5.2. 7017 - Batch Status Inquiry	86
5.3. BAM95 - Branch Batch Status - Inquiry	88
5.4. 7041 - Branch Totals Position	92
5.5. 7122 - Cross Rate Enquiry	96
5.6. 7008 - Last Ten Transactions	99
5.7. 7050 - Old To New Account Inquiry	102
5.8. 6006 - Search Electronic Journal	105
5.9. 7040 - Teller Totals Position	111
5.10. 7015 - Teller Transactions Summary	115
5.11. 6010 - View Teller Errors	118
6. Report Generation Transactions	121
6.1. BAM16 - Report Control Maintenance	122
6.2. 7775 - Report Request	127
6.3. 7780 - Advice/Report Cancel Request	129
6.4. 7781 - Report Cancel All Tellers	132
6.5. 7779 - Print Spooled Reports/Advices*	135
6.6. 7778 - Advice/Report Status Inquiry	138

1. Preface

1.1. Intended Audience

This document is intended for the following audience:

- Customers
- Partners

1.2. Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.3. Access to OFSS Support

<https://support.us.oracle.com>

1.4. Structure

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual

Introduction provides brief information on the overall functionality covered in the User Manual

Chapters are dedicated to individual transactions and its details, covered in the User Manual

1.5. Related Information Sources

For more information on Oracle FLEXCUBE Core Banking Release 11.5.0.0.0, refer to the following documents:

- Oracle FLEXCUBE Core Banking Licensing Guide

2. Branch Operations

Branch operations form the key element of the financial service provider's infrastructure, with an objective to augment customer service systems and improve internal efficiencies.

Branch Operations (BROP) in FLEXCUBE Retail terminology covers internal activities done at branches where the customer is not involved. From the branch management perspective, the BROP module of FLEXCUBE Retail facilitates activities, which include controlling the branch vault, opening and closing the branch for the day, and monitoring the transactions done during the day teller-wise and generation of adhoc reports.

FLEXCUBE Retail can work in the offline mode also. When the branch to the local office/ head office central data center link is down, the teller terminals are said to be off-line. In this mode, teller transactions may still be performed and stored at the branch. Later, when the link is up, the stored transactions may be automatically forwarded to the local office.

For all the cash transactions, the system will ask for denomination details only when denomination tracking is enabled.

Key Features

FLEXCUBE Retail Banking Solution offers features in the BROP module that allows bank branches to perform internal activities.

- Branch Batch activities that involve opening and closing of the branch
- Cash Management transactions that include managing the teller and vault cash
- Authorisation control of teller transactions during the day
- Transactions can be customized to be executed "OFF-LINE"
- Inquiries pertaining to teller transactions and transaction batches
- Report-generation transactions, which include customer advices and statements as well as internal branch reports

Terminologies

The following terminologies are used in the BROP module:

Batch

A batch is a bunch of transactions performed at a time as an activity by respective users at different levels in a bank. Certain parameters can be configured to define a batch for users at different levels such as, branch batch, vault batch and teller batch. Each user can perform the batch depending on the rights given to the user, and the kind of transactions she/he is going to perform.

Branch Batch

A branch batch is the process by which a supervisor initiates a branch open. The supervisor is allowed to open the branch for running the business for a particular posting date, and close the branch batch when all the transactions have been successfully processed to a logical end. The vault teller batch followed by the individual teller batch can start the activities, only after the branch batch is opened. The branch batch can be closed only if the individual teller batch followed by Vault teller batch is closed. The branch batch can be closed only once, for a particular posting date.

Vault Batch

A vault batch is a set of transactions performed by the vault teller or chief cashier during a posting date. All transactions such as buying cash from the Central Bank and the cashier of the bank, or selling cash to the Central Bank and the teller, and settling the cash with the Central Bank and the cashier are performed during the posting date before closing the vault batch.

Teller Batch

A teller batch is a set of transactions performed by an individual teller or the cashier. All transactions performed during a posting date should be closed only once.

Split Day Processing

If a branch batch could not be closed for a posting date due to an emergency, the system facilities the branch to open a branch batch for the next posting date to process the transaction. Thus, a branch can process the transactions for multiple days.

Database

Database in FLEXCUBE Retail, refers to organized data, stored on a server that can be searched and retrieved by a computer program. The database located at the Central office is known as Host database, and the database located at the branch level is known as Branch database.

3. Operational Control and Cash Management Transactions

To mitigate or limit operational risks, the bank management implements a number of specific measures within the branch. This includes taking care of the sequence of activities performed by a branch for every posting date on FLEXCUBE Retail.

