/applications/travelBlog/user_projects/domains/base_domain/servers/AdminServer/upload/FCRADTool11.1.war	The path to the deployable unit on the Administration Server.
Deployment Plan	(no plan specified)	The path to the deployment plan document on Administration Server.
Staging Mode	(not specified)	The mode that specifies whether an application's files are copied from a source on the Administration Server to the Managed Server's staging area during application preparation.
Security Model	DDOBy	The security model specifies how this deployment should be secured.
Deployment Order	100	An integer value that indicates when this unit is deployed, relative to other deployable units on a server, during startup.
Deployment Principal Name		A string value that indicates what principal should be used when deploying the file or archive during startup and shutdown. This principal will be used to set the current subject when calling out into application code for interfaces such as ApplicationLifecycleListener. If no principal name is specified, then the anonymous principal will be used.

Below the testing section, there is a "Modules and Components" table:

Name	Type
FCRADTool11	Web Application

At the bottom right of the page, there are links for "Local Intranet" and "100%".

7.3.18 Step 18

The Deployment of Open Development on Weblogic Server has been finished and you may launch the application by the link mentioned below.

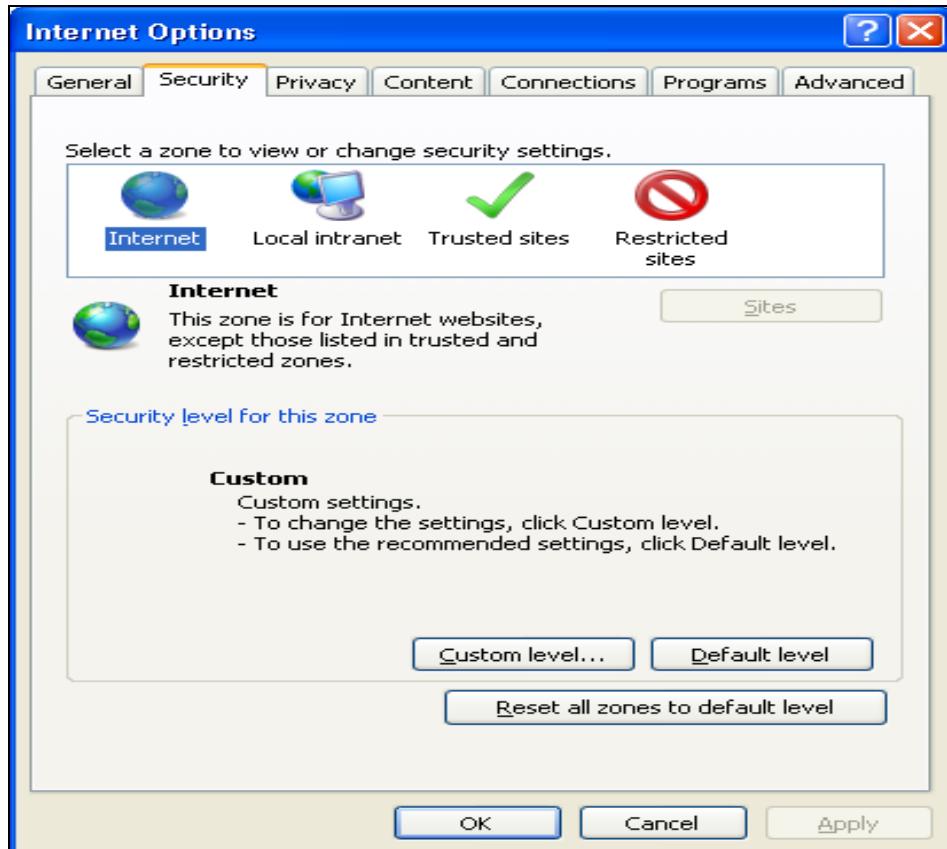

The screenshot shows the Oracle WebLogic Server Administration Console interface. The main content area displays a table titled "Deployment Tests" under the "Testing" tab. The table lists three entries:

