U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are “commercial computer software” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate failsafe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

This software or hardware and documentation may provide access to or information on content, products and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

1. Preface

1.1. Intended Audience

This document is intended for the following audience:

- Customers
- Partners

1.2. Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.3. Access to OFSS Support

<https://support.us.oracle.com>

1.4. Structure

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual

Introduction provides brief information on the overall functionality covered in the User Manual

Chapters are dedicated to individual transactions and its details, covered in the User Manual

1.5. Related Information Sources

For more information on Oracle FLEXCUBE Core Banking Release 11.5.0.0.0, refer to the following documents:

- Oracle FLEXCUBE Core Banking Licensing Guide

2. Introduction to Oracle FLEXCUBE

Oracle FLEXCUBE is a comprehensive solution that provides a unified back-office processing environment for Corporate, Retail and Investment Banking operations with a highly adaptable and scalable modular architecture. **Oracle FLEXCUBE** is designed to offer flexibility to financial institutions for easy adaptability to market needs and also enables banks to improve their overall operational efficiency.

Oracle FLEXCUBE offers effective control and risk management, thus delivering improved performance and reliable customer service. It is a highly modular system that allows the bank to choose the set of functional modules to suit the line of operations of the bank.

Oracle FLEXCUBE is a multi-currency system built on a powerful base of a flexible architecture. It uses one of the most reliable and leading technology platforms. **Oracle FLEXCUBE** is developed on Client/Server distributed architecture, which uses the Oracle or DB2 relational database and offers unlimited freedom to the bank to choose any leading UNIX or IBM or Windows NT/ Windows 2000-based hardware. A premium on-line transaction processing system efficiently services the high volume retail transactions.

Oracle FLEXCUBE has capabilities on the NLS both at the database level and presentation level. **Oracle FLEXCUBE** is already available in languages like English, Japanese, Portuguese and Arabic.

2.1. Starting Oracle FLEXCUBE

You require the necessary rights and privileges to start the Oracle FLEXCUBE software.

To start Oracle FLEXCUBE

- Click Start, point to Programs, and click Internet Explorer.
- Type the Oracle FLEXCUBE URL in the Address bar, and click . For example, the address may look like `http://server01/Flexcube`.
- Oracle FLEXCUBE displays the screen as shown in the following figure.

- Click the Click here to login link.
- Oracle FLEXCUBE displays the login screen as shown in the following figure.

- Enter your identification code in the User Name field and the password assigned to you in the Password field and click .
- If either the user ID or the password is incorrect, the following screen is displayed.

Note: All the characters you type in the **Password** field will appear as “****” for security reasons.

- The system displays the main application window depending upon the nature of user logged in. The initial screen / menus displayed after login depends on the access rights provided by the Oracle FLEXCUBE security administrator to the template under which the user is registered.

2.2. Product Features

- Flexibility through Standardization - Oracle FLEXCUBE's unique Product Definition facility is a manifestation of its flexible design. This feature allows a bank to define the various services and elements that the bank would offer under a product to all customers, thereby ensuring that all customers are offered the same uniform services.
- Modular, yet Integrated - The various functional blocks of Oracle FLEXCUBE are built on the concept of 'Service Based Architecture'. At the core of this architecture is a set of common services, called the Core System. All front-end functional modules utilize the common services offered by the Core System
- Ease of Use - Oracle FLEXCUBE offers a user-friendly and intuitive graphical user interface. The client-end software is Windows based and browser front end. Almost all operations, except user data input, are mouse based.
- Flexibility to Incorporate Change - The fundamental design objective of Oracle FLEXCUBE, as its name suggests, is to allow the tailoring of business to suit varied and dynamic market needs. Oracle FLEXCUBE is an application designed to easily respond to these changes by setting or resetting various product or global parameters without requiring a change in the software or extensive redesigning in product profile.
- Security - The Security Management System (SMS) in Oracle FLEXCUBE is in line with industry standards. The whole range of operations in Oracle FLEXCUBE is performed in virtually impregnable, high security conditions.
- Relationship Banking - Oracle FLEXCUBE incorporates a sophisticated Customer Information System (CIS) that enables true relationship banking. Detailed information (personal, demographic, employment, financial, corporate, etc.) about all customers is stored centrally in the CIS. It can provide a relationship statement, which is a combined statement for all the accounts related to the customer.
- Seamless Transaction Delivery over Multiple Channels - Oracle FLEXCUBE supports 7x24 non-stop convenience banking for all retail transactions through various delivery channels like branches, ATMs, POS terminals, debit cards, SWIFT, telephone/call center and internet. Oracle FLEXCUBE branch is designed to be functional even during network failures. When communication links are not operational, the branch can process the retail transactions in an off-line mode. All transactions carried out off-line are stored at the branch and uploaded to the host automatically for processing whenever the link is re-established. Offline capability has inbuilt intelligent roll-back facility to maintain data integrity.
- Language Support - Oracle FLEXCUBE is a multi lingual system, which uses the Oracle Translation Manager and other tools for providing the multilingual support.
- Real-Time Information - The multi-level drill down facility allows a user to drill down from an overall view of accounts or contracts to a more detailed view of specific accounts or contracts.
- Flexible Interfaces – Oracle FLEXCUBE supports standard ISO 8583 formats, thereby ensuring support for all ATM switches using the same. It also provides for standard API calls which the external applications of the bank can use for online interface to Oracle FLEXCUBE. Oracle FLEXCUBE also provides for batch posting of financial entries from an external system.
- Multi Entity Support - Different legal entities can be defined as entity in Oracle FLEXCUBE. It supports different local currency for each bank (entity). This also supports different local languages from same instance of application. Oracle FLEXCUBE supports batch runs for multiple banks in parallel.

2.3. Functional Overview

Oracle FLEXCUBE seamlessly offers a complete range of functional modules for Retail Banking. This section provides the list of all modules coming under the Oracle FLEXCUBE umbrella and the corresponding part of the user manual under which they are defined.

Transactions under each module could be broadly classified as definition transactions and operational maintenance / transactions. On a broad level, maintenances have a non-financial effect and the transactions result in a financial impact. As the nature of users using these maintenance's and transactions are different, they have been placed in different parts of the user manuals to aid in proper usage.

2.3.1. Core Modules

- Clearing – Clearing definitions are explained in the Definitions User Manual. Clearing maintenance's is explained in the Settlement and Clearing User Manual.
- General Ledger – GL Definitions are explained in the Definition User Manual
- Customer Information System – Customer Information definitions are explained in the Definitions User Manual. Customer Information maintenance's are explained in the Customer Information File User Manual.
- Management Information System
- Reports

2.3.2. Common Facilities

- Inventory Management - Inventory definitions are explained in the Definitions User Manual. Inventory maintenance's are explained in the Back Office User Manual.
- Fund Transfer – Fund Transfer transactions are explained in the Current and Savings Account User Manual.
- Service Charges – Service Charges definitions are explained in the Definitions User Manual. Service Charges maintenance's are explained in the Back Office User Manual.
- NPA Management – Asset Classification definitions are explained in the Definitions User Manual. Asset Classification maintenance's are explained in the Back Office User Manual.
- Collateral Management - Collateral definitions are explained in the Definitions User Manual. Collateral maintenance's are explained in the Back Office User Manual.
- Collection Transactions - This module is used to keep track of the follow-up of delinquent accounts. It maintains the records of the follow-up made to the customer including details like actions taken, result of the action, next action expected to be taken, etc.

2.3.3. Consumer Lending Suite

Retail Loan Accounts – Loan definitions are explained in the Definitions User Manual. Loan maintenance's are explained in the Loan User Manual.

2.3.4. Deposit Accounts

- Savings and Current Account – CASA definitions are explained in the Definitions User Manual. CASA maintenance's and transactions are explained in the Current and Savings Account User Manual.
- Recurring Deposits Accounts - RD definitions are explained in the Definitions User Manual. RD maintenance's and transactions are explained in the Current and Savings Account User Manual.
- Term Deposits and Certificate of Deposit – Term Deposits definitions are explained in the Definitions User Manual. Term Deposits maintenance's and transactions are explained in the Term Deposits User Manual.

2.3.5. Application Security

The application security maintenance's and transactions are explained in the Back Office User Manual.

2.4. Order Of Usage

The order of usage of the user manuals is as follows.

Bills User Manual is optional

2.5. Software Requirements

Production Servers	Software
Database Server	AIX 5.3 / Oracle 10g Enterprise Edition 10.1.0.4 / SQL Plus
Retail Application Server	AIX 5.3 OR Windows 2003 Enterprise Server / Oracle Client 10G 10.1.0 / Oracle 10G Application Server Release 3 OR WebSphere Application Server 5.1 / IBM MQ Server 6
Branch Server	Windows 2003 Enterprise Server/ Crystal Reports Professional Version 10 / Oracle Client 10G 10.1.0 / IIS 6.0 / Microsoft SOAP Toolkit 2.0 / MS XML 4.0 / IBM MQ Client 6
Client Workstations	Windows XP Professional (SP1) / Internet Explorer 6.0 / Microsoft SOAP Toolkit 2.0 / MS XML 4.0
Retail Report Server	Windows 2003 Enterprise Server / Crystal Enterprise Version 11/Crystal Reports Developer Edition 11

2.6. Hot Keys

Hot Keys are the shortcut keys which can be invoked by the user to navigate through various screens. Some of the examples are Cash Deposit (Fast Path: 1501) option allows the user to navigate through Balance Inquiry (Alt + B), Customer Name and Address Inquiry (Alt + C), Account Details (Alt + A), etc.

