1.5. AC008 - Provision Inquiry and Modification for Loans and Overdraft

Using this option you can view the details of the provisioning group , rate, provisioning base and the individual provisioning amounts for a selected CASA / Loan account. The fields Discounted Cash Flow of Credit and Discounted Collateral Value can be modified based on which the provision calculation will be made. An External system will provide the data for calculation of the provision entries.

The data provided by the external system is account wise and that includes the Provisioning group, Provisioning Sub group, and Provisioning rate for the account. The data is provided as and when there is a change in any of the parameters required for provisioning. The Provision frequency is daily.

Provision is calculated from the date of account opening till the date of closure. Provisioning and GL entries will be processed on daily basis (when there is a change in any of the parameters or values). The provision is always calculated in account currency. In the case of commonly assessed group, Liquidation Value (LV) will not be taken into account for calculation of provision.

For more information refer to the Examples provided at the end of the chapter.

1. P- on balance eligibility = $500(\text{On balance}) - 300(\text{LV}) = 200(\text{A})$ $\text{A} > 0$, then provision P-on = $200(\text{A}) * 0.236$ (Provision rate) = 47.2
2. P-interest eligibility = 50 (accr.int.) $- 0$ (remaining LV) = $50(\text{B})$ $\text{B} > 0$, then provision P-i = $50(\text{B}) * 0.236$ (Provision rate) = 11.8
3. P- commitment eligibility = 20 (com.fees) $- 0$ (remaining LV) = $20(\text{C})$ $\text{C} > 0$, then provision P-c = $20(\text{C}) * 0.236$ (Provision rate) = 4.72

LV = Discounted Value of Collateral + Discounted value of Cash flow of credit .

1.6. ACM07 - Provisioning Parameters at Bank level for Loans and Overdrafts

Using this option you can define the bank level parameters for the provisioning groups and components of the provisioning base. The components of provisioning bases can be subsequently modified. The provisioning will consider the new components of provisioning bases from the date of modification.

In case any new component is added, the provisioning for the new component will happen from the date of modification and in case an existing component is excluded from the provisioning base, the provision for that component will get nullified by the system.
