1. Introduction to Oracle FLEXCUBE

Oracle FLEXCUBE is a comprehensive solution that provides a unified back-office processing environment for Corporate, Retail and Investment Banking operations with a highly adaptable and scalable modular architecture. **Oracle FLEXCUBE** is designed to offer flexibility to financial institutions for easy adaptability to market needs and also enables banks to improve their overall operational efficiency.

Oracle FLEXCUBE offers effective control and risk management, thus delivering improved performance and reliable customer service. It is a highly modular system that allows the bank to choose the set of functional modules to suit the line of operations of the bank.

Oracle FLEXCUBE is a multi-currency system built on a powerful base of a flexible architecture. It uses one of the most reliable and leading technology platforms. **Oracle FLEXCUBE** is developed on Client/Server distributed architecture, which uses the Oracle or DB2 relational database and offers unlimited freedom to the bank to choose any leading UNIX or IBM or Windows NT/ Windows 2000-based hardware. A premium on-line transaction processing system efficiently services the high volume retail transactions.

Oracle FLEXCUBE has capabilities on the NLS both at the database level and presentation level. **Oracle FLEXCUBE** is already available in languages like English, Japanese, Portuguese and Arabic.

1.1. Starting Oracle FLEXCUBE

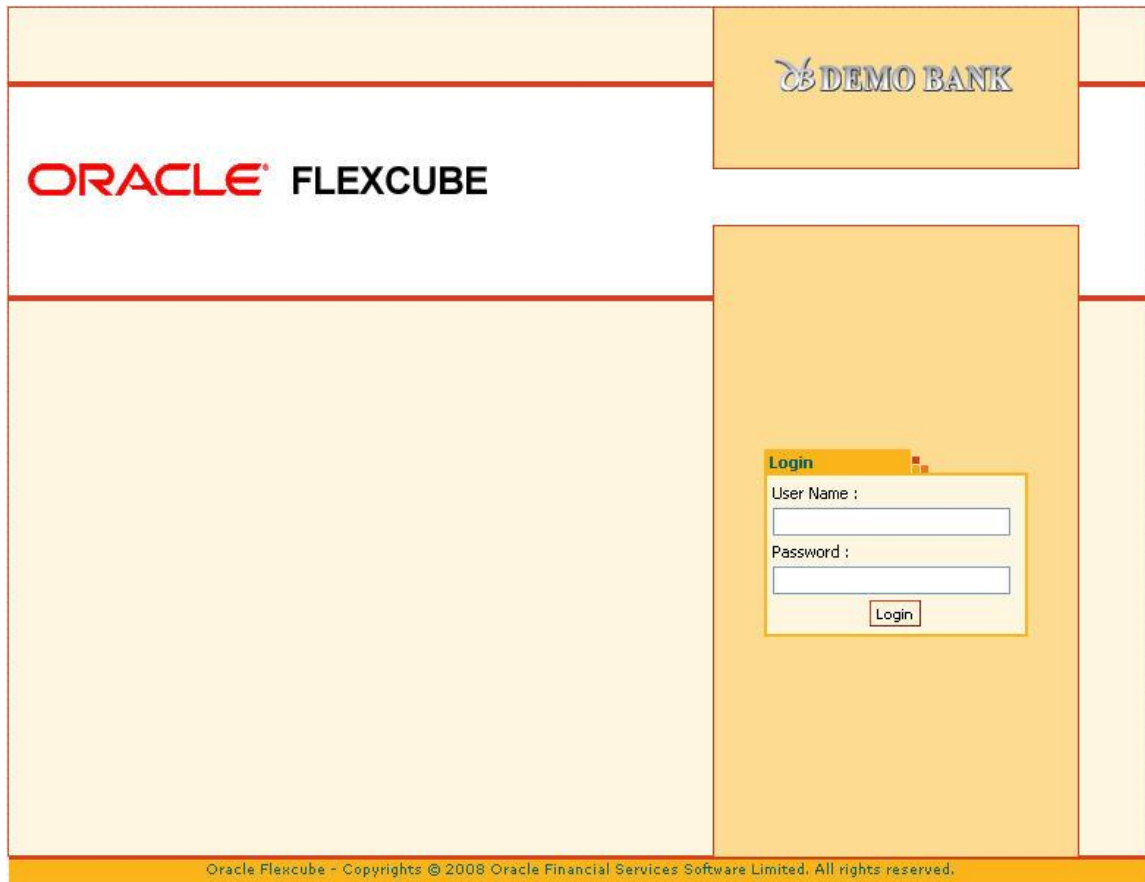

You require the necessary rights and privileges to start the **Oracle FLEXCUBE** software.

To start Oracle FLEXCUBE

- Click **Start**, point to **Programs**, and click **Internet Explorer**.
- Type the **Oracle FLEXCUBE** URL in the **Address** bar, and click . For example, the address may look like `http://server01/Flexcube`.
- **Oracle FLEXCUBE** displays the screen as shown in the following figure.

- Click the **Click here to login** link.
- **Oracle FLEXCUBE** displays the login screen as shown in the following figure.

- Enter your identification code in the **User Name** field and the password assigned to you in the **Password** field and click .
- If either the user ID or the password is incorrect, the following screen is displayed.

Note: All the characters you type in the **Password** field will appear as "****" for security reasons.

- The system displays the main application window depending upon the nature of user logged in. The initial screen / menus displayed after login depends on the access rights provided by the **Oracle FLEXCUBE** security administrator to the template under which the user is registered.

1.2. Product Features

- **Flexibility through Standardization** - Oracle FLEXCUBE's unique Product Definition facility is a manifestation of its flexible design. This feature allows a bank to define the various services and elements that the bank would offer under a product to all customers, thereby ensuring that all customers are offered the same uniform services.
- **Modular, yet Integrated** - The various functional blocks of Oracle FLEXCUBE are built on the concept of 'Service Based Architecture'. At the core of this architecture is a set of common services, called the Core System. All front-end functional modules utilize the common services offered by the Core System
- **Ease of Use** - Oracle FLEXCUBE offers a user-friendly and intuitive graphical user interface. The client-end software is Windows based and browser front end. Almost all operations, except user data input, are mouse based.
- **Flexibility to Incorporate Change** - The fundamental design objective of Oracle FLEXCUBE, as its name suggests, is to allow the tailoring of business to suit varied and dynamic market needs. Oracle FLEXCUBE is an application designed to easily respond to these changes by setting or resetting various product or global parameters without requiring a change in the software or extensive redesigning in product profile.
- **Security** - The Security Management System (SMS) in Oracle FLEXCUBE is in line with industry standards. The whole range of operations in Oracle FLEXCUBE is performed in virtually impregnable, high security conditions.
- **Relationship Banking** - Oracle FLEXCUBE incorporates a sophisticated Customer Information System (CIS) that enables true relationship banking. Detailed information (personal, demographic, employment, financial, corporate, etc.) about all customers is stored centrally in the CIS. It can provide a relationship statement, which is a combined statement for all the accounts related to the customer.
- **Seamless Transaction Delivery over Multiple Channels** - Oracle FLEXCUBE supports 7x24 non-stop convenience banking for all retail transactions through various delivery channels like branches, ATMs, POS terminals, debit cards, SWIFT, telephone/call center and internet. Oracle FLEXCUBE branch is designed to be functional even during network failures. When communication links are not operational, the branch can process the retail transactions in an off-line mode. All transactions carried out off-line are stored at the branch and uploaded to the host automatically for processing whenever the link is re-established. Offline capability has inbuilt intelligent roll-back facility to maintain data integrity.
- **Language Support** - Oracle FLEXCUBE is a multi lingual system, which uses the Oracle Translation Manager and other tools for providing the multilingual support.
- **Real-Time Information** - The multi-level drill down facility allows a user to drill down from an overall view of accounts or contracts to a more detailed view of specific accounts or contracts.
- **Flexible Interfaces** – Oracle FLEXCUBE supports standard ISO 8583 formats, thereby ensuring support for all ATM switches using the same. It also provides for standard API calls which the external applications of the bank can use for online interface to Oracle FLEXCUBE. Oracle FLEXCUBE also provides for batch posting of financial entries from an external system.
- **Multi Entity Support** - Different legal entities can be defined as entity in Oracle FLEXCUBE. It supports different local currency for each bank (entity). This also supports different local languages from same instance of application. Oracle FLEXCUBE supports batch runs for multiple banks in parallel.

1.3. Functional Overview

Oracle FLEXCUBE seamlessly offers a complete range of functional modules for Retail Banking. This section provides the list of all modules coming under the **Oracle FLEXCUBE** umbrella and the corresponding part of the user manual under which they are defined.

Transactions under each module could be broadly classified as definition transactions and operational maintenance / transactions. On a broad level, maintenances have a non-financial effect and the transactions result in a financial impact. As the nature of users using these maintenance's and transactions are different, they have been placed in different parts of the user manuals to aid in proper usage.

1.3.1. Core Modules

- Clearing – Clearing definitions are explained in the **Definitions User Manual**. Clearing maintenances are explained in the **Settlement and Clearing User Manual**.
- General Ledger – GL Definitions are explained in the **Definition User Manual**
- Customer Information System – Customer Information definitions are explained in the **Definitions User Manual**. Customer Information maintenance's are explained in the **Customer Information File User Manual**.
- Management Information System
- Reports

1.3.2. Common Facilities

- Inventory Management - Inventory definitions are explained in the **Definitions User Manual**. Inventory maintenance's are explained in the **Back Office User Manual**.

- Fund Transfer – Fund Transfer transactions are explained in the **Current and Savings Account User Manual**.
- Service Charges – Service Charges definitions are explained in the **Definitions User Manual**. Service Charges maintenance's are explained in the **Back Office User Manual**.
- NPA Management – Asset Classification definitions are explained in the **Definitions User Manual**. Asset Classification maintenance's are explained in the **Back Office User Manual**.
- Collateral Management - Collateral definitions are explained in the **Definitions User Manual**. Collateral maintenance's are explained in the **Back Office User Manual**.
- Collection Transactions - This module is used to keep track of the follow-up of delinquent accounts. It maintains the records of the follow-up made to the customer including details like actions taken, result of the action, next action expected to be taken, etc.

1.3.3. Consumer Lending Suite

Retail Loan Accounts – Loan definitions are explained in the **Definitions User Manual**. Loan maintenance's are explained in the **Loan User Manual**.

1.3.4. Deposit Accounts

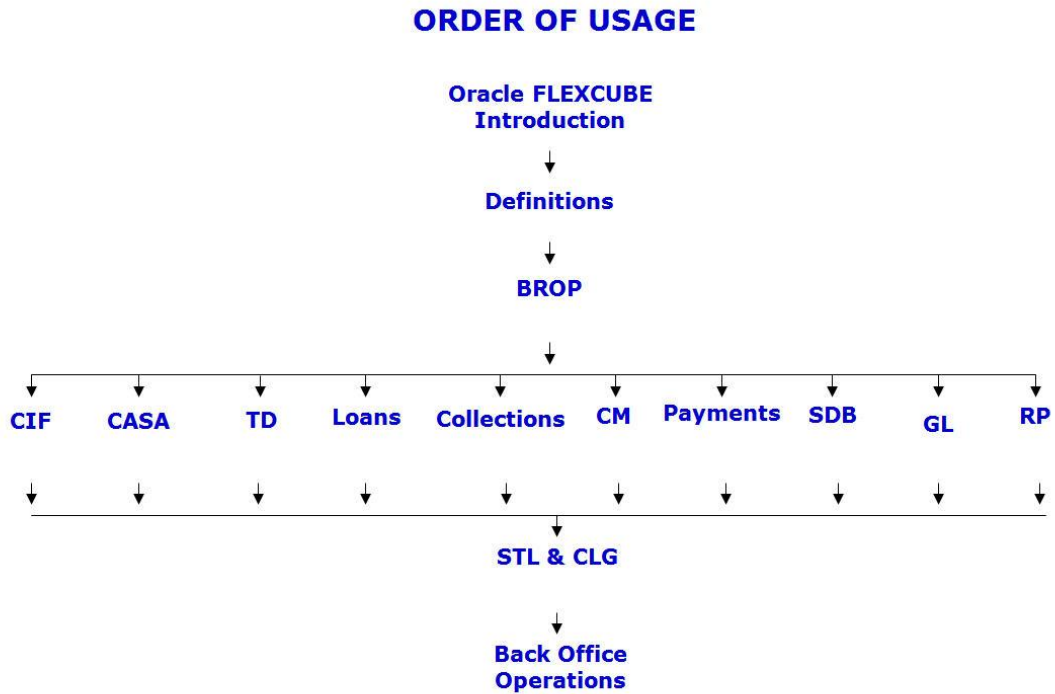

- Savings and Current Account – CASA definitions are explained in the **Definitions User Manual**. CASA maintenance's and transactions are explained in the **Current and Savings Account User Manual**.
- Recurring Deposits Accounts - RD definitions are explained in the **Definitions User Manual**. RD maintenance's and transactions are explained in the **Current and Savings Account User Manual**.
- Term Deposits and Certificate of Deposit – Term Deposits definitions are explained in the **Definitions User Manual**. Term Deposits maintenance's and transactions are explained in the **Term Deposits User Manual**.

