1.5. PM023 - Payment Transaction Authorization*

Using this option, you can further process an incoming rejected payment transaction. The records can be rejected due to any of the following reasons:

- Account Closed
- Account Blocked
- Account Name & Beneficiary Name not matching
- Invalid Account number
- Account Number not found
- TRN code and account number value does not match, etc

All such accounts will get into this exception processing option. You can modify the account number or the GL code for the rejected incoming transaction. If the account number is modified and a CASA account number is entered, then, on authorisation in the screen, **FLEXCUBE** will again perform all the account level validations on the modified account number. If the account fails any of the validations, transaction will again be rejected. The status of such transactions will be re-rejected. If a credit record is rejected from the exception queue it will go back as an outgoing payment in the next outgoing payment file. A debit note for bank charges cannot be rejected from the Exception queue. The reason for rejection of the transaction will be displayed in the Reason Code field in the screen. If you want to again reject the transaction from the exception queue, a new reason code can be selected from the Reason Code drop down. All the rejected incoming payment transactions will be available in the exception queue for two days. If you do not take any action on the rejected items, records will be purged from the exception queue according to the purge policy.

1.6. 2032 - SWIFT Outgoing Payment Message

Whenever customer requests for a SWIFT based outgoing fund transfer, the front office user will collect the basic details in **Outgoing Payment Initiation(CASA)** (Fast Path: 2030) or **Outgoing Payment Initiation - Against Cash** (Fast Path : 2042) or **Outgoing Payment Initiation - against GL** (Fast Path: 2041).

Using this option , the back office user will provide the necessary details and send the transaction to FCC for further processing. After successful validation in FCC, the SWIFT message for outgoing payment will be generated according to the contract provided by the FCR user and FCC reference number will be sent to FCR.

If the transaction is rejected by FCC, for validation reasons, the user can reinitiate the transaction from this option and modify the data if required and resend the same to FCC for further action. But if certain mandatory fields are incorrect, then the transaction has to be reversed through the EJ and a fresh transaction has to be initiated.

1.7. PM026 - Incoming Payment Repair Queue

Using this option, you can process an incoming payment transaction. An incoming payment file is uploaded to the database for onward credit to the accounts/GL.

When the system is unable to process an Incoming Payment because the target credit account in the message does not exist in the system, it keeps such transactions aside, by posting them to a "Repair Queue", awaiting corrections to be made to the transaction.

The records can be rejected due to any of the following reasons:

- Account Closed
- Account Blocked
- Account Name and Beneficiary Name not matching
- Invalid Account number
- Account Number not found
- TRN code and account number value doesn't match, etc.

This process of manual correction of an Incoming Payment is called Repair. You can modify the account number or the GL code for the rejected incoming transaction. If the account number is modified and a CASA account number is input then, on authorization in the screen, **FLEXCUBE** will again perform all the account level validations on the modified account number. If the account fails any of the validations, transaction will again be rejected. The status of such transactions will be re-rejected.

Using this option incoming payment messages can be repaired or rejected. Repair of transactions can happen one at a time and it does not work for bulk messages.

1.8. PM027 - Outgoing Payment Repair Queue

Using this option you can repair/reverse all the outgoing payment transactions which are authorized from the **Outgoing Payment Transaction (Message)** (Fast Path: 2031) option but before the extraction takes place.

Once the extract is generated and the transactions move to the respective folders in the RJSOUT area, no further repair/reversal is possible.

You can select one of the search criteria like branch code, User Id, Account no, payment type etc from the available options.

After selecting the transaction, if 'Reverse' is selected, **FLEXCUBE** will reverse both the accounting entries which are passed during the transaction initiation and the transaction authorization options. If 'Repair' is selected, then modifications in the transaction can be done for:

- TRN
- Routing Number

1.19. PM033 - RTGS-NEFT-Outgoing Pymt Auth Screen

Outgoing payment transactions involve accessing secured networks and the payment is initiated after checking that fund transfer request is made by the authorized signatory of the account. Using this option you can authorize or reject the transaction initiated for the outgoing payments. It also allows you to authorize bulk transactions. Transactions will not be successfully executed if it is not duly authorized within the timeline window.

Definition Prerequisites
