12. Function ID Glossary .............................................................................. 12-1
1. Preface

1.1 Introduction

This Manual is designed to help you quickly get acquainted with the General Ledger (GL) sub-system of Oracle FLEXCUBE.

It provides an overview to the module and takes you through the various steps involved in setting up a GL structure and reporting details of the GLs maintained at your bank.

You can further obtain information specific to a particular field by placing the cursor on the relevant field and striking <F1> on the keyboard.

1.2 Audience

This manual is intended for the following User/User Roles:

<table>
<thead>
<tr>
<th>Role</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operations</td>
<td>To define the GL structure</td>
</tr>
<tr>
<td>Operations Managers/Officers</td>
<td>Authorization functions</td>
</tr>
<tr>
<td>Financial Control</td>
<td>To generate reports on GLs</td>
</tr>
<tr>
<td>MIS Operators</td>
<td>Generation of reports</td>
</tr>
</tbody>
</table>

1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

1.4 Organization

This Manual is organized into the following chapters:

<table>
<thead>
<tr>
<th>Chapter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chapter 1</td>
<td>About this Manual gives information on the intended audience. It also lists the various chapters covered in this User Manual.</td>
</tr>
<tr>
<td>Chapter 2</td>
<td>General Ledger - An Overview is a snapshot of the features and functionality that the module provides.</td>
</tr>
<tr>
<td>Chapter 3</td>
<td>Setting up Chart of Accounts details the procedure to set up a GL structure for your bank.</td>
</tr>
<tr>
<td>Chapter 4</td>
<td>Maintaining Reporting Line Structure describes the procedure for defining an alternate reporting structure for your Head Office and Central bank.</td>
</tr>
<tr>
<td>Chapter 5</td>
<td>Defining Alternate Reporting Lines deals with the setting up of alternate reporting lines for GLs when a branch is located abroad.</td>
</tr>
<tr>
<td>Chapter 6</td>
<td>GL Report Classification on MIS Class gives details on reports that be generated based on MIS classes.</td>
</tr>
</tbody>
</table>

2. General Ledger - An Overview

2.1 Introduction

The General Ledger (GL) sub-system is the pillar on which the various functional components of Oracle FLEXCUBE rest. Through this single entity, you can consolidate and maintain balances and turnovers of all types of accounts your bank holds. In addition, the module enables you to retrieve on-line information on the GLs maintained for your bank.

In Oracle FLEXCUBE, GLs have been structurally fashioned as a tree, bearing a multi-level structure (like a tree's main branch and sub-branches). On the head stands the Head GL that does not report to any other GL. The subsequent levels consist of Nodes and Leaves. A Node GL is one that reports to another GL and has other GLs reporting to it. A Leaf GL is one that reports to another GL but does not have any GL reporting to it.

The number of levels in the tree structure, and the various constituents of the head, nodes, and leaves have been left open to your choice, the only restriction being that a report will be restricted to the number of levels that a 132-column paper can hold.

The GL structure for your bank has to be created at the bank level and maintained by different branches. Using this structure, you can consolidate the GL balances and turnovers across modules and products and retrieve on-line information on the same.

2.2 Features of GL Sub-system

Flexible GL structure

Keeping in mind the different type of accounts maintained in your bank, GL has been broadly classified into the following categories:

- Asset
- Liability
- Expense
- Income
- Contingent Asset
- Contingent Liability
- Memo
- Position
- Position Equivalent

A Head GL can be assigned any of the above categories. Two Head GLs can have the same category. All GLs that fall under a Head GL will essentially belong to the category defined for the Head. Each category can have any number of GLs under it, but the category allocated to a GL should be assigned at the head of any GL stream. All nodes and leaves by default take the category of the Head GL to which they report. At no other level can you assign a category.

Leaf GLs are merely points of contact through which all entries are passed to the nodes. It is at the nodes that consolidation of all accounting takes place. Therefore, any specification like the Currency type or GL type though specified at the leaf GL will be applicable only for the respective node of that leaf. Peripheral activities like linking a customer account to a GL or posting to a GL can be done only at the leaf.

All your profit and loss entries can be passed in LCY only; however, for reporting purposes you can also maintain a record of these in any FCY or even in all currencies. This makes it
possible to have multi-currency GLs. Along with this, revaluation of currencies has also been provided for.

**Categorization into MIS Classes**

The sub-system enables you to categorize information into MIS Classes, which are exclusively for reporting purposes. This feature serves not only your need for classified information, but also helps simplify the GL structure of the bank.

For instance, you can categorize information by the defined Customer/Transaction MIS Class. Under each type — Customer or Transaction you can create several MIS Classes and Sub-classes. This is done at the Bank level and used by the different branches.

**Information Retrieval**

You have been provided with various report definition options, so that you can tailor your report to suit your needs. In addition, the report generator helps you prepare reports in the format of the Head Office and Central Bank debit/credit lines, which may be at variance with the existing GL structure at the branch level.

Consolidation of GLs can take place at different branch levels. That is, at the Regional Office or Head Office levels depending upon the branch structure that you have defined in the Core Entities Module. The final consolidation of all GLs is done at the Head Office where the total consolidated GL is provided in a report. Even during consolidation, the break-up based on MIS Classes will be provided.

### 2.3 Need to Invoke GL Sub-system

You will need to invoke the General Ledger (GL) sub-system to:

- Maintain a General Ledger structure for your bank
- Avail of services provided by GL to different modules like EOD update of GL etc.
- Interface with the MIS System
- Set up Reporting lines and associate GLs to these debit and credit lines
- Specify break up of GLs by either customer or transaction MIS Class
- Run Year-end P/L account on book closure
- Extract reports on GL data history
- Obtain reports of General Ledgers for specific periods
3. Setting up Chart of Accounts

3.1 Introduction

Oracle FLEXCUBE supports a multilevel structure for your bank’s Chart of Accounts. You can create broad groups of accounts in the categories of assets, liabilities, income, expenses, etc., and further divide these groups into several levels. The groups at each of these levels are referred to as GLs. For instance, you can create a three level GL structure as follows:

```
  Head
    GL1
    Node
      GL2
      GL3
      GL4
      Node
        GL5
        GL6
        GL7
```

The GLs at the lowermost level are referred to as Leaf GLs. The balances and turnovers of leaf GLs are consolidated at higher level GLs called Node GLs. The GL at the top of the structure is referred to as the Head GL.

In the GL reporting hierarchy, a GL is a parent GL for GLs reporting to it. For instance, GL2 is the parent of GL 5 and 6, and GL1 is the parent GL for GLs 2, 3, and 4. The reporting GLs, GLs 5 and 6 in the first instance, are referred to as child GLs of GL 2. Similarly, GLs 2, 3, and 4 are child GLs with respect to GL1.

This multilevel GL structure can be maintained in the Chart of Accounts screen by the branch marked as the Head Office of your bank.

In Oracle FLEXCUBE, the GL balances are stored as currency wise balances as well as overall balance in LCY on GL level. This enables currency-wise break up of each GL account. However overall balance in local currency is also available.

You can invoke the ‘Chart of Accounts Maintenance’ screen by typing ‘GLDCHACC’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.
To define the details of a new GL, click new icon.

GL Code
In Oracle FLEXCUBE, a GL is identified by a Code. The length and composition of the code depends upon the GL Mask defined in the ‘Bank-wide Parameters’ Screen. The code that you enter can have a maximum of nine alphanumeric characters.

External Code
Using External Code, you can upload the existing record into Oracle FLEXCUBE, when the record is loaded for the first time. The old GL code will be defaulted as external code and you can enter new code and save it as well. External Code has to do nothing while entering new GL entries after installation of Oracle FLEXCUBE.

Description
You can enter a brief description to help identify the GL in this field. You can use this description for the internal reference of your bank.

Leaf GL
In Oracle FLEXCUBE, a GL that you create can be one of the following:

- Node GL
- Leaf GL

A Node GL is one that reports to another GL and has other GLs reporting to it. In the reporting relationship, if a GL reports to another GL, but no GLs report to it, then it is a Leaf GL. A Head GL is a Node that does not report to another GL.

The Chart of Accounts detailed screen is designed with four tabs. By invoking the screens that correspond with these tabs you can create GLs and maintain a GL structure of your bank.

- **GL Details** — In this screen, you can set up a GL, indicate its type, assign a category to the Head GL.
- **GL Linkages** — Click this tab to define the GLs that constitute your Chart of Accounts.
3.2 Specifying GL Details

To define details for a GL, click on the tab titled GL Details. The details that you can specify for a GL depend on the type of GL that you create. If a particular field is disabled, it means that the field is not relevant to the type of GL that you are creating.

GL Type

For both customer and internal GLs that you create, you should indicate the type. The GL type is indicative of the type of accounting entries that are posted into the GL. For a customer GL, the GL type could be Normal, Misc. Debit, Misc. Credit, and Nostro. For an Internal GL, the GL type could be Normal, Misc. Debit, misc. Credit, cash, and inter-branch.

Those GLs in which a debit entry is to be offset with multiple credit entries or a credit entry to be offset with multiple debit entries should be assigned the Misc. Debit and Misc. Credit type respectively.

Miscellaneous debit and credit entries should be associated with an instrument number. This will ensure proper reconciliation of the debit and credit entries made to the GL. Choose this option to indicate that the GL should cater only to entries related to your bank's account with another bank. All cash transactions, like in the Data Entry module, are posted directly into a GL by linking the GL with the Till ID. Choose this option to indicate that only interbranch related accounting entries can be posted to the GL.

The debit or credit entries of accounts that do not fall into any of the other types can be assigned to the Normal Type GL. The leaf GLs that you create will be taken as Normal Type by default.
GL Category
GL category can be specified only for a GL head. A Head GL can be assigned any of the following categories:

- Asset
- Liability
- Expense
- Income
- Contingent Asset
- Contingent Liability
- Memo
- Position
- Position Equivalent

Two Head GLs can have the same category. All GLs that fall under a Head GL will essentially belong to the category defined for the Head. Each category can have any number of GLs under it. But, the category allocated to a GL should be assigned at the head of any GL stream; all nodes and leaves by default take the category of the Head GL to which they report.