Hot Key	Screen Name	Description	Image
---------	-------------	-------------	-------

Alt + B	Balance Inquiry	This screen displays the account details of the savings and checking account balances such as the available balance, uncleared balance, current book balance, passbook balance, net balance, etc.	
---------	-----------------	---	--

The screenshot shows the 'Balance Inquiry' screen with the following data:

Field	Value	Field	Value
Account No :	000000000076	Account status :	Regular
Account type :	SAVING	Customer Name :	ACCREDITED
Previous Day Book Balance :	1,236.42	Minimum Bal Regd :	900.00
Available Bal :	1,236.42	Held Bal :	0.00
Uncleared Bal :	0.00	Adv against unclrd funds Limit :	0.00
Current Book Balance :	1,236.42	Drawing Power :	0.00
Passbook Balance :	0.00	PDC Discount limit Available :	0.00
Net Balance :	1,236.42	Sweep In Amount(Per) :	0.00
Advance Credit :	0.00	Sweep In allowed :	Y
Daily Interbranch With Amount Utilized :	0.00	Confirmation Amount :	0.00

Hot Keys	Screen Name	Description	Image
Alt + S	Amount based Account Image Display	This screen displays the images on the basis of the details maintained in the Amount Based Operating Instruction Maintenance (Fast Path: 7116) option	

Hot Keys	Screen Name	Description	Image																					
Alt + H	CBR Details Maintenance	<p>During the course of banking business it always helps to know the profitability aspect of relationship with a customer. Using this hot key you can get to know the volume of business associated with the customer. This screen gets populated whenever the Alt +H are pressed at the Customer ID field. This screen displays the details for the selected customer ID based on the CBR Details Maintenance (Fast Path: CIM18) option.</p>	<thead> <tr> <th>Label</th> <th>ID</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Profitability Band</td> <td>0000</td> <td></td> </tr> <tr> <td>Auto Loan</td> <td>0001</td> <td></td> </tr> <tr> <td>Personal Loan</td> <td>0002</td> <td></td> </tr> <tr> <td>Two Wheeler Loan</td> <td>1003</td> <td></td> </tr> <tr> <td>Credit Card</td> <td>0004</td> <td></td> </tr> <tr> <td>Future Use</td> <td>0005</td> <td></td> </tr> </tbody>	Label	ID	Description	Profitability Band	0000		Auto Loan	0001		Personal Loan	0002		Two Wheeler Loan	1003		Credit Card	0004		Future Use	0005	
Label	ID	Description																						
Profitability Band	0000																							
Auto Loan	0001																							
Personal Loan	0002																							
Two Wheeler Loan	1003																							
Credit Card	0004																							
Future Use	0005																							

Hot Keys	Screen Name	Description	Image
F8		This will enable the user to return to the same screen.	
Alt + I	Account Details Inquiry	This screen displays the details of CASA account whenever ALT+ I is pressed while accessing any CASA screen.	

Hot Keys	Screen Name	Description	Image
Alt + E	Customer Contact Details Update	This screen displays the contact details for the selected customer ID (Fast Path: CIM60) whenever ALT+ E is pressed while accessing CIM39, CI141, CIM13, and CIM11 screens.	

2.7. Exiting Oracle FLEXCUBE

The user needs to follow the correct procedure to exit Oracle FLEXCUBE. The user has to log out from the application and then close the browser window.

To exit Oracle FLEXCUBE

1. Each screen in **Oracle FLEXCUBE** has the **Logout** link on the header.
2. Click the **Logout** link.
3. The system displays the **Logon** screen.

2.8. Typographical Conventions

This	Represents
Bold	Transaction Screen Name, Field Names, Check Boxes, Button Names, Product Name etc.
<Xyz>	Name of a keyboard button
Constant width	<i>Formulae</i>

2.9. Using Online Help

The online help is the primary source of information for Oracle FLEXCUBE. It is a convenient way to look up information about a task you are performing or a feature or dialog box you would like to know more about.

Help on procedures

You can find the common tasks in the TOC tab or you can search text using the Search tab.

The tree structure of all maintenance's and transactions (appearing on the left side of the window) are arranged in the same order as the user manual. They are segregated as setup definition maintenance's and operational transactions.

To get Help

- Click the Help link on the header or press <F1> or click  the button from any transaction or maintenance inside Oracle FLEXCUBE to view the Oracle FLEXCUBE Help.
- Depending on the option you are currently working, the online help will display the relevant topic on the right panel. This online help will be opened in a separate window.

The screenshot shows the Oracle FLEXCUBE online help interface. On the left is a tree menu (TOC) with the following structure:

- Oracle FLEXCUBE
 - Version Number
 - Oracle FLEXCUBE Introduction
 - Definitions
 - Master Definitions
 - Currency Definitions
 - Securities Definitions
 - Customer Definitions
 - CASA Definitions
 - TD Definitions
 - TDM04 - TD Bank Param** (selected)
 - TDM01 - TD Product Mas
 - TDM00 - TD Product Rate
 - Tax Definitions
 - RD Definitions
 - Loan Definitions
 - Interest Rate - Rule Definitio
 - Limit Management
 - Collateral Definitions
 - Insurance Definitions
 - Asset Classification Defini
 - Clearing Definitions
 - Inventory Definitions
 - Remittance Definitions
 - Service Charge Definitions
 - Central Bank Reporting Defi
 - User Defined Fields
 - Other Definitions
 - Current and Savings Account
 - Time Deposit
 - Loans
 - Settlement and Clearing
 - Customer Information File
 - Relationship Pricing
 - Back Office
 - Branch Operations
 - General Ledger
 - System Operations Manual
 - Oracle Flexcube Reports
 - Disclaimer

The main content area displays the following information for **TDM04 - TD Bank Parameters Maintenance**:

The two important entities that are defined in **TD Bank Parameters Maintenance** are:

- **Suspense General Ledgers:** General Ledger entries are automatically passed in **FLEXCUBE Retail**. However, in certain exceptional cases, the system fails to pass the GL entries automatically. In such cases, GL posting is done automatically by the system into the suspense GLs defined at the bank parameter level. The bank would have to manually reconcile these GLs.
- **Penalty Interest Parameters:** The penalty interest rate values will be derived from the **Bank Parameters Maintenance** if the penalty interest rate to be charged has been defined as **Bank Level** while defining the product. You can specify an interest index and a variance that has to be levied as penalty at the account level.

Penalty applicable due to partial withdrawal can be done in two ways for all TD products at the bank level namely

- **Absolute Method** - The absolute penalty can be defined as a fixed rate or floating rate. Fixed interest rate is defined in 'Net Penalty Interest Rate' field. Floating interest rate is defined by selecting the corresponding interest index code in 'Net Penalty Index' field.
- **Incremental Method** - Penalty can be defined as reduction in applicable TD interest rate. This reduction can be either in the form of variance as defined in 'Incremental Penalty Interest Variance' or index code as defined in 'Incremental Penalty Index'. The standard penalty routine uses the incremental method.

Definition Prerequisite

- [BAM09 - Bank Master Maintenance](#)
- [GLM02 - Chart of Accounts](#)

Modes Available
Add, Modify, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to [Standard Maintenance Procedures](#).

To add bank parameter

1. Type the fast path **TDM04** and click **Go** or navigate through the menus to **Global Definitions > TD > TD Bank Parameters Maintenance**.
2. The system displays the **TD Bank Parameters Maintenance** screen.

TD Bank Parameters Maintenance

Field Description

3. Click the **Add** button.
4. Enter the bank code and press the <Tab> key.
5. Enter the GL details and the interest rate details.
6. Click the **OK** button.
7. The system displays the message "Record Added...Authorization Pending...". Click the **OK** button.
8. The new bank parameter is added once the record is authorised.

- To locate another topic, navigate using the tree menu (TOC) provided on the left pane and click the topic name link.

OR

- Click the Search button on the menu bar and type the related word or fast path in the Search field. Click the  button. The system displays the related topics.

To perform a search

- In the Help window, click the Search button.
- Enter the text you want to search in the text box located in the left pane and click the  button. You can also enter the text in inverted commas if you want to match the exact search criteria. The search string entered in the inverted commas is not case sensitive. For example: "Account number", the system displays the related topics.
- List of topics that contain part or whole search criteria are displayed. Click the relevant topic name.
- The selected topic is displayed in the right pane with the search criteria highlighted.
- Click the  button, to remove the highlight.
- To search for a word in the selected topic, enter the text in the Search box and click the  button. The required text is highlighted and displayed in the right pane.

The screenshot shows the Oracle Online Help search interface. The top bar includes a search box and the Oracle logo. The left pane displays a search result table for 'CIM01'.

Rank	Title
1	CIM01 - Signature Types Maintenance
2	CIM09 - Customer Information Master Maintenance
3	8053 - Customer Addition
4	Appendix of Fast Path

The right pane displays the content for the selected topic, **CIM01 - Signature Types Maintenance**. The content includes a description, a note, and sections for Definition Prerequisites, Modes Available, and Field Description.

CIM01 - Signature Types Maintenance

The user can maintain the signature type for individual customers using the **Signature Types Maintenance** option. Authorized records from this maintenance, will populate the pick list in the **Customer Addition** (Fast Path: 8053) option.

Note: The system automatically authorizes this transaction.

Definition Prerequisites
Not Applicable

Modes Available
Add, Modify, Delete, Inquiry. For more information on the procedures of every mode, refer to [Standard Maintenance Procedures](#).

To add the signature type

1. Type the fast path **CIM01** and click **Go** or navigate through the menus to **Global Definitions > Customer > Signature Types Maintenance**.
2. The system displays the **Signature Types Maintenance** screen.

Signature Types Maintenance

Field Description

3. Click the **Add** button.
4. Enter the signature code and the type of the signature.
5. Click the **Ok** button.
6. The system displays the message "Record Authorized....Click Ok to Continue". Click the **Ok** button.

The bottom of the interface shows a navigation pane with buttons for TOC, Search, and Glossary.

Use of other tools available on the help header:

- Back: Click the  button to return to the last help page you viewed.
- Forward: Click the  button to view the help option which you were initially working on.
- Refresh: Click the  button to refresh the current page which you are using.
- Expand All: Click the  button to expand all the data added in drop-down hot-spots.
- Collapse All: Click the  button to close all the data added in drop-down hot-spots.
- Glossary: In the Help window, click the Glossary button. This will display the list of glossary available in the help.

2.10. Structure of User Manual Documentation Set

The user manual is divided into the following sub-sections namely:

Description	Used By	Used To
Oracle FLEXCUBE Introduction	Everyone	Understand usage of Oracle FLEXCUBE and its manuals, online help, screen/menu layouts, transaction/maintenance procedures, authorization procedures, common screens, acronyms used.
Definitions	Static Data Administrator	Define various static data entities required for basic Oracle FLEXCUBE operations across all modules.
Customer Information File	Customer Service Personnel	Create new customers and maintain various customer level entities.
Current and Savings Account	Liabilities Servicing personnel, Retail Credit Personnel	Create new accounts and link customers to it; define funds management such as Standing Instruction, Sweep Out, Sweep In Overdrafts, Account Operations, Statement Attributes and Interest Attributes.
Time Deposit	Liabilities Servicing Personnel	Create new accounts and link customers to it, create account operations, lien maintenance, and certificate printing.
Loans	Credit Personnel	Link loan operations, collateral, define interest attributes.
Collections	Credit Personnel	Identify the delinquent advances accounts and initiate necessary follow up actions.
Card Management	Branch Managers, Tellers, BackOffice Operations, ATM and CARDS team	Create new card types, and link accounts to it. Modify the card status and other card operations.

