APPENDIX B: ROUNDING AMOUNTS AND RATE ATTRIBUTES

APPENDIX C: INTERFACING ORACLE FLEXCUBE LENDING AND LEASING WITH BI PUBLISHER

CHAPTER 1: ADMINISTRATION (SYSTEM) SETUP

The Administration window's System drop-down links record setup data related to the Oracle FLEXCUBE Lending and Leasing's overall functionality and performance. This data affects the mechanics of the system: how Oracle FLEXCUBE Lending and Leasing processes work and where it looks for files when completing tasks.

The Administration link bar's System drop-down link contains the following:

- Parameters
- Lookups
- User Defined Tables
- Audit Tables
- User Defined Defaults
- Txn Codes
- Data Files
- Reports
- Error Messages
- Translation

All System drop-down link pages allow you to control the behavior of the system from a technical perspective; for example, determine parameter values, define what information is audited, and record default values. Oracle Financial Services Software provides default values on all these pages.

Parameters link

System parameters define information or values used throughout Oracle FLEXCUBE Lending and Leasing. They act as switches that control the manner in which a function is implemented, or whether or not Oracle FLEXCUBE Lending and Leasing performs a particular task. Parameters are used throughout Oracle FLEXCUBE Lending and Leasing to control everything from user access to what information is stored on any given form. Parameters also define configuration data, such as the location of Oracle FLEXCUBE Lending and Leasing system files, the URLs for the report and image servers, and other administration controlled data. Some of the system parameters are setup when Oracle FLEXCUBE Lending and Leasing is installed, but the values associated with the parameters need to be reviewed and maintained.

There are three types of parameters in Oracle FLEXCUBE Lending and Leasing, grouped by what part of the Oracle FLEXCUBE Lending and Leasing system they affect:

Type of paramter:	Paramter range:
System parameters	These parameters apply to the entire system. Examples: batch processes, archiving, aging.
Organization parameters	These parameters apply to the organization, division, and user responsibility. Examples: User login control, password expiration.
Company parameters	These parameters apply to the company and branch. Examples: decision fax control, scoring model.

As a result, the Parameters drop-down link opens the following three pages:

- System Parameters Setup page
- Organization Parameters Setup page
- Company Parameters Setup page

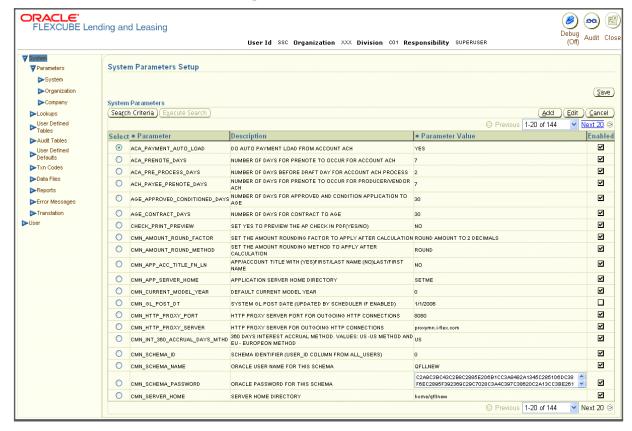

Parameters link > System link (System Parameters Setup page)

The System Parameters Setup page displays and records each system wide parameter, along with its current value and whether or not it is enabled. These parameters relate to the overall processing of the system, such as Oracle FLEXCUBE Lending and Leasing server file locations and data purging configuration.

CAUTION: You can only define these parameters only. Changing the values of any of these parameters affects all related Oracle FLEXCUBE Lending and Leasing processing.

To set up the system parameters

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- Click the Administration bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Parameters**.
- 4 Click the **Parameters** drop-down link, then click **System**.

5 On the **System Parameters Setup** page's **System Parameters** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of system parameter records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click Edit.

6 In the **System Parameters** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Parameter	Select the system parameter (required).
Description	View the system parameter description (display only).
Parameter Value	Enter the value for the system parameter (required).
Enabled	Select to enable the parameter.

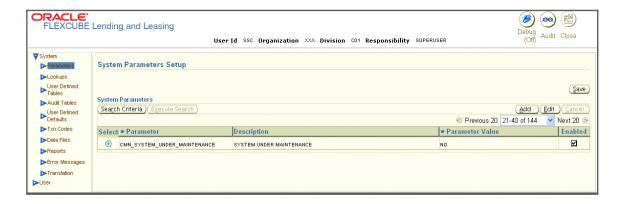

7 Click **Save** on the System Parameters Setup page.

24 x 7 Accessibility

Oracle FLEXCUBE Lending and Leasing allows continuous access to the Oracle FLEXCUBE Lending and Leasing system, 24-hours-a-day, 7-days-a-week (24 x 7). You can continue working in Oracle FLEXCUBE Lending and Leasing and posting most transactions during batch processing. When you post a transaction on the Customer Service window's Maintenance page and the transaction posting is deferred or cannot be posted at the present time, "SYSTEM UNDER MAINTENANCE. TRANSACTION POSTING DEFERRED" appears in the Results section.

If transaction posting is deferred, Oracle FLEXCUBE Lending and Leasing automatically posts the transactions once it completes batch processing. Otherwise, Oracle FLEXCUBE Lending and Leasing displays a message advising to post the transaction later.

24 x 7 accessibility is controlled by the following system parameter on the System Parameter window's System Parameters page:

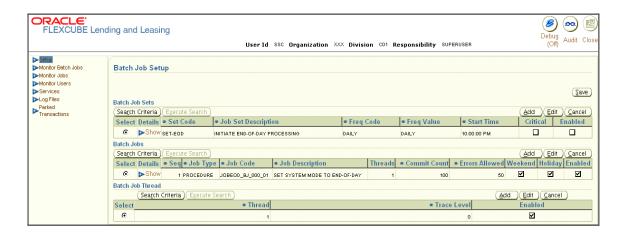

Parameter:Description:CMN_SYSTEM_UNDER_MAINTENANCESYSTEM UNDER MAINTENANCE

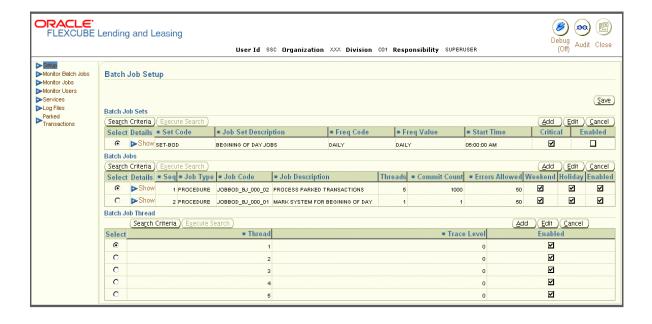

Oracle FLEXCUBE Lending and Leasing uses two batch job sets to handle end of day (EOD) and beginning of day (BOD) processing:

- 1. SET-EOD
- 2. SET-BOD

SET-EOD: This is the first job to run in the nightly batch jobs at the end of the day. It marks Oracle FLEXCUBE Lending and Leasing as being in "maintenance" mode, indicating that batch processing has started. Any transaction posted after the SET-EOD batch job starts will be either deferred or not allowed to be posted at the present time.

SET-BOD: This will be the fist batch job to run at the beginning of next day. It marks Oracle FLEXCUBE Lending and Leasing as being "available," indicating that batch processing has completed. Oracle FLEXCUBE Lending and Leasing will then return to all held transactions and post them in the chronological order in which they were entered.

Parameters link > Organization link (Organization System Parameters Setup page)

The parameters on the Organization System Parameters Setup page control Oracle FLEX-CUBE Lending and Leasing functions related to user log in, such as passwords and expiration dates, responsibility levels and the ability to access Oracle FLEXCUBE Lending and Leasing features. Individual parameters can be created with different values for uniquely defined organizations, divisions, and responsibility combinations.

When determining which parameter to use, Oracle FLEXCUBE Lending and Leasing selects the best match based on a hierarchical sort by the Organization, Division, and Responsibility fields, with values of ALL being a lower order match than an exact match.

Example

Assume the organization parameter UIX_APP_VIEW_ALL_APPS (VIEW ALL APPLICATIONS) has been defined as follows:

Oracle FLEXCUBE Lending and Leasing uses these two parameters to determine which users have the ability to view all applications:

- If a TFB user with a responsibility of SUPERUSER was using the Lending menu's Underwriting form, the system will return with a value N, and Oracle FLEXCUBE Lending and Leasing will not allow the user to view all applications.
- If a SSC user (one within an organization defined as ALL) with a responsibility of SUPERUSER, was using the Lending menu's Underwriting form, the system will return with a value Y, and Oracle FLEXCUBE Lending and Leasing will allow the user to view all applications.

Note: Be aware that while Oracle FLEXCUBE Lending and Leasing allows for Organization parameters to be defined at all three hierarchical (organization, division, and responsibility) levels, not all will be applicable to each parameter. For example, while you can define the UIX_SMTP_SERVER (EMAIL SERVER FOR USER) for a responsibility, you would normally only want to define this parameter based on organization or division.

To set up the organization system parameters

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Parameters**.
- 4 Click the **Parameters** drop-down link, then click **Organization**.

In the **Organization System Parameters Setup** page's **Organization Parameters** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of organization parameter records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 6 In the **Organization Parameters** section, enter, view, or edit the following information:

In this field:	Do this:	
Select	If selected, indicates that this is the current record.	
Parameter	Select the system parameter (required).	
Description	View system parameter description (display only).	
Parameter Value	Enter the value for the system parameter (required).	
Org	Select the organization for which the parameter will be valid (required).	
Div	Select the department for which the parameter will be valid (required).	
Responsibility	Select the responsibility for which the parameter will b valid (required).	
	IMPORTANT: In selecting which organization parameter	
	to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using the following attributes:	
	1 Organization	
	2 Division	
	3 Responsibility	

For this reason, Oracle Financial Services Software recommends creating one version of each organization parameter where ALL is these fields.

Enabled

Select to enable the parameter.

7 Click **Save** on the Organization System Parameters Setup page.

Parameters link > Company link (Company System Parameters Setup page)

The parameters on the Company System Parameters Setup page control Oracle FLEX-CUBE Lending and Leasing processes associated with functions that may vary for different companies or branches. These parameters address credit scoring, credit bureau interfaces, fax services, and fax generation. Individual parameters may be set up with different values for uniquely defined company and branch combinations.

When these parameters values are requested by the system, Oracle FLEXCUBE Lending and Leasing responds with the "best" match based on a hierarchical sort ordered on company and branch fields, with values of ALL being a lower order match than an exact match.

Example

Assume the company parameter UIX_RUN_AAI_ACT (ONLINE ACCOUNT CREATION AND ACTIVATION) has been defined as:

Oracle FLEXCUBE Lending and Leasing uses these two parameters to determine whether to create and activate an account online.

- When processing items for the company TFC, Oracle FLEXCUBE Lending and Leasing will return a value N and not create and activate an account online.
- When processing items for the company DCC, a company within the value ALL, Oracle FLEXCUBE Lending and Leasing will return with a value Y and create and activate an account online.

To set up the company system parameters

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Parameters**.
- 4 Click the **Parameters** drop-down link, then click **Company**.

5 On the Company System Parameters Setup page's Company Parameters section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of company parameter records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 6 On the **Company Parameters** page, enter, view, or edit the following information:

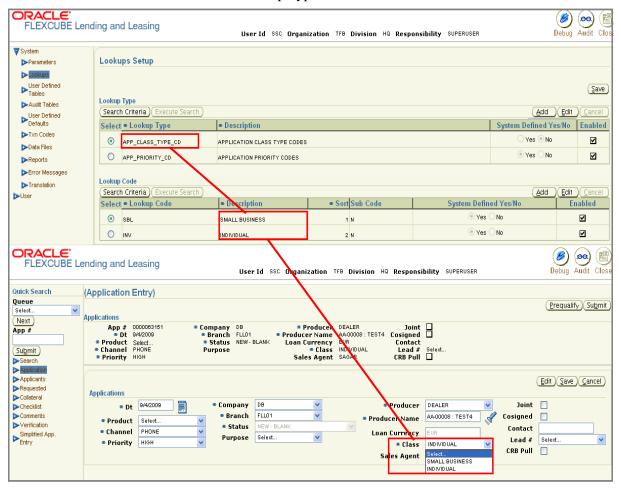

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Parameter	Select the system parameter (required).
Description	View the system parameter description (display only).
Parameter Value	Enter the value for the system parameter (required).
Company	Select the portfolio company for which the parameter will be valid (required).
Branch	Select the portfolio branch for which the parameter will be valid (required).
	IMPORTANT : In selecting which company parameter to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using the following attributes:
	1 Company2 Branch
	For this reason, Oracle Financial Services Software rec- ommends creating one version of each company parame- ter where ALL is the value in these fields.
Enabled	Select to enable the parameter.

7 Click **Save** on the Company System Parameters Setup page.

Lookups link (Lookups Setup page)

The Lookup Setups page defines the contents in many of the flashlight fields and dropdown fields used throughout Oracle FLEXCUBE Lending and Leasing. Fields that make use of a flashlight window or drop-down field will only accept entries that are stored on this page.

In the example below, the Application Entry page's Applications section contains the Class drop-down field. The contents of the Class drop-down field are linked to the APP_CLASS_TYPE_CD Lookup Type.

The Lookups page contains two pages: **Lookup Types** and **Lookup Codes**. Lookup types and codes can be system-defined or user-defined. The lookup types describe the function of the related lookup codes.

For system-defined lookup types, only the Description field may be changed.

A *system-defined lookup type* (**Lookup Types** page, **System Defined** selected) is one that is critical to Oracle FLEXCUBE Lending and Leasing and can not be changed. However, you can still modify the lookup type description and the lookup code description on the Lookup Types page.

A user-defined lookup type (Lookup Types page, System Defined cleared) is one that can be modified, depending on a user's business needs. You cannot modify the lookup

type, lookup code, and system indicator. If a lookup type is user-defined, the lookup code belonging to that lookup type can either be system-defined or user-defined.

A system-defined lookup code (**Lookups** page, **System Defined** selected) is one on which Oracle FLEXCUBE Lending and Leasing processing is dependent. Without this lookup code, the process produces incorrect results or fails.

A *user-defined lookup code* (**Lookups** page, **System Defined** cleared) is one that can be defined or altered by a user.

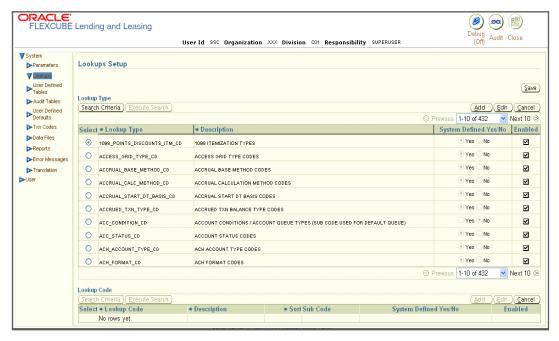

WARNING: System-defined lookup types are those that are required by Oracle FLEX-CUBE Lending and Leasing. Their related lookup codes will also be system defined. If you update and save a system-defined lookup type as a user-defined-lookup type (that is, change the System Defined button from Yes to a No in the Lookup Type sub page), Oracle FLEXCUBE Lending and Leasing will not allow you to change the lookup type back to system-defined in the future.

Note: Lookup codes cannot be deleted, as they may have been used in the past, and the display and processing of that data is still dependent on the existing setup.

Typically, the Oracle FLEXCUBE Lending and Leasing Administrator would modify the descriptions of lookup codes and add new lookup codes to the existing lookup types as needed.

To set up the lookups

- On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Administration bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Lookups**.

4 In the **Lookups Setup** page's **Lookup Types** section, select the record you want to work

with.

Note: If you choose, use **Search Criteria** to limit the display of lookup type records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Lookup Types** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Lookup Type	Enter the lookup type (required).
Description	Enter the description for the lookup type (required).
System Defined Yes/No	If selected, the lookup type is system defined.
Enabled	Select to enable the lookup type.

6 In the **Lookup Codes** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of lookup code records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- In the **Lookup Codes** section, enter, view, or edit the following for the individual values that a field or process using the related lookup type may have:

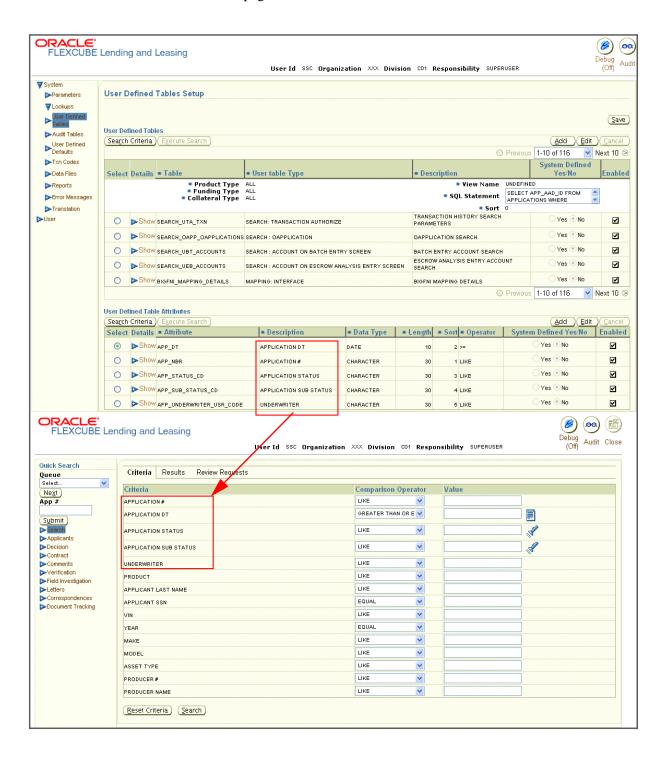

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Lookup Code	Enter the lookup code. These are solely dependent on the function of the Lookup Type (required).
Description	Enter the lookup code description. This may be changed as required by your business (required).
Sort	Enter the sort order for the lookup code. This determines the order these lookup codes are displayed or processed (required).
Sub Code	Enter the sub code for the lookup code (optional).
System Defined Yes/No	If selected, the lookup code is system defined. System defined lookup codes cannot be modified, other than to change the Description or Sort fields. If cleared, the lookup type is not system defined and the code can be modified.
Enabled	Select to enable the lookup code.

8 Click **Save** on the Lookups Setup page.

User Defined Tables link (User Defined Tables Setup page)

The User Defined Tables Setup page allows you to maintain user-defined tables, such as the data attributes Oracle FLEXCUBE Lending and Leasing uses on its Search pages.

In the following example, the list of attributes in the Criteria column is supplied from the User Defined Tables page.

To set up a user-defined table, you must:

- 1. Define the fields on the table.
- 2. Join the related tables.
- 3. Assign the table a lookup type.

You can create tables for different product, funding, and collateral types.

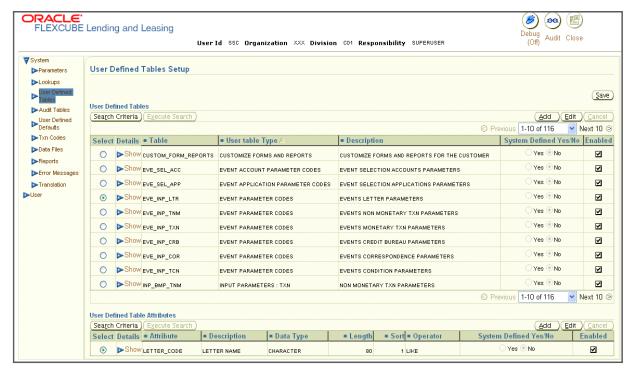

After creating the user-defined tables, Oracle FLEXCUBE Lending and Leasing sorts the attributes to make using the system more efficient. These details are used with different functions of Oracle FLEXCUBE Lending and Leasing, including:

- Searching of applications
- Tracking of follow-up items
- Creating details in bankruptcy, foreclosure/repossession, and deficiency

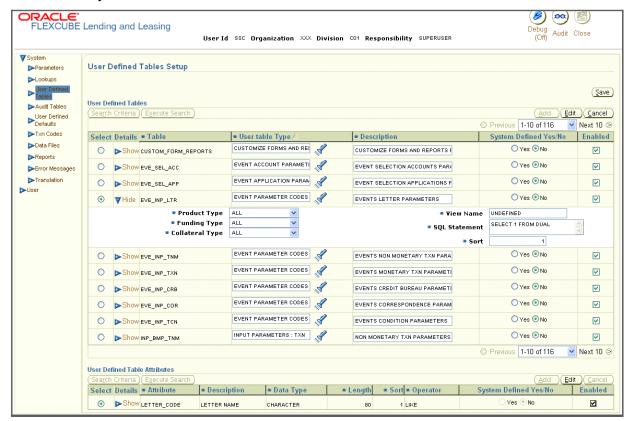

Note: Many of these tables, (ASSET TRACKING ATTRIBUTES for example) may be configured during the initial setup of the application to provide for your specific business needs. Others, such as APPLICATION SEARCH, may be changed whenever your business needs change. Still others should not be changed without consulting Oracle Financial Services Software, as changing them would require changes to existing code for the expected results to be implemented. As a rule of thumb, it is better to add or disable information on the User Defined Tables page than to edit existing entries.

To set up the user defined tables

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **User Defined Tables**.

4 In the User Defined Table Setup page's **User Defined Tables** section, select the record you want to work with and click **Show** in the **Details** column.

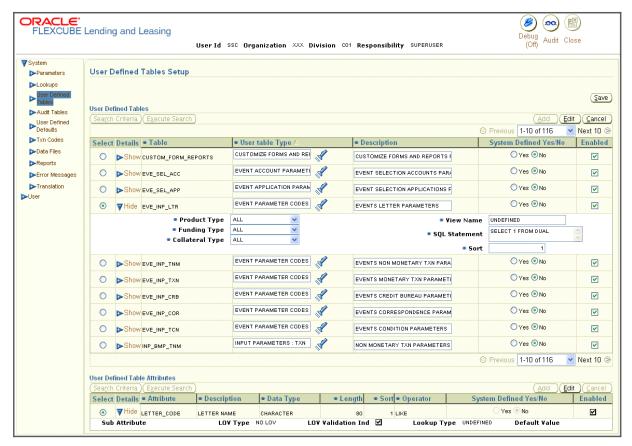

Note: If you choose, use **Search Criteria** to limit the display of user defined tables records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **User Defined Tables** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Table	Enter the user-defined table name (required).
User Table Type	Select the user-defined table type. This determines where and how the related data is being used (required).
Description	Enter the description for user-defined table (required).
System Defined Yes/NO	If selected, the entry is system defined. System defined entries cannot be modified. If cleared, the entry is not system defined and it can be modified.
Enabled	Select to enable the user-defined table (optional).
Product Type	Select the product type as loan (required).
Funding Type	Select the funding type associated with the user-defined table (required).
Collateral Type	Select the collateral type associated with the user-defined table (required).
View Name	Enter the view name (required).

6 In the **User Defined Table Attributes** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of user defined table attribute records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 On the **User Defined Table Attributes** sub page, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Attribute	Enter the user-defined table attribute (required).
Description	Enter the description for the user-defined table attribute (required).
Data Type	Select the data type for the attribute (CHARACTER, NUMBER, or DATE) (required).
Length	Enter the maximum length of the user-defined table attribute (required).
Sort	Enter the sort order of the user-defined table attribute. If the sort order is changed it will only affect new instances

of the User Defined Table, and will not affect existing

data (required).

Operator Select the operator for the user-defined table attribute

(required).

System Defined Yes/No If selected, the entry is system defined. System defined

entries cannot be modified. If cleared, the entry is not

system defined and it can be modified.

Enabled Select to enable the user-defined table attribute so the

attribute will be considered when creating new instances

of the User Defined Table (optional).

Sub Attribute Enter the sub-attribute for the attribute (sub attributes are

used to associate related attributes) (optional).

LOV Type Select the list of value (LOV) type for the user-defined

table attribute (optional).

LOV Validation Ind Select to enable LOV validation of the user-defined table

attribute (This indicates whether the data must come

from the LOV) (optional).

Lookup Types Enter the lookup type of the LOV associated with the

user-defined table attribute (optional).

Default Value Enter the default value for the user-defined table attribute

(optional).

8 Click **Save** on the User Defined Tables Setup page.

Audit Tables link (Audit Tables Setup page)

Oracle FLEXCUBE Lending and Leasing allows you to track changes in the database during origination. This includes the tracking of:

- Application status history
- Audit history of specified fields

The Audit Tables Setup page records the tables and columns requiring an audit. Oracle FLEXCUBE Lending and Leasing stores the following details for the fields you want to audit for changes:

- Current value in field
- New value field
- Oracle FLEXCUBE Lending and Leasing user who changed the field's content
- Date and time when the change was made

IMPORTANT: Oracle Financial Services Software recommends that only a database administrator perform the following steps.

To set up the audit tables

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Audit Tables**.

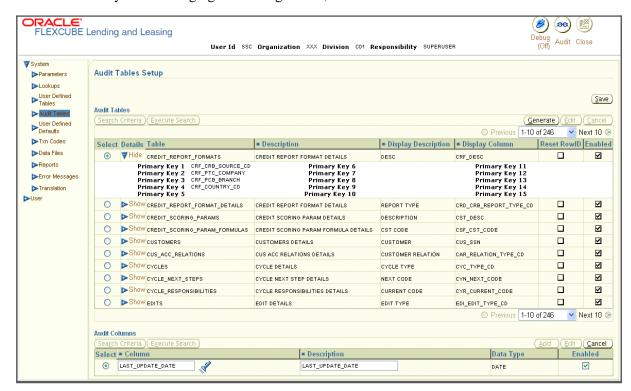

4 In the **Audit Tables Setup** page's **Audit Tables** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of audit table records.

• If you are entering a new record, click **Add**.

• If you are changing an existing record, click **Edit**.

In the **Audit Tables** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Table	View the table name on which audit trigger needs to be
	created (Oracle FLEXCUBE Lending and Leasing table
	being audited) (display only).
Description	Enter the table description (required).
Display Description	Enter the column description to be displayed on audit screen (required).
Display Column	Enter the table column to be displayed on audit screen
	(required).
Reset Row Id	Select to allow resetting the row identifier.
Enabled	Select to enable the audit table so it will be considered
	when generating the database triggers.
Primary Key 1 (unlabeled)	View the table primary key column 1 (These columns
	define how to access the data in the table) (display only).
Primary Key 2 (unlabeled)	View the table primary key column 2 (display only).
Primary Key 3 (unlabeled)	View the table primary key column 3 (display only).
Primary Key 4 (unlabeled)	View the table primary key column 4 (display only).
Primary Key 5 (unlabeled)	View the table primary key column 5 (display only).
Primary Key 6 (unlabeled)	View the table primary key column 6 (display only).
Primary Key 7 (unlabeled)	View the table primary key column 7 (display only).
Primary Key 8 (unlabeled)	View the table primary key column 8 (display only).
Primary Key 9 (unlabeled)	View the table primary key column 9 (display only).
Primary Key 10 (unlabeled)	View the table primary key column 10 (display only).
Primary Key 11 (unlabeled)	View the table primary key column 11 (display only).
Primary Key 12 (unlabeled)	View the table primary key column 12 (display only).
Primary Key 13 (unlabeled)	View the table primary key column 13 (display only).

Primary Key 14 (unlabeled)	View the table primary key column 14 (display only).
Primary Key 15 (unlabeled)	View the table primary key column 15 (display only).

6 In the **Audit Columns** section, select the record you want to work with.

Note: If you choose, use **Filter By** or **Advance Search** to limit the display of audit table column records. If you are entering a new record, click **Add Row**.

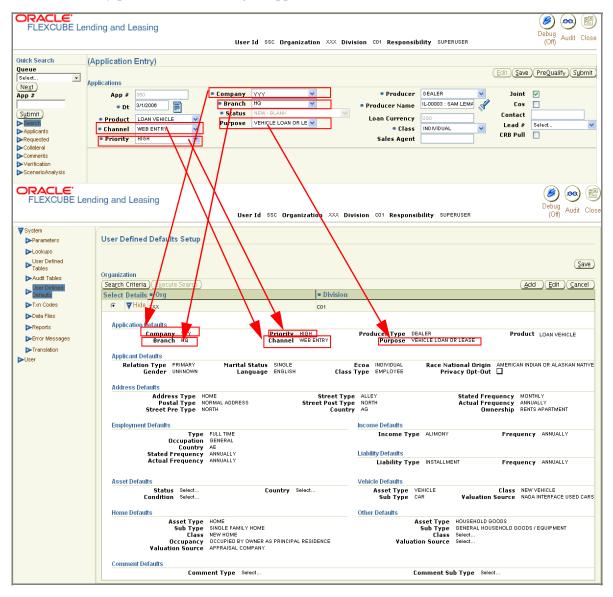

7 In the **Audit Tables Columns** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Column	Enter the column name on which the audit needs to be
	created (column in the table that is being audited)
	(required).
Description	Enter the column description (description of the data con-
	tained in the column) (required).
Data Type	View the data type for the attribute (required).
Enabled	Select to enable the audit column.

8 Click **Save** on the Audit Tables Setup page.

User Defined Defaults link (User Defined Defaults Setup page)

The User Defined Defaults Setup page allows you to set up default values to automatically populate in frequently used fields on the Application Entry page. This streamlines the data entry process when entering an application.

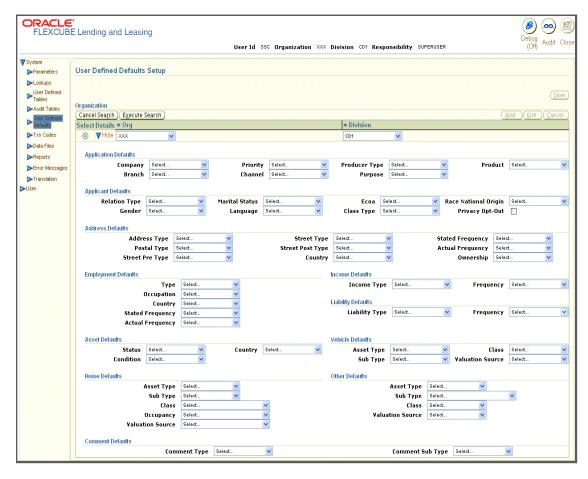

To set up the user defined defaults

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **User Defined Defaults**.

4 In the **User Defined Defaults Setup** page's **Organization** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of user defined default records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Organization** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Org	Select the organization for which these defaults are applicable (required).
Division	Select the division for which these defaults are applicable (required).

6 In the **Application Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Company	Select the company (optional).
Branch	Select the branch (optional).
Priority	Select the priority (optional).
Channel	Select the channel (optional).
Producer Type	Select the producer type (optional).
Purpose	Select the purpose (optional).
Product	Select the product (optional).

7. In the **Applicant Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Relation Type	Select the applicant relation type (optional).
Gender	Select the applicant gender (optional).
Marital Status	Select the applicant marital status (optional).
Language	Select the applicant language (optional).
Ecoa	Select the applicant ecoa (optional).
Class Type	Select the applicant class type (optional).
Race National Origin	Select the applicant race or national origin (optional).
Privacy Opt-Out	Select the check box to indicate that the applicant has
	elected to refrain from the non-public sharing of informa-
	tion (optional).

8 In the **Address Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Address Type	Select the address type (optional).
Postal Type	Select the postal address type (optional).
Street Pre Type	Select the street pre type (optional).
Street Type	Select the street type (optional).
Street Post Type	Select the street post type (optional).
Country	Select the country (optional).
State Frequency	Select the stated frequency (optional).
Actual Frequency	Select the actual frequency (optional).
Ownership	Select the ownership type (optional).

In the **Employment Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Туре	Select the employment type (optional).
Occupation	Select the occupation (optional).
Country	Select the country (optional).
Stated Frequency	Select the stated frequency (optional).
Actual Frequency	Select the actual frequency (optional).

10 In the **Income Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Income Type Frequency	Select the income type (optional). Select the frequency (optional).

11 In the **Liability Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Liability Type Frequency	Select the liability type (optional). Select the frequency (optional).

12 In the **Asset Defaults** section, enter, view, or edit the following information:

In this field:	Do this:	
Status	Select the asset status (optional).	
Condition	Select the asset condition (optional).	
Country	Select the country (optional).	

13 In the **Vehicle Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Asset Type	Select asset type (optional).
Sub Type	Select asset sub type (optional).
Asset Class	Select the asset class (optional).
Valuation Source	Select the asset valuation source (optional).

14 In the **Home Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Asset Type	Select asset type (optional).
Sub Type	Select asset sub type (optional).
Class	Select the asset class (optional).
Occupancy	Select the occupancy type (optional).
Valuation Source	Select the asset valuation source (optional).

15 In the **Other Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Asset Type	Select asset type (optional).
Sub Type	Select asset sub type (optional).
Class	Select the asset class (optional).
Valuation Source	Select the asset valuation source (optional).

16 In the **Comment Defaults** section, enter, view, or edit the following information:

In this field:	Do this:
Comment Type	Select the comment type (optional).
Comment Sub Type	Select the comment sub type (optional).

17 Click **Save** on the User Defined Defaults Setup page.

Txn Codes link (Transaction Codes Setup page)

Oracle FLEXCUBE Lending and Leasing uses transaction codes to define the actions and tasks it can perform; for example, defining itemization, menu items, setting up lock and unlock, and generating reports. The Transaction Codes Setup page catalogs and defines these core Oracle FLEXCUBE Lending and Leasing actions.

Oracle FLEXCUBE Lending and Leasing organizes transaction codes in "super groups." All transaction codes within a particular super group are processed in a similar manner. The transaction super groups in Oracle FLEXCUBE Lending and Leasing are as follows:

Super Group Type:	Description:
ITEMIZATION TXN	These transaction codes affect the itemization of applications within Oracle FLEXCUBE Lending and Leasing.
MENU TXN	These transaction codes affect the menus within Oracle FLEXCUBE Lending and Leasing.
REPORTS	These transaction codes are related to generating Oracle FLEXCUBE Lending and Leasing reports.
SETUP LOCK/UNLOCK	These transaction codes limit a user's ability to change the existing setup data, even if they are allowed access to the form, by restricting access to the Lock/Unlock Record icon on the Oracle FLEXCUBE Lending and Leasing tool bar.

The Transaction Codes Setup page records the following about each transaction in a super group.

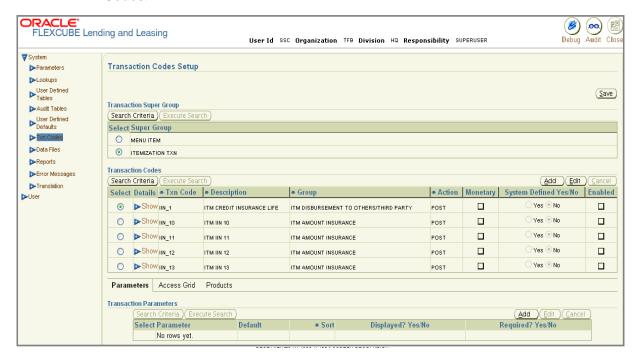

- Does Oracle FLEXCUBE Lending and Leasing complete the transaction in real time or later as a batch process?
- Is the transaction in use (enabled)?

Three sub pages, Transaction Parameters, Access Grid, and Transaction Product Definition, record any additional information required to perform a transaction, the user types that can perform the transaction, and the product type to which the transaction codes apply.

NOTE: Oracle Financial Services Software recommends that you lock the setup data and also restrict the access to the seed data once you are in production.

To set up the transaction codes

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Txn Codes**.

4 On the **Transaction Codes Setup** page's **Transaction Super Group** section, select the Super Group you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of transaction super group records.

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Super Group	Select the Super Group you want to work with in the Transaction Codes page.

5 In the **Transaction Codes** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of transaction codes records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 6 In the **Transaction Codes** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Txn Code	Enter the transaction code (required).
Description	Enter the description for the transaction (required).

Group Select the transaction group (the group within the Trans-

action Super Group that the transaction code belongs to)

(required).

Action Select the action type code for the transaction (what

action will take place when the transaction occurs)

(required).

Monetary Select if the transaction is a monetary transaction, clear if

the transaction is nonmonetary.

System Defined Yes/No If selected, the entry is system defined. System defined

entries cannot be modified. If cleared, the entry is not

system defined and it can be modified.

Enabled Select to enable the transaction.

Txn/Bal Type Select the transaction / balance type affected by the

Transaction (required).

Statement Txn Type Select the statement transaction type (how the transaction

should appear on the customer statement) (required).

Batch Select if the transaction is to be performed in a batch pro-

cess.

Manual Select if the transaction is a manual transaction. If you

define a transaction as manual, Oracle Financial Services Software recommends that the transaction that reverses it

also be defined as manual.

Stmt Print Select if the transaction is to be printed on customer

statements.

GL Select if the transaction is a general ledger transaction.

7 Click **Save** on the Transaction Super Group page.

Transaction Codes Setup sub pages

The Transaction Codes page contains three sub pages: **Parameters**, **Access Grid**, and **Products**.

IMPORTANT: Please contact your Implementation Manager before making any changes in these sub pages.

Parameters sub page

The Parameters sub page allows you to define the parameter information for the associated transaction. The Parameters sub page applies exclusively to these super groups:

- ITEMIZATION TXN
- MENU TXN
- REPORTS
- SETUP LOCK/UNLOCK

CAUTION: Treat the Transaction Parameters sub page as containing view-only information. This is very sensitive data and you should not change it without consulting Oracle Financial Services Software.

To set up the parameters

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Administration bar link.
- 3 In the Administration window's link bar, click the **System** drop-down link, then click **Txn Codes**.
- 4 On the **Transaction Super Group** page, select the Super Group you want to work with.
- 5 On the **Transaction Codes** page, select the record you want to work with.
- 6 Click the **Parameters** sub tab below the Transaction Codes Setup page.
- 7 In the **Parameters** sub page's **Transaction Parameters** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of transaction parameter records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 In the **Transaction Parameters** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Parameter	Select the parameter for the transaction code chosen above (required).
Default	Enter the default value for the transaction parameter (value to initially populate, or used if no value is supplied) (optional).
Sort	Enter the sort order for the transaction parameter (required).
Displayed? Yes/No	Select if the parameter is displayed (in current use).
Required? Yes/No	Select if the parameter is required. (You must select Required as empty values are not allowed).

9 Click **Save** on the Transaction Codes Setup page.

Access Grid sub page

The Access Grid sub page allows you to control access to each transaction according to user responsibility, account status, and account condition. It allows the administrator to control when these transactions may be conducted. Normally, you would create or modify the access based on either the user responsibility or account condition. Account status access is left unchanged.

To set up the access grid

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **System** drop-down link, then click **Txn Codes**.
- 4 On the **Transaction Super Group** page, select the Super Group you want to work with.

- On the **Transaction Codes** page, select the record you want to work with and click **Show** in the **Details** column.
- 6 Click the Access Grid sub tab.

7 In the Access Grid sub page's Transaction User Access Definition section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of transaction user access definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 In the **Transaction User Access Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Access Type	Select the access grid function type (ACCOUNT CONDI-
	TION, ACCOUNT STATUS, CHECKER RESPONSIBILITY,
	and RESPONSIBILITY) that is being used to control the
	creation of the associated transaction (required).
Access Value	Select the access function grid value (based on a lookup
	associated with the Access Type. Multiple entries for
	each access type may be created as long as each has a dif-
	ferent access value) (required).
Allowed? Yes/No	Select if the access is allowed (indicates whether the cur-
	rent Access Type / Access Value may create the associ-
	ated transaction).
System Defined Yes/No	If selected, the entry is system defined. System defined entries cannot be modified. If cleared, the entry is not
	system defined and it can be modified.

9 Click **Save** on the Transaction Codes Setup page.

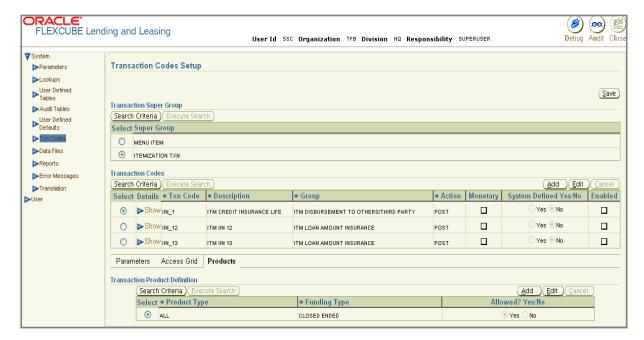

Products sub page

The Products sub page allows you to define the products to which the transaction codes apply. It allows the administrator to control if the associated transaction code will be available for use for specific product types and or funding types.

Normally, an Access Value of ALL is defined for one or more Access Types with a given Allowed value. Additional Access Values are then defined for the same Access Types with the opposite Allowed value. This controls access to the associated transaction.

To set up the products

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **System** drop-down link, then click **Txn Codes**.
- 4 On the **Transaction Super Group** page, select the Super Group you want to work with.
- 5 On the **Transaction Codes** page, select the record you want to work with.
- 6 Click the **Products** sub tab.

In the **Products** sub page's **Transaction Product Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of transaction product definition records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click Edit.

8 In the **Transaction Product Definition** section, enter, view, or edit the following information:

In this field:	Do this:	
Select	If selected, indicates that this is the current record.	
Product Type	Select the product type as loan.	
Funding Type	Select the funding type associated with the transaction code chosen above.	
Allowed? Yes/No	Select if the transaction is allowed (indicates whether the current Access Type / Access Value may create the associated transaction).	

9 Click **Save** on the Transaction Codes Setup page.

Data Files link (Data File Setup page)

The Data Files Setup page organizes information pertaining to the various output data files that Oracle FLEXCUBE Lending and Leasing can generate. Oracle FLEXCUBE Lending and Leasing uses the Data Files Setup page to outline the file layouts of each data file produced within the system, including the length and data type of each column name.

These files are typically produced during the nightly process.

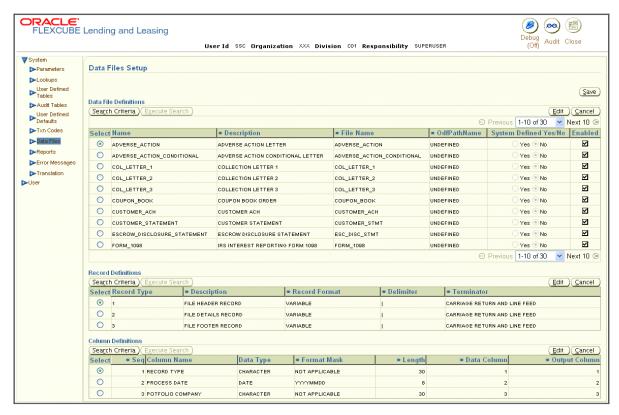

One major advantage for the system-defined data files is the format mask of each column name within each data file. A format mask is like a stencil that forces data input to be of the same format before accepting the data.

You can change the order in which the fields are displayed in the file.

Note: Any addition or removal of a field or change in the data type length requires Oracle Financial Services Software involvement.

To set up the data files

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Administration bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Data Files**.

4 In the **Data Files Setup** page's the **Data Files Definitions** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of data file definitions records.

• If you are changing an existing record, click **Edit**.

Note: The Data File Definitions section defines specific data files. Each is associated with a specific Output Data Definition (ODD) batch job that gathers the data the file will contain. While new data file definitions may be created they will have no use unless a batch job is also created to populate the data.

5 In the **Data Files Definitions** section, view or edit the following information:

Do this:
If selected, indicates this is the current record.
Enter data file type (name of data file definition) (required).
Enter data file description (required).
Enter data file name. Prefix used for files generated for
this Data File. This is the only field on the Data File Def-
initions page that can or should be modified by your
Administrator. The generated file name will be in the
form of <file name="">_<company id="">_<branch< td=""></branch<></company></file>
ID>_ <mmddyyyy>_<process id="">.DAT. The inclu-</process></mmddyyyy>
sion of _ <company id=""> and _<branch id=""> depends</branch></company>
entirely on the associated batch process (required).
Enter data file name (required).
If selected, the entry is system defined. System defined entries cannot be modified. If cleared, the entry is not system defined and it can be modified.
Select to enable the data file definition.

Each data file definition is made up of one or more record definitions. These define organization of the data. The associated batch file determines how these records are used. The order in which the data is populated determines the order in which those records will appear in the output file. This is generally related to the order the records appear in the Data File Definition section.

6 In the **Record Definitions** section, select the record you want to work with.

Note: If you choose, use Search Criteria to limit the display of record definition records.

- If you are changing an existing record, click Edit.
- 7 In the **Record Definitions** section, enter, view, or edit the following information:

In this field:	Do this:		
Select	If selected, indicates this is the current record.		
Record Type	Enter the type of record being defined (required).		
Description	Enter record description (required).		
Record Format	Select the format of output data (FIXED, VARIABLE) (required).		
Delimiter	Enter the delimiter (column separator used with VARI-ABLE format) (required).		

Terminator Select the record terminator code (how the end of each

record is indicated within the file -- CARRIAGE
RETURN, LINE FEED, or CARRIAGE RETURN AND

LINE FEED) (required).

Each record definition is made up of one or more column definitions. These define the output of the data. Much of this data is informational; it indicates what data is being provided by the associated batch job. Unless otherwise noted, the data should not be changed without changing the associated batch job.

8 In the **Column Definitions** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of column definition records.

- If you are changing an existing record, click **Edit**.
- 9 In the **Column Definitions** section, view or edit the following information:

In this field:	Do this:
Select Seq	If selected, indicates that this is the current record. Enter the order in which the output data dump will process the column information (required).
Column Name	Enter name/description of the column (informational only) (required).
Data Type	Select the data type. This describes the type of data the column is expected to contain (CHARACTER, DATE, or NUMBER). This effects how the ODD process handles the data, and should not be changed (display only).
Format Mask	Select the format mask for the column. For DATE or NUMBER columns, this field defines the output format of the data. For example; Date fields may be entered using the MM/DD/YYYY format, Number fields may be entered as decimal numbers with varying degrees of precision. Other formats for each data type are available (required).
Length	Enter the column length (the maximum number of characters of the output data to be included in the output file). Each output data details column may contain up to 240 characters of data. If the output data details column contains more data than the length value the data will be truncated. For VARIABLE records the length should be set to "-1" or a Delimited file will be created with FIXED LENGTH columns (required).
Data Column	Enter the data column sequence. This is the column that will be used to select the data that is being output. This should not be changed (required).
Output Column	Enter the output column sequence. This is the column that will appear in Output File. The Output Data Dump process allows for the output of 250 columns of data per record. No output column should be repeated in the setup for a record (required).

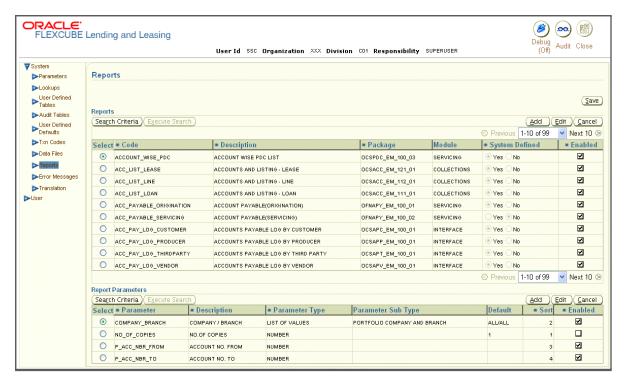

10 Click **Save** on the Data File Setup page.

Reports link (Reports page)

The Reports page allows you to setup reports in Oracle FLEXCUBE Lending and Leasing.

To set up the reports

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Reports**.

4 In the **Reports** page's **Reports** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of report records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- In the **Reports** section, enter, view, or edit the following information:

In this field:	Do this:	
Select	If selected, indicates that this is the current record.	
Code	Select the code of the report (required).	
Description	Enter the description of the report (required).	
Package	Select the code of the report (required).	
Module	Select the code of the report (required).	

System Defined Yes/No	If selected, the entry is system defined. System defined
	entries cannot be modified. If cleared, the entry is not
	system defined and it can be modified.
Enabled	Select to enable the report definition.

6 In the **Report Parameter** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of report parameter records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Reports Parameters** section, enter, view, or edit the following information:

In this field:	Do this:	
Select	If selected, indicates that this is the current record.	
Parameter	Select the code of the report (required).	
Description	Enter the description of the report (required).	
Paramter Type	Select the parameter type of the report (required).	
Parameter Sub Type	Select the parameter sub type of the report (required).	
Default	Enter the default value for the report parameter (value to	
	initially populate, or used if no value is supplied) (optional).	
Sort	Enter the sort order for the lookup code. This determines	
	the order these report parameters are displayed or pro-	
	cessed (required).	
Enabled	Select to enable the report definition.	

8 Click **Save** on the Reports page.

Error Messages link (Error Messages Setup page)

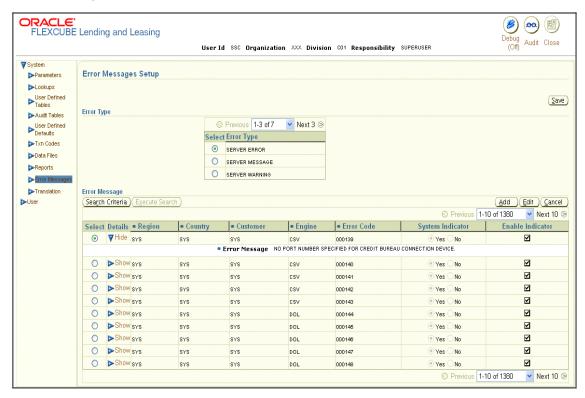

With the Error Messages Setup page, you can translate or modify the text of error messages. Oracle FLEXCUBE Lending and Leasing displays all messages as they appear to Oracle FLEXCUBE Lending and Leasing users in the Error Message section's Message field.

New messages created with the Error Messages page can then be translated with the Translation tab's Message Translation page.

To set up the error messages

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Administration bar link.
- 3 In the Administration window's link bar, click the **System** drop-down link, then click Error Messages.
- 4 On the Error Messages Setup page's Error Type section, use the Error Type field to select the error type. These are the categories of error messages available for creating or editing.

The error messages associated with the error type you selected appear in the Error Message section.

In the **Error Messages** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of error message records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 6 In the **Error Messages** section, enter, view, or edit the following information:

In this field:	Do this:	
Select	If selected, indicates that this is the current record.	
Region	Enter the region code (required).	
Country	Enter the country code (required).	
Customer	Enter the customer code (required).	
Engine	Enter the engine code (required).	
Error Code	Enter the error code (required).	
System Defined	Displays whether or not the record is system defined.	
Enabled Indicator	Select to enable the data error message.	
Error Message	Enter the error message (required).	

7 Click **Save** on the Error Messages Setup page.

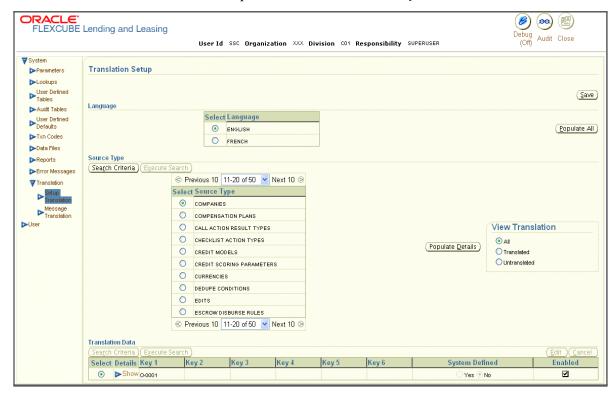

Translation link > Setup Translation link (Translation Setup page)

With the Setup Translation link's Administration page, you can translate the contents of a predefined list of setup description fields into a different language.

After you translate an entry in the Translation Data section, Oracle FLEXCUBE Lending and Leasing adds the new data to the setup form.

To set up the translation

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Administration bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Translation**.
- 4 Click the **Translation** drop-down link, then click **Setup Translation**.

5 In the **Translation Setup** page's **Language** section, select the language for which the translation needs to be done.

Note: For more information, see **Language setup** at the end of this chapter.

6 In the **Source Type** section, select the source (or location in Oracle FLEXCUBE Lending and Leasing) of the item you want to translate.

Note: If you choose, use **Search Criteria** to limit the display of source type records.

- 7 In the **View Translation** section, click:
- All to view all the records (both translated and un-translated) in the Translation Data section.

-or-

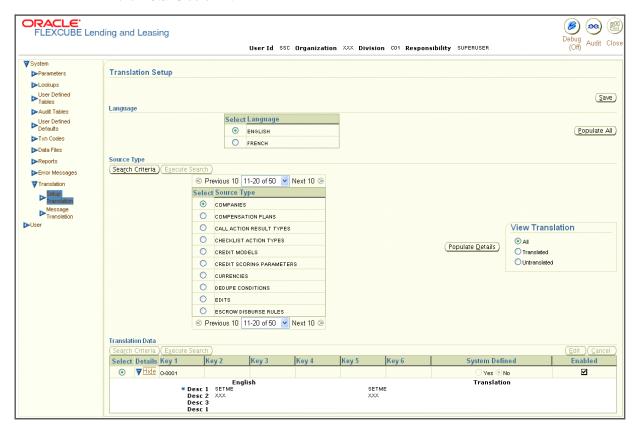

- **Translated** to view all the translated records in the Translation Data section.
 -or-
- **Un Translated** to view all the un-translated records in the Translation Data section.
- 8 Click **Populate Details** in the **Source Type** section and Oracle FLEXCUBE Lending and Leasing loads the setup data descriptions in the Translation section page for the source type in the Source Type section.

Note: If new records are added to setup (for example, new pricing strings added to the Pricing page), the next time you click **Populate Details** in the Source Type section, the new records (in this case, the new pricing strings) appear in the Translation Data section. These new entries have no impact on the previously translated data, they simply appear as additional entries available for translation.

The next time you click **Populate Details** in the View Translation section, the new entry appears in the Translation Data section with no impact to the previously translated data.

If you are unsure as to which setup items have been updated since the last translation, clicking Populate All loads the additional data for all items with no impact to the previously translated data for any of the entries.

9 In the **Translation Data** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use Search Criteria to limit the display of records.

10 Click **Edit** in the **Translation Data** section and edit the selected record with the following information:

In this field:	Do this:	
Select	If selected, indicates that this is the current record.	
Key 1	View the first reference key value (display only).	
Key 2	View the second reference key value (display only).	
Key 3	View the third reference key value (display only).	
Key 4	View the fourth reference key value (display only).	
Key 5	View the fifth reference key value (display only).	
Key 6	View the sixth reference key value (display only).	
System Defined	Displays whether or not the record is system defined.	
Enabled	If selected, indicates the record is active.	
Desc 1 (English)	View the first English description (display only).	
Desc 2 (English)	View the second English description (display only).	
Desc 3 (English)	View the third English description (display only).	
Desc 4 (English)	View the fourth English description (display only).	
Desc 1 (Translation)	Enter the first translated description (required).	
Desc 2 (Translation)	Enter the second translated description (optional).	
Desc 3 (Translation)	Enter the third translated description (optional).	
Desc 4 (Translation)	Enter the fourth translated description (optional).	

11 Click **Save** on the Translation Setup page.

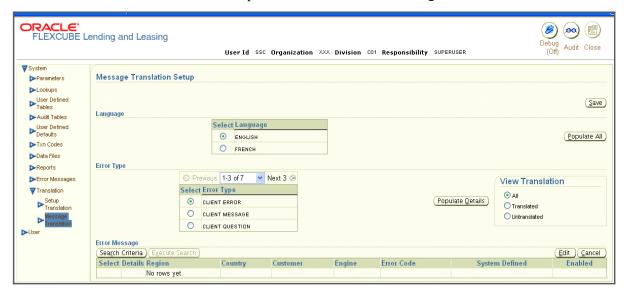

Translation link > Message Translation link (Message Translation Setup page)

With the Message Translation link's Administration page, you can translate the contents of a predefined list of error messages into a different language.

After you translate an entry in the Error Message section, Oracle FLEXCUBE Lending and Leasing adds the new data to the error message.

To set up the message translation

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **System** drop-down link, then click **Translation**.
- 4 Click the **Translation** drop-down link, then click **Message Translation**.

5 In the **Message Translation Setup** page's **Language** section, select the language for which the translation needs to be done.

Note: For more information, see **Language setup** at the end of this chapter.

- 6 In the **Error Type** section's Error Type field, select the type of error message you want to translate.
- 7 In the **View Translation** section, click:
- All to view all the records (both translated and un-translated) in the Error Message section.
 -or-
- **Translated** to view all the translated records in the Error Message section.
- Untranslated to view all the un-translated records in the Error Message section.
- 8 Click **Populate Details** in the **Error Type** section and Oracle FLEXCUBE Lending and

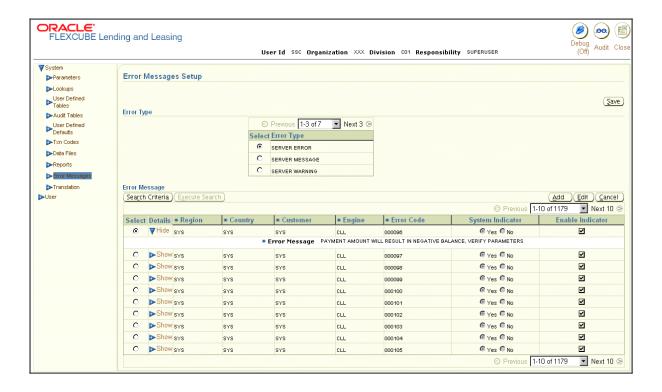

Leasing loads the error messages in the Error Message section for the selected error type in the Error Type section.

Note: If new error messages are added to setup, the next time you click **Populate Details** in the Error Type section, the new records appear in the Error Message section. These new entries have no impact on the previously translated data, they simply appear as additional entries available for translation.

The next time you click **Populate Details** in the Source Type section, the new entry appears in the Translation Data section with no impact to the previously translated data.