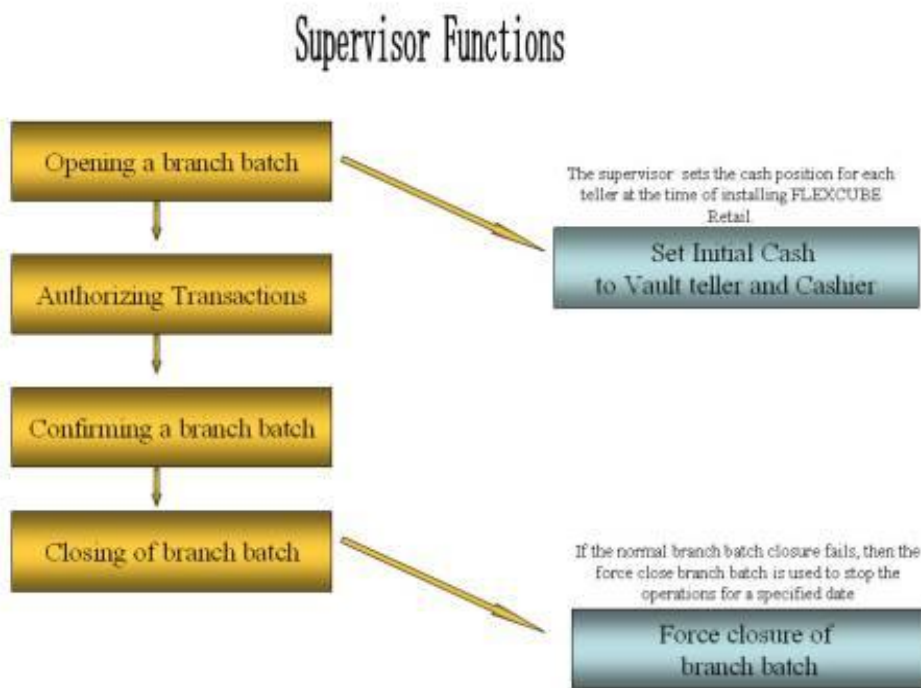

The operational controls to initiate branch operations require clearly defined procedures establishing a control environment, which provides authorisation and authentication of transactions.

FLEXCUBE Retail maintains cash balances both currency-wise and teller-wise. Every committed cash transaction taken to its logical end affects the previously mentioned cash balance. Hence, at any given point of time, the physical cash present with a teller has to match with that in the system. In addition, each of the above cash transactions passes GL entries to the cash GL thus affecting the cash GL balances. Thus the consolidated total of all the teller cash balances, together with the vault teller cash balance, has to match with the balance in the cash GL for that branch.

In a cash balancing exercise for each teller, the system displays the system cash balance with that specific teller and requests for a match with the physical cash held by the teller. In case of a mismatch in the above exercise, the teller has to book an Overage or Shortage depending on the mismatch, and proceed with the cash balancing exercise.

The functions could be broadly classified into:

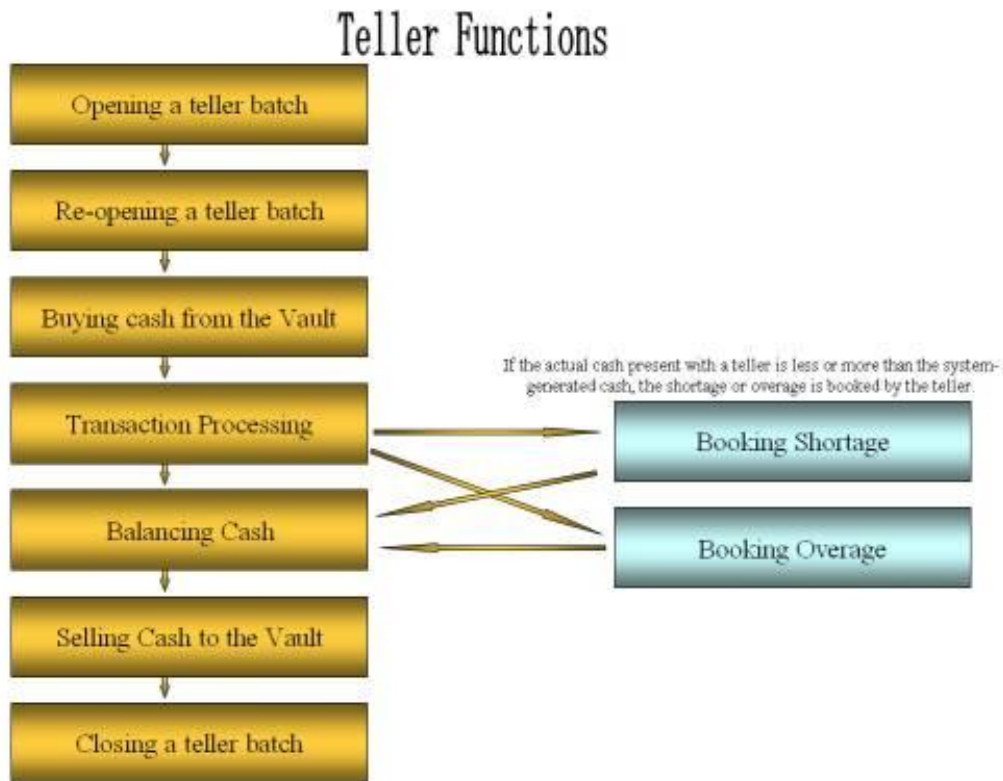

Supervisor Functions

Vault Teller Functions

Teller Functions

Ideally, in a bank, a supervisor opens the branch batch and then the vault teller performs cash activities. The tellers then open their respective batches and buy cash from the vault teller.

At the end of the processing day after all the transactions are completed, the tellers sell cash to the vault teller, if required, and then close their respective batches. After which the vault teller closes the vault batch and then the supervisor closes the branch batch for that day.

3.1. Supervisor

3.1.1. 6001 - Batch Open

Using this option the branch operations can be initiated for a specified date. This option can be executed from any workstation by any supervisor with access rights.

The tellers will not be able to perform any branch operations till the branch batch is opened by the supervisor.

The system allows the branch to be active for a maximum of two consecutive posting dates at a time by specifying the current and the next posting dates. Although a branch batch can be opened for two consecutive days teller batches can be opened only for one posting date at any given time.