1.3.5. Application Security

The application security maintenance's and transactions are explained in the **Back Office User Manual**.

1.4. Order Of Usage

The order of usage of the user manuals is as follows.

Bills User Manual is optional

1.5. Software Requirements

Production Servers	Software
Database Server	AIX 5.3 / Oracle 10g Enterprise Edition 10.1.0.4 / SQL Plus
Retail Application Server	AIX 5.3 OR Windows 2003 Enterprise Server / Oracle Client 10G 10.1.0 / Oracle 10G Application Server Release 3 OR WebSphere Application Server 5.1 / IBM MQ Server 6
Branch Server	Windows 2003 Enterprise Server/ Crystal Reports Professional Version 10 / Oracle Client 10G 10.1.0 / IIS 6.0 / Microsoft SOAP Toolkit 2.0 / MS XML 4.0 / IBM MQ Client 6
Client Workstations	Windows XP Professional (SP1) / Internet Explorer 6.0 / Microsoft SOAP Toolkit 2.0 / MS XML 4.0
Retail Report Server	Windows 2003 Enterprise Server / Crystal Enterprise Version 11/Crystal Reports Developer Edition 11

1.6. Hot Keys

Hot Keys are the shortcut keys which can be invoked by the user to navigate through various screens. Some of the examples are **Cash Deposit** (Fast Path: 1501) option allows the user to navigate through **Balance Inquiry** (Alt + B), **Customer Name and Address Inquiry** (Alt + C), **Account Details** (Alt + A), etc.

Hot Key s	Screen Name	Descripti on	Image
Alt + B	Balance Inquiry	This screen displays the account details of the savings and checking account balances such as the available balance, nucleated balance, current book balance, passbook balance, net balance, etc.	

Hot Key s	Screen Name	Description	Image
Alt + C	Customer Name And Address Inquiry	This screen displays the details such as the name, address, city, country, SSN/TIN number, etc of the selected customer .	
Alt + A	Account Details	This screen displays the account details of the customer such as account number, account branch, account currency, customer name, etc.	

Hot Key s	Screen Name	Description	Image
Alt + S	Amount based Account Image Display	This screen displays the images on the basis of the details maintained in the Amount Based Operating Instruction Maintenance (Fast Path: 7116) option	<p>The screenshot displays the 'Amount based Account Image Display' interface. At the top, it shows the account number '06048410000000' and the customer name 'EDWARD MATHEW'. Below this, the amount '100.00' is entered. The 'Amount Based Operating Instruction' table contains one row with 'Instr. No.' 1, 'Amount From' 0.00, 'Amount To' 9,999,999,999.99, 'Mode Of Operation' Singly, and 'No Of Signatures' 1. The 'Amount Based Account Image Display' table has one row with 'Customer Id' 604941, 'Customer Name' EDWARD MATHEW, 'Description' test, 'Show Image' Click to Display, and 'Select (Y/N)' Y. A 'Verify' button is located below the second table. At the bottom of the screen, there are buttons for 'Go Back', 'Go Forward', 'Print', and 'Exit'.</p>

Hot Keys	Screen Name	Description	Image
Alt + H	CBR Details Maintenance	<p>During the course of banking business it always helps to know the profitability aspect of relationship with a customer. Using this hot key you can get to know the volume of business associated with the customer. This screen gets populated whenever the Alt +H is pressed at the Customer ID field. This screen displays the details for the selected customer ID based on the CBR Details Maintenance (Fast Path: CIM18) option.</p>	

Hot Key s	Screen Name	Descripti on	Image
Alt + P		This will enable the user to print the receipt of the transactio n.	
F8		This will enable the user to return to the same screen.	

1.7. Exiting Oracle FLEXCUBE

The user needs to follow the correct procedure to exit **Oracle FLEXCUBE**. The user has to log out from the application and then close the browser window.

To exit Oracle FLEXCUBE

1. Each screen in **Oracle FLEXCUBE** has the **Logout** link on the header.
2. Click the **Logout** link.
3. The system displays the **Logon** screen.

1.8. Typographical Conventions

This	Represents
Bold	Transaction Screen Name, Field Names, Check Boxes, Button Names, Product Name etc.
<Xyz>	Name of a keyboard button
Constant width	<i>Formulae</i>

1.9. Using Online Help

The online help is the primary source of information for **Oracle FLEXCUBE**. It is a convenient way to look up information about a task you are performing or a feature or dialog box you would like to know more about.

Help on procedures

You can find the common tasks in the **TOC** tab or you can search text using the **Search** tab.

The tree structure of all maintenance's and transactions (appearing on the left side of the window) are arranged in the same order as the user manual. They are segregated as setup definition maintenance's and operational transactions.

To get Help

- Click the **Help** link on the header or press <F1> or click  the button from any transaction or maintenance inside **Oracle FLEXCUBE** to view the **Oracle FLEXCUBE Help**.
- Depending on the option you are currently working, the online help will display the relevant topic on the right panel. This online help will be opened in a separate window.

The screenshot shows the Oracle FLEXCUBE online help interface. On the left is a tree view (TOC) with the following structure:

- Oracle FLEXCUBE
 - Version Number
 - Oracle FLEXCUBE Introduction
 - Definitions
 - Master Definitions
 - Currency Definitions
 - Securities Definitions
 - Customer Definitions
 - CASA Definitions
 - TD Definitions
 - TDM04 - TD Bank Param
 - TDM01 - TD Product Mas
 - TDM00 - TD Product Rate
 - Tax Definitions
 - RD Definitions
 - Loan Definitions
 - Interest Rate - Rule Definitio
 - Limit Management
 - Collateral Definitions
 - Insurance Definitions
 - Asset Classification Defini
 - Clearing Definitions
 - Inventory Definitions
 - Remittance Definitions
 - Service Charge Definitions
 - Central Bank Reporting Defi
 - User Defined Fields
 - Other Definitions
 - Current and Savings Account
 - Time Deposit
 - Loans
 - Settlement and Clearing
 - Customer Information File
 - Relationship Pricing
 - Back Office
 - Branch Operations
 - General Ledger
 - System Operations Manual
 - Oracle Flexcube Reports
 - Disclaimer

At the bottom of the TOC are tabs for TOC, Search, and Glossary.

The main content area displays the topic **TDM04 - TD Bank Parameters Maintenance**. The content includes:

- The two important entities that are defined in **TD Bank Parameters Maintenance** are:
 - Suspense General Ledgers: General Ledger entries are automatically passed in **FLEXCUBE Retail**. However, in certain exceptional cases, the system fails to pass the GL entries automatically. In such cases, GL posting is done automatically by the system into the suspense GLs defined at the bank parameter level. The bank would have to manually reconcile these GLs.
 - Penalty Interest Parameters: The penalty interest rate values will be derived from the **Bank Parameters Maintenance** if the penalty interest rate to be charged has been defined as **Bank Level** while defining the product. You can specify an interest index and a variance that has to be levied as penalty at the account level.
- Penalty applicable due to partial withdrawal can be done in two ways for all TD products at the bank level namely
 - Absolute Method - The absolute penalty can be defined as a fixed rate or floating rate. Fixed interest rate is defined in 'Net Penalty Interest Rate' field. Floating interest rate is defined by selecting the corresponding interest index code in 'Net Penalty Index' field.
 - Incremental Method - Penalty can be defined as reduction in applicable TD interest rate. This reduction can be either in the form of variance as defined in 'Incremental Penalty Interest Variance' or index code as defined in 'Incremental Penalty Index'. The standard penalty routine uses the incremental method.
- Definition Prerequisite**
 - BAM09 - Bank Master Maintenance
 - GLM02 - Chart of Accounts
- Modes Available**
Add, Modify, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to [Standard Maintenance Procedures](#).
- To add bank parameter**
 - Type the fast path **TDM04** and click **Go** or navigate through the menus to **Global Definitions > TD > TD Bank Parameters Maintenance**.
 - The system displays the **TD Bank Parameters Maintenance** screen.
- TD Bank Parameters Maintenance**
 - Field Description**
 - Click the **Add** button.
 - Enter the bank code and press the <Tab> key.
 - Enter the GL details and the interest rate details.
 - Click the **OK** button.
 - The system displays the message "Record Added...Authorization Pending...". Click the **OK** button.
 - The new bank parameter is added once the record is authorised.

- To locate another topic, navigate using the tree menu (TOC) provided on the left pane and click the topic name link.

OR

- Click the **Search** button on the menu bar and type the related word or fast path in the **Search** field. Click the  button. The system displays the related topics.

To perform a search

- In the **Help** window, click the **Search** button.
- Enter the text you want to search in the text box located in the left pane and click the  button. You can also enter the text in inverted commas if you want to match the exact search criteria. The search string entered in the inverted commas is not case sensitive. For example: "Account number", the system displays the related topics.
- List of topics that contain part or whole search criteria are displayed. Click the relevant topic name.
- The selected topic is displayed in the right pane with the search criteria highlighted.
- Click the  button, to remove the highlight.
- To search for a word in the selected topic, enter the text in the Search box and click the  button. The required text is highlighted and displayed in the right pane.

The screenshot shows the Oracle Online Help search interface. The top bar includes a search box and the Oracle logo. The left pane displays a search result table for 'CIM01'.

Rank	Title
1	CIM01 - Signature Types Maintenance
2	CIM09 - Customer Information Master Maintenance
3	8053 - Customer Addition
4	Appendix of Fast Path

The right pane displays the content for the selected topic, **CIM01 - Signature Types Maintenance**. The content includes a description, a note, and a list of steps for adding a signature type.

CIM01 - Signature Types Maintenance

The user can maintain the signature type for individual customers using the **Signature Types Maintenance** option. Authorized records from this maintenance, will populate the pick list in the **Customer Addition** (Fast Path: 8053) option.

Note: The system automatically authorizes this transaction.

Definition Prerequisites
Not Applicable

Modes Available
Add, Modify, Delete, Inquiry. For more information on the procedures of every mode, refer to [Standard Maintenance Procedures](#).

To add the signature type

1. Type the fast path **CIM01** and click **Go** or navigate through the menus to **Global Definitions > Customer > Signature Types Maintenance**.
2. The system displays the **Signature Types Maintenance** screen.

Signature Types Maintenance

Field Description

3. Click the **Add** button.
4. Enter the signature code and the type of the signature.
5. Click the **Ok** button.
6. The system displays the message "Record Authorized....Click Ok to Continue". Click the **Ok** button.

The bottom of the interface shows a navigation pane with buttons for TOC, Search, and Glossary.

Use of other tools available on the help header:

- **Back:** Click the  button to return to the last help page you viewed.
- **Forward:** Click the  button to view the help option which you were initially working on.
- **Refresh:** Click the  button to refresh the current page which you are using.
- **Expand All:** Click the  button to expand all the data added in drop-down hot-spots.
- **Collapse All:** Click the  button to close all the data added in drop-down hot-spots.
- **Glossary:** In the **Help** window, click the **Glossary** button. This will display the list of glossary available in the help.

1.10. Structure of User Manual Documentation Set

The user manual is divided into the following sub-sections namely:

Description	Used By	Used To
Oracle FLEXCUBE Introduction	Everyone	Understand usage of Oracle FLEXCUBE and its manuals, online help, screen/menu layouts, transaction/maintenance procedures, authorization procedures, common screens, acronyms used.
Definitions	Static Data Administrator	Define various static data entities required for basic Oracle FLEXCUBE operations across all modules.
Customer Information File	Customer Service Personnel	Create new customers and maintain various customer level entities.
Current and Savings Account	Liabilities Servicing personnel, Retail Credit Personnel	Create new accounts and link customers to it, define funds management such as Standing Instruction, Sweep Out, Sweep In Overdrafts, Account Operations, Statement Attributes and Interest Attributes.
Time Deposit	Liabilities Servicing Personnel	Create new accounts and link customers to it, create account operations, lien maintenance, and certificate printing.
Loans	Credit Personnel	Link loan operations, collateral, define interest attributes.
Collections	Credit Personnel	Identify the delinquent advances accounts and initiate necessary follow up actions.
Card Management	Branch Managers, Tellers, BackOffice Operations, ATM and CARDS team	Create new card types, and link accounts to it. Modify the card status and other card operations.