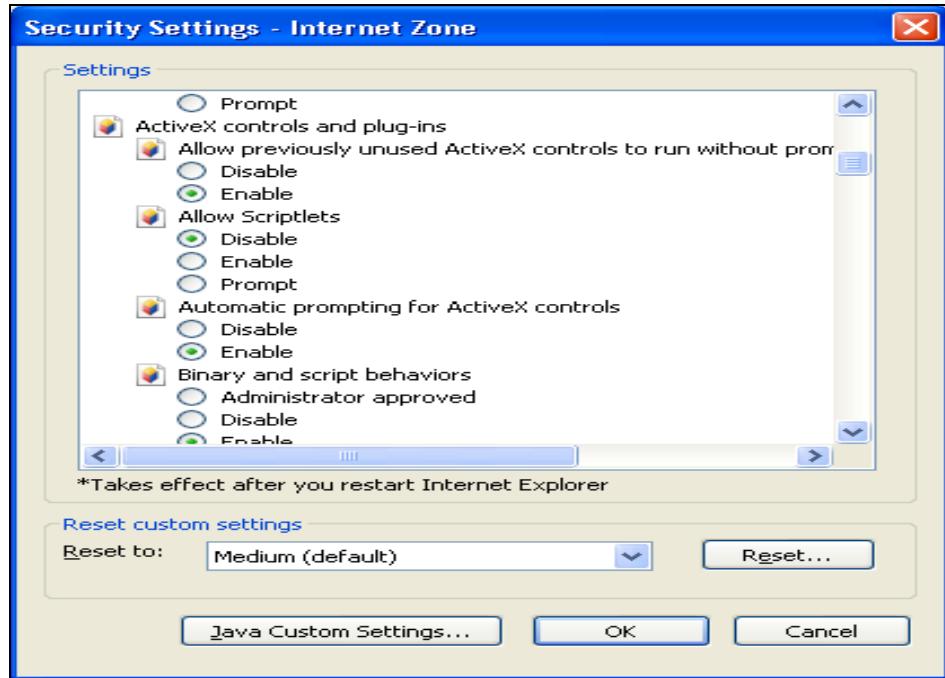

Name	Test Point	Comments
PCRADTool11	Http://10.104.74.104:9001/PCRADTool11	Default url on server ManagedServer_1
index.html	Http://10.104.74.104:9001/PCRADTool11/Index.html	Welcome file index.html on server ManagedServer_1

The URL "Http://10.104.74.104:9001/PCRADTool11" is circled in red. The left sidebar contains navigation links like "Change Center", "View changes and restarts", "Domain Structure", and "How do I...". The bottom status bar indicates "WebLogic Server Version: BEA11.1" and "Copyright © 1996-2006, Oracle and/or its affiliates. All rights reserved." The bottom right corner shows a zoom level of "100%".