The teller batch can be opened for the next posting date, only when it has been closed for the current posting date or it has not been opened for the current posting date. The teller batches cannot be opened for a posting date till the branch batch is opened for that date. When a branch batch is closed for a day by the supervisor the next working day is determined automatically by the system based on the branch calendar present in the branches.

Definition Prerequisites

Not Applicable

Modes Available

Not Applicable

To open a branch batch

1. Type the fast path **6001** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Batch Open**.
2. The system displays the **Batch Open** screen.

Batch Open

Batch Open*

Posting Date : 15/02/2008

Field Description

Field Name	Description
------------	-------------

Posting Date	<p>[Mandatory, dd/mm/yyyy]</p> <p>Type the posting date to open a new branch batch.</p> <p>By default the system displays the current date.</p> <p>In case of a split day processing, the system displays the current posting date. Change this date to a new posting date if the user wants to open a new branch for the next posting date.</p> <p>Opening of the branch batch for a particular date indicates to the head office that the branch is open for business operations for the selected date.</p>
---------------------	---

3. Click the **Ok** button.

3.1.2. 6002 - Branch Batch Close

Using this option, the branch batch has to be closed, after confirming that all branch transactions have been accounted for in the account books, through the Confirming Branch Batch (Fast Path: 6005) option.

The branch batch can be closed to stop the operations for a specified date using the Branch Batch Close option. All the teller batches and the vault batches of that branch have to be closed before closing the branch batch for that posting date.

In case of split days, where the branch batch is opened for two consecutive posting dates, the branch batch should be closed in the ascending order, i.e. the branch batch with the previous posting date should be closed first followed by the branch batch with the later posting date. The posting date for closing a branch batch should be the same date on which the respective branch batch was opened.

Definition Prerequisites

- 9005 - Close Teller Batch
- 9006 - Close Vault Batch

Modes Available

Not Applicable

To close a branch batch

1. Type the fast path **6002** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Branch Batch Close**.
2. The system displays the **Branch Batch Close** screen.

Branch Batch Close

Field Description

Field Name	Description
Posting Date	<p>[Mandatory, dd/mm/yyyy]</p> <p>Type the posting date to close an open branch batch.</p> <p>By default, the system displays the date for which the branch batch is open.</p> <p>Closing of the branch batch for a particular date indicates to the head office that the branch is now closed for business operations for the selected date.</p> <p>This date should be the same date for which the branch batch is opened.</p>

3. Click the **Ok** button.

3.1.3. 6005 - Branch Batch Confirm

Transactions done at the branch are posted through the branch database. These posted transactions are picked up by services running on the FLEXCUBE Retail Application Server and are finally posted in the host database. This synchronization ensures that ideally, all transactions performed at the branch and posted through the branch database are also present in the host database.

However in some situations, all transactions posted in the branch database do not get posted in the host database. This happens when the link between the branch database and the host database goes down or when the requisite services fail to pick up such branch transactions. There can also be a possibility that the transaction posted through the branch database has hit the host database but the transaction has not been completed due to a drop in the link between host and branch databases. In this case, the number of transactions posted at host will be more than the number of transactions posted in the branch. Such cases give rise to a mismatch between the branch and the host in terms of the count and value of transactions.

Branch batch confirmation is a system check to tally the number and amount of transactions processed at the branch with the number and amount of transactions posted to the host database. The details which are used for comparison include the total number of transactions, total amounts of credits and debits, the number of transfer transactions and the number of reversal of transfer transactions, credit reversals and debit reversals during the day. This supervisor option can be run from any workstation by any supervisor with access rights. This is essential to ensure that all transactions taken place at the branch have been accounted in the bank books.

This is an inquiry option and can be run from any workstation, any time, any number of times and by any supervisor having access rights.

Definition Prerequisites

- 6001 - Batch Open

Modes Available

Not Applicable

To confirm a branch batch

1. Type the fast path **6005** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Branch Batch Confirm**.
2. The system displays the **Branch Batch Confirm** screen.

5. If there is any outstanding transaction pending then the system displays a message "Some instrument are outstanding for Inward Clearing run". The branch batch confirmation will not proceed unless the transaction is completed.
6. Click the **Close** button.

3.1.4. 6009 - Force Close Branch Batch

Using this option you can close the branch batch by the branch manager/ supervisor and stop the operations for a specified date, if the normal Branch Batch Close (Fast Path: 6002) option fails. Once the branch batch is closed, it cannot be reopened for the same date.

Prior to closing the branch batch, the branch manager or the authorized supervisor has to ensure that all teller batches and vault batches have been closed, and the mismatch displayed in the Branch Batch Confirm (Fast Path: 6005) option has been noted down for further investigation.

This is the last option that can be performed for a posting date. However, you can generate reports after running this option.

Definition Prerequisites

- 6001 - Batch Open
- 6005 - Branch Batch Confirm
- 9005 - Close Teller Batch
- 9006 - Close Vault Batch

Modes Available

Not Applicable

To close the branch batch forcefully

1. Type the fast path **6009** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Force Close Branch Batch**.
2. The system displays the **Force Close Branch Batch** screen.

Force Close Branch Batch

Force Close Branch Batch*

Posting Date : 15/02/2008

Please use this option ONLY if Normal Branch Batch Close Option failed

Ensure that you have noted down the Mismatch displayed in the Batch confirm option

OK Close Clear

Field Description

Field Name	Description
Posting Date	<p>[Mandatory, dd/mm/yyyy]</p> <p>Type the posting date to force close the branch batch for that particular date.</p> <p>By default, the system displays the date for which the branch batch is open.</p> <p>Closing of the branch batch for a particular date indicates to the head office that the branch is now closed for business operations for the selected date.</p> <p>This date should be the same date for which the branch batch is opened.</p>

- Click the **OK** button.