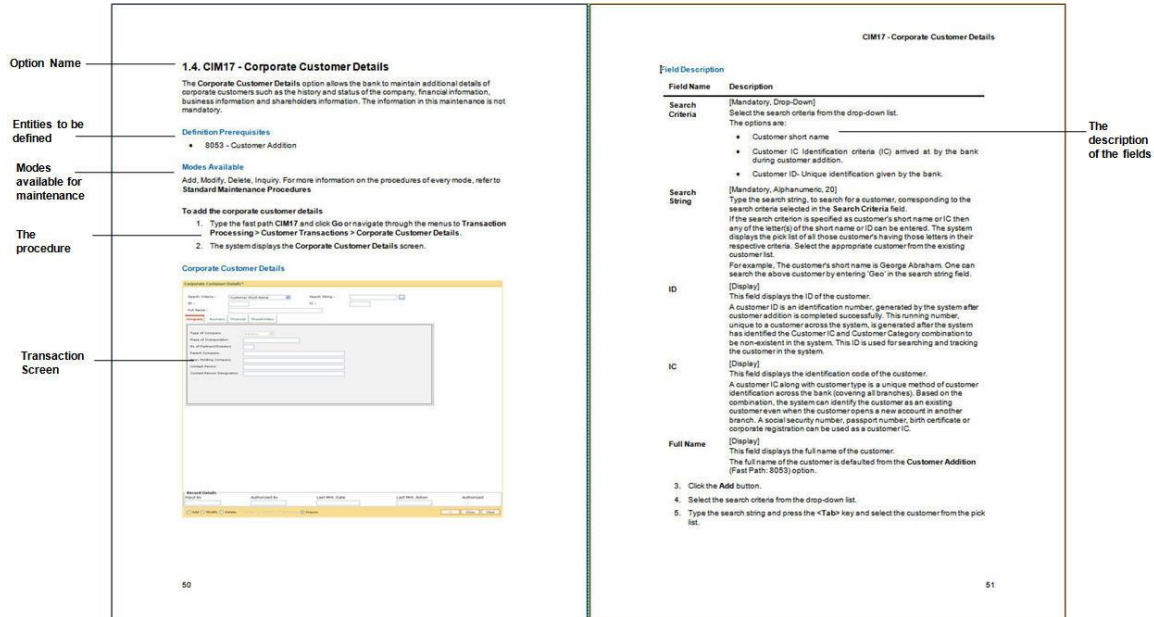

Structure of User Manual Documentation Set

Description	Used By	Used To
Payments	Tellers, Supervisors, Branch Manager, Back Office Operations	Send and receive fund and related messages to/from any external entity outside the bank.
Safe Deposit Box	Safe Deposit Box Users / Customer Support Officers	Safe deposit box allotment, rent recovery and maintenance.
General Ledger	GL Personnel, Branch and Head Office Staff	Define various GL accounts to be used in various modules, track their movement, do periodic reconciliation etc.
Relationship Pricing	Relationship Managers/Customer Support Officers	Provide pricing at the customer level.
Branch Operations	Branch Managers, Tellers	Perform branch operations, vault operations, teller operations, various inquiry transactions and adhoc report generation.
Settlement and Clearing	Clearing and Remittance	Perform clearing operations, transaction posting, remittance instruments operations and bill payments.
Back Office	Security Administrators, BackOffice Operations	Define SMS entities and operations, perform GL operations, collateral definitions and linkage, manage inventory, SC linkage maintenance, Download service maintenance and operations, Asset classification & operations, file upload operations.
Bills	Back Office Operations	Define bills and their operations, courts and their linkage to various branches.
System Operations	Branch Tellers who are responsible for operations on branch server, Data Centre Operations Personnel	Branch Server operations and Data centre operations.

1.11. User Manual Structure

The user manual covers all the aspects of **Oracle FLEXCUBE**.

The structure of the user manual is as follows:

Option Name

The name of the transaction screen. A brief introduction about the broad contours of the transaction is described in this section.

Definition Prerequisites

The entities to be defined before maintaining the option. For example, Signature Types have to be defined before adding a customer in **Oracle FLEXCUBE**.

Modes Available

The modes those are available to maintain the transaction, in case of maintenance transaction. For more information refer to the **Modes Available** section in the Understanding the **Oracle FLEXCUBE** User Interface option.

Procedures

The process used to operate the transaction is mentioned. Depending upon the nature of the maintenance, only the important sub-procedure is defined in the manual. Use the **Standard Maintenance Procedure** section in this manual to get the broad contours of procedures to be adopted.

The first step of the procedure gives the modes to access the transaction screen. The screen can be accessed in the following two ways:

- **Fast Path:** Type the fast path in the search field in the tree menu of **Oracle FLEXCUBE** and click the **Go** button. Refer to the Fast Path in the **Understanding the Oracle FLEXCUBE User Interface** option.

- The tree menu access path

Transaction Screen

The transaction or maintenance screen, which is displayed in the procedure. The transaction screen is explained in the **Central Workspace** section in the Understanding the **Oracle FLEXCUBE User** Interface option.

Tab Screen

In case the maintenance screen has more than one tab, each of the tabs is defined separately.

The tab screens are the different sections of a transaction screen. The tab screens are explained in the Understanding the **Oracle FLEXCUBE User** Interface option.

Field Description

The explanation of the fields in the transaction and tab screens.

The explanation gives the following points:

- Mandatory\Optional\Conditional: Whether the field is mandatory, optional or based on some other field i.e. conditional.
- Field Type: The type of the field. For e.g. Numeric, Alphanumeric, Drop-Down, Pick List, etc.
- Field Size: The maximum characters that can be entered in the field. This is applicable for numeric and alphanumeric fields only.
- General Description: It explains the function of the field

Field Name	Description
Address	[Mandatory, Alphanumeric, 35] Type the mailing address of the customer. The address can be mentioned in three lines.
City	[Mandatory, Pick List] Select the name of the city where the customer's mails should be sent from the pick list.
State	[Mandatory, Pick List] Select the name of the state where the customer's mails should be sent from the pick list.
Country	[Mandatory, Drop-Down] Select the name of the country, where the customer's mails should be sent, from the drop-down list.

1.12. Understanding the Oracle FLEXCUBE User Interface

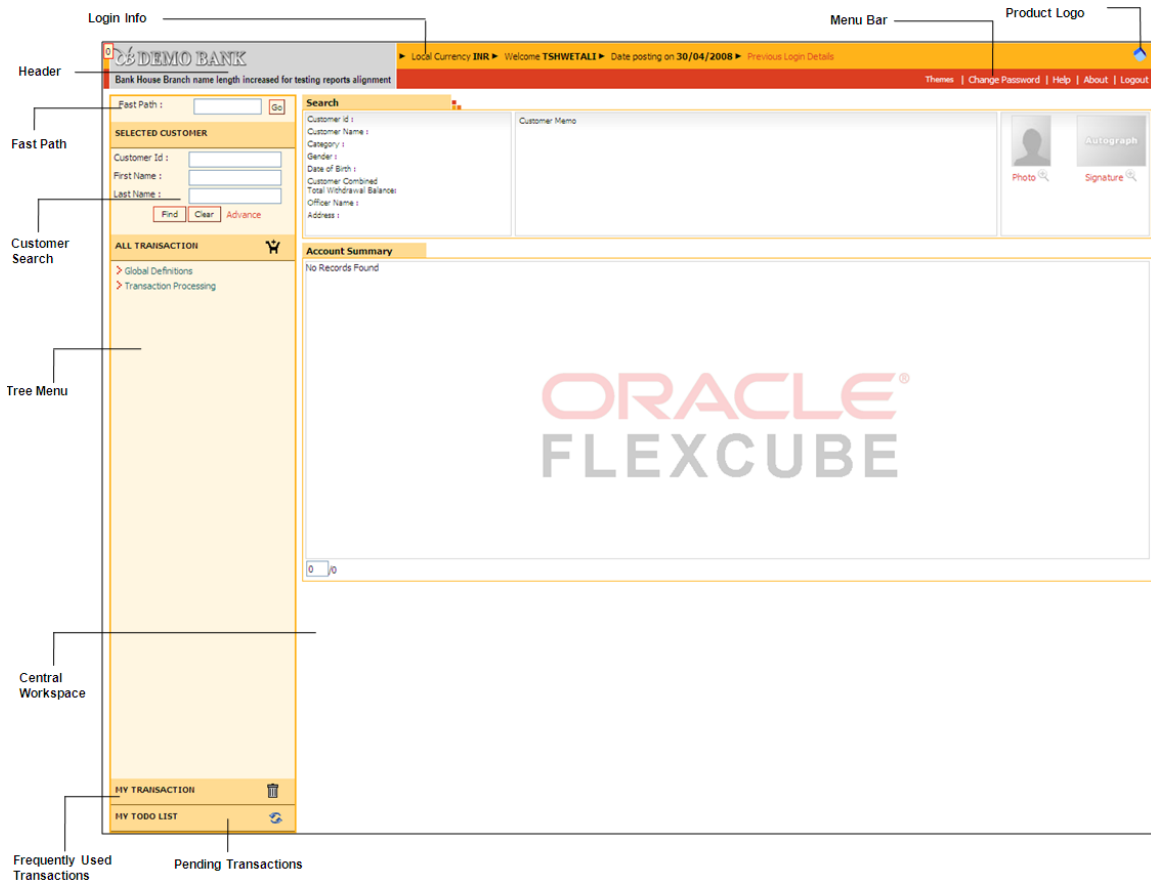

The **Oracle FLEXCUBE** is designed for extreme ease-of-use; taking advantage of the browser based User Interface. To navigate in **Oracle FLEXCUBE**, proper understanding of the interface is essential. This section illustrates the various parts of the **Oracle FLEXCUBE** interface and their uses.

There are two types of user interface:

- Conventional User Interface
- Front Banking Executive User Interface

The user interface which is displayed at the time of login is configured during the template level settings. After the user has logged into the system and selected a transaction from the menu or entered a fast path, the system will display the following:

Conventional User Interface:

Front Banking Executive User Interface:

Cash Summary

Login Info

The Login Info section contains.

- The local currency of the bank
- The name of the user who has logged into the system.
- The System Date - This is the branch posting date.
- Previous Login Details – Click this to view the last login date & time and the number of unsuccessful attempts made, if any.

Header

This appears on top of every page in **Oracle FLEXCUBE** and contains the following:

- Name of the bank along with the bank's logo.
- The name of the branch to which the logged in user is linked. Example: Head Office, Central Office, Branch Office1, Branch Office2, etc.

Menu Bar

Menu bar contains certain options as shown in the following table.

Menu	Description
Themes	Click this link to select the available colour for screen layout.
Change Password	Click this link to change the password. For more information please refer to Change Primary Password (Fast Path: 768) option in Back Office User Manual .
Help	Click this link to view Oracle FLEXCUBE Online Help.
About	Click this link to view Oracle FLEXCUBE version details.
Logout	Click this link to log out from Oracle FLEXCUBE .

Product Logo

The logo rotates in the right hand side of the transaction screen, if the connection of the branch with the host is up.

Customer Search

This section is used for basic customer search. For more details refer to the **Customer Search** option in the *Oracle FLEXCUBE Introduction User Manual*.

Cash Summary

This section displays the cash summary for a teller. The details include the cash currency code, the current cash status, and the over-limit and under-limit for the cash balance. Cash summary will get refreshed after every financial transaction performed by the teller.

Fast Path

Fast Path is a facility provided in **Oracle FLEXCUBE**, to navigate to a particular option using an alphanumeric hotkey. Each maintenance or transaction is allotted a unique hotkey, using which the user can invoke the same without going through the menu structure, thereby enabling quick access to the transaction.

Tree Menu

All the options in **Oracle FLEXCUBE** are arranged module wise and in a hierarchical form. You can navigate to the required module and select the required option with a mouse click.

The tree menu structure can be defined using the template-task cross reference maintenance.

Using Menus

This section explains the two methods available to navigate to options in **Oracle FLEXCUBE**. They are as follows:

- Fast Path method
- Menu method

To access an option (fast path method)

- Fast Path is an alphanumeric keyword used to uniquely identify a transaction. It is also called a transaction mnemonic.
- The Fast Path is to be entered in the **Fast Path** text box provided in the top left corner of the **Oracle FLEXCUBE** screen as shown in the following figure.

A screenshot of the Oracle FLEXCUBE user interface showing the 'Fast Path' input field. The text 'BAM08' is entered into the text box, and a 'Go' button is visible to its right.

- To access the option, type the Fast Path code in the text box and click  or press **ENTER**. For example enter 8053 in the **Fast Path** text box and press **ENTER**, the **Customer Addition** option is displayed as shown in the following figure.

A screenshot of the Oracle FLEXCUBE user interface showing the 'Customer Addition*' form. The 'Fast Path' input field contains '8053' and a 'Go' button. The form contains various input fields for customer information, including Home Branch, Customer IC, CIF Type, Language, Full Name, Salutation, Short Name, Address, State, Nationality, Zip, Resi. Phone No., Mobile No., Gender, Staff, Business, Profession, Category, IC Type, Customer ID, Middle Name, Last Name, Town / City, Country, Country of Residence, Birth / Reg Date, Customer Education, Email ID, Marital Status, and Employee Id. The form is displayed in a yellow-themed window with a 'TRANSACTION PROCESSING' and 'GLOBAL DEFINITIONS' footer. At the bottom right, there are buttons for 'Val. Customer', 'OK', 'Close', and 'Clear'.

To navigate to an option (menu method)

- When you login, the system displays the Tree Menu in the left pane as shown in the following figure.