Structure of User Manual Documentation Set

Description	Used By	Used To
Payments	Tellers, Supervisors, Branch Manager, Back Office Operations	Send and receive fund and related messages to/from any external entity outside the bank.
Safe Deposit Box	Safe Deposit Box Users / Customer Support Officers	Safe deposit box allotment, rent recovery and maintenance.
General Ledger	GL Personnel, Branch and Head Office Staff	Define various GL accounts to be used in various modules, track their movement, do periodic reconciliation etc.
Relationship Pricing	Relationship Managers/Customer Support Officers	Provide pricing at the customer level.
Branch Operations	Branch Managers, Tellers	Perform branch operations, vault operations, teller operations, various inquiry transactions and adhoc report generation.
Settlement and Clearing	Clearing and Remittance	Perform clearing operations, transaction posting, remittance instruments operations and bill payments.
Back Office	Security Administrators, BackOffice Operations	Define SMS entities and operations, perform GL operations, collateral definitions and linkage, manage inventory, SC linkage maintenance, Download service maintenance and operations, Asset classification & operations, file upload operations.
Bills	Back Office Operations	Define bills and their operations, courts and their linkage to various branches.
System Operations	Branch Tellers who are responsible for operations on branch server, Data Centre Operations Personnel	Branch Server operations and Data centre operations.

2.11. User Manual Structure

The user manual covers all the aspects of Oracle FLEXCUBE.

The structure of the user manual is as follows:

Option Name

The name of the transaction screen. A brief introduction about the broad contours of the transaction is described in this section.

Definition Prerequisites

The entities to be defined before maintaining the option. For example, Signature Types have to be defined before adding a customer in Oracle FLEXCUBE.

Modes Available

The modes that are available to maintain the transaction, in case of maintenance transaction. For more information refer to the **Modes Available** section in the Understanding the **Oracle FLEXCUBE** User Interface option.

Procedures

The process used to operate the transaction is mentioned. Depending upon the nature of the maintenance, only the important sub-procedure is defined in the manual. Use the **Standard Maintenance Procedure** section in this manual to get the broad contours of procedures to be adopted.

The first step of the procedure gives the modes to access the transaction screen. The screen can be accessed in the following two ways:

- **Fast Path:** Type the fast path in the search field in the tree menu of Oracle FLEXCUBE and click the Go button. Refer to the Fast Path in the Understanding the Oracle FLEXCUBE User Interface option.

- The tree menu access path

Transaction Screen

The transaction or maintenance screen, which is displayed in the procedure. The transaction screen is explained in the **Central Workspace** section in the Understanding the **Oracle FLEXCUBE** User Interface option.

Tab Screen

In case the maintenance screen has more than one tab, each of the tabs is defined separately.

The tab screens are the different sections of a transaction screen. The tab screens are explained in the Understanding the **Oracle FLEXCUBE** User Interface option.

Field Description

The explanation of the fields in the transaction and tab screens.

The explanation gives the following points:

- Mandatory\Optional\Conditional: Whether the field is mandatory, optional or based on some other field i.e. conditional.
- Field Type: The type of the field. For e.g. Numeric, Alphanumeric, Drop-Down, Pick List, etc.
- Field Size: The maximum characters that can be entered in the field. This is applicable for numeric and alphanumeric fields only.
- General Description: It explains the function of the field

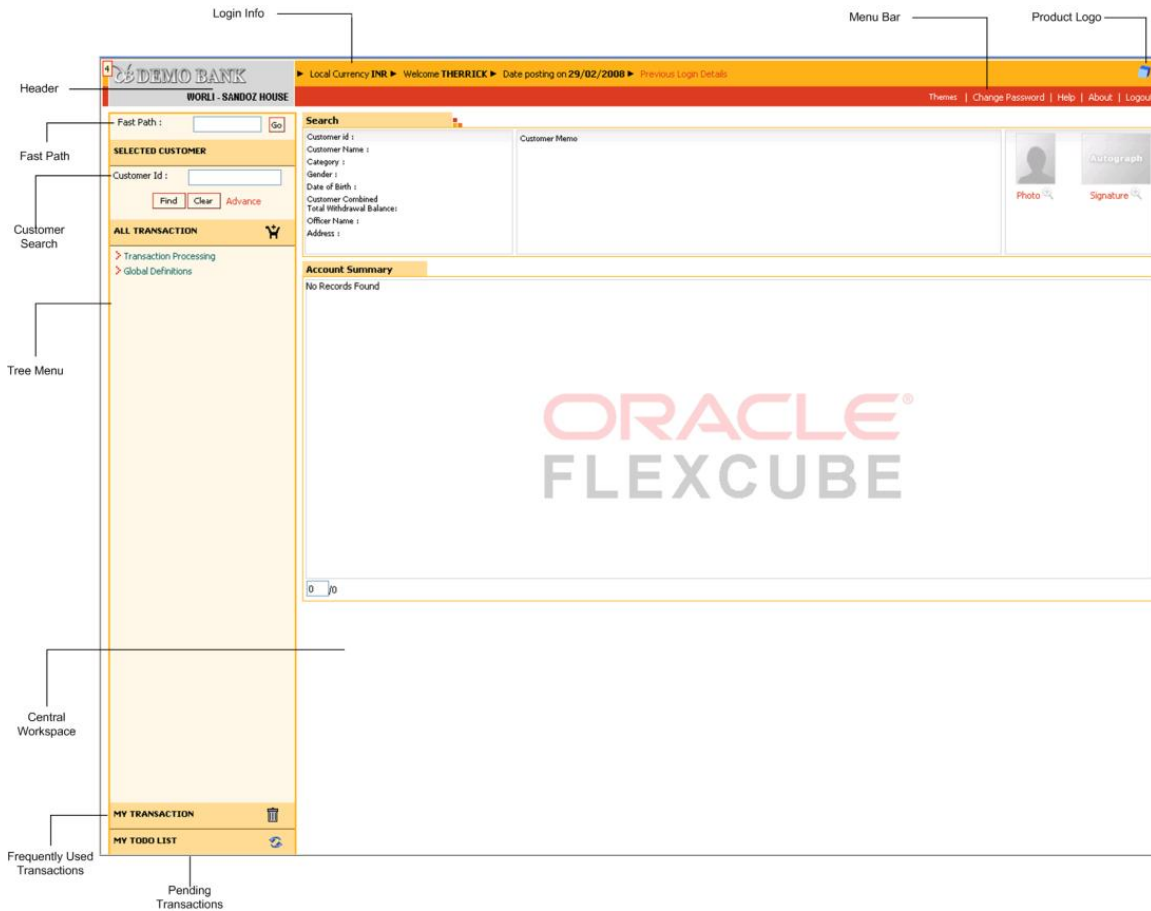

Field Name	Description
Address	[Mandatory, Alphanumeric, 35] Type the mailing address of the customer. The address can be mentioned in three lines.
City	[Mandatory, Pick List] Select the name of the city where the customer's mails should be sent from the pick list.
State	[Mandatory, Pick List] Select the name of the state where the customer's mails should be sent from the pick list.
Country	[Mandatory, Drop-Down] Select the name of the country, where the customer's mails should be sent, from the drop-down list.

2.12. Understanding the Oracle FLEXCUBE User Interface

The Oracle FLEXCUBE is designed for ease-of-use; with a convenient browser based User Interface. To navigate in Oracle FLEXCUBE, proper understanding of the interface is essential. This section illustrates the various parts of the Oracle FLEXCUBE interface and their usage.

The user interface which is displayed at the time of login is configured during the template level settings. After the user has logged into the system and selected a transaction from the menu or entered a fast path, the system will display the following:

Conventional User Interface:

Login Info

The Login Info section contains.

- The local currency of the bank
- The name of the user who has logged into the system.
- The System Date - This is the branch posting date.
- Previous Login Details – Click this to view the last login date & time and the number of unsuccessful attempts made, if any.

Header

This appears on top of every page in Oracle FLEXCUBE and contains the following:

- Name of the bank along with the bank's logo.
- The name of the branch to which the logged in user is linked.
- Menu Bar

Menu bar contains certain options as shown in the following table.

Menu	Description
Themes	Click this link to select the available colour for screen layout.
Change Password	Click this link to change the password. For more information please refer to Change Primary Password (Fast Path: 768) option in Back Office User Manual .
Help	Click this link to view Oracle FLEXCUBE Online Help.
About	Click this link to view Oracle FLEXCUBE version details.
Logout	Click this link to log out from Oracle FLEXCUBE .

Product Logo

The logo rotates in the right hand side of the transaction screen, if the connection of the branch with the host is up.

Customer Search

This section is used for basic customer search. For more details refer to the **Customer Search** option in the *Oracle FLEXCUBE Introduction User Manual*.

Fast Path

Fast Path is a facility provided in Oracle FLEXCUBE, to navigate to a particular option using an alphanumeric hotkey. Each maintenance or transaction is allotted a unique hotkey, using which the user can invoke the same without going through the menu structure, thereby enabling quick access to the transaction.

Tree Menu

All the options in Oracle FLEXCUBE are arranged module wise and in a hierarchical form. You can navigate to the required module and select the required option with a mouse click.

The tree menu structure can be defined using the template-task cross reference maintenance.

Using Menus

This section explains the two methods available to navigate to options in Oracle FLEXCUBE. They are as follows:

- Fast Path method
- Menu method

To access an option (fast path method)

- Fast Path is an alphanumeric keyword used to uniquely identify a transaction. It is also called a transaction mnemonic.
- The Fast Path is to be entered in the Fast Path text box provided in the top left corner of the Oracle FLEXCUBE screen as shown in the following figure.

A screenshot of the Oracle FLEXCUBE user interface showing a 'Fast Path' input field. The text 'BAM08' is entered into the text box, and a 'Go' button is visible to its right. The background is a light yellow color.

- To access the option, type the Fast Path code in the text box and click  or press ENTER. For example enter 8053 in the Fast Path text box and press ENTER, the Customer Addition option is displayed as shown in the following figure.

A screenshot of the Oracle FLEXCUBE user interface showing the 'Customer Addition*' form. The 'Fast Path' input field at the top left contains '8053' and a 'Go' button. The form contains various input fields for customer information, including:

- Home Branch: HO
- Customer IC: [text box]
- Customer Category: [dropdown menu]
- Customer IC Type: [dropdown menu]
- Language: [dropdown menu]
- Full Name: [text box]
- Salutation: [dropdown menu]
- Short Name: [text box]
- Address: [text box]
- State: [dropdown menu]
- Nationality: [dropdown menu]
- Zip: [text box]
- Resi. Phone No.: [text box]
- Mobile No.: [text box]
- Gender: [dropdown menu]
- Staff: [checkbox]
- Business: [checkbox]
- Profession: [dropdown menu]
- IC Type: [text box]
- Customer ID: [text box]
- Middle Name: [text box]
- Last Name: [text box]
- Town / City: [dropdown menu]
- Country: [dropdown menu]
- Country of Residence: [dropdown menu]
- Birth / Reg Date: [text box]
- Customer Education: [dropdown menu]
- Email ID: [text box]
- Marital Status: [dropdown menu]
- Employee Id: [text box]

At the bottom of the form, there are buttons for 'Val. Customer', 'OK', 'Close', and 'Clear'. The bottom left corner of the form displays 'TRANSACTION PROCESSING' and 'GLOBAL DEFINITIONS'.