Customer/Internal GL
A GL that you create in Oracle FLEXCUBE can be defined as a Customer or an Internal GL. Internal GLs are accounts that are internal to the bank, such as cash accounts, interest income and expense accounts, and so on. These also comprise of customer account balances from the front-end modules - Loans, Deposits, Money Market, etc. The customer savings, current, and nostro accounts of your bank are opened under GLs designated as customer GLs.

The GL combinations that you can have include:

<table>
<thead>
<tr>
<th>GL type</th>
<th>Direct posting of entries</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internal Node</td>
<td>No</td>
</tr>
<tr>
<td>Customer Node</td>
<td>No</td>
</tr>
<tr>
<td>Internal Leaf</td>
<td>Yes</td>
</tr>
<tr>
<td>Customer Leaf</td>
<td>No</td>
</tr>
</tbody>
</table>

As indicated above, you can post direct entries (i.e., link it to your bank’s internal accounts) only to internal leaf GLs. For internal and customer node GLs and customer leaf GLs, you would associate accounts with them.

Avg Bal Required
Oracle FLEXCUBE will compute and store average balances for customer GLs on a daily basis. However, the average balance computation is performed on the basis of transaction dated balance and any value dated adjustment will not be considered for this computation.

If a working day is followed by any holiday(s), the average balance computation will be done as per the specifications defined in the GL Branch Parameter Maintenance screen. That is, the balance will either include the accumulated balance for the number of days inclusive of the following holidays or the system will compute the balance on the next working day.
The system will compute and store average balances for customer GLs only if you select the Avg Bal Required option. You will not be allowed to modify this option at a later date. The balances will be computed on a daily basis and will be based only on booking dated transactions.

The system will store debit, credit and net average balances in FCY as well as in LCY.

Note
In the case of back dated transactions, the system will not update the average balances of previous periods.

You can query the average balances of customer GLs in the GL Average Balances screen. The query can be done using the following, either individually or in combination:

- GL Code
- Currency Code
- Branch
- Financial Year
- Period Code

Note
- The computation can be enabled only for internal leaf GLs. If you enable this option the system will compute average balance for GLs as part of EOD processing. The average balance will be computed on the Book-Dated balance. The Debit, Credit and Net average balances in FCY as well as LCY will be stored.
- Back-period entries do not affect average balance retrospectively.
- Computation includes the effect of revaluation entries and fin-closure entries.
- Data is stored and displayed as Period-to-Date and Year-to-Date figures.
- Computation can be based on the Next Working Day-1 or System Date as specified in the GL Branch Parameters screen. If the average balance calculation basis is ‘NWD-1’, the balances of holidays will be included in the previous working day. If the calculation basis is System Date, the balances of holidays will be included on the next working day provided the next working day is in the same period. If the basis is System Date but the next working day is in the next period, the holidays will be considered during the current run.

Report As Accrual
Check against this field if you want the system to calculate the accrual entries posted to this GL independently for displaying during the online query of FX positions. Depending on your selection in this field, system will arrive at the cash and accrual positions.

Revaluation
Specify whether currency revaluation is applicable to the GL. Check against the Revaluation option to indicate that the GL should be revalued. Leave it unchecked to indicate otherwise.

You can revalue the balances of asset, liability, contingent asset, and contingent liability GLs. You can also revalue the balances in Income / Expense GLs. If you indicate that revaluation is applicable, Oracle FLEXCUBE will revalue the GL when the End of Day (EOD) process is run.
Note
If transaction entry happens on STANDARD rate then the system does not post any revaluation, even though you have enabled revaluation for the GL002C

Transfer Balance on MIS Reclassification
Indicate whether the MIS balances in the GL must be transferred, upon MIS reclassification, into the new MIS code.

A batch process performs the transfer of balances upon reclassification, for each GL for which this option has been set.

Blocked
Oracle FLEXCUBE offers you the option to temporarily mark the status of the GL as Blocked. During this period, no entries can be passed into the GL. You can open a GL marked with blocked status by unchecking the blocked status box.

This feature is useful as you need not close the GL. Blocking is temporary whereas closure is permanent.

Reval Split Required
You can choose to break-up revaluation profit/loss for the GL you are defining into:

- Trading P&L – P&L due to revaluation of foreign currency transactions during the day.
- Revaluation P&L – P&L due to revaluation of opening balances (balances without current day’s turnover).

The following example compares the accounting entries posted when you do not choose to split revaluation profit/loss and when you do.

Note
The revaluation splitting is done for revaluation-into GL’s also.

Refer the chapter ‘Account Revaluation Maintenance’ in the Core Services User Manual for further details about revaluation.

3.2.0.1 Indicating Profit and Loss Revaluation Details

EOD Reval Of FCY Entries (Single Entry)
Journal entries that do not have an offset entry cannot be revalued using the EOD revaluation of FCY entries option. Enable this option if such journal entries are to be revalued.

EOD Reval Of FCY Entries (Entry Pair)
As part of the End of Day processes, before the account revaluation batch process executes on a given business day, the revaluation batch process for performing accounting entry-based revaluation for FCY entries in Income/Expense GLs is run.

This process performs entry-based revaluation for those Income/Expense GLs for which such revaluation has been indicated in the Chart of Accounts. You can enable this option to indicate that the entry wise revaluation of FCY entries posted during the day should be performed during the EOD processes, for each entry pair in the same FCY.
EOD Reval Of FCY Reversals
Enable this option if the revaluation of reversal entries has to be performed as part of the EOD processes. If you leave this box unchecked, the reversal entries will be posted with the Exchange Rate as of event date.

As mentioned earlier, if entry-based revaluation is indicated for a GL, the FCY Entries Revaluation batch, which executes before the normal revaluation batch, will perform the revaluation for the GL.

Refer the Entry-based Revaluation of Income/Expense GLs section for detailed information on the entry-based revaluation batch.

Repost FCY Entries in LCY
While defining Income or Expense type of Leaf GL’s you can indicate whether FCY entries have to be reposted as LCY entries during the EOD processes by checking this option.

If you enable this option, you must trigger the GL Reporting Batch (ACIDPRVL) as part of the EOD processes to post FCY entries in LCY. While doing this you should consider the logical order of revaluation as well as intraday posting processes.

The exchange rate at which the original FCY entry was posted is used for reposting in LCY.

Refer the Reposting of FCY entries for Realized P&L GL’s in LCY section for detailed information on the batch.

Note
The revaluation parameters that you set for a GL cannot be modified after it is authorized.

Intraday Posting GL
You can choose to post FCY income/expenses booked during the day into a balance sheet GL and have them transferred to the P & L GL after revaluation at the EOD exchange rate. Profit or loss due to this revaluation is posted in LCY equivalent with ‘0’ FCY postings.

While defining an Income/Expense GL in the Chart of Accounts screen, you can specify an intra-day GL into which FCY entries posted into this GL are to be transferred. This designated Intraday GL should be of Asset/Liability type.

The option of specifying an intra-day GL is allowed only for Income/Expense GLs. Another pre-condition is that either or both of EOD Reval of FCY Entries options should be enabled.

Given below is an example that illustrates the entries that are posted if you choose to post income/expense entries into an intra-day GL.

Processing features
- You need to run a batch process at EOD from the following functions:
  - Revaluation of the entry/entries posted into the intra-day GL using the EOD exchange rate.
  - Moving the intra-day GL balances into the actual income/expense GLs.
- If you have defined an intra-day posting GL for the Income/Expense GL that you are defining, then all entries meant for the latter throughout the day (starting with the BOD batch processes) are transferred into the intra-day GL. This continues till you run the batch process to post intra-day entries into the actual Income/Expense GL. Subsequent entries get posted directly into the actual Income/Expense GL.
The revaluation entries are posted with the same Contract Reference and Event Sequence as that of the original entry.

The entries are posted with respective event codes for entry-pair and single entry. Thus, for entry-pair the entries are posted using the event RVEP whereas for single entry, entries are posted using the event RVSE.

The revaluation accounting entries for the contract can be seen from the accounting entry view in the contract online.

**Currency Restrictions**

You can specify currency restrictions only for Internal GLs. In effect, you indicate the currencies in which postings can be made to the GL. The options available are:

- Single currency
- All foreign currencies
- All currencies

By default, you will be able to post entries of transactions in all currencies into a GL. If you indicate Single currency then you should also indicate the specific currency in which transactions can be posted to the GL.

If you indicate ‘All’ foreign currencies then you can post entries of all transactions in any currency other than the local currency of your bank.

If you select ‘All’ currencies then no currency based restriction is applicable for transactions posted to the GL.

### 3.2.0.2 Indicating Position Account Details

**Positioning Required**

You can retrieve the position of a foreign currency, any time, by opting for *Position Accounting* in your bank. When you opt for position accounting, you maintain a Position GL and a Position Equivalent GL for every foreign currency maintained in your bank. The Position GL reflects the current position in the currency. You can opt for position accounting while indicating your preferences in the Bank-Wide Parameters screen.

If you opt for position accounting while defining Bank-Wide Parameters, you can maintain Position GLs and Position Equivalent GLs for every foreign currency that your bank deals in. When maintaining the GLs in your bank, you can opt to link the different currencies, associated with the GL, to:

- The Position GLs that you have specified for the currency (Your specifications in the Currency Definition screen will default here), or
- Position GLs of your choice

In the GL Category field, indicate if you are maintaining a Position GL or a Position Equivalent GL.

The position accounting happens event and entry pair-wise. Each entry is considered. If any currency mismatch is found then position accounting for each posting pairs are considered for position accounting.

**Example**

You have initiated an FT transaction where account is denominated in USD but the transfer amount is EUR. Charge is calculated in USD. In this case, the system will pass position entries for transfer amount as well as charge amount.
If transfer happens in USD from an USD account while charge is settled in EUR from an EUR account number position entry will be posted as no currency mismatch exists.

**Display on Report With**
When you maintain a Position GL, you can define the manner in which you would like the currency position to be reported in the Currency-Wise Position report.