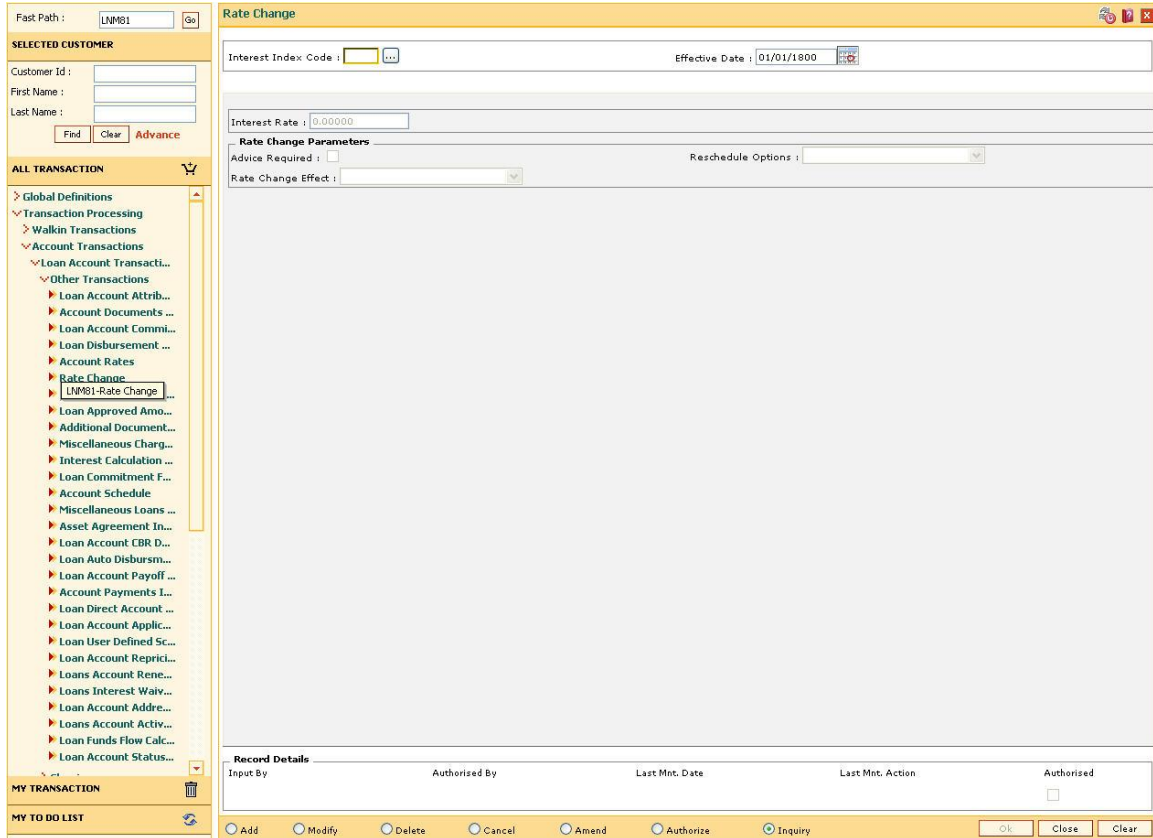

The screenshot displays the Oracle FLEXCUBE user interface. At the top, there is a 'Fast Path' section with a text input field and a 'Go' button. Below this is a 'SELECTED CUSTOMER' section containing three input fields for 'Customer Id', 'First Name', and 'Last Name', along with 'Find', 'Clear', and 'Advance' buttons. The main area is titled 'ALL TRANSACTION' and features a navigation tree with two items: 'Global Definitions' and 'Transaction Processing', both preceded by a right-pointing chevron (>). At the bottom, there are two more sections: 'MY TRANSACTION' with a trash icon and 'MY TO DO LIST' with a refresh icon.

- All the options available to the user are grouped in a hierarchical form in the left pane. To display a sub-option, in the left pane, click the > icon next to the option OR double-click the option. For example on the tree menu navigate to **Transaction Processing > Account Transactions > Loan Account Transactions > Rate Change** as shown in the following figure.

- The system displays the transaction screen in the Central Workspace as shown in the following figure.

Understanding the Oracle FLEXCUBE User Interface

Note: If you are using the tree menu to navigate to a particular option, the Fast Path is automatically displayed in the **Fast Path** text box

Using My Transaction

You can customize the menu based on the transactions which are used on a frequent basis. You can drag and drop the transaction from the tree menu in . Click **My Transaction** to view the screens which you have added. You can select the check box adjacent to the option name and click  to delete the option from **My Transaction**.

MY TO DO LIST

Using My To Do List

You can view the count of Authorized/Rejected Transactions.

For teller, the system displays a hyperlink with transactions pending for authorisation. Click the link, system displays the **Search Electronic Journal** (Fast Path: 6006) option with the list of transactions pending for authorisation. Now, the teller can resend the transaction for authorization to a different supervisor, if required.

For supervisor, it will display a hyperlink with count of transactions pending for authorization. Click the link, system displays the **Search Electronic Journal** (Fast Path: 6006) option with the list of transactions pending for authorization. Now, the supervisor can perform further operations on the listed transactions.

Central Workspace

This is the operational area where the contents of every transaction or maintenance are displayed. The following figure provides a detailed explanation of various elements that constitute the Central Workspace.

Screen Name

This is the name of the transaction being executed.

General Information

For most of the transactions there are certain fields which are common. Some of these fields are key to access the relevant record. The display of other information in the respective fields depends upon the unique value entered in the key field. For example, Account Number, Customer Name etc. For most transactions the user has to specify the Account Number and the details associated with that Account Number are displayed.

Tab Screen

Certain transactions are made up of a number of sub-sections. The tab screens are these separate sub-sections. Depending on the nature of the transaction, the user selects the appropriate tab screen and enters the details required in that tab screen or the system automatically displays the subsequent tab screen depending on the sequence of the transaction.

Transaction Information

This section may or may not be found in all transactions. The specific details to be entered or displayed for a particular transaction are displayed in this section of the Central Workspace.

Record Details

This contains the audit related information of the record in focus. This part contains the following fields:

Field	Description
Input By	The ID of the user who has added the record.
Authorised By	The ID of the user who has authorised the record.
Last Mnt Date	The addition or maintenance of the record was done on this physical date and time. This is the application server date / time.
Last Mnt Action	This indicates the last maintenance action which was authorized / auto-authorized. Example: Add, Modify etc.
Authorised	Indicates if the record in focus is an authorized record or not.

Modes Available

For all maintenances, **Oracle FLEXCUBE** enables various modes. These are command buttons and used to perform specific functions. The following table explains the individual button and its function.

Click	To
	Add a new record with the features of an existing record.
	Add a new record.
	Modify a record. The user can modify the record after authorization. All fields which do not form a part of the key field can be modified.
	Delete a record. The user can delete the record after authorization. The record is deleted from the system and cannot be accessed.
	Cancel a record. The user can cancel the record before authorization. This will enable cancellation of the earlier changes that have done. Example if the cancellation of the last modification was done, the record will revert to the last authorized status.
	Amend a record. The user, who has added or modified the record, can amend it before authorization. These amendments shall be taken into consideration when the supervisor authorizes the record.

Click	To
	Authorize a record. The user who has specific access rights can authorize the record.
	View the authorized records.

Validation Buttons

Click	To
	Commit a transaction.
	Clear the data entered on the screen.
	Close the screen and exit the maintenance / transaction.

Call Timing

Click  to view the time taken in form request, form render and submit event of transaction.

Help

Click  this to view the help related to a particular screen.

Close

Click  to close the current screen.

Type of fields

Information is entered in fields. Generally, the fields can be Display Fields, Entry Fields, Date Fields, and pick list.

Display Fields

Reserve Calculation Frequency :

Information in these fields is retrieved/calculated by **Oracle FLEXCUBE**. Display fields are shown on screen in grey colour, indicating that they cannot be changed.

Entry Fields

Narrative :

An Entry Field is an area in which the user can type or enter information. This information can be textual, numeric, or alphanumeric in nature. Entry Fields are of two types:

- **Mandatory Fields.** Information in these fields is mandatory for the process to move ahead.
- **Optional Fields.** Information in these fields is optional; you may or may not enter information in them.

Date Fields

LN Process Date : 

- Date Fields have special status in **Oracle FLEXCUBE**.
- Normally, one would enter the date in the field using dd/mm/yyyy format.
- For ease-of-use, **Oracle FLEXCUBE** has provided a Calendar function in every date field.
- The calendar allows you to choose a date rather than enter it in the field.
- To select a date from a calendar in a date field, follow the steps given below.

To select a date from the Calendar

- Click  with the mouse to activate the calendar.
- **Oracle FLEXCUBE** displays a calendar as shown below.

- Click the relevant date. The date gets populated in the date field.
- Click  OR  to navigate to the previous or next year respectively.
- Click  OR  to navigate to the previous or next month respectively.

To move within a workspace

- Click the field where you want to go.
OR
- Press **<Tab>** to move clockwise from one field to another, or **<Shift> + <Tab>** to move counter-clockwise.

Pick List

A field that has the  button adjacent to it is a pick list.

- You can enter the value in the field by selecting it from the pick list.

Understanding the Oracle FLEXCUBE User Interface

- To see the pick list available for any field, click the  button that appears adjacent to the field.
- For example, to select the name of the Country, click  adjacent to the **Country** field as shown in the following figure.

Country :

- **Oracle FLEXCUBE** displays the pop-up screen as shown in the following figure.

The screenshot shows a pop-up window titled 'LOW' with a close button. It contains a table with two columns: 'CountryName' and 'CountryCode'. The table has a header row with orange background and several data rows. Navigation buttons 'First', 'Previous', 'Next', and 'Last' are visible at the top, along with a page indicator '1 / 1 1'.

CountryName	CountryCode
AMERICA	US
AUSTRALIYA	A
BANGLADESH	BAN
CHINA	105
INDIA	103
INDIA1	IND
Indonesia	101
SRILANKA	SRL
japan	102

- When you click the mouse pointer over a particular record, it gets highlighted. Double-clicking the highlighted record will automatically populate the field as shown in the following figure.

Country :

Frame

A rectangular frame with a title bar that says "Sex". Inside the frame, there are two radio buttons. The first is labeled "Male" and is selected (indicated by a small black dot in the center of the circle). The second is labeled "Female" and is not selected.

A frame is a rectangular box, mostly with a title, that is used to group related fields on a screen. For example:

- The adjacent figure displays a section with “Marital Status” as its title.
- It has two fields, viz., **Status** and **No. of Spouses**.

Radio Button

Two radio buttons are shown. The first is labeled "Male" and has a small black dot in the center of its circle, indicating it is selected. The second is labeled "Female" and does not have a dot in its circle.

A radio button is a group of two or more choices that are mutually exclusive; that is, you can select only one. For example, if there are two radio buttons, only one of them can be active.

- To select a radio button, click the radio button.

Check box

Two check boxes are shown. The first is labeled "Global :" and has an empty square box next to it. The second is labeled "Keep In Office :" and also has an empty square box next to it.

A check box is a toggle switch.

You can click the check box to indicate Yes on the option or you can click the check box again to indicate No.

- In the Yes state you will see a tick mark inside the box.
- In the No state the box remains empty.

Drop-down list

A drop-down list box is shown. The label to the left is "Reason for Verification :". The box itself is open, showing a list of three options: "Not Verified", "Papers Verified", and "Bankground Verified". A small downward-pointing arrow is visible in the top right corner of the box.

A drop-down list box displays a fixed list of available choices.

- List boxes have scroll bars if there are more choices than what can be displayed at a given time.
- To invoke the list box, click the downward pointing arrow.
- Select any item from the list.

User Defined Fields

This section is used for updating additional details. Based on the requirement and the nature of the field, you can specify default values and validations for the field. **Oracle FLEXCUBE** validates all entries made to the field against the validations defined for a field. For more information refer to User Defined Fields in the **Common Screens** option in **Oracle FLEXCUBE Introduction** user manual.

The user defined fields are available in two layouts. The layouts of the UDF depends if the screen is jackbee or classic screens.

The UDF in classic screens will be as follows:

The UDF in jackbee screens will be as follows:

Click on the appropriate UDF to enter the additional details.

Session-Auto Expiry

The system displays session expiry alert if you are inactive for a particular duration (Interval/2) which is set by the bank. Click anywhere in the dashboard, you can reset inactivity duration and auto logout mechanism will not proceed with the logout of current session.

Click the checkbox to disable this alert for the current session. In this case, the current session will be expired without any notification if your inactivity duration is equal to value set.

The session-auto expiry screen will be as follows:

1.13. Standard Maintenance Procedures

The standard procedure for the maintenance's in **Oracle FLEXCUBE** is explained below. A record inside the table on which the maintenance operates has two parts namely:

A. **Key** – This can consist of one or more fields and these together identify a unique record in the table.

B. **Parts of the record** – Other attributes of the record.

For example, in **Bank Codes Maintenance**, the table layout is as follows:

Bank code is a key identifier in the Bank Codes table. Each bank code uniquely identifies a bank in the table. The attributes of that bank code would be defined in the body of the record. All action on the table namely add, modify, delete, amend, authorize and view are done using key field(s).

For doing any operations on the maintenance (or table), the key fields for the respective transaction screen have to be entered.

In addition to the entities on the screen, each of the record inside **Oracle FLEXCUBE** has some additional fields to be used internally by the system namely.