To navigate to an option (menu method)

- When you login, the system displays the Tree Menu in the left pane as shown in the following figure.

Understanding the Oracle FLEXCUBE User Interface

Fast Path :

Central Workspace

This is the operational area where the contents of every transaction or maintenance are displayed. The following figure provides a detailed explanation of various elements that constitute the Central Workspace.

Screen Name

This is the name of the transaction being executed.

General Information

For most of the transactions there are certain fields which are common. Some of these fields are key to access the relevant record. The display of other information in the respective fields depends upon the unique value entered in the key field. For example, Account Number, Customer Name etc. For most transactions the user has to specify the Account Number and the details associated with that Account Number are displayed.

Tab Screen

Certain transactions are made up of a number of sub-sections. The tab screens are these separate sub-sections. Depending on the nature of the transaction, the user selects the appropriate tab screen and enters the details required in that tab screen or the system automatically displays the subsequent tab screen depending on the sequence of the transaction.

Transaction Information

Understanding the Oracle FLEXCUBE User Interface

This section may or may not be found in all transactions. The specific details to be entered or displayed for a particular transaction are displayed in this section of the Central Workspace.

Record Details

This contains the audit related information of the record in focus. This part contains the following fields:

Field	Description
Input By	The ID of the user who has added the record.
Authorised By	The ID of the user who has authorised the record.
Last Mnt Date	The addition or maintenance of the record was done on this physical date and time. This is the application server date / time.
Last Mnt Action	This indicates the last maintenance action which was authorized / auto-authorized. Example: Add, Modify etc.
Authorised	Indicates if the record in focus is an authorized record or not.

Modes Available

For all maintenances, Oracle FLEXCUBE enables various modes. These are command buttons and used to perform specific functions. The following table explains the individual button and its function.

Click	To
	Add a new record with the features of an existing record.
	Add a new record.
	Modify a record. The user can modify the record after authorization. All fields which do not form a part of the key field can be modified.
	Delete a record. The user can delete the record after authorization. The record is deleted from the system and cannot be accessed.
	Cancel a record. The user can cancel the record before authorization. This will enable cancellation of the earlier changes that have done. Example if the cancellation of the last modification was done, the record will revert to the last authorized status.
	Amend a record. The user, who has added or modified the record, can amend it before authorization. These amendments shall be taken into consideration when the supervisor authorizes the record.
	Authorize a record. The user who has specific access rights can authorize the record.

Click	To
	View the authorized records.

Validation Buttons

Click	To
	Commit a transaction.
	Clear the data entered on the screen.
	Close the screen and exit the maintenance / transaction.

Call Timing

Click  to view the time taken in form request, form render and submit event of transaction.

Help

Click  this to view the help related to a particular screen.

Close

Click  to close the current screen.

Type of fields

Information is entered in fields. Generally, the fields can be Display Fields, Entry Fields, Date Fields, and pick list.

Display Fields

Reserve Calculation Frequency :

Information in these fields is retrieved/calculated by Oracle FLEXCUBE. Display fields are shown on screen in grey colour, indicating that they cannot be changed.

Entry Fields

Narrative :

An Entry Field is an area in which the user can type or enter information. This information can be textual, numeric, or alphanumeric in nature. Entry Fields are of two types:

- Mandatory Fields. Information in these fields is mandatory for the process to move ahead.
- Optional Fields. Information in these fields is optional; you may or may not enter information in them.

Date Fields

LN Process Date : 

- Normally, one would enter the date in the field using dd/mm/yyyy format.
- For ease-of-use, Oracle FLEXCUBE has provided a Calendar function in every date field.
- The calendar allows you to choose a date rather than enter it in the field.
- To select a date from a calendar in a date field, follow the steps given below.

To select a date from the Calendar

- Click  with the mouse to activate the calendar.
- Oracle FLEXCUBE displays a calendar as shown below.

- Click the relevant date. The date gets populated in the date field.
- Click  OR  to navigate to the previous or next year respectively.
- Click  OR  to navigate to the previous or next month respectively.

To move within a workspace

- Click the field where you want to go.
OR
- Press <Tab> or <Enter> to move clockwise from one field to another, or <Shift> + <Tab> to move counter-clockwise.

Pick List

A field that has the  button adjacent to it is a pick list.

- You can enter the value in the field by selecting it from the pick list.
- To see the pick list available for any field, click the  button that appears adjacent to the field.
- For example, to select the name of the Country, click  adjacent to the Country field as shown in the following figure.

Country : 

- Oracle FLEXCUBE displays the pop-up screen as shown in the following figure.

CountryName	CountryCode
AMERICA	US
AUSTRALIYA	A
BANGLADESH	BAN
CHINA	105
INDIA	103
INDIA1	IND
Indonesia	101
SRILANKA	SRL
japan	102

- When you click the mouse pointer over a particular record, it gets highlighted. Double-clicking the highlighted record will automatically populate the field as shown in the following figure.

Country : 

Frame

A frame is a rectangular box, mostly with a title, that is used to group related fields on a screen. For example:

- The adjacent figure displays a section with “Marital Status” as its title.
- It has two fields, viz., Status and No. of Spouses.

Radio Button

A radio button is a group of two or more choices that are mutually exclusive; that is, you can select only one. For example, if there are two radio buttons, only one of them can be active.

- To select a radio button, click the radio button.

Check box

A check box is a toggle switch.

You can click the check box to indicate Yes on the option or you can click the check box again to indicate No.

- In the Yes state you will see a tick mark inside the box.
- In the No state the box remains empty.

Drop-down list

A drop-down list box displays a fixed list of available choices.

- List boxes have scroll bars if there are more choices than what can be displayed at a given time.
- To invoke the list box, click the downward pointing arrow.
- Select any item from the list.

User Defined Fields

This section is used for updating additional details. Based on the requirement and the nature of the field, you can specify default values and validations for the field. Oracle FLEXCUBE validates all entries made to the field against the validations defined for a field. For more information refer to User Defined Fields in the Common Screens option in Oracle FLEXCUBE Introduction user manual.

The user defined fields are available in two layouts.

The UDF in classic format

An alternative UDF format

Click on the appropriate UDF to enter the additional details.

Session-Auto Expiry

The system displays session expiry alert if you are inactive for a particular duration (Interval/2) which is set by the bank. Click anywhere in the dashboard, you can reset inactivity duration and auto logout mechanism will not proceed with the logout of current session.

Click the checkbox to disable this alert for the current session. In this case, the current session will be expired without any notification if your inactivity duration is equal to value set.

The session-auto expiry screen will be as follows:

2.13. Standard Maintenance Procedures

The standard procedure for the maintenance's in Oracle FLEXCUBE is explained below. A record inside the table on which the maintenance operates has two parts namely:

- A. Key – This can consist of one or more fields and these together identify a unique record in the table.
- B. Parts of the record – Other attributes of the record.

For example, in Bank Codes Maintenance, the table layout is as follows:

Bank code is a key identifier in the Bank Codes table. Each bank code uniquely identifies a bank in the table. The attributes of that bank code would be defined in the body of the record. All action on the table namely add, modify, delete, amend, authorize and view are done using key field(s).

For doing any operations on the maintenance (or table), the key fields for the respective transaction screen have to be entered.

In addition to the entities on the screen, each of the record inside Oracle FLEXCUBE has some additional fields to be used internally by the system namely.

Sr No	Field Name	Description	Remarks
1	Flg-mnt-status	Maintenance Status Flag	Can be 'A' for Authorized or Null.
2	Cod-mnt-action	Maintenance Action Code	
3	Dat-last-mnt	Last Maintenance Date	
4	Cod-last-mnt-makerid	Last Maker ID	
5	Cod-last-mnt-chkerid	Last Checker ID	

For example, the standard procedures for the Bank Codes Maintenance option are as follows:

To add a bank code by copy

1. Select the **Add** mode.
2. Select the **Add By Copy** check box.
3. Type the existing bank code and press the **<Tab>** or **<Enter>** key.
4. The system displays the details of the bank code which is already maintained.
5. Modify the required fields and click the **Ok** button.
6. The system displays the message "Record Added...Authorisation Pending...Click Ok to Continue".

To add a bank code

1. Select the **Add** mode.
2. Type the bank code and press the **<Tab> or <Enter>** key.
3. Enter the bank code integer and bank name and click the **Ok** button.
4. The system displays the message "Record Added...Authorisation Pending...Click Ok to Continue".

To modify the bank code

1. Select the **Modify** mode.
2. Type the bank code and press the **<Tab> or <Enter>** key or select it from the pick list.
3. Modify the relevant information and click the **Ok** button.
4. The system displays the message "Record Modified...Authorisation Pending...Click Ok to Continue".

This enables modification of an authorized record in the table. System would allow modification of non-key fields. Key fields cannot be modified or altered. When a record is modified, system will make another copy of the record in the table. The changes done on the record would reside in the 'Unauthorized' record with the same key. Hence, till the time of authorization, the table would contain 2 rows for the same key field namely 'Authorized' record and 'Unauthorized' record.

When the authorizer authorizes the changes, the system would delete the 'Authorized' record from the table and replace the same with the 'Unauthorized' record and change the status to 'Authorized'.

To delete the bank code

1. Select the **Delete** mode.
2. Type the bank code and press the **<Tab> or <Enter>** key or select it from the pick list.
3. Click the **Ok** button.
4. The system displays the message "Record Deleted...Authorisation Pending...Click Ok to Continue".

This enables physical deletion of an authorized record in the table. When a record is marked for deletion, system will make another copy of the record in the table. The changes done on the record would reside in the 'Unauthorized' record with the same key. Hence, till the time of authorization, the table would contain 2 rows for the same key field namely 'Authorized' record and 'Unauthorized' record.

When the authorizer authorizes the deletion, the system would delete the 'Authorized' and 'Unauthorized' records from the table.

To cancel the bank code

1. Select the **Cancel** mode.
2. Type the bank code and press the **<Tab> or <Enter>** key or select it from the pick list.
3. Click the **Ok** button.
4. The system displays the message "Record Cancelled...Click Ok to Continue".

Cancel action is done by the teller who wants to nullify the action (add, modify, delete or amend) done by him on a record and does not want to send the same for authorization. This 'cancel' action can be done only by the teller who has done the initial (add, modify, delete or amend) maintenance. When the teller cancels the record, the system deletes the 'Unauthorized' record from the table.