In the Display on Report With field, under Position Accounting Details, indicate if you would like the currency position to be reported under one of the following:

- The head Asset
- The head Liability
- Under a separate head (that is, separately, as Currency Position)

**Branch Restrictions**
You have the option to indicate branch restrictions for an internal leaf GL. By default, both the Head Office and the branches of your bank can post and view entries made to a GL.

You can allow the Head Office, the branches of your bank or both to post entries to a GL. If you indicate Branch GL, only the branches of your bank can post entries to the GL. The Head Office can however view the accounting entries passed to Branch GLs. If you specify Head Office GL then only the Head Office can post entries to the GL. The branches can however view the entries posted to a Head Office GL.

**Note**
It is important to note that you cannot restrict specific branches from posting entries to a GL.

**Posting Restrictions**
Posting restrictions, like branch restrictions, can be specified only for internal leaf GLs. This is because, in Oracle FLEXCUBE, you can post entries only to internal leaf GLs.

The posting of entries to an internal leaf GL can be direct or indirect. In the case of direct posting, accounting entries are posted directly to the Internal GL through Data Entry Module of Oracle FLEXCUBE. In case of indirect posting, accounting entries are passed into the GL from the various modules of Oracle FLEXCUBE, for example - a loan or a money market contract.

**Back Period Entry Allowed**
You can also choose to post back period entries to the GL by enabling the Back Period Entry Allowed option. If you choose not to restrict back period entries, you will be allowed to post journal entry transactions for the GL as long as the period is open.

**Note**
While posting back-valued transactions, the System verifies whether the Back Period Entry Allowed option has been enabled for the GL. If the option has not been enabled an error message is displayed. This check is also performed while uploading journal entry transactions.

**Reconciliation**
If the GL that you are creating belongs to the miscellaneous debit or credit type, you should indicate reconciliation preferences. The method in which entries posted to a GL can be reconciled could be one of the following:
- Direct
- Split

In the case of direct reconciliation, each debit entry is offset by the corresponding credit entry and vice versa (e.g. Manager’s Check). For Split reconciliation, one debit entry can be offset against multiple credit entries and vice versa (e.g. Sundry Debtors and Creditors).

**Revaluing unrealized P&L GLs in Oracle FLEXCUBE**

Using Oracle FLEXCUBE, you can compute and book the due income earned not collected and the expense incurred not paid into unrealised (memo) income/expense accounts in a specified currency.

The revaluation process that performs revaluation of the total balance in the GL can be used to revalue unrealised Income/Expense GLs.

The movement of entries from unrealized to realized GLs is performed at the contract level.

### 3.3 Specifying GL Linkages

Click the tab titled GL Linkages from the Chart of Accounts screen to define linkages for the GL that you are defining.

In the GL Linkages screen you maintain the following:
- the parent to which a GL should report
- the year-end profit and loss accounts into which balances would be posted

#### 3.3.0.1 Indicating Parent GL

**Parent GL**

You can indicate the GL to which the current GL should report. This GL in effect becomes the parent of the current GL. You can select a parent GL from the option list available. The option list will contain only a list of Node GLs that you have already created.
Category
You can assign a Category only to a Head GL (a GL that does not report to another GL). If the GL that you indicated as the parent GL, is a Head GL the category assigned to it is also displayed.

3.3.0.2 Indicating Year-End Profit & Loss Accounts

Profit A/C
You can specify the accounts into which the year-end profit or loss entries for the GL should be posted.

The profit account is the account into which all income GL account balances are posted at the end of the year. On the last day of the financial cycle all balances from the account are posted into the year-end profit account. You can select an account code from the option list available.

Loss A/C
The loss account is the account into which all expense GL account balances are posted at the end of the year. On the last day of the financial cycle, all balances from the loss accounts are posted into the year-end loss account.

You can specify the same GL for posting both your profits and losses.

3.3.0.3 Identifying Previous Year Adjustment GL

Prev Yr Adj GL
You can indicate the GL to which the previous year’s adjustment entries for unrealized income and expense are to be posted. As a result the system automatically posts adjustment entries between Unrealised Income/Expense GL and an Adjustment GL for the interest/commission accrued in the Previous year, as these would already have moved to the year-end P and L GL during financial closure.

Adjustment entries are passed at the contract level to the effect that the improper balances on Revaluation Income/Expense GL’s on account of Reversal of Previous Day’s Revaluation entries (if there was a financial movement in between), get corrected.

Note
Revaluation of unrealized P and L GLs is performed only for interest and commission entries and is therefore applicable for the Money Markets, Trade Finance (LC, BC), Securities and Derivatives modules of Oracle FLEXCUBE.
3.4 View GLs Hierarchical Position

Click on the button titled Other GLs Linked to this Parent from the ‘Chart of Accounts’ screen to view the hierarchical position of any GL.

You can view the structural hierarchy of a GL based on two criteria:

- The GLs that are at the same level as the GL you are creating
- The GLs that report to the GL you are creating
For example, let us assume that your GL Head of Overdrafts is structured as follows:

```
Overdrafts (OD)
       /   \
      /     \
OD Clean A 5010000
 OD Working Capital A 5020000
      /     \      /     \
 OD Others A 5030000  OD Retail Lending A 5040000
       /   \
      /     \
 OD - Stocks A 5050000  OD - Share Debits A 5060000  OD - Employees A 5070000  OD - Loans A 5080000  OD - Mortgages A 5090000
```

Suppose AS190100 is on display in the field GL Code. On choosing the other GLs linked to this parent option, the following list will be displayed:

<table>
<thead>
<tr>
<th>GL Code</th>
<th>GL Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS190200</td>
<td>OD Retail Lending</td>
</tr>
<tr>
<td>AS190300</td>
<td>OD Clean</td>
</tr>
<tr>
<td>AS190400</td>
<td>OD Others</td>
</tr>
</tbody>
</table>

If you click on Child GLs for the Current GL the following list will be displayed:

<table>
<thead>
<tr>
<th>GL Code</th>
<th>GL Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS190101</td>
<td>OD Stocks</td>
</tr>
<tr>
<td>AS190102</td>
<td>OD Book Debts</td>
</tr>
</tbody>
</table>

Thus by clicking on the second option under hierarchy level, you can view the list of GLs that report to the current GL.

To understand the sequence of steps involved in creating a new GL structure, let us take an example:

For example, assume you are creating an asset Head GL for bank balances held with other banks.

Your GL mask is defined as NNNNNAAAD in the Bank-wide Parameters screen. You assign a GL code 50000ASS D to the Head GL. D is the last element of the code, which is system generated and is called the check digit. It will be an alphabet of the English language if it is represented in the mask as d and will be numeric if it is represented as D.

Under GL 50000ASS, you want to create two sub-GLs - 50100ASS representing balances with Federal Reserve Bank and 50200ASS representing balances with Commercial banks.

Under sub-GL 50200ASS stand two GLs -- 50201ASS and 50202ASS representing balances with commercial banks in local currency and foreign currency respectively.
The hierarchical structure of this GL tree is as follows:

To create this new GL structure, invoke the 'Chart of Accounts' screen, the 'GL Linkages' screen is displayed. Click new icon. A new screen with no prior inputs will be invoked.

You can click on any of the four broad heads listed atop the screen to activate that screen. Follow the given sequence of steps:

**Step 1:**
- Create Head GL by assigning code & description
- Indicate node or leaf
- Assign category to the GL Head
- Specify year-end profit & loss accounts (only for income or expense GL)

**Step 2:**
- Create GLs which report to Head GL
- Specify node or leaf
- Specify the parent
- Specify details for leaf GLs

In GL Linkages screen

In GL Details screen

In GL Linkages table

In GL Details table
3.5 Indicating Statement Generation Details for GL

For each new GL that you define in the Chart of Accounts, you may need to generate a periodic statement of accounts for transactions involving the GL.

You can indicate whether a periodic statement of accounts needs to be generated for transactions involving the GL through the Statement Details sub-screen in the GL Chart of Accounts screen.

To specify the statement related details click on the 'Statement' button in the Chart of Accounts screen. The 'Statements Detail' screen will be displayed.

Account Statement

Indicate that an account statement is to be generated periodically by the system for the particular account by specifying the format in which the statement is to be generated.

The options available are:

- Detailed – indicating that the statement should be a detailed account of all the transactions tracked against the particular GL Code
- Summary - indicating that only a summary of the transaction details is enough
Note
If you do not want a periodic statement of transactions involving the account, you can specify so by selecting the None option.

Cycle
Select the frequency at which the account statement should be generated from the adjoining drop-down list. This list displays the following values:

- Annual
- Semi-annual
- Quarterly
- Monthly
- Fortnightly
- Weekly
- Daily

On
Select the start date and month for the generation of the statement based on the frequency that you specify from the adjoining drop-down list. For a weekly generation of the account statement, specify the day of the week on which account statements should be generated.

For a monthly generation of statement you can specify the day of month. To specify the day of the month for the monthly generation of statements enter a number between 1 and 31 (corresponding to the system date).

If you set the statement date to 30, then account statements will be generated on:

- The last working day for months with less than 30 days
- For months with 30 days on the 30th day. If the 30th day is a holiday, it will be generated on the next working day

If you set the statement date to the 31st of the month, account statements will be generated on:

- The 31st, for months with 31 days
- The last working day for months for months with less than 31 days

Note
For all other cycles, the account statement will be generated on the last day of that cycle. Based on the preferences that you specify, the system generates a statement of accounts automatically, as part of the end of cycle processing.

Generate
Choose to generate the statement of accounts only when there has been a movement of funds into the account or when funds have been transferred out of the account.

For instance, let us assume that on the 21st of August 2001, you have set the account statement generation frequency as Daily for the account LI0202308. On the 5th of September 2001, there has been no movement of funds in the particular account. If you have opted for the Generate Only on Movement option the system will not generate a statement message for 5th Sept 2001.
You can also choose to generate the statement of accounts regardless of whether or not there has been a movement of funds to and from the account.

**Statement Required**

There may be times when you would have maintained the relevant account statement details for a particular GL. However, you would like to generate the account statements only a month or two later. You can choose to stall the generation of account statement for a temporary period of time by keeping the statement required check box unchecked.