Sr. No.	Field Name	Description	Remarks
1	Flg-mnt-status	Maintenance Status Flag	Can be 'A' for Authorized or Null.
2	Cod-mnt-action	Maintenance Action Code	
3	Dat-last-mnt	Last Maintenance Date	
4	Cod-last-mnt-makerid	Last Maker ID	
5	Cod-last-mnt-chkerid	Last Checker ID	

For example, the standard procedures for the **Bank Codes Maintenance** option are as follows:

To add a bank code by copy

1. Select the **Add** mode.
2. Select the **Add By Copy** check box.
3. Type the existing bank code and press the **<Tab>** key.
4. The system displays the details of the bank code which is already maintained.
5. Modify the required fields and click the **Ok** button.
6. The system displays the message "Record Added...Authorisation Pending...Click Ok to Continue".

To add a bank code

1. Select the **Add** mode.
2. Type the bank code and press the **<Tab>** key.
3. Enter the bank code integer and bank name and click the **Ok** button.
4. The system displays the message "Record Added...Authorisation Pending...Click Ok to Continue".

To modify the bank code

1. Select the **Modify** mode.
2. Type the bank code and press the **<Tab>** key or select it from the pick list.
3. Modify the relevant information and click the **Ok** button.
4. The system displays the message "Record Modified...Authorisation Pending...Click Ok to Continue".

This enables modification of an authorized record in the table. System would allow modification of non-key fields. Key fields cannot be modified or altered. When a record is modified, system will make another copy of the record in the table. The changes done on the record would reside in the 'Unauthorized' record with the same key. Hence, till the time of authorization, the table would contain 2 rows for the same key field namely 'Authorized' record and 'Unauthorized' record.

When the authorizer authorizes the changes, the system would delete the 'Authorized' record from the table and replace the same with the 'Unauthorized' record and change the status to 'Authorized'.

To delete the bank code

1. Select the **Delete** mode.
2. Type the bank code and press the **<Tab>** key or select it from the pick list.
3. Click the **Ok** button.
4. The system displays the message "Record Deleted...Authorisation Pending...Click Ok to Continue".

This enables physical deletion of an authorized record in the table. When a record is marked for deletion, system will make another copy of the record in the table. The changes done on the record would reside in the 'Unauthorized' record with the same key. Hence, till the time of authorization, the table would contain 2 rows for the same key field namely 'Authorized' record and 'Unauthorized' record.

When the authorizer authorizes the deletion, the system would delete the 'Authorized' and 'Unauthorized' records from the table.

To cancel the bank code

1. Select the **Cancel** mode.
2. Type the bank code and press the **<Tab>** key or select it from the pick list.
3. Click the **Ok** button.
4. The system displays the message "Record Cancelled...Click Ok to Continue".

Cancel action is done by the teller who wants to nullify the action (add, modify, delete or amend) done by him on a record and does not want to send the same for authorization. This 'cancel' action can be done only by the teller who has done the initial (add, modify, delete or amend)

maintenance. When the teller cancels the record, the system deletes the 'Unauthorized' record from the table.

To amend the bank code

1. Select the **Amend** mode.
2. Type the bank code and press the **<Tab>** key or select it from the pick list.
3. Modify the relevant information and click the **Ok** button.
4. The system displays the message "Record Amended...Authorisation Pending...Click Ok to Continue".

Amend action is used by the teller who wants to do further changes to the record which has been modified by him earlier but before authorization by the supervisor.

System will allow amending of non-key fields. Key fields cannot be modified or altered. When a record is amended, system will record the changes in the 'Unauthorized' record in the table. Hence, till the time of authorization, the table would contain 2 rows for the same key field namely 'Authorized' record and 'Unauthorized' record.

When the authorizer authorizes the changes, the system would delete the 'Authorized' record from the table and replace the same with the 'Unauthorized' record and change the status to 'Authorized'.

To authorize the bank code

1. Select the **Authorize** mode.
2. Type the bank code and press the **<Tab>** key or select it from the pick list.
3. Click the **Ok** button.
4. The system displays the message "Record Authorized...Click Ok to Continue".

Authorize action is done to accept the action (add, modify, delete or amend) done on a record. When a record is authorized, system will delete the existing 'Authorized' row and change the status of the 'Unauthorized' record to 'Authorized'.

To view the bank code

1. Select the **Inquiry** mode.
2. Type the bank code and press the **<Tab>** key or select it from the pick list.
3. The system displays the bank code details.

1.14. Standard Transaction Procedures

The procedure for the transactions in **Oracle FLEXCUBE** is explained below. The key fields for the respective transaction screen have to be entered. For example, the standard procedure for the Cash Deposit is as follows:

To deposit cash in CASA account

1. Type the account number and press the **<Tab>** key.
2. Select the Txn Ccy from the drop-down list and type the Txn Amount and click the **Ok** button.
3. The system displays the message "Authorisation Required. Do You Want to Continue"
4. The system displays the **Authorization Reason** screen.
5. Enter the relevant information and click the **Grant** button.
6. The system displays the transaction number. The transaction number is system generated that uniquely identifies each transaction performed by a teller and can be used for tracking the transaction.

1.15. Authorisation Procedures

You can define the following bank level parameters for authorisation:

- **Parallel Authorization:** This parameter will allow transaction to be authorised by a same level or higher level user belonging to the same class.
- **Re-enter Transaction Amount:** This parameter will require the authorizer to input the transaction amount before authorizing a transaction done through specific options.

Authorisation can be broadly classified into following four types:

1. Local Authorisation
2. Remote Authorisation
3. Centralised Authorisation
4. Deferred Authorisation

1.15.1. Local Authorisation

Local authorisation is used when the authoriser authorises the transaction on the same location / PC as that of the person posting the transaction, without the person logging off from his session. The transaction can be authorized by a user of same level or a higher level belonging to the same class, based on the 'Parallel Authorization' parameter value. A user can be initiator of a transaction as well as an authorizer for same transaction type but will not have the right to authorize the transaction initiated by him. Only posting transaction screens have option for Local authorization. Re-entry of amount is not possible for local authorization.

1. Enter the relevant information in the transaction screen and click the **Ok** button.
 1. The system displays the **Authorization required** message box.

3. Click the **OK** button to continue.
4. The system displays the **Authorization Reason** screen.

Oracle Flexcube Authorization

Premature Redemption of Term Deposit.

Local Remote

Supervisor ID : SSHWETALI
Primary Password : ●●●●●●

Comments : court order

Grant Deny Cancel

7. Click the **Grant** button and the transaction will be authorised.

1.15.2. Remote Authorisation

Remote authorisation is used when the person posting the transaction has sent the transaction for authorisation to a remote location, within his branch.

The authoriser list includes user name along with the user ID and login status. The transaction will be allowed to be authorized by a user of similar level or a higher level based on the 'Parallel Authorization' parameter value. The list will not have the User ID and details of the transaction initiator as a user cannot be the maker and checker for the same transaction. A user can be an initiator of a transaction as well as an authorizer for same transaction type but will not have the right to authorize transaction initiated by him. Only an initiator can change the authorizer for a transaction if the request for authorization is unanswered.

The remote authorisation process is divided into three stages.

Teller Activities

1. Enter the relevant information in the transaction screen and click the **Ok** button.
2. The system displays the **Authorization required** message box.

3. Click the **OK** button.
4. The system displays the **Authorization Reason** screen.

5. Select the **Remote** option.
6. Select the authoriser ID to whom the transaction is to be sent for authorisation from the **User Id** column drop-down list.
7. The system displays the message, "Transaction sent for Authorization". Click the **Ok** button.

Supervisor Activities

The authoriser can view only those transactions which are sent to him/her for authorization.

1. Type the fast path **6006** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Search Electronic Journal** or **My To Do List** link provided in the menu option.

2. The system displays the **Search Electronic Journal** screen.
3. Select the **Teller ID** from the pick list.
4. Click the **Remote Authorisation** option.
5. Click the **Fetch** button. The system displays all the transactions sent by the teller for authorization.

12. Click **Grant** button for record authorisation.

1.15.3. Centralised Authorisation

Centralised authorisation is a security enhancing setup which can be enabled in **Oracle FLEXCUBE** for providing additional authorizations when predefined reasons are encountered in online transactions by a group of supervisors, preferably from those located centrally.

This level of authorization is subsequent to and in addition to the local/remote authorization which would have been provided for the transaction to confirm the overrides.

The predefined reasons are defined in the branch database in an internal table called ba-auth-reason-mast table.

Centralised authorization is done by a specific transaction which can be accessed only by certain supervisors as identified in the Security Management System (SMS) setup. Supervisors accessing this transaction can identify the transaction(s) to be authorised by using the from branch, transaction code, customer id and account number combination.

The centralised authorization process is divided into the following steps namely:

If auto-authorization is disabled:

Step	Activity By	Activity Description
A	Teller	Teller performs online transaction from the branch. If system encounters conditions requiring local/remote authorization, transaction will proceed to step B. If system does not encounter any conditions requiring local/remote authorization but encounters centralised authorization requirement, system will proceed to step D.
B	Supervisor	Supervisor approves the transaction using local authorization or remote authorization. If local authorization is provided, system proceeds for further processing.
C	Teller	Teller resubmits the approved transaction from the Electronic Journal, for transactions sent for remote authorization. System encounters reasons requiring central authorization. Teller sends the transaction for central authorization.
D	Supervisor	Supervisor access the central authorization transaction and authorizes the transaction waiting for authorization.
E	Teller	Teller resubmits the approved transaction from the Electronic Journal and completes the transaction.

If auto-authorization is enabled:

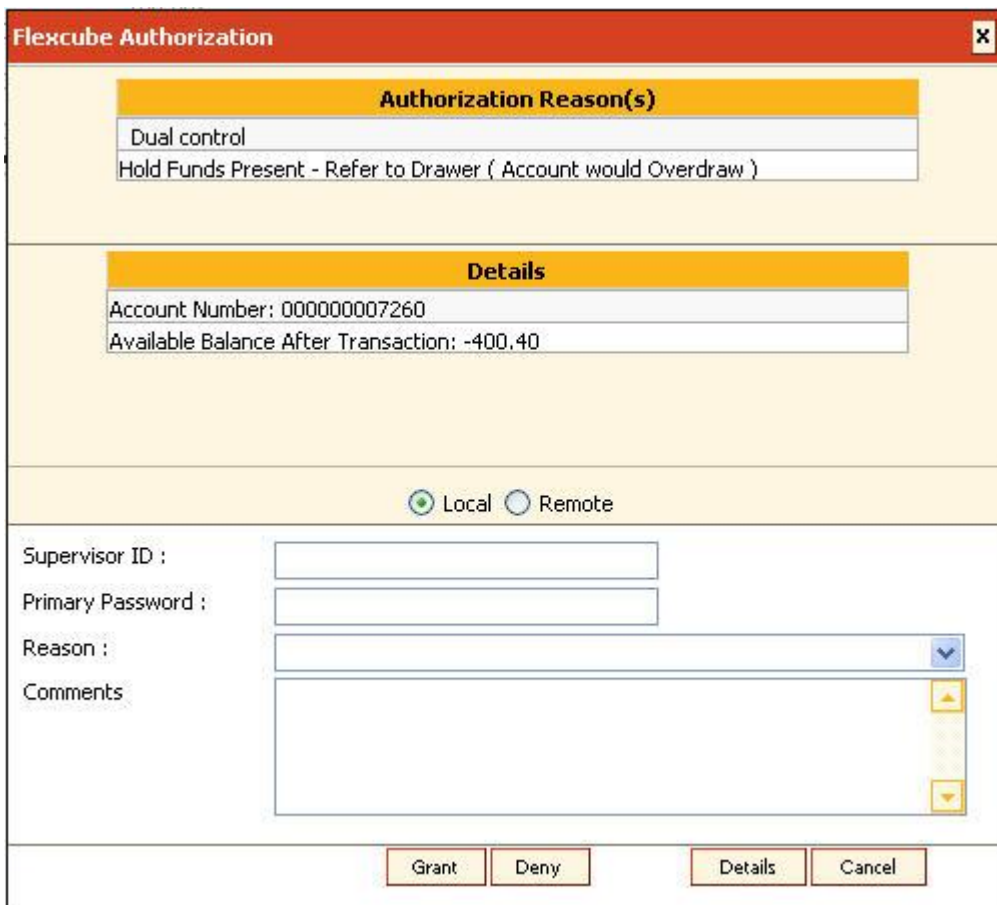

Step	Activity By	Activity Description
A	Teller	Teller performs online transaction from the branch. If system encounters conditions requiring local/remote authorization, transaction will proceed to step B. If system does not encounter any conditions requiring local/remote authorization but encounters centralised authorization requirement, system will proceed to step D.
B	Supervisor	Supervisor approves the transaction using local authorization or remote authorization. If local authorization is provided, system proceeds for further processing.
C	Teller	System encounters reasons requiring central authorization. Teller sends the transaction for central authorization.
D	Supervisor	Supervisor access the Central authorization transaction and authorizes the transaction waiting for authorization.

Teller Activities

1. Enter the relevant information in the transaction screen and click the **Ok** button.
2. The system displays the **Authorization Required** message box.

3. Click the **OK** button.
4. The system displays the **Authorization Reason** screen.

5. Select the **Remote** option.
6. The system displays the list of supervisors.
7. Click on the appropriate supervisor.
8. The system displays the message, "Transaction Sent For Authorization". Click the **Ok** button.