If you are unsure as to which error messages have been updated since the last translation, clicking **Populate All loads** the additional data for all items with no impact to the previously translated data for any of the entries.

9 In the **Error Message** section, select the record you want to modify and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of records.

10 Click **Edit**.in the **Error Message** section and edit the selected record with the following information:

In this field:	Do this:	
Select	If selected, indicates that this is the current record.	
Region	View the region code (display only).	
Country	View the country code (display only).	
Customer	View the customer code (display only).	
Engine	View the engine name (display only).	
Error Code	View the error code (display only).	
System Defined	Displays whether or not the record is system defined.	
Enabled	If selected, indicates the record is active.	
Message (English)	View the error message (display only).	
Message (Translation)	Enter the translated description (required).	

11 Click **Save** on the Message Translation Setup page.

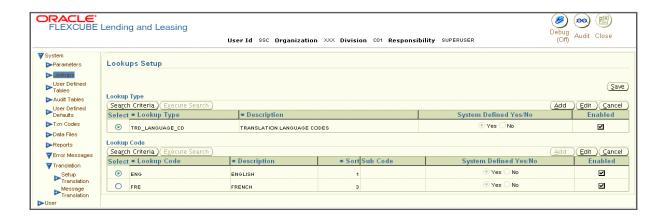

Language setup

On the Lookup master tab's Lookup Types page, you can add other languages to the TRD_LANGUAGE_CD lookup type and perform translations for those languages.

However, translated data only appears in one language, which is defined by the User Language parameter. This parameter can be defined in a Oracle FLEXCUBE Lending and Leasing configuration file, typically named DBKWEB.CFG, which defines the parameter as:

Parameter: otherparams=ORA_USER=<schema_name> USR_LANG=<native language>

Note: <native language> should match lookup codes in the TRD_LANGUAGE_CD lookup type on the Administration form's Lookups page.

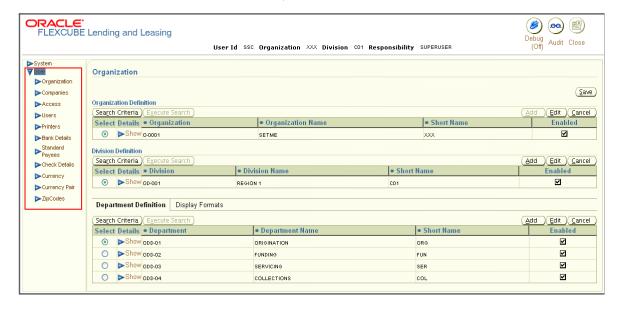

Oracle FLEXCUBE Lending and Leasing supports the following pre-defined list of setup items for translation:

- 1. Asset Sub Types
- 2. Asset Types
- 3. Assignments
- 4. Audit Table Columns
- 5. Audit Tables
- 6. Call Action Result Types
- 7. Call Action Types
- 8. Checklist Action Types
- 9. Checklist Types
- 10. Commission Plans
- 11. Companies
- 12. Company Branch Departments
- 13. Company Branches
- 14. Compensation Plans
- 15. Credit Bureau Score Reasons
- 16. Credit Models
- 17. Credit Scoring Parameters
- 18. Edits
- 19. Escrow Disburse Rules
- 20. Escrow Sub Types
- 21. Flex Table Attributes
- 22. Flex Tables
- 23. GL Transaction Types
- 24. GL Translators
- 25. Job Sets
- 26. Jobs
- 27. Lookup Codes
- 28. Lookup Types
- 29. Portfolio Companies
- 30. Portfolio Company Branches
- 31. Producers
- 32. Product Instruments
- 33. Product Insurances
- 34. Product Pricings
- 35. Products
- 36. Promotions
- 37. Spreads
- 38. Standard Correspondences
- 39. Standard Document Definitions
- 40. Standard Element Definitions
- 41. Standard Function Definitions
- 42. Transaction Codes
- 43. Error Messages
- 44. Org. Fees

CHAPTER 2: ADMINISTRATION (USER) SETUP

The Administration window's User drop-down links record setup data that define your organization structure and its users. Information on the User drop-down link is more "data" related, whereas the information stored on the System drop-down link functions more like switches that control system behavior.

The Administration link bar's User drop-down link contains the following:

- Organization
- Companies
- Access
- Users
- Printers
- Bank Details
- Standard Payees
- Check Details
- Currency
- Currency Pair
- ZipCodes

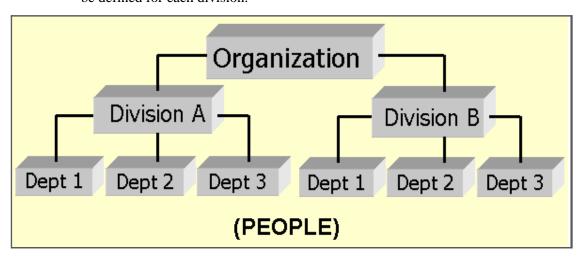

Organization link (Organization page)

The Organization page records the operational hierarchy of your business in terms of people. It groups the human resources of your business in three categories: organization, division, and department. Oracle FLEXCUBE Lending and Leasing uses this data to control who has access to which applications. (The Companies page allows you to set up where those applications are located.)

Please note that in completing the Organization page, there can be only one active organization, so use the Organization field to define your organization at its highest level.

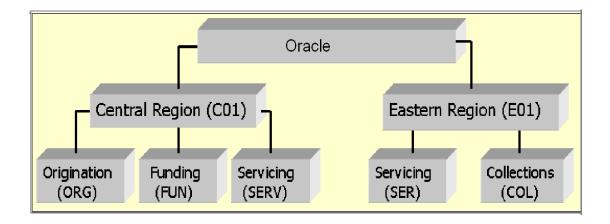

Divisions are groups within your organization that will have access to the same applications. Larger organizations often define their divisions by region. Smaller organizations may define division as branch offices or even departments, and might only have one division defined.

Departments are smaller units within a division. They expand on who is in the corresponding Division field. Oracle FLEXCUBE Lending and Leasing uses this sub page, for example, when setting up the Services page on the Utility form. At least one department must be defined for each division.

As an example of an organization setup, Oracle Corp. might be defined as:

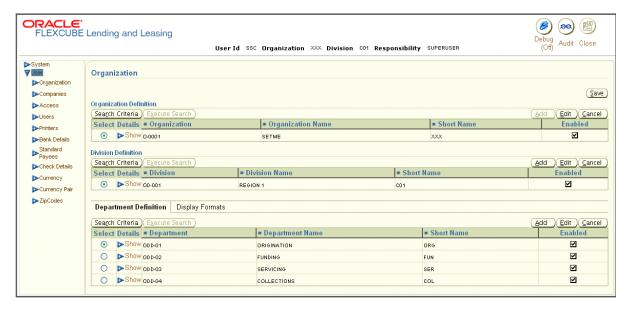

Organization:	O-0001	Oracle Corp.	ORA
Division:	OD-001	Central Region	C01
	Department: ODD-01 Department: ODD-02 Department: ODD-03	Origination Funding Servicing	ORG FUN SER
Division:	OD-002	Eastern Region	E01
	Department: ODD-11 Department: ODD-12	Servicing Collection	SER COL

Note: The Short Name field on the Organization page allows you to create the ID that Oracle FLEXCUBE Lending and Leasing will use when referring to the organization, division, and department throughout the system.

To set up the organization

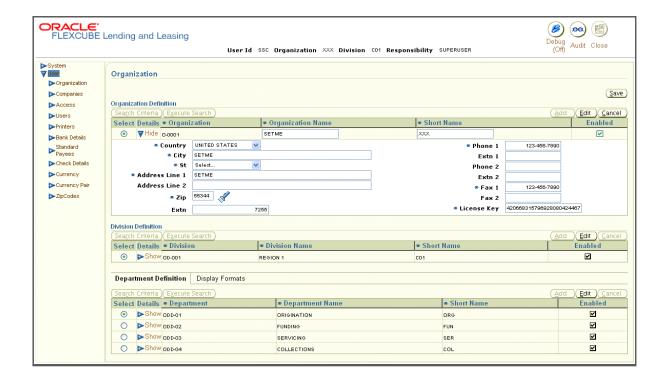

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **User** drop-down link, then click **Organization**.

In the **Organization** page's **Organization Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of organization definition records

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.

5 In the **Organization Definition** section, enter, view, or edit the following information. There can be only one active entry, so use this page to define your organization at its highest level.

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Organization	Enter the organization ID (the ID is the unique identifier
	used internally by Oracle FLEXCUBE Lending and
	Leasing to represent your organization).
	Note : Do not edit this field (required).
Organization Name	Enter the organization name (required).
Short Name	Enter the short name for the organization.
	Note: This is the ID that appears throughout Oracle
	FLEXCUBE Lending and Leasing to represent this orga-
	nization (required).
Enabled	Select to enable the organization.
	Note: Only one enabled organization is currently allowed
	by Oracle FLEXCUBE Lending and Leasing.
Country	Select the country where the organization is located
	(required).
City	Enter the city where the organization is located (required)
State	Select the state where the organization is located
	(required).
Address Line 1	Enter the address line 1 for the organization (required).
Address Line 2	Enter the address line 2 for the organization (optional).
Zip	Select the zip code where the organization is located
	(required).
Extn	Enter the zip extension where the organization is located
	(optional).

Phone 1 Enter the primary phone number for the organization (required).

Enter the phone extension for the primary phone number

(optional).

Extn 1

Phone 2 Enter the alternate phone number for the organization

(optional).

Extr 2 Enter the phone extension for the alternate phone number

(optional).

Fax 1 Enter the primary fax number for the organization

(required).

Fax 1 Enter the alternate fax number for the organization

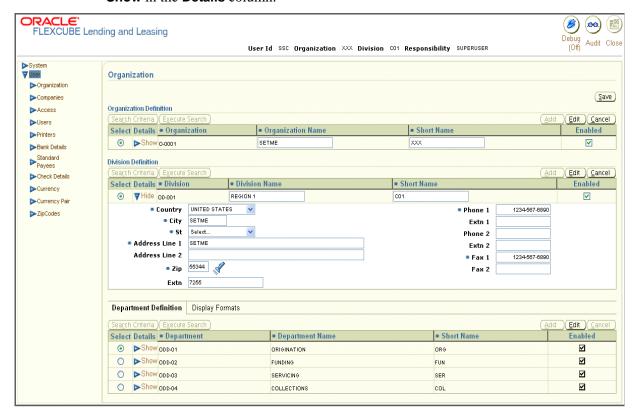

(optional).

License Key Enter software license key (unique license key for Oracle

FLEXCUBE Lending and Leasing that determines the

organization's access to the system).

6 In the **Division Definition** section, select the record you want to work with and click **Show** in the **Details** column.

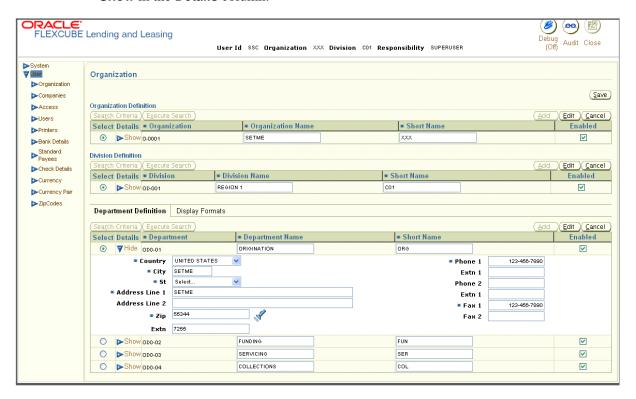

Note: If you choose, use **Search Criteria** to limit the display of division definition records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- In the **Division Definition** section, enter, view, or edit the following information for the groups within your organization that will have access to the same applications:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Division	Enter the division id. The ID is the unique identifier used
	internally by Oracle FLEXCUBE Lending and Leasing
	to represent the division within the organization.
	Note : Do not edit this field (required).
Division Name	Enter the division name (required).
Short Name	Enter the short name for the division.
	Note : This is the ID that appears throughout Oracle
	FLEXCUBE Lending and Leasing to represent this divi-
	sion (required).
Enabled	Select to enable the division.
Country	Select the country where the division is located
	(required).
City	Enter the city where the division is located (required).
State	Select the state where the division is located (required).
Address Line 1	Enter the address line 1 for the division (required).
Address Line 2 (unlabeled)	Enter the address line 2 for the division (optional).
Zip	Select the zip code where the division is located
	(required).
Extn	Enter the zip extension where the division is located
	(optional).
Phone 1	Enter the primary phone number for the division
	(required).
Extn 1	Enter the phone extension for the primary phone number
	(optional).
Phone 2	Enter the alternate phone number for the division
	(optional).
Extn 2	Enter the phone extension for the alternate phone number
	(optional).
Fax 1	Enter the primary fax number for the division (required).
Fax 2	Enter the alternate fax number for the division (optional).

8 On the **Department Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of department definition records.

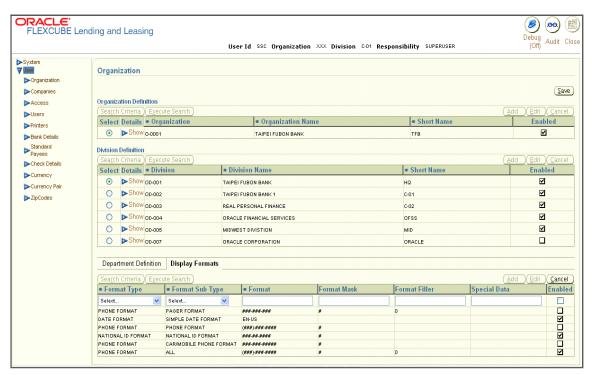

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 9 On the **Department Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Department	Enter the department ID (required).
	Note : The ID is the unique identifier used internally by
	Oracle FLEXCUBE Lending and Leasing to represent
	the department within the division.
Department Name	Enter the department name (required).
Short Name	Enter the short name for the department (required).
	Note: This is the ID that appears throughout Oracle
	FLEXCUBE Lending and Leasing to represent this
	department.
Enabled	Select to enable the department.
Country	Select the country where the department is located (required).
City	Enter the city where the department is located (required).

State	Select the state where the department is located (required).
Address Line 1	Enter the address line 1 for the department (required).
Address Line 2	Enter the address line 2 for the department (optional).
Zip	Select the zip code where the department is located (required).
Extn	Enter the zip extension where the department is located (optional).
Phone 1	Enter the primary phone number for the department (required).
Extn 1	Enter the phone extension for the primary phone number (optional).
Phone 2	Enter the alternate phone number for the department (optional).
Extn 2	Enter the phone extension for the alternate phone number (optional).
Fax 1	Enter the primary fax number for the department (required).
Fax 2	Enter the alternate fax number for the department

10 On the **Display Format** section, select the record you want to work with and click **Show** in the **Details** column.

(optional).

Note: If you choose, use **Search Criteria** to limit the display of department definition records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.

11. On the **Display Format** section, enter, view, or edit the following information:

In this field:	Do this:
Format Type	Select the type of format (required).
Format Sub Type	Select the sub type of the format (required) The format
	sub type will be displayed based on the format type selected.
Format	Select the format (required).
Format Mask	Enter the format mask (optional).
Format Filled	Enter the format filled (optional).
Special Data	Enter the special data, if any (optional).
Enabled	Select to enable the display format.

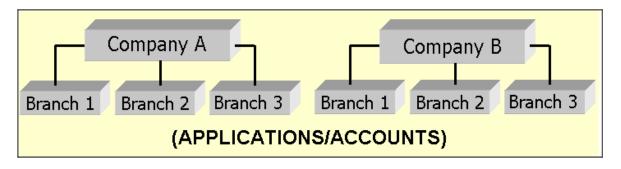

12. Click **Save** on the Organization page

Companies link (Companies page)

The Companies page records the hierarchical structure of your portfolio companies and their branches. Just as Oracle FLEXCUBE Lending and Leasing uses the Organization page to determine the location of people, it uses the information on the Companies page to determine the location of applications. In completing the Companies page, there can be more than one company, and each company can have more than one branch.

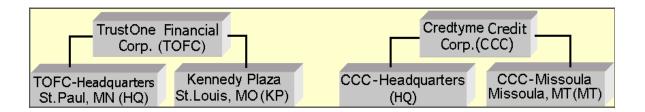

Accounting is performed at the company level. Applications can be sorted down to the branch level. For this reason, branches are set up to reflect different business practices. You would set up different branches if, for example:

- The General Ledger (GL) differs between branches
- The branches work with different accounts
- There is a difference between branches in terms of the tasks they perform

As an example of the companies setup, Oracle Corp. might have the following companies and branches defined as:

Company:	C-0001	TrustOne Financial Corp	TOFC
Branch:	CB-01	TOFC - Headquarters	HQ
Branch:	CB-02	Kennedy Plaza	KP
Company:	C-0002	Credtyme Credit Corp	CCC
Branch:	CB-11	CCC - Headquarters	HQ
Branch:	CB-12	CCC - Missoula	MT

Note: Oracle FLEXCUBE Lending and Leasing does not limit the number of companies or associated branches with the company you can enter.

Note: The Short Name field in the on the Companies page allows you to create the ID that Oracle FLEXCUBE Lending and Leasing will use when referring to the company and branch throughout the system.

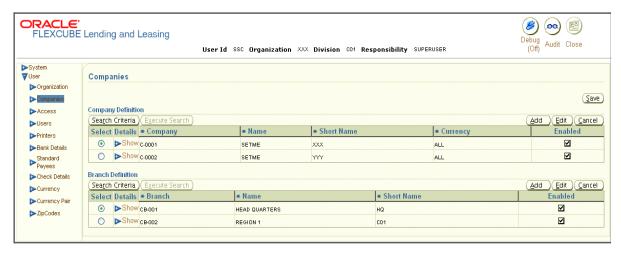

KEY CONCEPT: Note the difference between the Company page and the Organization page:

- On the **Organization** page, *Oracle FLEXCUBE Lending and Leasing users* belong to an organization, division, and department.
- On the **Companies** page, *credit applications* belong to a company and branch.

As you can see in the following Access page section, the information on the Organization and Companies pages define the operational hierarchy of your companies in terms of which Oracle FLEXCUBE Lending and Leasing users will have access to which applications.

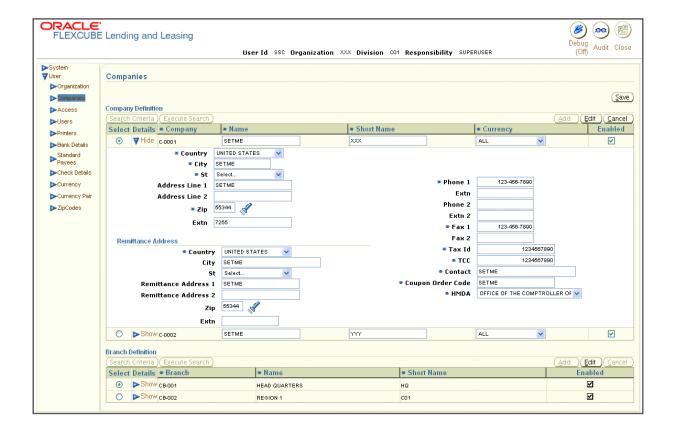

To set up the companies

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **User** drop-down link, then click **Companies**.

The **Companies** page defines entities within your organization that originate and/or service loans.

4 In the **Companies** page's **Company Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of company definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Company Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Company	Enter the portfolio company ID. (The ID is the unique
	identifier used internally by Oracle FLEXCUBE Lending
	and Leasing to represent the company) (required).
Name	Enter the name of the portfolio company (required).
Short Name	Enter the short name for the portfolio company (ID dis-
	played to represent the company) (required).
Currency	Select the currency of the portfolio company (required).
Enabled	Select to enable the portfolio company.
Country	Select the country where the portfolio company is located
	(required).
City	Enter the city where the portfolio company is located
	(required).
State	Select the state where the portfolio company is located
	(required).

Address Line 1 Enter the address line 1 for the portfolio company

(required).

Address Line 2 Enter the address line 2 for the portfolio company

(optional).

Select the zip code where the portfolio company is Zip

located (required).

Enter the zip extension where the portfolio company is Extn

located (optional).

Phone 1 Enter the primary phone number for the portfolio com-

pany (required).

Extn Enter the phone extension for the primary phone number

(optional).

Phone 2 Enter the alternate phone number for the portfolio com-

pany (optional).

Extn 2 Enter the phone extension for the alternate phone number

(optional).

Fax 1 Enter the primary fax number for the portfolio company

(required).

Enter the alternate fax number for the portfolio company Fax 2

(optional).

Tax Id Enter the tax identification number for the portfolio com-

pany (required).

TCC Enter the transmitter control code for the portfolio com-

pany (1098 Electronic Filing) (required).

Enter the contact information about the portfolio com-Contact

pany (required).

Coupon Order Code If you are using coupons, enter the coupon order code to

be used by a third party printing the coupons for billing

statements (required).

Select the HMDA agency (Home Mortgage Disclosure **HMDA**

Act reporting agency for the company) (required).

Remittance Address section

Country Select the remittance address country (required). City Enter the remittance address city (required). St Select the remittance address state (required).

Enter the remittance address line 1, which may be differ-Remittance Address 1

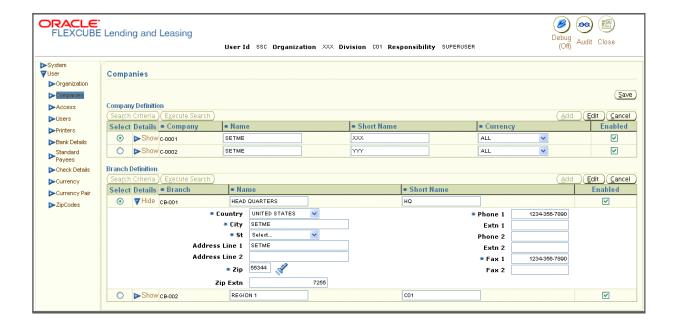

> ent from the company address. This address is included as the remittance address on statements (required).

Enter the remittance address line 2 (optional). Remittance Address 2

Zip Select the zip code (required

Enter the remittance address zip extension (optional). Extn

On the **Branch Definition** section, select the record you want to work with and click Show in the Details column.

Note: If you choose, use **Search Criteria** to limit the display of company definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 On the **Branch Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Branch	Enter the portfolio branch id. (The ID is the unique identifier used internally by Oracle FLEXCUBE Lending and Leasing to represent the branch within your company) (required).
Name	Enter the name of the portfolio branch (required).
Short Name	Enter the short name for the portfolio branch (ID displayed to represent the branch) (required).
Enabled	Select to enable the portfolio branch.
Country	Select the country (required).
City	Enter the city where the portfolio branch is located (required).
St	Select the state (required).
Address Line 1	Enter the address line 1 for the portfolio branch (optional).
Address Line 2	Enter the address line 2 for the portfolio branch (optional).
Zip	Select the zip code where the portfolio branch is located (required).
Zip Extn	Enter the zip extension where the portfolio branch is located (optional).

Phone 1 Enter the primary phone number for the portfolio branch

(required).

Extn 1 Enter the phone extension for the primary phone number

(optional).

Phone 2 Enter the alternate phone number for the portfolio branch

(optional).

Extn 2 Enter the phone extension for the alternate phone number

(optional).

Fax 1 Enter the primary fax number for the portfolio branch

(required).

Fax 2 Enter the alternate fax number for the portfolio branch

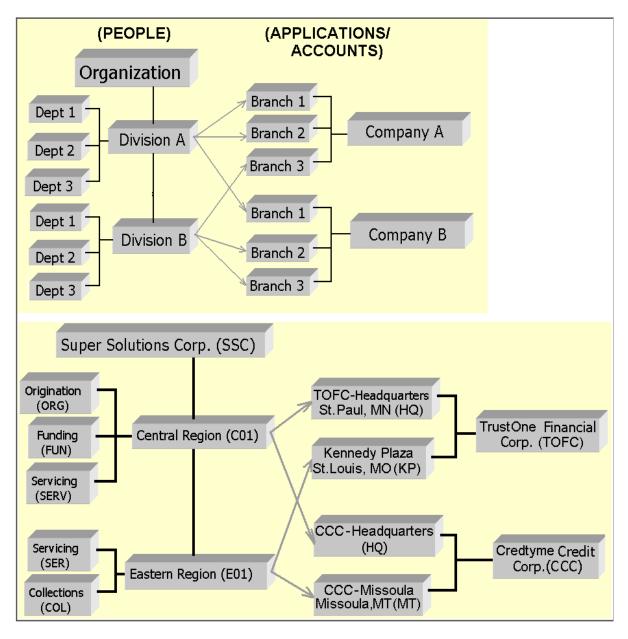

(optional).

8 Click **Save** on the Companies page.

Access link > Data link (Access Grid page)

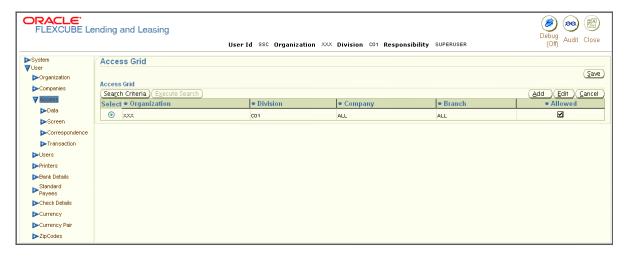

Using the organizations, divisions, companies, and branches created on the Organization and Companies pages, Oracle FLEXCUBE Lending and Leasing allows you to control which users have access to which applications. The Access page is where you define which organization/division (Oracle FLEXCUBE Lending and Leasing users) can gain access to which company/branch (applications) locations.

Normally, for each division within the one organization, you would define a record with Company value of ALL and a Branch value of ALL, then select the Allowed box. You then define other records for the same Organization and Division for other Company and Branch combinations with the Allowed box cleared to restrict access.

To set up the access

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **User** drop-down link, then click **Access**.
- 4 Click the **Access** drop-down link, then click **Data**.

5 In the **Access Grid** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of access grid records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 6 In the **Access Grid** section, enter, view, or edit the following information:

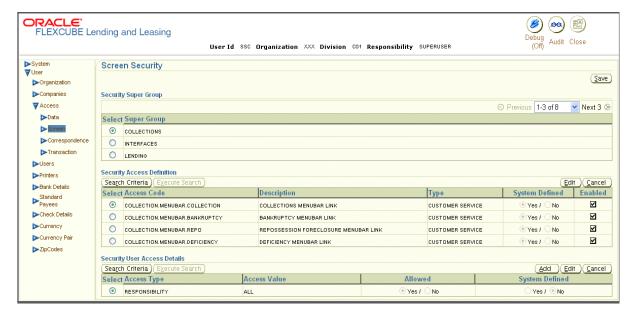

In this field:	Do this:
Organization	Select the organization for which you are defining access privileges (required).
Division	Select the division within the organization for which you are defining Access privileges (required).
Company	Select the portfolio company to which you are defining access privileges for the organization and division specified (required).
Branch	Select the portfolio branch of the company to which you are defining access privileges for the organization and division specified (required).
Allowed	Select to indicate whether access to the data pertaining to the company and branch is allowed for the organization and division specified.

7 Click **Save** on the Access Grid page.

Access link > Screen link

To set up the screen security

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **User** drop-down link, then click **Access**.
- 4 Click the **Access** drop-down link, then click **Screen**.

- In the **Security Screen** page's **Security Super Group** section, select the super group you want to work with.
- 6 In the **Security Access Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of security access definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Security Access Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Access Code	View the access code (display only).
Description	Enter the description of the access code (optional).
Type	Enter or view the type of security access definition (optional).
System Defined	If Yes is selected, the security access definition entry is system defined. If No is selected, the security access definition entry is manually defined.

Enabled If selected, indicates the security access definition entry is enabled.

8 In the **Security User Access Details** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of security user access definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 9 In the **Security User Access Details** section, enter, view, or edit the following information:

In this field:	Do this:
Access Type	Select the access type of the user who will have access to this screen (required).
Active Value	Select the active value of the user who will have access to this screen (required).
Allowed	Select Yes to allow access to this screen for this user. Select No to deny access to this screen for this user.
System Defined Yes/No	If Yes is selected, the screen user access definition entry is system defined. If No is selected, the screen user access definition entry is manually defined.

10 Click **Save** on the Screen Security page.

Access link > Correspondence link

The Correspondence page allows you to restrict access to different correspondence commands on the Letters menu, thus restricting your ability to generate certain correspondence.

If you do not have the responsibility to create to type of correspondence, the corresponding command on the Letters menu is unavailable (dimmed).

To set up the correspondence

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **User** drop-down link, then click **Access**.
- 4 Click the **Access** drop-down link, then click **Correspondence**.

In the **Correspondence** page's **Correspondence Codes** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of correspondence codes records.

- If you are changing an existing record, click Edit.
- 6 In the **Correspondence Codes** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Code	Search for and view the correspondence code name you want to work with (display only).
Description	View the description for the correspondence code (display only).
Enabled	If selected, indicates the selected correspondence code entry is enabled.

7 In the **Correspondence User Access Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of correspondence user access definition records.

- If you are changing an existing record, click **Edit**.
- 8 In the **Correspondence Codes** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Access Type	Enter the access grid function type (required).
Access Value	Enter the access function grid value (required).
Allowed	Select Yes to allow access or No to restrict access to the entry based on the access type and value.
System Defined Yes/No	If Yes is selected, the correspondence user access definition entry is system defined. If No is selected, the correspondence user access definition entry is manually defined.

9 Click **Save** on the Correspondence page.

Users link (Users page)

The Users page allows you to create and set up each Oracle FLEXCUBE Lending and Leasing user. In the User Definition section, you can assign a user an identification name and password to log on to Oracle FLEXCUBE Lending and Leasing. You can also assign the organization, division, and department where each user is located. Additional fields allow you to record information for contacting the user. You can also define the time frame within which a user has access to the system to ensure compliance to the company's schedule. This is a very useful feature to prevent logins during scheduled maintenance.

The Responsibility field records the job function of the user and defines the level of access that user has within the system; in particular:

- What menu items does the user have access to?
- What transactions can the user perform on the Maintenance page on the Customer Service window?
- What edits can the user perform on the Verification link during loan origination?

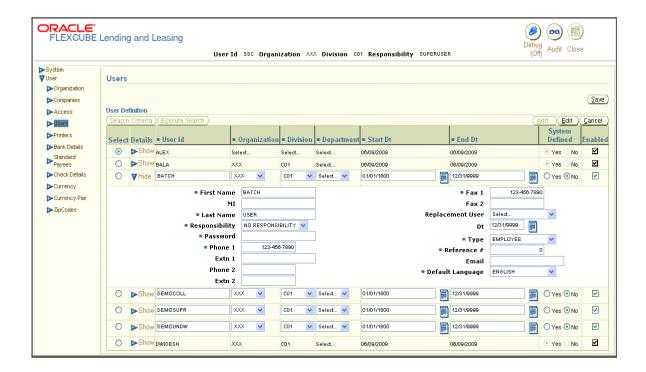

Note: The Oracle FLEXCUBE Lending and Leasing SUPERUSER responsibility grants access to the entire Oracle FLEXCUBE Lending and Leasing system. Please give careful consideration to the number and type of users who receive this responsibility.

To set up the users

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **User** drop-down link, then click **Users**.

4 In the Users page's User Definition section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use Search Criteria to limit the display of user definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **User Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
User Id	Enter the user id. Note : This field is a unique indicator and cannot be updated, edited, or deleted once saved (required).
Organization	Select the organization to which the user belongs (required).
Division	Select the division to which the user belongs (required).
Department	Select the department to which the user belongs (required).
Start Dt	Enter the start date for the user (required).
End Dt	Enter the end date for the user (required).
System Defined	If Yes is selected, the entry is system defined. System defined entries cannot be modified. If No is selected, the entry is not system defined and it can be modified.
Enabled	Select to enable the user.
First Name	Enter the first name of the user (required).
MI	Enter the middle initial of the user (optional).
Last Name	Enter the last name of the user (required).
Responsibility	Select the responsibility for the user (required). Note: A new user responsibility (role) is added. The users mapped to this responsibility can only view the screens.

Password Enter the password (required).

Phone 1 Enter the user's primary phone number (required).

Extn 1 Enter the phone extension for the primary phone number

(optional).

Phone 2 Enter the user's alternate phone number (optional).

Extn 2 Enter the phone extension for the alternate phone number

(optional).

Fax 1 Enter the user's primary fax number (required).

Fax 2 Enter the user's alternate fax number (optional).

Replacement User*

Select the user id of the replacement user (optional).

Dt* Enter the date from when the replacement is effective

(optional).

*Note: These two fields allow you to create a replacement user for the current user. This is particularly useful when a new employee assumes the duties of a former. By completing the Replacement User and Replacement Dt field, Oracle FLEXCUBE Lending and Leasing recognizes the replacement user as the current user on the effective date. For more information, see the following

section, Replacement Users.

Type Select the user type (required).

Reference # Enter the reference number for the user (optional).

Email Enter user's email address (optional). Default language Select the default language (required).

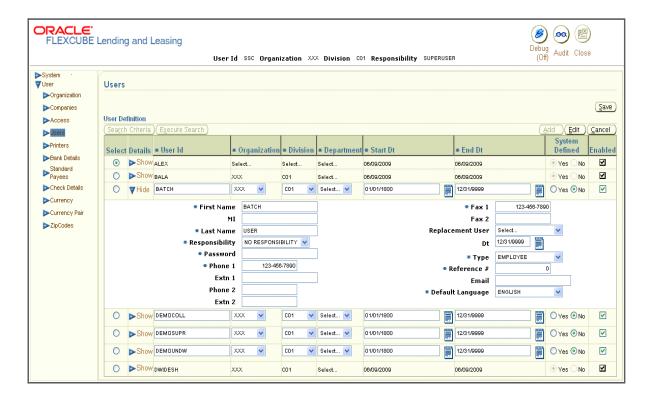

6 Click **Save** on the Users page.

Replacement users

By completing the **Replacement User** and **Replacement Dt** fields on the Users page, you can replace an existing user with a new user. Oracle FLEXCUBE Lending and Leasing assigns all responsibilities of the original Oracle FLEXCUBE Lending and Leasing user to the new user as of the date of the replacement.

The **Replacement User** and **Replacement Dt** fields allow you to designate a replacement for the current user in the User ID field. When you complete the **Replacement User** and **Replacement Dt** fields, save your entry, and then enable the record, Oracle FLEXCUBE Lending and Leasing replaces the original user. Oracle FLEXCUBE Lending and Leasing changes the **End Dt** field to the date when the original user was replaced (the same date in the Dt field).

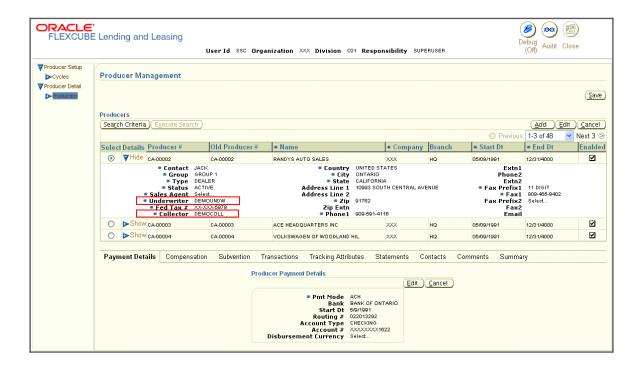

In the example below, User Id BATCH is the existing user replaced with Replacement User BATCH USER, effective as of 02/04/2008.

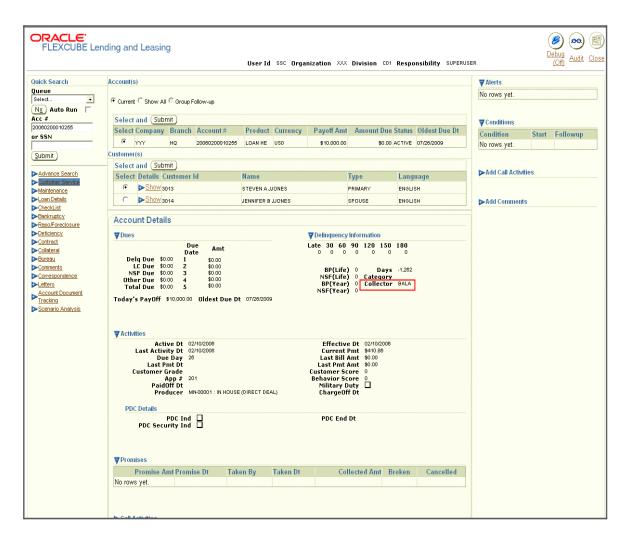

Oracle FLEXCUBE Lending and Leasing assigns the queues of the original user to only those replacement users who have the same user responsibilities (or Super User responsibility) as set in Oracle FLEXCUBE Lending and Leasing.

Oracle FLEXCUBE Lending and Leasing updates the following when replacing users:

- 1 Oracle FLEXCUBE Lending and Leasing assigns all applications in the replaced user's underwriting queue with the status NEW to the replacement user's queue.
- Oracle FLEXCUBE Lending and Leasing assigns all applications in the replaced user's funding queue with a status other than FUNDED to the replacement user's queue. Oracle FLEXCUBE Lending and Leasing currently stores the collector name in the back end tables, which are updated with the replacement users ID in the case of the replacement of any user.
- Oracle FLEXCUBE Lending and Leasing also updates the Producer Management page with the replacement user in the **Underwriter** and **Collector** fields. Oracle FLEXCUBE Lending and Leasing assigns all applications routed to the original user to the replacement user. This also includes any future applications for the replaced user.

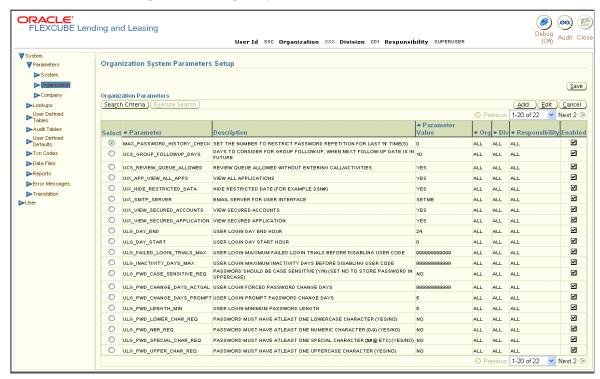

4 Oracle FLEXCUBE Lending and Leasing automatically updates the **Collector ID** field in all accounts to the replacement user and routes all accounts assigned to the original user to the replacement user. **Note**: Oracle FLEXCUBE Lending and Leasing will not update the replacement user ID for accounts that are closed.

On the queue setup Customer Service page's Responsibilities sub page, the record for the original user will be disabled and a new record will be created for the replacement user. If the replacement user already exists in the setup, Oracle FLEXCUBE Lending and Leasing will not create a new record. Oracle FLEXCUBE Lending and Leasing updates the user ID and routes all accounts that were assigned to the original user, based on the account condition, to the replacement user.

Enhanced password protection

Customer data is always vulnerable when passwords are simple enough for hackers to guess. This can happen in the absence of strict password rules. Oracle FLEXCUBE Lending and Leasing supports flexible and more secured password rules with a set of additional organizational level password parameters. Setting all password parameters to Y enforces the strictest password complexity.

These organization level password parameters are as follows:

Parameter	Description
ULG_PWD_CASE_SENSITIVE_REQ	PASSWORD SHOULD BE CASE SENSITIVE (Y/N) (SET NO TO STORE PASSWORD IN UPPER-CASE)
	If the Parameter Value is set to N , the password will be treated as if entered in uppercase.
ULG_PWD_LOWER_CHAR_REQ	PASSWORD MUST HAVE AT LEAST ONE LOW- ERCASE CHARACTER (YES/NO)
	If the Parameter Value is set to Y , at least one lowercase character is required in the password.
ULG_PWD_UPPER_CHAR_REQ	PASSWORD MUST HAVE AT LEAST ONE UPPERCASE CHARACTER (YES/NO)
	If the Parameter Value is set to Y , at least one uppercase character is required in the password.
ULG_PWD_NBR_REQ	PASSWORD MUST HAVE AT LEAST ONE NUMERIC CHARACTER (0-9) (YES/NO)

If the Parameter Value is set to **Y**, at least one numeric character is required in the password.

ULG_PWD_SPECIAL_CHAR_REQ

PASSWORD MUST HAVE AT LEAST ONE SPE-CIAL CHARACTER (\$#@ ETC) (YES/NO)

If the Parameter Value is set to Y, at least one special character is required in the password.

Note: IF THE ULG_PWD_CASE_SENSITIVE_REQ parameter is set to N, then the ULG_PWD_LOWER_CHAR_REQ parameter should also be set to N.

Password security is a top priority for any organization to secure its customer data. In addition to the existing Oracle FLEXCUBE Lending and Leasing security features, the encryption algorithm DES3 makes it even tougher for hackers to break the encrypted password.

Password encryption can be done with the following methods:

- 1. DES (data encryption standard)
- 2. DES3 (triple data encryption standard)

A technical note about DES and DES3: DES is a symmetric key cipher (encryption algorithm); that is, the same key is used to encrypt data as well as decrypt data. DES encrypts data in 64-bit sections using a 56-bit key. The banking industry has adopted DES based standards for transactions between private financial institutions, and between private financial institutions and a private individual.

Triple DES (DES3) is a far stronger cipher than DES. The resulting encrypted data is much harder to break using exhaustive search 2**168 attempts as compared to 2**56 attempts (in the case of DES).

You can specify the encryption type to use with your Oracle FLEXCUBE Lending and Leasing system using the following system parameter.

Parameter	Description
PASSWORD ENCRYPTION TYPE	PASSWORD ENCRYPTION TYPE

Oracle FLEXCUBE Lending and Leasing - Oracle Identity Manager Synchronization

Oracle Identity Manager is for user administration. Oracle FLEXCUBE Lending and Leasing has been developed in such a way that it can be implemented with or without Oracle Identity Manager. In case OID has been employed, the user definition is done in OID and then synchronized to the Oracle FLEXCUBE Lending and Leasing Users table using a utility JAR called OID Synchronization JAR. In OID, users are defined across various groups belonging to a realm which is nothing but the directory structure in OID. A user can be configured to belong to multiple groups in a realm. Every time the user tries to login to Oracle FLEXCUBE Lending and Leasing or OBIEE, the system validates the login id and the password with OID and provides access to those applications.

Printers link (Printers page)

The Printers page allows you to set up an unlimited number of network printers and fax devices to be used with the system server. Oracle FLEXCUBE Lending and Leasing will use the information on this page when selecting a printer when the printing process involves a batch job or use a job scheduler. Examples include printing reports and correspondence.

The printers and fax devices can be set up at each organization, division, or department to promote efficient printing of documents, and reports. Oracle FLEXCUBE Lending and Leasing uses this information during product setup and on the Letters page in the **Batch Printer** field.

Special printer names

The following printer names are predefined and have specific functions within Oracle FLEXCUBE Lending and Leasing:

UNDEFINED Indicates that the document to be printed is to be previewed in

your browser instead of actually printing the document.

ARCHIVE Instead of sending an item to the printer, Oracle FLEXCUBE

Lending and Leasing generates a PDF document and saves it in

the archive directory on your server.

EMAIL For loan origination correspondences that can be faxed, Oracle

FLEXCUBE Lending and Leasing will e-mail the document as a PDF attachment to the consumer for direct loans or to the pro-

ducer in the case of in-direct loans.

FAX For loan origination correspondences that can be faxed, Oracle

FLEXCUBE Lending and Leasing generates a PDF document it

will send to the fax server defined in System Parameters.

Additionally, you may set up composite entries in the Printer Name field to perform two or more functions at the same time. This can be done by defining a printer name with the following format:

PRINTER NAME = <PRINTER_NAME1> + <PRINTER_NAME2>

For example, if a printer named JET4050 was previously defined, as were the special printer names listed above, then the following additional printers could be defined:

JET4050+ARCHIVE Prints the document with the jet4050 printer and

archives the document.

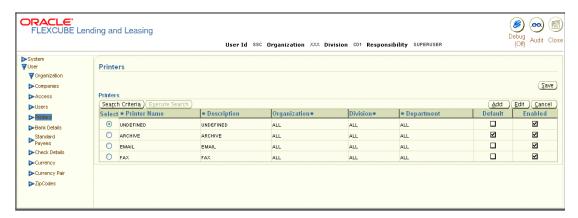

FAX+ARCHIVE Faxes and archives the document.

EMAIL+ARCHIVE+JET4050 E-mails, archives, and prints the document with

the jet4050 printer.

To set up the printers

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **User** drop-down link, then click **Printers**.

- 4 In the **Administration** page's **Printers** section, select the record you want to work with.
 - Note: If you choose, use **Search Criteria** to limit the display of printer records.
- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Printers** section, enter, view, or edit the following information:

In this field:	Do this:
Printer Name	Enter the printer name. The name of the printer as defined by the server. For a UNIX server, the name might be JET4050, while to access the same printer from a Windows server the name would be: \\server-name\jet4050 (required).
Description	Enter the description for the printer (required).
Organization	Select the organization to which the printer belongs (required).
Division	Select the division to which the printer belongs (required). The division will be displayed based on the organization selected.
Department	Select the department to which the printer belongs (required). The department will be displayed based on the division selected.
	IMPORTANT : In selecting which printer to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using the following attributes:
	1 Organization2 Division3 Department
	For this reason, Oracle recommends creating one version of each edit where ALL is the value in these fields.

It is also recommended that you define a default printer

for an Organization, Division and Department.

Select to indicate that this printer is a default printer.

Select to enable the printer and that the printer is active

(required).

Note: Never disable the UNDEFINED printer.

8 Click **Save** on the Printers page.

Default Enabled

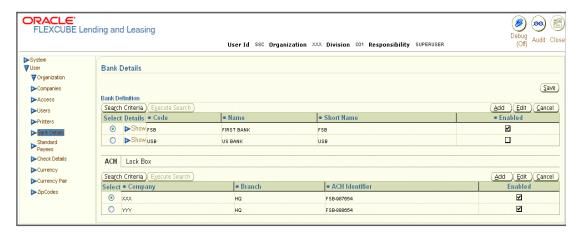

Bank Details link (Banks page)

The Banks page defines the banks a company/branch uses for processing automatic clearing house (ACH) and lock box payments.

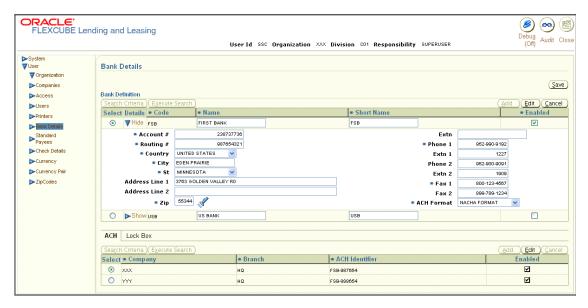

Note: This is "behind the scenes" information that Oracle FLEXCUBE Lending and Leasing uses for payments and does not appear on any other Oracle FLEXCUBE Lending and Leasing forms.

To set up the banks

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **User** drop-down link, then click **Bank Details**.

4 In the **Bank Details** page's **Banks Definition** section, select the record you want to work nd click **Show** in the **Details** column.

Note: If you choose, use Search Criteria to limit the display of bank definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Banks Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Code	Enter the bank code (ID used internally by Oracle FLEX-
	CUBE Lending and Leasing to represent the bank)
	(required).
Name	Enter the name for the bank (required).
Short Name	Enter the short name for the bank (ID displayed to repre-
	sent the bank. This may be included in any output files)
	(required).
Enabled	Select to enable and indicate this is an active bank
Account #	Enter the account number used for banking transactions with the bank.
	Note : If the organizational parameter
	UIX_HIDE_RESTRICTED_DATA is set to Y, this appears
	as a masked number; for example, XXXXX1234
	(required).
Routing #	Enter the routing number of the bank (required)
Country	Select the country where the bank is located (required).
City	Enter the city where the bank is located (required).
St	Enter the state where the bank is located (required).
Address Line 1	Enter the address line 1 for the bank (optional).
Address Line 2	Enter the address line 2 for the bank (optional).
Zip	Enter the zip code where the bank is located (required).
Extn	Enter the zip extension where the bank is located (optional).
Phone 1	Enter the primary phone number of the bank (required).
Extn 1	Enter the phone extension for the primary phone number (optional).
Phone 2	Enter the alternate phone number for the bank (optional).
Extn 2	Enter the phone extension for the alternate phone number (optional).
Fax 1	Enter the primary fax number for the bank (required).
Fax 1	Enter the alternate fax number for the bank (optional).
ACH Format	Select the ACH format accepted by this bank (required).

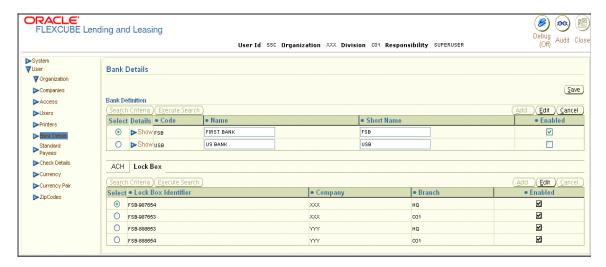

- 6 Click the **ACH** sub tab.
- 7 On the **ACH** sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of ACH records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 On the **ACH** sub page, enter, view, or edit the following information used to create ACH files for the bank listed in the Banks section.

In this field:	Do this:
Company	Select the portfolio company (required).
Branch	Select the portfolio branch (required).
ACH Identifier	Enter the lock box id provided by the bank. This field is used in the ACH files to identify the bank (required).
Enabled	Select to enable the ACH and indicate this is an active ACH identifier.

9 Click the **Lock Box** sub tab.

10 On the **Lock Box** sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of lock box records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 11 On the **Lock Box** sub page, enter, view, or edit the following information to create lock box files for the bank listed in the Banks page.

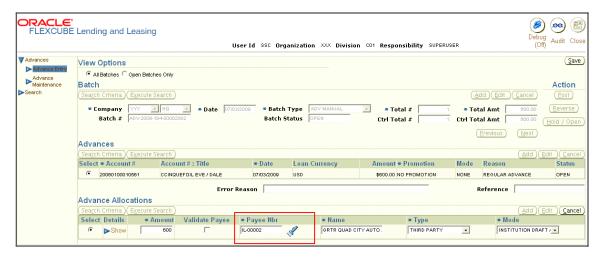

In this field:	Do this:
Lock Box Identifier	Enter the lock box id provided by bank. This field is used in the lock box files to identify the bank (required).
Company	Select the portfolio company (required).
Branch	Select the portfolio branch (required).
Enabled	Select to enable the lock box.

12 Click **Save** on the Bank Details page.

Standard Payees link (Standard Payees page)

The Standard Payees page defines the third parties that are frequently the payees for checks issued within your organization. These payees are then available on the Consumer Lending window's Advance Entry page. When you select the Payee # in the Advance Allocation section, Oracle FLEXCUBE Lending and Leasing completes the remaining fields in this page with information from the Standard Payees page.

Note: The Payee # field on the Advance Payment forms is a non-validated field. This allows you to select an entry or enter one of your own.

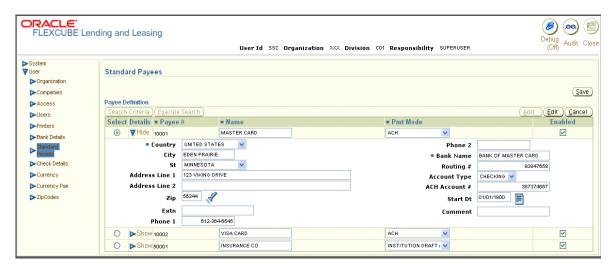

To set up the standard payees

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **User** drop-down link, then click **Standard Payee**.

4 On the **Standard Payees** page's **Payee Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of payee definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Payee Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Payee #	Select the payee number (Identifier for the payee)
	(required).
Name	Enter the payee name (required).
Pmt Mode	Select the payment method for the payee (required).
Enabled	View if payee is enabled (optional).
Country	Select the country where the payee is located (required).
City	Enter the city where the payee is located (optional).
St	Select the state where the payee is located (optional).
Address Line 1	Enter the address line 1 for the payee (optional).
Address Line 2	Enter the address line 2 for the payee (optional).
Zip	Select the zip code where the payee is located (optional).
Extn	Enter the zip extension where the payee is located
	(optional).
Phone 1	Enter the primary phone number for the payee (optional).
Phone 2	Enter the alternate phone number for the payee
	(optional).
Bank Name	Enter the payee ACH bank name used by the standard
	payee (required).
Routing #	Enter the payee ACH bank routing number of bank used
	by the standard payee (optional).
Account Type	Select the payee type of ACH bank account maintained
	by the Standard Payee (required).
ACH Account #	Enter the payee ACH bank account number.

Start Dt Enter the payment mode start date - the date the current

payment method was implemented (defaults on Pmt

Mode change) (display only).

Note: If the organizational parameter

UIX_HIDE_RESTRICTED_DATA is set to Y, this appears as a masked number; for example, XXXXX1234

(optional).

Comment Enter a comment for this advance allocations. This is the

default comment to include with payments to this Payee

(optional).

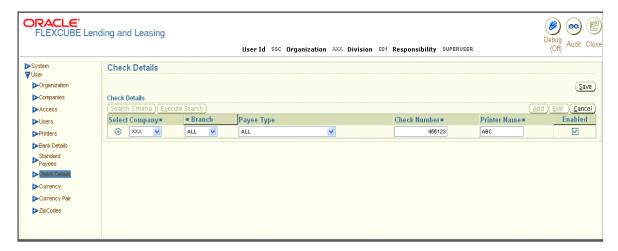

6 Click **Save** on the Standard Payees page.

Check Details link (Check Details page)

The Check Details page allows you to set up check details.

To setup the Check Details page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **User** drop-down link, then click **Check Details**.

4 In the **Check Details** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of check details records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Check Details** section, enter, view, or edit the following information:

In this field:	Do this:
Company	Select the company (required).
Branch	Select the branch (required).
Payee Type	Select the payee type (optional).
Check Number	Enter the check number (required).
Printer Name	Enter the printer name (required).
Enabled	Select to enable the check details entry.

6 Click **Save** in the Check Details page.

Currency link

The Currency link allows you to set up currency details.

To setup the currency information

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **User** drop-down link, then click **Currency**.

- 4 In the **Administration** page's **Currency** section, select the record you want to work with.
 - **Note**: If you choose, use **Search Criteria** to limit the display of currency records.
- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- 5 In the **Currency** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Currency	Select the currency (required).
Currency Name	View the currency name (required) The currency name is
	displayed based on the currency selected.
Country	Select the country (required).
Enabled	Select to enable the currency entry.

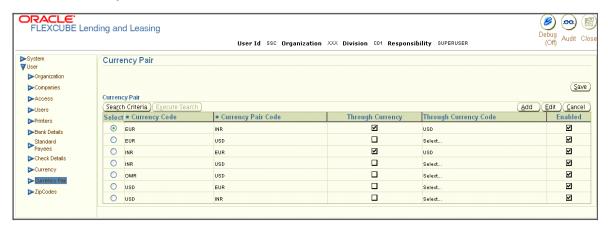

6 Click **Save** in the Currency section.

Currency Pair link

The Currency Pair links allows you to set up currency pair details.

To set up the currency pair information

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- 3 In the Administration window's link bar, click the **User** drop-down link, then click **Currency Pair**.

In the **Administration** page's **Currency Pair** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of currency pair records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Currency Pair** section, enter, view, or edit the following information:

View this:
If selected, indicates that this is the current record.
Select the currency code (required).
Select the currency pair code (required).
If selected, indicates that this is a through currency.
Select the through currency code (optional).
Select to enable the currency pair entry.

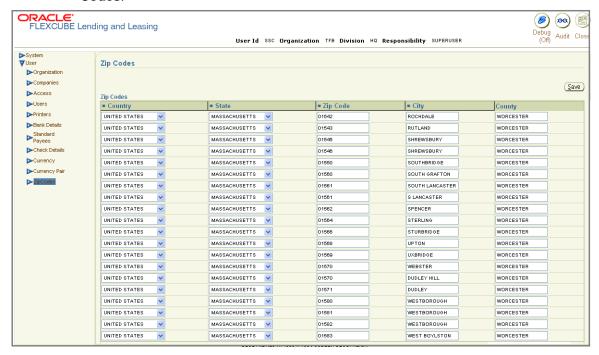

6 Click **Save** on the Currency Pair page.

Zip Codes link

The Zip Codes page allows you to set up zip code details.

To set up the zip codes information

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Administration** bar link.
- In the Administration window's link bar, click the **User** drop-down link, then click **Zip-Codes**.

Note:

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.

Note: The Edit functionality has been extended to the entire page. Previously the edit functionality was restricted to the selected record alone but now extended to the entire screen.

5 In the **Zip Codes** section, enter, view, or edit the following information:

In this field:	View this:
Country	Select the country (required).
State	Select the state (required).
Zip Code	Enter the zip code (required).
City	Enter the city (required).
Country	Enter the country (optional).

6 Click **Save** on the Zip Codes page.

CHAPTER 3: DE-DUPE SETUP

Oracle FLEXCUBE Lending and Leasing's de-dupe feature can be configured to identify possible fraudulent information and misrepresentation of details on a loan application based on duplicate information between applications.

Oracle FLEXCUBE Lending and Leasing checks for duplicate information from existing applications, already rejected applications, and applications currently being processed.

The following application entry information is used as the de-dupe criteria.

Label	Description
First Name	First name of the applicant.
Last Name	Last name of the applicant.
Date of Birth	Date of Birth of the applicant.
Mother's Maiden Name	Applicant's mother name.
National ID	National id of the applicant.
SSN	Applicant's SSN number.
Driving License	Applicants driving license number.
Passport Number	Passport number of the applicant.
Customer SSN	Customer's SSN number.
Customer First Name	First name of the customer.
Customer Last Name	Last name of the customer.
Customer Date of Birth	Date of Birth of the customer.
Customer Mother's Maiden NameCustomer's mother name.	
Customer National ID	National id of the customer.
Customer Driving License	Customer's driving license number.
Customer Passport Number	Passport number of the customer.