To enable the generation of account statements you can unlock the contract and uncheck this box to re-start the generation of messages.

**Media**

Identify the media through which the account statement is to be sent to the receiver. A list of all the different types of media maintained in the Media Maintenance screen will be displayed in the option list positioned next to this field. You can select the appropriate media from the available choices.

**Address**

You may need to send account statement details to your central bank for statutory reporting purposes. While maintaining account statement details for a GL you can capture the mailing address of the receiver of the account statement details. The address that you specify in the first line will be used for correspondence with the party concerned.

### 3.6 Maintaining Clearing Account Numbers for Internal GL’s

For an internal Leaf GL you can maintain the Clearing Account number to be used for outgoing payments where the internal GL is the remitter account. Click ‘IBAN Account Number’ button in the ‘Chart of Accounts’ screen.

The ‘Additional Information’ screen is displayed.

In this screen, you can specify the Clearing Account Number for the GL and the Bank Code of the GL. If a Clearing Account maintained for a GL is found in an uploaded incoming payment the System resolves the actual GL for the payment as per your maintenance in this screen. If the IBAN Number maintained for a GL is found in the incoming payment the System resolves the actual GL as per your maintenance in this screen.
3.7 Reposting of FCY Entries for Realized P&L GLs in LCY

If you have indicated that the entries posted to realized income and expense GL’s in FCY are to be posted in LCY, you must trigger the Batch Program during the EOD processes whereby all FCY entries for such GLs are reposed as LCY entries.

The reposted entries are posted against the RPOS event but they will have the same Transaction Reference and Event Sequence number as that of the original transaction.

To trigger the batch process invoke common batch function and choose GLREPDLY as the function id and execute, which will post FCY entries in LCY for those GL for which the Repost FCY entries in LCY option has been enabled.

3.8 Entry-based Revaluation of Income/Expense GLs

As part of the End of Day processes, before the account revaluation batch process executes on a given business day, the revaluation batch process for performing accounting entry-based revaluation for FCY entries in Income/Expense GLs is run.

This process performs entry-based revaluation for those Income/Expense GLs for which such revaluation has been indicated in the Chart of Accounts.

Note

If transaction entry happens on STANDARD rate then the system does not post any revaluation, even though you have enabled revaluation for the GL,

It executes according to the sequence of processes as shown below:

- Entry-pair revaluation
- Single entry revaluation
- Reversal revaluation

Entry-pair Revaluation

First, the FCY accounting entries passed during the day into Income/Expense marked for entry-based revaluation are revalued, using the revaluation rate for the rate type defined in the Account Revaluation Maintenance for entry-based revaluation. The revaluation is done only for entry pairs in respect of which:

- both the main and offset entries are in the same FCY
- the FCY amount is greater than zero

The revaluation offset entry is posted to the Account/GL of the actual offset entry of the transaction in respect of which the FCY entries were passed. The offset Account/GL is identified based on the Contract Reference Number, Event Sequence Number and Amount Tag combination, and the revaluation entries are posted with the same Contract Reference Number and Event Sequence Number as the original entry. The event code RVEP is used to pass the entries. Appropriate position entries are also passed.

Single Entry Revaluation

After the entry-pair revaluation, the journal FCY accounting entries (that is, entries without corresponding offset entries) passed during the day are revalued, using the revaluation rate for the rate type defined in the Account Revaluation Maintenance for entry-based revaluation. Only those entries with FCY amounts greater than zero are revalued.
The revaluation offset entry is posted to the Profit/Loss GL maintained for the revalued GL in the Account Revaluation Maintenance, with the same Contract Reference Number and Event Sequence Number as the original entry. The event code RVSE is used to pass the entries. Appropriate position entries are also passed.

**Reversal Revaluation**

Revaluation of FCY reversal entries into Income/Expense GLs is done for those GLs for which such revaluation has been indicated, in the Chart of Accounts.

If an entry is posted into an Income/Expense GL's with a negative amount, it is considered a reversal entry.

All reversal entries are ordered according to:
- Contract Reference Number
- Event Sequence Number (Reversal event sequence number)
- Debit / Credit Indicator
- Amount Tag
- Account

The entries are consolidated according to amount tags, and the resultant net amounts are revalued using the revaluation rate for the rate type defined in the Account Revaluation Maintenance for entry-based revaluation. The revaluation offset entry is posted into the FX Profit/Loss GL defined for the revalued GL in the Account Revaluation Maintenance, with the same reference number and the event sequence number of the reversal event, with the event code RVRL.

Since the revaluation offset entry in each case is passed with the reference number of the original transaction, the relevant MIS updates are also made just as is done for the original transaction.

The reversal revaluation entries can be viewed in the LCY statement for the revalued Income/Expense GLs.

### 3.9 Linking GL to Position or Position Equivalent GL

When defining a GL in the Chart of Accounts, you must link all the foreign currencies linked to a GL to a Position GL, and a Position Equivalent GL if you have opted for *position accounting* in the Bank Wide Parameters screen.

If you do not want position accounting for a particular GL, do not choose the Positioning required option under Position Accounting Details in the Chart of Accounts. Click 'Positioning
GL Maintenance’ button in the ‘Chart of Accounts’ screen. The ‘Position GL Maintenance’ screen is displayed.

In this screen, you can:

- Choose the currency of the GL
- Indicate the corresponding Position GL and the Position Equivalent GL defined for the Currency, or a Position GL of your choice.

You can choose to retain the Position GL that defaults (according to your specifications in the Currency Maintenance screen), or indicate a Position GL of your choice.

---

**Note**

You should maintain Position GLs before you can identify one for a GL that you are maintaining.

---

### 3.10 Specifying SWIFT BIC Information for Leaf GL

For a leaf GL, you can link the SWIFT BICs representing the sender entities that are authorized to specify the GL account as the debit account for a funds transfer transaction.

While uploading an incoming SWIFT payment message, and deriving the debit and credit accounts, the Oracle FLEXCUBE Straight Through Processing (STP) process checks whether the given Sender SWIFT BIC is authorized to specify a the Leaf GL as the Debit Account for incoming SWIFT payment messages.

To specify the Sender SWIFT BIC information for a leaf GL, click ‘BIC’ button in the ‘Chart of Accounts’ screen. The WIN BIC screen is opened, where you can specify the SWIFT BICs of
the Sender entities that are authorized to specify the leaf GL as the Debit Account as the Debit Account for incoming SWIFT payment messages.

For details about how Oracle FLEXCUBE processes incoming SWIFT payment message transactions and for details about the STP process, consult the Funds Transfer user manual.
4. Maintaining Reporting Line Structure

4.1 Introduction

To recall, in the Chart of Accounts screen, you define a GL and set up a GL hierarchy for your bank. We shall call this hierarchy the regular GL structure of the bank. Your Head Office or Central Bank may desire to have the balance sheet and profit and loss account categorized in a structure that is different from the regular GL structure of your bank. Oracle FLEXCUBE offers you the flexibility of defining an alternate reporting structure for Head Office and Central Bank reporting purposes.

This is achieved by setting up reporting lines. The heads of financial information required for your Head Office and Central bank are defined as Reporting Lines. Each of these lines is assigned a unique code. After you have set up reporting lines, you can indicate the GLs that should report to the line.

Note

Ideally, you should first set up the Head Office and Central Bank lines and then define the regular GL structure for the bank. The advantage is that when defining the regular GL structure, you can indicate the Head Office or Central Bank line to which a GL should report.

In the Reporting Line Maintenance screen, you can define reporting lines (heads of financial information) and indicate an alternate reporting structure for your Head Office and Central Bank.

To invoke this screen, click on General Ledger in the Application Browser, select Reporting Lines and click on Detailed under it. You can also invoke this screen by typing ‘GLDXLINE’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.
To create a new reporting line structure, click new icon.

In this table, you capture the following for your Head Office and the Central bank reporting lines:

- The branch code
- A code to identify the reporting line
- A description of the line
- The type of line — Head Office or Central Bank
- Category specified for this line — asset, liability, income, expense, etc.
- The type of line – Node or Leaf
- The parent line code for this reporting line

The reporting lines that you create are, for alternate reporting. Alternate reporting is required when the GL structure defined for the balance sheet of the Head Office or the Central Bank are different from the GL structure created by your bank.

The order in which the GL categories - Asset, Liability, Expense, Income, Contingent Asset, Contingent Liability appear in the balance sheet cannot be changed. However, under a category you can redefine the position of the various GL heads and shift a head from one GL category to another, if required.

For all practical purposes, GL heads appear in order of their numeric sequence number assigned.

---

**Note**

Central Bank and Head Office reporting lines can be created only at the Head Office of your bank.
4.1.1 Creating New Reporting Line Structure

To understand the sequence of steps involved in creating a new reporting line structure, let us take the following example:

Requirement
Assume you need to create a reporting line for your Head Office, representing investments of your bank. Under the head Investments, your Head Office wants information classified under financial investments and business investments.

Further, under business investments, you require to report holdings in subsidiaries and holdings in associates.

Solution
To create this new reporting structure, invoke the Reporting Lines Maintenance screen. First create the Head Reporting Line. In our example, it is Investments and assign it a description and a category - asset. Leave the parent details blank, since this does not report to another line.

Then create the lines at the second level, Financial investments, and Business investments. Indicate Investments as the Parent line for both these lines.

Thereafter, create the third level of GLs holdings in subsidiaries and holdings in associates respectively. Specify their parent line as Business investments. The category assigned to the Parent Line is defaulted.

The hierarchical structure of this Head Office reporting line would be as follows:

![Hierarchical Structure]

4.1.2 Linking GL to Reporting Line

After you have defined Central Bank and Head Office lines, you can indicate the leaf GLs that should report to the line. While creating a GL, you can indicate the Central Bank or Head Office line to which it should report.
Click on the ‘Reporting Lines’ tab on the ‘Chart of Accounts Maintenance’ screen to indicate the reporting lines to which leaf GLs should report. A GL that you create can report to Central Bank and Head Office reporting lines.