- The system displays the transaction sequence number. Click the **OK** button.

Supervisor Activities

At Local Branch:

The supervisor authorises the transaction done by the teller locally or remotely. For more information on Local and Remote authorization refer to **Local Authorization** and **Remote Authorization** earlier in this chapter.

At Central Location:

- Navigate to the **Centralised Authorization** screen using the fast path 4501.
- Transactions to be authorized can be filtered by entering one or more of the following:
 - From Branch and To Branch
 - Mnemonic
 - Customer ID
 - Account No
 - Teller ID

7. Click the **Submit** button to post the transaction.
8. The system displays the transaction sequence number.
9. Click the **Ok** button.
10. The system displays the documents screen.

1.15.4. Deferred Authorisation

Deferred authorisation is used for maintenance transactions. The transaction will be allowed to be authorized by a user of same level or a higher level belonging to the same class based on the 'Parallel Authorization' parameter value. A User can be initiator of a transaction as well as an authorizer for same transaction type but will not have the right to authorize transaction initiated by him/her. Any checker will be able to see unauthorized maintenance transactions requiring deferred authorization in authorize mode. For more information refer to Standard Maintenance Procedures in the **Oracle FLEXCUBE Introduction** User Manual.

Note: While authorising a transaction, the system displays various authorisation reasons depending on certain conditions. For example: Account is dormant, Hold funds present, Premature Redemption of Term Deposit, etc. Refer the Authorisation Reason screen.

1.16. Common Screens

This topic includes the details of the following screens available in **Oracle FLEXCUBE**:

- Service Charges Details
- Instrument Details
- Cheque Details
- Inventory Details
- Cost Rate Details
- User Defined Fields
- Negotiate
- Document Receipt
- IFSC Lookup
- Handle FCY

Common Screen refers to those screens which could find an appearance in most of the transactions having a financial impact. For all those transactions that require input or modification of default Service Charges or Inventory details or Cheque Details or Traveler's Cheque, the screen mentioned shall be used.

The service charge, inventory details and cheque details screens are invoked when the respective tabs on the transaction screen is clicked. The display of these respective tabs is dependant upon the setup. For example, in the following figure, the **Service Charge Details** tab is enabled.

The Service Charges transaction definition option can be attached to options like **Cash Deposit** (Fast Path:1401), **GL Miscellaneous Debit against Cash** (Fast Path: 1060), etc.

Collection Mode	<p>[Toggle]</p> <p>If the field is marked as Y then that group will get linked and if the field is marked as N then that group will get de-linked.</p>
Collection Mode ccy	<p>[Display]</p> <p>This field displays the selected collection amount.</p>
Total (Lcy)	<p>[Display]</p> <p>This field displays the total service charge to be applied in local currency.</p>

Column Name	Description
Rule Details	
Rule ID	[Display] This field displays the Rule ID attached to the selected SC. An interest rule ID is a unique number, which represents the installment rule.
Original Value	[Display] This field displays the original amount of the service charge.
Rule Returned	[Display] This field displays the rule returned description for the selected service charge.
Rule Returned Value	[Display] This field displays the value of the rule returned.
Final Value	[Display] This field displays the final value of the service charge after the rule has been applied. <i>Final Value = Original SC Value - Rule Returned Value.</i>
Reason	[Display] This field displays the reason for charging of SC.

Click the **Ok** button to apply the new or modified service charges to the transaction.

1.16.2. Instrument Details

The screenshot shows a window titled "Instrument Details*" with the following fields and values:

- Clearing Type : Local 3 day float
- Cheque No : 1
- Cheque Literal : Local Cheque Deposit
- Cheque Date : 20/03/2008
- Routing No : 1001001
- Bank : 100 Canara
- Drawer Acct No : 000000002220
- Branch : 1001 CANARA1
- Value Date : 01/05/2008
- Sector : 201 Java
- Late Clearing : N
- Chg Commission : Yes
- Instr. Sub-type : 00 - Crossed Cheque

An "OK" button is located at the bottom right of the window.

Field Description

Field Name	Description
Clearing Type	<p>[Mandatory, Drop-Down]</p> <p>Select the clearing type from the drop-down list.</p> <p>The bank can set up multiple clearing types, where cheques that are required to be cleared at different times of the day are deposited so that they can be treated differently. All processes for a cheque from outward clearing, running of value date, and marking late clearing, etc. takes place on the basis of the clearing type. Refer to the Clearing Type Maintenance (Fast Path: STM64) option in Definitions User's Guide.</p>

Field Name	Description
Cheque No	<p>[Mandatory, Numeric, 12]</p> <p>Type the cheque number, which is present on the MICR line of the instrument.</p> <p>When the cheque is deposited into any payee's account, the cheque number is used to ensure that the duplicate entries are not made in the system (that the same cheque is not deposited multiple times in the system.). On deposit of every cheque, cheque number, routing number and drawer account number (all the three are present on the MICR line) are used to check for the presence of duplicate instrument. If duplicate instruments are found, cheque deposit will be rejected unless the earlier cheques are all marked as Returned.</p>
Cheque Literal	<p>[Mandatory, Drop-Down]</p> <p>Select the cheque literal from the drop-down list.</p>
Cheque Date	<p>[Mandatory, dd/mm/yyyy]</p> <p>Type the cheque date.</p> <p>This date has to be less than or equal to current posting date. This date is used in checking validity of the instrument.</p> <p>Instruments become stale if the cheque date is prior to the current posting date by the stale period (defined in the Settlement Bank Parameters (Fast Path:STM59) option).</p>
Routing No	<p>[Mandatory, Numeric, Nine]</p> <p>Type the routing number of the cheque.</p> <p>The routing number is a combination of the bank code, the branch code and the sector code from where the instrument was drawn.</p> <p>The combination can be obtained from the Routing Branch Maintenance (Fast Path: STM54) option.</p> <p><i>Routing Number = Sector Code / Bank Code + Branch Code</i></p> <p>For a deposited cheque, this routing number is used by the system to determine the float days and thus the value date of the instrument.</p> <p>For an inward clearing cheque, this routing number should belong to the bank. The order, in which the codes in the routing number are to be entered, is determined by the set up using the Settlement Bank Parameters screen.</p>
Bank	<p>[Display]</p> <p>This field displays the bank name to which the cheque belongs, corresponding to the bank code extracted from the routing number.</p>

Field Name	Description
Branch	<p>[Display]</p> <p>This field displays the branch name from where the cheque is drawn, corresponding to the branch code and bank code extracted from the routing number.</p>
Sector	<p>[Display]</p> <p>This field displays the clearing sector name to which the cheque branch belongs, corresponding to the sector code extracted from the routing number.</p> <p>Sector Codes are defined using Sector Codes Maintenance (Fast Path: BAM41) option.</p>
Drawer Acct No	<p>[Mandatory, Numeric, 16]</p> <p>Type the account number on which the cheque is drawn.</p> <p>The drawer account number is the account number of the person who has issued the cheque. The drawer account number which is generally printed on the cheque leaf, is the account from where the funds will come into the beneficiary account. If the cheque is drawn on a different bank, the drawer account number will not be validated by the system. If the cheque is drawn on your own bank, the system will validate the drawer account number for its correctness.</p>
Value Date	<p>[Display]</p> <p>This field displays the value date of the cheque.</p> <p>When a cheque is deposited on an account, the system uses the routing number to check the float days from the Endpoint Float Maintenance (Fast Path: BAM28) option and the working days from the Endpoint-Clearing Branch Composite Calendar (Fast Path: BAM33) option to generate the value date of the cheque.</p> <p>The value date is the date on which the cheque is expected to be cleared. On the value date, the system updates the customer's available balance and credits the account with the cheque amount and reduces the un-cleared funds on the account.</p> <p>For more information on maintaining value date, refer to the Clearing Definitions option in the Definitions User's Guide.</p>

Field Name	Description
Late Clearing	<p>[Display]</p> <p>This field displays the values Y or N for late clearing.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Y - If the late clearing is marked • N - If the late clearing is not marked <p>This field displays Y when a customer deposits a cheque after the clearing cut-off time is over, for current posting date for the selected clearing type.</p> <p>The instruments that are deposited in late clearing will be considered as 'Late for clearing'. Such instruments will be treated as deposit for the next working date for all value date calculation.</p>
Chg Commission	<p>[Display]</p> <p>This field is currently not used in any processing.</p>
Instr. Sub-type	<p>[Mandatory, Drop-Down]</p> <p>Select the instrument sub type from the drop-down list.</p> <p>The values in the drop-down are defaulted from the Site Instrument Type field maintained in the Instrument Type Xref (Fast Path: STM58) option.</p>

Click the **Ok** button to apply the new or modified service charges to the transaction. Click the **Cancel** button to reject the instrument details.

1.16.3. Cheque Details

The screenshot shows a window titled "OBU CASA Funds Transfer Request". Inside the window, there is a section titled "Cheque Details". Below this title, there are two input fields: "Cheque No" with the value "988766566" and "Cheque Date" with the value "10/04/2008". At the bottom right of the window, there are "Ok" and "Cancel" buttons.

Field Description

Field Name	Description
Cheque No	[Mandatory, Numeric, 12] Type the cheque number issued on the From Account. System will validate the cheque to confirm if it has been issued on the From account and is in unpaid status.
Cheque Date	[Mandatory, dd/mm/yyyy] Type the date of the cheque. The system will default to the branch date. If the date is modified, the same should be less than the branch date.

Click the **Ok** button to accept the cheque details as a part of the transaction. Click the **Cancel** button to reject the cheque details.

1.16.4. Inventory Details

Inventory Details*

Stock Code : Stock SubType :

Instrument Type : Ccy Code :

Issuer Code : Total Amount :

Denomination Details :

Denm	Series Number	Start Number	End Number	Quantity
5		0	0	0
20		0	0	0
50		0	0	0
100		0	0	0
500		0	0	0

OK

Field Description

Field Name	Description
Stock Code	[Display] This field displays the stock code representing the inventory.
Stock Sub Type	[Display] This field displays the sub-type of the instrument.
Instrument Type	[Display] This field displays the instrument type of the inventory.
Ccy Code	[Display] This field displays the currency of the inventory. This is defaulted from the transaction screen.

Field Name	Description
Issuer Code	[Display] This field displays the issuer code of the inventory. This is defaulted from the transaction screen.
Total Amount	[Display] This field displays the total amount for which the inventory is being purchased. This is defaulted from the transaction screen.
Denomination Details	
Denm	[Display] This field displays the denomination detail that is defaulted from the Stock Codes Maintenance (Fast Path: IVM01) option for the particular issuer and particular currency.
Series Number	[Mandatory, Numeric, 10] Type the series number of the inventory which is to be purchased.
Start Number	[Mandatory, Numeric, 10] Type the start number of the inventory belonging to the respective series number which is to be purchased.
End Number	[Display] This field displays the end number that is calculated by the system depending upon the start number and quantity.
Quantity	[Display] This field displays the quantity of the inventory which is purchased.

Click the **Ok** button to accept the inventory details as a part of the transaction. Click the **Cancel** button to reject the inventory details.

1.16.5. Cost Rate Details

As part of the "Branch Profitability" requirements, cost rates needs to be captured transaction and account currency wise, for FX transactions.

The screenshot shows a window titled "Outgoing Payment Transaction(Message)" with a yellow header. Below the header is a section titled "Cost Rate Details". This section contains four input fields arranged in a 2x2 grid:

- Top-left: "Account Ccy :" with a dropdown menu showing "INR" and a small downward arrow.
- Top-right: "Acct Ccy Cost Rate :" with an empty text input box.
- Bottom-left: "Txn Ccy :" with a dropdown menu showing "INR" and a small downward arrow.
- Bottom-right: "Txn Ccy Cost Rate :" with an empty text input box.

Below the input fields, there are two text boxes containing the value "1.0", one under "Acct Ccy Cost Rate" and one under "Txn Ccy Cost Rate". At the bottom right of the window, there is an "Ok" button.

Field Description

Field Name	Description
Account Ccy	<p>[Display]</p> <p>This field displays the currency assigned to the product at the product level, under which the loan account is opened.</p> <p>All the entries posted in the account are in the account currency. The exchange rate values must be defined and downloaded.</p> <p>For example, if the currency assigned to a Loan product is USD (US Dollar), the account opened under that product has USD as its account currency, by default.</p>

Field Name	Description
Acct Ccy Rate	<p>[Display]</p> <p>This field displays the rate at which the account currency is converted to the local currency of the bank.</p> <p>The teller's right to change the account currency rate is configurable at the bank level. If such rights are not assigned to the teller, this field becomes non-editable.</p> <p>If the account currency and the local currency are same, the field takes the default value as 1, which cannot be modified.</p>
Acct Ccy Cost Rate	<p>[Display]</p> <p>This field displays the cost rate for the account currency that is defaulted to the mid rate for the currency.</p>
Txn Ccy	<p>[Mandatory, Drop-Down]</p> <p>Select the currency of the cheque from the drop-down list.</p> <p>This field, by default, displays the account currency as the transaction currency.</p> <p>While posting the transaction entries to the account, the transaction currency is converted into the account currency and for posting the GL entries it is converted into the local currency of the bank.</p>
Txn Ccy Rate	<p>[Display]</p> <p>This field displays the rate at which the transaction currency is converted to the local currency of the bank.</p> <p>The teller's right to change the transaction currency rate is configurable at the bank level. If such rights are not assigned to the teller, this field becomes non-editable.</p> <p>If the transaction currency and the local currency are same, the field takes the default value as 1, which cannot be modified.</p>
Txn Ccy Cost Rate	<p>[Display]</p> <p>This field displays the cost rate for transaction currency that is defaulted to the mid rate for the currency.</p>

Click the **Ok** button to accept the inventory details as a part of the transaction. Click the **Cancel** button to reject the inventory details.