3.1.5. 9888 - Set Initial Cash

Using this option, the supervisor can set the cash position of each teller at the time of initial implementation of the Oracle FLEXCUBE branch or at the time of the branch database setup after a branch database crash.

This has to be done for all the currencies for which the teller will carry out the transactions.

Definition Prerequisites

- Teller IDs to be created.

Modes Available

Not Applicable

To set initial cash

1. Type the fast path **9888** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Cash > Set Initial Cash**.
2. The system displays the **Set Initial Cash** screen.

Set Initial Cash

Set Initial Cash

Teller Id : SDOC5

Txn Coy : [Currency Symbol]

Amount : [Text Field]

Ok Cancel

Field Description

Field Name	Description
Teller Id	[Mandatory, Drop-Down] Select the user identification of the teller for whom the initial cash has to be set from the drop-down list.
Txn Ccy	[Mandatory, Drop-Down] Select the currency in which the initial cash has to be set from the drop-down list.
Amount	[Mandatory, Numeric, 13, Two] Type the amount which has to be set as initial cash for the teller.

3. Select the currency from the drop-down list.
4. Enter the initial amount.

Set Initial Cash

The screenshot shows a 'Set Initial Cash' dialog box. It contains the following fields:

- Teller Id :** A dropdown menu with 'SDOC5' selected.
- Txn Ccy :** A dropdown menu with 'INR' selected.
- Amount :** A text box containing the value '1000'.

At the bottom right of the dialog, there are two buttons: 'Ok' and 'Cancel'.

5. Click the **Ok** button.

3.2. Vault Teller

3.2.1. 9003 - Open Vault Batch

Using this option the vault teller can open a vault batch for a specified date. The vault teller is the main cashier of a branch and can be opened from any workstation.

For any given posting date only one vault batch can be opened. To open another vault batch, the first one should be closed. The vault batch can be opened. To open another vault batch, the first one should be closed. All the tellers buy additional cash or TCs and sell their excess cash or TCs to this teller. The cash balancing is automatically initiated and the cash balances are displayed on the screen for confirmation. The system will default the cash balances on opening a vault batch.

Definition Prerequisites

- 6001 - Batch Open
- BAM97 - Currency Codes Cross Reference

Modes Available

Not Applicable

To open a vault batch

1. Type the fast path **9003** and click **Go** or navigate through the menus to **Transaction Processing > Open Vault Batch**.
2. The system displays the **Open Vault Batch** screen.

Open Vault Batch

Field Description

Field Name	Description
Batch Date	<p>[Mandatory, Pick List, dd/mm/yyyy]</p> <p>Select the posting date, to open the vault batch on that date, from the pick list.</p> <p>By default, the system displays the current posting date.</p> <p>Opening of the vault batch for a particular date indicates that all transactions performed by the vault will be stamped with the selected date.</p> <p>This date should be the same date for which the branch batch is opened.</p>

DEM	0.00	0.00

OK Close Clear

- Enter the total cash and click the **OK** button.

Note: The system will not allow the vault batch to be opened in case the physical cash entered is not the same as the system cash.

3.2.2. 9009 - Buy Cash From Central Bank

The vault teller is the main cashier of a branch. All the tellers will buy additional cash or TC's and will sell their excess cash or TC's to this teller. The vault teller can open a vault batch for a specified date using the Open Vault Batch (Fast Path: 9003) option.

Using this option, after opening the vault batch, the vault teller can get cash from the Central Bank and deposit it into the vault. Once the cash is bought from the Central Bank, the system updates the cash position. This transaction is performed by a vault teller.

Definition Prerequisites

- 9003 - Open Vault Batch
- BAM97 - Currency Codes Cross Reference
- Denomination details should be maintained in case denomination-tracking facility is being used.

Modes Available

Not Applicable

To buy cash from central bank

1. Type the fast path **9009** and click **Go** or navigate through the menus to **Transaction Processing > GLTransactions > Cash > Buy Cash From Central Bank**.
2. The system displays the Buy Cash From Central Bank screen.

12. Click the **Close** button.

Note: For more information on Authorisation transactions, refer to the **FLEXCUBE Introduction User Manual**.

3.2.3. 9010 - Sell Cash To Central Bank

Using this option the vault teller can sell cash to the Central Bank from the vault after all the tellers have sold the additional cash to the vault teller. The vault teller cannot close the batch if some excess cash remains at the end of the day.

The amount of cash to be sold by the vault teller cannot exceed the amount of cash held by the vault teller at that point of time. This transaction could be performed even if the vault teller has less cash than the assigned limit.

After the cash is sold to the Central Bank, the system updates the cash position of the vault teller.

If the system maintained cash position is less than the input amount to be sold to the Central Bank, the system displays an error message in which case the transaction should be retried with the correct amount.

Definition Prerequisites

- 9003 - Open Vault Batch
- Denomination details should be maintained in case denomination tracking facility is being used.

Modes Available

Not Applicable

To sell cash to central bank

1. Type the fast path **9010** and click **Go** or navigate through the menus to **Transaction Processing > GL Transactions > Cash > Sell Cash To Central Bank**.
2. The system displays the **Sell Cash To Central Bank** screen.