4.1.2.1 Associating GL with Central Bank Reporting Line

For Central Bank reporting purposes, you should associate a GL with a debit and credit reporting line.

**Debit Line**
The Central Bank debit line indicates the line to which an account under a GL should report, if in debit.

**Credit Line**
Similarly, you can indicate the line to which an account under a GL should report, if in credit.

You can select a reporting line from the option list. The option list will contain a list of all the lines maintained in the Reporting Line Maintenance screen. The description of each specified reporting line appears alongside the line number. The debit and credit reporting lines you define for a leaf can be the same.

4.1.2.2 Associating GL with Head Office Reporting Line

In order to include a GL under a Head Office reporting line, you should associate it with debit and credit reporting line.

**Debit Line**
The Head Office debit line indicates the line to which an account under a GL should report, if in debit.

**Credit Line**
Similarly, you can indicate the line to which an account under a GL should report, if in credit.

You can select a reporting line from the option list. The option list will contain a list of all the lines maintained in the Reporting Line Maintenance screen. The description of each specified reporting line appears alongside the line number. The debit and credit reporting lines you define for a leaf can be the same. After you have made the required entries save the entries.
5. Defining Alternate Reporting Lines

5.1 Introduction

Oracle FLEXCUBE offers you the flexibility to define alternate reporting lines for Head Office and Central Bank reporting purposes. If your bank has a network of branches spread over several countries, you can opt to maintain Central Bank (CB) lines at the branch level. This means all branches or Regional Offices can maintain CB lines.

In the Reporting Line Maintenance screen you can define reporting lines (heads of financial information) and indicate an alternate reporting structure for your Head Office or Central Bank depending on which branch of the bank you are working at. For instance, if you are operating from the Head Office (HO) level, you will be allowed to define both HO and CB lines. However, if you are working at the branch level, you can only define CB lines.

You can invoke the ‘Reporting Line Maintenance’ screen by typing ‘GLDLINE’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

To create a new reporting line structure, click new icon. The ‘Reporting Line Maintenance’ screen will be displayed without any details except for the ‘Branch Code’ field. Here the code assigned to the branch where you are currently working will be defaulted. You will not be allowed to change the branch code.

The other details that you need to specify for your Head Office and Central Bank reporting lines are as follows:

- a code to identify the reporting line
- a description of the line
- the type of line - Head Office or Central Bank
- category specified for this line - asset, liability, income, expense etc
- the parent line code for this reporting line
5.1.1 Linking GL to CB Line

Once you define Central Bank lines, you can indicate the leaf GL that should report to the line.

If you are working at the Head Office, you can specify this linkage under the Reporting Lines section of the Chart of Accounts screen. At the branch level you need to indicate this linkage in the GL Code to CB Line Linkage screen.

You can invoke the ‘GL Central Bank Line Linkage Maintenance’ screen by typing ‘GLDXGLLN’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

5.1.2 Indicating CB Debit Line and CB Credit Line

The CB Debit Line indicates the line to which an account under a GL should report, if in debit.

Similarly, you can indicate the line to which an account under a GL should report, if in credit.

You can select a reporting line from the option list. The option list will contain a list of all the lines maintained in the Reporting Line Maintenance screen. The description of each specified reporting line appears alongside the line number. The debit and credit reporting lines you define for a leaf can be the same.

5.1.3 Operations on GL Code to CB Line Linkage Record

Apart from defining a new linkage you can perform any of the following operations (if any icon is disabled in the application toolbar, it means that the function is not allowed for the record) on an existing record.

- Amend the details of a record
- Authorize a record
- Close the record
5.2 Linking GL to MIS Class

By linking a GL code to an MIS class you can generate GL reports in which the balances are reported against the entries defined in the linkage. The advantage of a GL to MIS linkage is that it helps you group information under different MIS entities.

The advantage in linking a GL to an MIS class is that the reported information will be grouped based on the MIS Class specified during linkage.

You can invoke the ‘GL MIS Linkage Maintenance’ screen by typing ‘GLDREP’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

If you are maintaining a new GL-MIS Linkage, click new icon. The ‘GL MIS Linkages’ screen will be displayed without any values.

5.2.1 Operations on GL MIS Linkages Record

On an existing GL MIS Linkages record, you can perform any of the following operations (if any icon is disabled in the application toolbar, it means that the function is not allowed for the record):

- Amend the details
- Authorize the addition or amendment of a record
- Copy the details record to another
- Close the record
- Reopen the record
- Print the details of a record
- Delete the addition of a record

Refer to the manual on common procedures for details of these operations.
6. GL Report Classification on MIS Class

6.1 Introduction

In order to manage cumbersome information, you can classify it under broad heads called classes. An MIS Class is an entity based on which you can classify information relating to customer and internal general ledgers. Based on your requirement, you can categorize information under MIS classes. Each class is assigned a code based on which you can retrieve information.

A class can have several categories under it, for example, under a class called business segment you can have further sub-classifications represented by categories, like, big business, small-scale industries, business for charity etc. This classification into MIS classes helps to manage efficiently information related to GLs.

Requirement:
If you want to have a consolidated report of all the loans disbursed from your bank. You also want to classify the loans into short term, medium term, and long term loans.

However, for information management purposes you want to further classify information of these GLs and sub-ledgers based on:

- The type of customer to whom the loan disbursed are categorized, could be:
  - Individual
  - Corporate
  - Banks and
  - Financial Institutions
- The industry to which the customer belongs, for instance,
  - Fisheries
  - Agriculture
  - Manufacturing
  - Software

The aim is to see that the GL structure does not become unwieldy and difficult to work with.

Solution
You can set up a GL called Loans. All loans disbursed from your bank will be consolidated at this GL. You should further set up sub-GLs to classify loans into short term, medium term, and long term loans.

We have already defined two GL levels. Instead of adding more GLs and making the structure complex, you can use the MIS class categorization to further classify information.

Therefore, you should set up two MIS classes called Customer Type and Industry type. You can have the MIS Codes Individuals, Banks, Corporate, Financial Institutions reporting to the class Customer Type. You can associate the MIS codes, Fisheries, Agriculture, Manufacturing, and Software to the class Industry Type.

This helps simplify the GL structure of the bank and serves the purpose of providing you the classified information that you require.
Note

MIS classes can be created only at the Head Office of your bank.

In order to maintain MIS classes, you need to invoke the ‘MIS Class Maintenance’ screen by typing ‘GLDCLSMT’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. In this screen, you can define various categories based on which reports on general ledgers should be classified. To maintain details of a new MIS class, click new icon.

Here you can maintain the following details:

**MIS class**
In Oracle FLEXCUBE, each MIS class that you maintain is identified by a unique nine-character code called a Class Code. You can follow your own convention for devising this code.

**Description**
You can specify a short description that will enable you to identify the MIS class quickly. The short description that you specify is for information purposes only and will not be printed on any customer correspondence.

**MIS Type**
An important detail in defining an MIS class is to specify the type of class that you are creating. The MIS class type identifies the basic nature of the class. In Oracle FLEXCUBE you can set up the following type of MIS classes:

- **Transaction class** — A transaction class refers to all transactions that have taken place through any of the front-end modules like foreign exchange, money market etc. Customer Class relates to customer accounts.
- **Customer class** — Select this option if you are defining a customer-based classification.
- **Composite class** — Choose this option to indicate that the MIS class can be used both at customer definition and at the time of processing a transaction.
- **Fund class** — Refer to the Core Services User Manual for details on setting up a Fund MIS class

This is the basic feature of a class and will determine the type of MIS codes that can constitute the class. For each of these MIS types you can create a maximum of ten classes.

**Mandatory**
Using this field, you can indicate whether entering an MIS code is mandatory for a particular MIS class or not. Whenever any transaction is stored, the system checks if an MIS code is supplied for this MIS class invoked in the transaction.

**MIS Codes**
Under a class, you can indicate the sub-divisions that should be reported under the class. Each of the sub-classes is given unique code identifiers.

The MIS codes that you associate with a class will fall under the class at the time of reporting or consolidation.

Click add icon to associate an MIS code to a class. To remove an MIS class from the list, place your cursor in that row and click delete icon.

The MIS codes that you associate will depend on the Type of MIS Class that you are creating. While setting up the details of a customer, you can associate the customer to a customer type MIS Code. Therefore the set up serves more for management purposes and makes the management of GLs simple and easy.

**Saving the record**
Click save icon to save the record. Click delete icon to exit without saving the details that you entered. An MIS Class that you have created will be available for use only after it has been authorized by a user bearing another ID.

Similarly, you cannot make any modifications to a Class or Category until the previous modification made, has been authorized.

After you have made the required entries, click ‘Exit’ button to exit the screen. You will be returned to the Application Browser.

### 6.2 Maintaining GL Branch Parameters

You can maintain branch level parameters that govern the processing of GL in a particular branch of your bank through the General Ledger Branch Parameters screen. You can invoke the ‘General Ledger Branch Parameters Maintenance’ screen by typing ‘GLDBRPRM’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.
The General Ledger Branch Parameter screen will be displayed.

![General Ledger Branch Parameters](image)

You will need to maintain the following branch details:

### 6.2.1 Defining Branch Identification Details

**Branch Code**

In Oracle FLEXCUBE, each branch of your bank is identified by a unique three-character code called the branch code. This code will be displayed upon invoking the screen.

**Description**

The description of the branch will be displayed by default when the screen is invoked. You can also specify the name that identifies the branch.

### 6.2.2 Defining Batch Processing Details

You can define Batch Processing Details in way detailed below.

**MIS Average Balance Retention Days**

The MIS average balance details will be retained in the system only for those numbers of days you mention in this field. The Retention day is entered always in terms of days and is greater than the system date.

**General Ledger Average Balance Retention Days**

The GL average balance details will be retained in the system only for those numbers of days you mention in this field. The Retention day is entered always in terms of days and is greater than the system date.

---

**Note**

When a GL-MIS average balance report is requested for a date beyond the retention date, the system will display an error message stating that the data is not available.
Account Statement Retention Days
The Customer Account Statistics will be retained in the system only for those numbers of days you mention in this field. Specify the retention days in terms of days and which is greater than the system date.