To amend the bank code

1. Select the **Amend** mode.
2. Type the bank code and press the **<Tab> or <Enter>** key or select it from the pick list.
3. Modify the relevant information and click the **Ok** button.
4. The system displays the message "Record Amended...Authorisation Pending...Click Ok to Continue".

Amend action is used by the teller who wants to do further changes to the record which has been modified by him earlier but before authorization by the supervisor.

System will allow to amend of non-key fields. Key fields cannot be modified or altered. When a record is amended, system will record the changes in the 'Unauthorized' record in the table. Hence, till the time of authorization, the table would contain 2 rows for the same key field namely 'Authorized' record and 'Unauthorized' record.

When the authorizer authorizes the changes, the system would delete the 'Authorized' record from the table and replace the same with the 'Unauthorized' record and change the status to 'Authorized'.

To authorize the bank code

1. Select the **Authorize** mode.
2. Type the bank code and press the **<Tab> or <Enter>** key or select it from the pick list.
3. Click the **Ok** button.
4. The system displays the message "Record Authorized...Click Ok to Continue".

Authorize action is done to accept the action (add, modify, delete or amend) done on a record. When a record is authorized, system will delete the existing 'Authorized' row and change the status of the 'Unauthorized' record to 'Authorized'.

To view the bank code

1. Select the **Inquiry** mode.
2. Type the bank code and press the **<Tab> or <Enter>** key or select it from the pick list.
3. The system displays the bank code details.

2.14. Standard Transaction Procedures

The procedure for the transactions in Oracle FLEXCUBE is explained below. The key fields for the respective transaction screen have to be entered. For example, the standard procedure for the Cash Deposit is as follows:

To deposit cash in CASA account

1. Type the account number and press the **<Tab> or <Enter>** key.
2. Select the Txn Ccy from the drop-down list and type the Txn Amount and click the **Ok** button.
3. The system displays the message "Authorisation Required. Do You Want to Continue"
4. The system displays the **Authorization Reason** screen.
5. Enter the relevant information and click the **Grant** button.
6. The system displays the transaction number. The transaction number is system generated that uniquely identifies each transaction performed by a teller and can be used for tracking the transaction.

2.15. Authorisation Procedures

You can define the following bank level parameters for authorisation:

- **Parallel Authorization:** This parameter will allow transaction to be authorised by a same level or higher level user belonging to the same class.
- **Re-enter Transaction Amount:** This parameter will require the authorizer to input the transaction amount before authorizing a transaction done through specific options.

Authorisation can be broadly classified into following four types:

1. Local Authorisation
2. Remote Authorisation
3. Centralised Authorisation
4. Deferred Authorisation

2.15.1. Local Authorisation

Local authorisation is used when the authoriser authorises the transaction on the same location / PC as that of the person posting the transaction, without the person logging off from his session. The transaction can be authorized by a user of same level or a higher level belonging to the same class, based on the 'Parallel Authorization' parameter value. A user can be initiator of a transaction as well as an authoriser for same transaction type but will not have the right to authorize the transaction initiated by him. Only posting transaction screens have option for Local authorization. Re-entry of amount is not possible for local authorization.

1. Enter the relevant information in the transaction screen and click the **Ok** button.
 1. The system displays the **Authorization required** message box.

3. Click the **OK** button to continue.
4. The system displays the **Authorization Reason** screen.

Oracle Flexcube Authorization

Authorization Reason(s)
Premature Redemption of Term Deposit.

Local Remote

Supervisor ID :

Primary Password :

Comments

Grant Deny Cancel

5. Select the **Local** option.
6. Enter the appropriate user name and password.

7. Click the **Grant** button and the transaction will be authorised.

2.15.2. Remote Authorisation

Remote authorisation is used when the person posting the transaction has sent the transaction for authorisation to a remote location, within his branch.

The authoriser list includes user name along with the user ID and login status. The transaction will be allowed to be authorized by a user of similar level or a higher level based on the 'Parallel Authorization' parameter value. The list will not have the User ID and details of the transaction initiator as a user cannot be the maker and checker for the same transaction. A user can be an initiator of a transaction as well as an authoriser for same transaction type but will not have the right to authorize transaction initiated by him. Only an initiator can change the authorizer for a transaction if the request for authorization is unanswered.

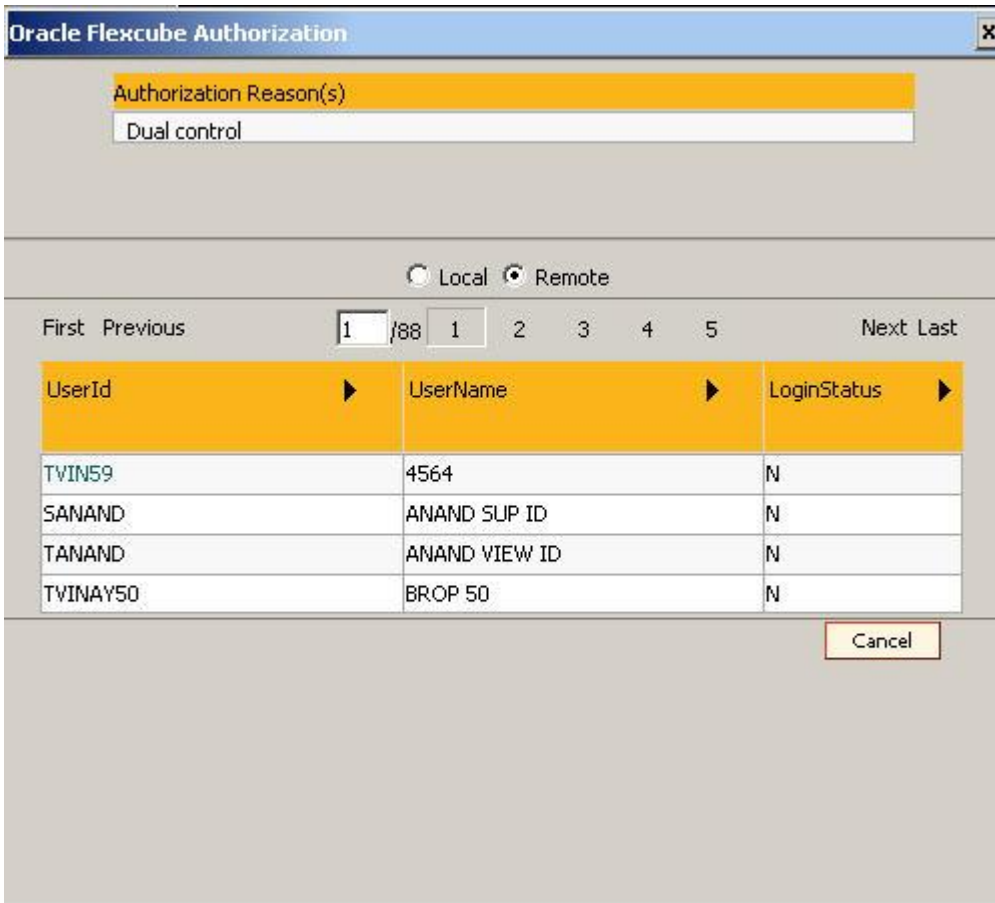

The remote authorisation process is divided into three stages.

Teller Activities

1. Enter the relevant information in the transaction screen and click the **Ok** button.
2. The system displays the **Authorization required** message box.

3. Click the **OK** button.
4. The system displays the **Authorization Reason** screen.

5. Select the **Remote** option.
6. Select the authoriser ID to whom the transaction is to be sent for authorisation from the **User Id** column drop-down list.
7. The system displays the message, "Transaction sent for Authorization". Click the **Ok** button.

Supervisor Activities

The authoriser can view only those transactions which are sent to him/her for authorization.

1. Type the fast path **6006** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Search Electronic Journal** or **My To Do List** link provided in the menu option.
2. The system displays the **Search Electronic Journal** screen.
3. Select the **Teller ID** from the pick list.
4. Click the **Remote Authorisation** option.
5. Click the **Fetch** button. The system displays all the transactions sent by the teller for authorization.

9. Enter the amount. If the amount entered matches with the transaction amount entered by the teller, the authorizer can commit the transaction. The authoriser can reject the transaction, if required.

Oracle Flexcube Authorization

Amount : 100,000.00

Ok Close

10. Click **Ok** button. The system displays the authorization screen.

The screenshot shows a dialog box titled "Oracle Flexcube Authorization". At the top, there is a yellow header bar with the text "Authorization Reason(s)". Below this is a text input field containing the text "Dual control". Underneath, there is a section with two labels: "Reason :" and "Comments". To the right of "Reason :" is a dropdown menu. To the right of "Comments" is a large, empty text area with a vertical scrollbar. At the bottom of the dialog box, there are two buttons: "Grant" on the left and "Cancel" on the right.

11. Enter the relevant information.
12. Click **Grant** button for record authorisation.

2.15.3. Centralised Authorisation

Centralised authorisation is a security enhancing setup which can be enabled in **Oracle FLEXCUBE** for providing additional authorizations when predefined reasons are encountered in online transactions by a group of supervisors, preferably from those located centrally.

This level of authorization is subsequent to and in addition to the local/remote authorization which would have been provided for the transaction to confirm the overrides.

The predefined reasons are defined in the branch database in an internal table called ba-auth-reason-mast table.

Centralised authorization is done by a specific transaction which can be accessed only by certain supervisors as identified in the Security Management System (SMS) setup. Supervisors accessing this transaction can identify the transaction(s) to be authorised by using the from branch, transaction code, customer id and account number combination.

The centralised authorization process is divided into the following steps namely:

If auto-authorization is disabled:

Step	Activity By	Activity Description
A	Teller	Teller performs online transaction from the branch. If system encounters conditions requiring local/remote authorization, transaction will proceed to step B. If system does not encounter any conditions requiring local/remote authorization but encounters centralised authorization requirement, system will proceed to step D.
B	Supervisor	Supervisor approves the transaction using local authorization or remote authorization. If local authorization is provided, system proceeds for further processing.
C	Teller	Teller resubmits the approved transaction from the Electronic Journal, for transactions sent for remote authorization. System encounters reasons requiring central authorization. Teller sends the transaction for central authorization.
D	Supervisor	Supervisor access the central authorization transaction and authorizes the transaction waiting for authorization.
E	Teller	Teller resubmits the approved transaction from the Electronic Journal and completes the transaction.

If auto-authorization is enabled:

Step	Activity By	Activity Description
A	Teller	Teller performs online transaction from the branch. If system encounters conditions requiring local/remote authorization, transaction will proceed to step B. If system does not encounter any conditions requiring local/remote authorization but encounters centralised authorization requirement, system will proceed to step D.