Note: For more information on Authorisation transactions, refer to the **Oracle FLEXCUBE Introduction User Manual**.

3.2.4. 9006 - Close Vault Batch

Using this option the vault batch can be closed for a specified date. The vault teller can log in and close the vault batch from any workstation. The system will allow the vault teller to close a vault batch only if all teller batches are closed.

Cash balancing is done automatically and cash balances are displayed on the screen for confirmation. There is also a limit, different from the teller cash limit, on the cash that can be held by the vault teller. If the cash held by the vault teller exceeds the specified limit at the end of the day, the excess cash should be sold to the Central Bank. The vault teller can close the batch only after all the tellers of the branch have sold their excess cash to the vault and have closed their respective teller batches. If there is a difference in the actual total cash with the vault teller and the cash available as shown by the system, the vault teller will have to book overage/shortage for the difference amount before closing the vault batch, till the differences are closed out.

Definition Prerequisites

- 9003 - Open Vault Batch
- All the teller batches have to be closed.

Modes Available

Not Applicable

To close a vault batch

1. Type the fast path **9006** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Close Vault Batch**.
2. The system displays the **Close Vault Batch** screen.

Note: System will not allow the teller batch to be opened in case the physical cash entered is not same as the system cash.

3.3.2. 9007 - Buy Cash From Vault

Using this option you can get cash from the vault. After completing this transaction, the system updates the cash position of the vault teller and the teller. If the vault teller's cash position is less than the total cash requested by the teller, the system displays an error message and the teller should perform this transaction after the vault has been replenished.

The teller can buy any amount up to the amount available with vault. If the amount exceeds the maximum limit that the teller is allowed to retain with him/her, the system will prompt the teller to sell the excess cash to the vault using Sell Cash to Vault (Fast Path: 9008) option.

Definition Prerequisites

- 9003 - Open Vault Batch
- Denomination details should be maintained in case denomination tracking facility is being used.

Modes Available

3.3.4. 6201 - Cash Balancing

Using this option you can check if the physical cash held by a teller / vault teller matches with the system cash for that teller as per Oracle FLEXCUBE. This can be verified anytime during the day or before closing the teller batch.

This option displays approved currencies in which the teller / vault teller can perform transactions. The total amount for a particular currency available in the cash drawer / vault should be entered to check the overage/shortage of cash amount maintained in the system.

In case of an overage/shortage for a particular currency, the teller should perform the transaction in the Book Cash Overage (Fast Path: 7552) option or Book Shortage (Fast Path: 7551) option and then perform the cash balancing transaction again.

Definition Prerequisites

Overage/Shortage

[Display]

This column displays the difference in the amount between the total counted cash and the available cash with the teller.

Based on this difference, either the overage or shortage amount is displayed.

- **Overage:** If the physical cash held by the teller in a particular currency exceeds the amount of cash in that currency for the teller as shown by the system, the excess amount of that currency is known as overage. The overage amount is displayed with a '+' sign.
- **Shortage:** If the physical cash held by the teller in a particular currency is less than the amount of cash in that currency for the teller as shown by the system, the shortage amount of that currency is known as shortage. The shortage amount is displayed with a '-' sign.

3. Enter the total counted cash for the respective currencies.

12. Click the **Close** button.

Note: For more information on authorisation transactions, refer to the *Oracle FLEXCUBE Introduction User Manual*.

3.3.7. 9005 - Close Teller Batch

Using this option you can close the teller batch for the given posting date.

The system allows the teller batch to be closed for the day only when all the transactions are successfully processed to a logical end. In case any transactions are pending, like an unauthorised or an incomplete batch data entry, the system prompts you to either complete or reverse the transactions so that the teller can close the batch for the day. In addition to this, there is a specified limit on the cash that a teller can retain at the end of the day. The bank maintains the specified limit for each currency. Whenever a transaction is performed or while closing the teller batch, the system checks the cash balances for each currency with the respective limits and prompts the teller in case of violation. If the limit is exceeded, the teller sells the excess cash to the main vault, to bring his cash holding within the retention limit. After selling the excess cash the teller has to ensure that the physical cash held, is same as that shown by the system.

For a teller, if there is a difference in the physical cash and that calculated by the system, the overage or shortage has to be booked accordingly and only then each teller can close the teller batch for that day.

Before closing the teller batch, the teller should ensure completion of all the incomplete batches for consolidated cheques, outward clearing batches, inward clearing batches, etc. This is applicable if the teller has done the header transaction of the consolidated cheque deposit but has not performed the detailed data entry of consolidated cheques. Once it is closed, the teller batch cannot be re-opened for the same posting date.

Definition Prerequisites

- 9001 - Open Teller Batch
- 9003 - Open Vault Batch

Modes Available

Not Applicable

To close a teller batch

1. Type the fast path **9005** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Close Teller Batch**.
2. The system displays the **Close Teller Batch** screen.

3.3.8. 6203 - TC Balancing*

Bank may buy and sell Traveler's cheques from the existing customers as well as walk-in customers. Balancing the TC is a prerequisite for the teller before closing the teller batch for the day.

Using this option, tellers authorized to deal with TC, balance their physical TC in custody with the system count at the beginning of the branch operations. During the day the count is altered vide TC purchases and sales. Balancing the TC is a prerequisite for the teller before closing the teller batch for the day. In case of any overage/shortage of TC, the same is displayed in the screen for the user for reconciliation and balancing.