Dedupe link (De-Dupe page)

The Dedupe Setup window's De-Dupe page enables you to define the de-dupe criteria from the fields listed above. With the De-Dupe page's Criteria section, you can specify the logical operators of AND or OR while defining the criterion.

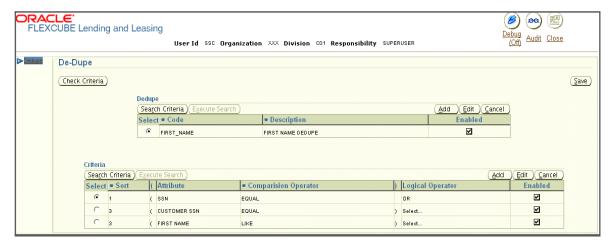

If you choose AND as the logical operator between the criterion components, Oracle FLEXCUBE Lending and Leasing retrieves the records that are matching with the details in the criterion components.

For example, if you define the de-dupe criteria as First Name and Passport Number, Oracle FLEXCUBE Lending and Leasing retrieves all records in which *both* the first name and passport number match the current application. On the contrary, if you choose OR as the logical operator, Oracle FLEXCUBE Lending and Leasing retrieves all the records in which *either* the First Name or Passport Number match the current application.

To set up the De-Dupe

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **De-Dupe** bar link.
- 3 In the Dedupe Setup link bar, click **Dedup**.
- 4 On the **De-Dupe** page's **Dedupe** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Dedupe** section, enter, view, or edit the following information:

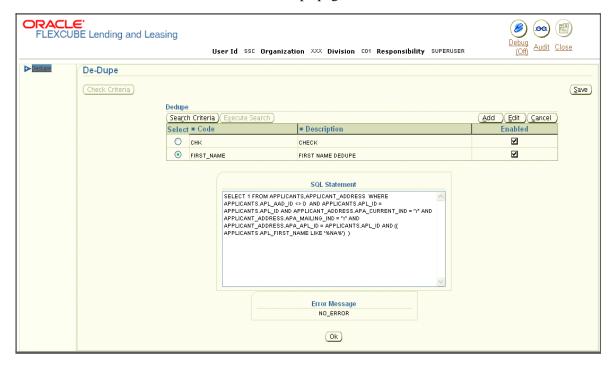

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Code	Enter the code of the dedupe (required).
Description	Enter a description of the dedupe (required).
Enabled	Select to enable the dedupe.

6 In the **Criteria** section, define the dedupe selection criteria with the following fields:

Note: Criteria can be one or more rows.

In this field:	Do this:
Sort	Enter the sequence numbers (required).
(Enter left bracket (optional).
Attribute	Select the attribute (required).
Comparison Operator	Select comparison operator (required).
)	Enter right bracket (optional).
Logical Operator	Enter logical operator (optional).
Enable	Select to enable the criteria.

7 Click **Check Criteria** on the De-Dupe page.

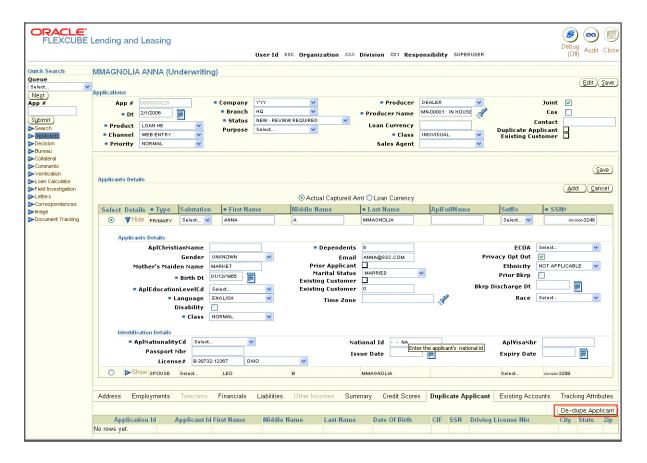

Oracle FLEXCUBE Lending and Leasing reviews the selection criteria for errors.

- If NO ERROR appears in the Error Message box, choose **OK**.
- If errors appears in the Error Message box, make the necessary corrections in the Criteria section.
- 8 Click **Save** on the De-Dupe page.

During the underwriting and funding processes, you can initiate the de-dupe check by clicking **De-dupe Applicant** on the Applicants Details page's Duplicate Applicant sub page (opened from the Applications link bar's Applicant link).

CHAPTER 4: ORACLE FLEXCUBE LENDING AND LEASING CREDIT BUREAU SETUP

In Oracle FLEXCUBE Lending and Leasing, an important part of the origination process is pulling a credit report from a credit bureau and scoring that information against a user-defined risk model. These credit reports can be pulled both automatically and manually.

After you enter an application, Oracle FLEXCUBE Lending and Leasing compares its contents against pre-screen criteria. If the application passes a pre-screen edits check, Oracle FLEXCUBE Lending and Leasing advances the status of the application and automatically pulls a credit report.

You can manually request a credit report for an applicant or any other party included on the application, such as co-signers and spouses by selecting the bureau from which you want to pull the report. If more than one report type is defined for the selected bureau, you can indicate the type of report you want to pull.

Credit Bureau Setup details

- The credit bureau from which the report is pulled is determined by the applicant's zip code. The credit bureau interface searches the information in the Credit Bureau Zip Matrix tab and matches the applicant's zip code to determine the bureau(s) from which to request a report.
- The number of credit reports automatically pulled per applicant is controlled through the credit request parameter CRB_MAX_BUREAU_PULL. If this parameter is set to 1, a credit bureau request will be made for the Bureau1 credit bureau from the zip code matrix. Likewise, if this parameter is set to 2, a credit bureau request will be made for the Bureau1 and the Bureau2 credit bureaus from the zip code matrix.
- Oracle FLEXCUBE Lending and Leasing automatically pulls credit reports for only
 the primary applicant and the primary applicant's spouse (for joint applications) unless
 the CRB_ALL_APL_BUREAU_PULL credit request parameter is set to Y. However, if
 the parameter is set to Y, Oracle FLEXCUBE Lending and Leasing pulls credit reports
 for all of the applicants on the loan, regardless of their relationship to the primary borrower.
- Passwords, default report formats, and other required information from the credit bureaus are set up in the Report Formats page.

Member codes and passwords when switching credit bureau access methods (moving from dial-up to Net Connect). The member codes and passwords are not dependent on the connection method used to access the bureau.

Frame relay access is from the database server to the Experian host though a TCP/IP socket connection. The connection is outbound only and it is to a specific port (699 or 700) on the Experian host.

The Oracle FLEXCUBE Lending and Leasing credit bureau service will be accessing Experian Net Connect service through HTTP to the ECALS URL supplied by Experian as well as by the HTTPS to the URL returned as a response to the ECALS URL inquiry (the

credit request URL). This access is from the database server (not the iAS server) and access

Credit Bureau setup

On the Oracle FLEXCUBE Lending and Leasing Credit Bureau Setup window, the Request drop-down link open pages that allow you to set up credit bureaus.

The Request drop-down link contains the following links:

- Report Formats
- Connections
- Zip Matrix
- Parameters
- Score Reasons

This section explains how to set up the pages opened from each.

Request link > Report Formats link (Report Formats page)

The Reports Formats page captures and tracks the attributes related to the multiple types of reports offered by the credit bureau agencies. When a company enlists the service of a credit bureau, the credit bureau provides a membership code and password. This information needs to be entered on the Reports Formats page before you can request a credit report. You must define at least one report for each credit bureau from which you want to pull reports.

The information on the Report Formats page is location-specific. If the business requires different membership codes for each location, be it a company or branch, then individual records must be set up.

The Score Type, Additional Product, and Inquiry Limit fields on the Credit Report Setup section are optional. They may not apply to all credit bureau types and even if they do apply, you may want to leave them blank and rely on a default value set up at the credit bureau.

Note: For more information, please refer to the **Oracle FLEXCUBE Lending and Leasing Installation Notes**.

To set up the report formats

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Credit Bureau bar link.
- 3 In the Credit Bureau Setup link bar, click the **Request** drop-down link, then click **Report** Formats.

4 In the **Report Formats** page's **Credit Bureau** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of credit bureau records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- 5 In the **Credit Bureau** section, enter, view, or edit the following information:

In the field:	Do this:
Select	If selected, indicates this is the current record.
Bureau Name	Enter the name of the credit bureau company (required).
Short Name	Enter the abbreviated or short name for the bureau (required).
Source	Select the credit bureau source (required).
Country	Select the country of the credit bureau address (required).
City	Enter the city for the credit bureau address (required).
St	Select the state of the credit bureau address (required).
Address Line 1	Enter the address line 1 for the credit bureau (required).
Address Line 2	Enter the address line 2 for the credit bureau (optional).
Zip	Select the zip code for the credit bureau address (required).
Extn	Enter the zip extension for the credit bureau address (optional).
Phone 1	Enter the primary phone number for the credit bureau (required).
Extn 1	Enter the extension for the primary phone number (optional).

Phone 2	Enter the secondary phone number for the credit bureau
	(required).
Extn 2	Enter the extension for the secondary phone number
	(optional).
Fax 1	Enter the primary fax number for the credit bureau
	(required).
Fax 2	Enter the extension for the primary fax number
	(optional).

- 6 Click **Save** on the Report Formats page.
- 7 In the **Credit Bureau Report Formats** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of credit report format records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 In the **Credit Bureau Report Formats** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Company	Select the portfolio company that will be using the above
	credit bureau (required).
Branch	Select the portfolio branch from the company that will be
	using the above credit bureau (required).
Description	Enter the credit report format description (required).
Member Code	Enter the credit bureau member code (assigned by bureau) (optional).
Password	Enter the credit bureau password (required).
Customer Code	Enter the customer code (optional).
Auth Password Change Dt	View the last authorization password change date. The Experian Net Connect product requires that the Auth Password (or SSP Password in Experian jargon) be changed every 90 days (or sooner). Equifax may have similar requirements, but they were not known at the time of this writing. Use the date displayed in this field to identify when the password needs to be changed. Note: The password needs to be changed both in Oracle FLEXCUBE Lending and Leasing and at the credit bureau. Changing the password in Oracle FLEXCUBE Lending and Leasing does not initiate or perform a change at the bureau. Changing the password at the bureau must be done outside of Oracle FLEXCUBE Lending and Leasing. Contact the credit bureau for the procedure for changing the password (display only).
Auth User ID Auth Password	View the authorization user id (display only). View the authorization password (display only). Note: This field is not displayed to the user and is also encrypted before being stored in the database (display only).

Change Authorization User Id/Password section

New Auth User Id Enter the authorization user id (optional).

New Auth User Password Enter the authorization user password (optional).

TransUnion Details section

(**Note**: This is only applicable for TransUnion.)

MarketEnter the TransUnion market id (optional).Sub MarketEnter the TransUnion Sub Market id (optional).IndustryEnter the TransUnion Industry code (optional).

Experian Details section

(Note: This is only applicable for Experian.)

Preamble Enter the Experian preamble code (optional).

Host Id Enter the Experian host id (optional).
UIC Enter the Experian UIC (optional).

Equifax Details section

(**Note**: This is only applicable for Equifax.)

Service Name Enter the equifax service name. The service name will be

provided to you by Equifax when your company's Internet System to System account is created. Possible values for pulling credit reports are acrotest (for access to the test system) and acro (for access to the production sys-

tem) (optional).

Credco Details section

(**Note**: This is only applicable for Credco.)

Origin Code Enter the credco origin code (optional).

9 In the **Report Format Details** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of report format detail records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 10 In the **Report Format Details** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Report	Enter the report name to be accessed from the credit
	bureau (required).
Report Type	Select the report type of the credit bureau report
	(required).
Score Type	Select the credit score type (optional).
Additional Product	Select the product code (optional).
Inquiry Limit	Select the inquiry limit for the credit report (optional).
Default	Select if the report is used as default.

11 Click **Save** on the Report Formats page.

Request link > Connections link (Connections page)

The Connections page records and supports various connections to the credit bureau to receive reports from the agencies. Oracle FLEXCUBE Lending and Leasing supports connections to the bureaus through one or more modems attached to the database server, network accessed modem server, or direct network connection (usually frame relay).

For modem-based connections, multiple credit bureaus can be accessed over the same modem. If there are multiple requests in the queue, the order in which the bureaus are listed determines the order in which the requests are processed.

Example

If the credit bureau service checks the submitted credit requests and finds three Experian, one Equifax, and two TransUnion credit requests and the connections setup is Bureau1=TUC, Bureau2=EFX, and Bureau3=EXP, the two TransUnion requests will be processed first, the Equifax request next, and then the three Experian requests.

Note: For this above example, adding two more modems and assigning a specific bureau to each one would help to avoid the delay caused by queuing all requests through a single modem.

IMPORTANT:

Direct network connections must be set up for only one bureau.

Like the Credit Bureau section on the Report Formats page, the data fields used on the Connections page are generic and not all fields are used for all access methods. The following table summarizes the data needed for each access method:

Method	Name	Bureau 1	Bureau	Вигеаи	Device	Device Speed
			2	3		
Dial-up	Required	Required	Optional	Optional	Required (can be either	Required for
		(can be	(can be	(can be	a local serial port device	locally attached
		EXP,	EXP,	EXP,	or an IP address and	modems
		TUC, or	TUC, or	TUC, or	port number of a	
		EFX)	EFX)	EFX)	network modem)	
Experian	Required	Must be	Leave	Leave	Must be the IP address	Not applicable
Frame-relay	_	EXP	blank	blank	and port number of	
_					Experian host	
Equifax	Required	Must be	Leave	Leave	Must be the IP address	Not applicable
Frame-relay		EFX	blank	blank	and port number of	
_					Equifax host	
TransUnion	Required	Must be	Leave	Leave	Must be the IP address	Not applicable
Frame-relay	_	TUC	blank	blank	and port number of	
_					TransUnion host	
Experian Net	Required	Must be	Leave	Leave	Must be the ECALS	Not applicable
Connect	_	EXP	blank	blank	URL provided by	
					Experian	
Equifax	Required	Must be	Leave	Leave	Must be the URL	Not applicable
Internet		EFX	blank	blank	provided by Equifax for	
System to					connecting to the	
System					Internet System to	
					System service	
CSC Internet	Required	Must be	Leave	Leave	Must be the URL	Not applicable
		CSC	blank	blank	provided by CSC	
CredcoConnect	Required	Must be	Leave	Leave	Must be the URL	Not applicable
	_	CRD	blank	blank	provided by Credco	

For frame relay access, specify the IP address provided by the bureau followed by a space and then the port number (for example, 192.168.36.2.700).

Experian Net Connect

At the time of this writing, the Experian product ECALS URL is:

http://www.experian.com/lookupServlet1?lookupService Name=AccessPoint&lookupServiceVersion=1.0&serviceName=Net Connect&serviceVersion=2.0&responseType=text/plain

Note: The URL given above is one continuous string. This can be verified by entering the URL with a browser. The displayed value will be an HTTPS URL.

Enter the entire ECALS URL provided by Experian into the Device field. Notice that this URL does not start with https. The ECALS URL is a URL used by the Oracle FLEX-CUBE Lending and Leasing credit bureau service to request the HTTPS URL. The HTTPS URL is not displayed on any setup screen and is only known to the credit bureau interface at runtime.

Equifax Internet System to System

At the time of this writing, the Equifax Internet System to System URL is:

https://transport5.ec.equifax.com/servlet/stspost

CSC Tri-Merge

At the time of this writing, the CSC URL is:

https://www.emortgage.Equifax.com/cgi-bin/emspop.exe

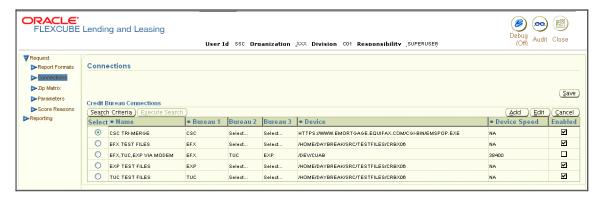

CredcoConnect

At the time of this writing, the Credco URL is:

https://www.credcoconnect.com/CGI-BIN/CCListener.exe

To set up the connections

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Credit Bureau** bar link.
- 3 In the Credit Bureau Setup link bar, click the **Request** drop-down link, then click **Connections**.

4 In the **Connections** page's **Credit Bureau Connections** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of credit bureau records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Credit Bureau Connections** section, enter, view, or edit the following information:

In the field:	Do this:
Select	If selected, indicates this is the current record.
Name	Enter connection name (required).
Bureau 1	Select first credit bureau (required).
Bureau 2	Select 2nd credit bureau (required).
Bureau 3	Select 3rd credit bureau (required).
	Note: The Bureau1, Bureau2, and Bureau3 fields in the
	Credit Bureau Connections section specify which bureau
	types can be accessed over the connection.
Device	Enter the connection device name. The Device field lists
	the physical device name for a modem, or the IP address
	for a network accessed connection. (required).
Device Speed	Select the connection device speed. The Device Speed
	field is only applicable to server-attached modems. It is
	used to specify the communications speed between the
	server and the modem (required).
Enabled	Select to enable the connection (required).

6 Click **Save** on the Connections page.

Request link > Zip Matrix link (Zip Matrix page)

Oracle FLEXCUBE Lending and Leasing uses the zip code of the applicant's current home address to determine which credit bureau to use when automatically pulling a report. The Zip Matrix page allows you to record the credit bureau from which a report is pulled based on a range of zip codes, as well as the company, branch and country of the account.

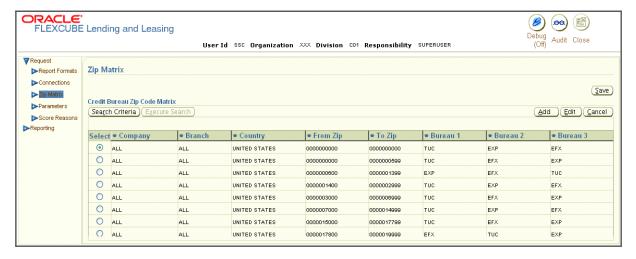

When searching for a zip code match, Oracle FLEXCUBE Lending and Leasing:

- 1) Reads the first credit bureau defined in the matrix
- 2) Reads the credit report format to get the appropriate membership code and password for the user's location
- 3) Requests a credit report.

If Oracle FLEXCUBE Lending and Leasing cannot pull a report from the first bureau, it pulls one from the second. If the zip code you entered does not fall in the matrix setup, Oracle FLEXCUBE Lending and Leasing uses a default zip matrix (0000000000 to 0000000000) to select the required bureau.

To set up the zip matrix

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Credit Bureau** bar link.
- In the Credit Bureau Setup link bar, click the **Request** drop-down link, then click **Zip Matrix**.

4 In the **Zip Matrix** page's **Credit Bureau Zip Code Matrix** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of credit bureau zip code matrix records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click Edit.

5 In the **Credit Bureau Zip Code Matrix** section, enter, view, or edit the following information:

In the field:	Do this:
Select	If selected, indicates this is the current record.
Company	Select the portfolio company (required).
Branch	Select the portfolio branch (required). The branch will be
	displayed based on the company selected.
Country	Select the country (required).
From Zip	Enter the starting zip code (From) (required).
To Zip	Enter the ending zip code (To) (required).
Bureau 1	Select the preferred bureau #1 (first bureau pulled). You must enter at least one credit bureau in the Bureau 1 field for each zip code range. The bureau entered in the Bureau 1 field for each range is the primary bureau. For any given range, do not list the same credit bureau in more than one field (required).
Bureau 2	Select the preferred bureau #2 (second bureau pulled) (required).
Bureau 3	Select the preferred bureau 3 (third bureau pulled) (required).

6 Click **Save** on the Zip Matrix page.

Request link > Parameters link (Parameters page)

The Parameters page records parameters specifically dealing with credit bureau information. These parameters are divided into three groups:

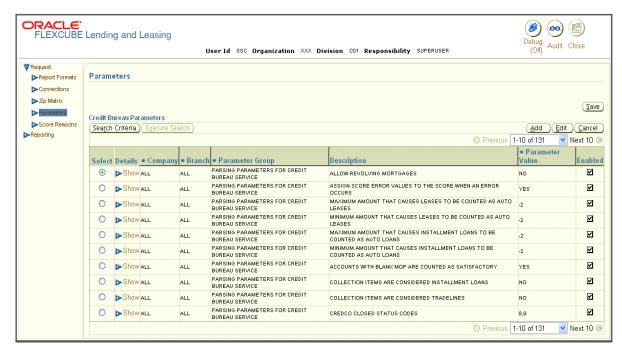

- Parsing parameters
- Request parameters
- Configuration parameters

Parameters can be defined at the company or branch level. The following credit bureau parameters are configured during the installation:

PARSING PARAMETERS FOR CREDIT BUREAU SERVICE CONFIGURATION PARAMETERS FOR CREDIT BUREAU SERVICE REQUEST PARAMETERS FOR CREDIT BUREAU SERVICE

To set up the parameters

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Credit Bureau** bar link.
- In the Credit Bureau Setup link bar, click the **Request** drop-down link, then click **Parameters**.

4 In the **Parameters** page's **Credit Bureau Parameters** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of parameter records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.

5 In the **Credit Bureau Parameters** section, enter, view, or edit the following information:

In the field:	Do this:
Select	If selected, indicates this is the current record.
Company	Select the portfolio company (required).
Branch	Select the portfolio branch (required). The branch will be
	displayed based on the company selected.
Parameter Group	Select the credit bureau parameter (required).
Parameter Value	Enter the credit bureau parameter value (required).
Enabled	Select to enable the credit bureau parameter.

6 Click **Save** on the Parameters page.

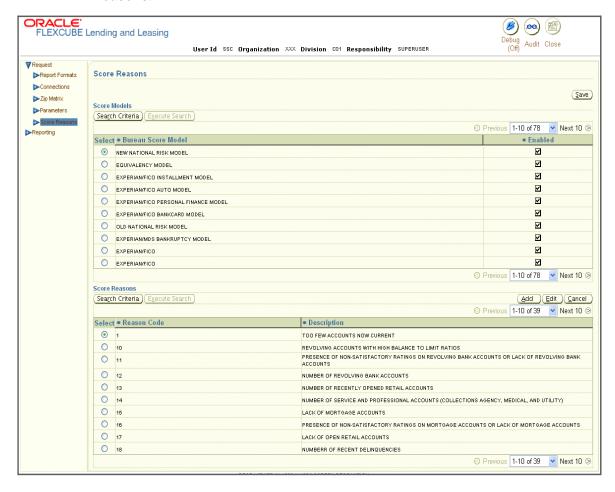

Request link > Score Reasons link (Score Reasons page)

The Score Reasons page allows you to define or modify the scoring reason codes and descriptions for the predefined scoring models used by the credit bureau agencies.

Note: This information is not associated with the user-defined scores determined by the internal Oracle FLEXCUBE Lending and Leasing model during product setup.

To set up the score reasons

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Credit Bureau bar link.
- 3 In the Credit Bureau Setup link bar, click the **Request** drop-down link, then click **Score Reasons**.

4 In the **Score Reasons** page's **Score Models** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of score model records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click Edit.

5 In the **Score Models** section, enter, view, or edit the following information:

In the field:	Do this:
Select	If selected, indicates this is the current record.
Bureau Score Model	View the credit bureau score model (display only).
Enabled	Select to enable the credit bureau score model.

6 In the **Score Reasons** sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of score reason records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 On the **Score Reasons** sub page, enter, view, or edit the following information for the reason code and description for the selected scoring model:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Reason Code	Enter the reason code (required).
Description	View the description (required).

8 Click **Save** on the Score Reasons page.

Reporting link (Reporting page)

Oracle FLEXCUBE Lending and Leasing reports to the credit bureau agencies in the Metro 2 format with the payment and account status information of each account holder. The Credit Bureau Reporting page contains the program identifier to be reported to the bureaus.

To set up the reporting

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Credit Bureau** bar link.
- 3 In the Credit Bureau link bar, click **Reporting**.

4 In the **Reporting** page's **Credit Bureau Reporting** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of credit bureau report records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- In the **Credit Bureau Reporting** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Company	Select the portfolio company (required).
Bureau	Select the bureau (required).
Program Identifier	Enter the program identifier. The customer receives this
	from the bureau and uses it to identify itself to that
	bureau. You will need to update this information
	(required).
Enabled	Select to enable the program.

6 Click **Save** on the Reporting page.

Special Metro II Code reporting

Oracle FLEXCUBE Lending and Leasing allows you to report the following special Metro II segments to the credit bureau output file:

- Consumer Information Indicator Code (CIIC)
- Compliance Condition Code (CCCD)
- Special Comment Code (SPCC).

Oracle FLEXCUBE Lending and Leasing users will need to use call Action/Results and Reason fields on the Call Activities sub page of the Customer Service form (Lending > Customer Service > Customer Service (2) master tab > Account Details tab > Call Activities sub tab) to place specific account conditions where these Metro II segments are to be reported. The specific segment reported for a given condition will be based on the account condition and call activity reason codes.

Note: It is the responsibility of the Oracle FLEXCUBE Lending and Leasing Administrator or individual user to setup Special Metro II Code reporting functionality.

When users open one of the following conditions:

CIIC CONSUMER INFORMATION INDICATOR CODE (METRO2 - FCRA)

CCCD COMPLIANCE CONDITION CODE (METRO2)
SPCC SPECIAL COMMENT CODE (METRO2)

Oracle FLEXCUBE Lending and Leasing recognizes the condition, processes the selected Metro II reporting call activity reason code, and generates the Metro II reporting segment in the Metro II reporting output file.

Note: You (the Oracle FLEXCUBE Lending and Leasing user) are responsible for selecting the correct Metro II reporting segment reason code to be reported. If you do not select a Metro II reporting segment reason code, Oracle FLEXCUBE Lending and Leasing will not generate information to Metro II output file. If you select an incorrect (wrong) Metro II reporting segment reason code, Oracle FLEXCUBE Lending and Leasing will report the selected Metro II reporting segment. Oracle FLEXCUBE Lending and Leasing does not validate the contents of the Reason field with the contents of the Condition field.

To end the reported Special Metro II Special Code, close the open Special Metro II Condition (no reason code needed). Oracle FLEXCUBE Lending and Leasing recognizes the closing of the open Special Metro II Condition and will not create a Metro II reporting segment in the output file.

IMPORTANT:

The CBU_FILE_FREQUENCY (METRO 2 FILE FREQUENCY) Company system parameter determines if output file is generated and created daily or output file is written with daily data and output monthly.

To set up Metro II Code reporting

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 In the **Administration** page, click **Queues**, then click **Setup**.
- In the **Call Actions** and **Call Results** sections, set up to open and close the following system defined condition codes to open and close:

Action Code	Description
CIIC	CONSUMER INFORMATION INDICATOR CODE (METRO2 - FCRA)
CCCD	COMPLIANCE CONDITION CODE (METRO2)
SPCC	SPECIAL COMMENT CODE (METRO2)

When setup is completed, you can open and close Special Metro II code conditions.

Note: Opening and closing Special Metro II Code reporting is a manual process.

The CBU_FILE_FREQUENCY (METRO 2 FILE FREQUENCY) Company system parameter determines if output file is generated and created daily or output file is written with daily data and output monthly.

Oracle Wallet Manager setup

The Experian Net Connect, Equifax Internet System to System, and CSC interfaces within the Oracle FLEXCUBE Lending and Leasing credit bureau service use functionality provided by the Oracle Wallet feature. Use the Oracle Wallet Manager on the database server to create and export a wallet for use by the Oracle FLEXCUBE Lending and Leasing credit bureau service.

Note: All of the above mentioned interfaces use the same Oracle wallet. If a wallet already exists and is in use by one of the credit bureau interfaces, there is no need to create another wallet. Due to differing certificate requirements, there may be a need to import additional trusted certificates into the wallet, but there will not be a need to create a new one. The Oracle FLEXCUBE Lending and Leasing credit bureau parameter ORA_WALLET_PATH contains the location of the Oracle Wallet used by the Oracle FLEXCUBE Lending and Leasing credit bureau service.

To create and export a wallet suitable for use by the Oracle FLEXCUBE Lending and Leasing credit bureau

Refer to the Oracle documentation for more detailed instructions on how to use the Oracle Wallet Manager to create and manage a wallet:

- If a wallet does not already exist, create one somewhere on the database server. The location must be readable and writable by the Oracle user. Make a note of the full path where the wallet is stored (for example, /etc/ORACLE/WALLETS/oracle or C:\oracle\WALLETS).
- 2 The wallet needs to contain the public key for the certificate authority that issued the server certificate for each HTTPS web site that will be connected to by the credit bureau interface. At the time of this document, those sites are:

```
https://ssl.experian.com Experian
https://transport5.ec.equifax.com Equifax
https://www.emortgage.Equifax.com CSC
https://www.credcoconnect.com Credco
```

This list may change. Use the URL provided to you by the credit bureau when they set up your service. To get the proper Experian HTTPS URL, enter the ECALS URL that was provided by Experian into a web browser. The response returned to the browser is the HTTPS URL that will be used to communicate with Experian.

- 3 Import the necessary certificate authority's certificate files into the Oracle wallet that was created in Step 1. See the appendix of this chapter for detailed instructions of how to download and install a trusted certificate.
- 4 Test the wallet by connecting to each web site with a simple command issued from SQL-Plus.

```
SQL> select utl_http.request('https://ssl.experian.com',
NULL, 'file:/etc/ORACLE/WALLETS/oracle', 'password') from
dual;
```

Replace the URL in the above command with each HTTPS URL given to you for use by the credit bureaus. Also replace the wallet path with the path to your wallet and your wallet password. The output from the command is not important, what is important is that it

- runs without displaying an Oracle error. If there is an Oracle error, then something is wrong with the contents of the wallet, the path to the wallet, and/or the wallet password.
- When the wallet contains all of the required trusted certificates, export the wallet to a text file. On the **Operations** menu on the Oracle Wallet Manager, choose **Export All Trusted Certificates**. The text file MUST be located in the same directory as the wallet and the filename MUST be default.txt. Anytime a change is made to the trusted certificates in the wallet, the wallet must be re-exported to the same text file.
- 6 From Oracle FLEXCUBE Lending and Leasing Setup menu, choose Credit Bureau > Request > Parameters tab within and set the ORA_WALLET_PATH and ORA_WALLET_PASSWORD parameters.

To create a client certificate wallet suitable for use by the CredcoConnect interface

The CredcoConnect interface requires another wallet file in addition to the default wallet file. This additional wallet file contains the client certificate and certificate chain issued to your company by First American Credco when your account is created.

- 1 Save the client certificate file sent to you by First American on your local PC.
- 2 Open Microsoft Internet Explorer and go to Tools > Internet Options > Content > Certificates screen.
- 3 Click the **Import** button. Choose **Next** and the locate the PFX file you saved in Step 1. Choose **Next** and enter the password provided to you by Credco for the certificate file. Select the **Enable string private key protection** and **Mark the private key as exportable** check boxes. Choose the default selections on the following screens until the import is successful.
- 4 On the **Certificate Manager** screen, select the First American Corporation certificate and click the **Export** button.
- 5 Choose **Next**, **Yes**, export the private key, **Next**, PKCS12 format, include all certificates in the certification path, and enable strong protection and **Next**.
- 6 Set the password for the certificate to be the same password as your Oracle wallet.
- 7 Choose **Next** and save the file as **credco.p12**.
- 8 Copy the **credco.p12** file to your database server and into the same directory where the existing Oracle wallet in use by Oracle FLEXCUBE Lending and Leasing is located.

Oracle JVM Security setup

The Experian Net Connect interface within the Oracle FLEXCUBE Lending and Leasing credit bureau service requires the use of the Oracle Java Virtual Machine (JVM) that is resident in the Oracle database. Furthermore, specific permissions must be granted to the Java classes used by the credit bureau service. These permissions have been added to the set_java_perms.sql script that is part of the Oracle FLEXCUBE Lending and Leasing distribution. This script (as well as many other useful SQL scripts) is available from the Oracle Financial Services Software technical support Oracle FLEXCUBE Lending and Leasing patches web site.

The set_java_perms.sql script needs to run as the SYS user (or a user with SYS privileges). The script will prompt for SYS user id and password. Be prepared to provide it when prompted. Also, the script will select the value of the ORA_WALLET_PATH parameter from the credit bureau parameters table. Make sure that it has been updated with the proper wallet path before running the set_java_perms.sql script (although the script can be safely run again if necessary).

Credit Bureau Service operation

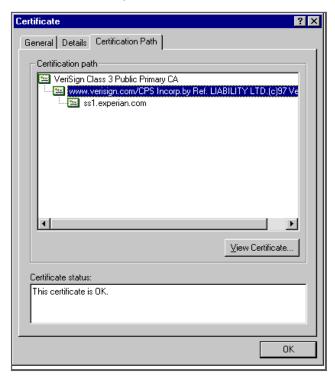

The basic operation of the credit bureau service has not changed. Once setup, there is no operational difference between accessing the credit bureaus via dial-up, frame relay, or the Internet.

Importing a trusted certificate into an Oracle Wallet

The HTTPS servers used by Experian, Equifax, and CSC for their Internet based credit report services (as well as all HTTPS servers) contain a site certificate signed by a trusted Certificate Authority (CA). The CA is an entity that guarantees the identity of the HTTPS server. If the client trusts the CA, and the CA says that the HTTPS server is who they say they are, then the client inherently trusts the HTTPS server. Normally, a client tool such as Microsoft Internet Explorer has a large store of trusted CA certificates which makes secure communication between a client and a trusted HTTPS server relatively seamless and uneventful. Unfortunately, the store of CA certificates in the default Oracle wallet is rather small and it is likely that it will not contain the certificate of the CA that is certifying one or more of the credit bureau web sites. This means that the CA certificate must be imported into the wallet. To do this, the certificates must first be exported from a browser and then imported into the Oracle wallet using the Oracle Wallet Manager.

Using Microsoft Internet Explorer to Export a Certificate

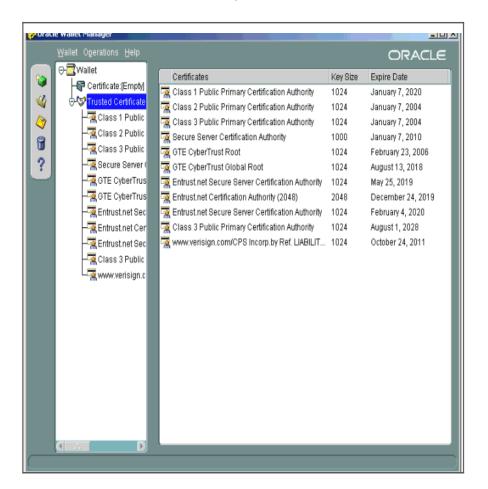

- 1 Use Microsoft Internet Explorer and connect to one of the HTTPS URLs referenced in the Oracle Wallet Manager Setup section of this document.
 - If the web site asks for a user id and password, cancel the dialog box and remain on the top-level HTTPS page.
- 2 Once connected, from the browser's **File** menu, choose **Properties**.
- 3 Click the Certificates button.
- 4 Click the **Certification Path** tab. The bottom-most certificate is the one generated by the host itself. The one or more certificates above the bottom-most one are of greater importance to this task. The screen shot below displays a web site with two CAs (an intermediate, and a primary). Whether it is an intermediate CA or a primary one, the steps are the same for saving the certificate as a text file.

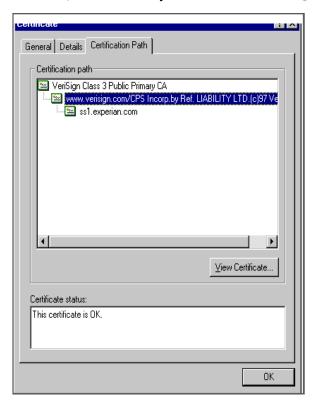

- 5 Click the first certificate above the bottom-most certificate (it may be the only certificate above the bottom-most certificate).
- 6 Click the **View Certificate** button.
- 7 Click the **Details** tab.
- 8 Click the **Copy to File** button.
- 9 Click the **Next** button.
- 10 Choose the **Base 64** encoded format.
- 11 Click the **Next** button.
- 12 Enter a filename and location for the file.
- 13 Click the **Next** button.
- 14 Click the **Finish** button.
- 15 Repeat steps 5 through 14 for the next certificate in the certification path (if any).

Importing the Certificates into an Oracle Wallet

- 1 Copy the certificates exported and saved during the process described above onto the database server (not the iAS server).
- 2 As the Oracle user (or Administrator on Windows), start the Oracle Wallet Manager.
- 3 Open the wallet that will be used by the Oracle FLEXCUBE Lending and Leasing credit bureau service. Create a new wallet if one does not already exist.
- 4 View the list of Trusted Certificates in the wallet.
- 5 Check the list of certificates against the list of certificates that are in use on the HTTPS servers used by the credit bureaus (and that were exported and saved during the export process described above).
- 6 Click the **Trusted Certificates** heading in the left list box of the Oracle Wallet Manager.

7 Use Microsoft Internet Explorer to view the certificate details for the HTTPS web sites (File > Properties > Certificates > Certification Path > View Certificate > General) that will be contacted by the credit bureau service. Look through the list of certificates shown in the right panel of the Oracle Wallet Manager and look for a match between the Issued To and Valid To dates shown in the Internet Explorer View Certificate Window. The screen shot below shows a certificate that is already in the wallet's list of trusted certificates (see the last entry for the www.verisign.com/CPS certificate).

- 8 On the **Operations** menu, choose **Import Trusted Certificate** and follow the prompts for locating and loading the files that were copied onto the database server in step 1 for any certificate not already stored in the wallet.
- 9 On the **Wallet** menu, choose **Save** when finished loading certificates.

De-duping Credit Bureau data

Oracle FLEXCUBE Lending and Leasing allows you to remove duplicate ("de-dupe") liabilities data from the credit bureau information.

De-duping logic

The de-duping logic is based on a number of parameters that Oracle FLEXCUBE Lending and Leasing compares among *tradelines* (**only**) to determine if they are duplicates. The following fields are used to determine if two tradelines are duplicates:

Field:	Description:
Account #	The account number of the consumer with the lender for the particular account.
Open Date	The date the account was opened.
Member Code	The subscriber code of the lender with the respective credit bureau. Note: Since member codes for the same lender differ across bureaus, this field is used only for tradelines reported by the same bureau. Since reports obtained from CSC can have tradelines from different bureaus, this field is only for reports pulled from the credit bureaus.

All available bureau reports pulled later than DEDUP_CRB_EXPIRATION_DAYS days old will be used.

The following system parameters will be set up to provide switches to allow the functionality to be turned on and off:

Parameter	Description	Valid Values	Setup Value
JOINT_DEDUP_SPOUSE_LIABILITIES	De-deup the tradelines with spouse	Y, N	Υ
JOINT_DEDUP_ALLAPL_LIABILITIES	De-deup the tradelines with spouse and secondary applicants(s).	Y, N	Υ
DEDUP_CRB_EXPIRATION_DAYS	Credit report expiration days	Number	90

Whenever two (or more) items are identified as duplicates, Oracle FLEXCUBE Lending and Leasing uses the following hierarchy to pick one of the items as the "correct" one:

- 1 Last Reported Date: The row that has been reported most recently is used.
- 2 Owner: In case of a tie on the last reported date, one of the tradelines is picked in the descending order of priority depending on who the tradeline belongs to: Primary, Spouse, then Secondary.

Debt Ratio combination

Oracle FLEXCUBE Lending and Leasing uses the system parameter DBR_JOINT_INC_DEBT_WITH_SPOUSE to decide whether to combine debt ratios of the spouse with the primary applicant. The DBR_JOINT_INC_DEBT_WITH_COAPP parameter decides whether to do the same on a non-spousal joint application.

When this indicator is checked, all liabilities in the Liability section on the Summary sub page of the Applicant (2) master tab with the Include box selected will be used in the debt ratio calculation.

The following system parameter will be set up to provide switches to allow the functionality to be turned on and off:

De-duping process

The de-duping logic will be integrated into the Oracle FLEXCUBE Lending and Leasing decision-making process in the following manner:

Initial credit pulls on new applications

- If the JOINT_DEDUP_SPOUSE_LIABILITIES/ JOINT_DEDUP_ALLAPL_LIABILITIES
 system parameters are set to Y, Oracle FLEXCUBE Lending and Leasing uses the deduping logic described above to uncheck the duplicate liabilities in the spouse's/coapplicant's liabilities.
- If the DBR_JOINT_INC_DEBT_WITH_SPOUSE/
 DBR_JOINT_INC_DEBT_WITH_ALLAPL parameters are set to **Y**, Oracle FLEXCUBE
 Lending and Leasing includes the liabilities of the spouse/ co-applicant while calculating the debt ratio of the primary applicant.
- Oracle FLEXCUBE Lending and Leasing will use all available credit reports at the time.

Subsequent credit pulls (manual)

- To remove duplicate liabilities from the calculation, choose the **Dedup Liabilities** button on the **Underwriting** form (**Applicants (9)** master tab > **Summary** sub page > **Liability** section). (Potential record locking situations force the action to remain manual versus the system automatically doing it).
- If the Populate Debt and Include Debt boxes are selected in the Applicant/Customer Detail section on the Bureau (4) master tab on the Underwriting form for the credit request and the JOINT_DEDUP_SPOUSE_LIABILITIES/
 JOINT_DEDUP_ALLAPL_LIABILITIES system parameters are set to Y, Oracle FLEX-CUBE Lending and Leasing will use the de-duping logic described above to uncheck the duplicate liabilities in the spouse's/co-applicant's liabilities.
- If the DBR_JOINT_INC_DEBT_WITH_SPOUSE/
 DBR_JOINT_INC_DEBT_WITH_COAPL parameters are set to **Y**, Oracle FLEXCUBE
 Lending and Leasing will include the liabilities of the spouse/ co-applicant while calculating the debt ratio of the primary applicant.
- Oracle FLEXCUBE Lending and Leasing will use all available credit reports at the time of the request that have been requested within the number of days specified in the

Restrictions

The de-duping logic will be limited based upon the discussion above. If Oracle FLEX-CUBE Lending and Leasing cannot identify two tradelines as duplicates based upon the logic mentioned above, the individual tradelines will be retained. In such circumstances, both tradelines will be used in the debt ratio calculation and it will be the user's responsibility to disregard one of them by clearing the Include check box.

CHAPTER 5: BATCH JOB SETUP

"Batch jobs" refer to the back-end processes that automatically run at a certain time. There are two types of batch jobs:

- Business processes (such as billing and delinquency processing)
- Housekeeping tasks (such as application aging and application purging)

On the Setup window's Administration page, the Batch Job section's Loan link opens pages that allow you to set up, monitor, and maintain batch jobs in Oracle FLEXCUBE Lending and Leasing.

Batch jobs can be set up to be performed on a daily, weekly, monthly, and ad-hoc basis. Batch jobs can also be configured to trigger an e-mail or phone message if a batch job should fail.

Critical batch jobs control job flow and system date rollover to allow recovery during errors. Errors are instances where a process did not successfully complete. Failures indicate that a particular job encountered errors that require remedial action. The number of errors allowed before failure is defined for each job. Some errors automatically result in a failure.

Setup link > Batch Job link (Batch Job Sets page)

The Batch Job Sets page allows you to track and maintain of all batch processes within the Oracle FLEXCUBE Lending and Leasing system. Using this form, the system administrator can configure the frequency and start time of each batch process, as well as set the number of threads to improve performance.

"Threading" allows a specific job to be separated into smaller units that are processed at the same time. This allows Oracle FLEXCUBE Lending and Leasing to complete the job in less time.

You can set up multiple batch jobs within a batch set. In the Batch Job Sets section, each process is listed with the last run date (Last Run Dt field) and the next scheduled process date (Next Run Dt field). In the Freq Code and Freq Value fields, you can determine the frequency of each batch set, such as daily, weekly and monthly. You can also set up batch sets to incorporate a dependency on another batch set. This way, if the initial batch fails, the dependent set will not be processed.

In the Batch Jobs section, you can configure the process to run on weekends and holidays using the respective option boxes.

CAUTION: As the batch job setup widely affects the Oracle FLEXCUBE Lending and Leasing system, Oracle Financial Services Software suggests that the system administrator has a clear understanding of the various functionalities within Oracle FLEXCUBE Lending and Leasing before creating and updating the batch processes.

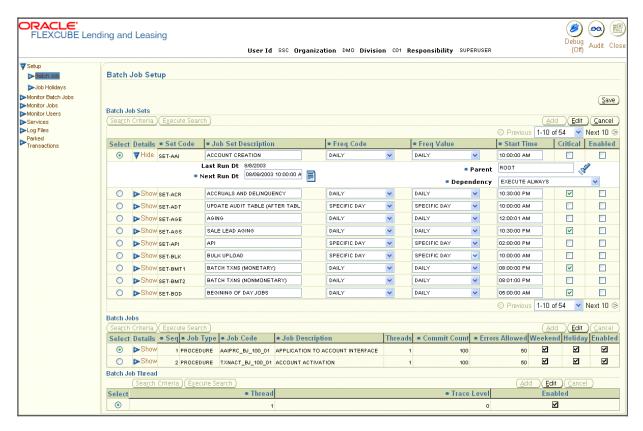

For the standard job set please review the Visio document, dbk std detail design job sets.vsd

To set up a batch job

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Batch Jobs** bar link.
- 3 In the Batch Jobs Setup link bar, click the **Setup** drop-down link, then click **Batch Jobs**.

4 In the **Batch Job Setup** page's **Batch Job Sets** section, select the record you want to work with and click **Show** in the **Details** column.

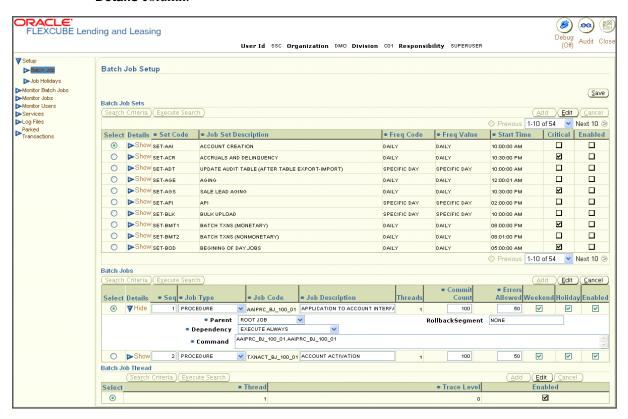

Note: If you choose, use **Search Criteria** to limit the display of batch job set records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Batch Job Sets** section, enter, view, or edit the following information:

In the field:	Do this:
Select	If selected, indicates this is the current record.
Set Code	Enter the code for the batch job set (required).
Job Set Description	Enter the description for the batch job set (required).
Freq Code	Select the frequency at which the job set is to be executed (required).
Freq Value	Select the frequency value (required). The frequency value will be displayed based on the frequency code selected.
Start Time	Enter the start time for the job set (required).
Critical	Select if this job set is critical. A "critical" job is one that prevents the General Ledger (GL) post date from rolling forward, should the job fail.
Enabled	Select to enable the job set.
Last Run Dt	View the last run date of the job set (display only).
Next Run Dt	Enter the next run date for job set (required).
Parent	Select the parent job set (required).

6 In the **Batch Jobs** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of batch job records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Batch Job** section, enter, view, or edit the following information:

In the field:	Do this:
Select	If selected, indicates this is the current record.
Seq	Enter the batch job sequence number.
	Note : Within a job set jobs are executed sequentially
	based on the seq number assigned.(required).
Job Type	Select the batch job request type (required).
Job Code	Enter the batch job request code (required).
Job Description	Enter the batch job description (required).
Threads	View the number of threads used by the job (display only).
Commit Count	Enter the number of rows after which auto-commit is triggered (required).
Errors Allowed	Enter the number of errors allowed (required).
Parent	Select the parent job (required).
Dependency	Select the type of dependency on the parent (required).
Weekend	Select to perform batch jobs on weekend.

Holiday Select to perform batch jobs on a holidays. (Holidays are

defined on the Job Holidays page.)

Enabled Select to enable the batch job.

Parent Select the parent batch job (required).

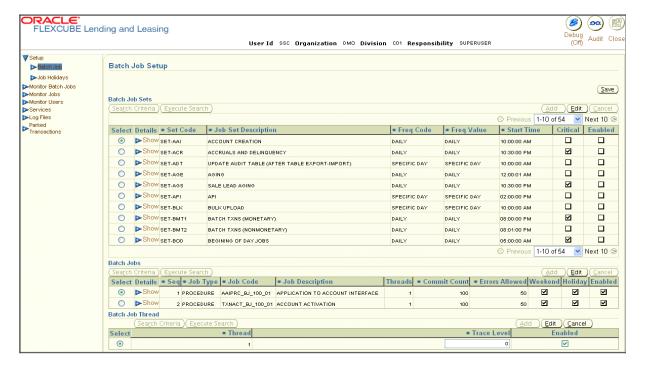

Dependency Select the dependency clause of the batch job (required).

Command Enter the command line for the job (required).

RollbackSegment If you choose, use this field to enter the rollback segment

for job (optional).

8 In the **Batch Job Thread** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of batch job records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- 9 In the **Batch Job Thread** section, enter, view, or edit the following information:

In the field:	Do this:
Select	If selected, indicates this is the current record.
Thread	Enter the name of thread (required).
Trace	Enter the SQL trace level (0, 1, 4, 8, 12) The higher the
	number, the more activities Oracle FLEXCUBE Lending
	and Leasing can trace (required).
Enabled	Select to enable the thread.

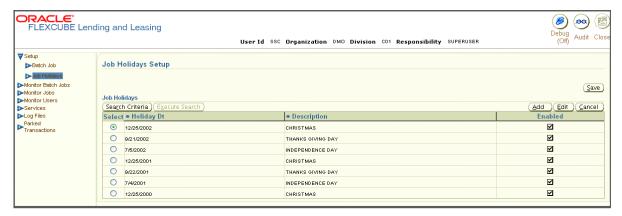

10 Click **Save** on the Batch Job Setup page.

Setup link > Job Holidays link (Job Holidays page)

Oracle FLEXCUBE Lending and Leasing allows you to define holidays within the company on Job Holidays page. You can then use the Batch Jobs page to set up whether or not you want Oracle FLEXCUBE Lending and Leasing to perform batch jobs on these days using with the Batch Jobs section Holiday box.

To define job holidays

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Batch Jobs** bar link.
- 3 In the Batch Jobs Setup link bar, click the **Setup** drop-down link, then click **Job Holidays**.

4 In the **Job Holidays Setup** page's **Job Holidays** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of job holiday records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- 5 In the **Job Holidays** section enter, view, or edit the following information:

In the field:	Do this:
Select	If selected, indicates this is the current record.
Holiday Dt	Enter the date of the job holiday (required).
Description	Enter the job holiday description (required).
Enabled	Select to enable the holiday.

6 Click **Save** on the Job Holidays Setup page.

Monitor Batch Jobs link

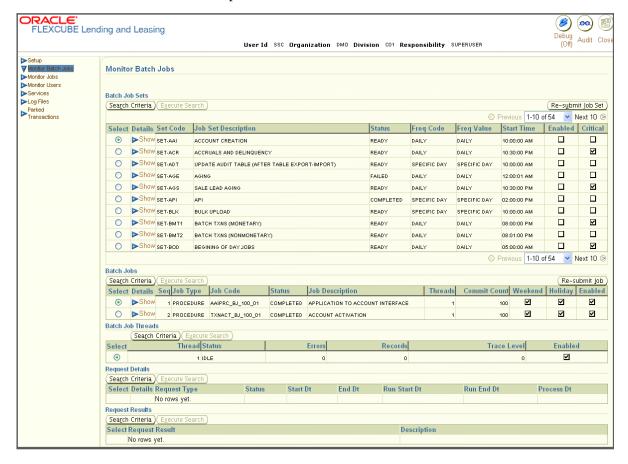

Oracle FLEXCUBE Lending and Leasing tracks the success of each batch process on the Batch Job Sets page. If either a set of batch jobs or specific batch job should fail, you can resubmit it on this page and review the results in the Request Details section.

The Monitor Batch Jobs page is only a display page that contains the following sections:

- Batch Job Sets
- Batch Jobs
- Batch Jobs Threads
- Request Details
- Request Results

To use the Monitor Batch Job Sets page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Batch Jobs bar link.
- 3 In the Batch Jobs Setup link bar, click **Monitor Batch Jobs**.

4 In the **Monitor Batch Jobs** page's **Batch Job Sets** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of batch job set records.

5 In the **Batch Job Sets** section, view the following information:

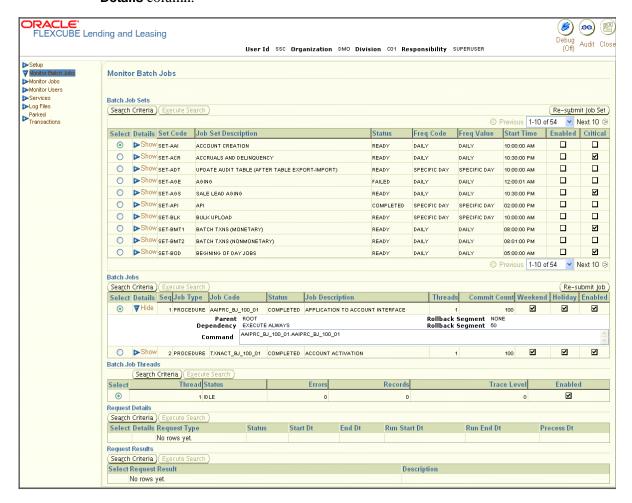

In the field:	View this:
Select	If selected, indicates this is the current record.
Set Code	The code for batch job set.
Job Set Description	The description for batch job set.
Status	The job set status.
Freq Code	The frequency at which the job set is to be executed.
Freq Value	The value of the frequency code chosen for the job set.
Start Time	The start time for the job set.
Enabled	If selected, the job set is enabled.
Critical	If selected, this job set is critical.
Last Run Dt	The date of last run of the job set.
Next Run Dt	The next run date for job set.
Parent	The preceding job set.
Dependency	The type of dependency on predecessor.

To resubmit a batch job set: Whenever a batch job set fails, it is best to resubmit it after correcting the errors that caused the failure. Resubmitting a set causes Oracle FLEXCUBE Lending and Leasing to re-perform the batch job set and dependent batch jobs.

• In the **Batch Job Sets** section, choose the batch job set to resubmit (only a batch job set with a status of FAILED can be resubmitted), then choose **Resubmit Job Set**.

The **Batch Jobs** section lists the batch jobs within a job set. The status, threads, commit count, dependencies, enabled indicator and the holiday and weekend runtime indicators are shown for each job.

6 In the **Batch Jobs** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of batch job records.

7 In the **Batch Jobs** section, view the following information:

In this field:	View this:
Select	If selected, indicates this is the current record.
Seq	The batch job sequence number.
Job Type	The batch job request type.
Job Code	The batch job request code.
Status	The job status.
Job Description	The batch job description.

Threads The number of threads used by the job.

Commit Count The number of rows after which auto-commit is trig-

gered.

Weekend If selected, it batch job will execute job on weekend. Holiday If selected, it batch job will execute job on a holiday.

Enabled The job enabled indicator.
Parent The preceding job.

Dependency The type of dependency on predecessor.

Command The command line for the job.
Rollback Segment The rollback segment for job.
Errors Allowed The number of errors allowed.

To resubmit a batch job: Whenever a batch job fails, it is best to resubmit it after correcting the errors that caused the failure. Resubmitting a set will cause Oracle FLEXCUBE Lending and Leasing to re-perform the batch job.

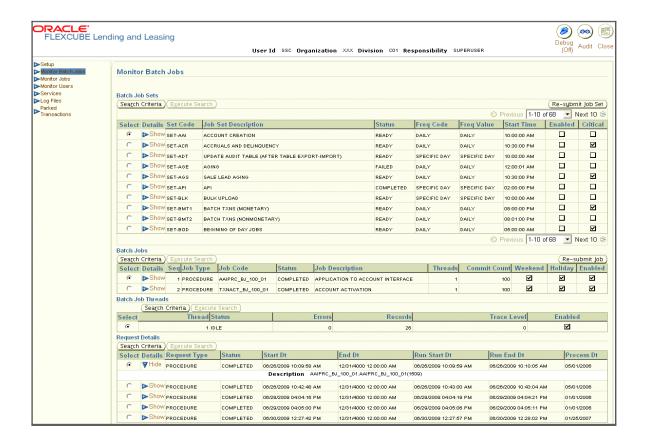

- In the **Batch Jobs** section, choose the batch job to resubmit (only a batch job with a status of FAILED can be resubmitted), then choose **Resubmit Job Set**.
- 8 The **Batch Job Threads** section displays the status of the individual threads. In the **Batch Job Threads** section, select the batch job thread you want to view.

Note: If you choose, use **Search Criteria** to limit the display of batch job threads records.

9 In the **Batch Job Threads** section, view the following information:

In this field:	View this:
Select	If selected, indicates this is the current record.
Thread	The name of thread.
Status	The status of thread.
Errors	The number of errors in the thread.
Records	The number of records in the thread.
Trace Level	The SQL trace level (0, 1, 4, 8, 12).
Enabled	The thread enabled indicator.

10 The **Request Details** section displays the status and the runtimes for each time the selected job ran. In the **Request Details** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of request details records.

11 In the **Request Details** section, view the following information:

In this field:	View this:
Select	If selected, indicates this is the current record.
Request Type	The job request type.
Status	The job request status.
Start Dt	The job request is valid from this date and time.
End Dt	The job request is valid till this date.
Run Start Dt	The date and time on when the job run started.
Run End Dt	The date and time at which the job run ended.
Process Dt	The transaction is posted with this General Ledger effec-
	tive date.
Description	The job request description.