Step	Activity By	Activity Description
B	Supervisor	Supervisor approves the transaction using local authorization or remote authorization. If local authorization is provided, system proceeds for further processing.
C	Teller	System encounters reasons requiring central authorization. Teller sends the transaction for central authorization.
D	Supervisor	Supervisor access the Central authorization transaction and authorizes the transaction waiting for authorization.

Teller Activities

1. Enter the relevant information in the transaction screen and click the **Ok** button.
2. The system displays the **Authorization Required** message box.

3. Click the **OK** button.
4. The system displays the **Authorization Reason** screen.

5. Select the **Remote** option.
6. The system displays the list of supervisors.
7. Click on the appropriate supervisor.
8. The system displays the message, “Transaction Sent For Authorization”. Click the **Ok** button.
9. The system displays the transaction sequence number. Click the **OK** button.

Supervisor Activities

At Local Branch:

The supervisor authorises the transaction done by the teller locally or remotely. For more information on Local and Remote authorization refers to **Local Authorization** and **Remote Authorization** earlier in this chapter.

At Central Location:

1. Navigate to the **Centralised Authorization** screen using the fast path 4501.
2. Transactions to be authorized can be filtered by entering one or more of the following:
 - a. From Branch and To Branch
 - b. Mnemonic
 - c. Customer ID
 - d. Account No
 - e. Teller ID

Centralised Authorisation

From Branch : To Branch :

Mark Grant Deny View Back

6. Click the **Grant** button to authorize the transaction.
7. Click the **Deny** button to deny authorization of the transaction.
8. The system displays the **Authorization Reasons** screen.

The screenshot shows a 'Cash Withdrawal' form with the following fields:

- Account No : 9999101000001080 SEEMA U HIREBET (SB ;
- Account Ccy : INR Txn Ccy : INR
- Acct Ccy Rate : 1.00000 Txn Ccy Rate : 1.00000
- Amount : 6,000.00
- Account Amt : 6,000.00
- Narrative : Cash Withdrawal

An 'Authorization Reasons' dialog box is open, showing:

- Reason: SANCTION OBTAINED
- Comments: Overdraft for the account

Buttons for 'Ok' and 'Cancel' are visible at the bottom of the dialog box and in the main form's footer.

9. Select the reason from the drop-down list and type the comments.
10. Click the **Ok** button.

Teller activities after authorization

If auto-authorize is not enabled, the person posting the transaction (teller) is expected to submit the transaction for posting from the Electronic Journal screen or Incomplete Transactions screen, after the authorizer has authorized the transaction.

1. Type the fast path **6006** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Search Electronic Journal**.
2. The system displays the **Search Electronic Journal** screen.
3. Click the **Electronic Journal** option.
4. Click the **Fetch** button. The system displays all the transactions performed by the teller.

8. The system displays the transaction sequence number.
9. Click the **Ok** button.
10. The system displays the documents screen.

2.15.4. Deferred Authorisation

Deferred authorisation is used for maintenance transactions. The transaction will be allowed to be authorized by a user of same level or a higher level belonging to the same class based on the 'Parallel Authorization' parameter value. A User can be initiator of a transaction as well as an authoriser for same transaction type but will not have the right to authorize transaction initiated by him/her. Any checker will be able to see unauthorized maintenance transactions requiring deferred authorization in authorize mode. For more information refer to Standard Maintenance Procedures in the Oracle FLEXCUBE Introduction User Manual.

Note: While authorising a transaction, the system displays various authorisation reasons depending on certain conditions. For example: Account is dormant, Hold funds present, Premature Redemption of Term Deposit, etc. Refer the Authorisation Reason screen.

2.16. Common Screens

This topic includes the details of the following screens available in **Oracle FLEXCUBE**:

- Service Charges Details
- Instrument Details
- Cheque Details
- Inventory Details
- Cost Rate Details
- User Defined Fields
- Negotiate
- Document Receipt

Common Screen refers to those screens which could find an appearance in most of the transactions having a financial impact. For all those transactions that require input or modification of default Service Charges or Inventory details or Cheque Details or Traveler's Cheque, the screen mentioned shall be used.

The service charge, inventory details and cheque details screens are invoked when the respective tabs on the transaction screen is clicked. The display of these respective tabs is dependent upon the setup. For example, in the following figure, the Service Charge Details tab is enabled.

The Service Charges transaction definition option can be attached to options like Cash Deposit (Fast Path: 1401), GL Miscellaneous Debit against Cash (Fast Path: 1060), etc.

If you click the Service charge transaction definition tab, the system will display the SC common screen. The tabs can be disabled using the Transaction Definition (Fast Path: TC001) option.

2.16.1. Service Charge Details

A maximum of five default service charges can be linked to each transaction.

Service Charges Details*

Service Charge	Amount	CCY	Amount (LCY)	Parent (LCY)	Addnl (LCY)	Rule Applied
HOME CASH CHARGES	50	INR	50.00	0.00	0.00	Rule
SERVICE TAX	10.00	INR	10.00	0.00	0.00	Rule
CESS	0.20	INR	0.20	0.00	0.00	Rule

TOTAL (LCY) :

Rule ID	Original Value	Rule Returned	Rule Returned Value	Final Value	Reason

Field Description

Field Name	Description
Service Charge	[Display] This field displays the default SC which is linked to the transaction.
Amount	[Mandatory, Numeric, 13, Two] Type the service charge to be applied. By default, this field displays the service charge amount in SC currency. The SC is defaulted based on the setup. If the relevant SC is to be waived, type zero in this field.

Field Name	Description
CCY	[Display] This field displays the service charge currency.
Amount(Lcy)	[Display] This field displays the service charge in the local currency. If the SC amount has changed, system will automatically convert the new SC amount into the local currency.
Parent(Lcy)	[Display] This field displays amount of Service Charge of the Parent SC in local currency.
Addnl(LCY)	[Display] The field displays the amount of Service Charge of the Additional SC in local Currency.
Rule Applied	[Display] Click the Rule link to view the rule details applied for the SC. The link is displayed if a rule is applied to the service charge.
Total (Lcy)	[Display] This field displays the total service charge to be applied in local currency.

Column Name	Description
Rule Details	
Rule ID	[Display] This field displays the Rule ID attached to the selected SC. An interest rule ID is a unique number, which represents the installment rule.
Original Value	[Display] This field displays the original amount of the service charge.
Rule Returned	[Display] This field displays the rule returned description for the selected service charge.
Rule Returned Value	[Display] This field displays the value of the rule returned.

Column Name	Description
Final Value	[Display] This field displays the final value of the service charge after the rule has been applied. <i>Final Value = Original SC Value - Rule Returned Value.</i>
Reason	[Display] This field displays the reason for charging of SC.

Click the Ok button to apply the new or modified service charges to the transaction.

2.16.2. Instrument Details

The screenshot shows the 'Instrument Details' window with the following data:

Clearing Type :	Local 3 day float	Bank :	100 Canara
Cheque No :	1	Branch :	1001 CANARA1
Cheque Literal :	Local Cheque Deposit	Sector :	201 Java
Cheque Date :	20/03/2008		
Routing No :	1001001		
Drawer Acct No :	00000002220		
Value Date :	01/05/2008		
Late Clearing :	N		
Chg Commission :	Yes		
Instr. Sub-type :	00 - Crossed Cheque		

Field Description

Field Name	Description
Clearing Type	<p>[Mandatory, Drop-Down]</p> <p>Select the clearing type from the drop-down list.</p> <p>The bank can set up multiple clearing types, where cheques that are required to be cleared at different times of the day are deposited so that they can be treated differently. All processes for a cheque from outward clearing, running of value date, and marking late clearing, etc. takes place on the basis of the clearing type. Refer to the Clearing Type Maintenance (Fast Path: STM64) option in Definitions User's Guide.</p>

Field Name	Description
Cheque No	<p>[Mandatory, Numeric, 12]</p> <p>Type the cheque number, which is present on the MICR line of the instrument.</p> <p>When the cheque is deposited into any payee's account, the cheque number is used to ensure that the duplicate entries are not made in the system (that the same cheque is not deposited multiple times in the system.). On deposit of every cheque, cheque number, routing number and drawer account number (all the three are present on the MICR line) are used to check for the presence of duplicate instrument. If duplicate instruments are found, cheque deposit will be rejected unless the earlier cheques are all marked as Returned.</p>
Cheque Literal	<p>[Mandatory, Drop-Down]</p> <p>Select the cheque literal from the drop-down list.</p>
Cheque Date	<p>[Mandatory, dd/mm/yyyy]</p> <p>Type the cheque date.</p> <p>This date has to be less than or equal to current posting date. This date is used in checking validity of the instrument.</p> <p>Instruments become stale if the cheque date is prior to the current posting date by the stale period (defined in the Settlement Bank Parameters (Fast Path: STM59) option).</p>
Routing No	<p>[Mandatory, Numeric, Nine]</p> <p>Type the routing number of the cheque.</p> <p>The routing number is a combination of the bank code, the branch code and the sector code from where the instrument was drawn.</p> <p>The combination can be obtained from the Routing Branch Maintenance (Fast Path: STM54) option.</p> <p><i>Routing Number = Sector Code / Bank Code + Branch Code</i></p> <p>For a deposited cheque, this routing number is used by the system to determine the float days and thus the value date of the instrument.</p> <p>For an inward clearing cheque, this routing number should belong to the bank. The order, in which the codes in the routing number are to be entered, is determined by the set up using the Settlement Bank Parameters screen.</p>
Bank	<p>[Display]</p> <p>This field displays the bank name to which the cheque belongs, corresponding to the bank code extracted from the routing number.</p>

Field Name	Description
Branch	<p>[Display]</p> <p>This field displays the branch name from where the cheque is drawn, corresponding to the branch code and bank code extracted from the routing number.</p>
Sector	<p>[Display]</p> <p>This field displays the clearing sector name to which the cheque branch belongs, corresponding to the sector code extracted from the routing number.</p> <p>Sector Codes are defined using Sector Codes Maintenance (Fast Path: BAM41) option.</p>
Drawer Acct No	<p>[Mandatory, Numeric, 16]</p> <p>Type the account number on which the cheque is drawn.</p> <p>The drawer account number is the account number of the person who has issued the cheque. The drawer account number which is generally printed on the cheque leaf, is the account from where the funds will come into the beneficiary account. If the cheque is drawn on a different bank, the drawer account number will not be validated by the system. If the cheque is drawn on your own bank, the system will validate the drawer account number for its correctness.</p>
Value Date	<p>[Display]</p> <p>This field displays the value date of the cheque.</p> <p>When a cheque is deposited on an account, the system uses the routing number to check the float days from the Endpoint Float Maintenance (Fast Path: BAM28) option and the working days from the Endpoint-Clearing Branch Composite Calendar (Fast Path: BAM33) option to generate the value date of the cheque.</p> <p>The value date is the date on which the cheque is expected to be cleared. On the value date, the system updates the customer's available balance and credits the account with the cheque amount and reduces the un-cleared funds on the account.</p> <p>For more information on maintaining value date, refer to the Clearing Definitions option in the Definitions User's Guide.</p>

Field Name	Description
Late Clearing	<p>[Display]</p> <p>This field displays the values Y or N for late clearing.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Y - If the late clearing is marked • N - If the late clearing is not marked <p>This field displays Y when a customer deposits a cheque after the clearing cut-off time is over, for current posting date for the selected clearing type.</p> <p>The instruments that are deposited in late clearing will be considered as 'Late for clearing'. Such instruments will be treated as deposit for the next working date for all value date calculation.</p>
Chg Commission	<p>[Display]</p> <p>This field is currently not used in any processing.</p>
Instr. Sub-type	<p>[Mandatory, Drop-Down]</p> <p>Select the instrument sub type from the drop-down list.</p> <p>The values in the drop-down are defaulted from the Site Instrument Type field maintained in the Instrument Type Xref (Fast Path: STM58) option.</p>

Click the Ok button to apply the new or modified service charges to the transaction. Click the Cancel button to reject the instrument details.