All records older than the period that you specify are purged as part of the purge process. The purge process should be initiated manually. The current period data is not purged.

General Ledger MIS Process Days
Those events, which have to be triggered automatically, will be processed accordingly during batch process. You have the option to specify whether the batch process should be processed as part of the EOD process till the next working date - 1 day or not.

Check the box to indicate that the processing has to be done till the next working date - 1 day. Leave the box unchecked to indicate otherwise.

General Ledger Average Balance Process Days
Computation of Average Balance can be based on the Next Working Day-1 or System Date. If the average balance calculation basis is NWD-1, the balances of holidays are included in the previous working day. If the calculation basis were System Date, the balances of holidays are included on the next working day provided the next working day is in the same period. If the basis is System Date but the next working day is in the next period, the holidays are considered during the current run.

6.3 Maintaining GL Class
You can group GL charts of accounts that belong to the particular business entities through the ‘General Ledger Class Maintenance’ screen. You can invoke the ‘General Ledger Branch Parameters Maintenance’ screen by typing ‘STDGLCMT’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

GL Class Code
Specify the unique code given to the specific group of GLs. You can enter a maximum of 3 alphanumeric characters.
**GL Class Name**
Specify the GL Class Code name. You can enter a maximum of 255 alphanumeric characters.

**GL Code**
Specify the GL code. The adjoining list displays all the GL codes maintained in the system. You can choose the appropriate one.

**GL Description**
The system displays the GL account description.
7. Enterprise GL Integration

7.1 Introduction

Oracle FLEXCUBE when deployed in a bank as a product processor allows extraction of accounting data from its core GL system and mapping of the same to an enterprise GL which is external to the system. Oracle FLEXCUBE GL collates the accounting entries from all the modules within Oracle FLEXCUBE and transmits the relevant information to the Data Extraction layer. This layer further interfaces with the external adapter which processes the data as per the requirements of the external GL and transmits the same to it.

7.2 Enterprise GL Extraction Infrastructure

Data extraction process is an End of Day process which is executed during the End of Financial Input stage. In this stage the system consolidates the accounting entries from different modules and passes them on to the extraction layer.

Accounting entries related to revaluation and the year end profit and loss transfer are not included in the data extraction process. All the other accounting entries are transmitted.

After the data extraction is complete, a notification is triggered in Oracle FLEXCUBE to indicate that the data is ready to be processed by the Adapter Layer. On receiving this notification the Adapter Layer would start process the accounting data provided by the extraction layer, according to the requirement of the enterprise GL.

7.2.1 Maintaining Enterprise GL Parameters

Enterprise GL parameters can be captured in the ‘Enterprise GL Parameters’ screen. This is a head office (HO) level maintenance screen where only one set of Enterprise GL Parameters is allowed. Hence, this screen allows you to maintain only one record at the HO Branch level.

You can invoke the ‘Enterprise GL Parameters’ screen by typing ‘EGDGLPRM’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.
The following information can be captured in this screen.

**HO Branch**

Head Office branch code is defaulted to this field. You can not modify the value.

**Reversal Indicator**

In cases where Enterprise GL systems are not able to accept negative numbers in the amount field, the reversal entries will be handled by flipping the accounting entry indicator (Dr/Cr) and always quoting an absolute number in the amount fields. Reversal Indicator provides an option to choose among flipping the accounting entry indicator or providing negative amounts.

**Consider Position Accounting**

Choose this option if you want the position accounting entries to be included for reporting.

**Bank Level Consol Handoff**

If you choose this option, the handoff creation process will be triggered only after the data extraction is completed in all the branches.

---

**Note**

Data extraction in Oracle FLEXCUBE will always be performed at branch level.

---

**Default Transaction Code**

Specify the transaction code that should be used to handle report accounting entries when there is a change in the customer account reporting GL. This change could be due to current balance movement or account status change or reporting GL maintenance change.

A brief description of the chosen transaction code is displayed alongside.

**External Suspense GL**

During data extraction the system validates whether the accounting entries posted to the GLs are valid or not based on the branch and currency restrictions specified in the EGL Master screen. In case such violations are found the system will have to post those accounting entries in a separate suspense GL.

You can specify the suspense GL that should be used to report such accounting entries, here. This should be a valid external GL.

You can select the appropriate suspense GL from the adjoining option list which displays all the GLs defined in the ‘EGL Master’ screen.

---

**7.2.2 Specifying Enterprise GL Mapping Parameters**

You can map different combinations like the GL code and currency in Oracle FLEXCUBE to a GL in the Enterprise GL system. These parameters can be maintained for a given effective date and any modification made will be effective from corresponding business date. Change in the mapping will not have any effect on the historical information that has been already extracted or handed off.
You can invoke the ‘Enterprise GL Mapping Parameters’ screen by typing ‘EGDMAPRM’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Mapping parameters can be chosen as any of the following fields:

**Effective Date**
The date from which mapping is effective is displayed here. This field is always defaulted to the application date and you can not change it.

**7.2.2.1 Specifying Mapping Parameters**

**Branch Code**
Check this option if you wish to include branch as on of the mapping parameters

**Transaction MIS**
The system displays all the transaction MIS classes defined in Oracle FLEXCUBE. However only the ones that have been defined as ‘mandatory’ in the MIS Class Maintenance screen will be enabled. Choose the class that you want to include in the mapping parameters.

**Customer MIS**
The system displays all the customer MIS classes defined in Oracle FLEXCUBE. However only the ones that have been defined as ‘mandatory’ in the MIS Class Maintenance screen will be enabled. Choose the class that you want to include in the mapping parameters

**Composite MIS**
The system displays all the composite MIS classes defined in Oracle FLEXCUBE. However only the ones that have been defined as ‘mandatory’ in the MIS Class Maintenance screen will be enabled. Choose the class that you want to include in the mapping parameters

**7.2.3 Defining Enterprise GL Master**
You can define External GLs for a combination of Oracle FLEXCUBE attributes in the ‘EGL Master’ screen. This maintenance is effective date based and any modification made to the
existing data will be effective from the date of modification. This screen is also a Head Office function.

You can invoke the ‘Enterprise GL Master Maintenance’ screen by typing ‘EGDEGMST’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

**Effective Date**
The application date of the Head Office is defaulted here on creation of any new record or modification to the existing data.

**GL Code**
Specify the Oracle FLEXCUBE GL Code which should be mapped to the External GL. The adjoining option list displays all the GL codes maintained in Oracle FLEXCUBE. You can choose the appropriate one.

**Enterprise GL**
Enter a GL code to which you wish to map a Oracle FLEXCUBE GL. You can specify a GL maintained in the Enterprise GL system or a GL code to represent suspense GL (for posting violated accounting entries).

Refer the section titled ‘External Suspense GL’ under ‘Maintaining Enterprise GL’ Parameters for further details on violated accounting entries.
Currency
Choose the currency that should be mapped along with the chosen Oracle FLEXCUBE GL to the External GL. The adjoining option list displays all the currency codes maintained in Oracle FLEXCUBE. You can choose the appropriate one. You can also choose or the wildcard ‘***’.

7.2.4 Specifying Values for Mapping Parameters

Here you can select different MIS codes for the relevant MIS classes to be mapped to the External GL Code.

Branch Code
Select the appropriate branch code from the adjoining option list which displays all the branch codes defined in the system.

Transaction MIS
The system displays all the transaction MIS codes for the relevant transaction MIS classes defined in Oracle FLEXCUBE. You need to specify the appropriate MIS code against every MIS class listed. The adjoining option list displays all the MIS codes coming under the MIS class. Only the MIS classes selected in the ‘Enterprise GL Mapping Parameters’ screen will be enabled for selection.

Customer MIS
The system displays all the customer MIS codes for the relevant transaction MIS classes defined in Oracle FLEXCUBE. You need to specify the appropriate MIS code against every MIS class listed. The adjoining option list displays all the MIS codes coming under the MIS class. Only the MIS classes selected in the ‘Enterprise GL Mapping Parameters’ screen will be enabled for selection.

Composite MIS
The system displays all the composite MIS codes for the relevant transaction MIS classes defined in Oracle FLEXCUBE. You need to specify the appropriate MIS code against every MIS class listed. The adjoining option list displays all the MIS codes coming under the MIS class. Only the MIS classes selected in the ‘Enterprise GL Mapping Parameters’ screen will be enabled for selection.

7.2.4.1 Specifying Restrictions

Posting Allowed
By default this option will be selected. Uncheck this option if you want to impose a restriction.

Branch Allowed/Disallowed
From the set of available branches, you can maintain a list of Branches which are either allowed or disallowed for the external GL.

Select the required branch from the option list. You can add additional branches by clicking add icon.

Accounting entries can be posted to this GL only from the branches selected here.

Currencies Allowed/Disallowed
From the set of available currencies, you can maintain a list of currencies which are either allowed or disallowed for the external GL.

Select the required currency from the option list. You can add additional currencies by clicking add icon.

Accounting entries can be posted to this GL only in the currencies selected here.
7.2.5 **Data Extraction Processing**

Information mapping and data extraction can be performed using a batch process. This batch process should be triggered during End of Financial Input stage in EOD. This process will contain two major portions to it - one, to handle accounting entries to internal type GLs and the second to handle accounting entries to customer accounts and building fictitious accounting entries to customer GLs in order to represent the balance movement when ever there is a change in reporting GL mapped to them.

You can also invoke this batch by typing ‘EGBEGLEX’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

7.2.5.1 **Identification of Internal GL’s**

System will pick up the values of different attributes defined to be mapped to an External GL for all the accounting entries posted to Internal GLs. Then the External GL Code will be identified using these attributes. Failure to identify an External GL will terminate the process. Identified External GL for each accounting entry will logged in an intermediary data store.

You can run this process as an intra-day job to reduce the processing time required during End of Day.

7.2.5.2 **Identification of Customer Accounts & Customer GL’s**

Identification of reporting Customer GL for a Customer Account requires the closing balance in the customer account. Since account balances are reconciled at EOD, this process relating to entries to Customer should be run only during End of Financial Input window. As a first step, the system will identify the reporting Customer GL for each Customer Account and the External GL mapped to such a Customer GL. It will also identify the corresponding Oracle CCID mapped.