12 If a particular job requires that a result message be created, then that message appears in the Job Results section. A message is usually created in the event of an error. In the **Job Results** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of job result records.

13 In the **Job Result** section, view the following information:

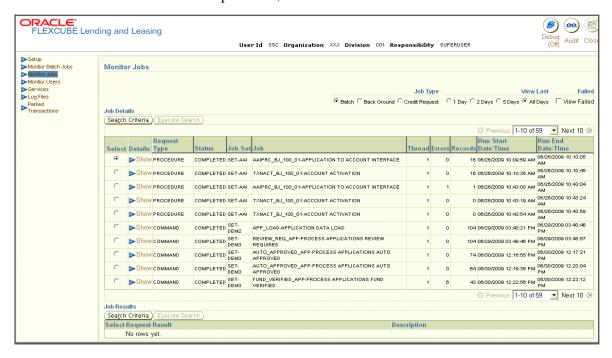

In this field:	View this:
Select	If selected, indicates this is the current record.
Request Result	The result of the job request.
Description	The result details.

Monitor Jobs link (Monitor Details page)

The Monitor Jobs page provides another view of monitoring all system processes, including credit bureau requests and payment posting. This page displays the data in reverse chronological order of the Run Start Date/Time, where as the Monitor Batch Jobs page provides the historical data about each job and job set.

To view the Monitor Details page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Batch Jobs** bar link.
- 3 In the Batch Jobs Setup link bar, click Monitor Jobs.

4 On the **Job Details** page **Job Type** section, select the type of jobs you want to view in the Job Details section and view the following information:

If you select:	Oracle FLEXCUBE Lending and Leasing displays:
Batch	Batch jobs (used primarily for the nightly processes).
Back Ground	User submitted requests, such as reports and payment
	posting.
Credit Request	Credit bureau requests.

In the **View Last** section, select the time frame of the contents of the **Job Details** section and view the following information:

If you select:	Oracle FLEXCUBE Lending and Leasing displays:
1 Day	All the types of jobs selected in the Jobs Type section of
	the last one-day.
2 Days	All the types of jobs selected in the Jobs Type section of
	the last two days.

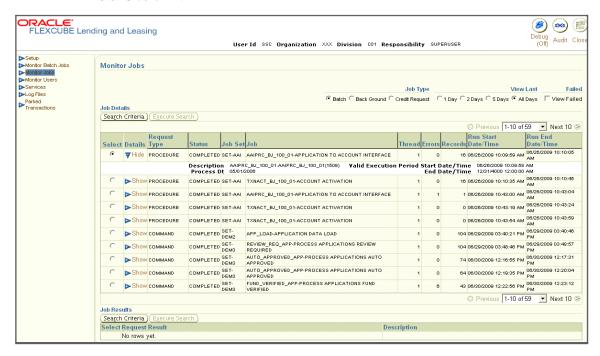

5 Days All the types of jobs selected in the Jobs Type section of

the last five days.

All Days All the types of jobs selected in the Jobs Type section.

6 If you select **View Failed** in the **Failed** section, Oracle FLEXCUBE Lending and Leasing displays the failed jobs on the type and time frame you have selected.

7 In the **Job Details** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of batch detail records.

8 On the **Job Details** page, view the following information about the jobs matching the contents of the Job Type, View Last, and Failed boxes:

In this field:	View this:
Select	If selected, indicates this is the current record.
Request Type	The job request type.
Status	The job request status.
Job Set	The job set code.
Job	The job description.
Thread	The job thread.
Errors	The number of errors.
Records	The number of records processed by the job.
Run Start Date/Time	The job run start date time.
Run End Date/Time	The job run end date time.
Description	The job request description.
Process Dt	The job process date.
Valid Execution Period	
Start Date/Time	The job start date/time.
End Date/Time	The job end date time.

Monitor Users link (Monitor page)

The Monitor Logins page allows you to view all users who have logged on to Oracle FLEXCUBE Lending and Leasing, along with the log on time stamp and logout time stamp. The information appears in reverse chronological order of the log on time stamp.

To monitor users who have logged on to Oracle FLEXCUBE Lending and Leasing

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Batch Jobs** bar link.
- 3 In the Batch Jobs Setup link bar, click Monitor Users.

4 In the Monitor Users page's **User Logins** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of user login records.

5 In the **User Logins** section, view the following information:

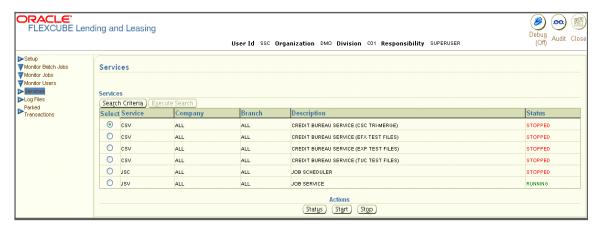

In this field:	View this:
Select	If selected, indicates this is the current record.
User Id	The user id.
User Name	The user name.
Details	The details.
Login Date and Time	The login date time for the user.
Logout Date and Time	The logout date time for the user.

Services link (Services page)

The Services page allows you to track and maintain Oracle FLEXCUBE Lending and Leasing's processing services, including credit bureaus, fax-in, and batch job scheduler. The system administrator can start or stop the service on this page by using the command buttons in the Action section.

To stop, start, or refresh a processing service

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Batch Jobs** bar link.
- 3 In the Batch Jobs Setup link bar, click **Services**.

4 In the **Services** page's **Services** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of service records.

5 In the **Services** section, view the following information about Oracle FLEXCUBE Lending and Leasing's processing services:

In this field:	View this:
Select	If selected, indicates this is the current record.
Service	The service name.
Company	The service company.
Branch	The service branch.
Description	The service description.
Status	The service status.

6 In the **Action** section, select the processing service you want to work with and choose one of the following commands in the **Action** section.

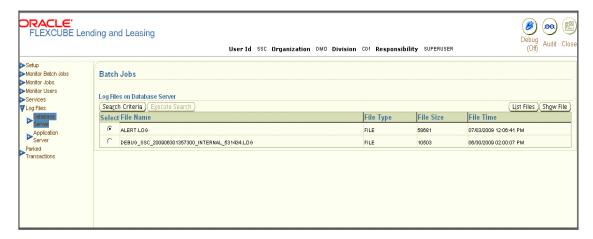

If you choose:	Oracle FLEXCUBE Lending and Leasing:
Status	Refreshes (updates) the status of the service. The Service page does not update the status in real time. You must choose Status after choosing Start or Stop to perform that command.
Start	Starts the job service.
Stop	Stops the job service.

Log Files link > Data Server link (Batch Jobs page)

Various processes in Oracle FLEXCUBE Lending and Leasing create reports in different log file with regards to what tasks they performed and what they encountered (for example, errors, failures, erroneous data, and so on.) The Database Server link lists and describes all such log files within Oracle FLEXCUBE Lending and Leasing on the database server.

To view a log file on the database server

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Batch Jobs** bar link.
- 3 In the Batch Jobs Setup link bar, click the **Log Files** drop-down link, then click **Database Server**.

- 4 In the Log Files on Database Server section, click List Files.
- In the **Batch Jobs** page's **Log Files on Database Server** section, select the record you want to work with.

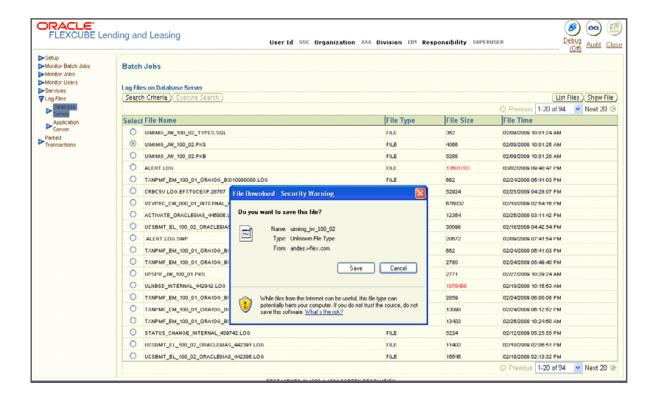

Note: If you choose, use **Search Criteria** to limit the display of log file (database server) records.

6 In the **Log Files on Database Server** section, view the following information:

In this field:	View this:
Select	If selected, indicates that this is the current record.
File Name	The name of the file.
File Type	The type of the file.
File Size	The size of the file.
File Time	The time stamp of the file.

7 Click Show File.

A File Download - Security Warning dialog box appears with the question "Do you want to save this file?"

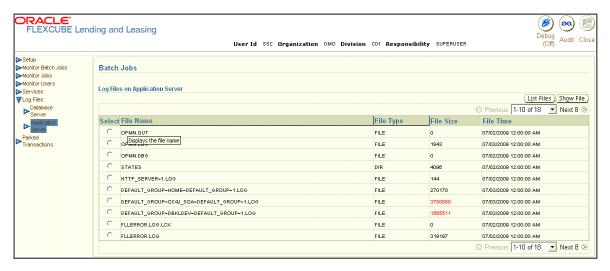

- 8 On the File Download Security Warning dialog box, click **Save**.
- 9 In the Save As dialog box, select where you want to save the file and click **Save**.

Log Files link > Application Server link (Batch Jobs page)

Various processes in Oracle FLEXCUBE Lending and Leasing create reports in different log file with regards to what tasks they performed and what they encountered (for example, errors, failures, erroneous data, and so on.) The Database Server link lists and describes all such log files within Oracle FLEXCUBE Lending and Leasing on the application server.

To view a log file on the application server

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Batch Jobs bar link.
- 3 In the Batch Jobs Setup link bar, click the Log Files drop-down link, then click Application Server.

- 4 In the Log Files on Application Server section, click List Files.
- 5 In the **Batch Jobs** page's **Log Files on Application Server** section, select the record you want to work with.

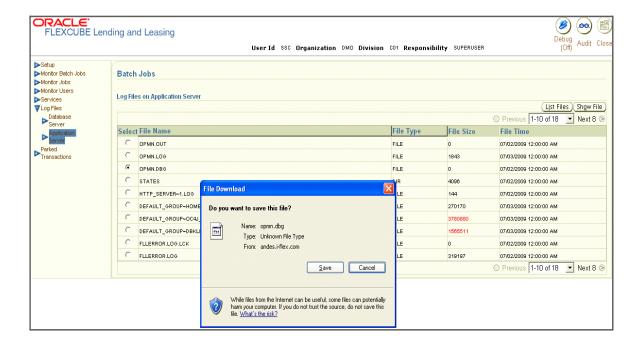

Note: If you choose, use **Search Criteria** to limit the display of log file (database server) records.

6 In the **Log Files on Application Server** section, view the following information:

View this:
If selected, indicates that this is the current record.
The name of the file.
The type of the file.
The size of the file.
The time stamp of the file.

7 Click Show File.

A File Download - Security Warning dialog box appears with the question "Do you want to save this file?"

- 8 On the File Download Security Warning dialog box, click **Save**.
- 9 In the Save As dialog box, select where you want to save the file and click **Save**.

CHAPTER 6: PRODUCT SETUP

On the Setup Module window's link bar, the Setup link opens pages that enable you to configure the basic business guidelines necessary to support one or more products in Oracle FLEXCUBE Lending and Leasing. This includes defining the types of collateral your company supports, creating lending instruments, and determining what is included in credit bureau reporting. Setting up the Products pages requires a thorough understanding of the current rules of your business and must be completed before you can use Oracle FLEXCUBE Lending and Leasing.

The Setup Module link bar sections contains the following:

Link:	Purpose:
Setup	Records data to support the loan products your company offers
Loan	Allows you to set up the closed ended fixed and variable rate loans your company offers.

This chapter explains how to set up the pages opened from the Setup Module link bar's Setup link, information common to loans:

- Assets page
- Scoring Parameters page
- Index Rates page
- Currency Exchange Rates page

Setup drop-down link

The Setup drop-down link opens pages to record data of the loan products supported by Oracle FLEXCUBE Lending and Leasing and contains the following links: Assets, Scoring Parameters, Index Rates, and Currency Exchange Rates.

Setup link > Assets link (Assets page)

The Assets page allows you to set up the asset types that can serve as an application's collateral.

The information on the Assets page is used by Oracle FLEXCUBE Lending and Leasing to automatically display the appropriate collateral page (Vehicle, Home, or Other) on the Application Entry window.

Oracle FLEXCUBE Lending and Leasing recognizes the following four types of collateral:

Collateral Type	Description
Home collateral	Homes, manufactured housing, or any real estate collateral.
Vehicle collateral	All vehicle types, such as cars, trucks, and motorcycles.
Household goods and	All other collateral types not defined as home, vehicle, or
other collateral	unsecured; for example, household items such as water
	heaters, televisions, and vacuums.
Unsecured collateral	All unsecured lending instruments. (This collateral type
	makes the collateral tabs on Oracle FLEXCUBE Lending
	and Leasing forms unavailable.)

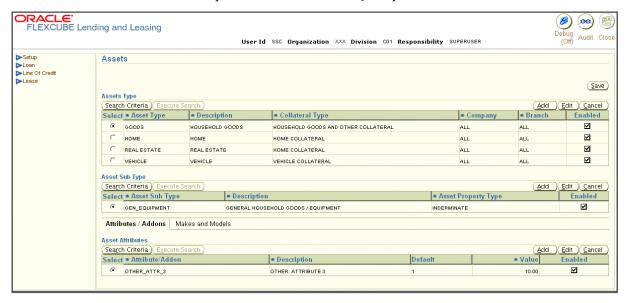

The Asset Sub Type section allows you to further categorize an asset; for example, the asset type VEHICLE might be categorized as CAR, TRUCK, or VAN.

The Attributes/Addons and Makes and Models sub pages continue to further detail the asset both in description and value. For example, a VEHICLE asset might include addons such as LEATHER SEATS and CRUISE CONTROL.

Note: Neither asset types nor asset sub types can be deleted. As they may have been used in the past, the display and processing of that data is still dependent on the existing setup.

To set up the assets

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- In the Products Setup link bar, click the **Setup** drop-down link, then click **Assets**.

4 In the **Asset** page's **Assets Type** section, select the record you want to work with.

Note: If you choose, use Search Criteria to limit the display of asset type records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- In the **Asset Type** section, enter, view, or edit the following information:

Note: There can be only one active entry, so use this section to define your organization at its highest level.

In this field:	Do this:
Select	If selected, indicates this is the current record.
Asset Type	Enter the asset type (required).
Description	Enter the description for the asset. (This is the asset type
	as it will appear throughout Oracle FLEXCUBE Lending
	and Leasing) (required).
Collateral Type	Select the collateral type (the general category that the
	asset type falls within).
	Note: There is no need to define an asset for UNSE-
	CURED COLLATERAL, as by definition there is no asset
	on such loans (required).
Company	Select the portfolio company to which the asset type
	belongs. These are the companies within your organiza-
	tion that can make loans using this asset type. This may
	be ALL or a specific company (required).

Branch	Select the portfolio branch to which the asset type belongs. This is the branch within the selected company that can make loans using this asset type. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL (required).
	IMPORTANT : In selecting which asset type to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using the following attributes:
	1 Company2 Branch
	For this reason, Oracle Financial Services Software recommends creating one version of each asset type where ALL is the value in these fields.
Enabled	Select to enable the asset type and indicate that the asset type is currently in use.

6 In the **Asset Sub Type** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of asset sub type records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Asset Sub Type** section, enter the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Asset Sub Type	Enter the asset sub type (required).
Description	Select the description for the asset attribute/addon (required)
Asset Property Type	Enter the type of property (required).
Enabled	Select to enable the asset sub type.

8 Click the **Attributes/Addons** sub tab and select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of asset sub type records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 9 In the **Attributes/Addons** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Attribute/Addon	View the asset attribute or addon name for the selected asset (required).
Description	Select the description for the asset attribute/addon (required).
Default	Enter the default text to be copied or displayed when the asset attributes and addons fields are completed on an application for this asset (optional).

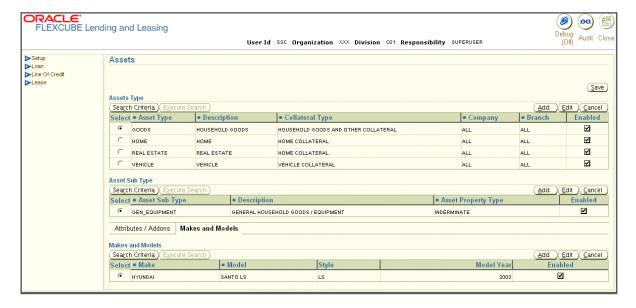

Value Enter the default monetary value to be copied or dis-

played when the asset attributes and addons fields are completed on an application for this asset (required).

Enabled Select to enable the asset attribute and indicate that it is

available for this type of asset.

- 10 Click **Save** on the Assets page.
- 11 Click the Makes and Models sub tab.

12 On the **Makes and Models** sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of makes and models records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 13 In the **Makes and Models** section, enter, view, or edit the following information:

In this field:	Do this:
Make	Enter asset make (required).
Model	Enter asset model (required).
Style	Enter asset style type (optional).
Model Year	Enter asset model year (optional).
Enabled	Select to enable the asset make and model and indicate
	that it is included on fields for this asset type.

14 Click **Save** on the Assets page.

Setup link > Scoring Parameters link (Scoring Parameters page)

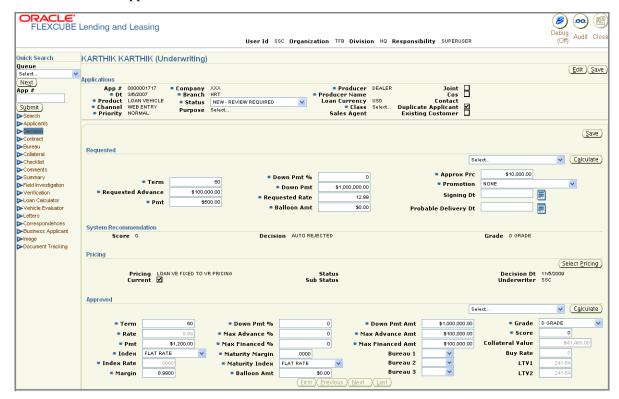

With the Scoring Parameters page, you can define the scoring parameters of a company's credit score card.

While Oracle FLEXCUBE Lending and Leasing pricing scores apply to applications and are based on information recorded during loan origination.

Credit Scoring

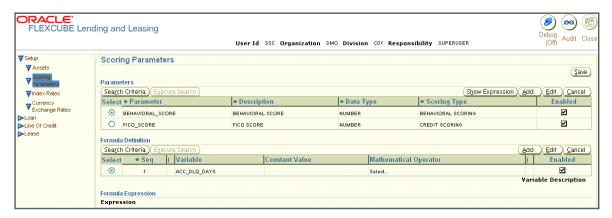

Parameters define the factors that can be used when scoring an application on during underwriting and generating an initial decision on whether you wish to fund a loan. The combination of the flexible definition of these parameters, along with the scoring set up on the Scoring Models page, allows you to automate much of the initial decision process in underwriting loans.

The Formula Definition section on the Scoring Parameters page allows you to build a mathematical expression to express the scoring parameter, test its validity, and locate specific information with the resulting scoring parameters. Oracle FLEXCUBE Lending and Leasing calculates scoring parameters using application data, credit bureau information, and applicant details.

To set up the scoring parameters

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Setup** drop-down link, then click **Scoring Parameters**.

4 On the **Scoring Parameters** page's **Parameters** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of parameter records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Parameters** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Parameter	Enter the name of the scoring parameter. Oracle Financial
	Services Software recommends entering a name that in
	some way reflects how the parameter is used; for exam-
	ple, use FICO_SCORE instead of PARAMETER_1.
	(required).
Description	Enter a description of the parameter. Again, enter a name
	that reflects how the parameter is used; for example, use
	FICO SCORE and WEIGHTED FICO SCORE instead of
	FICO SCORE NUMBER 1 and FICO SCORE NUMBER 2
	(required).
Data Type	Select the data type of the scoring parameter being
	defined - this determines how Oracle FLEXCUBE Lend-
	ing and Leasing handles the values. (While DATE and
	CHARACTER are available data types, generally only
	NUMBER should be used when defining a scoring parameter (required).
Scoring Type	Select the scoring type: CREDIT SCORING (required).
Enabled	Select to enable and indicate that the scoring parameter is available.

The **Formula Definition** section allows you to define a mathematical expression of the scoring parameter you want to define. The expression may consist of one or more sequenced entries. All arithmetic rules apply to the formula definition. If errors exist in the formula definition, Oracle FLEXCUBE Lending and Leasing displays an error message in this section when you choose Show Expression.

6 In the **Formula Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of formula definitions records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Formula Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Seq	Enter the sequence number (the order in which the formula definition variable will be assembled and evaluated) (required).
(Enter a left bracket if you need to group part of your formula definition (optional).
Variable	Select the variable from a validated field based on the
	user-defined table SCR_CRED_SUMMARY: SCORING
	PARAMETERS (required).
Constant Value	Enter the constant value (optional).
Mathematical Operator	Select the math operator to be used on the adjacent formula definition rows (required).
)	Enter a right bracket if you are grouping part of your formula definition (optional).
Enabled	Select to enable the formula and indicate this it is
	included when building a definition for the scoring parameter.

8 In the **Parameters** section, click **Show Expression**.

The mathematical expression appears in the **Formula Expression** section (in sequential order) in the Expression field.

9 Click **Save** on the Scoring Parameters page.

Setup link > Index Rates link (Index Rates page)

The Index Rates page maintains your organization's history of periodic changes in index rates. It allows you to define index rates to support variable rate loan. The index rate provides the base rate for a credit line where:

```
interest rate = index rate + margin rate.
```

The Index section displays the currently defined indexes on the Lookups page. You may create additional user-defined lookup codes for this lookup type as needed.

Note: You cannot tie an index rate to a product rate.

You can also record any index rate change on the Index Rates page. During nightly batch processing, all the loan accounts with that index type are included when posting the RATE CHANGE transaction. After Oracle FLEXCUBE Lending and Leasing processes the batch, the interest rate of the loan account is changed. Oracle FLEXCUBE Lending and Leasing will use this new interest rate when computing all future interest calculations.

To set up Index Rates page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Setup** drop-down link, then click **Index Rates**.

4 On the **Index Rates** page's **Index** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of index records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click Edit.

5 In the **Index** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Index Type	Select the type of index (required).
Short Description	Enter a short description of the index (required).
Description	Enter the index description (required).
Enabled	Select the Enabled check box to activate the index type.

The Index Details section allows you to define multiple index values using the Start Dt and Rate fields.

Note: The history appears in descending order, with the most current record at the top.

6 In the **Index Details** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of index details records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Index Details** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Start Dt	Enter the effective start date for the index rate (required).
Rate	Enter the new index rate effective from above mentioned
	date as a percentage (required).
	Note : For the FLAT RATE index there should be only one
	entry with a Start Dt. = $01/01/1900$ and a RATE =
	0.0000.
Enabled	Select the Enabled check box to activate the index rate
	effective from start date mentioned above.

8 Click **Save** on the Index Rates page.

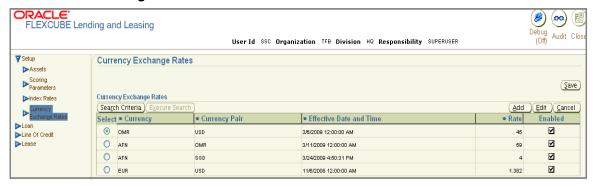

Note: Variable rate loans functionality is not extended to pre-compute loans.

Setup link > Currency Exchange Rates link (Currency Exchange Rates page)

The Currency Exchange Rates page maintains currency exchange rates.

To set up the currency exchange rates

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- In the Products Setup link bar, click the **Setup** drop-down link, then click **Currency Exchange Rates**.

4 On the **Currency Exchange Rates** page's **Currency Exchange Rates** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of currency exchange rate records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Currency Exchange Rates** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Currency	Select the currency being exchanged (required).
Currency Pair	Select the currency to be changed with (required).
Effective Date and Time	Enter date and time of the exchange rate (required).
Rate	Enter the exchange rate (required).
Enabled	Select the Enabled check box to activate the currency
	exchange rate.

6 Click **Save** on the Currency Exchange Rates page.

CHAPTER 7: PRODUCT LOAN SETUP

On the Setup Module window's link bar, the Loan link opens pages that allow you to set up the closed ended loan products your company offers.

The Loan link contains the following links:

- Products
- Pricing
- Edits
- Cycles
- Scoring
- Contract
- Fees
- Compensation
- Commission
- Checklists
- Org. Fees
- Stipulations
- Spreads
- Letters
- Promotions
- Insurances

This chapter explains how to setup the pages associated with each one.

Loan link > Products link (Loan Products page)

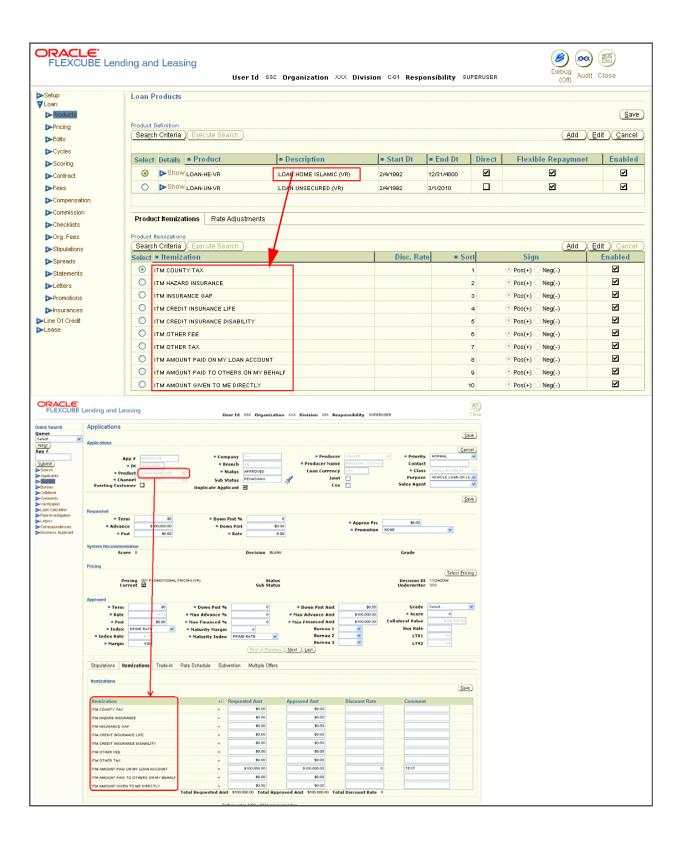

The Loan Product page defines the closed ended loan products your organization offers (home loans, vehicle loans, unsecured loans, and so on). The Loan Product page is enhanced to support Islamic loans along with the conventional loans.

A loan product is based on the following attributes:

- The collateral type and sub type
- The billing cycle
- Whether the loan is paid directly or indirectly to the customer

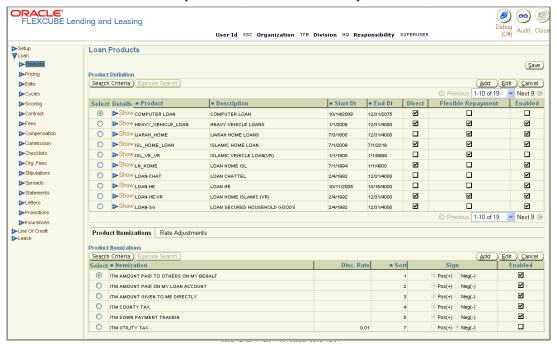

The Product Definition section records details about the loan product, such as the description, collateral type and sub type, credit bureau reporting attributes, and billing cycle.

The Product Itemization section is used to define itemized entries for a loan product. This information is used on the Itemization sub pages of the Application Entry and Application windows.

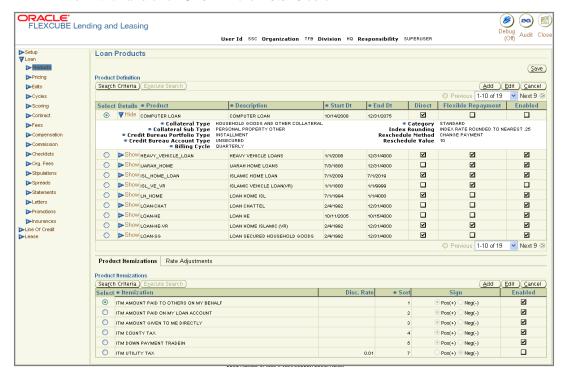

To set up the loan product

- On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Product Setup link bar, click the **Loan** drop-down link, then click **Products**.

4 On the Loan Product page's **Product Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of product records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Product Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select Product	If selected, indicates that this is the current record. Enter the product code as defined by your organization (in other words, how you want to differentiate the loan products). For example, loan products can be differentiated according to asset (LOAN-HE for a home loan, or LOAN-SG for a secured goods loan). The product code, or name, is unique (required).
Description	Enter the description of the product; for example, LOAN HE COLLATERAL, LOAN SECURED HOUSEHOLD GOOD, LOAN UNSECURED. (This is the product description as it appears throughout Oracle FLEXCUBE Lending and Leasing) (required).
Start Dt	Enter the start date for the product (required).
End Dt	Enter the end date for the product (required).
Direct	Select if the product can be originated directly to customer. (In this case, the compliancy state is the state listed in the customer's current mailing address.) -or-
Flexible Repayment	Clear if the product is an indirect lending product; that is payment is made to the producer. (In this case, the compliancy state is the state listed in the producer's address. Select if flexible repayment is allowed for the Product. When you select this check box, the Flexible Repaymen Allowed box on the Funding window's Contract link Repayment sub page Repayment section is selected. Note: On the Funding window's Contract link Repay-
	ment sub page, you may only enter the desired repaymen schedule type in the Repayment section's Type field if the Flexible Repayment Allowed is selected.
Enabled Collateral Type	Select to activate the product. Select the collateral type for the product. This field identifies what type of collateral is associated with the loan and assists Oracle FLEXCUBE Lending and Leasing in identifying the correct page(s) to display (required).
Collatoral Sub Type	identifying the correct page(s) to display (required). Select the colleteral sub-type for the product (required)
Collateral Sub Type Credit Bureau Portfolio Type*	Select the collateral sub type for the product (required). Select the credit bureau portfolio type for the product
Credit Bureau Portiono Type	(required).
Credit Bureau Account Type*	• •
Billing Cycle Category	is reported back to the credit bureaus (required). Select the billing cycle for the product (required). Select the category as Standard for the conventional loar product and Islamic for the islamic loan product. This

	serves to group products for reporting purposes (required).
Index Rounding	Select the index rate rounding factor for the product.
_	Note: For more information, see Appendix C: Rounding
	Amounts and Rate Attributes.
Reschedule Method	Select the rate change reschedule method for the variable rate product. Select CHANGE PAYMENT if you want to automatically recalculate the repayment amounts on the interest rate change. Select UNDEFINED (the default value) if you do not want to take any action on interest
Danahadala Vales	rate change (optional).
Reschedule Value	Enter the value in percent (%) to decide the repayment change. For example, if you enter 10, then the periodic repayment amount will change only if the newly computed repayment amount is higher by 10% of the previous repayment amount. Enter 0 if you want to change repayment amounts with every index rate change (optional).

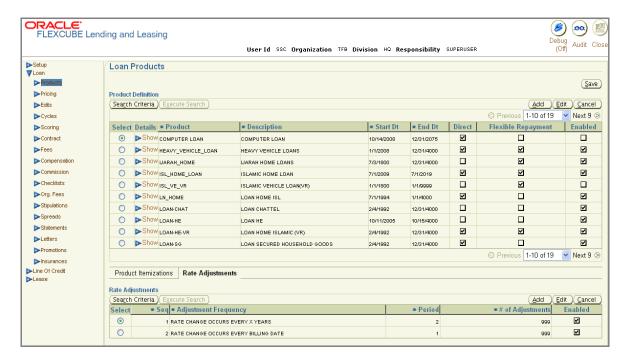

- 6 Click the **Product Itemizations** sub tab.
- 7 On the **Product Itemization** sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of product itemization records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 In the **Product Itemization** sub page, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Itemization	Select the itemization type (required).
Disc. Rate	Enter the discount rate (optional).
Sort	Enter the sort order (required).
Sign	Select Pos (+) for a positive number.
	-Or-
	Select Neg (-) for a negative number.
	Note : The Pos and Neg buttons determine whether the
	values will increase or decrease the itemization total for
	the loan based on the selected loan product. Together the
	contents of the Product Itemization sub page, positive
	and negative, add up to the loan amount.
Enabled	Select to indicate that this product itemization is currently available.

- 9 Click **Save** on the Loan Products page.
- 10 Click the **Rate Adjustments** sub tab.

11 On the Rate Adjustments sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of rate adjustments records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 12 On the **Rate Adjustments** sub page, enter, view, or edit the following information:

In this field:	Do this:
Select Seq Adjustment Frequency	If selected, indicates that this is the current record. Enter the sequence number of the rate change adjustments. Consider 1 as the initial (first) rate change adjustment frequency. All subsequent frequencies will be considered for rate change adjustments according to their sequence number (required). Select the frequency value for adjustments. Currently, the following values are available in Oracle FLEXCUBE Lending and Leasing:
	RATE CHANGE OCCURS EVERY X YEARS RATE CHANGE OCCURS EVERY X MONTHS RATE CHANGE OCCURS EVERY X DAYS RATE CHANGE OCCURS EVERY BILLING DATE RATE CHANGE OCCURS EVERY DUE DATE (required).
Period	Enter the period associated to adjustment frequency. For example, if you select the adjustment frequency as RATE CHANGE OCCURS EVERY X YEARS and enter 5, the rate change occurs every five years (required).

of Adjustments Enter the number of adjustments associated with the

adjustment frequency. For example, in above example, if you enter the value as 2, then rate payment adjustment occurs on the loan every five years and will happens 2 times before switching to the next adjustment frequency

(required).

Enabled Select to indicate that this rate adjustment is currently

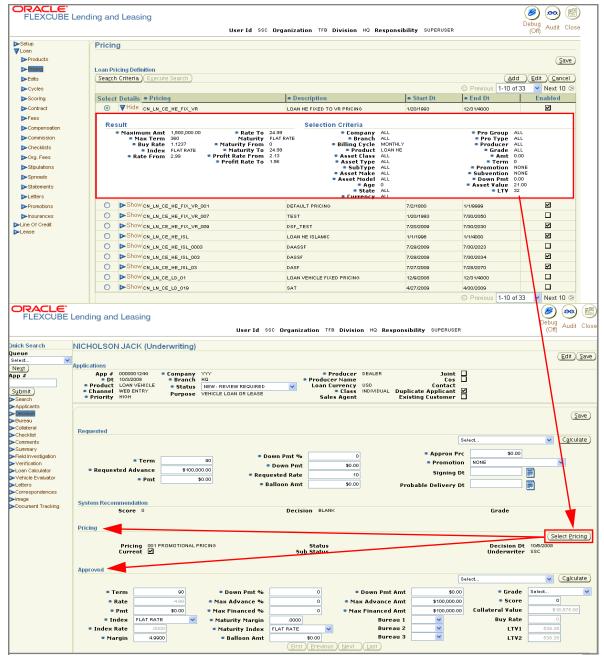

available.

13 Click **Save** on the Loan Products page.

Loan link > Pricing link (Pricing page)

The Pricing page records pricing information related to your loan products. Oracle FLEX-CUBE Lending and Leasing uses the information in the Loan Pricing Definition section to identify the correct pricing for an application, depending upon the product and the specific application parameters. Oracle FLEXCUBE Lending and Leasing will always search for a unique match.

When you choose the **Select Pricing** when making a decision on the **Underwriting** window, Oracle FLEXCUBE Lending and Leasing displays the best match and completes the Pricing and Approved sections. The information in the Approved section cite the minimum amounts for the loan, though the Oracle FLEXCUBE Lending and Leasing user can edit these figures.

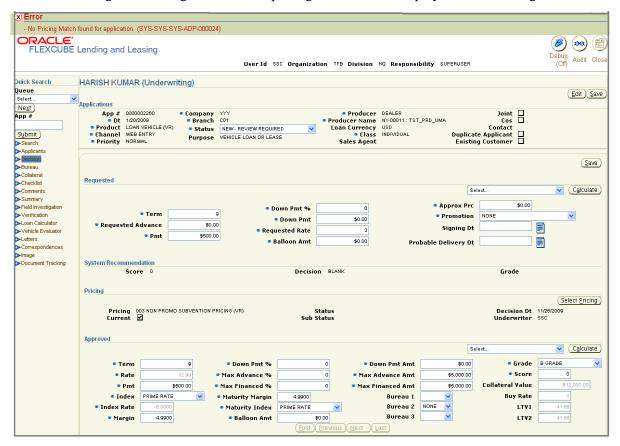

Oracle FLEXCUBE Lending and Leasing determines the best match by looking at all enabled loan pricing strings on the Pricing page that meet the following criteria:

- Exactly match the application values for the Promotion and Billing Cycle fields.
- Are less than or equal to the application values for the Term, Amount, Age, and Start Date fields.
- Match either the application value or ALL for all other criteria.

Exact matches for each field are given a higher weight than matches of ALL. The returned rows are then ranked based on the weighted values and the hierarchical position of the field (see above). They are then ranked by start date. Oracle FLEXCUBE Lending and Leasing recognizes the first row returned as the best match.

Note: You should set up a default pricing for each billing cycle and pricing that Oracle FLEXCUBE Lending and Leasing can select to ensure error-free performance. Oracle Financial Services Software recommends creating one version of each edit type where ALL is the value in the selection criteria fields listed above. If Oracle FLEXCUBE Lending and Leasing cannot find a pricing match, it will display an error message.

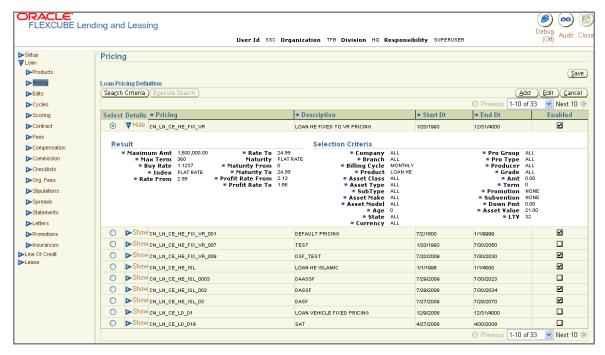

Note: Oracle FLEXCUBE Lending and Leasing supports the bulk uploading of product pricing setup data. This allows you to upload multiple setup data, avoid reentering setup data, and more importantly, reduce data entry mistakes. Oracle FLEXCUBE Lending and Leasing currently supports uploading using a fixed-length format only, where each data is at a pre-fixed position only. You can run batch jobs with the Set Code SET-BLK to upload pricing and GL data.

To set up the pricing

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Pricing**.

4 On the **Pricing** page's **Loan Pricing Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of product records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.

5 In the **Loan Pricing Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Pricing*	Enter the code for the pricing string (required).
Description*	Enter the description for the pricing string (required).
* Together these two f	ields define the name of the loan pricing.
Start Dt	Enter the start date for this pricing string (required).
End Dt	Enter the end date for this pricing string (required).
Enabled	Select to enable the pricing string.

Result section

Note: You can create edits during implementation to note when amounts in applications are outside the range of tolerance.

Maximum Amt	Enter the maximum amount financed for this rate pricing string (required).
Max Term	Enter the maximum term financed for this rate pricing string (required).
Buy Rate	Enter the buy rate (required).
Index	Select the index type associated with this rate pricing string (required).
Rate From	Enter the minimum rate allowed for loans using this rate pricing (required).
Rate To	Enter the maximum rate allowed for loan using this variable rate pricing (required).
Maturity	Select the maturity type associated with this variable rate pricing string (required).
Maturity From	Enter the lowest maturity rate allowed for loans using this variable rate pricing. Maturity rate is the rate to be charged on the loan if it remains unpaid after its last term has been billed (required).
Maturity To	Enter the maximum maturity rate allowed for loans using this pricing (required).
Profit Rate From	Enter the minimum profit rate allowed for the loan using this pricing (required). Note: This field will be displayed only if you select the category as the Islamic in the Loan Product page.
Profit Rate To	Enter the maximum profit rate allowed for the loan using this pricing (required) Note: This field will be displayed only if you select the category as the Islamic in the Loan Product page.

The Selection Criteria section allows you to specify pricing at different levels and determine how Oracle FLEXCUBE Lending and Leasing matches specific loan pricing to the applicant's loan request.

Selection Criteria section

Company Select the portfolio company for this pricing. This may be ALL or a specific company (required).

Branch Select the portfolio branch for this pricing. This may be

ALL or a specific branch. (This must be ALL if in the

Company field you selected ALL) (required).

Billing Cycle Select the billing cycle for this pricing (required).

Product Select the product for this pricing. This may be ALL or a

specific product. The available values come from a validated field based on the selected billing cycle and the

loan product setup (required).

Asset Class Select the asset class. This may be ALL or a specific asset

class. The available values come from a validated field based on the collateral type. You may create additional user-defined lookup codes for these lookup types as

needed (required).

Asset Type Select the asset type. This may be ALL or a specific asset

type. The available values come from a validated field

based your assets setup (required).

SubType Select the asset sub type. This may be ALL or a specific

asset sub type. The available values come from a validated field based your assets setup, and is linked to the

selected asset type (required).

Asset Make Select the asset make. The available values come from a

validated field based your assets setup and is restricted based on the selected Asset Type and Asset Sub Type. For example, If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available

selection for the asset make (required).

Asset Model Select the asset model. The available values come from a

validated field based your assets setup, and is restricted based on the selected Asset Type and Asset Sub Type. If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available selection for

the asset model (required).

Age Enter the asset age (the minimum age for the selected

pricing).

Note: If your entry in this field is based on the number of years of age of the asset and not the actual year of make, you must update this entry annually to ensure that the

proper pricing string is available (required).

State Select the state for this pricing. This may be ALL or a

specific state (required).

Currency Select the currency for this pricing (required).

Grade

Pro Group Select the producer group for this pricing. This may be

ALL or a specific producer group (required).

Pro Type Select the producer type for this pricing. This may be

ALL or a specific producer type (required).

Producer Select the producer. This may be ALL or a specific pro-

ducer. The available values come from a validated field based on the product group and product type (required).

Select the credit grade for this pricing. This may be ALL

or a specific grade (required).

Amt Enter the minimum amount financed for this pricing

string (required).

Term Enter the minimum loan term for this pricing (required). **Promotion** Select the promotion applicable to this pricing string. The

available values come from a validated field based on the

promotions setup (required).

Subvention Select the subvention plan if pricing is specific for any

subvention plan (required).

Down Pmt Enter the down payment for the pricing (required).

Asset Value Enter the asset value (required). **LTV** Enter the loan to value (required).

6 Click **Save** on the Pricing page.

Loan link > Edits link (Edits page)

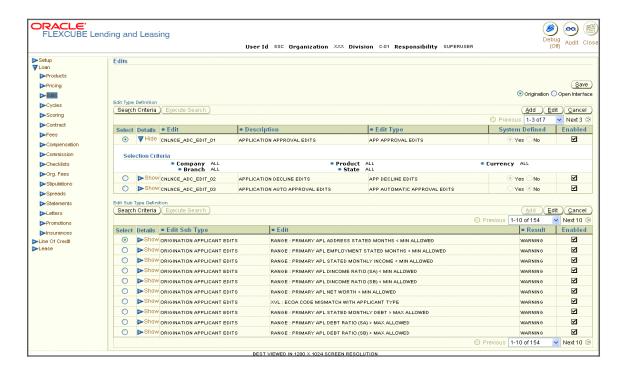

Edits ensure your organization's guidelines are properly followed and that all exceptions are sent to the appropriate personnel to review.

To set up the edits

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Edits**.

- 4 On the Edits page, choose Origination or Open Interface.
- 5 In the **Edit Type Definition** section, select the record you want to work with, then click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of edit type definition records.

• If you are entering a new record, click **Add**.

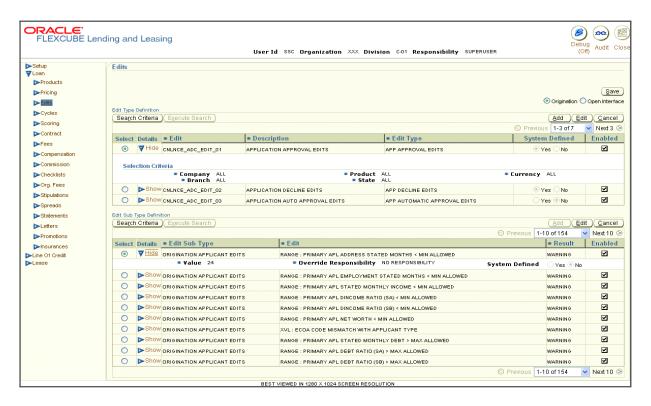

In this field:

- If you are changing an existing record, click **Edit**.
- 6 In the **Edit Type Definition** section, enter, view, or edit the following information:

Do this:

Select	If selected, indicates this is the current record.
Edit	Enter the edit name (required).
Description	Enter the description for the edit (required).
Edit Type	Select the edit type code (required).
System Defined	If Yes is selected, the entry is system defined. System defined entries cannot be modified. If No is select, the entry is not system defined and it can be modified.
Enabled	Select to enable the edit.
Selection Criteria section	
Company	Select the portfolio company associated with this edit.
	This may be ALL or a specific company (required).
Branch	Select the portfolio branch within the company associ-
	ated with this edit. This may be ALL or a specific branch.
	This must be ALL if you selected ALL in the Company
	field (required).
Product	Select the product associated with this edit. This may be
a. .	ALL or a specific product (required).
State	Select the state with this edit. This may be ALL or a specific product (required).
Currency	Select the currency associated with this edit. This may be

7 In the **Edit Sub Type Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of edit type definition records.

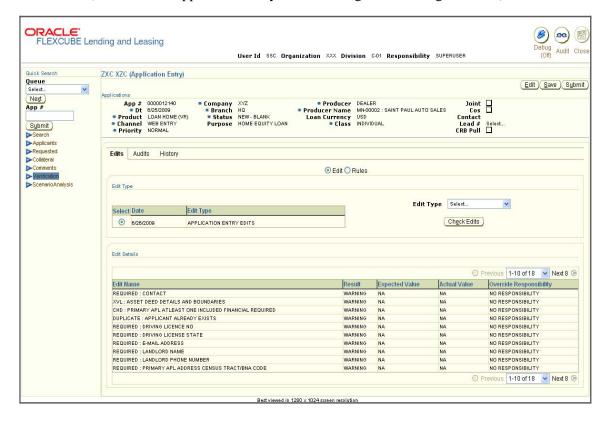

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- 8 In the **Edit Sub Type Definition** section, enter, view, or edit the following information:

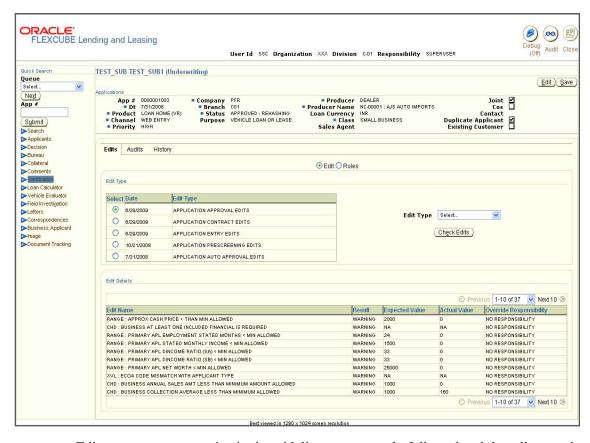

In this field:	Do this:
Select	If selected, indicates this is the current record.
Edit Sub Type	Select the edit sub type for the edit (required).
Edit	Select the description for the edit (required).
Result	Select the result type for the edit (required).
Enabled	Select to enable the edit.
Value	Enter the expected value for the first edit. The Value field records the threshold value for the edit. The actual function of the entered value is dependent on the edit category (required).
Override Responsibility	Select the responsibility that can override the edit, if the edit result is an override. Designates the user responsibility level required to continue processing applications that fail the edit based on the Value field. You may define the same edit multiple times with a Result = OVERRIDE and different Value and Override Responsibility combinations to encompass various results (required).

If Yes is selected, the entry is system defined. System defined entries cannot be modified. If No is select, the entry is not system defined and it can be modified.

9 Click **Save** on the Edits page.

You can configure your Oracle FLEXCUBE Lending and Leasing system so that during the loan origination process, at each change to an application's status, Oracle FLEXCUBE Lending and Leasing will perform a set of edits on the Verification link's Edits page (found on the Application Entry, Underwriting, and Funding windows).

Edits ensure your organization's guidelines are properly followed and that all exceptions are sent to the appropriate personnel to review. If the edits check fails, Oracle FLEXCUBE Lending and Leasing will not allow the status to change, and the application will remain in its current status. The Edit Type Definition page allows you to define the validations Oracle FLEXCUBE Lending and Leasing performs on the Verification master tab as an application moves from one status to another.

Origination edits are used to validate applications entered through the standard Application Entry and Applications windows. The Edits page contains two sections, the Edit Type Definition section and the Edit Sub Type Definition section.

Using the **Edit Type** field of the **Edit Type Definition** section, you can define when you want the edits check to occur by selecting from the following list of edit types:

Edit type:	Description:
APP ENTRY EDITS	Edits that normally run on Application Entry form.
APP PRESCREENING EDITS PRE QUALIFY EDITS	Edits that run between application entry and the pulling of a credit bureau. These edits determine whether the application should be reviewed further, and whether a credit bureau should be pulled. Edits that run to check whether the minimum details which are required to prequalify the application are satisfied or not.
APP AUTOMATIC	Edits that run after a credit bureau has been pulled and
mi morowinic	Lans that run arter a credit bureau has been puned and

APPROVAL EDITS	scored. These edits determine whether an application should be automatically approved or declined.
APP APPROVAL EDITS	Edits that run whenever an application is manually changed to a status/sub status that indicates the application (in its current state) should be approved.
APP DECLINE EDITS	Edits that run whenever an application is manually changed to a status/sub status that indicates the application (in its current state) should be declined.
APP CONTRACT EDITS	Edits that run whenever an APPROVED or CONDITIONED-APPROVED application is about to be funded. These edits ensure the validity of the contract data.

Each entry in the Edit Sub Type field is grouped into the following categories:

Origination edit sub types: ORIGINATION APPLICANT EDITS	Edits that pertain to data entered for an applicant on an application.
ORIGINATION APPLICATION EDITS	Edits that pertain to data entered for the requested loan.
ORIGINATION ASSET EDITS	Edits that pertain to data entered for asset entered on the application.
ORIGINATION CONTRACT EDITS	Edits that pertain to data entered for the contract on the application.
ORIGINATION CREDIT BUREAU EDITS	Edits that pertain to data gathered from the credit bureau reports for the applicants on the application.
ORIGINATION DECISION EDITS	Edits that pertain to data required to make a decision on the application.

Each entry in the Edit Sub Type field can be set up with more than one entry in the Description field. The purpose of specific edits fall into the following types:

Description starts with:	(Edit Category) Description of Edit Category:
CHD:	(RECORD POPULATION EDITS) Check for the existence of an entire data record.
DUPLICATE:	(DUPLICATION EDITS) Check for duplication of existing data.
RANGE:	(VALUE RANGE/TOLERANCE EDITS) Check to determine whether data entered for a specific data field is within the specific tolerance.
REQUIRED:	(REQUIRED FIELD EDITS) Check to determine whether a specific data field has been populated within a data record.
FLK:	(LOOKUP VALUE EDIT) Check API entered data against the existence of that value in the related lookup types lookup codes.

XVL: (CROSS VALIDATION EDIT) Check to determine whether specific field, or set of fields, value corresponds to a value obtained by calculating them from another field or set of fields (for example, Total Payments = Terms * Standard payment amount).

An Edits check can produce one of three results: an ERROR, a WARNING, or an OVER-RIDE.

Edit type:	Results:
ERROR	Oracle FLEXCUBE Lending and Leasing will prevent you from proceeding when an edits check fails. The only option in this case is to change the source data. The application will revert to its previous status/sub status. The user will be directed to correct the specific error. Until the edits that return an ERROR value are addressed, the user cannot continue processing the application.
WARNING	When an edits check fails in these cases, Oracle FLEX-CUBE Lending and Leasing allows the process to continue. Warnings serve as informational messages and can be ignored. The user will be notified that an edit failed, but the failure need not stop the current processing of the application. The user can either ignore the error, or have the application revert to its previous status/sub status and address the error before processing the application further.
OVERRIDE	The edit check has failed; however, Oracle FLEXCUBE Lending and Leasing allows users with the responsibility specified in the Override Responsibility field to continue. Multiple override levels can be setup depending upon the resulting value of the edit. If the user has override responsibility, the application will process as if the edit had not failed. If the user does not have override responsibility, the application will revert to its previous status/ sub status and the sub status changes to OVERRIDE REQUIRED. Oracle FLEXCUBE Lending and Leasing will direct the application to a user with the authority to process the application. (See the Queues chapter for more information).

Note: Do not set the **Result** field to Override for credit application edits.

Interfacing Oracle FLEXCUBE Lending and Leasing with Oracle Rule Author

Oracle Business Rules is a component of Oracle Application Server that enables applications to rapidly adapt to regulatory and competitive pressures. This increased agility is possible due to the adoption of Oracle Rule author wherein a lending Institution can create or change a business rule without having to indulge in coding and also without stopping the business process. Also, externalizing business rules allows to manage business rules directly, without involving programmers. It provides best of breed solutions that would

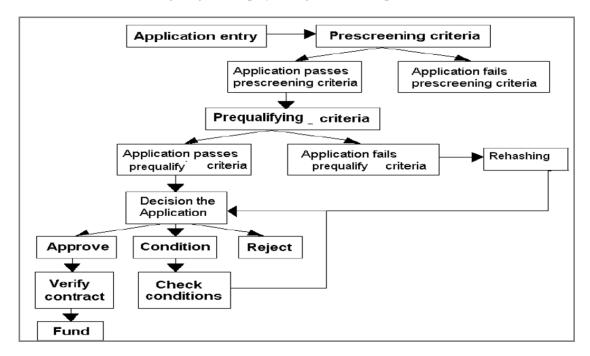

help in configuring the rules very quickly by a business analyst or user with some insight on the database.

Loan link > Cycles link (Cycles page)

The Cycles page allows you to define the loan origination workflow process of your organization. As you delineate the steps in the origination process, you will also define:

- The user responsibilities that have access to perform the steps
- Any edits you want Oracle FLEXCUBE Lending and Leasing to perform between changes in status/sub status.

The following diagram displays the general concept of workflow:

Cycle code definitions drive the loan application cycle. The following pairs of status/sub status define status/sub statuses that have system defined meanings and should be included in your origination workflow, if they are not already included.

After entering the basis details of the applicant, the user can check whether the application pre-qualifies or not. If the pre-qualified edits are satisfied, the status is changed to **NEW-PREQUALIFY APPROVED** and the user can modfiy or update any further details in the Application Entry screen. If the edits are not satisfied, the application will be pushed to the REJECTED APPLICATIONS queue with a status update to **REJECTED-PREQUAL-IFY REJECTED**. The user can also view the rejected prequalification in the Underwriting window.

Note: The Oracle FLEXCUBE Lending and Leasing status and sub status lists are predefined and cannot be changed by the Oracle FLEXCUBE Lending and Leasing administrator. If you require additional sub status codes please contact Oracle Financial Services Software to determine whether they can be added.

Status/Sub status:	Description:
NEW-BLANK	This is the status/sub status of applications during data entry. Applications remain NEW-BLANK until you choose the Next Application on the Application Entry form and Oracle FLEX-CUBE Lending and Leasing successfully performs the application edits check.
NEW-PRESCREEN	Oracle FLEXCUBE Lending and Leasing is processing the prescreen edits to determine whether a credit report should be pulled for this application.
NEW-PRESCREEN APPROVED	Applications in this status/sub status have passed the prescreen edits. Oracle FLEXCUBE Lending and Leasing will now request a credit bureau pull.
NEW- PREQUALIFICATION	Oracle FLEXCUBE Lending and Leasing checks the applicant details whether it is qualified or not.
NEW- PREQUALIFY APPROVED	If the pre-qualified edits are satisfied, the status is changed to NEW-PREQUALIFY APPROVED and the user can modfiy or update any further details in the Application Entry screen.
REJECTED- PREQUALFY REJECTED	If the edits are not satisfied, the application will be pushed to the REJECTED APPLICATIONS queue with a status update to REJECTED-PREQUALIFY REJECTED.
REJECTED- PRESCREEN REJECTED	Applications in this status/sub status failed the prescreen edits. These applications will receive no further processing. The producer will be sent a decision fax and the consumer will receive an adverse action letter.
NEW- REVIEW REQUIRED	Either based on the scoring of the application's credit bureau(s) pull, or the fact that a credit bureau report was not successfully obtained, the application needs to be reviewed by an underwriter.
NEW- RECOMMEND APPROVAL	Based on the scoring of the application's credit bureau(s) pull, the application should be reviewed by an underwriter. However, based on the current setup, Oracle FLEXCUBE Lending and Leasing recommends approving this application.
NEW- RECOMMEND REJECTION	Based on the scoring of the application's credit bureau(s) pull, the application should be reviewed by an underwriter. However, based on the current setup, Oracle FLEXCUBE Lending and Leasing recommends rejecting this application.
APPROVED-AUTO APPROVED	Based on the scoring of the application's credit bureau(s) pull, Oracle FLEXCUBE Lending and Leasing automatically approved the application. The producer will be sent a decision fax, and the application will be passed to funding.

REJECTED-AUTO REJECTED

Based on the scoring of the application's credit bureau(s) pull, Oracle FLEXCUBE Lending and Leasing automatically rejected the application. The producer will be sent a decision fax and the consumer will receive an adverse action letter.