1.16.6. User Defined Fields

While working with **Oracle FLEXCUBE**, there are additional fields which are required to be used, either for convenience or to suit the requirements of the bank. The **User Defined Fields** option, allows the user to add fields based on the specifications.

Based on the requirement and the nature of the field, you can specify default values and validations for the field. **Oracle FLEXCUBE** validates all entries made to the field against the validations defined for a field.

The screenshot shows a window titled "TD Interest Payout Inquiry". The fields are as follows:

- Account No : 000000030775
- Account Ccy : INR
- Acct Ccy Rate : 1.00000
- Deposit No : 4
- Int Payout Amount : 0.09
- Tax Calculated : 0.00
- Net Interest Payout : 0.09
- Txn Amount : 0.09
- User Reference No : 1
- Narrative : TD, Interest Payout By Cash

At the bottom left, there is a tabbed interface with "Other Transactions" selected and "User Defined Fields" visible. At the bottom right, there are "Ok" and "Cancel" buttons.

If you click the **User Defined Fields** tab, the system will display the **User Defined Fields** screen.

The screenshot shows a window titled "TD Interest Payout Inquiry". Inside, there is a section labeled "UDF Details". Below this section, there is a label "*Limit Breached:" followed by a text input field containing the character "N". At the bottom right of the window, there are two buttons: "Validate" and "Back".

Field Description

Field Name	Description
Limit Breached	[Display] This field displays the status as Y if the limit amount is breached.

Click the **Validate** button to validate the UDF details.

1.16.7. Negotiate

Field Description

Field Name	Description
Exchange Rate	[Display] This field displays the current exchange rate.
Comments	[Optional, Alphanumeric, 256] Type the comments if any.
New Exchange Rate	[Display] This field displays the exchange rate after it has been negotiated.

You can click the **Negotiate** button to get a better exchange rate as compared to the current rate.

The Treasurer can view the exchange rate change request using the **Treasury Negotiation Worklist** (Fast Path: BA030) option. The treasurer has the right to reject or negotiate the exchange rate.

1.16.8. Document Receipt

This screen is displayed at the end of some transactions. For example, While using the **Future Dated Cash Deposit** (Fast Path: 1411) option at the end of the transaction the system will display the **Document Receipt** screen. It is used to print the details of the transaction.

Documents			
Sr No	Doc Id	Description	Printed
1	137	Receipt	N

Cancel

Field Description

Field Name	Description
Sr No	[Display] This field displays the serial number.
Doc Id	[Display] This field displays the document Id.
Description	[Display] This field displays the description.
Printed	[Display] This field displays the whether the transaction details have been printed or not.

1.16.9. IFSC Lookup

The IFSC code is a unique identification code for the branches across a bank. It is used for NEFT and RTGS transactions.

RTGS-NEFT-Payment Inquiry Screen*

Branch Code : 9999 User Id :
 Start Date : 30/06/2008 End Date : 30/06/2008

Field Name	Description
IFSC Code	<p>[Optional, Drop-Down, Alphanumeric, 11] Select the condition from the drop-down list. The options are:</p> <ul style="list-style-type: none"> • Contains • Does Not Contain • Equal to • Not Equal To • Starts With • Ends With • Is Blank <p>Type the IFSC (Indian Financial System Code) code in the adjacent field. It is a unique code across the branches of banks in India for NEFT and RTGS.</p>
Bank Name	<p>[Optional, Alphanumeric, 40] Type the name of the bank.</p>
Branch Name	<p>[Conditional, Alphanumeric, 120] Type the name of the branch. This field is enabled if the Bank Name is entered.</p>

Click the **Find** button. The system displays the list of IFSC code for the respective bank and branch name.

1.16.10. Handle FCY

This tab is enabled if the controls are defined on the Transaction Definition Screen (FP: TC001) and when transaction currency selected is FCY in the transaction mnemonic screen.

1. Click on Handle FCY Tab present at the bottom of the main screen.
2. The System will display **Handle FCY** screen as shown below.

Field Description

Field Name	Description
From Ccy	[Display] This field displays the currency of the account that is debited for the FCY Cash Withdrawal Transaction (ACY).

Field Name	Description
To Ccy	[Display] This field displays the local currency. This will always be the LCY of the branch.
From Ccy Rate	[Display] This field displays the FX midrate between the ACY & LCY.
To Ccy Rate	[Display] This field displays the LCY Ccy rate. This value will always be 1.00000.
From Ccy Amount	[Numeric, 13, Two] Type the value for FCY amount, for this the branch teller wants to handover the change to the customer. Amount should not be greater than the transaction amount
To Ccy Amount	[Display] This field displays the equivalent LCY for the FCY Amount entered in the FCY Amount field.
Narrative	[Alphanumeric, 40] Type the transaction description. As a narrative enrichment, the standard narration will be suffixed with 'FCY Cash Handling - <Account Number debited>'

- Fill in the required fields.

Handle FCY Change Details*

From Ccy : <input style="width: 50px;" type="text" value="USD"/>	To Ccy : <input style="width: 50px;" type="text" value="RMB"/>

4. Click on **OK** button present at the bottom of the screen
5. The system will display the main screen.
6. Click on **OK** button.
7. The System will display "**transaction sequence number** " on a pop up.
8. Click **OK**

1.17. Customer Search

This option allows you to search for account information based on customer search. A list of accounts belonging to that customer is displayed, and each record gives the status of that particular account. This option would be useful to the user when the customer contacts the bank to check the status of their account, and is unable to provide the account number.

This option has a primary search which is mandatory and secondary (refined) optional search. The user may enter a combination of the values based on the options available in the advance and refined search. The numbers of combinations possible are as follows:

Primary Search Criteria	Secondary Search Criteria
Customer short name	Date of birth/Date Incorporated
Customer first name	Date of birth/Date Incorporated
National ID (Customer IC)	Date of birth/Date Incorporated
Customer last name	Mobile number
Customer first name	Home phone
IBAN	Currency

Customer ID, IBAN and ATM card number is unique for every customer, hence when it is selected as the search string the user has to input exact string to get the record.

Wild card search is supported for the search based on Customer short name, Customer first name, customer last name and national Id (Customer IC).

For Example:

Search by date of birth / date incorporated:

If the user enters the DOB / date incorporated as 01/01/1965 (DD/MM/YYYY) and it is entered along with the advance search criteria of first name as George then **Oracle FLEXCUBE will** fetch all the records where the registration date or the date of birth of a customer is 01/01/1965 and the first name is George.

The search result will be as follows:

Customer IC	Customer ID	First Name	Customer Type	DOB/Registration date	ATM card number	Postal Address
8159	600918	George	Individual	01/01/1965	44793705 21504778	28,Billstreet,New York
1253	315789	George	Corporate	01/01/1965	61763528 45789887	25,Billstreet, New York
4789	678215	George	Corporate	01/01/1965	50791248 32594578	18, Hamilton street, New York

Definition Prerequisites

- 8053 - Customer Addition

To perform customer search

1. Type the user name and password to login.
2. The system displays the **Oracle FLEXCUBE** screen.

Oracle FLEXCUBE

The screenshot displays the Oracle FLEXCUBE Customer Search interface. At the top left, there is a 'Fast Path' field with a 'Go' button. Below this is the 'SELECTED CUSTOMER' section, which includes input fields for 'Customer Id', 'First Name', and 'Last Name', along with 'Find', 'Clear', and 'Advance' buttons. To the right of these fields is a 'Search' section with a grid for customer details: Customer Id, Customer Name, Category, Gender, Date of Birth, Customer Combined Total Withdrawal Balance, Officer Name, and Address. A 'Customer Memo' field is also present. On the far right, there are 'Photo' and 'Autograph' buttons. Below the 'SELECTED CUSTOMER' section is the 'ALL TRANSACTION' section, which contains a tree view with 'Global Definitions' and 'Transaction Processing'. At the bottom left, there are 'MY TRANSACTION' and 'MY TODO LIST' sections. The main content area is titled 'Account Summary' and displays 'No Records Found' with a large 'ORACLE FLEXCUBE' watermark. A status bar at the bottom shows '0 / 0'.

3. Enter the search string in the **Selected Customer** grid and click the **Find** button. The system displays the account details for the selected customer. For example: Enter a search string in the **Customer ID** field.

MY TO DO LIST

Field Description

Field Name	Description
------------	-------------

User can enter any of the following search criteria from the **SELECTED CUSTOMER** section mentioned below

Customer Id	[Optional, Numeric, 10] Type the customer ID in this field. A customer ID is an identification number, generated by the system after customer addition is completed successfully. This running number, unique to a customer across the system, is generated after the system has identified the Customer IC and Customer Category combination to be non-existent in the system. This ID is used for searching and tracking the customer in the system.
First Name	[Optional, Alphanumeric, 40] Type the first name of the customer.
Last Name	[Optional, Alphanumeric, 40] Type the last name of the customer.
Customer Id	[Display] This field displays the customer ID.

Field Name	Description
Customer Name	[Display] This field displays the full name of the customer. The full name of the customer is defaulted from the Customer Addition (Fast Path: 8053) option. For Example: If the full name entered in the search criteria is - George, then Oracle FLEXCUBE will display all the customer's with the name as 'George' along with all the other details.
Category	[Display] This field displays the category of a customer. For Example: Individual, Corporate, etc.
Gender	[Display] This field displays the gender of the customer.
Date of Birth	[Display] This field displays the date of birth of the customer.
Customer's Combined Total Withdrawal Balance	[Display] This field displays the customer combined balance in local currency. For more information, refer to Calculation Details 1 at the end of this topic.
Officer Name	[Display] This field displays the name of the officer.
Address	[Display] This column displays the residential address of the customer.

Search-CASA

Note: For better readability / understanding the screen shots are provided in 2 separate rows. While working in **Oracle FLEXCUBE** you have to use the horizontal scroll bar to view all the fields.

Field Description

Column Name	Description
CASA	
Account No	[Display] This column displays the account number of the customer.
Product Name	[Display] This column displays the product name.

Column Name	Description
Product Code	[Display] This column displays the code of the product under which the customer has an account.
Home Branch	[Display] This column displays the name of the home branch under which the customer has an account.
Currency	[Display] This column displays the currency assigned to product under which the account is opened. All the entries are posted in the account in the account currency. The exchange rate values are defined and downloaded. For example, if the currency assigned to a CASA product is USD (US Dollar), the account opened under that product has USD as its account currency, by default.
Available Bal	[Display] This column displays the Available/Principal/Outstanding balance in the account. In case of CASA account, the available balance under the customer's account will be displayed. The amount will be displayed in the currency of the account. In case of TD account, the balance is displayed as the principal balance. The principal balance is the original amount of the Term Deposit. The amount will be displayed in the currency of the account. In case of Loan account, the balance is displayed as O/S Balance. The O/S balance is the outstanding amount of the loan. The amount will be displayed in the currency of the account.
Book Balance	[Display] This column displays the book balance of the account.
Unclear Funds	[Display] This column displays the uncleared amount for the account.
Future Dated Cash Deposit	[Display] This column displays the future dated cash deposit amount.
Bills	[Display] This column displays the
Blocking Code	[Display] This column displays the blocking code.
Account Status	[Display] This column displays the status of the account.
Classification Status	[Display] This column displays the classification status of the account.
Account Rel	[Display] This column displays the relation of the customer with the account.