Definition Prerequisites

- Issuer Maintenance (Fast Path: BAM09)
- BAM56 - Currency Codes Maintenance
- Bank Codes Maintenance (Fast Path: BAM20)

Modes Available

Field Description

Field Name	Description
Issuer Code	[Mandatory, Drop-Down] Select the issuer bank from the drop down. The same is maintained by the Issuer Maintenance (Fast Path- BAM09) option.
Currency	[Mandatory, Drop-Down] Select the currency of the TC in custody of the teller
Denominations	[Display] The denomination of the TC is displayed in this field. TCs of various denominations will be available with the teller.
User Count	[Mandatory,Numeric,20] Enter the number of TCs of the selected currency and denomination available with the teller.
Amount	[Display] The total value of the TCs of the displayed denomination is displayed in this field.

Field Name	Description
System Count	[Display] This field displays the system count of the TC of the denomination specified.
Amount	[Display] This field displays the amount of the TC as per the system count.
Total	[Display] This field displays the user and system totals across denomination and amount.
Overage / Shortage	[Display] This field displays overage/shortage in TC denomination/amount if any.

3. Select the issuer code and currency from the drop down list.
4. Enter user count denomination-wise.

TC Balancing

Denominations	User Count	Amount	System Count	Amount
One Hundred	10	1,000.00	20	2,000.00
Total :	10	1,000.00		2,000.00
Overage / Shortage :	-10	-1,000.00		

5. Click the **Ok** button.
6. If there is any overage, the system displays the message "TC Not Balanced".
7. Click the **Cancel** button.

4. Other Transactions

The tellers and supervisors of the bank can perform ancillary activities in FLEXCUBE Retail. This system facilitates the bank in transferring the CASA account (single account or multiple accounts) from one branch to another branch, changing the ownership of unauthorised batch and printing spooled documents.

4.1. BA995 - Single Account Transfer

Using this option, a bank can transfer a CASA/TD/Loan account from one branch to another, if the customer initiates the transfer. The account number of the effected accounts will not change but the branch to which the account reports will change

It is not possible to transfer an account from one product to another product. Also account transfer will be disallowed for the accounts which are members of the group linked in the Group Accounts Maintenance (Fast Path: CHM24) option.

Definition Prerequisites

- The branch and transfer branch product should be the same.

Modes Available

Add By Copy, Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To transfer a single account from one branch to another

- Type the fast path **BA995** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Others > Single Account Transfer**.
- The system displays the **Single Account Transfer** screen.

4.2. BA999 - Bulk Account Transfer

Using this option the bank can transfer all Oracle FLEXCUBE accounts across products from one branch to another branch when a branch is closed or merged. The account numbers of the affected accounts do not change but the branch to which they report to get changed.

It is not possible to transfer accounts from one product to another. This option can also be used when banks decide to open special type of branches catering to specific customer needs and decide to transfer the existing accounts from other branches to the new branch.

4.3. 5514 - Change Data Entry Batch User

Using this option the ownership of an unauthorised batch can be changed from one teller to another, as system does not allow tellers to work on batches not owned by them.

This is done when the original teller who had done the transaction is not available and the batch needs to be modified. In such situations, this option is used to transfer the ownership of the unauthorised batch to another teller or user.

The owner of the Voucher Entry branch cannot be changed by using this option.

Definition Prerequisites

- Branch batch to be opened and teller batch opened for the change.

Modes Available

Not Applicable

To change the data entry batch user

1. Type the fast path **5514** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Data Entry > Change Data Entry Batch User**.
2. The system displays the **Change Data Entry Batch User** screen.

4. Select the report type from the drop-down list and click **Fetch**.
5. The print report details are displayed on the screen.
6. In the **Print** column, select the check box against the relevant transaction or select the **Select All** check box to select all the reports for printing.

5. Inquiries

Transaction inquiries display detailed information about a transaction performed by the user.

This section explains how the system allows the user to view information about branch operations. The user can view the status of the transactions performed by the teller, branch-wise transactions, the errors committed by the tellers, last few transactions performed by each teller, reversal of transactions, etc. through various inquiry screens.

5.1. 7012 - Account No Check Digit Inquiry

The account number of a customer could consist of the bank code (two digits), branch code (four digits), a running serial number (six digits) and a check digit (two digits). The order of these entities as well as the weightage for each position in the account number for calculation of the check digits depends on the setup done in an internal table of Oracle FLEXCUBE.

Using this option you can retrieve the actual account number when the teller queries on an account, without giving the check digit(s). When the teller enters the account number without the check digit(s), the system automatically populates the check digits.

Definition Prerequisites

Not Applicable

Modes Available

Not Applicable

To view the account number check digit

1. Type the fast path **7012** and click **Go** or navigate through the menus to **Transaction Processing > Account Transactions > CASA Account Transactions > Inquiries > Account No Check Digit Inquiry**.

5.2. 7017 - Batch Status Inquiry

Using this option you can view the status of all the batches pertaining to the tellers and the vault tellers according to the posting dates in that particular branch. The status displays whether a particular teller, vault batch or branch batch is opened or closed.

Apart from this, the inquiry also displays the open batch of the previous posting date. The batch can be opened simultaneously for maximum two posting dates.

This option is used by the supervisor/manager of the branch to find out the overall status of all batches.

Definition Prerequisites

5.3. BAM95 - Branch Batch Status - Inquiry

Using this option ,you are provided with the status of all the branch batches opened and closed branch-wise, for all posting dates with the date and the time of opening and closure . This inquiry displays the branch batch status for a range of dates and does not display the status of the teller batch.