APPROVED-BLANK

Application has been manually approved. Normally this occurs when an application is in the NEW-RECOMMEND APPROVAL, NEW- RECOMMEND APPROVAL status/sub status, or less often in the NEW-RECOMMEND REJECTION status/sub status. Any cycle code definition with next values of APPROVED-BLANK should have a lookup value of APP APPROVAL EDITS to ensure that all of the required data has been gathered in making the decision to approve the application (unless the application is currently in a status/sub status that assures the APP APPROVAL EDITS have been run).

NEW-OVERRIDE REQUIRED

A user without sufficient override authority attempted to approve an application, which, based on setup, required a higher over-ride authority to approve.

APPROVED-**VERIFYING**

A user placed the application in this status to indicate the contract has been received from the producer.

APPROVED-FINAL DOCUMENT CHECK The contract has been reviewed and the data is correct. Normally this occurs when an application is in APPROVED-FINAL DOCU-MENT CHECK OR CONDITIONED-FINAL DOCUMENT CHECK status/sub status. Any cycle code definition with next values of APPROVED-FINAL DOCUMENT CHECK or CONDITIONED-FINAL DOCUMENT CHECK should have a value of APP CON-TRACT EDITS to ensure that all of the required data has been gathered in making the decision to approve the application, unless the application is currently in a status/sub status that assures the APP CONTRACT EDITS have run.

APPROVED-VERIFIED The application has been processed and is awaiting funding.

APPROVED-FUNDED

The application has been funded, and a check requisition has been created. If Oracle FLEXCUBE Lending and Leasing's Customer Service form is being used, then an account is also created at this time.

REJECTED-BLANK

The application for whatever reason is being manually rejected regardless of its current status/sub status. Any cycle code definition with Next values of REJECTED-BLANK should have a lookup value of APP DECLINE EDITS to ensure that all of the required data has been gathered in making the decision to approve the application (unless the application is currently in a status/sub status that assures the APP DECLINE EDITS have run).

WITHDRAWN-BLANK The applicants have indicated that they are no longer pursuing this loan.

CONDITIONED-<ANY> These status/sub status pairs are analogous to the corresponding

APPROVED-<ANY> pair and indicate that the application has had

additional conditions placed on its approval.

<ANY>- These OVERRIDE sub statuses indicate that the application

<ANY OVERRIDE> requires OVERRIDE approval. The meaning of the sub status is

analogous to the corresponding OVERRIDE sub status, and may

require that specific EDITS run before proceeding.

<ANY>-AGED These applications have been decisioned but no contract has been

APPLICATION received after a period of time determined by setup. If not acted

on, these applications will become VOID.

<ANY>-AGED Contracts have been received after a period of time determined by

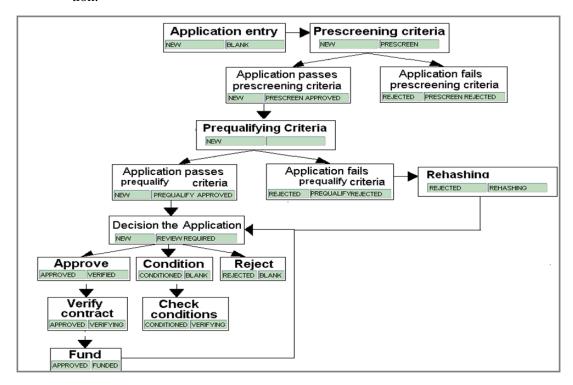

CONTRACT setup. If not acted on these applications will become VOID.

<ANY>-VOID Indicate application previously had a sub status of AGED CON-

TRACT or AGED APPLICATION. These applications have not been completed and were made VOID after another period of

time had passed.

Using these status and sub status, let us reexamine the early workflow diagram in this section.

Note: It is extremely important that the APP CONTRACT EDITS run prior to an application being funded. All cycle code definitions should be reviewed to ensure that there are no paths through the origination cycle that bypass this EDIT type.

To set up the cycles

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Setup Module link bar, click the **Loan** drop-down link, then click **Cycles**.

4 In the **Cycle** page's **Cycle Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of cycle definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Cycle Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Cycle	Enter the cycle name (required).
Туре	Select the cycle type (required).
Product	Select the product for the cycle (required).

An application's status/sub status determines where in the Origination process the application currently is, and what actions are needed to allow the application to continue through the process.

6 In the **Cycle Code Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of cycle code definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.

7 In the **Cycle Code Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Current Code	Select the current code (status) to transition FROM (current status of the application) (required).
Current Sub Code	Select the current sub code (sub status) to transition FROM (current sub status of the application) (required).
Next Code	Select the current code (status) to transition TO (status the application can be assigned to based on the current status/sub status) (required).
Next Sub Code	Select the sub code (sub status) to transition TO (sub status the application can be assigned to based on the current status/sub status) (required).
Edit Type Cd	Select the edit type to verify when the transition occurs (If the edit set fails the status/sub status of the application will remain as it is. If the edit set requires an OVERRIDE, the status of the application will remain as it is, but the sub status will be changed to OVERRIDE REQUIRED) Along with each combination of Current Code/ Current Sub Code and Next Code/Next Sub Code, an edit can be associated with the step. This ensures that Oracle FLEX-CUBE Lending and Leasing performs the set of checks before the next status/sub status is assigned. (required).

8 In the **Cycle Code Responsibility Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of cycle code responsibility definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- In the **Cycle Code Responsibility Definition** section, enter, view, or edit the following information to define the user groups that are provided or denied access to perform the step:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Responsibility Code	Select the responsibility that can change a status/sub sta-
	tus change. (There can be more than one responsibility
	for each code.) (required).
Allowed	If selected, the responsibility is allowed to change to the
	next status/sub status.

10 Click **Save** on the Cycles page.

Loan link > Scoring link (Scoring page)

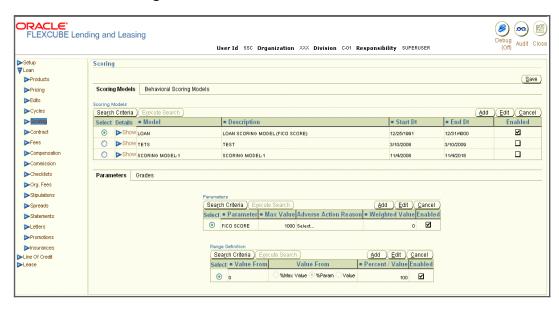

The Scoring page allows you to setup individual and multiple scoring models. You can define different scoring models by company, branch and product. Scoring models are used to automate the decisioning process during underwriting and grade applications.

When you complete the Application Entry process, Oracle FLEXCUBE Lending and Leasing determines which scoring model to use by finding a best match. Oracle FLEXCUBE Lending and Leasing searches the Company, Branch, and Product fields of all enabled scoring models that contain either the exact value on the application or ALL. (Exact matches for each field are given a higher weight than matches to ALL.) Oracle FLEXCUBE Lending and Leasing then ranks the returned matches in descending order based on the weighted values and the hierarchical position of the field, then by Start Date. Oracle FLEXCUBE Lending and Leasing recognizes the first row returned as the best match. This scoring model information is then used to determine the next status and sub status of the application.

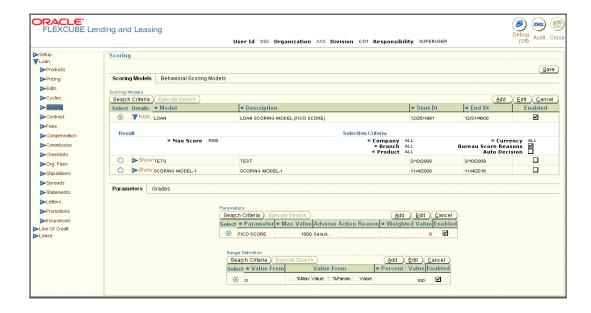

If you use a standard bureau score as a scoring model, you can set up Oracle FLEXCUBE Lending and Leasing to use the adverse action reasons provided by the standard bureau score on the Stipulations sub page.

To set up the scoring

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Scoring**.
- 4 Click the **Scoring Models** tab.

5 On the **Scoring Models** page, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of scoring model records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- 6 On the **Scoring Models** page, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Model	Enter the code for the scoring model (required).
Description	Enter a description of the scoring model (required).
Start Dt	Enter the start date for the scoring model (required).
End Dt	Enter the end date for the scoring model (required).
Enabled	Select to enable the scoring model.
Results section	
Max Score	Enter the maximum score allowed. (This is normally the sum of the Max Value fields within the scoring parameters.) (required).
Selection Criteria section	
Company	Select the company for the scoring model. This may be ALL or a specific company (required).
Branch	Select branch within the company for the scoring model. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL) (required).
Product	Select the product for the scoring model. This may be ALL or a specific product (required).
Currency	Select the currency for the scoring model. This may be ALL or a specific currency (required).

Bureau Score Reasons	Select to use the score reasons supplied by the credit bureau. If not selected, automatically rejected applica- tions scored using this scoring model display the Adverse
	Action Reasons from the Parameters sub page.
Auto Decision	Select to assign an application a status/sub status based
	on the grade associated with the score returned for this
	scoring model. If not selected, Oracle FLEXCUBE Lend-
	ing and Leasing assigns applications scored using this
	scoring model a status/sub status of NEW-REVIEW
	REQUIRED.

7 Click **Save** on the Scoring page.

Loan link > Scoring link > Scoring Models page > Parameters sub page

The Parameters sub page records the parameters used to determine the score calculated by the scoring model. You can define multiple parameters and adverse action reason associated with each parameter in a scoring model. Each scoring parameter can have maximum values set. The score range is based upon the information in the Range Definition section on the Parameters sub page.

Oracle FLEXCUBE Lending and Leasing calculates a final score by adding the score for each parameter in the scoring model. A parameter weighted value is used to find the four adverse action reasons, if bureau reasons are not used.

Note: A character parameter range definition should contain the exact value of the parameter.

Note: Each scoring parameter should have range definitions defined that encompass all of the values that might result.

- 1 Click the **Parameters** sub tab.
- 2 In the **Parameters** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of parameters records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- On the **Parameters** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Parameter	Select the parameter from the field (required).
Max Value	Enter the maximum value allowed for the selected parameter (required).
Adverse Action Reason	Select the adverse action reason from the field. (If, on the Scoring Models page, the Bureau Screen box is selected for the scoring model, you cannot update this field) (optional).
Weighted Value	Enter the adverse action weighted value. This indicates the priority of this parameter when determining which adverse action reasons to use on the application. The top

ten adverse action reasons based on the weighted value of the parameter will be populated (required). Select to enable the parameter.

•

The **Range Definition** section allows you to translate the calculated value for a scoring parameter into the value to be used, depending on the returned value of the parameter.

4 In the **Range Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of range definition records.

• If you are entering a new record, click **Add**.

Enabled

- If you are changing an existing record, click **Edit**.
- 5 In the **Range Definition** section, enter, view, or edit the following information:

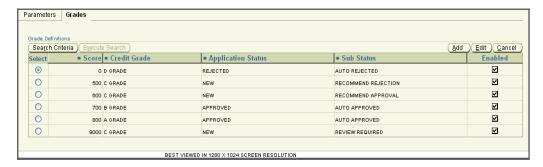

In this field:	Do this:
Select Value From	If selected, indicates this is the current record. Enter the lowest calculated value to apply the specific translation. The ceiling of the range definition is based on the range definition with the next highest Value From or the Max Value of the scoring parameter (whichever is
Value From	less) (required). Choose one of the following options to determine how values for a scoring parameters are translated: If you choose, Max Value, then calculated values within the range definition receives a value based on a percentage of the Max Value of the scoring parameter. If you choose, Param, then calculated values within the range definition receives a value based on a percentage of the calculated value of the scoring parameter. If you choose Value, then calculated values with in the
Percent / Value	range definition receives a specific value. Enter the percent or value to be used in the translation of the calculated value of the scoring parameter.
Enabled	Select and Oracle FLEXCUBE Lending and Leasing will consider this range definition when translating values for this scoring parameter.

6 Click **Save** on the Scoring page.

Loan link > Scoring link > Scoring Models page > Grades sub page

The Grades sub page allows you to define how Oracle FLEXCUBE Lending and Leasing translates the scoring model scores into your organization's grade. Oracle FLEXCUBE Lending and Leasing uses these grades in the auto-decisioning process. Each grade has a specific status/sub status that informs Oracle FLEXCUBE Lending and Leasing what to do with the application of a particular grade as it continues through the origination cycle. **Note**: Each scoring model should have grade definitions defined that encompass all of the values that might result.

1 Click the **Grades** sub tab.

2 In the **Grade** sub page's **Grade Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of grade records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 3 In the **Grade Definition** section, enter, view, or enter the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Score	Enter the score the application receives (required).
Credit Grade	Select the grade to assign to an application (required).
Application Status	Select the status to assign to applications with a score starting with the value of this grade definition (required).
Sub Status	Select the sub status to assign to applications with a score starting with the value of this grade definition. Credit scoring only allows for only the following status/ sub status pairs: APPROVED - AUTO APPROVED REJECTED - AUTO REJECTED NEW - REVIEW REQUIRED
Enabled	NEW - RECOMMEND APPROVAL NEW - RECOMMEND REJECTION (required). Select to indicate that this grade definition will be considered when grading an application using this scoring model.

4 Click **Save** on the Scoring page.

Loan link > Contract link (Contract page)

The Contract page allows you to define the loan instruments used within your Oracle FLEXCUBE Lending and Leasing system. A loan instrument is a contract used by a financial organization with specific rules tied to it. When processing an application, an instrument associated with the application informs Oracle FLEXCUBE Lending and Leasing of the type of contract being used for the approved loan. This ensures that all parameters tied to the instrument are setup for the account as it is booked - without requiring you to do it.

Instruments can be setup at different levels:

- Company
- Branch
- Product
- Application state
- Currency

The following groups of parameters are setup at the instrument level (Each has its own section on the Contract page):

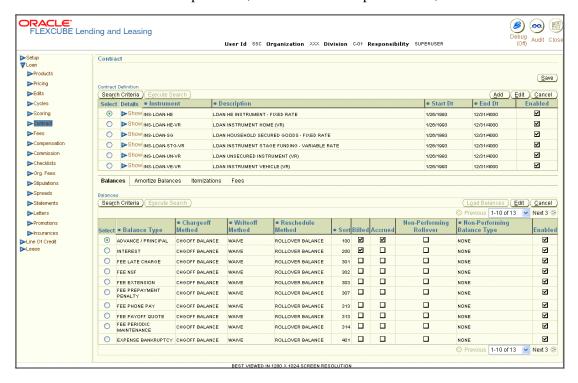

- Accrual
- Rebate
- Other
- Billing
- Extension
- Advance details
- Scheduled dues
- Delinquency

Items defined in the contract are "locked in" when you choose **Select Instrument** on the Funding form's Contract link.

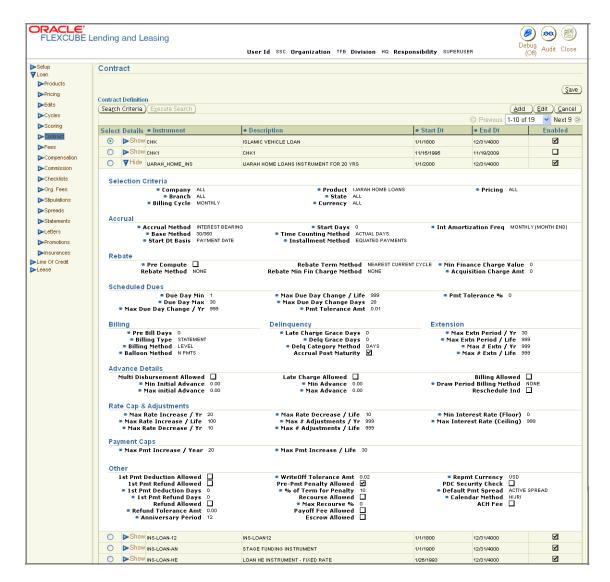

The Contract page's Instrument and Description fields allow you to enter the financial instrument's name and description, for example; INS-LOAN: VEHICLE.

To set up the contract

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the Loan drop-down link, then click Contract.

4 On the **Contract** page's **Contract Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of contract records.

- If you are entering a new record, click **Add**
- If you are changing an existing record, click **Edit**.
- On the **Contract Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Contract Definition section	
Select	If selected, indicates this is the current record.
Instrument	Enter the code identifying the loan instrument (required).
Description	Enter the description of the loan instrument being defined.
Start Dt	Enter the start date for the loan instrument (required).
End Dt	Enter the end date for the loan instrument (required).
Enabled	Select box and Oracle FLEXCUBE Lending and Leasing will consider this contract definition when selecting a loan instrument for an application.
Selection Criteria section	

Company Select the company for the loan instrument. This may be

ALL or a specific company (required).

Branch Select the branch within the company for the loan instru-

ment. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL)

(required).

Billing Cycle Select the billing cycle selected (required).

Product Select the product for the loan instrument. This may be

ALL or a specific product (required).

State Select the state in which the loan instrument is used. This

may be ALL or a specific state (required).

Currency Select the currency for the loan instrument.

IMPORTANT: In selecting which loan type to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using the following attributes:

1 Billing Cycle

2 Start Date

3 Company

4 Branch

5 Product6 State

For this reason, Oracle Financial Services Software recommends creating one version of each loan type where

ALL is the value in these fields.

Pricing Select the pricing in which the loan instrument is used.

This may be ALL or a specific pricing (required).

Accrual section

Accrual Method Select the accrual base method used to calculate interest

accrual for this loan instrument (required).

Base Method Select the base method accrual calculation method used

to calculate interest accrual for this loan instrument

(required).

Start Dt Basis Select to define the start date from when the interest

accrual is to be calculated for this loan instrument

(required).

Note:

If you select the Effective Date, then the interest is calcu-

lated from the Contract date.

If you select the Payment Date, then the interest is calculated based on (first payment date minus one billing

cycle).

Start Days Enter the number of days for which the interest accrual

for loans is to be calculated (required).

Time Counting MthdSelect the time counting method used to calculate interest

accrual for this loan instrument (required).

Installment Method Select the payment installment method (required).

Note: Oracle FLEXCUBE Lending and Leasing supports an amortized repayment schedule with the final payment potentially differing from the regular payment amount in

the other billing cycles. You may choose:

Whether the equal installments for each billing cycle includes any minute final payment differences (EQUAL PAYMENTS)

-or-

If the final payment amount may be slightly different (FINAL PAYMENT DIFFERS).

Int Amortization Freq

Rebate section **Pre Compute**

Select the interest amortization frequency (required).

If selected, indicates that this is a precomputed rebate

(required).

Rebate Mthd Rebate Term Mthd Select the rebate calculation method (required). Select the rebate term method (required).

Rebate Min Fin Charge Mthd

Select the rebate minimum finance charge calculation

method (required).

Min Finance Charge Value **Acquisition Charge Amt**

Enter the minimum finance charge value (required). Enter the acquisition charge amount (required).

Scheduled Dues section

Due Day Min Enter the minimum value allowed for the due day for this

loan instrument (required).

Enter the maximum value allowed for the due day for this **Due Day Max**

loan instrument (required).

Max Due Day Chg / Yr Enter the maximum number of due day changes allowed

within a given year this loan instrument (required).

Enter the maximum number of due day changes allowed Max Due Day Chg / Life

over the life of a loan funded with this loan instrument

(required).

Max Due Day Change Days Enter the maximum number of days a due date can be

moved (required).

Pmt Tolerance Amt* Enter the payment tolerance amount. This is the threshold

amount that must be achieved before a due amount is

considered PAID or DELINQUENT. If (Payment

Received + Pmt Tolerance: \$Value) >= Standard Monthly Payment, the Due Date will be considered satisfied in terms of delinquency. The amount unpaid is still owed

(required).

Pmt Tolerance%* Enter the payment tolerance percentage. This is the

> threshold percentage that must be achieved before a due amount is considered PAID or DELINQUENT. If Payment Received >= (Standard Monthly Payment * Pmt Tolerance% / 100), the due date will be considered satisfied in terms of delinquency. The amount unpaid is still owed

(required).

Oracle FLEXCUBE Lending and Leasing uses the lesser

of these two values.

Billing section

Prebill Days Enter the prebill days. This is the number of days before

the first payment is due that accounts funded with this loan instrument will be billed for the first payment. Thereafter, the accounts will be billed on the same day every month. If an account has a first payment date of 10/ 25/2003 and Pre Bill Days is 21, then the account will bill on 10/04/2003, and then bill on the 4th of every

month (required).

Billing Type Select the billing type for accounts funded using this loan

instrument (required).

Bill Method Select the billing method for accounts funded using this

loan instrument (required).

Balloon Method Select the balloon payment method for accounts funded

using this loan instrument (required).

Delinquency section

Late Charge Grace Days Enter the number of grace days allowed for the payment

of a due date before a late charge is assessed on the

account (required).

Delq Grace DaysEnter the number of grace days allowed for the payment

of a due date before an account is considered delinquent. This affects DELQ Queues, Oracle FLEXCUBE Lending and Leasing reporting, and the generation of collection

letters (required).

Delq Category Method Select the delinquency category method to determine the

how Oracle FLEXCUBE Lending and Leasing populates delinquency counters on the Customer Service form.

Note: This value does not affect credit bureau reporting

(required).

Accrual Post Maturity If selected, indicates that this is the post maturity default

rate.

Extensions allow you to extend the maturity of the contract by one or more terms by allowing the customer to skip one or more payments. The skipped terms are added to the end of the contract.

Extension section

Max Extn Period / Yr Enter the maximum number of terms that the contract

may be extended within a given rolling calendar year

(required).

Max Extn Period / Life Enter the maximum number of terms that the contract

may be extended within the life of the loan (required).

Max # of Extn / Yr Enter the maximum number of extensions that may be

granted within a given rolling calendar year (required).

Max # of Extn / Life Enter the maximum number of extensions that may be

granted within the life of the loan (required).

Advance Details section

Multi Disbursements Allowed Select if this loan contract allows disbursement of

funds to customers through multiple advances or draws up to the approved loan amount within a specified "draw period." If you select the Multiple Disbursements Permitted box, complete the Advance Details section on the Contract section. (For more information, see the **Stages**

Funding section in this chapter.)

Min Initial Advance Enter the minimum initial advance amount allowed. This

is the smallest possible initial advance that can be dis-

bursed to the borrower after funding (required).

Max Initial Advance Enter the maximum initial advance amount allowed. This

is the largest possible initial advance that can be disbursed to the borrower after funding (required).

Late Charge Allowed

Min Advance

Select to allow disbursement period late charge.

Enter the minimum advance amount. This is the smallest advance amount that a borrower may subsequently

request after the initial advance (required).

Max Advance Enter the maximum advance amount. This is the largest

advance amount that a borrower may subsequently

request after the initial advance (required).

Billing Allowed Select to allow stage funding with draw period billing.

Draw Period Billing Method Select the method for billing during the draw period

(optional).

Reschedule Ind Select this check box to indicate that the rescheduling is

allowed at the draw period.

.

Rate Cap & Adjustments section

Max Rate Increase / Yr

Enter the maximum rate increase allowed in a year

(required).

Max Rate Increase / Life Enter the maximum rate increase allowed in the life of

the loan (required).

Max Rate Decrease / Yr

Enter the maximum rate decrease allowed in a year

(required).

Max Rate Decrease / Life Enter the maximum rate decrease allowed during the life

of the loan (required).

Max # Adjustments / Yr Enter the maximum number of rate changes allowed in a

year (required).

Max # Adjustments / Life Enter the maximum number of rate changes allowed dur-

ing the life of the loan (required).

Min Interest Rate (Floor) Enter the minimum rate (required).

Max Interest Rate (Ceiling) Enter the maximum rate (required).

Payment Caps section

Max Pmt Increase / Yr Enter the maximum payment increase allowed in a year

(required).

Note: This field is applicable only for loans.

Max Pmt Increase / Life Enter the maximum payment increase allowed in the life

of the loan (required).

Note: This field is applicable only for loans.

Other section

1st Pmt Deduction Allowed Select to indicate that the first payment for fixed rate

loans using this loan instrument may be deducted from

the producer's proceeds.

1st Pmt Refund Allowed Select to indicate that refunding first payment deductions

to the producer is allowed.

1st Pmt Deduction Days Enter the first payment deduction days. If the first pay-

ment for fixed rate loans using this loan instrument is less than this number of days from funding, the first payment will be deducted from the producer's proceeds if 1st Pmt

Deduction (required).

1st Pmt Refund Days Enter the first payment refund days. If the first payment

for fixed rate loans using this loan instrument is received within this number of days from the first payment date, the first payment deduction will be refunded to the pro-

ducer if 1st Pmt Refund (required).

Refund Allowed Select to indicate that refunding of customer over pay-

ments are allowed.

Refund Tolerance Amt Enter the refund tolerance amount. If the amount owed to

the customer is greater than the refund tolerance, the over payment amount will be refunded if Refund Allowed box

is selected (required).

Anniversary Period Enter the anniversary term that define the anniversary

period. This is based on billing cycle, so normally for MONTHLY the value is 12 and for WEEKLY the value is

52 (required).

WriteOff Tolerance Amt

Enter the write off tolerance amount. If the remaining

outstanding receivables for accounts funded using this loan instrument is less or equal to the write off tolerance amount, the remaining balance on the account will be

waived (required).

Pre-Pmt Penalty Allowed Select box if there is a prepayment penalty charged for

accounts funded using this loan instrument.

% of Term for Penalty Enter percentage of term for prepayment penalty. If the

(remaining terms / total terms) expressed as a percentage exceeds this amount, a prepayment penalty will be assessed if the Pre-Pmt Penalty box was selected

(required).

Recourse Allowed Select box if recourse is allowed. This indicates whether

the unpaid balance may be collected from the producer if

the consumer fails to perform on the loan.

Max Recourse% Enter the maximum percentage of the outstanding receiv-

ables that may be collected from the producer if the Recourse Allowed box was selected (required).

Payoff Fee Allowed Select Payoff Fee to allow for a payoff quote fee to be

assessed to the account attached to this contract.

Note: This will require you to set up a payoff fee at the contract (Fees sub page) or state (Fee page) level. For more information, see the following Contract page (Loan)'s **Fees sub page** or **Fee page (Loan)** sections in

this chapter.

Escrow Allowed Select if this loan contract can do escrow of tax and

insurances. (For more information, see the Escrow

Setup Form chapter.)

Repmt Currency Select the designated repayment currency for this loan

contract (required).

PDC Security Check Select to indicate that post dated checks are the method

of repayment for this contract.

Default Pmt Spread Select the default payment spread to be used when

receiving payments for this account if one is not explic-

itly chosen (required).

Calendar Method Select the required calendar method for this loan contract

(required). The calendar method "Hijri" should be

selected, if the product category is selected as Standard in the Loan Products page. For "Islamic" product category, the calendar method can be either Gregorian or Hijri. Select this checkbox to indicate that direct debit fee is

included.

Note: The ACH Fee/Direct Debit Fee balance will be displayed in Balances sub tab only when this checkbox is selected.

6 Click **Save** on the Contract page.

ACH Fee

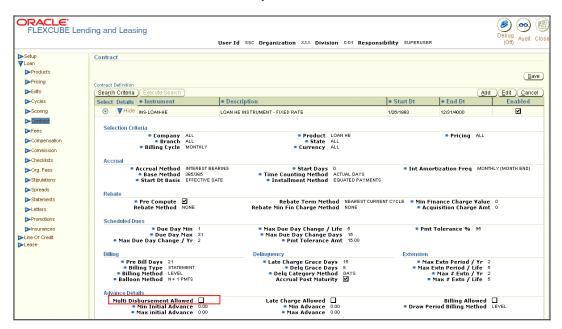

Oracle Financial Services Software Confidential - Restricted

Staged Funding

Staged funding for closed-end loans allows you to disburse funds to customers through multiple advances or draws up to the approved loan amount within a specified "draw period."

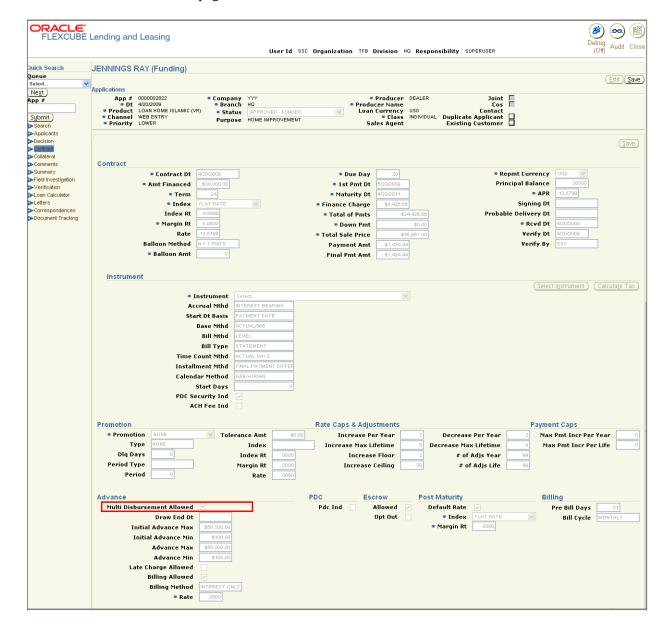

To create a multiple disbursement contract for a loan transaction

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Contract**.
- 4 On the **Contract** page's **Contract Definition** section, select the record you want to work with and click **Show** in the **Details** column.
- In the **Contract Definition** section, click **Add** and complete the fields following the instructions above, making sure to complete the following steps:
- In the Other section, select the Multiple Disbursement Permitted check box.

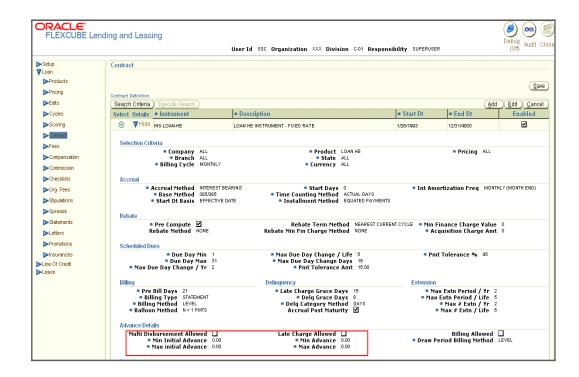

When you select a contract instrument that permits staged funding (multiple disbursements) on the Funding window, Oracle FLEXCUBE Lending and Leasing copies the information for that instrument from the Setup Module window's Contract page to the Funding window's Contract link Contract page.

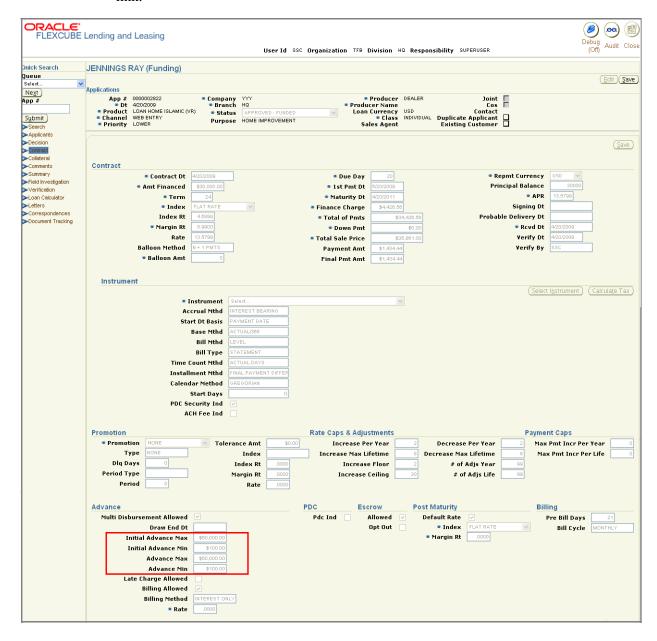

Note: You cannot clear the **Multi Disbursement Allowed** box in the Advance section on the Contract page.

• Complete the fields in the **Advance Details** section to define the limits for initial and subsequent advances for staged funding.

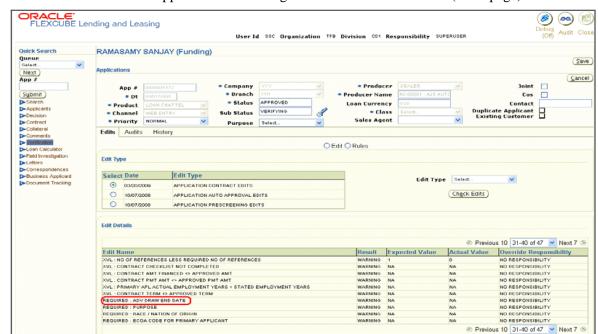

Note: This information appears in the **Advance** section of the Funding window's Contract link.

If you choose, set the following APPLICATION CONTRACT EDITS as an ERROR or WARNING on the Setup Module window's Edits page. **Note**: For more information, see the **Edits link (Edits page)** section in this chapter.

- 1) REQUIRED: ADV DRAW END DATE
- 2) XVL: ADV DRAW END DT MUST BE AFTER CONTRACT DT
- 3) XVL: ADV DRAW END DT MUST BE LESS THAN FIRST PMT DT PREBILL DAYS

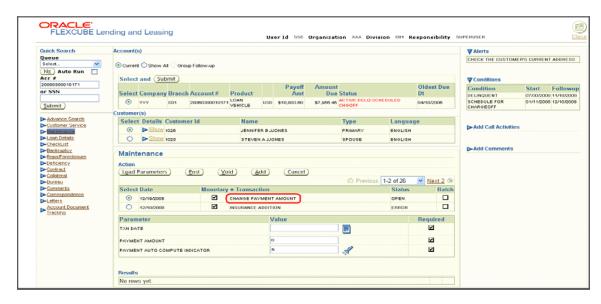

These edits appear on the Funding window's Verification link (Edits page).

Repayment scheduling for staged funding

When funding a loan, Oracle FLEXCUBE Lending and Leasing computes repayment schedules from the contract date, irrespective of whether funds have been disbursed or not. Oracle FLEXCUBE Lending and Leasing uses the approved loan amount (amount financed) for computing repayment schedules on the contract date.

As the loan might have been disbursed through multiple draws, or the draws have been less than the approved amount, or the loan amount may have been repaid in some amount before the draw end date, you may need to change the payment amount. In such cases, you can manually change the payment in Oracle FLEXCUBE Lending and Leasing by posting the monetary transaction CHANGE PAYMENT AMOUNT on the Customer Service window's Maintenance link.

Loan disbursements for staged funding

The approved loan amount for staged funding can be disbursed with the Funding window or at a later time using the Advances window. If the first disbursement is requested during funding, you may enter it on the Itemization sub page of the Funding window's Contract page.

If the entire approved loan amount is not disbursed during initial funding, it can be disbursed using the Advances window's Advance Entry page.

If the initial loan amount on the Advance Entry page is not within the minimum or maximum limits (as entered in the Advance Details section on the Setup Module window's Contract page), Oracle FLEXCUBE Lending and Leasing displays one of the following error or warning messages in the Advances section's **Error Reason** field:

- ADVANCE AMOUNT IS LESS THAN THE INITIAL ADVANCE AMOUNT MINIMUM
 -or-
- ADVANCE AMOUNT IS MORE THAN THE INITIAL ADVANCE AMOUNT MAXIMUM

The Advance Entry page also allows you to enter subsequent funding / disbursements. If subsequent advances are not within the predetermined minimum or maximum amounts, Oracle FLEXCUBE Lending and Leasing displays one of the following warning or error messages in the Advances section's **Error Reason** field:

- ADVANCE AMOUNT IS LESS THAN THE ALLOWED SUBSEQUENT ADVANCE AMOUNT
 -or-
- ADVANCE AMOUNT IS MORE THAN THE ALLOWED SUBSEQUENT ADVANCE
 AMOUNT

Additional messages in the Error Field regarding Staged Funding

If you attempt to post an advance after the draw end date, Oracle FLEXCUBE Lending and Leasing displays the following message in the Advances section's **Error Reason** field:

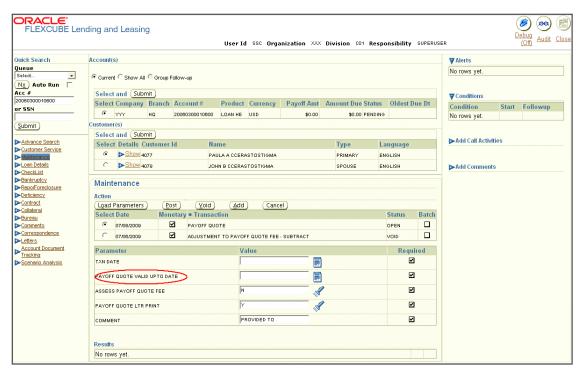

"ADVANCE DT IS AFTER DRAW PERIOD END DATE".

If you attempt to post an advance above the approved amounts, including tolerance, Oracle FLEXCUBE Lending and Leasing displays the following message in the Advances section's **Error Reason** field:

"ADVANCE AMOUNT IS MORE THAN THE TOTAL APPROVED AMOUNT INCLUDING TOLERANCE".

Since this is not a revolving loan, if any repayment is made against the approved loan amount principal balance, Oracle FLEXCUBE Lending and Leasing will not adjust the disbursed amount allowing for subsequent additional staged funding or advances.

Note: There is no change to the payoff quote functionality in Oracle FLEXCUBE Lending and Leasing. Oracle FLEXCUBE Lending and Leasing uses the actual amount of the advance(s) and any interest accrued since the date of the last payment or credit in the PAY-OFF QUOTE VALID UPTO DATE value when the payoff quote is requested before the draw end date.

Loan link > Contract link > Balances sub page

The Balances sub page lists the balances that will be established when an account is booked and funded.

CAUTION:

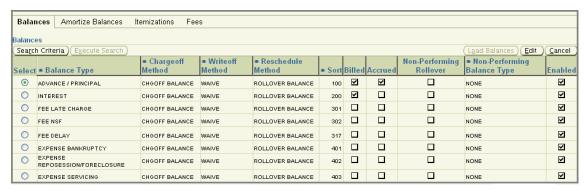

Please contact your Implementation Manager for changes to this section.

To set up the balances

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Contract**.
- 4 On the **Contract** page, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of contract records.

5 Click the **Balances** sub tab

6 On the **Balances** sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of contract balance records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 On the **Balances** sub page, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Balance Type	Enter the balance type (required).
Chargeoff Method	Select the charge off method to determine how the out- standing amount of this balance type will be handled if the account becomes uncollectable and the loan is charged off (required).
Writeoff Method	Select the write off method to determine how the outstanding amount of this balance type will be handled if the account is within the write off tolerance of being PAID (required).
Reschedule Method	Select the reschedule method to determine how the outstanding amount of this balance type will be handled if the account is rescheduled (required).

Sort Enter the sort order of how account balances will appear

on the Customer Service form's Balance page (required).

Billed Select to indicate that outstanding amounts for this bal-

ance type are considered a part of the billed amount. This also determines whether payments applied to this balance type are considered when satisfying outstanding amounts

due.

Accrued Select to indicate that outstanding amounts for this bal-

ance type will be included when interest is accrued

against the account.

Non-Performing Rollover Select to indicate that "non-performing" is used as an

intermediary status on your general ledger prior to charge off and want to create balances for non-performing

accounts for this balance type.

Note: (The Non-Performing Rollover box applies only to Balance Types of ADVANCE/PRINCIPAL and INTER-EST. For all other Balance Types, this box would be

cleared).

Non-Performing Balance Type Select this box if you select the Non-Performing Roll-

over box and want the balance type to rollover to

(ADVANCE/PRINCIPAL).

Enabled Select to indicate that this balance type will be created

when the account is booked and funded

8 Click **Save** on the Contract page.

Oracle FLEXCUBE Lending and Leasing loads the currently defined balances for accounts.

If your organization maintains additional balances, contact your Implementation Manager for information regarding those balances.

Loan link > Contract link > Amortize Balances sub page

With the Amortize Balances sub page, you can select one or more balances to be amortized over the life of the loan. You can also define the amortization method.

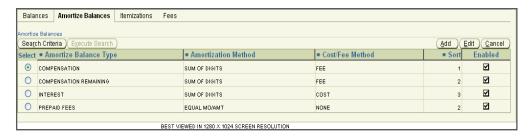

Note: Interest is automatically amortized, so there is no need to manually set it up.

To set up the amortization balances

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- In the Product Setup link bar, click the **Loan** drop-down link, then click **Contract**.
- 4 On the **Contract** page, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of contract records.

5 Click the **Amortization Balances** sub tab.

- 6 On the **Amortization Balances** sub page, select the record you want to work with.
 - **Note**: If you choose, use **Search Criteria** to limit the display of balance records.
- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Amortization Balances** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Amortize Balance Type	Select the amortize transaction type (required).
Amortize Method	Select the amortization method used to calculate the net amortization amount (required).
Cost/Fee Method	Select the amortization fee method (required).
Sort	Enter the sort sequence to define the order of the amortize balances (required).
Enabled	Select to enable the amortize balance to be created when the account is booked and funded.

8 Click **Save** on the Contract page.

Loan link > Contract link > Itemizations sub page

On the Itemizations sub page, you can define the itemized components for each type of contract, indicate if it is required, and determine whether it has a positive or negative bearing on the contract itemization math. You can establish the following groups of itemization transactions:

Advance	Total amount of the loan that is not a part of financed fees; in other words, the total amount the customer requested to be advanced.
Financed Fees	Fees rolled into the principal balance of the loan. Financed fees are also considered to be a part of the finance charge.
Pre-Paid Fees	Fees that are paid by the consumer prior to the funding of the loan. These fees are not rolled into the balance of the loan but are considered as part of the finance charge and are included in the calculation of the APR.

Producer Fees that are paid to or by the producer of the loan; for example, a

fee that is being charged to the producer. These transactions will

affect proceeds.

Escrow Allows you to connect the actual escrow itemization with the

escrow type and the funding transaction.

To set up the itemizations

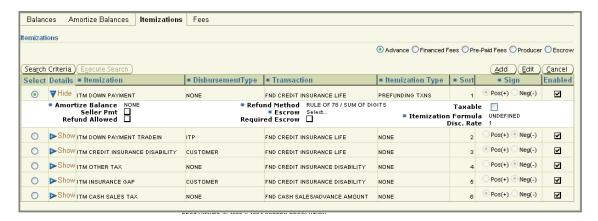

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the Loan drop-down link, then click Contract.
- On the **Contract** page, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of contract records.

5 Click the Itemizations sub tab.

- On the **Itemization** sub page select the option button to indicate the type of itemization you are working with: **Advance**, **Financed Fees**, **Pre-Paid Fees**, **Producer**, or **Escrow**.
- 7 On the **Itemizations** sub page, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of itemization records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click Edit.

8 On the **Itemization** sub page, enter, view, or edit the following information:

In this field:	Do this:
Select Itemization Disbursement Type Transaction Itemization Type	If selected, indicates this is the current record. Select the itemization (required). Select the disbursement type (required). Select the funding transaction type (required). Select the itemization type (required). Notes: 1. On selecting the "Prefunding Txns" as itemization type, it indicates that this particular itemization expects a payment from the customer prior to funding.
	2. The itemization type "Prefunding Txns" is available only for loans.
Sort	Enter the sort order to define the order of the itemization transactions (required).
Sign	If the itemized transaction increases the group balance, click Pos (+) .
	If the itemized transaction decreases the group balance, click Neg (-) .
Enabled	Select to enable the itemization and indicate that this itemization transaction will be created when the account is booked and funded.
Amortize Balance	Select the amortize balance affected by this itemization transaction. Note : Advance itemizations do not affect amortize balances (required).
Refund Allowed Refund Method Escrow Required Escrow	Select to indicate refund is allowed for this itemization. Select refund calculation method (required). Select the escrow (required). If this is an escrow account, select this box to signal an escrow is required during the application process (though at that time the user can choose Opt Out to decline.)
Taxable Itemization Formula Itemization Type Disc. Rate	Select if the itemization type is taxable. Select the itemization formula description (required). Select the itemization (required). Enter the discount rate for the itemization (optional).

9 Click **Save** on the Contract page.

Loan link > Contract link > Fees sub page

Any fees that are defined in the contract are set up on the Fees sub page. Oracle FLEX-CUBE Lending and Leasing currently supports the following contract fees:

- Late charges
- Non sufficient funds
- Extensions
- Prepayment penalties

- Delay Fee
- ACH Fee

The Fees sub page allows you to define those fees whose value and method of calculation are set at the time of the loan. As these amounts cannot be changed after the loan is booked and funded, you should only set up fees here that will not change over the life of the loan. Individual contract fee types may be defined multiple times in order to create graduated fees.

Note: Certain fees, like late fees, can be set up at contract, as well as state level. In such cases, the contract fee, if present, is used first.

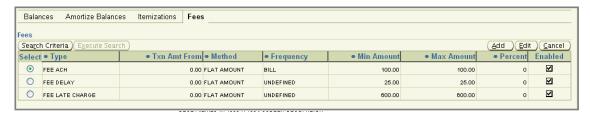

To set up the fees

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Contract**.
- On the **Contract** page, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of contract records.

5 Click the **Fees** sub tab.

la Alaia fialal.

6 On the **Fees** sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of contract balance records.

• If you are entering a new record, click **Add**.

If you are changing an existing record, click **Edit**.

7 In the **Fees** section, enter, view, or edit the following information:

Da 46:a.

In this field:	Do this:
Select	If selected, indicates this is the current record.
Туре	Select the fee type (required).
Txn Amt From	Enter the lowest transaction amount or balance amount against which this contract fee definition may be applied (required).
Method	Select the method of calculating the fee to be assessed (required).
Frequency	Select the frequency of calculating the fee to be assessed (required).
Min Amount	Enter the minimum fee amount to be assessed (required).
Max Amount	Enter the maximum fee amount to be assessed. If you selected FLAT in the Method field, then this field is not used and is normally populated as \$0.00 (required).

Percent Enter the fee percentage of the outstanding transaction

amount to be assessed as a fee. This amount will be adjusted to fall within the Min Amount and the Max

Amount.

Enabled Select and this contract fee will be created when the

account is booked and funded.

8 Click **Save** on the Contract page.

Loan link > Fees link (Fee page)

The Fee page allows you to define fees that may be automatically assessed by Oracle FLEXCUBE Lending and Leasing. The Fee Definition section records fees not defined within the Contract page's Fees sub page.

The following fee types are currently supported for automatic assessment:

- Late charges
- Non sufficient funds
- Extensions
- Prepayment penalties
- Delay Fee
- ACH Fee

Fees can be calculated as either a flat amount or a percentage of payment due based on fee type.

You can specify minimums and maximums for fee amounts in the Min Amt and Max Amt fields. Different fee rules can be setup at the company/branch level.

When Fees are assessed, Oracle FLEXCUBE Lending and Leasing determines the best match using all enabled fee definitions for that meet the following criteria:

- Exactly match the fee type being assessed.
- Have an effective date that is greater than or equal to the start date.
- Have a Txn Amt From that is greater than or equal to the outstanding amount related to the fee assessment.
- Match either the value or ALL for all other criteria (Exact matches for each field are given a higher weight than matches to ALL.)

The returned rows are then given a descending rank based on the weighted values and the hierarchical position of the following criteria:

- 1 Company
- 2 Branch
- 3 Product
- 4 Application state
- 5 Transaction amount
- 6 Start date
- 7 End date

On the ranked rows, the first row is returned as the best match.

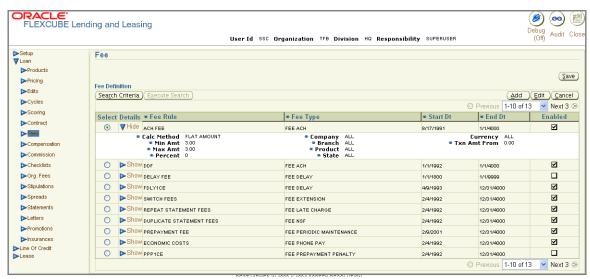

Note: Certain fees, like late fees, can be set up at contract, as well as state level. In such cases, the contract fee, if present, is used first. Only if the contract fee is not present is the state fee used.

To set up the fee

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Fees**.

4 On the **Fee** page's **Fee Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use Search Criteria to limit the display of fee definition records.s

If you are entering a new record, click Add.
 If you are changing an existing record, click Edit.

In the **Fee Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Fee Rule	Enter the fee rule used to identify the particular fee defi-
	nition (required).
Fee Type	Select the fee type (required).

Start DtEnter the start date (required).End DtEnter the end date (required).EnabledSelect to enable the fee.

Calc Method Select the method of calculating the fee (required).

Min Amt Enter the minimum amount for the fee (required).

Max Amt Enter the maximum amount for the fee. If you selected

FLAT AMOUNT in the Calc Method field, then this field is not used and is normally populated as \$0.00 (required).

Percent Enter the percentage value of the outstanding transaction

amount to be assessed as a fee. This amount will be adjusted to fall within the Min Amount and the Max

Amount (required).

Company Select the portfolio company. This may be ALL or a spe-

cific company (required).

Branch Select the portfolio branch. This may be ALL or a spe-

cific branch. (This must be ALL if in the Company field

you selected ALL) (required).

Product Select the product. This may be ALL or a specific prod-

uct. The available values come from a validated field based on the selected Billing Cycle setup and the Loan

Product setup (required).

State Select the state for this fee. This may be ALL or a specific

state (required).

Currency Select the currency for this fee. This may be ALL or a

specific currency (optional).

Txn Amt From Enter the transaction or balance amount. The fee is calcu-

lated using the specifications of this record only if the transaction amount is greater than the value specified in this field (and less than this field in another record for the

same fee) (required).

IMPORTANT: In selecting which fee to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using the following attributes:

match using the following attributes:

- 1 Company
- 2 Branch
- 3 Product
- 4 State
- 5 Amount (Txn Amt From)
- 6 Effective/start date (Start Dt)

For this reason, Oracle Financial Services Software recommends creating one version of each fee where ALL is

the value in the these fields.

It is also recommended that you define a default printer for an Organization, Division and Department.

6 Click **Save** on the Fee page.

Loan link > Compensation link (Compensation page)

With the Compensation page, you can define compensation plans for producers who supply the financial institution with applications for loans. These compensation plans can be set up at various levels depending upon your organization's needs.

This information is used on the Compensation sub page on the Contract link of the Applications window. The Compensation Plan field lists the plans available based on the contract in use for the application. When you click **Load** on the Compensation sub page, Oracle FLEXCUBE Lending and Leasing adds the information setup on the Compensation page.

Compensation can be paid to a producer in a number of ways:

Payment calculation method:	Description:
AS EARNED	The compensation amount is paid out in pieces over the life of the loan based upon the interest earned.
PAY AS U GO	The compensation amount is paid out in pieces over the life of the loan based upon the interest received by virtue of the payment.
UPFRONT	The entire compensation amount is paid at the time of booking the loan.
UPFRONT MONTH END	The entire compensation amount is paid at the month-end of booking the loan.
UPFRONT MONTH END (AMORTIZE SPREAD FORMULA)	The amount financed will be amortized at a rate equal to the difference between the contract rate and buy rate. The finance charge thus derived would be considered the base compensation amount. Oracle FLEXCUBE Lending and Leasing then allows this base compensation to be split into two components: 1) Upfront compensation amount 2) Remaining compensation amount. The disbursement method will apply to the remaining compensation portion (total compensation minus the upfront amount).

Compensations can be charged back from a producer if a loan is prematurely paid or charged off. The charge back amount can be calculated using the following methods:

- Earned
- Percentage

You can specify whether the unearned portion or a certain percentage of the total compensation is to be charged back in case of early payoff or charge off.

The period for which the charge back plan can remain active can be set up according to:

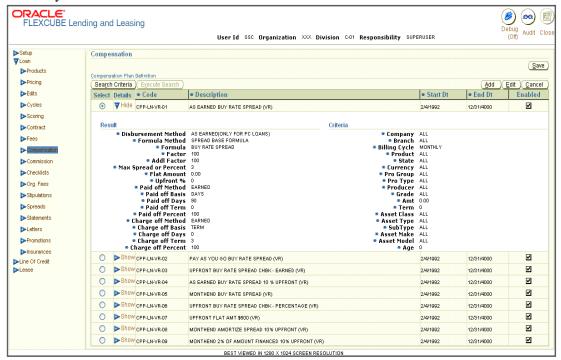

- Number of days
- Term (number of months)

To set up the compensation

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Compensation**.

In the **Compensation** page's **Compensation Plan Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of compensation plan definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.

5 In the **Compensation Plan Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select Code	If selected, indicates that this is the current record. Enter the compensation code (required).
Description	Enter a description of the compensation plan being defined (required).
Start Dt	Enter the start date for the compensation plan (required).
End Dt Enabled	Enter the end date for the compensation plan (required). Select to enable the compensation plan.
Result section	
Disbursement Method	Select the method for calculating the compensation disbursement to be paid (required).
Formula Method	Select the type of formula to be used to calculate the compensation to be paid. Oracle FLEXCUBE Lending and Leasing uses following formula methods: FLAT AMOUNT - Flat amount is paid. SPREAD BASE FORMULA - A formula based on the
	spread between the buy rate and the interest rate offered to the consumer is used (required).
Formula	Select the spread formula to be used to calculate Compensation (required).
Factor	Enter the compensation factor; that is, the percentage applied to the compensation to be paid. If this value is not 100.00, it will reduce the compensation amount (required).
Addl Factor	Enter the additional compensation factor. If this value is not 100.00, it will further reduce the compensation amount (required).
Max Spread Or Percent	Enter the maximum compensation spread. This limits the spread on which compensation will be paid. Spreads exceeding this value will be treated as if the spread was the specified value (required).
Flat Amount	Enter the flat compensation amount (required).
Upfront%	Enter the percentage of the compensation allocated
Paid Off Method	upfront (required). Select the method of the compensation that will be recovered by the producer if the loan amount is paid off early (required).
Paid Off Basis	Select the basis used to determine the amount of compensation to be recovered from the producer, if the loan amount is paid off early (required).
Paid Off Days	Enter the number of days in which the compensation can be recovered, if the Basis is selected as Days (required).
Paid Off Term	Enter the number of days in which the compensation can be recovered if the Basis is selected as Term (required).
Paid Off Percent	Enter the percent of the compensation that will be recovered by producer if the loan amount is paid off (required).

Charge off Method Select the method of the compensation that will be recov-

ered by the producer, if the loan amount is charge off

(required).

Charge off Basis Select the basis used to determine the amount of compen-

sation to recover from the producer if the loan is charged

off as uncollectable (required).

Charge off Days Enter the number of days in which compensation can be

recovered if the Basis is DAYS (required).

Charge off Term Enter the number of terms in which compensation can be

recovered if the **Basis** is TERM (required).

Charge off Percent Enter the percent of the compensation that will be recov-

ered by producer if the account is charged off as uncollectable, and the charge off basis is PERCENTAGE

(required).

Criteria section

IMPORTANT: In selecting which compensation to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using the fields in this section. For this reason, Oracle Financial Services Software recommends creating one version of each compensation where ALL is the value in the these fields when you have the option.

Company Select the portfolio company. This may be ALL or a spe-

cific company (required).

Branch Select the portfolio branch within the company for the

selected compensation plan. This may be ALL or a specific branch. This must be ALL if in the Company field

you selected ALL (required).

Billing Cycle Select the billing cycle for the compensation plan

(required).

Product Select the product for the selected compensation plan.

This may be ALL or a specific product. The available values come from a validated field based on the selected Billing Cycle setup and the Loan Product setup

(required).

State Select the state for the selected compensation plan. This

may be ALL or a specific state (required).

Currency Select the currency for the selected compensation plan.

This may be ALL or a specific currency (required).

Pro Group Select the producer group for the compensation plan.

This may be ALL or a specific producer group (required).

Pro Type Select the producer type for the compensation plan. This

may be ALL or a specific producer type (required).

Producer Select the producer for the compensation plan. This may

be ALL or a specific producer. The available values come from a validated field based on the Pro Group and Pro

Type (required).

Grade Select the credit grade for this compensation plan. This

may be ALL or a specific grade (required).

Amt Enter the minimum amount financed for the compensa-

tion plan (required).

Term Enter the minimum term for the compensation plan

(required).

Asset Class Select the asset class for the compensation plan. This

may be ALL or a specific asset class. The available values come from a validated field based on the Collateral Type

(required).

Asset Type Select asset type for the compensation plan. This may be

ALL or a specific asset type. The available values come

from a validated field based on you assets setup

(required).

SubType Select the asset sub type for this compensation plan. This

may be **ALL** or a specific asset sub type. The available values come from a validated field based on you assets

setup (required).

Asset Make Enter the asset make. If ALL was selected for either Asset

Type or Asset Sub Type, then ALL will be the only avail-

able selection for the asset make (required).

Asset Model View the asset model. If ALL was selected for either

Asset Type or Asset Sub Type, then ALL will be the only

available selection for the asset model (display only).

Age Enter the asset age (required).

6 Click **Save** on the Compensation page.

Loan link > Commissions link (Loan Commission Plans page)

The Loan Commission Plans page allows you to calculate dealer commissions for additional products (for example, life insurance and disability insurance) for loans sold by the dealer and entered in the Itemization sub page during loan origination. You can setup the various commission plans, which you use or select during funding.

In addition to the criteria, you can also define the insurance itemization, as well as the commission itemization for which the plan is valid.

You can select one of the following two system-defined methods to calculate the commissions:

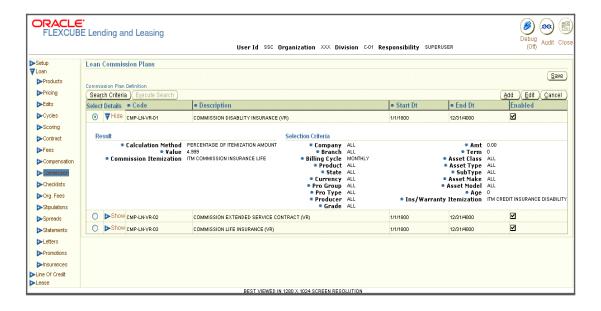

- 1 Flat fee
- 2 Percentage of itemization amount.