2.16.3. Cheque Details

The screenshot shows a window titled "OBU CASA Funds Transfer Request" with a yellow header. Below the header, the text "Cheque Details" is displayed. There are two input fields: "Cheque No : 988766566" and "Cheque Date : 10/04/2008". At the bottom right of the window, there are "Ok" and "Cancel" buttons.

Field Description

Field Name	Description
Cheque No	[Mandatory, Numeric, 12] Type the cheque number issued on the From Account. System will validate the cheque to confirm if it has been issued on the From account and is in unpaid status.
Cheque Date	[Mandatory, dd/mm/yyyy] Type the date of the cheque. The system will default to the branch date. If the date is modified, the same should be less than the branch date.

Click the Ok button to accept the cheque details as a part of the transaction. Click the Cancel button to reject the cheque details.

2.16.4. Inventory Details

Inventory Details*

Stock Code : Stock SubType :

Instrument Type : Ccy Code :

Issuer Code : Total Amount :

Denomination Details :

Denm	Series Number	Start Number	End Number	Quantity
5	0	0	0	0
20	0	0	0	0
50	0	0	0	0
100	0	0	0	0
500	0	0	0	0

OK

Field Description

Field Name	Description
Stock Code	[Display] This field displays the stock code representing the inventory.
Stock Sub Type	[Display] This field displays the sub-type of the instrument.
Instrument Type	[Display] This field displays the instrument type of the inventory.
Ccy Code	[Display] This field displays the currency of the inventory. This is defaulted from the transaction screen.

Field Name	Description
Issuer Code	[Display] This field displays the issuer code of the inventory. This is defaulted from the transaction screen.
Total Amount	[Display] This field displays the total amount for which the inventory is being purchased. This is defaulted from the transaction screen.
Denomination Details	
Denm	[Display] This field displays the denomination detail that is defaulted from the Stock Codes Maintenance (Fast Path: IVM01) option for the particular issuer and particular currency.
Series Number	[Mandatory, Numeric, 10] Type the series number of the inventory which is to be purchased.
Start Number	[Mandatory, Numeric, 10] Type the start number of the inventory belonging to the respective series number which is to be purchased.
End Number	[Display] This field displays the end number that is calculated by the system depending upon the start number and quantity.
Quantity	[Display] This field displays the quantity of the inventory which is purchased.

Click the **Ok** button to accept the inventory details as a part of the transaction. Click the Cancel button to reject the inventory details.

2.16.5. Cost Rate Details

As part of the "Branch Profitability" requirements, cost rates needs to be captured transaction and account currency wise, for FX transactions.

The screenshot shows a window titled "Outgoing Payment Transaction(Message)" with a yellow header. Below the header, the "Cost Rate Details" section contains four input fields arranged in a 2x2 grid. The top row includes "Account Ccy" (a dropdown menu showing "INR"), "Acct Ccy Rate" (a text box with "1.0"), "Acct Ccy Cost Rate" (an empty text box), and "Txn Ccy" (a dropdown menu showing "INR"). The bottom row includes "Txn Ccy Rate" (a text box with "1.0") and "Txn Ccy Cost Rate" (an empty text box). An "ok" button is located at the bottom right of the window.

Field Description

Field Name	Description
Account Ccy	<p>[Display]</p> <p>This field displays the currency assigned to the product at the product level, under which the loan account is opened.</p> <p>All the entries posted in the account are in the account currency. The exchange rate values must be defined and downloaded.</p> <p>For example, if the currency assigned to a Loan product is USD (US Dollar), the account opened under that product has USD as its account currency, by default.</p>

Field Name	Description
Acct Ccy Rate	<p>[Display]</p> <p>This field displays the rate at which the account currency is converted to the local currency of the bank.</p> <p>The teller's right to change the account currency rate is configurable at the bank level. If such rights are not assigned to the teller, this field becomes non-editable.</p> <p>If the account currency and the local currency are same, the field takes the default value as 1, which cannot be modified.</p>
Acct Ccy Cost Rate	<p>[Display]</p> <p>This field displays the cost rate for the account currency that is defaulted to the mid rate for the currency.</p>
Txn Ccy	<p>[Mandatory, Drop-Down]</p> <p>Select the currency of the cheque from the drop-down list.</p> <p>This field, by default, displays the account currency as the transaction currency.</p> <p>While posting the transaction entries to the account, the transaction currency is converted into the account currency and for posting the GL entries it is converted into the local currency of the bank.</p>
Txn Ccy Rate	<p>[Display]</p> <p>This field displays the rate at which the transaction currency is converted to the local currency of the bank.</p> <p>The teller's right to change the transaction currency rate is configurable at the bank level. If such rights are not assigned to the teller, this field becomes non-editable.</p> <p>If the transaction currency and the local currency are same, the field takes the default value as 1, which cannot be modified.</p>
Txn Ccy Cost Rate	<p>[Display]</p> <p>This field displays the cost rate for transaction currency that is defaulted to the mid rate for the currency.</p>

Click the Ok button to accept the inventory details as a part of the transaction. Click the Cancel button to reject the inventory details.

2.16.6. User Defined Fields

While working with Oracle FLEXCUBE, there are additional fields which are required to be used, either for convenience or to suit the requirements of the bank. The User Defined Fields option, allows the user to add fields based on the specifications.

Based on the requirement and the nature of the field, you can specify default values and validations for the field. Oracle FLEXCUBE validates all entries made to the field against the validations defined for a field.

The screenshot shows the 'TD Interest Payout Inquiry' window with the following data:

Account No :	000000030775	AMARSINGH
Account Ccy :	INR	Txn Ccy : INR
Acct Ccy Rate :	1.00000	Txn Ccy Rate : 1.00000
Deposit No :		4
Int Payout Amount :		0.09
Tax Calculated :		0.00
Net Interest Payout :		0.09
Txn Amount :		0.09
User Reference No :		1
Narrative :	TD. Interest Payout By Cash	

At the bottom left, the 'Other Transactions' tab is active, and 'User Defined Fields' is listed as an option. At the bottom right, there are 'Ok' and 'Cancel' buttons.

If you click the User Defined Fields tab, the system will display the User Defined Fields screen.

The screenshot shows a window titled "TD Interest Payout Inquiry". Inside, there is a section labeled "UDF Details". Below this section, there is a field labeled "*Limit Breached:" with a text input box containing the character "N". At the bottom right of the window, there are two buttons: "Validate" and "Back".

Field Description

Field Name	Description
Limit Breached	[Display] This field displays the status as Y if the limit amount is breached.

Click the Validate button to validate the UDF details.

2.16.7. Negotiate

Field Description

Field Name	Description
Exchange Rate	[Display] This field displays the current exchange rate.
Comments	[Optional, Alphanumeric, 256] Type the comments if any.
New Exchange Rate	[Display] This field displays the exchange rate after it has been negotiated.

You can click the **Negotiate** button to get a better exchange rate as compared to the current rate.

The Treasurer can view the exchange rate change request using the **Treasury Negotiation Worklist** (Fast Path: BA030) option. The treasurer has the right to reject or negotiate the exchange rate.

2.16.8. Document Receipt

This screen is displayed at the end of some transactions. For example, While using the **Future Dated Cash Deposit** (Fast Path: 1411) option at the end of the transaction the system will display the **Document Receipt** screen. It is used to print the details of the transaction.

The screenshot shows a window titled "Document Receipt" with a close button (X) in the top right corner. Inside the window, there is a table with the following data:

Documents			
Sr No	Doc Id	Description	Printed
1	137	Receipt	N

Below the table, there is a "Cancel" button.

Field Description

Field Name	Description
Sr No	[Display] This field displays the serial number.
Doc Id	[Display] This field displays the document Id.
Description	[Display] This field displays the description.
Printed	[Display] This field displays the whether the transaction details have been printed or not.

2.17. Customer Search

This option allows you to search for account information based on customer details. A list of accounts belonging to the customer is displayed. This option would be useful to the user when the customer contacts the bank to check the status of their account, and is unable to provide the account number.

This option has a primary search which is mandatory and secondary (refined) optional search. The user may enter a combination of the values based on the options available in the advance and refined search.

Customer ID, IBAN¹ and ATM card number is unique for every customer, hence when it is selected as the search string the user has to input exact string to get the record.

Wild card search is supported for the search based on Customer short name, Customer first name, customer last name and national Id (Customer IC).

For Example:

Search by date of birth / date incorporated:

If the user enters the DOB / date incorporated as 01/01/1965 (DD/MM/YYYY) and it is entered along with the advance search criteria of first name as George then Oracle FLEXCUBE will fetch all the records where the registration date or the date of birth of a customer is 01/01/1965 and the first name is George.

The search result will be as follows:

Customer IC	Customer ID	First Name	Customer Type	DOB/Registration date	ATM card number	Postal Address
8159	600918	George	Individual	01/01/1965	44793705 21504778	28, Billstreet, New York
1253	315789	George	Corporate	01/01/1965	61763528 45789887	25, Billstreet, New York
4789	678215	George	Corporate	01/01/1965	50791248 32594578	18, Hamilton street, New York

Definition Prerequisites

- 8053 - Customer Addition

To perform customer search

1. Type the user name and password to login.
2. The system displays the **Oracle FLEXCUBE** screen.

¹(International Bank Account Number: It is a unique account number that is used to identify a customer's account in a financial institution internationally.)