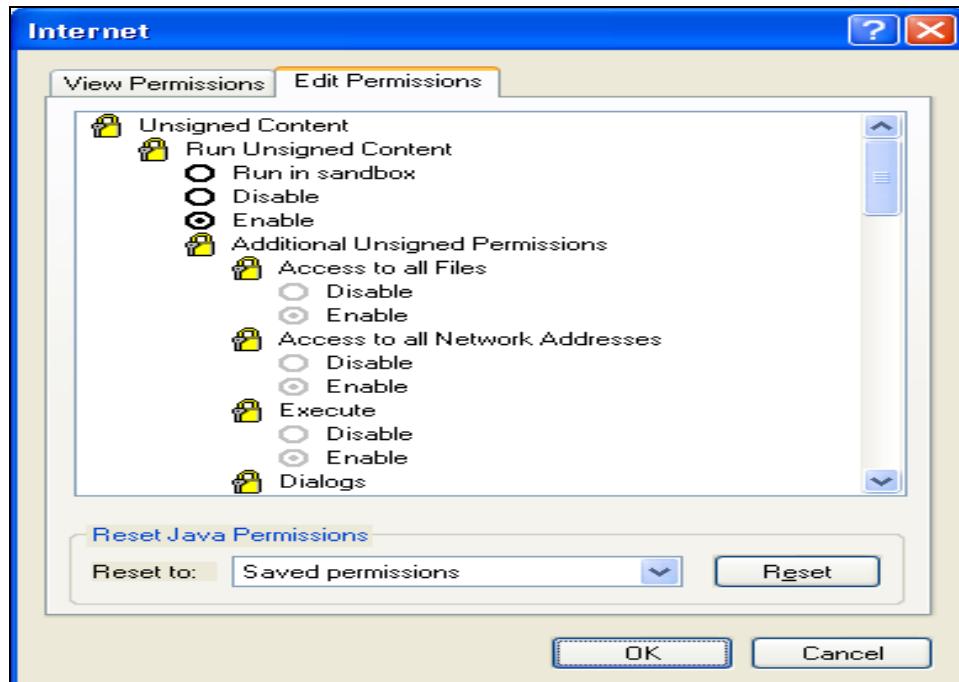

8. IE Settings

- Open Internet Explorer click on Tools → Internet Options → Security (Tab) → Internet → Custom Level

- Enable all the Options, select custom for Java Permissions
- Click on Java Custom Settings

- Select Edit Permissions Tab.
- Select Enable Option for Run Unsigned Content and Run Signed Content.
- Same Settings For Local Intranet

Click on Custom Level select Enable for all Options, for Java Permissions it should be custom.

9. Administration

9.1 User Roles

Open Development Tool has the below User Roles for controlling the access rights:

- System Administrator
- Release Administrator
- Developer

Users will be allowed to perform various tasks based on the “Role” assigned to the user. Users can have different Roles for different Releases. However, System Administrator Role is not at a Release Level and is only for Open Development Tool Administration.

9.1.1 System Administrator

This Role is only meant for the Open Development Team and Users with this Role will have full control over the system. Users with this Role only would be able to create New Releases in Open Development Tool.

Login Open Development tool with RADTOOL as user Name and RADTOOL as Password

9.1.2 Release Administrator

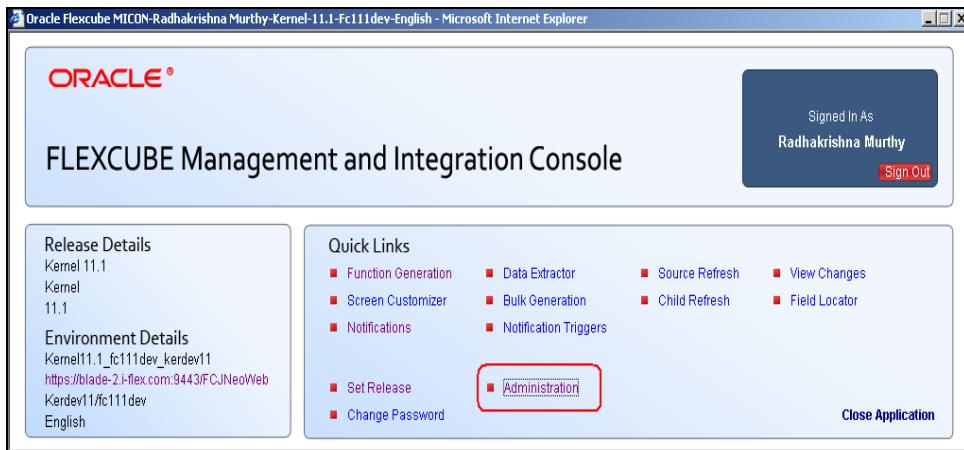

This Role is meant for Project Leaders and Team leaders and allows them to Release administration. Users with this role would be allowed to perform the below tasks

- Creation of Environment(s) for the Release
- Creation of users
- Provide access to the Release for required Users

9.1.3 Developer

This Role is for Developers and Users with role would be able to access the Function development related features of the Open Development tool.