To set up the loan commission plans

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- In the Products Setup link bar, click the **Loan** drop-down link, then click **Commissions**.

4 In the **Loan Commission Plans** page's **Commission Plan Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of commission plan definition records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- 5 In the **Commission Plan Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Code	Enter the commission code (required).
Description	Enter the commission plan description (required).
Start Dt	Enter the start date associated with the commission (required).
End Dt	Enter the end date associated with the commission (required).
Enabled	Select to enable the compensation plan.
Results section	
Calculation Method	Select the commission calculation method (required).
Value	Enter the commission value (required).
Commission Itemization	Select the commission itemization (required).

Selection Criteria section

IMPORTANT: In selecting which commission to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using fields in this section. For this reason, Oracle Financial Services Software recommends creating one version of each compensation where ALL is the value in the these fields when you have the option.

Company Select the portfolio company associated with the com-

mission (required).

Branch Select the portfolio branch associated with the commis-

sion (required).

Billing Cycle Select the billing cycle associated with the commission

(required).

Product Select the product associated with the commission

(required).

State Select the state associated with the commission

(required).

Currency Select the currency associated with the commission

(required).

Pro Group Select the producer group associated with the commis-

sion (required).

Pro Type Select the producer type associated with the commission

(required).

Producer Select the producer associated with the commission

(required).

Grade Select the credit grade associated with the commission

(required).

Amt Enter the minimum itemization amount associated with

the commission (required).

Term Enter the minimum insurance, warranty term associated

with the commission (required).

Asset Class Select the asset class associated with the commission

(required).

Asset Type Select the asset associated with the commission

(required).

SubType Select the asset sub type associated with the commission

(required).

Asset Make Select the asset make associated with the commission

(required).

Asset Model View the asset model associated with the commission

(required).

Age Enter the asset age associated with the commission

(required).

Ins/Warranty Itemization Select the insurance or warranty itemization associated

with the commission (required).

6 Click **Save** on the Loan Commissions Plans page.

Loan link > Checklists link (Checklists page)

A checklist is an optional set of steps to follow when completing a task in Oracle FLEX-CUBE Lending and Leasing, such as the underwriting and funding processes.

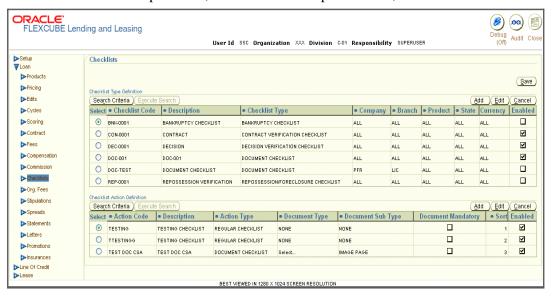

Checklists can be used as guidelines to help ensure that Oracle FLEXCUBE Lending and Leasing users follow your business's standard operating procedures and enter all required data. Some checklists are optional, but others such as those related to application decisions or contract verification, may be required depending on the edit sets defined in your Oracle FLEXCUBE Lending and Leasing system. The Checklists page allows you to specify the contents of the checklist.

You can define additional checklists for your organization. You can set up multiple checklists for a single type of checklist. These checklists can be differentiated by:

- Company
- Branch
- Product
- Application state

To set up the checklists

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Checklists**.

4 In the **Checklist** page's **Checklist Action Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of checklist records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click Edit.

5 In the **Checklist Action Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select Checklist Code	If selected, indicates this is the current record. Enter the checklist code that identifies checklist being defined (required).
Description Checklist Type	Enter the description for the checklist (required). Select the checklist type to define where the specific checklist will be available in Oracle FLEXCUBE Lending and Leasing (required).
Company	Select the portfolio company associated with the checklist. This may be ALL or a specific company (required).
Branch	Select the portfolio branch associated with the checklist. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL) (required).
Product State	Select the product associated with the checklist. This may be ALL or a specific product. The available values come from a validated list based on the selected Billing Cycle setup and the Loan Product setup (required). Select the state associated with the checklist type. This may be ALL or a specific state (required).
	IMPORTANT: In selecting which edits type to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using the following attributes:
	CompanyBranchProductState
	For this reason, Oracle Financial Services Software recommends creating one version of each checklist type where ALL is the value in these fields.
Currency	Select the currency associated with the checklist. This
Enabled	may be ALL or a specific currency (required). Select to enable the checklist.

Checklist actions are steps (a set of one or more tasks) related to the checklist you are creating. They are loaded on the Checklist Action Definition section.

6 In the **Checklist Action Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of checklist action definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Checklist Action Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Action Code	Enter the action code for the checklist (required).
Description	Enter the description for the action type (required).

Document Mandatory If selected, indicates that the document is mandatory.

Sort Enter the sort order to define the placement of the action

type on the Checklist sub page (required).

Enabled Select to include this action in the checklist.

8 Click **Save** on the Checklists page

Loan link > Org. Fees link (Loan Origination Fees page)

Oracle FLEXCUBE Lending and Leasing supports the auto computation of origination itemized fees. System administrators can define and maintain the itemization formula on the Loan Origination Fees page.

An itemization formula can be set up as a computation of other itemizations (such as adding or subtracting one itemization from another) and can consist of multiple itemizations. An itemization formula will have a minimum and maximum value. You can set up a formula value range to be used as the final value.

Itemizations are linked to a product with the Loan Products page's Product Itemizations sub page.

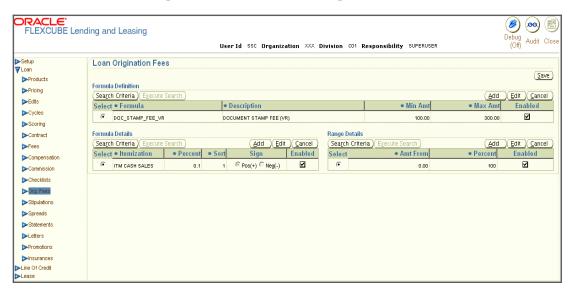

One itemization can be based on one formula, while the same formula can be attached to multiple itemizations. If a formula is attached to a contract itemization and that formula requires an itemization not present Formula Definitions page, Oracle FLEXCUBE Lending and Leasing displays an error message.

Oracle FLEXCUBE Lending and Leasing will search for any "circular dependency" at the time the contract is enabled. An example of a circular dependency is when Itemization1 has Formula1 attached requiring Itemization2 for computation and Itemization2 has Formula2 attached requiring Itemization1 for computation.

To set up the loan origination fees

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Org Fees**.

4 In the **Loan Origination Fees** page's **Formula Definitions** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of formula definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Formula Definitions** section, enter, view, or edit the following information:

In this field:	Do this:
Select	Select to indicate that this is the current record.
Formula	Enter the formula code to define computation (required).
Description	Enter the description for the formula (required).
Min Amt	Enter the minimum value that should be considered to compute the final value of formula (required).
Max Amt	Enter the maximum value that should be considered to compute the final value of formula (required).
Enabled	Select the Enabled indicator to allow the stipulations to be used by Oracle FLEXCUBE Lending and Leasing (required).

6 In the **Formula Details** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of formula details records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Formula Details** section, enter, view, or edit the following information:

In this field: Do this:

Select Itemization	Select to indicate that this is the current record. Select the itemization based on which the itemization formula will derive its computed value (required).
Percent	Enter the percentage value that should be considered while computing value for itemization formula (required).
Sort	Enter the sort sequence for the itemization to be considered while computing the value of the itemization formula (required).
Sign	Select the positive or negative sign that needs to be considered between two itemizations for computing the value of the itemization formula (required).
Enabled	Select the Enabled indicator to allow the itemization details to be used by Oracle FLEXCUBE Lending and Leasing (required).

8 In the **Range Details** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of range details records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 9 On the **Range Details** section, enter, view, or edit the following information:

In this field:	Do this:
Select	Select to indicate that this is the current record.
Amt From	Enter the value up to which the percentage of final value of the itemization formula to be considered for the final value of itemization formula (required).
Percent	Enter the percentage value that should be considered while computing the value for the final value of the itemization formula (required).
Enabled	Select the Enabled indicator to allow the range details to be used by Oracle FLEXCUBE Lending and Leasing (required).

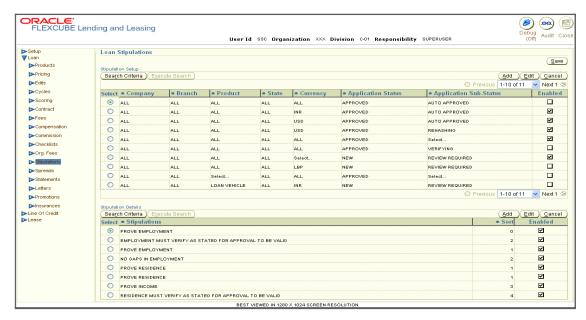

10 Click **Save** on the Loan Origination Fees page.

Loan link > Stipulation link (Loan Stipulations page)

Oracle FLEXCUBE Lending and Leasing supports the automatic generation of default stipulations for loans during loan origination on the Underwriting window's **Stipulation** sub page (Decision link). The default stipulations can be maintained by company, branch, product, state, application status and application sub-status on the Loan Stipulations page.

To set up the loan stipulations

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Product Setup link bar, click the **Loan** drop-down link, then click **Stipulation**.

4 In the **Loan Stipulations** page's **Stipulation Setup** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of stipulation setup records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Stipulation Setup** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Company	Select the portfolio company associated with the default stipulations (required).
Branch	Select the portfolio branch associated with the default stipulations (required).
Product	Select the product associated with the default stipulations (required).
State	Select the state associated with the default stipulations (required).

Currency	Select the currency associated with the default stipulations (required).
Application Status	Select the application status associated with the default stipulations (required).
Application Sub-Status	Select the application sub status associated with the default stipulations (required).
Enabled	Select the Enabled indicator to allow the default stipulations to be used Oracle FLEXCUBE Lending and Leasing (required).

6 In the **Stipulation Details** section, select the record you want to work

Note: If you choose, use **Search Criteria** to limit the display of stipulation details records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Stipulation Details** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Stipulations	Select the stipulation (required).
Sort	Enter the sort sequence for the stipulation (required).
Enabled	Select the Enabled indicator to allow the stipulations
	details to be used by Oracle FLEXCUBE Lending and
	Leasing (required).

8 Click **Save** on the Loan Stipulations page.

Loan link > Spreads link (Spreads page)

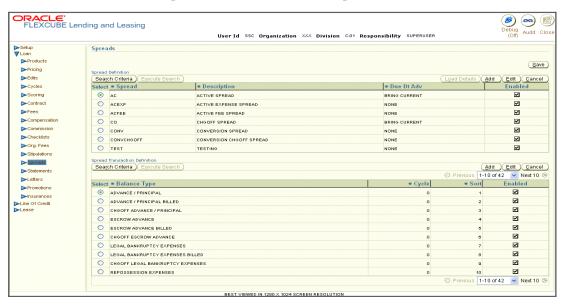

The Spreads pages allows you to define the payment allocation strategy used by your business while applying payments to accounts. Spreads are selected on the Payment Entry (Payment Maintenance) pages.

The Spread Definition section is used to define individual spreads. Many common spreads have already been defined. With each spread, you can define the due date advancement method to use, BRING CURRENT, FUTURE, or NONE.

The Spreads page records the order in which balances are satisfied when a payment is applied to an account. (Unless someone indicates otherwise, payments will be applied against each balance type, in sort order, until either there is no remaining balance, or the payment has been completely allocated.)

To set up the spreads

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Spreads**.

4 On the **Spreads** page's **Spread Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of spread definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Spread Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select Spread	If selected, indicates this is the current record. Enter the code identifying the spread (required).

Description	Enter the description for the spread. (This usually reflects when this spread is used.) (required).
Due Dt Adv	Select the due date advancement code that determines how payments applied using this spread will affect due amounts. Oracle FLEXCUBE Lending and Leasing uses the following predefined Due Dt Adv Codes: BRING CURRENT - The payment allocations for transactions against an account's outstanding balances that make up the billed balances. This will be applied against billed due amounts. FUTURE - The payment allocations for transactions against an accounts outstanding balances that make up the billed balances. This will be applied against billed due amounts. Any remaining amount allocated against billed balances will be accumulated and applied against future due amounts (required). NONE - Payments applied using this spread will not affect the due amounts of the account in any way.
Enabled	Select box to enable the spread.

6 In the **Spread Transaction Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of spread transaction definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Spread Transaction Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select Balance Type	If selected, indicates this is the current record. Select the balance type to allocate a portion of the received payment against (required).
	Note : Oracle Financial Services Software recommends that you always setup an ADVANCE/PRINCIPAL balance type for each spread.
Cycle	Enter the balance cycle during which to apply payments. This collects payment on bad (unpaid) cycles. You can only go back five cycles. Cycle will have a value of 0 for loans (required).
Sort	Enter the sort order in which the balance type has payments allocated against it (required).
Enabled	Select and Oracle FLEXCUBE Lending and Leasing will consider this spread transaction when allocating payments.

8 Click **Save** on the Spreads page.

Loan link > Letters link (Loan Letters page)

The Loan Letters page allows you to define letters that Oracle FLEXCUBE Lending and Leasing automatically generates when the application for a loan meets certain conditions, or "trigger events." Each letter has its own trigger event. For example, you can configure Oracle FLEXCUBE Lending and Leasing to automatically send a welcome letter when an application becomes an account or send a collection letters when an account becomes delinquent.

Oracle FLEXCUBE Lending and Leasing supports the following types of letters:

Type of letter:	Definition:
ADVERSE ACTION LETTER	Generated in nightly batch jobs for applications that were declined. This letter is sent to the consumer to indicate the reasons why the application was declined.
CONDITIONAL ADVERSE ACTION LETTER	the reasons why the application was declined. Generated in nightly batch jobs for applications that were declined. This letter is sent to the consumer to indicate the reasons why the application was declined. This letter also indicates steps that the consumer may take to gain approval of the loan application.
CONTRACT FUNDING FAX/EMAIL	Generated when an application is APPROVED: FUNDED or CONDITIONED: FUNDED. This letter is sent to the producer.
DECISION FAX/EMAIL	Generated when an application is APPROVED, CONDITIONED, or REJECTED. This letter is sent to the consumer or producer, depending on whether the loan is a direct or in-direct loan.
WELCOME LETTER	Generated when an application is APPROVED: FUNDED. This letter is sent to the consumer.

When Oracle FLEXCUBE Lending and Leasing generates letters, it searches the Loan Letters page for letter definitions that meet the following criteria:

- Definition is enabled.
- Definition is an exact match of the letter code being generated.
- Definition is a match of either the application value or ALL for all other criteria. Exact matches for each field are given a higher weight than matches to ALL.

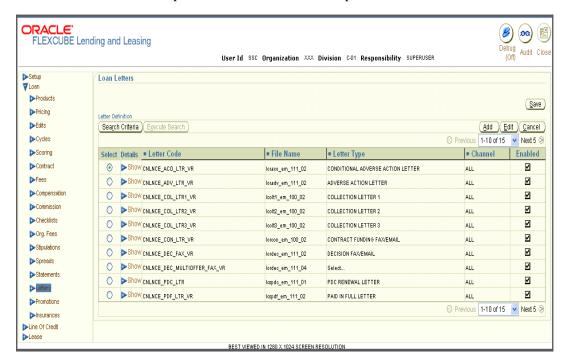

The returned rows are then given a descending rank based on the weighted values and the hierarchical position of these fields:

- 1 Company
- 2 Branch
- 3 Product
- 4 State
- 5 Channel

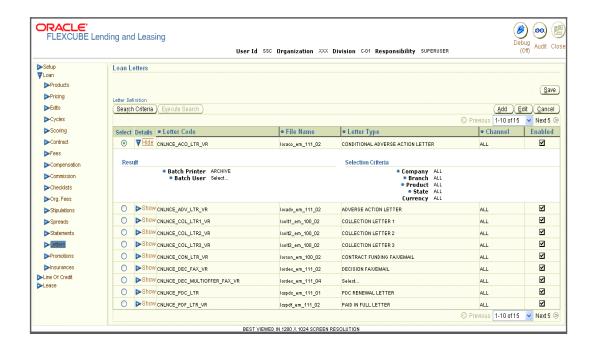

On the ranked rows, the first row is returned as the best match.

To set up the loan letters

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Letters**.

4 In the **Letter Definition** page's **Letter Definition** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of letter definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Letter Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Letter Code	Enter the code for the letter (required).
File Name	Enter the file name of the Oracle report used to generate the letter. The file should be named <file name="">.rep on your server (required).</file>
Letter Type	Select the type of letter you want to generate (required).
Channel	Select the application source (channel) for the letter. This may be ALL or a specific channel (required).
Enabled	Select to enable this letter definition.
Result section	
Batch Printer	Select the batch printer being used to generate the letter (required).
Batch User	Select the user who will submit this letter. This will normally be set to BATCH (required).
Selection Criteria section	
Company	Select the portfolio company for which this letter will be used. This may be ALL or a specific company (required).
Branch	Select the portfolio branch for which this letter will be used. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL) (required).
Product	Select the product for which this letter will be used. This may be ALL or a specific product (required).
State	Select the state for which this letter will be used. This may be ALL or a specific state (required).
Currency	Select the currency for which this letter will be used. This may be ALL or a specific currency (required).

6 Click **Save** on the Loan Letters page.

Loan link > Promotions link (Loan Introductory page)

The Loan Introductory page allows you to set up the promotions a financial institution can offer its customers. Promotions can be selected as part of the loan on the Application Entry and Applications windows.

You can define an introductory promotion based on the following attributes:

- Type
- Period Type
- Period

You can define multiple promotions for a product, then select the appropriate promotion at the time the application is processed. Promotions also serve as a selection criteria on the Pricing page.

CAUTION: Oracle FLEXCUBE Lending and Leasing only supports promotions selected when a loan is funded.

Same as Cash promotions

In the case of the same as cash promotion:

- If the outstanding loan amount at the end of the promotional period is within the tolerance amount, then the customer receives the full benefit of the promotion and Oracle FLEXCUBE Lending and Leasing will not charge any interest on the borrowers' loan account.
- If the outstanding loan amount is higher than the authorized tolerance amount, then
 the customer loses the benefit of the promotion and Oracle FLEXCUBE Lending and
 Leasing computes and charges the borrower interest from the date the loan was
 funded.

Interest & Payments

Interest still continues to accrue for a loan account that is funded using the SAME AS CASH promotion. However, the interest accrued during the promotion period is not charged or collected on the account until the end of the promotion period.

Any repayment made by the customer during the promotion period is applied towards the principal amount. Oracle FLEXCUBE Lending and Leasing then calculates the interest accrual using the reduced principal amount, if applicable.

If the loan remains unpaid after the end of the promotion period and the principal balance is above any stated tolerance amount, then Oracle FLEXCUBE Lending and Leasing starts collecting interest earned and accrued during the promotion period.

Pay-off quote during promotion period

If the loan account is set-up using the SAME AS CASH promotion, then during the promotion period:

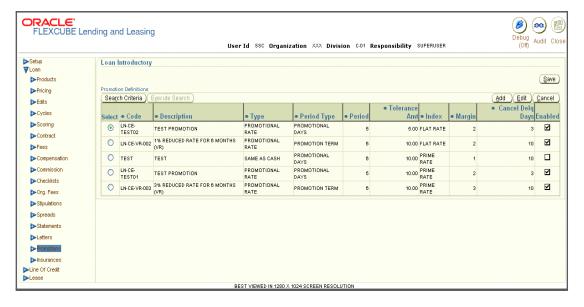

- a) On the Customer Service form's Account Details page, Oracle FLEXCUBE Lending and Leasing displays only the principal amount and any fees/expenses due. Interest amounts will not be included.
- b) The payoff quote generated through the Customer Service form's Maintenance (3) page displays only the principal amount and any fees/expenses due from the borrower(s). If all or any portion of the loan account is unpaid at the end of the promotion period and is over any set tolerance limit, then the PAYOFF amount displays the total amount (Principal + Interest + other charges, if any) using the current amounts.

Reduced rate introductory loan promotions

Oracle FLEXCUBE Lending and Leasing's promotion method PROMOTIONAL RATE allows you to create and specify loan promotions where customers can be charged lower interest rates during a specific promotional period of time. You may define the length of the promotion in either terms or days. Also you will be able to set the specific interest rate you want attached to the promotion. During the promotional period, interest on an account is accrued at the promotional rate. When the promotional period expires, Oracle FLEXCUBE Lending and Leasing changes the interest rate of the loan to the contractual interest rate to accrue interest. The promotion expires on the promotion end date defined by the length of the promotion. However, Oracle FLEXCUBE Lending and Leasing allows you to set a grace period for extending the automatic cancellation of the promotion due to delinquency, similar to the grace period associated with a payment date.

To set up the loan introductory

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Promotions**.

4 In the **Loan Introductory** page's **Promotion Definitions** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of promotion definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Promotion Definitions** section, enter, view, or edit the following information:

In this field:	Do this:
Select Code Description	If selected, indicates that this is the current record. Enter the code identifying the promotion (required). Enter a description of the promotion being offered (required).
Type Period Type	Select the promotion type (required). Select the period type.
Period	Note: Select PROMOTIONAL DAYS if the length of the promotion is to be measured in days. Select PROMOTION TERM if the length of the promotion is more accurately measured in terms (required). Enter the specific promotion period. If you selected PROMOTIONAL DAYS in the Period Type field, then enter the number of days of the promotion period duration. If you selected PROMOTION TERM, enter the number of terms for which the promotion applies. Remember that Oracle FLEXCUBE Lending and Leasing uses the same length
Tolerance	of the term increment that is used in the billing cycle for the loan; for example, weekly, monthly, semi-annual, or annual (required). Enter the dollar amount of the allowed "tolerance", if applicable. This is the amount that can be outstanding at the end of the promotion period. Note: This applies only to the promotion type SAME AS CASH (required).
Index Margin Cancel Delq Days	Enter the promotional index rate (required). Enter the promotional margin rate (required). Enter the tolerance days for the promotion cancellation due to delinquency (required).
Enabled	Select to enable the promotion.

6 Click **Save** on the Loan Introductory page.

Loan link > Insurances link (Insurances page)

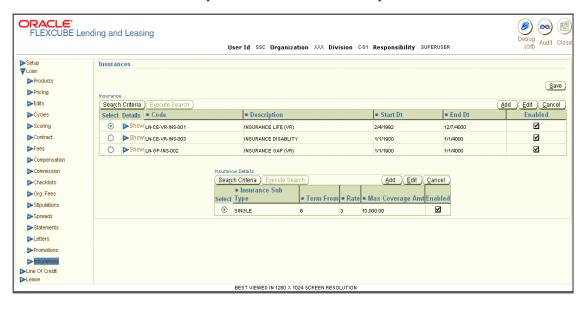

Most financial institutes offer financing for insurance to the borrowers; examples include credit life, credit disability, and GAP. The insurance product offer permits the customer to cancel the insurance in mid term or automatically end when the loan matures or is paid-off. Oracle FLEXCUBE Lending and Leasing supports financing of insurance products during loan origination and automatically end the insurance when the loan is paid-off. Oracle FLEXCUBE Lending and Leasing also can compute the rebate premium based on "Rule of 78" or "Actuarial" method. As a customer might cancel the insurance in mid term of the loan, Oracle FLEXCUBE Lending and Leasing computes the premium rebate on a prorate basis. This also applies to additional insurance purchase during the life of the loan. Normally, mid term insurance cancellations have associated fees and grace period. In such cases, the customer may cancel the insurance during the grace period without accruing any fees. However, when a customer cancels after the grace period, the result is a predefined fees which Oracle FLEXCUBE Lending and Leasing deducts from the computed rebate.

Oracle FLEXCUBE Lending and Leasing supports mid term insurance cancellation with and without grace period and cancellation fees. With this enhancement of insurance processing, you can define the premium rebate computation with a prorate basis.

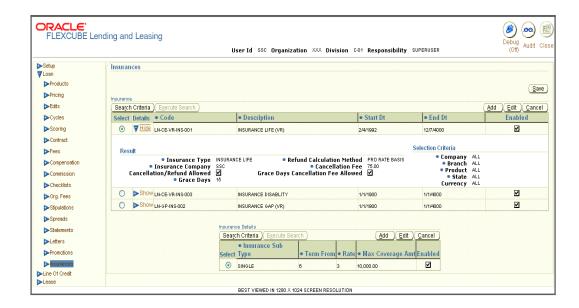

You can define financed insurance related itemizations in the Loan Origination Fees page (Org. Fees link) as you have in previous releases with the Loan Insurance page. You can also set the refund method to "Pro Rate Basis" in the Refund Method field in the Contract Itemization section on the Itemization sub page during setup with the Loan link > Contracts link.

To set up the insurances

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Products** bar link.
- 3 In the Products Setup link bar, click the **Loan** drop-down link, then click **Insurances**.

4 In the **Insurances** page's **Insurance** section, select the record you want to work with and

Note: If you choose, use **Search Criteria** to limit the display of loan insurance records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Insurance** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Code	Enter the code associated with the insurance product (required).
Description	Enter a brief description of the insurance product (required).
Start Dt	Enter the date from which you can start offering the product to customers (required).
End Dt	Enter the date from which to stop offering the product to customers (required).
Enabled	Select the Enabled box if you want to allow the offering of this insurance product (required).
Result section	
Insurance Type	Select the insurance types available for financing (required).
Insurance Company	Enter the name of the company through which the insurance product is offered (required).
Cancellation/Refund Allowed	Select the Cancellation/Refund Allowed box to allow the insurance rebate/refund for cancellation/paid-off (required).
Grace Days	Enter the number of grace days allowed for cancellation without charging a cancellation fee (required).
Refund Calculation Method	Select the insurance premium refund/rebate calculation method to be used when insurance is cancelled (required).

Enter the amount of the cancellation fee to be charged when the insurance is cancelled (required). Select the Grace Day's Cancellation Fee Allowed to
allow cancellation fees during grace period (required).
Select the portfolio company that can offer the insurance product. Select ALL if offered by all companies (required).
Select the branch of the specified portfolio company that can offer the insurance product. Select ALL if offered by all the branches of the specified portfolio company (required).
Select the product for which you can offer the insurance product. Select ALL if offered for all the products (required).
Select the state for which you can offer the insurance product. Select ALL if this is offered for all the states (required).
Select the currency for which you can offer the insurance product. Select ALL if this is offered for all the states (required).

6 In the **Insurance Details** section, select the record you want to work with.

Note: If you choose, use Search Criteria to limit the display of insurance detail records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Insurance Details** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Insurance Sub Type	Select the insurance sub type you want to define for the entry in the Insurance section; for example SINGLE (required).
Term From	Enter the minimum loan term for the insurance sub type (required).
Rate	Enter the rate for premium calculation per \$1,000.00 for the insurance sub type (required).
Max Coverage Amt	Enter the maximum coverage amount covered by the insurance sub type (required).
Enabled	Select to enable the insurance.

8 Click **Save** on the Insurances page.

CHAPTER 8: ESCROW SETUP

The Oracle FLEXCUBE Lending and Leasing provides tax and insurance escrow for loans. The Escrow window opens pages that allow you to set up these features.

This chapter explains the Escrow window and how to set up escrow in the Oracle FLEX-CUBE Lending and Leasing system.

Loan link > Escrow link (Escrow Definition page)

The Escrow Definition page allows you to review or set up escrow definitions for taxes and insurance and note whether or not cushion is allowed.

To set up the Escrow definition

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Escrow** bar link.
- 3 In the Escrows Setup link bar, click the **Loan** drop-down link, then click **Escrow**.

4 On the **Escrow Definitions** page's **Escrow Definitions** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of escrow definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Escrow Definitions** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Escrow	Enter the escrow code. This is protected against update
	and cannot be changed after initial set up (required).
Description	Enter the escrow description (required).

Escrow Type Select the escrow type, usually INSURANCES or TAXES

(required).

Cushion Allowed Select this if the escrow you are defining allows for cush-

ion.

Note: Cushion rules are used to determine how much

cushion should be retained.

Incl 1098 Select to include in 1098 reporting.

Enabled Select to enable the escrow definition.

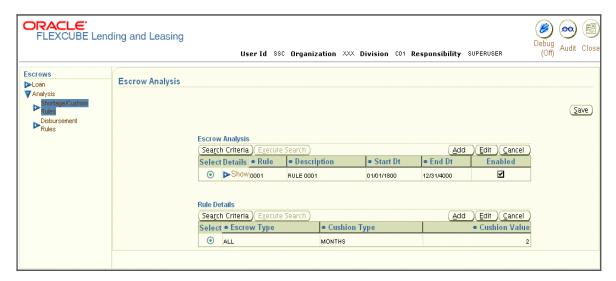

8 Click **Save** on the Escrow Definition page.

Analysis link > Shortage/Cushion Rules link (Escrow Analysis page)

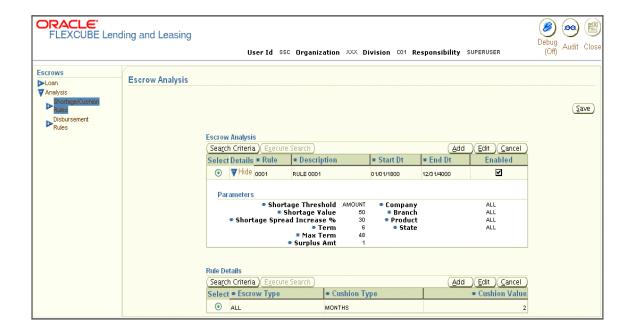

The Escrow Analysis page allows you to review and set up escrow analysis shortage/cushion rules. Shortage/cushion rules determine how much cushion you are allowed on a particular escrow line and, if there is a predicted shortage, how to eliminate it by increasing payment.

To set up the Escrow analysis

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Escrow** bar link.
- 3 In the Escrows Setup link bar, click the **Analysis** drop-down link, then click **Shortage/ Cushion Rules**.

4 On the **Escrow Analysis** page's **Escrow Analysis** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of rules records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Escrow Analysis** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Rule	Enter the rule code. This is protected against update and cannot be changed after initial set up (required).
Description	Enter the rule description (required).
Start Dt	Enter the start date for this rule (required).
End Dt	Enter end date for this rule (required).
Enabled	Select to enable the rule.
Parameters section	
Shortage Threshold	Select the shortage threshold, either an amount in dollars or number of installments (required).
Shortage Value	Enter shortage threshold value (required).
Shortage Spread Increase%	Enter shortage spread increase percent (required).
Term	Enter shortage spread term (required).
Max Term	Enter the maximum amount of shortage spread terms (required).
Surplus Amt	Enter surplus threshold amount for this rule (required).
Section Criteria section	
Company	Select the company for this rule (required).
Branch	Select the branch for this rule (required).
Product	Select the product for this rule (required).
State	Select state for this rule (required).
Company Branch Product	Select the company for this rule (required). Select the branch for this rule (required). Select the product for this rule (required).

IMPORTANT: In selecting which escrow rule to use, Oracle FLEXCUBE Lending and Leasing searches for a best match using the following attributes:

- 1 Company
- 2 Branch
- 3 Product
- 4 State

For this reason, Oracle Financial Services Software recommends creating one version of each rule where ALL is the value in these fields.

6 In the **Rule Details** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of rule details records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Rule Details** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Escrow Type	Select escrow type (required).
Cushion Type	Select cushion type (required).
Cushion Value	Enter cushion value (required).

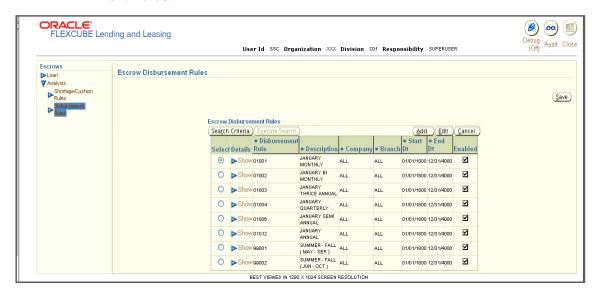

8 Click **Save** on the Escrow Analysis page.

Analysis link > Disbursement Rules link (Rules page)

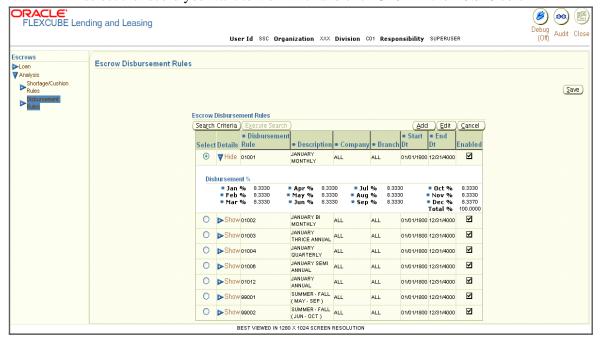

The Rules page allows you to define the disbursement rules for your escrow.

To set up the rules

- On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Escrow** bar link.
- 3 In the Escrows Setup link bar, click the Analysis drop-down link, then click Disbursement Rules.

4 On the **Escrow Disbursement Rules** page's **Escrow Disbursement Rules** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Escrow Disbursement Rules** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Disbursement Rule	Enter the disbursement rule. This is protected against
	update and cannot be changed after initial set up
	(required).
Description	Enter the description (required).
Company	Select the company (required).
Branch	Select the branch (required).
Start Dt	Enter the start date (required).
End Dt	Enter the end date (required).
Enabled	Select to enable this disbursement rule.
Disbursement section	
Jan%	Enter the percent to be disbursed in January (required).
Feb%	Enter the percent to be disbursed in February (required).
Mar%	Enter the percent to be disbursed in March (required).
Apr%	Enter the percent to be disbursed in April (required).
May%	Enter the percent to be disbursed in May (required).
Jun%	Enter the percent to be disbursed in June (required).
Jul%	Enter the percent to be disbursed in July (required).
Aug%	Enter the percent to be disbursed in August (required).
Sep%	Enter the percent to be disbursed in September
	(required).
Oct%	Enter the percent to be disbursed in October (required).
Nov%	Enter the percent to be disbursed in November (required)
Dec%	Enter the percent to be disbursed in December (required)
Total%	Displays total annual disbursement percentage. This figure is the sum of the monthly disbursements and must
	equal 100 percent (display only).

6 Click **Save** on the Escrow Disbursement Rules page.

CHAPTER 9: SUBVENTION SETUP

Oracle FLEXCUBE Lending and Leasing Subvention window's Loan Subvention page allows you to set up loan subvention plans for producers (groups or individuals). Multiple producers may contribute to one subvention plan or a plan can be set for a specific producer.

Subvention Types

Subvention can be offered in many forms for vehicle loans. The most common formats are the rate subvention for vehicle loans. Rate/rent factor subvention involves sharing the finance charge (interest) by the participant (most frequently with the manufacturer). The finance company sets its buy rate (the minimum cost to the company to extend the loan to a customer). If the customer rate is less than this buy rate, then the amount equivalent to the interest amount for the difference (the buy rate minus the customer rate) is paid by the participant as the subvention amount.

Currently Oracle FLEXCUBE Lending and Leasing supports the following subvention types:

Loan subvention types:

- 1 Rate
- 2 Cash bonus
- 3 Buy down

Subvention plans can be defined for one participant (for example, a manufacturer or a particular dealer) or group of participants (such as a dealer association). One subvention plan could have multiple sub plans and multiple participants could participate to each sub plan.

Example

Subvention plan:

- "Summer Special Event" Subvention sub-plans for above plan:
- 1.9% for 36 months
 - or -
- 2.99% for 48 months
 - or -
- 3.99% for 60 months
 - or -
- \$1500.00 cash bonus

Multiple participants may participate in each sub plan. For example, for the 1.9% rate, 1% might be shared by the manufacturer and 0.9% might be shared by the dealer. Similarly for the \$1,500 cash bonus, \$1,000 might be shared by the manufacturer and \$500 by the dealer. Or, the complete \$1,500 might be covered by the manufacturer.

Collection of subvention amounts can be set for each participant in the subvention plan with the Collection Method.

Oracle FLEXCUBE Lending and Leasing supports following collection methods:

UPFRONT The entire subvention amount is collected at the booking

of the loan from the producer proceed.

UPFRONT STATEMENT The entire subvention amount is collected at the time of

the subvention statement.

PAY AS U GO

The subvention amount is billed to the producer when the

customer pays the loan payment. The producer is due for

the amount at each statement.

Subvention Refund

There are times when a loan is either paid-off early or gets charged off and the finance company refunds the unearned subvention amount back to the producer. The refund is available only when the subvention amount is collected from the producer proceeds (UPFRONT) or the whole amount is billed in the first statement (UPFRONT STATEMENT).

You can set up Oracle FLEXCUBE Lending and Leasing to allow refunds only for a certain period and not beyond that. The period can be set differently for charge offs and paid offs and can be based on two methods:

- 1 Days
- 2 Term

Oracle FLEXCUBE Lending and Leasing provides the following methods for refund amount calculation:

- 1 Earned
- 2 Percentage

The earned method is used to refund the unearned portion of the collected subvention amount. The percentage method is used to refund a certain percentage of the subvention amount collected.

Loan link > Loan Subvention link (Loan Subvention Plans page)

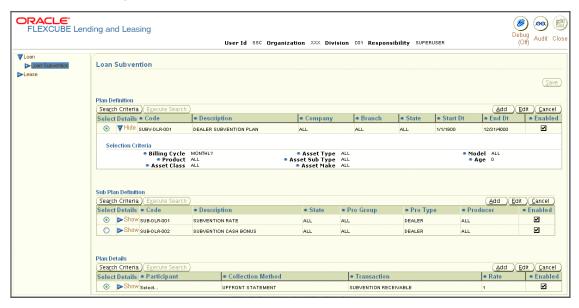

The Loan Subvention Plans page allows you to set up subventions for loans.

To set up the loan subvention plans

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Subvention** bar link.
- 3 In the Subvention Setup link bar, click the **Loan** drop-down link, then click **Loan Subvention**.

4 On the **Loan Subvention** page's **Plan Definition** section, select the record you want to work with, then click **Show** in the **Details** column.

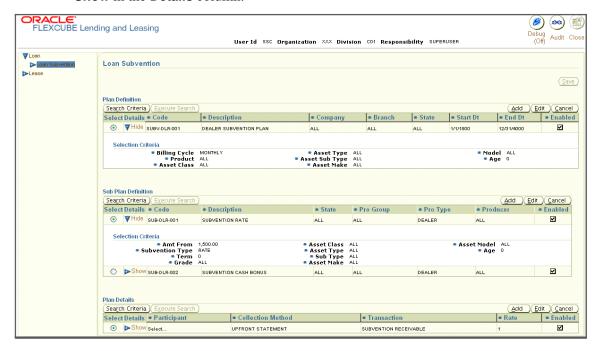

Note: If you choose, use **Search Criteria** to limit the display of loan subvention records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Plan Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Code	Enter the subvention plan code (required).
Description	Enter the subvention plan description (required)
Company	Select the company name (required).
Branch	Select the branch name (required).
State	Select the state (required).
Start Date	Enter the start date for the subvention plan (required).
End Date	Enter the end date for the subvention plan. (required).
Enabled	If selected indicates the record is active.
Selection Criteria section	
Billing Cycle	Select billing cycle (required).
Product	Select the product (required).
Asset Class	Select the asset class (required).
Asset Type	Select the asset type (required).
Asset Sub Type	Select asset sub type (required).
Asset Make	Select asset make (required).
Asset Mode	View the asset model (required).
Age	Enter the asset age (required).

6 In the **Sub Plan Definition** section, select the record you want to work with, then click **Show** in the **Details** column.

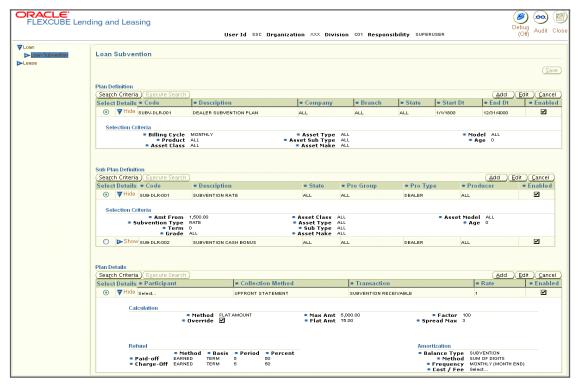

Note: If you choose, use **Search Criteria** to limit the display of sub plan definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Sub Plan Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Code	Enter the subvention sub plan code. (required).
Description	Enter the subvention sub plan description (required).
State	Select the state (required).
Pro Group	Select the producer group (required).
Pro Type	Select the producer type (required).
Producer	Select the producer (required).
Enabled	If selected indicates the record is active.
Selection Criteria section	
Amount From	Enter the amount (required).
Subvention Type	Select the subvention type (required).
Term	Enter the term (required).
Grade	Select the grade (required).
Asset Class	Select the asset class (required).
Asset Type	Select the asset type (required).
Sub Type	Select asset sub type (required).
Asset Make	Select asset make (required).
Asset Model	Select the asset model (required).
Age	Enter asset age (required).

8 In the **Plan Details** section, select the record you want to work with, then click **Show** in the **Details** column.

Note: If you choose, use Search Criteria to limit the display of plan detail records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 9 In the **Plan Details** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Participant	Select the participant (required).
Collection Method	Select the collection method for the subvention plan (required).
Transaction	Select the transaction code (required).
Rate	Enter the subvention rate (required).
Enabled	If selected indicates the record is active.
Calculation section:	
Method	Select the subvention calculation method (required).
Override	Select to allow overriding the rate at the time of underwriting / funding (required).
Max Amt	Enter the maximum subvention amount (required).
Flat Amt	Enter the flat amount (required).
Factor	Enter the subvention factor (required).
Spread Max	Enter the max subvention spread value (required).
Refund section:	
Method (Paid off)	Select the method if the account is paid-off early (required).
Method (Charge-Off)	Select the method if the account is charged-off
	(required).
Basis (Paid off)	Select the basis if the account is paid-off early (required)
Basis (Charge-Off)	Select the basis if the account is charged-off (required).
Period (Paid off)	Enter the number of terms in which the subvention can be refunded to the producer if the account is paid-off early (required).
Period (Charge-Off)	Enter the number of terms in which the subvention will
Terroa (Onarge On)	be refunded to the producer if the account is charge-off (required).
Percent (Paid off)	Enter the refund percentage if the account is paid-off
	(required).
Percent (Charge-Off)	Enter the refund percentage if the account is charged-off (required).
Amortization section:	
Balance Type	Select the amortize balance type (required).
Method	Select the amortize method (required).
Frequency	Select the amortize frequency (required).

CHAPTER 10: CORRESPONDENCE SETUP

The Correspondence Setup window contains pages that enable you to set up Oracle FLEXCUBE Lending and Leasing correspondence.

The Oracle FLEXCUBE Lending and Leasing system provides two types of correspondence: predefined and ad hoc. The following chart provides a quick summary of both:

TYPE OF CORRESPONDENCE:	AD HOC	PREDEFINED
Created automatically		X
Created manually	X	X
Generated for accounts	X	X
Generated for applications	X	X
Set up with the Correspondence link	X	
Set up with the Letters link on the Product link		X

This chapter explains how to set up ad hoc correspondence with the Correspondence form. The Correspondence Setup link bar opens pages that provide a cost-effective and easy to use method to build custom documents that draw information from the Oracle FLEX-CUBE Lending and Leasing database without additional programming. You can choose what to include in a letter, create a template, and then use this template to produce a letter.

The core of the Correspondence module is the document element -- the information stored in the database merged into the correspondence. Oracle FLEXCUBE Lending and Leasing has document elements defined for commonly used data elements in correspondence, such as account numbers, account balances, customer addresses, telephone numbers, and due dates.

Correspondence consists of a document file with text of your choice and the document elements from the Oracle FLEXCUBE Lending and Leasing database.

You can create a correspondence set that consists of one or more documents. If a correspondence set consists of more than one document, such as the account details letter and a payment overdue letter, it prints both documents every time Oracle FLEXCUBE Lending and Leasing generates correspondence for a customer.

The Correspondence module creates the following standard ad hoc correspondence:

- Microsoft Word (RTF)
- Adobe Acrobat (PDF/XFDF)

Note: In this document and in the Oracle FLEXCUBE Lending and Leasing system, the term BANKERS SYSTEM is synonymous with Adobe Acrobat.

Correspondence Setup link bar

The Correspondence Setup link bar contains the following: Common and Loan. Which one of these four links you click determines which product the correspondence set up will affect.

- Click **Common** to make changes common to all correspondence regarding loans.
- Click Loan to make changes to all correspondence regarding loans.

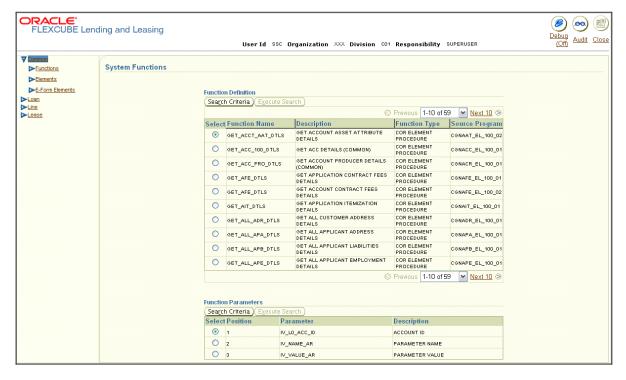

Functions link (System Functions page)

The System Functions page enables you to view the predefined functions for the loan product in Oracle FLEXCUBE Lending and Leasing. These are attributes from the database.

Functions define how Oracle FLEXCUBE Lending and Leasing retrieves data to include in correspondence. The data is retrieved as elements which are either specific database columns or calculated values. Elements are recorded on the Elements page.

To view the predefined functions

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Correspondence** bar link.
- 3 In the Correspondence Setup link bar, click the **Common** or **Loan**, depending on the type of correspondence you want to work with, then click **Functions**.

In the **System Functions** page's **Function Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of function definition records.

5 In the **Function Definition** section, view the following information:

In this field:	View this:
Select	If selected, indicates this is the current record.
Function Name	The function name.
Description	The function description.
Function Type	The function type.
Source Program	The source program.

6 In the **Functions Parameters** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of function definition records.

7 In the **Functions Parameters** section, view the following information:

In this field:	View this:
Select	If selected, indicates this is the current record.
Position	The parameter position.
Parameter	The function parameter.
Description	The function parameter description.

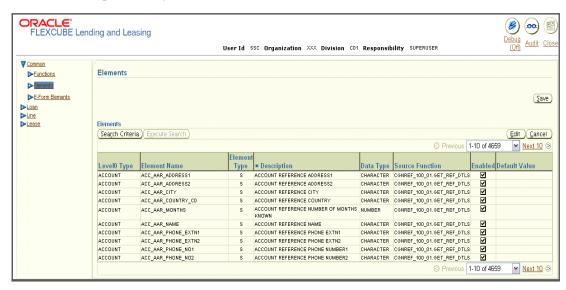

Elements link (Elements page)

The Elements page displays the predefined document elements retrieved from the database when Oracle FLEXCUBE Lending and Leasing generates a correspondence.

In the Element Definitions section, you can update or edit the Description field only.

To view the document elements

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Correspondence** bar link.
- In the Correspondence Setup link bar, click the **Common** or **Loan** depending on the type of correspondence you want to work with, then click **Elements**.

4 On the **Elements** page's **Elements** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of element records.

- If you are changing an existing record, click **Edit**.
- 5 On the **Element Definitions** page, view or edit the following information:

In this field:	Do this:
Level0 Type	View the element Level0 type.
Name	View the element name.
Element Type	View the element type.
Description	Enter the element description (required).
Data Type	View the element data type.
Source Function	View the element function.
Enabled	Select to enable the element.
Default Value	View the default value.

7 Click **Save** on the Elements page.

E-Form Elements link (E-Forms Elements page)

The E-forms Elements page defines elements included when Oracle FLEXCUBE Lending and Leasing generates online correspondence with a browser. The E-forms page is only set up for PDF elements using the XFDF format. These definitions translate the external element required by the vendor to a Oracle FLEXCUBE Lending and Leasing correspondence element.

Example

Vendor Element AllBorrowers.FullNameStreetCityStateZip

(Contains names of all borrowers with address of primary customer)

Oracle FLEXCUBE Lending and Leasing ElementsPRIM_APL_NAME

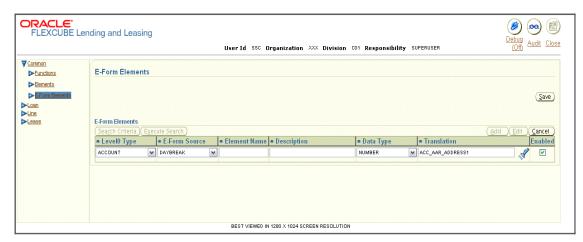

SPOUSE_APL_NAME PRIM_APA_ADDRESS1 PRIM_APA_ADDRESS2 PRIM_APA_ADDRESS3

Translation:

PRIM_APL_NAME || ', ' || SPOUSE_APL_NAME || ', ' || PRIM_APA_ADDRESS1 || '; ' || PRIM_APA_ADDRESS2 || '; ' || PRIM_APA_ADDRESS3

To set up the E-forms elements

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Correspondence** bar link.
- In the Correspondence Setup link bar, click the **Common** or **Loan** depending on the type of correspondence you want to work with, then click **E-Form Elements**.

4 On the **E-form Elements** page's **E-form Elements** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of e-form element records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.

5 In the **E-form Elements** section, enter, view, or edit the following information:

In this field:	View this:
Level0 Type	Enter the element Level0 type (required).
E-Form Source	Select the element e-form source (required).
Element Name	Enter the element name (the name used in the external
	form) (required).
Description	Enter the element description (required).
Data Type	Select the element data type (required).
Translation	Select the translation for the e-form element (SQL state-
	ment fragment defining the element data) (required).
Enabled	Select to enable the e-form element.

6 Click **Save** on the E-Form Elements page.

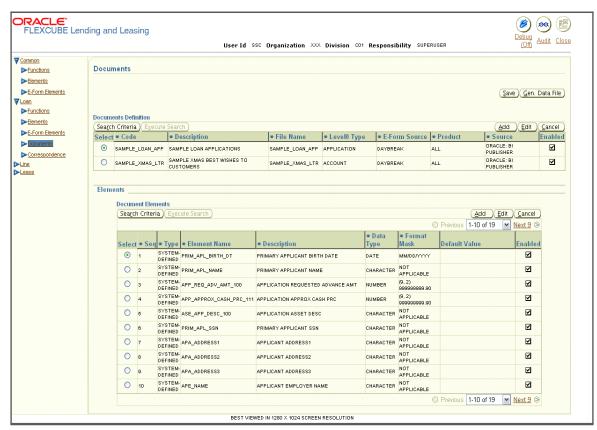

Documents link (Documents page)

The Documents page enables you to set up the various documents and the data fields that Oracle FLEXCUBE Lending and Leasing compiles together when creating a correspondence. Oracle FLEXCUBE Lending and Leasing provides two different document formats: Word or XFDF: XML-based form.

Note: Oracle Financial Services Software assumes the user is familiar with Word and the Merge Document command. If the user is creating e-form documents with XFDF, Oracle Financial Services Software assumes that person is familiar with Adobe forms.

To set up documents to be compiled in correspondence

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Correspondence** bar link.
- In the Correspondence Setup link bar, click the **Common** or **Loan** depending on the type of correspondence you want to work with, then click **Documents**.

4 In the **Documents** page's **Documents Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of document definition records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.

5 In the **Documents Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Code	Enter the document code to define the name for the new
	document (required).
Description	Enter the document description for the new document.
	This entry appears in the Correspondence section on
	the Request page when you generate an ad hoc corre-
	spondence (required).
File Name	Enter the document file name for the resulting file (Word
	or XFDF document) (required).
Level0 Type	Select the level0 type (required).
E-form Source	Select the element e-form source (required).
Product	Select the document product (required).
Source	Select the document source type (required).
Enabled	Select to enable the document definition.

The Elements sub page records the Oracle FLEXCUBE Lending and Leasing application information that appears in the ad hoc correspondence.

6 In the **Elements** sub page's **Document Elements** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of document elements records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Elements** sub page, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Seq	Enter the sequence number to order the document elements (required).
Type	Select element type from the following (required): S System-defined. If you select S, the value is supplied by Oracle FLEXCUBE Lending and Leasing and cannot be changed in the Correspondence Request page. C Constant. UD User Defined Element. If you select UD, you can choose the value and change it in the Correspondence Request screen. UC User Defined Constant. If you choose UC, you can choose the value, but you cannot change it in the Correspondence Request screen. T Translated Element. If a document contains an e-form element and you do not select T, the value will not be translated.
Element Name	Select or enter the element name (required).

Description Enter element description.

Notes:

1. (Check that the element name does not have blank spaces or special characters, such as the forward slash "/"

or backward slash "\".)

2. If the element is system-defined, Oracle FLEXCUBE Lending and Leasing will automatically complete this

field. (required).

Data TypeSelect the element data type (required).Format MaskSelect the element format mask (required).Default ValueEnter the element default value (if appropriate).EnabledSelect to include the element in the document.

8 Click **Save** on the Documents page.

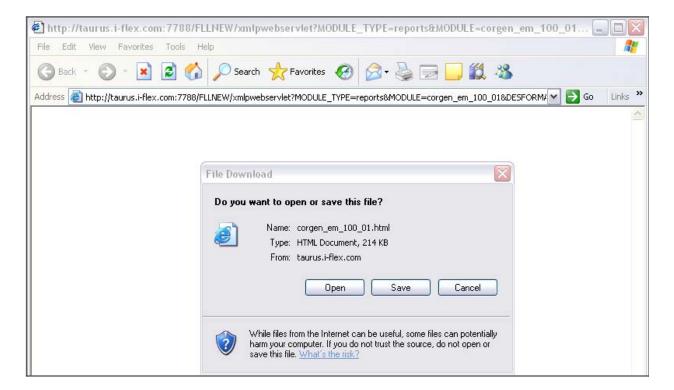

To generate a data file for a document

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Correspondence** bar link.
- 3 In the Correspondence Setup link bar, click the **Common** or **Loan** depending on the type of correspondence you want to work with, then click **Documents**.
- In the **Documents** page's **Document Definition** section, select the record for which you want to generate a data file.

Note: If you choose, use **Search Criteria** to limit the display of document definition records.

6 Click Gen. Data File.

A new browser window opens with a File Download dialog box asking the question "Do you want to open or save this file?"

- Click **Open** to view the data file in the browser.
- Click **Save** to save the data using a Save As dialog box.

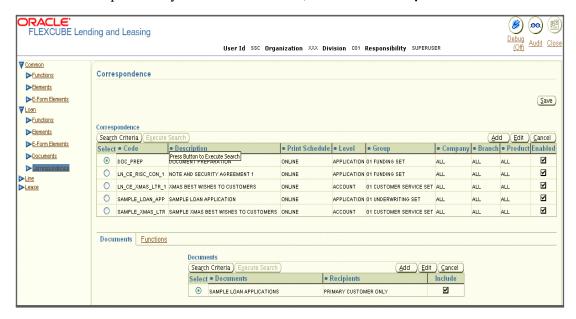

For more information on proceeding with the letter and report generation in the BI publisher, please refer to the Appendix C:Interfacing Oracle FLEXCUBE Lending and Leasing with BI publisher

Correspondence link (Correspondence page)

The Correspondence page enables you to define who will receive the documents you created on the Document Definition page by creating correspondence sets. Each document must belong to a set, and a set can have more than one document.

To set up a correspondence set

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Correspondence** bar link.
- In the Correspondence Setup link bar, click the **Common** or **Loan** depending on the type of correspondence you want to work with, then click **Correspondence**.

4 In the **Correspondence** page's **Correspondence** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of correspondence definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.

5 In the **Correspondence** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Code	Enter the correspondence code (required).
Description	Enter the correspondence description (required).
Print Schedule	Select the correspondence output schedule type (required).
Level	Select the correspondence level type (required).
Group	Select correspondence group (required).
Company	Select the correspondence company (required).
Branch	Select the correspondence branch (required).
Product	Select the correspondence product (required).
Enabled	Select to enable the correspondence.

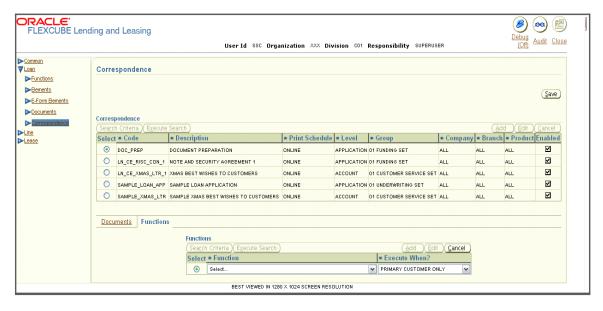

- 6 Click **Save** on the Correspondence page.
- 7 Click the **Documents** sub tab.
- 8 In the **Documents** sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of document records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 9 In the **Documents** sub page, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Document	Select the correspondence document (required).
Recipients	Select the recipients for the document (required).
Include	Select to include the recipient selected.

- 10 Click **Save** on the Correspondence page.
- 11 Click the **Functions** sub tab.

12 In the **Functions** sub page, select the record you want to work with.

Note: Creating custom functions requires programming at set up.

Note: If you choose, use **Search Criteria** to limit the display of function records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 13 In the **Functions** sub page, enter, view, or edit the following information to define the functions that should be executed before or after correspondence is generated.

In this field:	Do this:
Select	If selected, indicates this is the current record.
Function	Select the correspondence functions (required).
Exe When?	Select when to execute the correspondence function
	(required).