The data can be filtered branch-wise and status-wise. Inquiry can be performed for:

- All batches that are Open
- All batches that are Closed
- All batches that are Confirmed
- All Batches irrespective of their status

Definition Prerequisites

- 6001 - Batch Open

Modes Available

4. Enter the posting date and click the **Ok** button.
5. The system displays the branch totals position details.

Branch Totals Position

The screenshot shows a window titled "Branch Totals Position*". At the top, there are fields for "Currency" (set to INR) and "Posting Date" (set to 15/02/2008). Below this is a table with the following columns: Transactions, Type, Opening Balance, Debits, Count, Credits, Count, and Closing Balance. The table contains two rows: "Vault" and "Teller". The "Vault" row shows a Cash transaction with an opening balance of 5,790,000.00, debits of 0.00, a count of 0, credits of 0.00, a count of 0, and a closing balance of 5,790,000.00. The "Teller" row shows a Cash transaction with an opening balance of 244,010,678,655.31, debits of 45,000.00, a count of 5, credits of 2,263,954.00, a count of 14, and a closing balance of 244,012,897,609.31. Below the table, there are input fields for "Transfer Amount" (set to 0.00) and "Transfer Count" (set to 0). At the bottom right, there are buttons for "OK", "Close", and "Clear".

Transactions	Type	Opening Balance	Debits	Count	Credits	Count	Closing Balance
Vault	Cash :	5,790,000.00	0.00	0	0.00	0	5,790,000.00
Teller	Cash :	244,010,678,655.31	45,000.00	5	2,263,954.00	14	244,012,897,609.31

Transfer Amount : 0.00
Transfer Count : 0

OK Close Clear

6. Click the **Close** button.

5.5. 7122 - Cross Rate Enquiry

Using this option you can search and view the exchange rate between two different currencies, against the bank's local currency. This option also displays the cross rate between two currencies. Cross rate is helpful when three currencies are involved.

For instance, many countries recognize the major currencies, viz. US Dollar, EURO, Yen and Great Britain Pound for export or import billing.

For example, an Arab Emirates company raises the bill in AED currency for exporting goods to India. At the time of payment, the Indian bank will calculate the equivalent cross rate from AED currency to USD currency. The amount derived in US Dollar will be converted to Indian Rupees, and that amount in Indian Rupees will be debited to the importer's account.

Definition Prerequisites

- Exchange rates of all currencies with respect to the local currency for the respective posting date should be defined.

Modes Available

Not Applicable

To view the cross rate

1. Type the fast path **7122** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Cross Rate Enquiry**.
2. The system displays the **Cost Rate Enquiry** screen.

Cost Rate Enquiry

Field Description

Field Name	Description
Source Currency	[Mandatory, Drop-Down] Select the currency, which is to be converted from the drop-down list.
Target Currency	[Mandatory, Drop-Down] Select the currency against which the exchange rates need to be obtained from the drop-down list.
Source Ccy Rate	[Display] This field displays the source currency exchange or conversion rate against the local currency of the bank.
Dest Ccy Rate	[Display] This field displays the target currency exchange or conversion rate against the local currency of the bank.

Field Name	Description
Cross Rate	[Display] This field displays the rate of conversion of the source currency against the conversion rate of the target currency in terms of the bank's local currency.

3. Select the source currency and the target currency from the drop-down list.
4. Click the **Ok** button.
5. The system displays the cross rate details.

Cost Rate Enquiry

The screenshot shows a window titled "Cross Rate Enquiry*" with a yellow header bar. Inside the window, there are four input fields arranged in a 2x2 grid:

- Source Currency :
- Target Currency :
- Source Ccy Rate :
- Dest Ccy Rate :

Below these fields, there is a label "Cross Rate :" followed by a large empty text area. At the bottom of the window, there is a navigation bar with several buttons: "UDF", "OK", "Close", and "Clear". Above these buttons, there is a row of tabs: "Card", "Change Pin", "Cheque", "Cost Rate", "Denomination", "Instrument", "Inventory", "Pin Validation", "Service Charge", "Signature", and "Travellers Cheque". The "Cost Rate" tab is currently selected.

6. Click the **Close** button.

5.6. 7008 - Last Ten Transactions

Using the option a teller can view the details of the last ten monetary transactions performed on the posting date. You can enquire the transactions for the current or for next posting date.

The system provides details on transaction type, date of transaction with time, account number, currency of the transaction, transaction amount and Dr/Cr indicator.

Definition Prerequisites

- 9001 - Open Teller Batch

Modes Available

Not Applicable

To view the last ten transactions

1. Type the fast path **7008** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > INQUIRIES > Last Ten Transactions**.
2. The system displays the **Last Ten Transactions** screen.

Last Ten Transactions

The screenshot shows a software window titled "Last Ten Transactions*". At the top, there are input fields for "User No" (containing "TKATDARE") and "Date" (containing "31/01/2008"). Below these is a table with the following columns: Seq No, Type, Txn Date, Txn Time, Acct No, Ccy, Txn Amt, and Dr / Cr. The table is currently empty. At the bottom of the window, there is a horizontal bar containing several buttons: "Card", "Change Pin", "Cheque", "Cost Rate", "Denomination", "Instrument", "Inventory", "Pin Validation", "Service Charge", "Signature", and "Travellers Cheque". Below these buttons are four more buttons: "UDF", "OK", "Close", and "Clear".