User will also be able to Switch Between releases and Environments Using the “Set Release” Option.

9.2 Release Definition

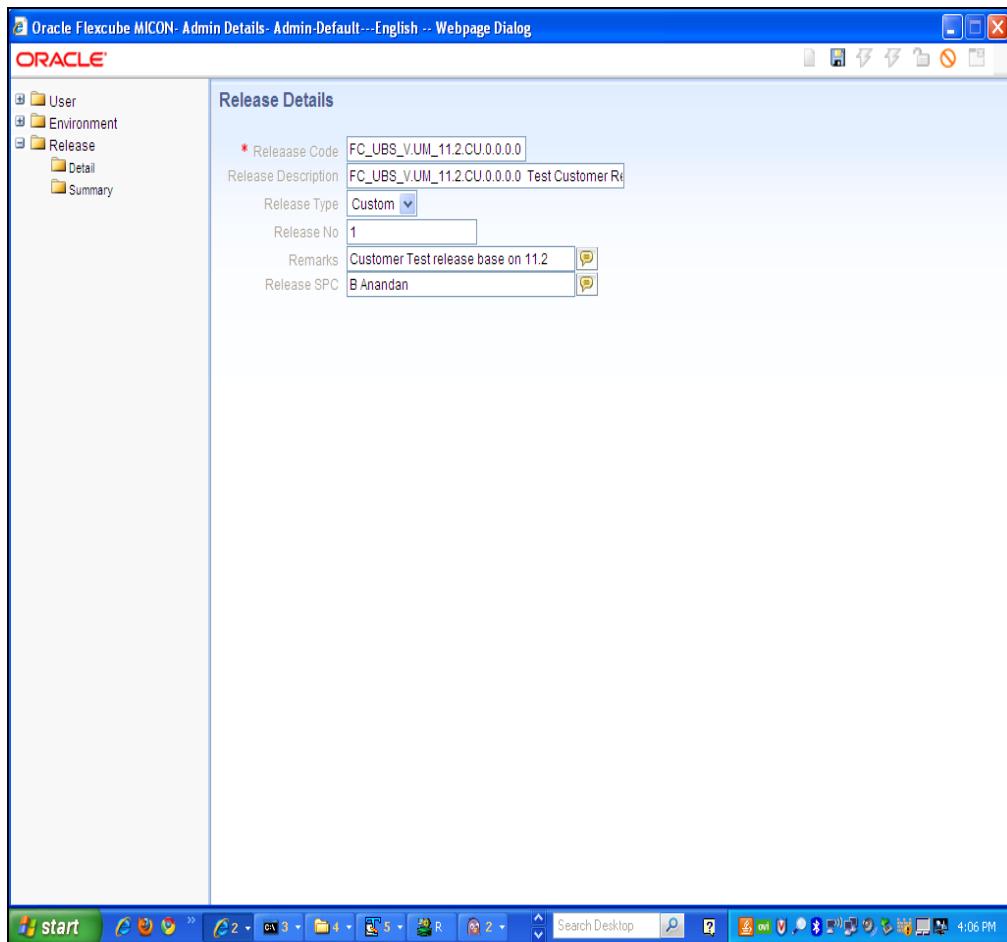

Every Release needs to be maintained in Open Development Tool. Below details need to be maintained in Open Development Tool before starting any New Release

- Release Code : A unique Code which would identify the release E.g. FCUBSKERNEL11.1
- Release Description : Brief Description of the Release
- Release Type : Kernel/Cluster/Custom