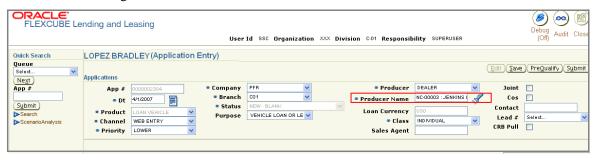

14 Click **Save** on the Correspondence page.

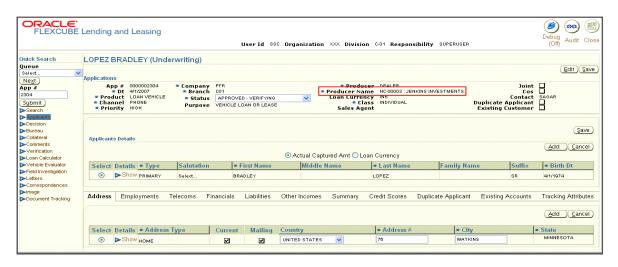

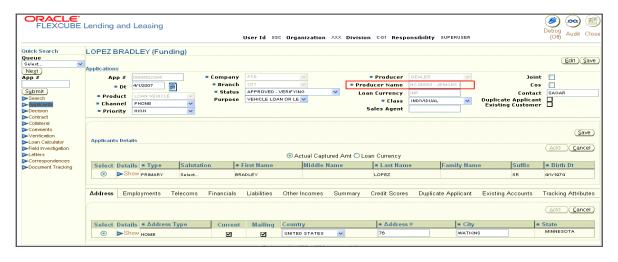

CHAPTER 11: PRODUCER SETUP

Oracle FLEXCUBE Lending and Leasing can manage both direct and indirect loans. While direct loans are paid directly to the customer, indirect loans are paid through a third party. In Oracle FLEXCUBE Lending and Leasing, these third parties (dealerships, agents, and so on) are managed using the Producer Setup window.

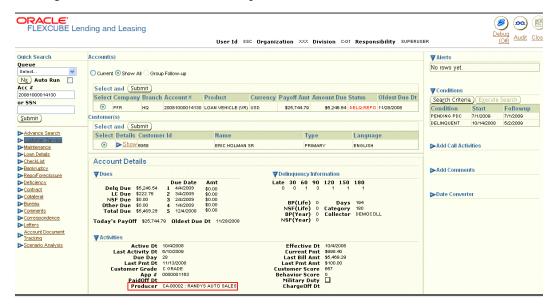

Applications are sent to financial institutions indirectly through producers (or "dealers") on behalf of the customer. Oracle FLEXCUBE Lending and Leasing associates a credit application with the producer who sent it on the Application Entry, Underwriting, and Funding windows.

When the credit application is approved and funded, Oracle FLEXCUBE Lending and Leasing associates the account with the producer.

Oracle FLEXCUBE Lending and Leasing allows for a variety of producers, such as dealers and agents. Producers can have three different statuses:

- Active (producers can fund an application)
- Inactive (producers cannot fund an application)
- Temporary (producers can review but not fund an application)

The producers are paid for their participation, either:

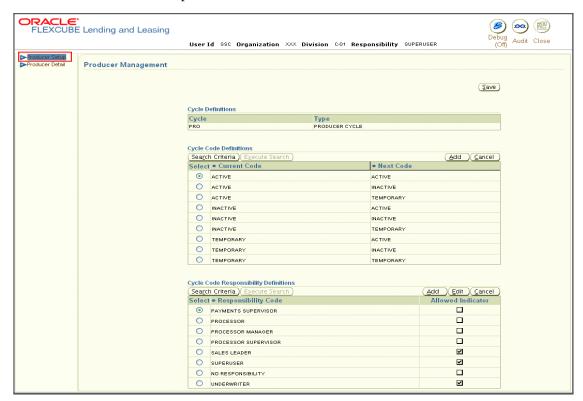

- Up front during funding -or-
- Up front on a monthly basis
- When the interest is earned
- When the payment is received from the customer based on the set up compensation plans.

The Producer Setup window contains pages that enable you to maintain and administer producer compensation, compensation payments, charge back plans, and chargeback parameters.

To open the Producer Manager form for set up

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Producers** bar link.

Oracle FLEXCUBE Lending and Leasing displays the Producer Setup window opened at the Producer Setup link.

In setting up the Producer Setup window, you will need to complete the Cycles page on the Producer Setup link, as well as the Producers Management page and Payment Details sub page on the Producer Details link.

To open the Producer Manager form as a Oracle FLEXCUBE Lending and Leasing user

- On the Oracle FLEXCUBE Lending and Leasing home page, click the **Producers** master tab.
- 2 Click the **Producer** bar link.

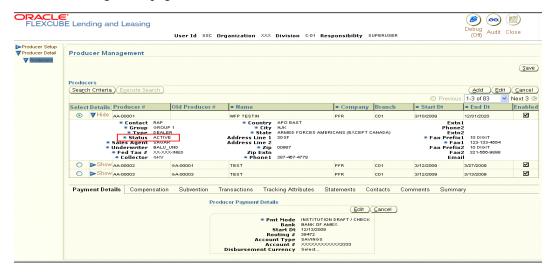

Oracle FLEXCUBE Lending and Leasing displays the Producer Setup window opened at the Producer Details link.

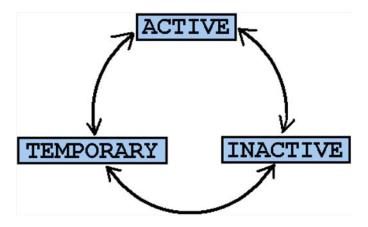

In working with the Producer Setup window, you will primarily use the Payment Details, Tracking Attributes, Contracts, Comments, and Summary sub pages on the Producer Detail link. The Producers page, completed during set up, can be use to view and maintain producer details.

Producer Setup link > Cycles link (Producer Management page)

The Producer Management page enables you to define the dealer or producer status cycle. This tells Oracle FLEXCUBE Lending and Leasing which statuses a producer can cycle through. (This information is recorded in the Status field on the Producers section of the Producer Management page. For more information).

Example

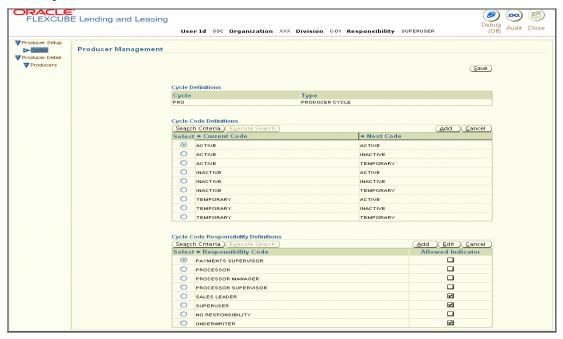

The Producer Management page also defines the user responsibilities capable of changing the producer status.

Note: Oracle FLEXCUBE Lending and Leasing only enables producers/dealers with a status of ACTIVE to fund contracts.

To set up the producer management

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Producer** bar link.
- In the Producer Setup link bar, click the **Producer Setup** drop-down link, then click **Cycles**.

4 In the **Cycle Definitions** section, select the cycle you want to work with.

In this field:	Do this:
Cycle	View the cycle name.
Type	View the cycle type.

5 In the **Cycle Code Definition** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of cycle records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 6 In the **Cycle Code Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Current Code	Select the current code to transition FROM (required).
Next Code	Select the code to transition TO (required).

In the **Cycle Code Responsibility Definitions** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of cycle code responsibility definition records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.

8 In the **Cycle Code Responsibility Definition** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Responsibility Code	Select the responsibility that will be capable of executing this transition (required).
Allowed Indicator	Select to allow the responsibility execute the transition (required).

9 Click **Save** on the Producer Management page.

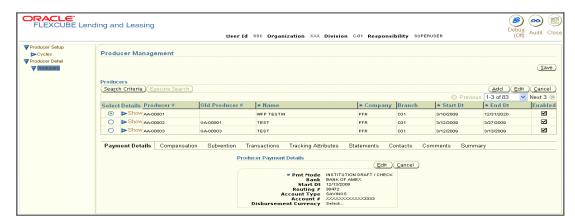

Producer Detail link > Producers link (Producer Management page)

The Producer Management page allows you to record or edit basic information about the producer. You can set up dealers or producers for a company and branch. You can also set up a default underwriter and a default collector for a producer. Oracle FLEXCUBE Lending and Leasing uses this information in the origination workflow to select a queue.

The producer number, name, contact information, company and branch to which the producer applies, federal tax number, status, and other information can be stored in this page.

To set up or maintain the Producer Management page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Producer** bar link.
- 3 In the Producer Setup link bar, click the **Producer Detail** drop-down link, then click **Producers**.

4 On the **Producer Management** page's **Producer** section, select the record you want to work with and click **Show** in the **Details** column.

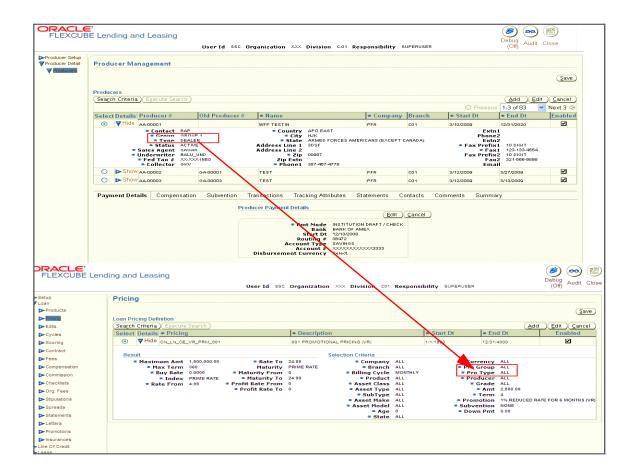

Note: If you choose, use **Search Criteria** to limit the display of producer detail records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.

In the **Producer** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Producer #	Depending on your system setup, either:
	Enter the producer number
	-or-
	View the system generated producer number (required).
Old Producer #	Enter the old producer number (optional).
Name	Enter the producer name (required).
Company	Select the company (required).
Branch	Select the branch (display only).
Start Dt	Select the producer start date (required).
End Dt	Select the producer end date (required).
Enabled	Select to enabled this entry.
Details section	
Contact	Enter the producer contact (required).
Group*	Select the producer group (required).
Type*	Select the producer type (required).
	*Note: The Group and Type fields help in setting up the
	pricing schemes on the Pricing page.

Status Select the appropriate status (required).

Sales Agent

Note: The contents of this field can be linked to edits in the loan origination cycle so that only producers with a

status of the ACTIVE can be funded (required),

Select the sales agent associated with this producer (required).

Underwriter Select the default underwriter assigned to this producer.

Note: Only users with a responsibility for an UNDER-WRITER can be designated as underwriters for producers

(required).

Fed Tax # Enter the federal tax identification number.

Note: If the organizational parameter

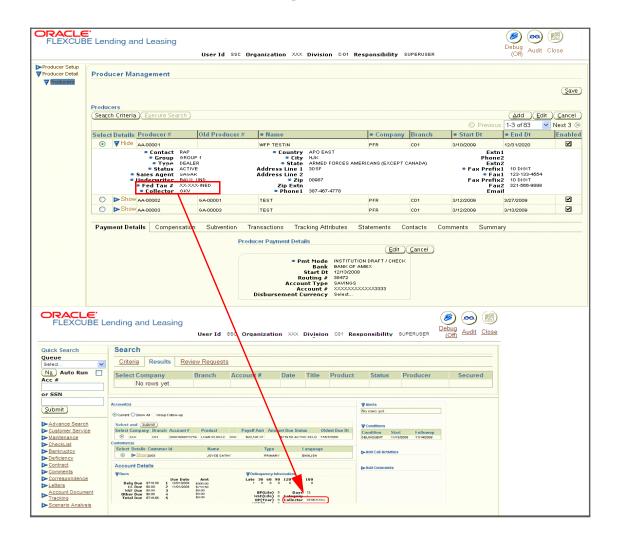

UIX_HIDE_RESTRICTED_DATA is set to Y, this appears as a masked number; for example, XXXXX1234

(optional).

Collector Select the default collector or agent assigned to this pro-

ducer. (This will appear in the **Collector** field in the **Delinquency Information** section of the **Account Details** page on the **Customer Service window**)

(required).

Address section

Country Select the country code (required).

City Enter the city (optional).

State Select the state (required).

Address Line 1 Enter address line 1 (optional).

Address Line 2 Enter address line 2 (optional).

Zip Select the zip code (optional).

Zip Extn Enter the zip extension (optional).

Phone 1 Enter phone number 1 (required).

Exnt 1 Enter phone number 1 extension (optional).

Phone 2 Enter phone number 2 (optional).

Extn2 Enter phone number 2 extension (optional).

Fax Prefix1 Select fax prefix number 1 (required).

Fax1 Enter fax number 1 (required).

Fax Prefix 2 Select fax prefix number 2 (optional).

Fax2 Enter fax number 2 (optional).

EMail Enter the producer mail address (optional).

- * Note: Oracle Financial Services Software recommends you double-check the fax numbers (especially the 10 digit number) and email addresses you enter on this page, since Oracle FLEXCUBE Lending and Leasing uses this information to send its system-generated underwriting decisions.
- 6 Click **Save** on the Producer Management page.

Payment Details sub page

You can setup ACH as the payment mode for a dealer or producer on the Payment Details sub page. The Payment Details sub page stores the information regarding the producer's bank, such as the bank's name, routing number, account type and account number.

Note: Once you complete this sub page, the information goes into effect immediately.

To complete the Payment Details sub page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Producer** bar link.
- 3 In the Producer Setup link bar, click the **Producer Detail** drop-down link, then click **Producers**.
- On the **Producer Management** page's **Producer** section, select the record you want to work with.
- 5 Click the **Payment Details** sub tab.

6 In the Payment Details sub page's Product Payment Details section, view or edit the

following information:

• If you are editing an existing record, click **Edit**.

In this field: D	O 1	this:
------------------	------------	-------

Producer Payment Details section

Pmt Mode Select the payment mode (required).
Bank Enter the ACH bank name (optional).

Start Dt Select the ACH start date if payment mode is ACH.

Routing # Enter the ACH bank routing number (optional).

Account Type Select the ACH bank account type (required).

Account # Enter the ACH bank account number.

Disbursement Currency Select the disbursement currency.

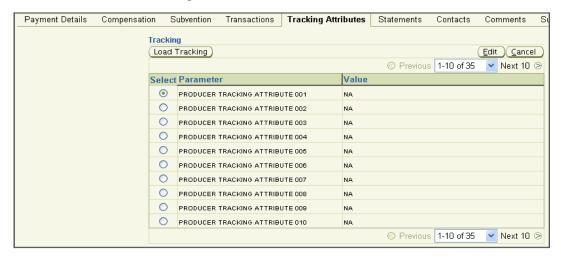

7 Click **Save** on the Producer Management page.

Tracking Attributes sub page

The Tracking Attributes sub page allows you to link information to a producer who is not tracked by default in the Oracle FLEXCUBE Lending and Leasing system, but is part of your company's business practices.

To complete the Tracking Attributes sub page

- On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Producer** bar link.
- 3 In the Producer Setup link bar, click the **Producer Detail** drop-down link, then click **Producers**.
- 4 On the **Producer Management** page's **Producer** section, select the record you want to work with.
- 5 Click the **Tracking Attributes** sub tab.

- 6 On the Tracking Attributes sub page's Tracking section, click Load Tracking.
 Oracle FLEXCUBE Lending and Leasing loads the tracking parameters.
- 7 In the Tracking section, click **Edit**.

- 8 Complete the **Tracking** section by entering the parameter(s) in the **Value** field(s).
- 9 Click **Save** on the Producer Management page.

Contacts sub page

The Contacts sub page allows you to record information regarding contacts associated with a producer, such as employees at a dealership.

To complete the Contacts sub page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Producer** bar link.
- In the Producer Setup link bar, click the **Producer Detail** drop-down link, then click **Producers**.
- 4 On the **Producer Management** page's **Producer** section, select the record you want to work with.
- 5 Click the **Contacts** sub tab.

6 On the **Contacts** sub page's **Producer Contacts** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of producer contact records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 On the **Producer Contacts** sub page, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Contact Type	Select the producer contact type (required).
Name	Select/Enter the producer contact name (required).
Phone	Enter producer contact phone number (optional).
Extn	Enter phone number extension (optional).
Fax	Enter producer contact fax number (optional).
Enabled	Select to indicate this is a current contact.

8 Click **Save** on the Producer Management page.

Comments sub page

The Comments sub page allows you to view and enter comments regarding the producer.

To enter a comment on the Comments sub page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Producer** bar link.
- 3 In the Producer Setup link bar, click the **Producer Detail** drop-down link, then click **Producers**.
- 4 On the **Producer Management** page's **Producer** section, select the record you want to work with.
- 5 Click the **Comments** sub tab.

On the **Comments** sub page's **Comments** section, select the record you want to work with.

Note: If you choose, use **Search** to limit the display of producer comment records.

- If you are entering a new record, click **Add**.
- 7 In the **Comments** section, enter or view the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Comment	Enter comment (required).
Comment By	View user id (required).
Comment Dt	View comment date (required).

8 Click **Save** on the Producer Management page.

Summary sub page

The display only Summary sub page allows you to view summary information regarding the producer.

To enter a comment on the Summary sub page

- On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Producer** bar link.
- 3 In the Producer Setup link bar, click the **Producer Detail** drop-down link, then click **Producers**.
- 4 On the **Producer Management** page's **Producer** section, select the record you want to work with.
- 5 Click the **Summary** sub tab.

6 On the **Summary** sub page's **Summary** section, select the record you want to work with.

Note: If you choose, use **Search** to limit the display of producer comment records.

7 In the **Summary** section, view the following information:

In this field:	View this:
Select	If selected, indicates that this is the current record.
Total	The application total status count.
YearMonth	The year and month.
Approved	The application approved status count.
Conditioned	The application conditioned status count.
Rejected	The application rejected status count.
Withdrawn	The application rejected status count.
Funded	The application withdrawn status count.
Amount	The application funded status total amount.

CHAPTER 12: VENDORS SETUP

During the life of an account, a financial institution might require the use of specialized services of a vendor for various purposes; for example, repossessing a vehicle, retaining an attorney for bankruptcy court proceedings, or making field calls. With Oracle FLEX-CUBE Lending and Leasing's Vendors window, you can:

- Maintain vendor information
- Maintain services offered by the vendor
- Assign tasks to the vendors and subsequently track and process those tasks
- Charge vendor expenses to customers
- Enter and update invoices raised by the vendors
- Post vendor transactions
- Process vendor payments.

Once an invoice has been presented for a service performed by a vendor, you can enter the information on the Vendor Management form and create a monetary transaction. You can then choose if the customer should pay any particular expense or not.

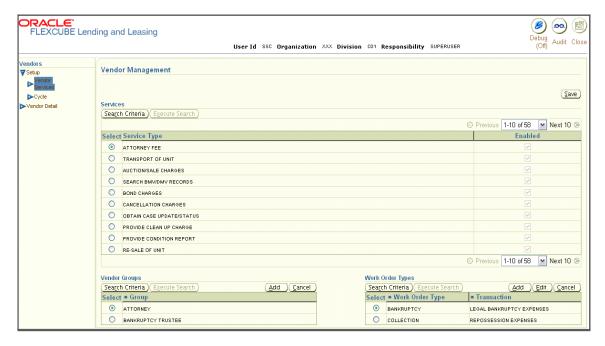

Setup link > Vendor Services link

The Vendor Service link enables you to establish the links between the service type, vendor group, and the work order type. It records which vendor groups can provide which types of services and which service types belong to which work order types.

For each service type (Service Type field), there can be multiple vendor groups. Each vendor (Group field) can belong to one or multiple vendor group(s). The list of values for the vendor group is managed in the lookup. Each work order type (Work Order Type field) can be linked to one or multiple work order type(s).

To set up the vendor services

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Vendor** bar link.
- In the Vendors Setup link bar, click the **Setup** drop-down link, then click **Vendor Services**.

4 In the **Vendor Management** page's **Services** section, select the service type you want to link to a vendor group(s) and work order type(s).

Note: If you choose, use **Search Criteria** to limit the display of service records.

5 In the **Services** section, enter, view, or edit the following information:

In this field:	View this:
Select	If selected, indicates that this is the current record.
Service Type	The service type (display only).
Enabled	If selected, the service is enabled.

- 6 In the **Vendor Groups** section, select the vendor group that will provide this service.
 - **Note**: If you choose, use **Search Criteria** to limit the display of vendor group records.
- If you are entering a new record, click **Add**.
- 7 In the **Vendor Groups** section, enter or view the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Group	Enter the vendor group (required).

- 8 In the **Work Order Types** section, select the work order type you want to work with.
 - **Note**: If you choose, use **Search Criteria** to limit the display of vendor group records.
- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 9 In the **Work Order Types** section, enter, view, or edit the following information:

In this field:	View this:
Select	If selected, indicates that this is the current record.
Work Order Type	Select the work order type (required).
Transaction	Select the associated transaction for the service type
	(required).

10 Click **Save** on the Vendor Management page.

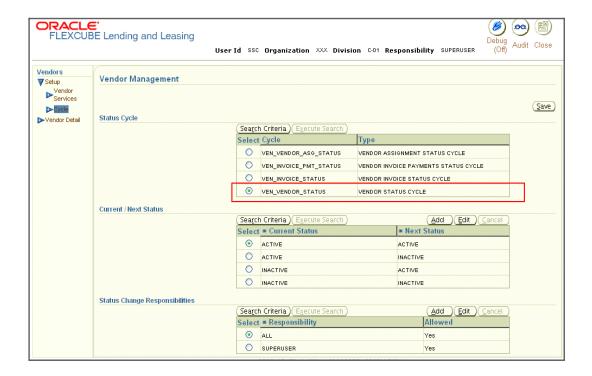

Setup link > Cycle link

The Cycle link allows you to define the various vendor cycles and the responsibilities that can gain access to the various transactions in each cycle.

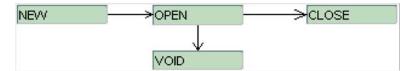

You can define vendor status cycle and restrict the status change based on responsibility.

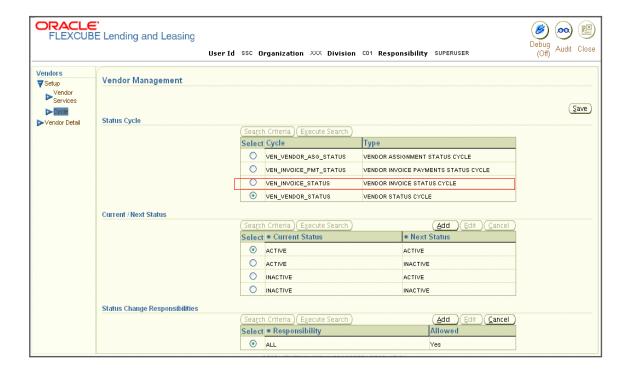

Example

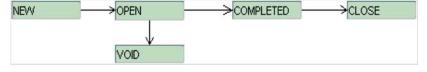

You can define vendor invoice status cycle and restrict the status change based on responsibility.

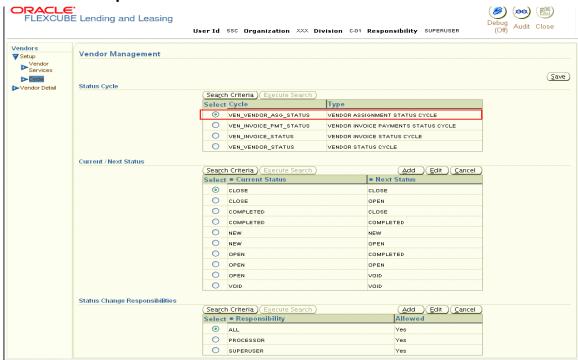

Example

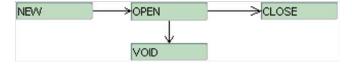

You can define vendor assignment status cycle and restrict the status change based on responsibility.

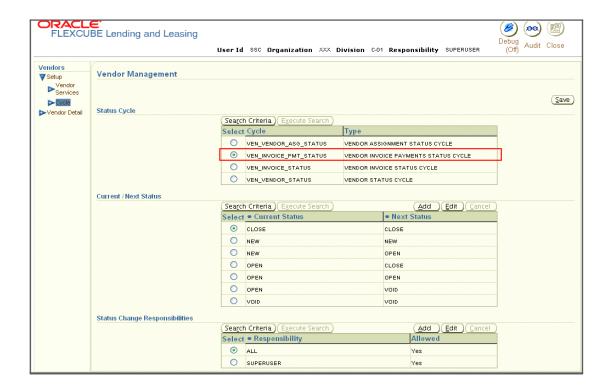

Example

You can define vendor invoice payment status cycle and restrict the status change based on responsibility.

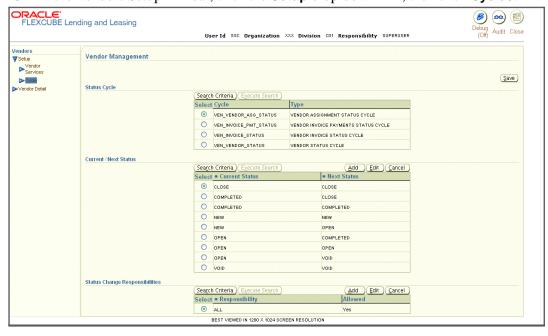

Example

To set up the vendor cycles

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Vendor** bar link.
- 3 In the Vendors Setup link bar, click the **Setup** drop-down link, then click **Cycles**.

4 In the **Vendor Management** page's **Status Cycle** section, select the cycle type you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of cycle type records.

5 In the **Status Cycle** section section view the following information:

View this:
VENDOR ASSIGNMENT STATUS CYCLE
VENDOR INVOICE PAYMENTS STATUS CYCLE
VENDOR INVOICE STATUS CYCLE
VENDOR STATUS CYCLE

- 6 In the **Current/Next Status** section, select the current code to transition from in the **Current Status** field.
- 7 Select the current code to transition to in the **Next Status** field.
- 8 In the **Status Change Responsibilities** section, select the responsibility that will be capable of executing this transition (from current code to the next code).
- 9 Choose **Yes** to allow this responsibility.
- 10 Click **Save** on the Vendor Management page.

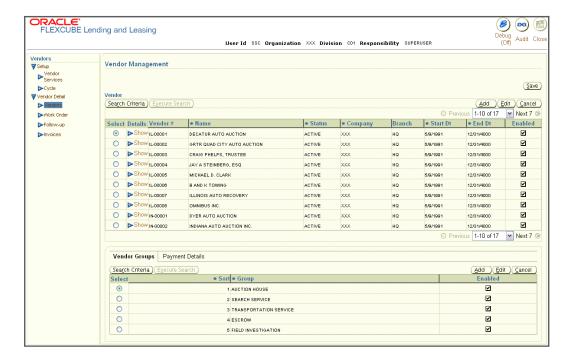

Vendor Detail link > Vendors link

The Vendors link allows you to set up vendor information. If the vendor receives escrow disbursement at an address different from the current business address, enter this information in the Pay Details sub page. This Pay Details sub page. also allows you to enter the number of days prior to the due date by which the payment to the vendor must be processed.

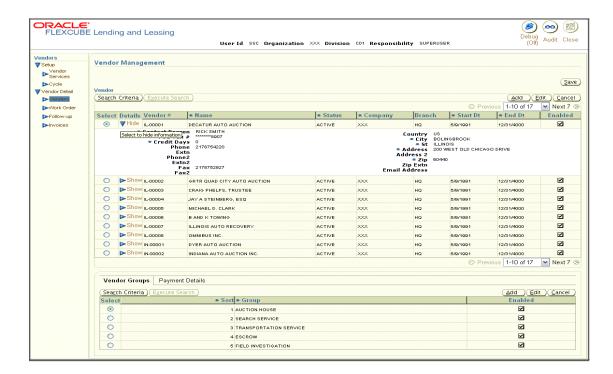

Note: The contents of this section defaults to the vendor's current address, but can be modified.

To enter or edit vendor information

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Vendor** bar link.
- 3 In the Vendors Setup link bar, click the Vendor Details drop-down link, then click Vendors.

4 In the **Vendor Management** page's **Vendor** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of cycle code responsibility definition records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.
- 5 In the **Vendor** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Vendor #	View the vendor number. Oracle FLEXCUBE Lending and Leasing automatically generates the vendor number (display only).
Name	Enter the vendor name (required).
Status	Select the vendor status (required).
Company	Select the vendor portfolio company (required).
Branch	View the vendor portfolio branch (display only).
Start Dt	Enter the vendor start date (required).
End Dt	Enter the vendor end date (required).
Enabled	Select if the vendor is enabled (optional).
Contact Person	Enter the vendor contact name (required).
Fed Tax #	If available, enter the vendor federal tax identification
	number. Note: If the organizational parameter
	UIX_HIDE_RESTRICTED_DATA is set to Y, this appears
	as a masked number; for example, XXXXX1234.
	(optional).
Credit Days	Enter the credit days for the vendor invoice. This number
	is used to check that the Invoice Due Date is not more
-	than the credit days from the Invoice Date. (required).
Phone	Enter phone number 1 (optional).

Extn Enter the phone extension (optional). Phone 2 Enter phone number 2 (optional).

Extn 2 Enter the phone number 2 extension (optional).

Fax Enter the fax number (optional).
Fax 2 Enter the fax number 2 (optional).
Country Select the country code (optional).

CityEnter the city (required).StSelect the state (required).AddressEnter address line 1 (required).Address 2Enter address line 2 (optional).

Zip Enter the zip (required).

Zip Extn Enter the zip extension (optional). Email Address Enter the email address (optional).

6 Click **Save** on the Vendor Management page.

Vendor Detail link > Vendors link (Vendors Groups sub page)

The Vendors Groups sub page allows you to set up vendor groups.

To enter or edit vendor group information

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Vendor** bar link.
- 3 In the Vendors Setup link bar, click the Vendor Details drop-down link, then click Vendors.

- 4 In the **Vendor Management** page's **Vendor** section, select the record you want to work with.
- 5 On the **Vendor Groups** sub page, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of cycle code responsibility definition records.

- If you are entering a new record, lick **Add**.
- If you are changing an existing record, click **Edit**.
- 6 On the **Vendor Groups** sub page, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Sort	Enter sort sequence (required).
Group	Select the vendor type to which the vendor belongs based
	on the services provided by the vendor (required).
Enabled	Select to enable the vendor service.

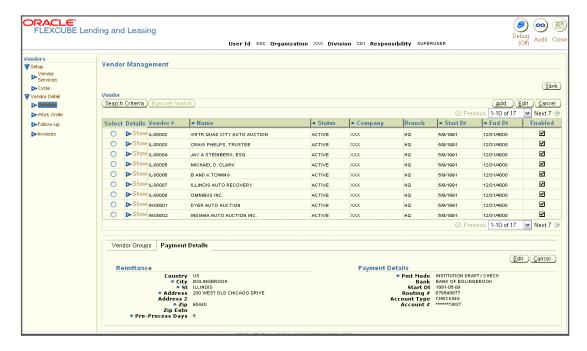

7 Click **Save** on the Vendor Management page.

Vendor Detail link > Vendors link (Payment Details sub page)

The Payment Details sub page allows you to set up automatic clearing house information for vendors.

To enter or edit vendor payment details information

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Vendor** bar link.
- 3 In the Vendors link bar, click the **Vendor Detail** drop-down link, then click **Vendors**.
- 4 In the **Vendor Management** page's **Vendor** section, select the record you want to work with.
- 5 Click the **Payment Details** sub page.

- 6 On the **Payment Details** sub page, select the record you want to work with.
- If you are changing an existing record, click **Edit**.
- 7 On the **Payment Details** sub page, view or edit the following information:

Do this:
Select the country code (optional).
Enter city (required).
Select state (required).
Enter address line 1 (required).
Enter address line 2 (optional).
Enter zip (required).
Enter zip extension (optional).
Enter the remittance preprocess days. This is the number
of days prior to the due date by which the payment to the
vendor must be processed (required).
Select the mode of payment (required).
Enter the ACH bank (optional).
View ACH start date (display only).
Enter the bank routing number (optional).
Select the account type (optional).
Enter the account number. Note : If the organizational parameter UIX_HIDE_RESTRICTED_DATA is set to Y, this appears as a masked number; for example, XXXXX1234 (optional).

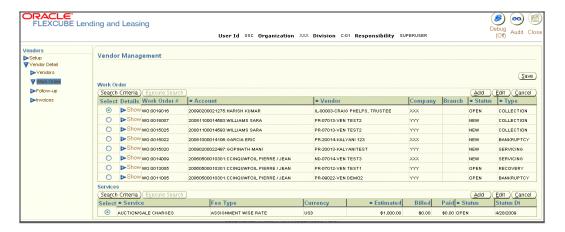

8 Click **Save** on the Vendor Management page.

Vendor Detail link > Work Orders link

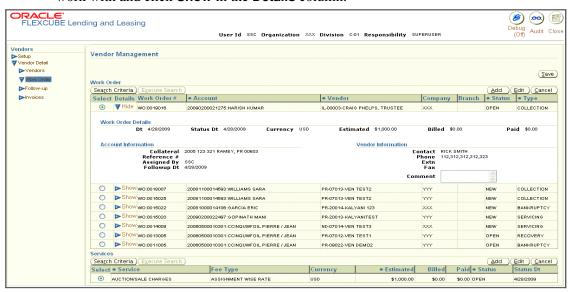

The Work Orders link allows you to assign an account to a vendor for a service that the vendor provides.

To set up the work orders

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Vendor** bar link.
- 3 In the Vendors Setup link bar, click the Vendor Detail drop-down link, then click Work Order.

4 In the **Vendor Management** page's **Work Order** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of work order responsibility definition records.

- If you are entering a new record, click Add.
- If you are changing an existing record, click **Edit**.

5 In the **Work Order** section, enter, view, or edit the following information:

In this field:	View this:
Select	If selected, indicates that this is the current record.
Work Order #	View work order number (display only).
Account	Select the account number for the work order (required).
Vendor	Select the vendor who will service the work order (required).
Company	View the vendor company (display only).
Branch	View the vendor branch (display only).
Status	Select the service status (required).
Туре	Select the work order type (required).
Work Order Details section	
Dt	View the work order date (display only).
Status Dt	View the last work order status change date (display only).
Currency	View the currency for the work order (display only).
Estimated	View the estimated amount for the work order (display only).
Billed	View the amount billed by the vendor for the work order (display only).
Paid	View the amount paid to the vendor for the work order (display only).
Account Information section	
Collateral	Select the asset associated with the work order (optional).
Reference #	Enter the vendor reference (optional).
Assigned By	View the user who created the work order (display only).
Followup Dt	Enter the next follow-up date (optional).
Vendor Information section	
Contact	Enter the vendor contact for the work order (optional).
Phone	Enter the vendor contact phone for the work order (optional).
Extn	Enter the vendor contact phone extension for the work order (optional).
Fax	Enter the vendor contact fax for the work order (optional).
Comment	Enter any comments regarding the work order (optional).

6 In the **Services** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of work order responsibility definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.

7 In the **Services** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Service	Select the service type (required).
Fee Type	Select the vendor fee type (optional).
Currency	Select the currency (optional).
Estimated	Enter the estimated amount for the service (required).
Billed	View the amount billed by the vendor for the service (display only).
Paid	View the amount paid to the vendor for the service (display only).
Status	View the status (optional).
Status Dt	View the last service status change date (display only).

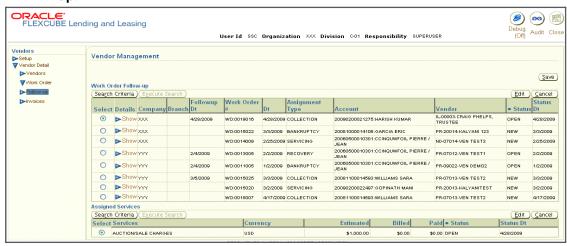

Click **Save** on the Vendor Management page.

Vendor Detail link > Follow-up link

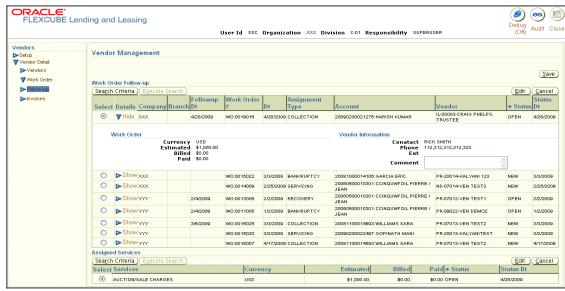

The Work Orders link lists the work orders that are not complete and hence require followup.

To set up the work order follow-ups

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Vendor** bar link.
- 3 In the Vendors Setup link bar, click the Vendor Detail drop-down link, then click Follow-up.

In the **Vendor Management** page's **Work Order Follow-up** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of work order follow-up definition records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.

5 In the **Work Order Follow-up** section, enter the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Company	View the vendor company (display only).
Branch	View the vendor branch (display only).
Followup Dt	Enter the next follow-up date (optional).
Work Order #	View the work order number (display only).
Dt	View the work order date (display only).
Assignment Type	View the work order type (display only).
Account	View the account associated with the work order (display only).
Vendor	View the vendor associated with the work order (display only).
Status	Select the work order status (required).
Status Dt	View the last work order status change date (display only).
Work Order section	
Currency	View the currency for the work order (display only).
Estimated	View the estimated amount for the work order (display only).
Billed	View the amount billed by the vendor for the work order (display only).
Paid	View the amount paid to the vendor for the work order (display only).
Vendor Information section	
Contact	View the vendor contact name (display only).
Phone	View the vendor contact phone number (display only).
Comment	Enter a comment (optional).

6 In the **Assigned Service** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of assigned services records.

- If you are changing an existing record, click **Edit**.
- 7 In the **Assigned Service** section, view or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Services	View the service provided by the vendor (display only).
Currency	View the currency for the vendor (display only).
Estimated	View the estimated amount for the service (display only).
Billed	View the amount billed by the vendor for the service (display only).
Paid	View the amount paid to the vendor for the service (display only).
Status	Select the service status (required).
Status Dt	View the last service status change date (display only).

8 Click **Save** on the Vendor Management page.

Vendor Detail link > Invoices link

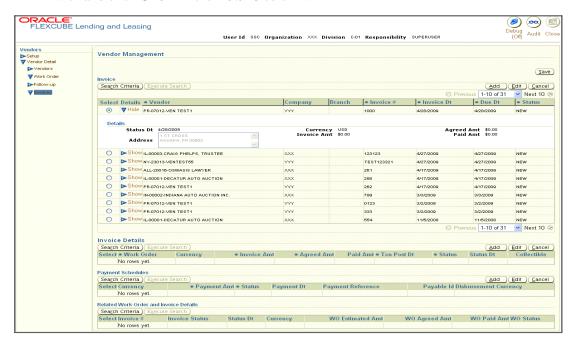

The Invoices page records invoices received from the vendor and processes them for payment.

To complete the Invoice page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Vendor** bar link.
- In the Vendors Setup link bar, click the **Vendor Detail** drop-down link, then click **Invoices**.

4 In the **Vendor Management** page's **Invoices** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of invoice records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Invoice** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Vendor	Select the vendor name who has send the invoice (required).
Company	View the vendor portfolio company (display only).
Branch	View the vendor portfolio branch (display only).
Invoice #	Enter the invoice number (required).
Invoice Dt	Enter the invoice date (required).
Due Date	Select the due date (required).
Status	Select the invoice status (required).
Details section	
Status Dt	View the last invoice status change date (display only).
Address	View the vendor address (display only).
Currency	View the currency (display only).
Invoice Amt	View the total invoice amount (display only).
Agreed Amt	View the total agreed amount (display only).
Paid Amt	View the total paid amount (display only).

6 In the **Invoice Details** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of invoice detail records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 7 In the **Invoice Details** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Work Order	Select the work order (required).
Currency	View the currency (display only).
Invoice Amt	Enter the invoice amount (required).
Agreed Amt	Enter the agreed amount (required).
Paid Amt	View the paid amount (display only).
Txn Post Dt	Enter transaction effective date (required).
Status	Select the status (required).
Status Dt	View the last status change date (display only).
Collectible	Select if the agreed amount can be collected from the
	customer.

8 In the **Payment Schedules** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of payment schedule records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.

9 In the In the **Payment Schedules** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Currency	View the currency (display only).
Payment Amt	Enter the payment amount (required).
Status	Select the payment status (required).
Payment Dt	Enter the payment date (optional).
Payment Reference	Enter the payment reference (optional).
Payable Id	View the payable requisition Id (display only).
Disbursement Currency	View the currency (display only).
•	

10 In the **Related Work Order and Invoice Details** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of related work order and invoice details records.

11 In the **Related Work Order and Invoice Details** section, view the following display only information:

View this:
If selected, indicates that this is the current record.
The invoice number.
The invoice status.
The invoice status date.
The currency.
The work order estimated amount.
The work order agreed amount.
The work order paid amount.
The work order status.

12 Click **Save** on the Vendor Management page.

CHAPTER 13: QUEUE SETUP

When processing an application, various Oracle FLEXCUBE Lending and Leasing users might work on the application to complete different tasks. A data entry person might complete the Application Entry window before an underwriter works on the application using the Applications window. Later, another Oracle FLEXCUBE Lending and Leasing user might use the Applications window to fund the application.

The application processing workflow facilitates the movement of the application from one person to another with queues. Queues create a work section of applications waiting for a particular and common task to be performed, such as application entry or verification. Oracle FLEXCUBE Lending and Leasing's powerful queuing module automates this otherwise manual process.

The Setup Modules window's pages that allow you to setup manage workflow and work assignments on a daily basis to ensure that all applications are in the queues of the appropriate users at all times.

Any time an application's status is changed, Oracle FLEXCUBE Lending and Leasing checks whether the application is in the right queue.

Oracle FLEXCUBE Lending and Leasing will sort queues based on an application's status and sub status.

Origination Queues

The Origination page on the Queue Setup form allows you to set up queues that direct applications to Oracle FLEXCUBE Lending and Leasing users during the loan origination cycle. Origination queues are based on an application's status and sub status. Whenever an application changes its status/sub status, the Oracle FLEXCUBE Lending and Leasing moves the application to a queue based on the information on this page.

You can define the loan origination queues and the corresponding selection criteria based on:

- Application status
- Application sub status
- Product type
- Funding type
- Product
- Underwriter
- State
- Channel
- Producer type
- Producer

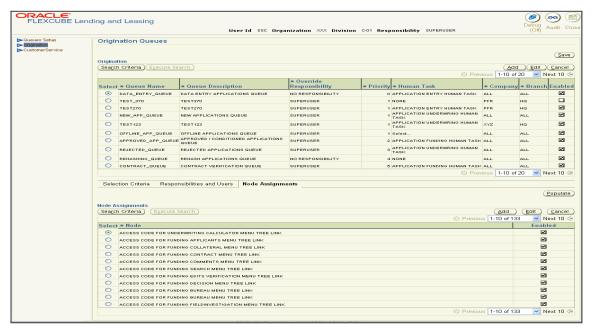

With loan origination queues set up, the applications in your work queue automatically appear on the Results page when you open the Underwriting or Funding window. The queue to which you are assigned appears in the Queue Name field. You would then begin processing the applications in the order of which they are listed, double-clicking the application at the top of the list to load it.

Origination link (Queues page)

The Setup Module window's Queues page allows you to determine how applications are directed to users who process applications. Whenever applications change status or sub status, the application is placed in a queue based on the information on this page.

To set up the Setup Module window's Queues

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Queues** bar link.
- 3 In the Queue Setup link bar, click **Origination**.

4 On the Queues page's **Origination** section, select the queue you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of queue records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 5 In the **Origination** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Queue Name	Enter queue name (required).
Queue Description	Enter queue description. Note: Oracle FLEXCUBE
	Lending and Leasing uses this entry when referring to the
	queue on other forms (see the example on the previous
	page) (required).
Override Responsibility	Select an override responsibility code, if an override
	queue. Note: Oracle FLEXCUBE Lending and Leasing
	uses the data in the Override Responsibility field to deter-

mine which queue to assign an application, if an applica-

tion triggers an "override" edit. (required).

Priority Enter the priority number. Oracle FLEXCUBE Lending

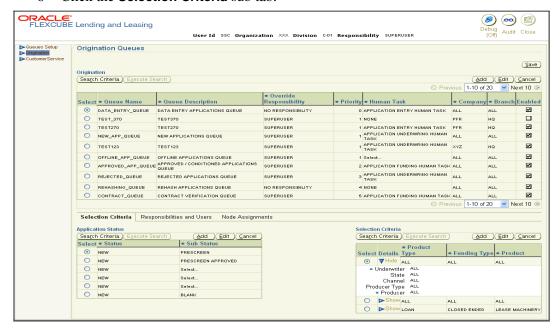

and Leasing sorts applications by the higher number, so an application with a priority of 5 will be sorted as a

higher priority than one with a 3 (required).

CompanySelect the company (required).BranchSelect the branch (required).

Enabled Select to enable the queue (required).

6 Click the **Selection Criteria** sub tab.

The Selection Criteria sub page allows you to further filter the applications in a particular queue. This sub page is generally used by organizations processing over 2,000 applications a day.

7 In the **Selection Criteria** sub page's **Application Status** section, select the status you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of status records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 In the **Application Status** section, use the **Status** and **Sub Status** fields to define the credit application status/sub status combinations that should be considered for the queue.

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Status	Select application status (required)
Sub Status	Select application sub status (required)

In the **Selection Criteria** section, select the record you want to work with and click **Show** in the **Details** column.

Note: If you choose, use **Search Criteria** to limit the display of records.

If you are entering a new record, click Add.

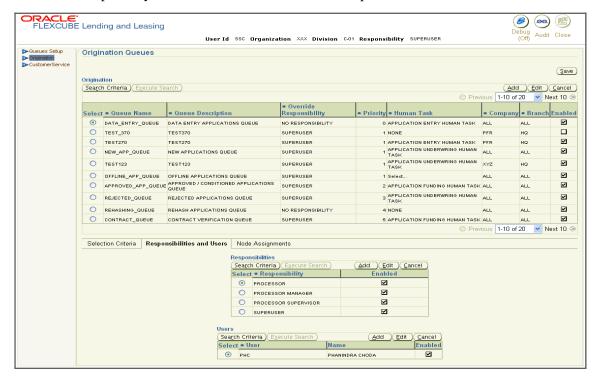

• If you are changing an existing record, click **Edit**.

Note: All is the default value for each field.

10 In the **Selection Criteria** section, enter, view, or edit the following information:

Do this:
If selected, indicates that this is the current record.
Select the product type as loan (required).
Select funding type (required).
Select product (required).
Select underwriter (required).
Select state (required).
Select channel (required).
Select producer type (required).
Select producer (required).

- 11 Click **Save** on the Queues page.
- 12 Click the **Responsibilities and Users** sub tab.
- 13 In the **Responsibilities** section, use the **Responsibility** field to define the users by responsibly that are authorized to work on the queue.

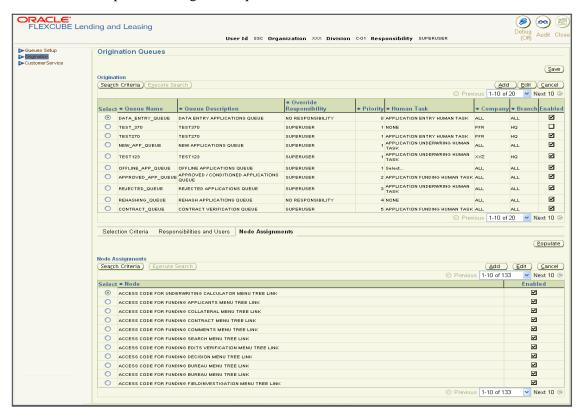

- 14 Select **Enabled** to enable the responsibility.
- 15 In the **Users** section, use the **User** field to define the users who are authorized to work on the queue.

In this field:	Do this:
User	Select user (required).
Name	View the user name (display only).

Enabled Select to enable.

- 16 Click **Save** on the Queues page.
- 17 Click the **Node Assignments** sub tab to enable the administrator to configure the User interface nodes that should be made available for the applications that are being processed in that particular origination queue.

18 In the **Node Assignments** sub page's **Node Assignments** section, select the record you want to work with.

Note: If you choose, use Search Criteria to limit the display of records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 19 In the **Node Assignments** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates that this is the current record.
Node	Select the node (required).
Enabled	Select to enable the record.

- 20 Click **Populate** on the Node Assignments sub page to display the respective UI nodes in the origination module.
- 21 Click **Save** on the Queues page.

13-6

CHAPTER 14: EVENTS SETUP

The Events Setup window gives you the ability to set up "trigger events" with associated actions which Oracle FLEXCUBE Lending and Leasing performs during loan origination. The fields on this form are both system and user defined.

During loan origination, when an application moves from one status/sub status to another, or changes condition, Oracle FLEXCUBE Lending and Leasing can trigger an event and perform the associated event actions. This can occur either online or in batch mode. There are three pages on the Events Setup window to set up and maintain these events:

- Setup page
- Online page
- Batch page

Note: Only predefined events and actions can be set up on the Events Setup window. You cannot create new event types or actions types.

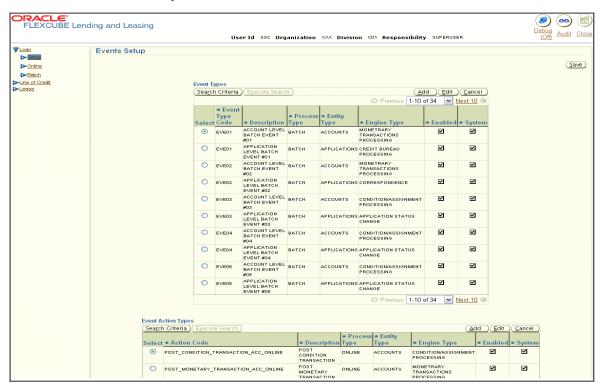

As processing events and associated actions require additional processing at the server level, the performance of the transactions, for which the events are set up, may be adversely affected dependent upon your specific configuration.

Setup link (Setup page)

The Setup page contains two predefined sections of information, the Event Types section and the Event Action Types sections. This page and its two sections provide a master table for setting up the online and batch events. This setup triggers the event, which in turn triggers the event's associated actions during application entry.

To set up the setup

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Events** bar link.
- 3 In the Events Setup link bar, click the drop-down link for product associated with the event (**Loan**).
- 4 Click the **Setup** link.

- 5 In the **Setup** page's **Events Type** section, select the record you want to work with.
 - **Note**: If you choose, use **Search Criteria** to limit the display of event type records.
- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 6 In the **Events Type** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Event Type Code	Enter the event type code (required).
Description	Enter the event description (required).
Process Type	Enter the process type (BATCH or ONLINE) (required).
Entity Type	Enter the entity type (required).

Engine Type	Enter the engine type (MONETRARY TRANSACTIONS
	PROCESSING, NON-MONETRAY TRANSACTION PRO-
	CESSING, CONDITION/ASSIGNMENT PROCESSING,
	APPLICATION STATUS CHANGE, CREDIT BUREAU
	PROCESSING, or CORRESPONDENCE) (required).
Enabled	Select or clear to activate or disable the event type.
System	If selected, it indicates that the event type is system
	define. If cleared, it indicates that the event type is user
	defined (display only).

7 The **Event Action Types** section is system defined and lists the action codes supported in Oracle FLEXCUBE Lending and Leasing. In the **Event Action Types** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of event action type records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 In the **Events Action Type** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Action Code	Enter the action code (required).
Description	Enter the action description (required)
Process Type	Enter the process type (BATCH or ONLINE) (required)
Entity Type	Enter the entity type (required)
Engine Type	Enter the engine type (required).
Enabled	Select to activate or disable the action.
System	If selected, it indicates that the action is system define. If
	cleared, it indicates that the action is user defined (dis-
	play only).

9 Click **Save** on the Setup page.

Online link (Online page)

The Online page allows you to set up the events performed online by Oracle FLEXCUBE Lending and Leasing. Oracle FLEXCUBE Lending and Leasing supports the following online event:

The change in application status / sub status to APPROVED – REHASHING.

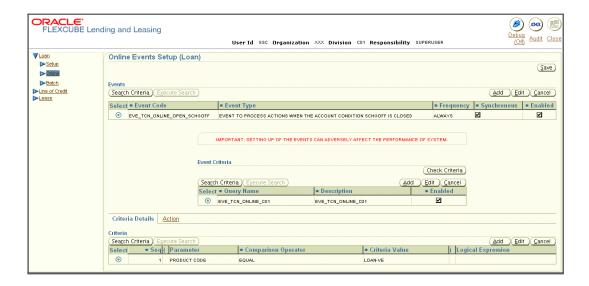

The events that can be performed online after each of the event listed above are as follows:

- Generate correspondence for an application
- Send a credit bureau request for an application.

The Online page allows you to set up the online events by defining all online events and the event criteria actions.

To set up the online

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Events** bar link.
- 3 In the Events Setup link bar, click the drop-down link for product associated with the event (**Loan**).
- 4 Click the **Online** link.

5 In the **Events** page's **Events** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of event records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click Edit.
- 6 In the **Events** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.

Event Code Enter the event code (required).

Event Type Enter the event type (required).

Frequency Enter the event frequency (required).

7 Select the **Synchronous** box to set the event as synchronous (any failure in triggering the event will fail to trigger the entire transaction).

-or-

Clear the **Synchronous** box to set the event as asynchronous (any failure in the event will not affect the transaction, which will be successfully completed).

- 8 Select or clear the **Enabled** box to activate or disable the event type.
- 9 The **Event Criteria** section allows you to name and describe the query for an event, as well as enable or disable the query. In the **Events Criteria** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of event criteria records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 10 In the **Event Criteria** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Query Name	Enter the query name (required).
Description	Enter the query description (required).
Enabled	Select to activate or disable the event criteria.

11 Click **Save** on the Online page.

Online link > Criteria Details sub page

The Criteria Details sub page allows you to define the selection criteria for the event. The event engine uses these criteria to determine which applications to include in the event action.

To set up the criteria details

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Events** bar link.
- 3 In the Events Setup link bar, click the drop-down link for product associated with the event (**Loan**).
- 4 Click the **Online** link.
- 5 In the **Events** page's **Events** section, select the record you want to work with.
- 6 Click the **Criteria Details** sub tab.
- 7 In the **Criteria Details** sub page's **Criteria** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of criteria records.

If you are entering a new record, click Add.

- If you are changing an existing record, click **Edit**.
- 8 In the **Criteria** section, enter, view, or edit the following information to define the event selection criteria:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Seq	Enter sequence numbers (required).
(Enter left bracket (optional).
Parameter	Select the parameter (required).
Comparison Operator	Select comparison operator (required).
Criteria Value	Enter criteria value (required).
)	Enter right bracket (optional).
Logical Expression	Enter logical operator (optional).

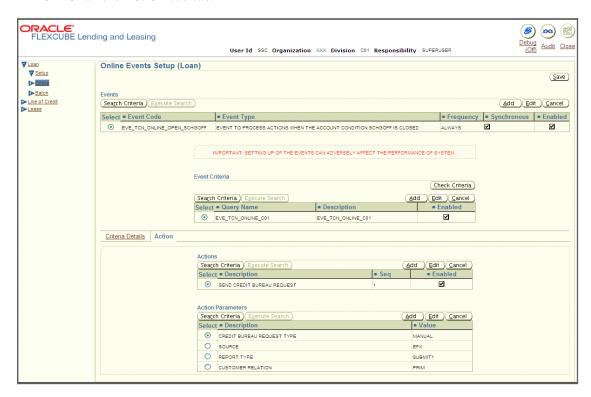

9 Click **Save** on the Online page.

Online link > Action sub page

The Actions sub page records the actions Oracle FLEXCUBE Lending and Leasing performs after the event is triggered.

To set up the action

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Events** bar link.
- 3 In the Events Setup link bar, click the drop-down link for product associated with the event (**Loan**).
- 4 Click the **Online** link.
- 5 In the **Events** page's **Events** section, select the record you want to work with.
- 6 Click the Action sub tab.

7 In the **Action** sub page's **Actions** section, select the record you want to work with.

Note: If you choose, use Search Criteria to limit the display of action records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 In the **Actions** section, define the action you want Oracle FLEXCUBE Lending and Leasing to perform for the event by entering the following information. (You can set up more than one event action for a particular event, then use the Seq field to define the order in which the events will occur):

In this field:	Do this:
Select	If selected, indicates this is the current record.

DescriptionEnter the event action (required).SeqEnter sequence numbers (required).EnabledSelect or clear to activate or disable the event action.

9 In the **Action Parameters** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of action parameter records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 10 For each event action, use the **Action Parameters** section to set up the required action parameters and values.

In this field:	Do this:
Select	If selected, indicates this is the current record.
Description	Enter the event action (required).
Value	Enter sequence numbers (required).

11 Click **Save** on the Online page.

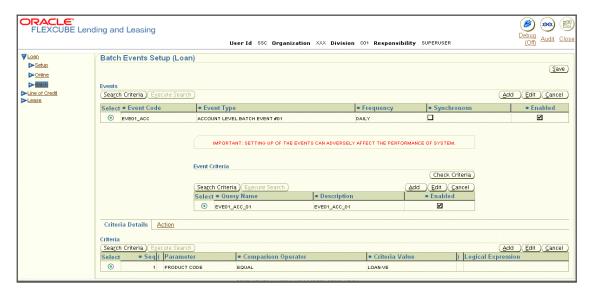

Batch link (Batch page)

The Batch page allows you to set up the events performed as a batch transaction by Oracle FLEXCUBE Lending and Leasing. Oracle FLEXCUBE Lending and Leasing supports the following predefined batch events for application processing. (These batch events are listed in the Events Types section on the Setup page):

- APPLICATION LEVEL BATCH EVENT #01
- APPLICATION LEVEL BATCH EVENT #02
- APPLICATION LEVEL BATCH EVENT #03
- APPLICATION LEVEL BATCH EVENT #04
- APPLICATION LEVEL BATCH EVENT #05
- APPLICATION LEVEL BATCH EVENT #06
- APPLICATION LEVEL BATCH EVENT #07
 APPLICATION LEVEL BATCH EVENT #08
- APPLICATION LEVEL BATCH EVENT #09
- APPLICATION LEVEL BATCH EVENT #10

To set up the batch

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the Events bar link.
- 3 In the Events Setup link bar, click the drop-down link for product associated with the event (**Loan**).
- 4 Click the **Batch** link.