If there is a change in the reporting GL the system will automatically create fictitious accounting entries to Customer GL to report the balance movement.

The following example illustrate this process

7.2.6 **Handoff Generation**

A daily handoff data store will be provided which would contain all the basic accounting entry related information to the external GL mapped. While providing this data system will identify whether there are any violations to the restrictions defined in the EGL Master screen. If found these accounting entries will be reported to using the External Suspense GL maintained in the ‘Enterprise GL Parameters’ screen.

Successful completion of this process will mark the end of the process.
8. Maintaining GL Balance Transfer

You can maintain sweep instructions for transferring balance from branch “Stamp duty payable GL” to the head office GL. You can maintain it through “GL Balance Transfer Maintenance” screen. You can invoke this screen by typing ‘STDGLTRF’ in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Specify the following details:

**Branch Code**
Specify the current branch code from where the sweep would take place.

**Group Code**
Specify the code to group the GL’s to be transferred.

**Description**
Enter the description for the group.

**Transaction Code**
Select a transaction code to be used for posting transfer entries from the list of values provided.

**From GL**
Select the GL code to transfer funds from the list of values provided.

---

**Note**
This is the inter branch GL used for parking stamp duty collected.

**To Branch**
Select the branch code from the list of values provided to transfer the balances.
To GL
Select the GL code from the list of values provided to be used for posting sweep entries by the system.

Note
After this batch is executed, the balance on the source GL (stamp duty payable GL) is 0 for the branch. The system then transfers the balances of GL in each currency to the target GL in head office in the same currency.

8.1 Balance Transfer Batch GL

GL balance transfer batch posts transfer entries and is scheduled as part of AEOD post EOTI. It sweeps the balance if any from the branch GL’s to the head office GL. If the branch GL has balances in multiple currencies, system transfers the balance for each currency to the head office GL in the same currency. When this batch is executed, system checks for any sweep instruction maintenance available for the current branch and then generates and post entries to sweep balance from branch GL to head office GL.

8.2 GL Balances Query

You can invoke the ‘GL Balances Query’ screen by typing ‘GLDXWBAL’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The ‘GL Balances Query’ screen is shown below:

Click the Enter Query button to enter the following query criteria.

General Ledger Code
Specify the code used to identify the general ledger.
Branch
Specify the branch code. The adjoining option list displays all valid branch codes maintained in the system. You can select the appropriate one.

Financial Year
Specify the financial year.

General Ledger Description
The system displays the appropriate general ledger description for the general ledger code selected.

Period Code
Specify the period code. The adjoining option list displays all valid period codes maintained in the system. You can select the appropriate one.

Currency Code
Specify the currency code for the transaction. The adjoining option list displays all valid currency codes maintained in the system. You can select the appropriate one.

Branch
Specify the branch code. The adjoining option list displays all valid branch codes maintained in the system. You can select the appropriate one.

Year
Specify the financial year. The adjoining drop-down list displays all valid financial year codes maintained in the system. You can select the appropriate one.

Period
Specify the period code. The adjoining option list displays all valid period codes maintained in the system. You can select the appropriate one.

Currency
Specify the currency code for the transaction. The adjoining option list displays all valid currency codes maintained in the system. You can select the appropriate one.

FCY Balance
Specify the balance in foreign currency.

LCY Balance
Specify the balance in local currency.

Debit Movement
Indicate whether the debit amount should be moved or not.

Credit Movement
Indicate whether the credit amount should be moved or not.

Net Movement
Indicate whether the net amount should be moved or not.

Debit Movement LCY
Specify the debit amount moved in local currency.

Credit Movement LCY
Specify the credit amount moved in local currency.

Net Movement LCY
Specify the net amount moved in local currency.
9. Error Codes and Messages

10. Glossary

10.1 General Ledger Terms

The following terms have been used in this manual.

**GL**
This module forms the single repository in Oracle FLEXCUBE for financial information and accounting for all types of accounts held by the bank. Balances, turnovers and so on for any account or type of account can be maintained and consolidated.

**Leaf GL**
A GL that reports to a node GL and is not itself reported to by any other GL.

**Node GL**
A GL that reports to a main head GL above it and is itself reported to by leaf GLs’ under it.

**MIS Class**
An identifier for the kind of entity that is identified as the basis for MIS reporting

**LCY**
The local currency in which profit and loss entries can be posted to a GL. Reporting will obtain details in this currency.

**FCY**
A foreign currency in which record of the profit and loss entries posted to a GL can be maintained.

**Chart of Accounts**
The structure or framework in which the different GL's are maintained, in the bank

**Contingent Asset**
One of the categories of head GLs that can be maintained in the structure, for the posting of entries related to contingent assets.

**Contingent Liability**
One of the categories of head GLs that can be maintained in the structure, for the posting of entries related to contingent liabilities.

**Position Accounting**
Maintaining the position of a foreign currency, by setting up a Position GL and a Position Equivalent GL for each foreign currency

**Reporting Lines**
Unique codes assigned to each financial information head required for the Head Office and Central Bank. Reporting lines can be associated with the appropriate GL’s that would report to them.
11. Reports

11.1 Introduction

Several reports giving information on the financial details of the bank, like the balance sheet, profit and loss statement, cash flow, etc. can be generated in Oracle FLEXCUBE. Many of these reports are available in the standard format, and can be readily generated. Many more can be generated to suit your needs through Business Objects, the Report Generator for Oracle FLEXCUBE.

You can generate the following reports for the GL module:

- Accounting Journal Report
- Trial Balance Report
- Multi-Currency P and L report
- Daily Average Balance Report
- General Ledger Periodical Average Balance
- General Ledger Report
- Cash Flow Report
- Currency-wise Cash Flow Report
- Uncollected Funds Report
- Currency Position Report
- GL Summary Report
- Balance Sheet Report
- Profit and Loss Internal Transactions Report
- Monthly Average Balance for Entire GL Report
- Daily Expense Tracking Report
- Back Dated Transaction Report
- Income Expense Report
- Profit and Loss Statement
- Currency wise Profit and Loss Statement
- General Ledger Summary Report

11.2 Accounting Journal Report

The Accounting Journal contains the accounting entries passed for transactions processed during the day. The journal contains all information related to transactions like account number, currency, transaction code, transaction description, etc.

The accounting journal can be generated at any time during the day. Ideally, after End of Transactions Input (EOTI), the user who made the inputs should take a print out of the transaction journal for the relevant transactions, put it along with the vouchers or tickets based on which the inputs were made, and hand them over to the authorizer. The authorizer can then check the entries passed for each transaction and then authorize the transaction. Oracle FLEXCUBE provides you with many options to enable you to generate the journal for specific entries.

This would be a convenient way of checking out details for the authorizer. However, details of the entries are available for the authorizer on-line during authorization also.
Mandatory generation of the report during End of Day

During end of day, after all the automatic processing for the day has been completed, you have to generate the transaction journal for all transactions during the day. This should be irrespective of whether the journal was generated during the day for specific transactions. This report can be spooled and stored in a file so that it can be retrieved later on. This information may come in handy at a later point in time, even though there are other ways of retrieving past data.

Besides, you cannot proceed with the end of day processing for the day without generating the transaction journal for all transactions processed during the day.

11.2.1 Selection Options

By default, the transaction journal will be generated for all transactions processed during the day. However, you can customize the report to contain details of transactions satisfying certain criteria:

Module
You can generate the report for all modules or for a single module. To generate the report for a single module click on Single and from the option-list choose the module that you want to generate the report for.

If you want the report to be generated for all modules choose ‘All’.

Product
For a particular module(s) you can generate a product wise report. To generate a product wise report for a specific module, click on Single and choose the product from the option list. If you want the generated report to contain details of all the products, click ‘All’.

User
You can generate the report for transactions entered by a particular user or for all users. To generate the report for entries made by a particular user, click on Single and choose a User ID from the option list. Click ‘All’ to generate a report containing entries made by all users.

For example, you want to generate a report for accounting entries passed by a person with the User ID GAIU000. At the User option if you specify the ID GAIU000 only those entries passed by the person with that User Id will be generated in the report.

Specifying the batch numbers
Teller and journal entries are passed into batches. You can generate the report for specific batch numbers only, a range of them, or all of them. If you need to generate the report for a range, enter the ‘From’ and ‘To’ teller or journal entry batch for which you want details.

Indicating transaction preferences
- Click on All if you want to generate the report for all transactions made during the day.
- Click on This Branch if you want to generate the report for all transactions involving accounts of your branch only.
- Click on Posted to Other Branch if the report has to be generated for transactions involving entries posted to accounts in other branches.
- Click on This branch acted as bridge if you want details of those transactions, in which your branch acted as an intermediary in an inter-branch transaction.

Print Copies
Once the details of a transaction have been printed in the journal, they will be marked off as printed. However, you have the option to print these details again.
However, at End of Day, it is recommended that you take the journal for all the transactions, irrespective of whether their details were printed during the day.

You can invoke the screen by typing the code ‘ACRJRNAL’ in the field at the top right corner of the Application tool bar and click on the adjoining arrow button.

11.2.2 Contents of the Report

The report options that you select while generating the report will be printed at the beginning of the report.

Body of the Report

The transactions processed during the day in each module will be reported in the alphabetic order of the module code. Totals will be provided in local currency for each module.