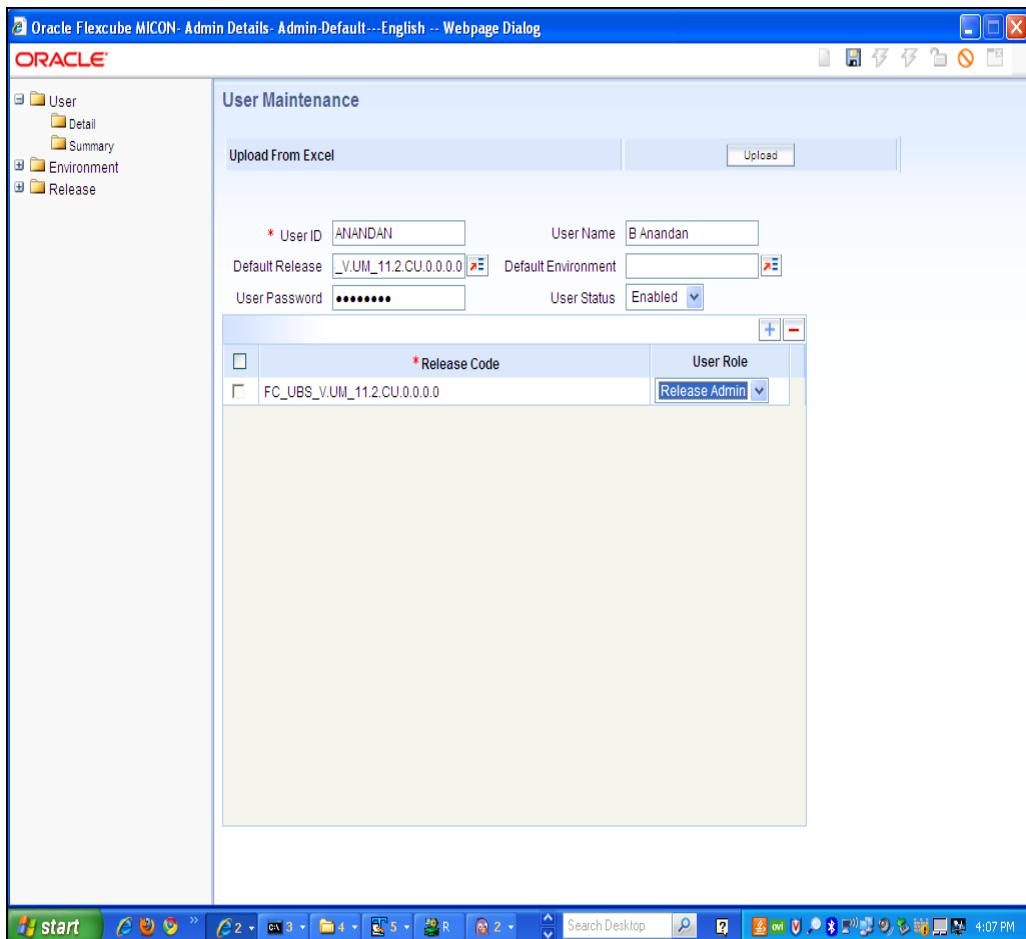

Create the Release with Custom type for extensibility environment

- Release Number: Release Number e.g. .11.1
- A release can have multiple environments for various activities like Development, Unit Testing, and Support etc.
- Release Creation can only be done by Open Development Team and a request with the above details needs to be sent to the Open Development Team in the beginning of every Release. Open Development team would create a release and grants “Release Administrator” Role to the Requester. Release administrator then can provide access to this Particular release for the developers.
- Release administrator will be able to create Environment(s) for this Release. Release administrator can also create New Users if required and can provide them the access to this Release.