Column Name	Description
IBAN	[Display] This column displays the IBAN number.
Account Open Date	[Display] This column displays the date on which the account is opened.
Account Activation Date	[Display] This column displays the date on which the account is registered in the name of the account holder and debit transactions are allowed.
Relationship Date	[Display] This column displays the date on which customer's relation with account is registered or modified. For example: This will be the date on which the account is opened with ownership as SOW or the date on which customer is linked to an account with ownership of either JAF/JAO or JOF/JOO.
No of Months Since Account Activation	[Display] This column displays the number of months since the account is activated.
Combined Total withdrawal Balance (ACY)	[Display] This field displays the combined balance for the given CASA account in account currency. For more information, refer to Calculation Details 2 at the end of this topic.
Combined Total withdrawal Balance (LCY)	[Display]] This field displays the combined balance for the given CASA account in local currency. For more information, refer to Calculation Details 2 at the end of this topic

Field Description

Field Name	Description
------------	-------------

User can enter any of the following search criteria mentioned below

- | | |
|--------------------|--|
| Customer Id | [Optional, Numeric, 10]
Type the customer ID in this field.
A customer ID is an identification number, generated by the system after customer addition is completed successfully. This running number, unique to a customer across the system, is generated after the system has identified the Customer IC and Customer Category combination to be non-existent in the system. This ID is used for searching and tracking the customer in the system. |
| Account No | [Optional, Numeric, 16]
Type the account number of the customer. |
| National Id | [Optional, Alphanumeric, 30]
Type the national ID of the customer |
| First Name | [Optional, Alphanumeric, 40]
Type the first name of the customer. |
| Last Name | [Optional, Alphanumeric, 40]
Type the last name of the customer. |
| Short Name | [Optional, Alphanumeric, 20]
Type the short name of the customer. |

Field Name	Description
NLS Name	[Optional, Alphanumeric, 40] Type the last name of the customer.
ATM Card Number	[Optional, Alphanumeric, 16] Type the valid ATM card number of the customer.
IBAN	[Optional, Alphanumeric, 34] Type the IBAN. All the accounts which belong to the IBAN entered are displayed.
Refined Search	
Mobile No	[Optional, Numeric, 30] Type the mobile number of the customer.
Home Phone	[Optional, Numeric, 15] Type the home phone number of the customer.
Date of Birth	[Conditional, Pick List, dd/mm/yyyy] Select the date of birth of the customer from the pick list. It cannot be a future date. This field is disabled if data is entered in the Date Incorporated field.
Date Incorporated	[Conditional, Pick List, dd/mm/yyyy] Select the date of incorporation from the pick list. This field is disabled if data is entered in the Date of Birth field.
Currency	[Conditional, Drop-Down] Select the currency, as an additional search criteria with IBAN , from the drop-down list. This field is enabled if the search criteria are IBAN . The currency details are maintained in the Currency Codes Maintenance (Fast Path: BAM56) option.
Search Result	
Customer IC	[Display] This column displays the identification code of the customer. A customer IC along with customer type is a unique method of customer identification across the bank (covering all branches). Based on the combination, the system can identify the customer as an existing customer even when the customer opens a new account in another branch. A social security number, passport number, birth certificate or corporate registration can be used as a customer IC.

Calculation Details 1:

Customer's Combined Total Withdrawal Balance is be calculated as below

- Total Balances of all owned CASA accounts

(Total Balance = Available Balance - Minimum. Balance. Required - Hold Balance + Sweep In Amount (Lien) + Drawing Power+ Advance against uncleared funds Limit + Confirmation Amount).

+

- Balance of all owned TD accounts

(Principal Balance - Principal Lien Amount).

+

- Net Balance of all Sweep in Provider non-owned CASA accounts

(Net Balance = Available Balance - Minimum. Balance. Required - Hold Balance + Drawing Power + Sweep In Amount (Lien) + Confirmation Amount).

+

- **Balance of all Sweep In provider non-owned TD accounts**

(Principal Balance - Principal Lien Amount).

+

- **Balance of all 2-Way Sweep In Provider non-owned TD accounts**

(Principal Balance - Principal Lien Amount).

Calculation Details 2:

Combined Total Withdrawal Balance for a given CASA account is calculated as below :

- **Total Balance of a CASA account**

(Total Balance = Available Balance - Minimum. Balance Required - Hold Balance + Sweep In Amount (Lien) + Drawing Power+ Adv against uncleared funds Limit + Confirmation Amount).

+

- **Linked CASA Sweep In Bal.**

(Net Balance of all Sweep in Provider CASA accounts. Net Balance = Available Balance - Minimum Balance. Required - Hold Balance + Drawing Power + Sweep In Amount (Lien) + Confirmation Amount).

+

- **Linked TD Sweep In Bal.**

(Balance of all Sweep In provider TD accounts. Balance of TD account = Principal Balance - Principal Lien Amount).

+

- **Linked 2-Way TD Sweep In Bal**

(Balance of all 2-Way Sweep In TD accounts. Balance of TD account = Principal Balance - Principal Lien Amount).

1.19. Glossary

Glossary Term	Description
ACH	Automated Clearing House: It is an electronic payment and information delivery system which transfers dollar amounts and related information between business, private and government sectors.
ADB	Average Daily Balance
AMB	Average Monthly Balance
AO	Account Officer
APS	Application Processing System
APY	Annual Percentage Yield: The formula for Annual percentage yield: $APY = \{(1+r/m)^m - 1\} * 100$ Where, r : Rate of interest per annum m : Compounding frequency (# of Times interest is compounded in a Year)
APYE	Annuual Percentage Yield Earned: The formula for APYE : $100 [(1 + Interest/Principal)^{365/Days \text{ in term}} - 1]$ The Days in Term figure is governed by the Accrual Basis
AQB	Average Quarterly Balance
Back to back loan	The loan against TD
BCL	Business Line of Credit
BIC	Bank Identification Code
Cash pooling	The salient features are : 1) It is a multi-tiered sweep. 2) Accounts will be grouped together to form a sweep-in / sweep-out hierarchy thus sweep out instructions will be maintained for the account in layers with hierarchy specified. 3) When funds are insufficient in the sub-accounts, funds will be provided by sweep-in from the lead account to sub account as long as the balance is available in the Lead / provider account. 4) Excess funds will be swept from sub account to lead account at EOD.
Catch-up interest accrual	This represents accrual of interest from last interest accrual date to the processing date (excluding the current date)
Category	FLEXCUBE for core banking divides the batch processing into multiple categories. Each category internally contains one or more shells. Category is an internal grouping of shells. There are 3 main categories which are executed for any bank. These are Cut off (changes the system date), End of day(EOD) & BOD(Beginning of day).
CBR	Central Bank Reporting

CCD	Central Clearing Division
CDS	Cash Dispenser System
Clearing Branch	The branch which does the centralized clearing.
Clearing Minimum	The maintenance of a minimum clearing amount for each type of instrument in each currency. A deposit of an instrument for an amount less than the specified amount will be given immediate credit.
Concentration account / Provider Account	This account is the Sweep-in provider account and funds will be swept to the beneficiary / target account.
Contracted interest rate	Rate of interest at the time of TD booking
CRR	Credit Risk Rating
Daily Periodic Rate	It is the interest rate linked to the account divided by the number of days in a year as determined by the interest accrual basis set.
DCN	Data Communication Network
Deduction Plan	It is a plan for affecting deductions for an account during disbursement. A deduction plan can be linked to one or more products. Thus all the accounts under a given product will have the same deduction plan.
DIN	Debtor Identification Number
DLC	Date Last Contact
Document Plan	It is a plan for listing the documents to be collected from an account. A document plan can be linked to one or more products.
DPD	Days Past Due
Draw down	It is a method of repayment of loan arrears. In this method a loan account is linked to a savings account. Whenever there is an arrear in the loan account, the system tries to draw down sufficient funds from the savings account to cover the outstanding arrears. The drawdown is typically initiated by the loans module, in contrast to a standing instruction which is initiated by a Savings module. Additional features to the draw down method is by defining that partial draw down is allowed, or by letting the loans module raise an earmark on the Savings account.
Early Settlement	It is the premature liquidation of the loan account by paying lumpsum amount to clear all the liabilities.
EFS	Early and Final Settlement
Endpoint	The clearing house is called the Endpoint.

EOP	End of Period
EPI	Equated Periodic Installment
Escheatment	It is the law that requires banks to submit the monies/funds from bank accounts that are considered unclaimed-abandoned property (no customer initiated transactions) unless the owner acknowledges the existence of the account. The monies/funds must be sent to the appropriate state according to that states unclaimed-abandon property law.
FCC PE	Flexcube Corporate Payment Engine
Final Settlement	It is the liquidation of the loan account on or after maturity date by paying the final installment due.
Float days	Float is the number of days after which credit is given. The Bank's Float is the number of days after which credit is given to the bank by the clearing house. The Customer's Float is the number of days after which the Bank gives credit to the customers.
Floor and Ceiling Rates	The minimum and maximum interest rates allowed for accounts under the product can be set for fixed and floating interest rates. Whenever interest index rate changes beyond this range, the changes are not given effect.
GEFU	Generic External File Upload
Hand-off	It is the file extract given out from FLEXCUBE to other software.
IBAN	International Bank Account Number: It is a unique account number that is used to identify a customer's account in a financial institution internationally.
ICP	Interest Compensation Pooling Requirement
IDC	Inward Direct Credit
IDD	Inward Direct Debit
IFSC	Indian Financial System Code
IOA	Interest On Arrears
IOI	Interest Only Installment
IPI	Interest and Principal Installment
IRR	Internal Rate of Return
ISB	Inter System Bridge General Ledger
JAF	Joint and First

JAO	Joint and Other
JFAB	Joint Finance Asset Buy
JOF	Joint Or First
JOO	Joint or Other
LLP	Loan Loss Provisioning
LO	Local Office
LOB	Line of Business
LTS	Loan Transaction Services
Mudharabah	A Syariah banking product type using profit sharing concept.
NACHA	National Automated Clearing House Association: The Electronic Payments Association. A non-profit trade association, which forms the cooperative foundation for the ACH, network system through a network of Regional Payments.
NEACH	New England Automated Clearing House
NEFT	National Electronic Funds Transfer
Nisbah / Bonus	Profit sharing portion (Nisbah for Mudharabah Product / Bonus for Wadiah product)
NLS	National Language Support
Notional Pooling	This is the facility to group customer's accounts for: a. Liquidity Management b. Passing the transactions using the total group balance c. Interest Calculation on the total group account balance d. Reduction of overdraft charges.
NPL	Non Performing Loans
NRE	Non Resident (External)
ODC	Outward Direct Credit
ODD	Outward Direct Debit
ODFI	Originating Depository Financial Institution: The financial institution that processes ACH files on behalf of the Originator through the ACH network.
Originator (ACH context)	A Company or individual who initiates an ACH transaction. : The person or organization who had authorized an ODFI to transmit a credit or debit entry to the account of a receiver with an RDFI, or if the receiver is also the RDFI, to such receiver. In some cases the ODFI may also be the originator.

P&R	Pay and Receivable
PAT	Pre-Authorised Transfers
PCL	Personal Line of Credit
PDD	Projected Date of Dormancy
PDO	Permanent Dividend Order
PL	Performing Loans
PMI	Post Maturity Interest
PMO	Personal Money Orders
Post Maturity Period (Loans)	It is the phase of the loan account after the maturity date. Theoretically, if all the arrears are being paid on time, then an account should never get into this phase. Due to this reason, there is no stage of the schedule associated with this phase of the loan account. The interest rates applicable for an account can be different for this period.
PPF	Partial Pay-off: It is the payment of any principal amount before the same becomes due. The amount paid is less than the total amount of principal outstanding.
Product Expiry Date	It is the date beyond which no new accounts can be opened under a given product.
PSS	Profit Sharing System
RDFI	Receiving Depository Financial Institution: The financial institution where the receiver of an ACH entry holds an account.
Receiver (ACH context)	The individual or Company that holds an account at RDFI i.e.: an individual, organization or other entity that has authorized an originator to initiate a credit or debit entry to a transaction account held at RDFI.
Reminder Plan	It is a plan for generating reminders to be sent to customers when arrears are not paid. A reminder plan can be linked to one or more products.
Repayment Appropriation Sequence - SPLOIC	SPLOIC stands for: S- Service Charge arrear P = Penalty arrears L – Legal fees O – Outgoing type of arrear I = Interest Arrears. C = Principal arrears
Routing Number	It is the number printed on the cheque, also called MICR number (Magnetic Ink Character Recognition). This number facilitates faster clearance of the instrument. It can be configured to have the following information: Bank code, Sector, Branch Code.
RPA	Repayment Pending Appropriation (advance payment)

RTGS	Real Time Gross Settlement
RVT	Relationship Value Tagging
Schedule	The repayment plan for an account based on various parameters. It helps the customer to plan in advance for repayment.
SEPA	Single Euro Payment Area
Shell	The batch process in FLEXCUBE for core banking is done at the lowest level in programs called as shells. A shell handles a particular type of activity like interest accrual, interest posting etc.
Single Maturity Deposit	Time Deposits where no instruction is maintained for the maturity date and the deposit amount is required to be transferred to the TD matured GL
Slave Account / Target Account	This account is the Sweep in Beneficiary Account and the funds are swept from the Concentration / Provider account.
SOW	Sole Owner
Stage	It is a part of schedule. Various stages can be defined like IOI, IPI, EPI etc. A schedule is typically made up of more than one stage.
SWIFT	Society for Worldwide Interbank Financial Telecommunication
Syariah Account	It is a type of account defined for Islamic Banking Product
Syariah Banking	It is same as Islamic Banking. Some of the Syariah products are Current, Savings, TD and Loans. The difference with the conventional product is that the interest is not paid to the customer and it is shared with the customer. It is called "Nisbah" (Profit Sharing). Customer is also liable to pay tax out of Nisbah.
TAN No	Tax Deduction and Collection Account Number
Third Party accounts	These are accounts whose records exist outside FLEXCUBE.
TPD	A type of Education Savings account with special features
UTR	Unique Transaction Reference Number
VE	Voucher Entry
VRU	Voice Recognition Unit
Wadiah	A Syariah banking Product type using depository concept
ZBA	Zero Balance Account