Field Description

Field Name	Description
User No	[Display] This field displays the user ID of the teller who has logged in. Only those transactions performed by the teller who has logged in are displayed.
Date	[Mandatory, Numeric, dd/mm/yyyy] Type the posting date of the transaction. By default, the system displays the current posting date.

Column Name	Description
Seq No	[Display] This column displays the sequence number pertaining to the transaction carried out by the teller.

5.7. 7050 - Old To New Account Inquiry

When the bank has migrated from a different system to Oracle FLEXCUBE or from an old Oracle FLEXCUBE release to a new Oracle FLEXCUBE release, the account number of all customer accounts might need to be changed.

Using this option you can support the transition period wherein customers quote the old account numbers at the branch to perform transactions. It determines the new account number on which the transaction(s) are to be performed. The system also provides the customer name for proper verification of old to new account.

Definition Prerequisites

Not Applicable

Modes Available

Not Applicable

To view the new account number

1. Type the fast path **7050** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Old To New Account Inquiry**.
2. The system displays the **Old To New Account Inquiry** screen.

5.8. 6006 - Search Electronic Journal

The tellers and the supervisors can view the status of all the transactions performed by them during the posting date for which the teller batch is opened. The teller can view the status of only those transactions done by them. However, the supervisor can view the status of all the transactions done by all the tellers.

Using this option, the teller can also reverse the transaction posted by him during the day. This option can be used to view the list of all transactions. The incomplete transactions are those transactions that have been initiated by the teller and require authorization for completion.

After performing a transaction which needs authorisation, the system prompts the teller to send the transaction for remote authorisation or for local authorisation. If the user selects remote authorisation, the system prompts the user to select a supervisor. After the teller selects the supervisor, and confirms sending the transaction for authorisation, the supervisor can view the transaction on their terminal by using this option. The Teller ID drop-down list in this option displays a list of tellers and the vault tellers who have sent the transactions for authorisation to that supervisor.

Whenever any transaction is sent for remote authorisation, the transaction sequence number is displayed at the teller / vault teller level. After the authorisation of a transaction, the screen remains unchanged, so that the supervisor can select the next transaction for authorisation.

Definition Prerequisites

- Existence of Transactions for authorisation / reversal

Modes Available

Not Applicable

To view and authorize the records sent for remote authorization

1. Type the fast path **6006** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Search Electronic Journal**.
2. The system displays the **Search Electronic Journal** screen.

5.9. 7040 - Teller Totals Position

Using this option a teller can view his/her own position and the total transactions performed by any teller for a particular currency on the posting date.

A supervisor can view the position of any teller in his/her branch. This inquiry is only for teller cash and funds transfer position. Cash and transfer transaction details are grouped separately. The total transaction count and amount are provided. You can enquire the transactions for the current or for next posting date. Cash and transfer transaction details are grouped separately. The total transaction count and amount are provided by the system.

Definition Prerequisites

- 9001 - Open Teller Batch

Modes Available

Not Applicable

To view the teller position and the total transactions performed by the teller

1. Type the fast path **7040** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Teller Totals Position**.
2. The system displays the **Teller Totals Position** screen.

6. Report Generation Transactions

Management, operational staff and customers need reports to acquire information or status of the transactions/activities performed on the system. Every bank branch is responsible for issuing an advice to their customers against every transaction performed in their respective accounts.

By default, all the reports, adhoc and batch, are generated in the central FLEXCUBE Retail application server.

This section deals with maintaining the report control, requesting for the reports and advices and generating or canceling the requested reports and advices.

6.1. BAM16 - Report Control Maintenance

Using this option the setup can control the generation of various reports by Oracle FLEXCUBE. Reports can be generated as adhoc reports or batch reports.

The adhoc reports are generated on demand or online using the Report Request (Fast Path: 7775) option from a branch terminal. The batch reports are automatically generated during the end of day or beginning of day operations. You can also maintain the module to which the report belongs to and the frequency of generation of reports in this option.

Definition Prerequisites

Not Applicable

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquire. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the report control details

1. Type the fast path **BAM16** and click **Go** or navigate through the menus to **Global Definitions > Other > Report Control Maintenance**.
2. The system displays the **Report Control Maintenance** screen.

6.2. 7775 - Report Request

Using this option reports and advices can be requested .

The request for two types of reports can be given, viz. adhoc reports and batch reports. The adhoc reports are generated on demand or on request, while the batch reports are automatically generated at the end of day or beginning of day.

The user can select the report type and the module to display the report categories. Each category has different reports, displayed along with their ID and title. The user can select the desired report from the list to generate it.

For more information, please refer to the respective Module wise Reports Manual.

Definition Prerequisites

- BAM16 - Report Control Maintenance

Modes Available

Not Applicable

To request for a report

1. Type the fast path **7775** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Reports > Report Request**.
2. The system displays the **Report Request** screen.

6.6. 7778 - Advice/Report Status Inquiry

Using this option the advice /reports are displayed which are requested by the user login Id, through the Reports Request (Fast Path : 7775) option. The user who has requested the advices/reports can view the status and generate the advices or reports.

The supervisor can view all the report/advice requests of any teller associated under his/her supervision. In this case, select the teller from the drop-down list whose transaction details you want to view.

For more information, please refer to the respective Module wise Reports Manual.

Definition Prerequisites

- BAM16 - Report Control Maintenance
- 7775 - Report Request

Modes Available

Not Applicable