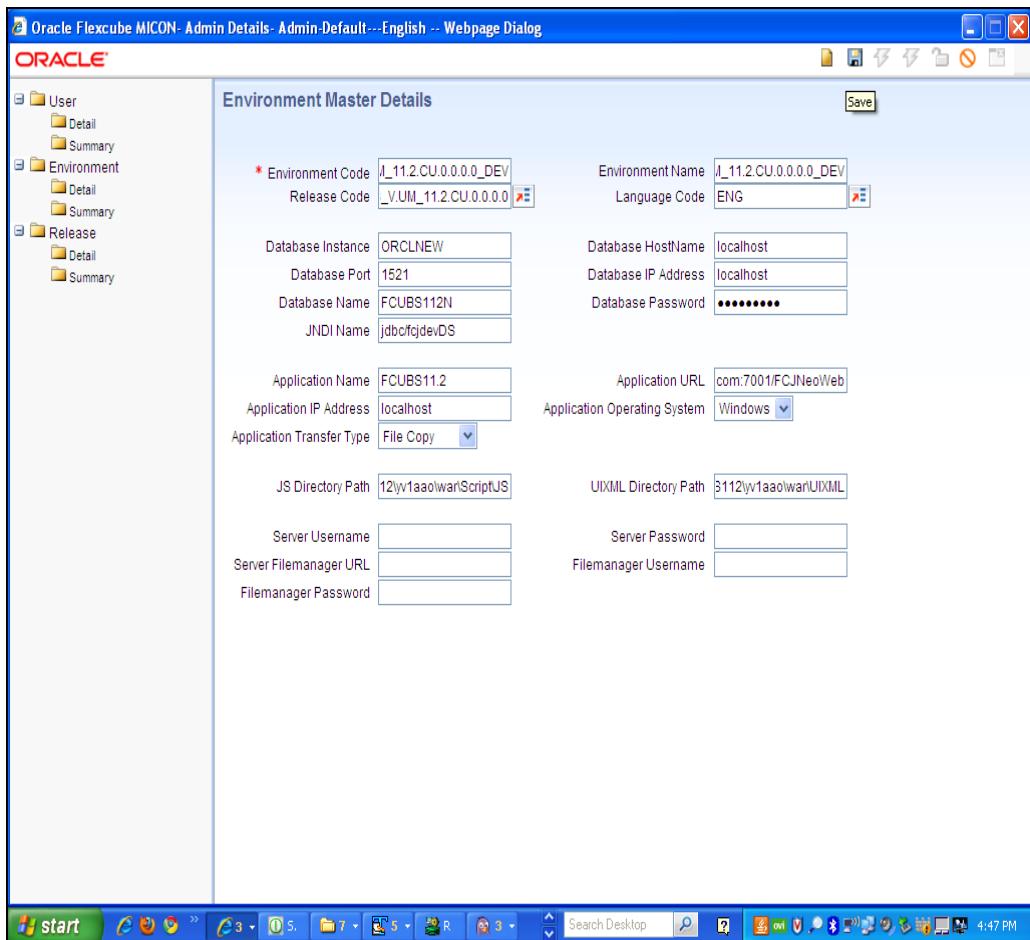

Create the User and assign Release Admin role for a release that created

9.3 Environment Creation

Open Development Tool requires at least one environment for each release and the below environment details need to be maintained in Open Development Tool for each environment

- Data Base Details
 - Instance Name
 - Port Number
 - Schema Name
 - Password
- Application Server Details
 - Target FLEXCUBE UBS Application URL
 - Target FLEXCUBE UBS JS Path
 - Target FLEXCUBE UBS UIXML Path
- Server Password and user id in case the App server is on Unix

9.3.1 User Definition

New users can be created by System Administrators and Release administrators.

- User Id
- Password
- Default Release
- Default Environment
- User Releases
 - Releases for which the user needs access should be given here
 - One user can have access to multiple Release with one of those Release as the default release
 - User Role for each of these Releases.

Oracle Flexcube MICON- Admin Details- Radhakrishna Murthy-Kernel-11.1-Fc111dev-English -- Web Page Dialog

10. Developer Check List

As Open Development tool identifies the Release parameters and accordingly generates the output, it is important to ensure the correct release before using the Tool.

Open Development Tool also reads several tables from FLEXCUBE schema, Developers should ensure the correctness of the environment they are currently connected to.

The Landing page of Open Development Tool has both Release details and environment details as shown below