Oracle FLEXCUBE

Field Description

Field Name	Description
Customer Id	[Optional, Numeric, 10] Type the customer ID in this field. A customer ID is an identification number, generated by the system after customer addition is completed successfully. This running number, unique to a customer across the system, is generated after the system has identified the Customer IC and Customer Category combination to be non-existent in the system. This ID is used for searching and tracking the customer in the system.
Customer Details	
Customer Id	[Display] This field displays the customer ID.
Customer Name	[Display] This field displays the full name of the customer. The full name of the customer is defaulted from the Customer Addition (Fast Path: 8053) option. For Example: If the full name entered in the search criteria is - George, then Oracle FLEXCUBE will display all the customer's with the name as 'George' along with all the other details.

Field Name	Description
Gender	[Display] This field displays the gender of the customer.
Customer Type	[Display] This field displays the category of a customer. For Example: Individual, Corporate, etc.
Home Branch	[Display] This field displays the branch Code and short name of the branch.
Mobile Number	[Display] This field displays the mobile number of the customer.
Email Address	[Display] This column displays the email address of the customer.
Aadhaar Number	[Display] This column displays the Aadhaar number of the customer.
Aadhar Number Updated On	[Display] This field displays the date on which Aadhaar Number has been updated.
Aadhar Linked A/c	[Display] This field displays the CASA Account linked to Aadhaar.
Customer Memo	
Customer Memo	[Display] This field displays all the customer memos, one below the other
Customer Instructions	[Display] This field displays the customer Instructions which are maintained as part of "Customer Instruction Maintenance".
Message	[Display] This field displays the message of happy birthday to the customer, in case if customer's birthday is on the particular day. For example: "Happy Birthday Anwar Ali.
Number of unresolved conversations	[Display] This field displays the number of unresolved conversations based on the number of customer conversations which are open or not closed. The customer conversations can be initiated using FCDB or Customer Contact/Complaint Log – CIM12 option.

Field Description

Column Name	Description
CASA	
Account No.	[Display] This column displays the account number of the customer.
Product	[Display] This column displays the product name and code of the product under which the customer has an account.
Branch	[Display] This column displays the code and name of the home branch under which the customer has an account.
Currency	[Display] This column displays the currency assigned to product under which the account is opened. In case the customer has accounts in multiple currencies, then the accounts have to be ordered as per the currency and the total of the balances to be displayed for each currency.
Available Bal	[Display] This column displays the Available/Principal/Outstanding balance in the account. In case of CASA account, the available balance under the customer's account will be displayed. The amount will be displayed in the currency of the account. In case of TD account, the balance is displayed as the principal balance. The principal balance is the original amount of the Term Deposit. The amount will be displayed in the currency of the account. In case of Loan account, the balance is displayed as O/S Balance. The O/S balance is the outstanding amount of the loan. The amount will be displayed in the currency of the account.
Book Balance	[Display] This column displays the book balance of the account.
Unclear Funds	[Display] This column displays the unclear balance of the account.
Account Status	[Display] This column displays the status of the account. The status of the account can be ACCOUNT OPEN REGULAR, ACCOUNT OPEN - NO CREDIT, ACCOUNT OPEN - NO DEBIT, etc. Closed accounts should not be displayed.
Classification Status	[Display] This column displays the classification status of the account. For asset type of products, the classification status of the account, which is derived based on the CRR code, should be displayed.
Account Rel.	[Display] This column displays the relation of the customer with the account.

Fund Projection

The screenshot displays the Oracle Flexcube Customer Search interface. On the left, there is a sidebar with navigation options: 'SELECTED CUSTOMER' (with a search bar and 'Go' button), 'ALL TRANSACTION' (with a shopping cart icon), and 'MY TRANSACTION' and 'MY TODO LIST' at the bottom. The main content area is titled 'Customer Details' and shows information for Customer ID 603900, including AADHAR Card 1000002, Name RAM SINGH, Gender MALE, Home Branch 240-SANDOZ - MUMBAI, Mobile Number 9819089266, and Email Address. A dropdown menu is set to 'INDIVIDUAL'. To the right, there are fields for 'Customer Memo' (1.Memo for Ram Singh by Court.) and 'Customer Instruction'. Below this, there are 'Photo' and 'Autograph' buttons. The main section is titled 'Funds Projection' and contains a table with columns: Account Number, Beneficiary, Transaction Details, Dr/Cr, Amount, and Date. The table is currently empty, showing only a large 'ORACLE FLEXCUBE' watermark and a '0 / 0' indicator at the bottom left of the table area.

Field Description

Column Name	Description
Fund Projection Details	
Account Number	[Display] This column displays the account number of the customer. This account can either be a provider or beneficiary for an SI. The details fetched will be in lines of the screen CH043- Fund's Projection . The details can be fetched only for the accounts where the customer holds a primary relationship.
Beneficiary	[Display] This column displays the beneficiary account for the SI or Loans Drawdown instructions.
Transaction Details	[Display] This column displays the transaction details. The transaction details are the nature of the instruction or the narrative that is provided during SI setup. In case of loans drawdown instruction, "Loans Drawdown" should be displayed.
Dr/Cr	[Display] This column displays the debit credit flag. If the Account Number field is a beneficiary, then this flag will display Dr.
Amount	[Display] This column displays the outflow/inflow amount as per the instruction. In case of Loans Drawdown the outstanding amount as per the schedule plus the unpaid arrears if any need to be shown.
Date	[Display] This column displays the date of the execution of the customer instruction. The range of such instructions displayed will be 1 month from the current date.

Field Description

Field Name	Description
------------	-------------

User can enter any of the following search criteria mentioned below

Customer Id	[Optional, Numeric, 10] Type the customer ID in this field. A customer ID is an identification number, generated by the system after customer addition is completed successfully. This running number, unique to a customer across the system, is generated after the system has identified the Customer IC and Customer Category combination to be non-existent in the system. This ID is used for searching and tracking the customer in the system.
Account No.	[Optional, Numeric, 14] Type the account number of the customer.
Customer IC	[Optional, Alphanumeric, 30] Type the Customer IC of the customer
Short Name	[Optional, Alphanumeric, 20] Type the short name of the customer.
NLS Name	[Optional, Alphanumeric, 40] Type the last name of the customer.
IBAN	[Optional, Alphanumeric, 34] Type the IBAN. All the accounts which belong to the IBAN entered are displayed.

Field Name	Description
ATM Card Number	[Optional, Alphanumeric, 16] Type the valid ATM card number of the customer.
Refined Search	
Mobile No	[Optional, Numeric, 30] Type the mobile number of the customer.
Home Phone	[Optional, Numeric, 15] Type the home phone number of the customer.
Date of Birth	[Conditional, Pick List, dd/mm/yyyy] Select the date of birth of the customer from the pick list. It cannot be a future date. This field is disabled if data is entered in the Date Incorporated field.
Date Incorporated	[Conditional, Pick List, dd/mm/yyyy] Select the date of incorporation from the pick list. This field is disabled if data is entered in the Date of Birth field.
Currency	[Conditional, Drop-Down] Select the currency, as additional search criteria with IBAN , from the drop-down list. This field is enabled if the search criteria are IBAN . The currency details are maintained in the Currency Codes Maintenance (Fast Path: BAM56) option.
Search Result	
Customer IC	[Display] This column displays the identification code of the customer. A customer IC along with customer type is a unique method of customer identification across the bank (covering all branches). Based on the combination, the system can identify the customer as an existing customer even when the customer opens a new account in another branch. A social security number, passport number, birth certificate or corporate registration can be used as a customer IC.
Customer ID	[Display] This column displays the ID of the customer. A customer ID is an identification number, generated by the system after customer addition is completed successfully. This running number, unique to a customer across the system, is generated after the system has identified the Customer IC and Customer Category combination to be non-existent in the system. This ID is used for searching and tracking the customer in the system.
Full Name	[Display] This column displays the full name of the customer. The full name of the customer is defaulted from the Customer Addition (Fast Path: 8053) option. The search is based on the customer's full name. For Example: If the full name entered in the search criteria is - George, then Oracle FLEXCUBE will display all the customer's with the name as 'George' along with all the other details.

Field Name	Description
Customer Type	[Display] This column displays the category of the customer. For example, Individual, Corporate, etc. Further processing such as tax applicable, SC charges, etc., are levied based on the customer type.
Date of Birth	[Display] This column displays the date of birth of the customer.
Mobile No	[Display] This column displays the mobile number of the customer.
Home Phone	[Display] This column displays the home phone number of the customer.
Home Branch	[Display] This column displays the home branch of the customer. The branch in which the customer accounts in opened.
Postal Address	[Display] This column displays the mailing address of the customer.

3. Double click the record to view the account details for the selected customer.

4. Double click the record to view the list of **Related Transaction**. Refer to the customer search procedure for more details explained above in this option.
5. Click the **Next Search** button in the **Selected Customer** grid to start a new search.

2.18. Downloading Procedure

Fast Path: 8892

Once an entity is defined in the FLEXCUBE Retail, you need to download the entity to the respective branch, using the Data Download option. The user with specific access rights can download the product.

When the automatic download is enabled, the system will automatically download the entity / entities at the pre-configured time provided the link to the branch server is up at that time. In case the link is down at the time of download, the download process will create an output file in a pre-designated directory in the FLEXCUBE application server.

The following procedure needs to be followed by the operator at the centralized operations for invoking a manual download of an entity or entities to the branches:

1. Select the appropriate **Entity** from the pick list.
2. Select the appropriate location from the drop-down list.
3. Select the destination branch from the drop-down list, to which you want to download the product.
4. Click the **Download** button.
5. The system downloads the product to the respective branch.

Oracle FLEXCUBE is a comprehensive solution that provides a unified back-office processing environment for Corporate, Retail and Investment Banking operations with a highly adaptable and scalable modular architecture. Oracle FLEXCUBE is designed to offer flexibility to financial institutions for easy adaptability to market needs and also enables banks to improve their overall operational efficiency.

Oracle FLEXCUBE offers effective control and risk management, thus delivering improved performance and reliable customer service. It is a highly modular system that allows the bank to choose the set of functional modules to suit the line of operations of the bank.

Oracle FLEXCUBE is a multi-currency system built on a powerful base of a flexible architecture. It uses one of the most reliable and leading technology platforms. Oracle FLEXCUBE is developed on Client/Server distributed architecture, which uses the Oracle or DB2 relational database and offers unlimited freedom to the bank to choose any leading UNIX or IBM or Windows NT/Windows 2000-based hardware. A premium on-line transaction processing system efficiently services the high volume retail transactions.

Oracle FLEXCUBE has capabilities on the NLS both at the database level and presentation level. Oracle FLEXCUBE is already available in languages like English, Japanese, Portuguese and Arabic.