5 In the **Batch** page's **Events** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of event records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click Edit.
- 6 In the **Events** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.

Event Code Enter the event code (required). **Event Type** Enter the event type (required). Enter the event frequency (required). Frequency

- The **Synchronous** box is cleared as all batch events are set as asynchronous; any failure in the event will not affect the transaction, which will be successfully completed.
- Select or clear the **Enabled** box to activate or disable the event type.
- The **Events Criteria** section allows you to name and describe the guery for an event, as well as enable or disable the query. In the Events Criteria section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of event criteria records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 10 In the **Events Criteria** section, enter, view, or edit the following information:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Query Name	Enter the query name (required).
Description	Enter the query description (required).
Enabled	Select to activate or disable the event criteria.

11 Click **Save** on the Batch page.

Batch link > Criteria Details sub page

The Criteria Details sub page allows you to define the selection criteria for the event. The event engine uses these criteria to determine which applications to include in the event action.

To set up the criteria details

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Events** bar link.
- 3 In the Events Setup link bar, click the drop-down link for product associated with the event (Loan).
- Click the **Batch** link.
- In the **Batch** page's **Events** section, select the record you want to work with. 5
- Click the Criteria Details sub tab.
- In the Criteria Details sub page's Criteria section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of criteria records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 In the **Criteria** section, enter, view, or edit the following information to define the event selection criteria:

In this field:	Do this:
Select	If selected, indicates this is the current record.
Seq	Enter sequence numbers (required).
(Enter left bracket (optional).
Parameter	Select the parameter (required).
Comparison Operator	Select comparison operator (required).
Criteria Value	Enter criteria value (required).
)	Enter right bracket (optional).
Logical Expression	Enter logical operator (optional).

9 Click **Save** on the Batch page.

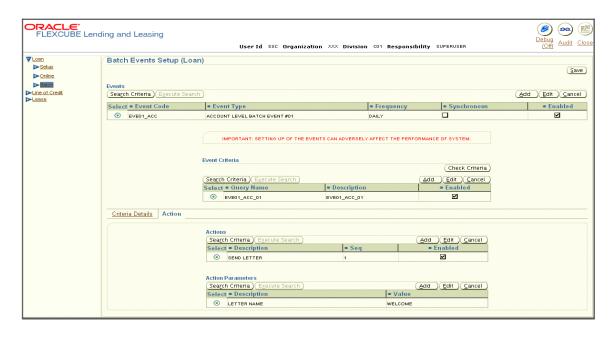

Batch link > Action sub page

The Action sub page allows you to define the actions performed in the batch event. Oracle FLEXCUBE Lending and Leasing supports the following batch event actions:

- Send letter for an application
- Generate correspondence for an application.

To set up Action sub page

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Events** bar link.
- In the Events Setup link bar, click the drop-down link for product associated with the event (**Loan**).
- 4 Click the **Batch** link.
- 5 In the **Batch** page's **Events** section, select the record you want to work with.
- 6 Click the **Action** sub tab.

7 In the **Action** sub page's **Actions** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of action records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 8 In the Actions section, define the action you want Oracle FLEXCUBE Lending and Leasing to perform for the event by entering the following information. (You can set up more than one event action for a particular event, then use the Seq field to define the order in which the events will occur):

In this field:	Do this:
Select	If selected, indicates this is the current record.
Description	Enter the event action (required).
Seq	Enter sequence numbers (required).
Enabled	Select or clear to activate or disable the event action.

9 In the **Action Parameters** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of action parameter records.

- If you are entering a new record, click **Add**.
- If you are changing an existing record, click **Edit**.
- 10 For each event action, use the **Action Parameters** section to set up the required action parameters and values.

In this field:	Do this:
Select	If selected, indicates this is the current record.
Description	Enter the event action (required).
Value	Enter sequence numbers (required).

11 Click **Save** on the Batch page.

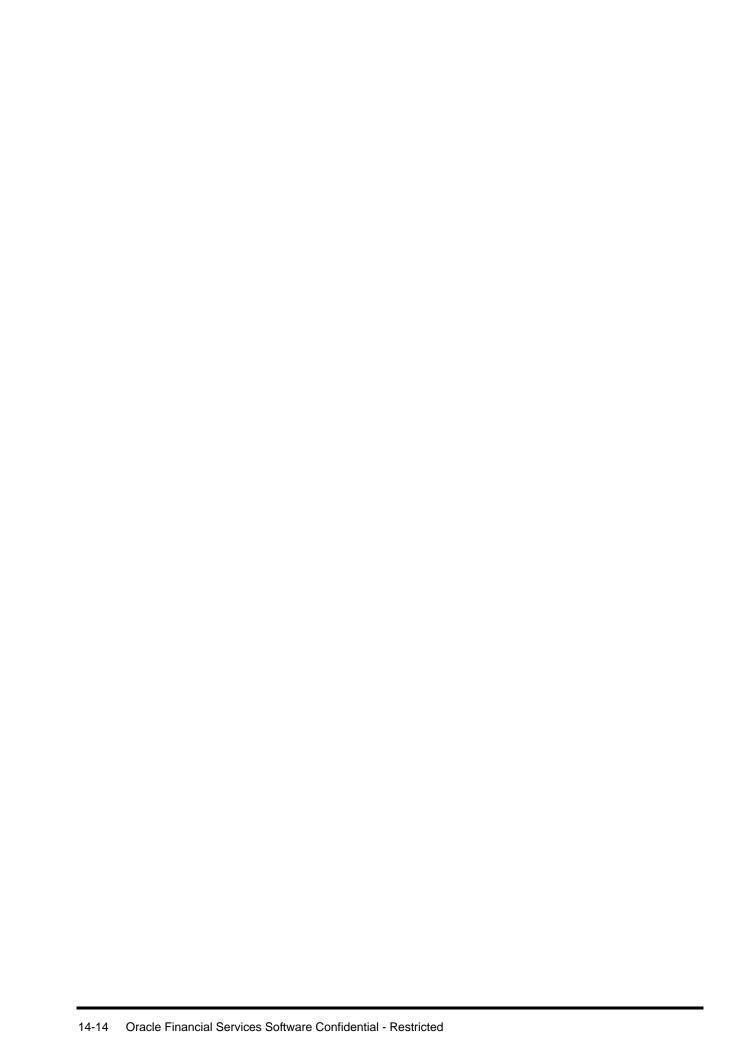

Monitoring events

You can verify the status of events and event actions on the Monitor Jobs page of the Utilities form.

To monitor events

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **Batch Jobs** bar link.
- 3 In the Batch Jobs Setup link bar, click **Monitor Jobs**.
- 4 On the Monitor Jobs page, choose Back Ground in the Job Type section.

Oracle FLEXCUBE Lending and Leasing displays the status for all asynchronous events that have been completed or failed for an application.

CHAPTER 15: ORACLE FLEXCUBE LENDING AND LEASING USER PRODUCTIVITY SETUP

Oracle FLEXCUBE Lending and Leasing User Productivity Setup window is a supervisor feature that allows you to monitor the daily performances of Oracle FLEXCUBE Lending and Leasing users completing loan origination and loan servicing tasks. These tasks are categorized as either underwriting/funding tasks (loan origination) or customer service/collection tasks (loan servicing).

Note: Oracle FLEXCUBE Lending and Leasing updates this display only form every day.

Using the Oracle FLEXCUBE Lending and Leasing User Productivity Setup window, you can review the following daily tallies:

- Number of applications entered, by user
- Number of underwriting decisions (approved, rejected, conditioned, or withdrawn), by user
- · Number of funding decisions (verified or funded), by user
- Number of applications entered, by queue

This chapter explains how to use the Oracle FLEXCUBE Lending and Leasing User Productivity Setup window to view this information.

Viewing the Underwriting/Funding tasks

Daily tallies from the loan origination module appear on the pages opened from the following UnderWriting/Funding drop-down link links:

- Application Entry
- Underwriting
- Funding
- Queues Status

UnderWriting/Funding link > Application Entry link

The UnderWriting/Funding link's Application Entry link displays the number of applications each Oracle FLEXCUBE Lending and Leasing user entered that day.

To use the Application Entry link

- On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **User Productivity** bar link.
- 3 In the User Productivity link bar, click **UnderWriting/Funding** drop-down link, then click **Application Entry**.

In the **User Productivity** page's **Application Entry By User** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of records.

5 In the **Application Entry by User** section, view the following information:

In this field:	View this:
Select	If selected, indicates that this is the current record.
User	The user code.
Name	The user name.
Applications	The number of applications entered.

UnderWriting/Funding link > Underwriting link

The UnderWriting/Funding link's Underwriting link displays the number of applications that were approved, rejected, conditioned, or withdrawn by each Oracle FLEXCUBE Lending and Leasing user that day.

To view the Underwriting link

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **User Productivity** bar link.
- 3 In the User Productivity link bar, click **UnderWriting/Funding** drop-down link, then click **Underwriting**.

4 In the **Underwriting** page's **Underwriting By User** section, select the record you want to work with.

Note: If you choose, use Search Criteria to limit the display of records.

5 In the **Underwriting By User** section, view the following information:

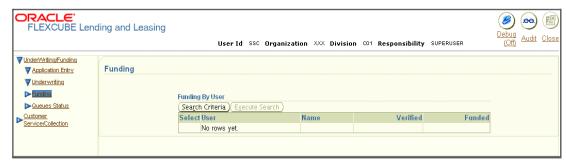

In this field:	View this:
Select	If selected, indicates that this is the current record.
User	The user code.
Name	The user name.
Approved	The number of applications approved.
Rejected	The number of applications rejected.
Conditioned	The number of applications conditioned.
Withdrawn	The number of applications withdrawn.

UnderWriting/Funding link > Funding link

The UnderWriting/Funding link's Funding link displays the number of applications that each Oracle FLEXCUBE Lending and Leasing user either verified of funded that day.

To view the Funding link

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **User Productivity** bar link.
- 3 In the User Productivity link bar, click **UnderWriting/Funding** drop-down link, then click **Funding**.

4 In the **Funding** page's **Funding By User** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of records.

5 In the **Funding By User** section, view the following information:

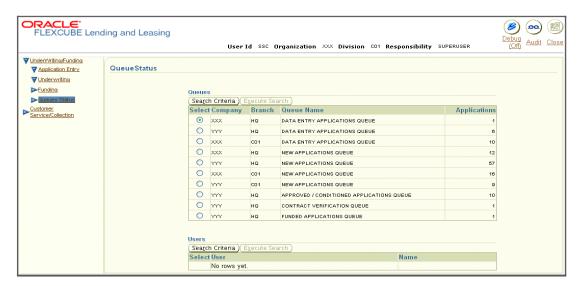

In this field:	View this:
Select	If selected, indicates that this is the current record.
User	The user code.
Name	The user name.
Verified	The number of applications verified.
Funded	The number of applications funded.

UnderWriting/Funding link > Queues Status link

The UnderWriting/Funding link's Queues Status link displays the number of applications worked by queue that day, as well as the users who worked the queue.

To view the Queues Status link

- 1 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 2 Click the **User Productivity** bar link.
- 3 In the User Productivity link bar, click **UnderWriting/Funding** drop-down link, then click **Queues Status**.

4 In the **Queue Status** page's **Queues** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of records.

5 In the **Queues** section, view the following information:

In this field:	View this:	
Select	If selected, indicates that this is the current record.	
Company	The company.	
Branch	The branch.	
Queue Name	The queue name.	
Applications	The number of applications in the queue.	

6 In the **Users** section, select the record you want to work with.

Note: If you choose, use **Search Criteria** to limit the display of records.

7 In the **Users** section, view the following information:

In this field:	View this:
Select	If selected, indicates that this is the current record.
User	The user code.
Name	The user name.

15-6

APPENDIX A: SUMMARY OF ORACLE FLEXCUBE LENDING AND LEASING CREDIT SCORING PARAMETERS

Glossary

Term	Description	
DEROG / DEROGATORY	Account has had chargeoffs, collections, bank-ruptcy, or repossession.	
MINOR DELINQUENCY	Less than or equal to 60 days delinquent.	
MAJOR DELINQUENCY	Greater than 60 days delinquent.	
DEBT RATIO	Debt / Available credit.	
DEBT TO INCOME RATIO	Debt / Income.	
"APPLICANT STATED"	Parameter is pulling information stated or in any other way provided by the applicant on the application on the Application Entry form in Oracle FLEXCUBE Lending and Leasing.	
"APPLICANT CREDIT BUREAU"	Parameter is pulling information from the credit bureau, as opposed to another source, such as the Application Entry form.	
LOAN FINANCE	Refers to companies that provide the loan but are not selling the actual object financed, if any. Example : An independent auto finance company.	
SALES FINANCE	Refers to companies that provide the object being financed in addition to the financing. Example: Marshall Fields card.	

Credit Scoring Parameters by Category

1. Applicant Details / Debt Ratios

1.1. APPLICANT CREDIT BUREAU AUTO DEBT RATIO

This is the sum of all automobile type loan balances and the sum of all automobile type credit limits. For installment loans, the credit limit is normally equal to the original loan amount. This applies to open tradelines only.

1.2. APPLICANT CREDIT BUREAU BANK DEBT RATIO

This is the sum of all bank type loan balances and the sum of all bank type credit limits. For installment loans, the credit limit is normally equal to the original loan amount. This applies to open tradelines only.

1.3. APPLICANT CREDIT BUREAU CARD DEBT RATIO

This is the sum of all travel card type loan balances and the sum of all travel card type credit limits. This applies to open tradelines only.

1.4. APPLICANT CREDIT BUREAU DEBT RATIO

This parameter provides a value for all debt divided by all available credit as shown on the bureau.

1.5. APPLICANT CREDIT BUREAU FICO SCORE

This is the FICO score provided for the applicant in the bureau pull. There are usually several different types of FICO scores available at the bureau. The different score models are set up to give certain attributes different weighting based on if the person is buying a car, or a house, and so on. The type of FICO score pulled is based on credit bureau setup.

1.6. APPLICANT CREDIT BUREAU INST DEBT RATIO

This is the sum of all installment loan balances and the sum of all installment loan credit limits. For installment loans, the credit limit is normally equal to the original loan amount. This applies to open tradelines only.

1.7. APPLICANT CREDIT BUREAU LOAN FIN DEBT RATIO

This is the sum of all loan finance type loan balances and the sum of all loan finance type credit limits. For installment loans, the credit limit is normally equal to the original loan amount. This applies to open tradelines only.

1.8. APPLICANT CREDIT BUREAU MORTGAGE DEBT RATIO

This is the sum of all mortgage type loan balances and the sum of all mortgage type credit limits. For installment loans, the credit limit is normally equal to the original loan amount. This applies to open tradelines only.

1.9. APPLICANT CREDIT BUREAU OPEN PUBLIC RECORDS

This parameter indicates if there are any open public records in the credit bureau associated with the applicant. This is a numeric counter covering the full period of time available in the bureau.

1.10. APPLICANT CREDIT BUREAU PUBLIC RECORDS

This parameter indicates if there are any public records, open or closed, in the credit bureau associated with the applicant. This is a numeric counter covering the full period of time available in the bureau.

1.11. APPLICANT CREDIT BUREAU RETAIL DEBT RATIO

This is the sum of all retail type loan balances divided by the sum of all retail type credit limits. For installment loans, the credit limit is normally equal to the original loan amount. This applies to open tradelines only. This is expressed as a percent: 50% shows as 50.

1.12. APPLICANT CREDIT BUREAU REV DEBT RATIO

This is the sum of all revolving type loan balances and the sum of all revolving type credit limits. This applies to open tradelines only. This is expressed as a percent: 50% shows as 50.

1.13. APPLICANT CREDIT BUREAU SALES FIN DEBT RATIO

This is the sum of all sales finance type loan balances and the sum of all sales finance type credit limits. For installment loans, the credit limit is normally equal to the original loan amount. This applies to open tradelines only. This is expressed as a percent: 50% shows as 50.

1.14. APPLICANT DEBT RATIO STATED AFTER REQUESTED LOAN

This is the debt divided by available credit based on the values stated by the applicant after factoring in the requested loan amount- this information is not taken from the bureau. This is expressed as a percent: 50% shows as 50.

1.15. APPLICANT DEBT RATIO STATED BEFORE REQUESTED LOAN

This is the debt divided by available credit based on the values stated by the applicant before factoring in the requested loan amount- this information is not taken from the bureau. This is expressed as a percent: 50% shows as 50.

1.16. APPLICANT DEBT TO INCOME RATIO STATED AFTER REQUESTED LOAN

This is the debt divided by income based on the values stated by the applicant after factoring in the requested loan amount- this information is not taken from the bureau. This is expressed as a percent: 50% shows as 50.

1.17. APPLICANT DEBT TO INCOME RATIO STATED BEFORE REQUESTED LOAN

This is the debt divided by income based on the values stated by the applicant before factoring in the requested loan amount- this information is not taken from the bureau. This is expressed as a percent: 50% shows as 50.

1.18. APPLICANT PAYMENT TO INCOME RATIO STATED

This is the total amount of all monthly payments divided by monthly income. These values are stated by the applicant and not taken from the bureau. This is expressed as a percent: 50% shows as 50.

1.19. APPLICANT PRIOR CUSTOMER

This parameter indicates whether the applicant is a prior customer. It is populated when the application is passed to Underwriting for a decision. If the SSN given by the applicant already exists then the applicant is marked as a prior customer and the parameter value is Y (Yes).

1.20. APPLICANT REVOLVING DEBT RATIO STATED

This is the sum of all revolving type loan balances / sum of all revolving type credit limits. This applies to open tradelines only. This is expressed as a percent: 50% shows as 50.

5.1.21. APPLICANT STATED EMPLOYMENT PERIOD (IN MONTHS)

This parameter looks at the number of months of stated employment for the most recently entered current employment.

Example: The applicant states that she has been working at her current place of employment for 3 years and 5 months. This parameter would be populated with (3years * 12 months/year) + 5 months which calculates to 41 stated months. If the applicant enters another current employment and enters 1 year and 2 months then this parameter will be populated with 14 months, even though the other employment is still current.

1.22. APPLICANT STATED MONTHLY INCOME

This is the monthly income stated by the applicant on the application. It combines the income for all employment marked as "current" in Oracle FLEXCUBE Lending and Leasing. If the income is stated as anything other than monthly, the income will be converted to monthly for this parameter.

Example: The applicant states that he is paid \$50,000 with a frequency of ANNUALLY. This parameter is populated with \$50,000/12, which calculates to \$4166.67 stated monthly income.

1.23. APPLICANT STATED MONTHLY LIABILITY

This is the stated monthly liability as provided by the applicant on the Application Entry screen.

1.24. APPLICANT STATED RESIDENCE PERIOD (IN MONTHS)

This parameter looks at the stated residence period for the most recent current address.

2. Loan Details

2.1. APPROXIMATE CASH PRICE

This is the Approximate Cash price taken from the "Approx Price" field on the Application Entry form's Loan page in Oracle FLEXCUBE Lending and Leasing.

2.2. REQUESTED ADVANCE AMOUNT

This is the Requested Advance Amount value taken from the Application Entry form's Loan page in Oracle FLEXCUBE Lending and Leasing.

3. Auto Trades / Inquiries

3.1. APPLICANT CREDIT BUREAU 6MONTH AUTO TRADES

This is the number of auto trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

3.2. APPLICANT CREDIT BUREAU 12MONTH AUTO TRADES

This is the number of auto trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

3.3. APPLICANT CREDIT BUREAU 24MONTH AUTO TRADES

This is the number of auto trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

3.4. APPLICANT CREDIT BUREAU AUTO INQURIES

This is the number of automobile-related credit inquiries the have been made to the bureau.

3.5. APPLICANT CREDIT BUREAU AUTO TRADES

This is the number of auto trades, both open and closed. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

3.6. APPLICANT CREDIT BUREAU CURRENT AUTO TRADES

Total number of auto trades that are paid on time right now. These trades may or may not have been delinquent in the past.

3.7. APPLICANT CREDIT BUREAU OPEN AUTO TRADES

This is the number of open auto trades on the account. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

3.8. APPLICANT CREDIT BUREAU SATISFACTORY AUTO

Total number of auto trades paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

3.9. APPLICANT CREDIT BUREAU WORST AUTO TRADE

The rating code used for this parameter is the same rating code system displayed for the tradelines. The different bureaus use different systems so Oracle FLEXCUBE Lending and Leasing changes them to a common format that is used in the scoring:

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

4. Bank Trades / Inquiries

4.1. APPLICANT CREDIT BUREAU 12MONTH BANK TRADES

This is the number of bank trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

4.2. APPLICANT CREDIT BUREAU 24MONTH BANK TRADES

This is the number of bank trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

4.3. APPLICANT CREDIT BUREAU 6MONTH BANK TRADES

This is the number of bank trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

4.4. APPLICANT CREDIT BUREAU BANK INQUIRIES

This is the number of bank inquiries against the bureau in the applicant's recorded bureau history.

4.5. PPLICANT CREDIT BUREAU BANK TRADES

This is the number of open bank trades on the account. Note that bank trades can be considered a sub type to installment, mortgage, and / or revolving loans.

4.6. APPLICANT CREDIT BUREAU CURRENT BANK TRADES

Total number of bank trades that are paid on time right now. These trades may or may not have been delinquent in the past.

4.7. APPLICANT CREDIT BUREAU OPEN BANK TRADES

This is the number of bank trades that are open right now. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

4.8. APPLICANT CREDIT BUREAU REV BANK BALANCE

This parameter shows the "current" revolving bank balance. If the revolving credit is owned by a bank, then it will show up here.

4.9. APPLICANT CREDIT BUREAU REV BANK HIGH BALANCE

This parameter shows the highest cumulative balance among all revolving bank credit over the bureau history.

NOTE: If the applicant had \$5,000 on one account 2 years ago and \$10,000 on another account 4 years ago, this parameter would return \$15,000. The parameter is of questionable utility in many situations.

4.10. APPLICANT CREDIT BUREAU SATISFACTORY BANK

Total number of bank trades paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

4.11. APPLICANT CREDIT BUREAU WORST BANK TRADE

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

5. Card Trades / Inquiries

5.1. APPLICANT CREDIT BUREAU 12MONTH CARD TRADES

This is the number of card trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

5.2. APPLICANT CREDIT BUREAU 24MONTH CARD TRADES

This is the number of card trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

5.3. APPLICANT CREDIT BUREAU 6MONTH CARD TRADES

This is the number of card trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

5.4. APPLICANT CREDIT BUREAU CARD INQUIRIES

This is the number of card inquiries that have been made against the bureau for the applicant in the bureau's recorded history.

5.5. APPLICANT CREDIT BUREAU CARD TRADES

This is the number of card trades, both open and closed, in the bureau history. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

5.6. APPLICANT CREDIT BUREAU CURRENT CARD TRADES

Total number of card trades that are paid on time right now. These trades may or may not have been delinquent in the past.

5.7. APPLICANT CREDIT BUREAU OPEN CARD TRADES

This is the number of open card trades on the account. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

5.8. APPLICANT CREDIT BUREAU SATISFACTORY CARD

Total number of card trades paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

5.9. APPLICANT CREDIT BUREAU WORST CARD TRADE

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

6. Installment Trades / Inquiries

6.1. APPLICANT CREDIT BUREAU 12MONTH INST TRADES

This is the number of installment trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

6.2. APPLICANT CREDIT BUREAU 24MONTH INST TRADES

This is the number of installment trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

6.3. APPLICANT CREDIT BUREAU 6MONTH INST TRADES

This is the number of installment trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

6.4. APPLICANT CREDIT BUREAU CURRENT INST TRADES

Total number of installment trades that are paid on time right now. These trades may or may not have been delinquent in the past.

6.5. APPLICANT CREDIT BUREAU INST TRADES

This is the number of installment trades, both open and closed. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

6.6. APPLICANT CREDIT BUREAU OPEN INST TRADES

This is the number of open installment trades on the account. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

6.7. APPLICANT CREDIT BUREAU SATISFACTORY INST TRADES

Total number of installment trades paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

6.8. APPLICANT CREDIT BUREAU WORST INST TRADE

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

7. Loan Finance Trades / Inquiries

7.1. APPLICANT CREDIT BUREAU 12MONTH LOAN FIN TRADES

This is the number of loan finance trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

7.2. APPLICANT CREDIT BUREAU 24MONTH LOAN FIN TRADES

This is the number of loan finance trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

7.3. APPLICANT CREDIT BUREAU 6MONTH LOAN FIN TRADES

This is the number of loan finance trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

7.4. APPLICANT CREDIT BUREAU CURRENT LOAN FIN TRADES

Total number of loan finance trades that are paid on time right now. These trades may or may not have been delinquent in the past.

7.5. APPLICANT CREDIT BUREAU LOAN FIN TRADES

This is the number of loan finance trades, both open and closed. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

7.6. APPLICANT CREDIT BUREAU LOAN FINANCE INQUIRIES

This is the number of loan finance inquires listed on the credit report. The bureaus have their own limits as to how long they keep an inquiry on the credit report, but this parameter will show whatever total is shown for that bureau.

7.7. APPLICANT CREDIT BUREAU OPEN LOAN FINANCE TRADES

This is the number of open loan finance trades on the account. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

7.8. APPLICANT CREDIT BUREAU SATISFACTORY LOAN FIN

Total number of loan finance trades paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

7.9. APPLICANT CREDIT BUREAU WORST LOAN FIN TRADE

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

8. Mortgage Trades / Inquiries

8.1. APPLICANT CREDIT BUREAU 12MONTH MORTGAGE TRADES

This is the number of mortgage trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

8.2. APPLICANT CREDIT BUREAU 24MONTH MORTGAGE TRADES

This is the number of mortgage trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

8.3. APPLICANT CREDIT BUREAU 6MONTH MORTGAGE TRADES

This is the number of mortgage trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

8.4. APPLICANT CREDIT BUREAU CURRENT MORTGAGE TRADES

Total number of mortgage trades that are paid on time right now. These trades may or may not have been delinquent in the past.

8.5. APPLICANT CREDIT BUREAU MORTGAGE TRADES

This is the total number of mortgage trades, both open and closed. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

8.6. APPLICANT CREDIT BUREAU OPEN MORTGAGE TRADES

This is the number of open mortgage trades on the account. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

8.7. APPLICANT CREDIT BUREAU SATISFACTORY MORTGAGE

Total number of mortgage trades paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

8.8. APPLICANT CREDIT BUREAU WORST MORTGAGE TRADE

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

9. Retail Trades / Inquiries

9.1. APPLICANT CREDIT BUREAU 12MONTH RETAIL TRADES

This is the number of retail trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

9.2. APPLICANT CREDIT BUREAU 24MONTH RETAIL TRADES

This is the number of retail trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

9.3. APPLICANT CREDIT BUREAU 6MONTH RETAIL TRADES

This is the number of retail trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

9.4. APPLICANT CREDIT BUREAU CURRENT RETAIL TRADES

Total number of retail trades that are paid on time right now. These trades may or may not have been delinquent in the past.

9.5. APPLICANT CREDIT BUREAU OPEN RETAIL TRADES

This is the number of open retail trades on the account. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

9.6. APPLICANT CREDIT BUREAU RETAIL INQUIRIES

This is the number of retail inquires listed on the credit report. The bureaus have their own limits as to how long they keep an inquiry on the credit report, but this parameter will show whatever total is shown for that bureau.

9.7. APPLICANT CREDIT BUREAU RETAIL TRADES

This is the number of retail trades, both open and closed. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

9.8. APPLICANT CREDIT BUREAU SATISFACTORY RETAIL

Total number of retail trades paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

9.9. APPLICANT CREDIT BUREAU WORST RETAIL TRADE

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

10. Revolving Trades

10.1. APPLICANT CREDIT BUREAU 12MONTH REV TRADES

This is the number of revolving trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

10.2. APPLICANT CREDIT BUREAU 24MONTH REV TRADES

This is the number of revolving trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

10.3. APPLICANT CREDIT BUREAU 6MONTH REV TRADES

This is the number of revolving trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

10.4. APPLICANT CREDIT BUREAU CURRENT REV TRADES

Total number of revolving trades that are paid on time right now. These trades may or may not have been delinquent in the past.

10.5. APPLICANT CREDIT BUREAU OPEN REV TRADES

This is the number of open revolving trades on the account. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

10.6. APPLICANT CREDIT BUREAU REV BALANCE

This is the total revolving credit balance shown on the applicant's credit bureau. This applies to all open revolving trades.

10.7. APPLICANT CREDIT BUREAU REV HIGH BALANCE

This parameter shows the highest cumulative balance among all revolving credit over the bureau history.

NOTE: If the applicant had \$5,000 on one account 2 years ago and \$10,000 on another account 4 years ago, this parameter would return \$15,000. The parameter is of questionable utility in many situations.

10.8. APPLICANT CREDIT BUREAU REV RETAIL BALANCE

This is the current revolving retail trade balance shown on the applicant's credit bureau. This applies to all open retail trades. It shows current, not historical, information.

10.9. APPLICANT CREDIT BUREAU REV RETAIL HIGH BALANCE

This parameter shows the highest cumulative balance among all revolving retail credit over the bureau history.

NOTE: If the applicant had \$5,000 on one account 2 years ago and \$10,000 on another account 4 years ago, this parameter would return \$15,000. The parameter is of questionable utility in many situations.

10.10. APPLICANT CREDIT BUREAU REV TRADES

This is the number of revolving trades, both open and closed. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

10.11. APPLICANT CREDIT BUREAU SATISFACTORY REV TRADES

Total number of revolving trades paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

10.12. APPLICANT CREDIT BUREAU WORST REV TRADE

The rating code used for this parameter is the same rating code system displayed for the tradelines. The different bureaus use different systems so Oracle FLEXCUBE Lending and Leasing changes them to a common format that is used in the scoring:

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

11. Sales Finance Trades / Inquiries

11.1. APPLICANT CREDIT BUREAU 12MONTH SALES FIN TRADES

This is the number of sales finance trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

11.2. APPLICANT CREDIT BUREAU 24MONTH SALES FIN TRADES

This is the number of sales finance trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

11.3. APPLICANT CREDIT BUREAU 6MONTH SALES FIN TRADES

This is the number of sales finance trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

11.4. APPLICANT CREDIT BUREAU CURRENT SALES FIN TRADES

Total number of sales finance trades that are paid on time right now. These trades may or may not have been delinquent in the past.

11.5. APPLICANT CREDIT BUREAU OPEN SALES FINANCE TRADES

This is the number of open sales finance trades on the account. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

11.6. APPLICANT CREDIT BUREAU SALES FIN TRADES

This is the number of sales finance trades, both open and closed. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

11.7. APPLICANT CREDIT BUREAU SALES FINANCE INQUIRIES

This is a count of the number of sales finance inquiries that have been made against the Applicant's bureau information in the bureau history.

11.8. APPLICANT CREDIT BUREAU SATISFACTORY SALES FIN

Total number of sales finance trades paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

11.9. APPLICANT CREDIT BUREAU WORST SALES FIN TRADE

The rating code used for this parameter is the same rating code system displayed for the tradelines. The different bureaus use different systems so Oracle FLEXCUBE Lending and Leasing changes them to a common format that is used in the scoring:

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

12. Other Trades

12.1. APPLICANT CREDIT BUREAU 12MONTH TRADES

This is the number of all trades that have been opened in the last 12 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

12.2. APPLICANT CREDIT BUREAU 24MONTH TRADES

This is the number of all trades that have been opened in the last 24 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

12.3. APPLICANT CREDIT BUREAU 6MONTH TRADES

This is the number of all trades that have been opened in the last 6 months. Note that these trades may now be open or closed, paid as agreed, delinquent, or derogatory, and so on.

12.4. APPLICANT CREDIT BUREAU AVG OPEN TRADE AGE

This is the average trade age in months as calculated using all open trades in the bureau. This is based on taking all of the open tradelines, then dividing by the age.

12.5. APPLICANT CREDIT BUREAU AVG TRADE AGE

This is the average trade age in months as calculated using all trades, open and closed, in the bureau.

12.6. APPLICANT CREDIT BUREAU CHARGEOFF TRADES

This parameter is a count of the total number of charged off trades for that applicant in the bureau.

12.7. APPLICANT CREDIT BUREAU COLLECTIONS

This is the total number of trades in collections for that applicant in the credit bureau. This refers to accounts assigned to collections agencies.

12.8. APPLICANT CREDIT BUREAU CURRENT TRADES

This is the total number of trades that are paid on time right now. These trades may or may not have been delinquent in the past.

12.9. APPLICANT CREDIT BUREAU INQUIRIES

This is the number of inquires listed on the credit report. The bureaus have their own limits as to how long they keep an inquiry on the credit report, but this parameter will show whatever total is shown for that bureau.

12.10. APPLICANT CREDIT BUREAU INQUIRIES 12M

This is the total number of inquiries that have been made against the credit bureau for that applicant in the last 12 months

12.11. APPLICANT CREDIT BUREAU INQUIRIES 24M

This is the total number of inquiries that have been made against the credit bureau for that applicant in the last 24 months

12.12. APPLICANT CREDIT BUREAU INQUIRIES 6M

This is the total number of inquiries that have been made against the credit bureau for that applicant in the last 6 months

12.13. APPLICANT CREDIT BUREAU JUDGMENTS

This is a count of the number of judgments against the applicant in the credit bureau.

12.14. APPLICANT CREDIT BUREAU LIENS

This is the total number of liens shown for the applicant in the credit bureau for that applicant.

12.15. APPLICANT CREDIT BUREAU NEWEST INQUIRY

This is the number of months since the most recent inquiry in the credit bureau for that applicant. This of course excludes the pull from the immediate past used to do the scoring in this particular situation in Oracle FLEXCUBE Lending and Leasing.

12.16. APPLICANT CREDIT BUREAU NEWEST TRADE

This is the number of months between now and the newest trade in the bureau for that applicant.

12.17. APPLICANT CREDIT BUREAU OLDEST INQUIRY

This is the number of months between now and the oldest inquiry in the bureau for that applicant.

12.18. APPLICANT CREDIT BUREAU OLDEST TRADE

This is the number of months between now and the oldest trade in the bureau for that applicant. Oldest is determined by looking at the oldest date on any tradeline, and then showing that.

12.19. APPLICANT CREDIT BUREAU OPEN COLLECTION TRADES

This is the number of open trades in collections shown in the bureau for that applicant. This refers to any accounts assigned to in-house collections departments (as compared to 5.12.7).

12.20. APPLICANT CREDIT BUREAU OPEN COLLECTIONS

This is the number of open collections in the bureau for that applicant.

12.21. APPLICANT CREDIT BUREAU OPEN JUDGMENTS

This is the total number of open (unsatisfied) judgments against the applicant as indicated in the bureau for that applicant.

12.22. APPLICANT CREDIT BUREAU OPEN LIENS

This is the total number of open liens against the applicant as indicated in the bureau for that applicant.

12.23. APPLICANT CREDIT BUREAU OPEN TRADES

This is the number of all open auto trades on the account. Note that these trades may be paid as agreed, delinquent, derogatory, and so on. The parameter makes no distinction.

12.24. APPLICANT CREDIT BUREAU PAST DUE 30

This is the number of trades that have been 30 or more days past due at some point in the recorded history of the bureau. Note that these trades may be delinquent, derogatory, and so on. The parameter makes no distinction.

12.25. APPLICANT CREDIT BUREAU PAST DUE 30 12M

This is the number of trades that have been more than 30 days past due in the last 12 months. The past dues could be for the same or different trades. If one trade has been late 3 times, this parameter would show 1 if there are no other trades.

12.26. APPLICANT CREDIT BUREAU PAST DUE 30 24M

This is the number of times the applicant has been more than 30 days past due in the last 24 months. The past dues could be for the same or different trades. If one trade has been late 3 times, this parameter would show 1 if there are no other trades.

12.27. APPLICANT CREDIT BUREAU PAST DUE 60

This is the number of times the applicant has been more than 60 days past due in the recorded history of the bureau. The past dues could be for the same or different trades. If one trade has been late 3 times, this parameter would show 1 if there are no other trades.

12.28. APPLICANT CREDIT BUREAU PAST DUE 60 12M

This is the number of times the applicant has been more than 60 days past due in the last 12 months. The past dues could be for the same or different trades. If one trade has been late 3 times, this parameter would show 1 if there are no other trades.

12.29. APPLICANT CREDIT BUREAU PAST DUE 60 24M

This is the number of times the applicant has been more than 60 days past due in the last 24 months. The past dues could be for the same or different trades. If one trade has been late 3 times, this parameter would show 1 if there are no other trades.

12.30. APPLICANT CREDIT BUREAU PAST DUE 90

This is the number of trades that are 90 or more days past due in the recorded history of the bureau. Note that these trades may be delinquent, derogatory, and so on. The parameter makes no distinction that one trade has been late 3 times; this parameter would show 1 if there are no other trades. If one trade has been late 3 times, this parameter would show 1 if there are no other trades.

12.31. APPLICANT CREDIT BUREAU PAST DUE 90 12M

This is the number of times the applicant has been more than 90 days past due in the last 12 months. The past dues could be for the same or different trades. If one trade has been late 3 times, this parameter would show 1 if there are no other trades.

12.32. APPLICANT CREDIT BUREAU PAST DUE 90 24M

This is the number of times the applicant has been more than 90 days past due in the last 24 months. The past dues could be for the same or different trades. If one trade has been late 3 times, this parameter would show 1 if there are no other trades.

12.33. APPLICANT CREDIT BUREAU PAST DUE NOW

This is the number of trades on which the applicant is currently past due, according to the bureau.

12.34. APPLICANT CREDIT BUREAU REPOSSESSIONS

This is the number of repossessions shown on the bureau for the applicant in the history of the bureau.

12.35. APPLICANT CREDIT BUREAU SATISFACTORY TRADES

This is the total number of trades of all types, paid as agreed (no delinquencies) for the entire life of the trade. This could be a few months or several years- the parameter makes no distinction.

12.36. APPLICANT CREDIT BUREAU TOO NEW TRADES

This shows the number of trades that have been reported where a lender is reporting a brand new account, but has not even billed the applicant yet.

12.37. APPLICANT CREDIT BUREAU TRADE COLLECTIONS

This is the number of trades in collections assigned to collections agencies shown on the bureau for the applicant in the history of the bureau.

12.38. APPLICANT CREDIT BUREAU TRADES

This is the number of trades in the history of the credit bureau for that applicant. Note that different bureaus store information for varying amounts of time.

12.39. APPLICANT CREDIT BUREAU WORST TRADES

- 1 = current
- 2 = 30-59 days late
- 3 = 60-89 days late
- 4 = 90-119 days late
- 5 = 120-149 days late
- 6 = 150- days late
- 7 = involved in a bankruptcy
- 8 = repossession, foreclosure
- 9 = charge-off

13. Bankruptcy information

13.1. APPLICANT CREDIT BUREAU 11 BANKRUPTCIES

This parameter provides a count of the number of Chapter 11 Bankruptcies the applicant has filed in the stored history of the bureau.

13.2. APPLICANT CREDIT BUREAU 13 BANKRUPTCIES

This parameter provides a count of the number of Chapter 13 Bankruptcies the applicant has filed in the stored history of the bureau.

13.3. APPLICANT CREDIT BUREAU 7 BANKRUPTCIES

This parameter provides a count of the number of Chapter 7 Bankruptcies the applicant has filed in the stored history of the bureau.

13.4. APPLICANT CREDIT BUREAU BANKRUPTCIES

This parameter provides a count of the number of bankruptcies of any type the applicant has filed in the stored history of the bureau.

13.5. APPLICANT CREDIT BUREAU BKRP SCORE

The bureaus offer two basic types of scores, a FICO type, and a bankruptcy type. The term FICO score is sometimes used as a generic term for a credit score, but it is supposed to mean that the score is based on an algorithm purchased or licensed from Fair Isaac Corp. In Oracle FLEXCUBE Lending and Leasing, if a score is listed as a FICO score, it is based on a Fair Isaac model. A bankruptcy score is a score that is used to predict the likelihood of a consumer to file bankruptcy. It is provided much like a FICO score.

13.6. APPLICANT CREDIT BUREAU OPEN 11 BANKRUPTCIES

This parameter provides a count of the number of open Chapter 11 Bankruptcies associated with the applicant in the bureau.

13.7. APPLICANT CREDIT BUREAU OPEN 13 BANKRUPTCIES

This parameter provides a count of the number of open Chapter 13 Bankruptcies associated with the applicant in the bureau.

13.8. APPLICANT CREDIT BUREAU OPEN 7 BANKRUPTCIES

This parameter provides a count of the number of open Chapter 7 Bankruptcies associated with the applicant in the bureau.

13.9. APPLICANT CREDIT BUREAU OPEN BANKRUPTCIES

This parameter provides a count of the number of bankruptcies of any type the applicant X has open currently.

13.10. APPLICANT CREDIT BUREAU RECENT 11 BANKRUPTCY

For this parameter, "Recent" refers to the number of months since the subject's most recent bankruptcy filing. One would use this parameter to determine if the subject has filed for Chapter 11 bankruptcy in the last X months.

13.11. APPLICANT CREDIT BUREAU RECENT 13 BANKRUPTCY

For this parameter, "Recent" refers to the number of months since the subject's most recent bankruptcy filing. One would use this parameter to determine if the subject has filed for Chapter 13 bankruptcy in the last X months.

13.12. APPLICANT CREDIT BUREAU RECENT 7 BANKRUPTCY

For this parameter, "Recent" refers to the number of months since the subject's most recent bankruptcy filing. One would use this parameter to determine if the subject has filed for Chapter 7 bankruptcy in the last X months.

13.13. APPLICANT CREDIT BUREAU RECENT BANKRUPTCY

For this parameter, "Recent" refers to the number of months since the subject's most recent bankruptcy filing. One would use this parameter to determine if the subject has filed for any kind of bankruptcy in the last X months.

13.14. APPLICANT HAS A PRIOR BANKRUPTCY

This parameter tracks whether the applicant has indicated a prior bankruptcy based on the checkbox in the Oracle FLEXCUBE Lending and Leasing Origination module. The prior bankruptcy is set to Y if the checkbox is checked otherwise it has a value of N.

14. Delinguency Information

14.1. APPLICANT CREDIT BUREAU LONGEST SINCE MAJOR

This parameter reflects the longest period (in months) a tradeline has been open since the last derog.

14.2. APPLICANT CREDIT BUREAU LONGEST SINCE MINOR

This parameter reflects the longest period (in months) a tradeline has been open since the last minor delinquency.

14.3. APPLICANT CREDIT BUREAU OPEN LONGEST SINCE MAJOR

This parameter considers the greatest amount of time (in months) between now and the corresponding major delinquency for all of the open parameters with major delinquencies, and reflects the greatest value returned.

14.4. APPLICANT CREDIT BUREAU OPEN LONGEST SINCE MINOR

This parameter considers the greatest amount of time (in months) between now and the corresponding minor delinquency for all of the open parameters with minor delinquencies, and reflects the greatest value returned.

14.5. APPLICANT CREDIT BUREAU OPEN SHORTEST SINCE MAJOR

This parameter considers the least amount of time (in months) between now and the corresponding major delinquency for all of the open parameters with major delinquencies, and reflects the least value returned.

14.6. APPLICANT CREDIT BUREAU OPEN SHORTEST SINCE MINOR

This parameter considers the least amount of time (in months) between now and the corresponding minor delinquency for all of the open parameters with minor delinquencies, and reflects the least value returned.

14.7. APPLICANT CREDIT BUREAU SHORTEST SINCE MAJOR

This parameter considers the least amount of time (in months) between now and the corresponding major delinquency for all of the parameters (open and closed) with major delinquencies, and reflects the least value returned.

14.8. APPLICANT CREDIT BUREAU SHORTEST SINCE MINOR

This parameter considers the least amount of time (in months) between now and the corresponding minor delinquency for all of the parameters (open and closed) with minor delinquencies, and reflects the least value returned.

15. Derogatory Trade Information

15.1. APPLICANT CREDIT BUREAU DEROG 12M TRADES

Provides the number of trades that were derogatory in the last 12 months. This includes open and closed trades. These trades may or may not be derogatory now.

15.2. APPLICANT CREDIT BUREAU DEROG 24M TRADES

Provides the number of trades that were derogatory in the last 24 months. This includes open and closed trades. These trades may or may not be derogatory now.

15.3. APPLICANT CREDIT BUREAU DEROG NOW TRADES

Provides the number of trades that are derogatory right now. Does this include closed trades?

15.4. APPLICANT CREDIT BUREAU DEROG TRADES

This parameter addresses the number of derogatory trades associated with the applicant. This includes open and closed trades.

15.5. APPLICANT CREDIT BUREAU LONGEST SINCE DEROG

This parameter covers the longest period (in months) since last derog.

15.6. APPLICANT CREDIT BUREAU OPEN LONGEST SINCE DEROG

This parameter covers the longest period (in months) a tradeline has been open since the last derog.

15.7. APPLICANT CREDIT BUREAU OPEN SHORTEST SINCE DEROG

This parameter considers the least amount of time (in months) between now and the corresponding derog for all of the open parameters with derogs, and reflects the least value returned.

15.8. APPLICANT CREDIT BUREAU SHORTEST SINCE DEROG

This parameter considers the least amount of time (in months) between now and the corresponding derog for all of the parameters (open and closed) with derogs, and reflects the least value returned.

APPENDIX B: ROUNDING AMOUNTS AND RATE ATTRIBUTES

Rounding Amounts

Generally in the lending industry, computed amounts (interest, fees, costs, and so on) are rounded to the second decimal place. However, there are occasions where the rounding of the computed amounts has to be carried out using different methods. Oracle FLEXCUBE Lending and Leasing supports the rounding, raising of, or cutting off calculated amounts.

Rounding will increase the resulting amount to the next number up to the second decimal, based on the value of third decimal.

Raising will always increase the resulting amount to the next number up to the second decimal.

Cutting off will always cut the number after the second decimal.

You can choose the rounding method you want to use by setting the parameter value for the system parameter CMN_AMOUNT_ROUND_METHOD on the Administration form (Setup menu > Administration command > System command > Parameters tab > System tab).

You can choose the rounding factor you want to use by setting the parameter value for the system parameter CMN_AMOUNT_ROUND_FACTOR on the Administration form. Currently, Oracle FLEXCUBE Lending and Leasing supports rounding up to two decimals only.

Examples of how resulting amounts differ by RAISE, ROUND, and CUTOFF:

Example 1: Amount: 234.136

Method	Result
Round	234.14
Raise	234.14
Cutoff	234.13

Example 2: Amount: 234.134

Method	Result	
Round	234.13	
Raise	234.14	
Cutoff	234.13	

Example 3: Amount: 234.1319999

Method	Result
Round	234.13
Raise	234.14
Cutoff	234.13

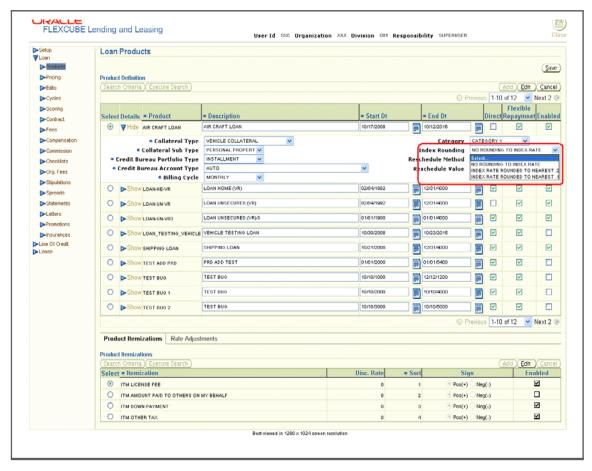

Note: Oracle FLEXCUBE Lending and Leasing only rounds calculated amounts (calculated fees, calculated payment, and so on) and not user-entered amounts.

Rate Attributes

Oracle FLEXCUBE Lending and Leasing supports the rounding of the index rate to keep the rate calculation as simple as possible for the customers. The general practice is to round the rate to nearest eighth (1/8th) (to keep the index rate in the multiple of .125) or fourth (1/4th) (to keep the index rate in the multiple of .25). Oracle FLEXCUBE Lending and Leasing rounds only the index rate and not the margin or final rate. You can define the index rounding method on the Product tab's Product Definition page for variable rate loans.

Note: Index rounding does not apply to fixed rate loans.

Oracle FLEXCUBE Lending and Leasing currently supports the following rounding of methods.

- 1. NO ROUNDING TO INDEX RATE
- 2. INDEX RATE ROUNDED TO NEAREST .25
- 3. INDEX RATE ROUNDED TO NEAREST .125

NO ROUNDING TO INDEX RATE: Select this method for no rounding.

INDEX RATE ROUNDED TO NEAREST .25: Select this method to round up to 1/4th (to keep the index rate in the multiple of .25).

Examples:

Current rate: 5.125 Round of rate: 5.25

Current rate: 5.124 Round of rate: 5.00

INDEX RATE ROUNDED TO NEAREST .125: Select this method to round up to 1/8th (to keep the index rate in the multiple of .125).

Examples:

Current rate: 5.325 Rate rounded to: 5.375

Current rate: 5.312 Rate rounded to: 5.250

B-4

APPENDIX C: INTERFACING ORACLE FLEXCUBE LENDING AND LEASING WITH BI PUBLISHER

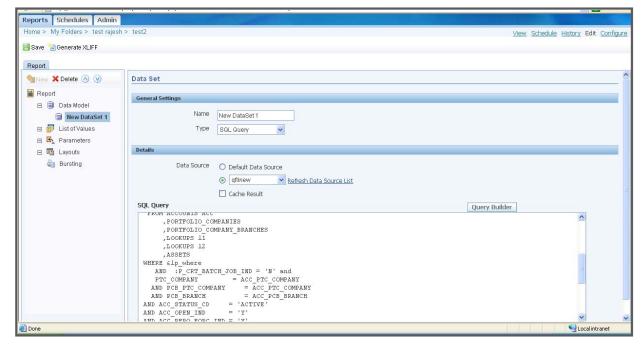

Oracle FLEXCUBE Lending and Leasing is being interfaced with Oracle Business Intelligence Publisher - using the PublicReportService web service. This facilitates the generation of operational reports on transactions, balances and statuses and other data besides taking care of the publishing requirements like letters and correspondence. All the templates for various reports, letters and correspondence are stored in BI publisher server with a reference id's which are used in Oracle FLEXCUBE Lending and Leasing. This provides the operations such as validation of privileges, information about the reports and repository and run and schedules the reports. Further BI publisher comes with an add-on for Microsoft word that can be used to create the template for the report/letter.

The queries for various reports/ letters are being stored in BI publisher under that particular report/ letter id along with the parameters and the database schema against which the querying has to be done. The report/ letter id is then mapped to the corresponding report or letter in Oracle FLEXCUBE Lending and Leasing setup module. Whenever the batch job / the user triggers the generation of letter/ report, the system calls the PublicReportService which will run the query on the database and then display the results using the template in the configured output file format.

Once the data requirements for a report/ letter are identified, the user has to pick up an SQL query for the specified data items taking care of the constraints.

To configure a letter/report

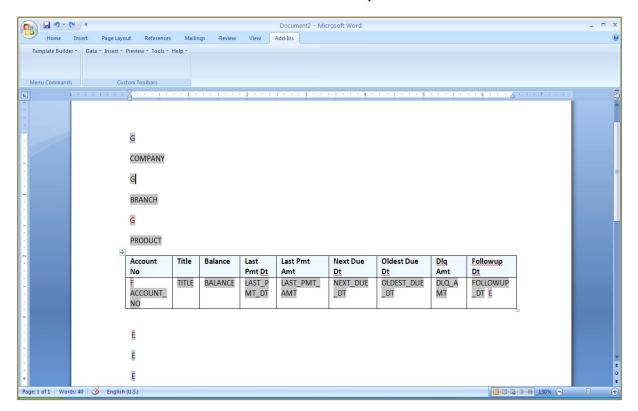

Write the SQL query manually or use the query builder in BI publisher to create the same. The list of tables using which the query has to be built will be available to choose from based on the database schema configured to BI publisher.

Once the query is built in, click on **EXPORT** to generate the XML file.

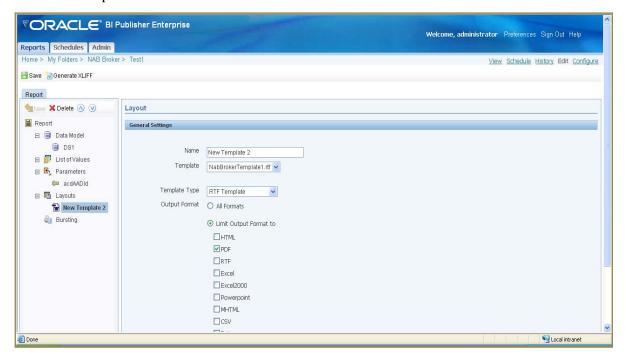

3 Once the XML file is generated and saved, create a template using the Oracle template builder which is nothing but an add on tool for Microsoft word using which you can load the xml file and then choose to build the template.

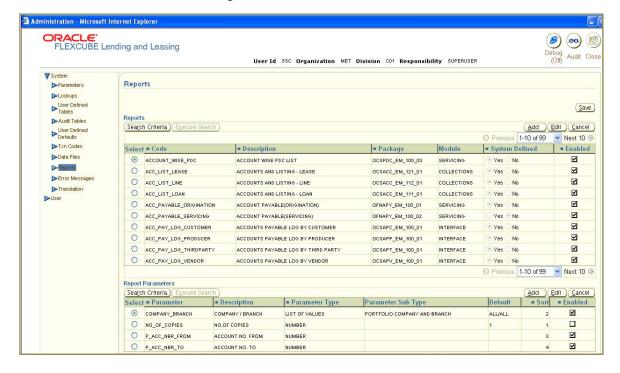

Note: Once the template is built, you can preview to check whether the report or the letter is generated as desired.

4 Once the template (RTF) is ready, the same has to be uploaded to the report/letter in BI publisher.

Note: You can also specify the format in which the output file needs to be generated.

5 Once the database connection, parameters and the template are configured for the report in the BI publisher, the reference has to be given in Oracle FLEXCUBE Lending and Leasing Setup module which will mark the completion of configuring the report/letter as shown in the following screenshots.

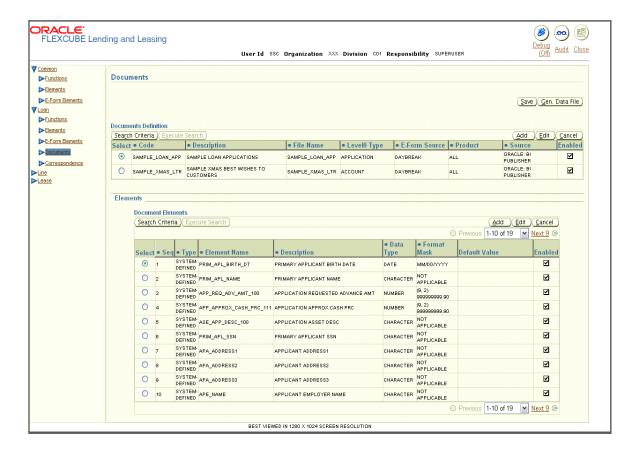

To configuring an ad hoc correspondence

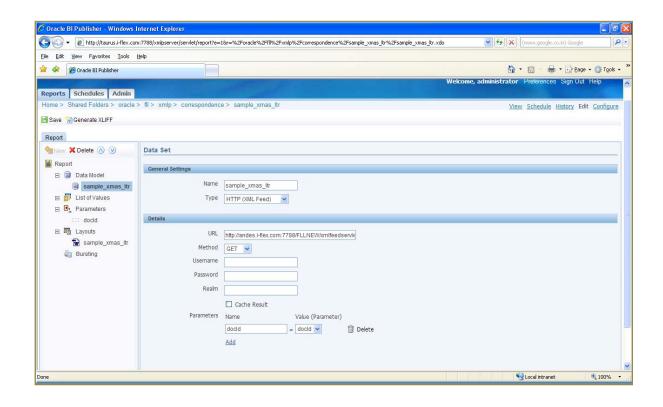

In Oracle FLEXCUBE Lending and Leasing, an ad hoc correspondence can constitute multiple documents for which the data elements and the templates to be used are to be configured as mentioned below:

- 1 Identify the elements needed for the document.
- 2 On the Oracle FLEXCUBE Lending and Leasing home page, click the **Setup** master tab.
- 3 Click the **Correspondence** bar link.

There would be a pre-defined list of elements available to choose from. The values for the elements chosen will be retrieved by the functions which are nothing but sql programs that are pre-defined in Oracle FLEXCUBE Lending and Leasing. Every time a new field is added to an existing table, the corresponding function should be modified for the new columns added. In case new tables are added, it warrants the creation of new functions for the same.

- Once the elements for the documents are being configured and saved, click on **Gen. Data**File so that the data file is generated.
- 5 Using the data file generated, create the template and then loaded to BI Publisher under the correspondence folder in it.
- 6 Every time, the user triggers the creation of ad hoc correspondence, BI publisher refers to the servlet and passes the correspondence id as the parameter value. Based on the correspondence id, the servlet generates and passes the xml feed to BI publisher which ports the data on the template and displays it.