<table>
<thead>
<tr>
<th>Reference number</th>
<th>This is the reference number of the contract involved in the transaction being reported.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account number</td>
<td>This is the account number for which the accounting entry was passed.</td>
</tr>
<tr>
<td>Account branch</td>
<td>This is the branch to which the account belongs.</td>
</tr>
<tr>
<td>Account description</td>
<td>This is the description of the account.</td>
</tr>
<tr>
<td>Currency</td>
<td>This is the SWIFT code of the account currency.</td>
</tr>
<tr>
<td>Dr/Cr</td>
<td>This indicates whether the transaction was a debit or credit.</td>
</tr>
<tr>
<td>Transaction Code</td>
<td>Every accounting entry in Oracle FLEXCUBE involves a transaction code. The transaction code describes the nature of the entry for which you are generating the report.</td>
</tr>
<tr>
<td>Transaction description</td>
<td>This is the description assigned to the transaction code.</td>
</tr>
<tr>
<td>Value date</td>
<td>The accounting entry was passed on this date.</td>
</tr>
<tr>
<td>FCY amount</td>
<td>If the transaction is in a foreign currency, the amount expressed in the foreign currency is displayed.</td>
</tr>
<tr>
<td>Exchange rate</td>
<td>If the transaction currency is different from the local currency, the exchange rate used is displayed.</td>
</tr>
<tr>
<td>LCY amount</td>
<td>This is the local currency equivalent of the amount involved in the transaction.</td>
</tr>
</tbody>
</table>

11.3 Trial Balance Report

The trial balance report gives details of all transactions involving a particular account. You can generate this report only after End of Financial Input is marked for the day.
You can invoke the screen by typing the code ‘GLRPTBAL’ in the field at the top right corner of the Application tool bar and click on the adjoining arrow button.

Since there are no selection options available for this report, click ‘OK’ button to generate the report. Click ‘Exit’ button if you do not want to generate the report.

11.3.1 Contents of the Report

Apart from the header the following information is provided for each account.

Body of the report

The report is sorted in the alphabetic order of the accounts and GLs involved in transactions during the day. This is in contrast with the transaction journal report that reports the transactions during the day, sorted on the module. The trial balance report gives the list of accounts or GLs involved in transactions, in any module.

The following details will be reported for each account:

<table>
<thead>
<tr>
<th>Account number</th>
<th>This is the account number involved in the transactions being reported.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account currency</td>
<td>This is the currency of the account.</td>
</tr>
<tr>
<td>Opening Balance</td>
<td>This is the opening balance</td>
</tr>
<tr>
<td>Transaction Reference</td>
<td>This is the reference number of the transaction being reported. It will be empty for a teller or voucher entry.</td>
</tr>
<tr>
<td>Additional text</td>
<td>This is the additional text</td>
</tr>
<tr>
<td>Fcy amount</td>
<td>If the account is in foreign currency, this is the transaction amount in the foreign currency.</td>
</tr>
<tr>
<td>Lcy amount</td>
<td>This is the equivalent of the transaction amount in local currency. The conversion is done at the rate used for the transaction.</td>
</tr>
<tr>
<td>Current Balance</td>
<td>The current balance in the specific account</td>
</tr>
</tbody>
</table>
11.4 Multi-Currency P and L report

This is the multi-currency profit and loss report. It gives the latest balances in the income and expense GLs.

The way in which the balances in different currencies for a GL are reported can be explained by way of an example.

11.4.1 Generating a Consolidated Report

You can indicate that the report should be consolidated across the branches as per the reporting structure defined at your branch. If you choose to consolidate the balances (to recall, the GL structure will be the same in all the branches in a reporting structure), you should also indicate the date as of which the consolidation should be done.

This date assumes significance when the different branches in the reporting structure are on different dates. In such a case, the consolidation should ideally be made as of the earliest of the dates of the branches, or earlier. The report will be as of the date you enter here, for all branches across which the balances are being consolidated.

11.4.2 Generating the Balance Sheet or P n L Report for a Period in the Past

You can generate the report to retrieve the balance sheet or the P n L report for any date in the past. Such a history report can be generated either for a past financial period or a financial year.

11.4.3 Selection options

You can generate the report for the following options.

**Consolidation**
You can indicate whether you want a report consolidated across the branches in the reporting structure defined for your branch.

**Past period and period code**
Indicate that you want to generate the report for a period in the past, by highlighting this field.

**Financial year**
By choosing a past financial year, you can generate the report for that period.
11.4.4 Contents of the Report

The report options that you select while generating the report will be printed at the beginning of the report. Apart from the header the following information is provided for each contract.

<table>
<thead>
<tr>
<th>Body of the Report</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Currency/GL Code</strong></td>
</tr>
<tr>
<td>This is the currency for which the balances are being reported. The GL Code is the GL for which the balances are being reported. When the contributions from contracts in a foreign currency are reported, the local currency equivalent of the amounts is also shown. The conversion rate would be the one that was used for the transaction.</td>
</tr>
<tr>
<td>Description</td>
</tr>
<tr>
<td>This is the description of the GL Code for which the balances are reported.</td>
</tr>
<tr>
<td>Debit balance</td>
</tr>
<tr>
<td>For an expense GL, the debit balance will be reported in foreign currency, followed by the local currency equivalent of the amount. The conversion rate would be the one used for the transaction.</td>
</tr>
<tr>
<td>Credit balance</td>
</tr>
<tr>
<td>For an income GL, the credit balance will be reported in foreign currency, followed by the local currency equivalent of the amount. The conversion rate would be the one used for the transaction.</td>
</tr>
<tr>
<td>Euro Eqv.</td>
</tr>
<tr>
<td>The equivalent of each of the above values in terms of Euro</td>
</tr>
</tbody>
</table>

**Summation**
Debit and credit totals will be provided for all categories of GL.

11.5 Daily Average Balance Report

In Oracle FLEXCUBE, the GL – MIS average balance report can be generated daily. It gives the latest value date average balances or the book date average balances based on the
option you chose at the time of report generation. The report displays the average balance with branch code, GL code, currency code, MIS class and MIS code. The report can be generated for All Customers as well as Single Customer.

By defining GL reports with MIS linkages, you can generate a GL report in which the balances are reported against the entities defined in the linkage. These reports help you group information under different MIS entities. The following example illustrates this concept:

While generating the GL report, you can indicate that an MIS Linkage report should be generated instead of a normal report. The contents of the report will be the same as that of a normal GL report, except for the break-up provided for each MIS Class.

It also includes the effects of revaluation and financial closure entries on the average balance.

You can invoke the screen by typing the code ‘GLRISAVG’ in the field at the top right corner of the Application tool bar and click on the adjoining arrow button.

![GL MIS System Daily Average Balance](image)

### 11.5.1 Selection Options

You can generate the report for the following options:

**Indicating the preference for GLs**

You can generate the report for all GLs or for a GL. To generate the report for a single GL click on Single and from the option list choose the GL that you want to generate the report for.

If you want the report to be generated for all GLs choose ‘All’.

**Indicating the Currencies preference**

To generate the report for a single currency click on Single and from the option list choose the currency code that you want to generate the report for.

If you want the report to be generated for all currencies choose ‘All’.

**Indicating the Customer criteria**

To generate the report for a single customer click on Single and from the option list choose the customer number that you want to generate the report for.

If you want the report to be generated for all customers choose ‘All’.
Defining the MIS Class criteria

To generate the report for a single MIS class click on Single and from the option list choose the MIS class that you want to generate the report for.

If you want the report to be generated for all MIS class choose ‘All’.

Specifying the date preference for generation of the report

You have the option to specify the date option for generating the report.

You can generate the report to reflect the average balance report for any date in the past.

Note

However this date has to be within the retention date you have mentioned in the GL Branch Parameters screen.

Select the value date button if you want to generate value date GL-MIS average balance report. To generate book date GL-MIS average balance report, select book date button.

11.5.2 Contents of the Report

You can generate the GL-MIS average balance report for a single customer or for all customers for a specific date till date. The system will generate the report based on the parameters specified by you.

The contents of the daily average balance report are given below:

Header

The ‘Header’ carries the title of the report, branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

Body

The report contains the average balance for financial year to date and period to date for the foreign currency and the local currency. The average balance includes the effect of account revaluation and financial closure entries for both book date and value date.

The value date average balance reflects adjustment due to back value entries in addition to normal value date balance.

The book date average balance is based on the booking date and hence there is no adjustment.

The financial year ‘To date’ and period ‘To date’ average balance values are with respect to the financial year and period code of the bank.

Each column in the report contains the following details:

<table>
<thead>
<tr>
<th>Branch</th>
<th>Indicates Branch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>GL Code</td>
<td>The code that identifies the general ledger</td>
</tr>
<tr>
<td>Currency</td>
<td>Indicates currency</td>
</tr>
<tr>
<td>Month to Date LCY</td>
<td>Month to date local currency balance</td>
</tr>
<tr>
<td>MIS Class</td>
<td>The class of MIS</td>
</tr>
</tbody>
</table>
11.6 General Ledger Periodical Average Balance

You can generate the average balance report from General Ledger module of Oracle FLEXCUBE. This report gives you details of GL balance in both transaction currency and local currency. You can set preferences as to generation of the report using ‘Reports – GL Average Balance’ screen. To invoke the screen, type ‘GLRPAVG’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

| MIS Code | The code that identifies the MIS |
| Month to Date ACY | Month to date account currency balance |
| Customer Number | The CIF of the customer whose details are being generated |
| Year To Date LCY | Year to date local currency balance |
| Year To Date ACY | Year to date account currency balance |

11.6.1 Report Options

You can set the following preferences:

**Financial Year**

You can specify the following parameters.

**From Year**

Specify the financial year from when you need to generate the report from the adjoining option list.

**To Year**

Specify the financial year till when you need to generate the report from the adjoining option list.

**Period**

You can specify the following parameters.
From Period
Specify the start date of the report period.

To Period
Specify the end date of the report period.

Include Zero Balances
Check this option to include zero balances in the report.

Once you have captured the details, click OK button. The system will display the print options screen. Set your preferences and click OK to print.

11.6.2 Contents of the Report

The parameters specified while generating the report are printed at the beginning of the report. Other content displayed in the report is as follows:

Header
The following details are displayed in the header section:

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Field Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Branch</td>
<td>Indicates Branch Code and Branch Name</td>
</tr>
<tr>
<td>Branch Date</td>
<td>Indicates Current Date of the Branch</td>
</tr>
<tr>
<td>User ID</td>
<td>Indicates User ID</td>
</tr>
<tr>
<td>Date &amp; Time</td>
<td>Indicates the Date and Time when the report was generated</td>
</tr>
<tr>
<td>Module</td>
<td>Indicates module for which report is generated.</td>
</tr>
</tbody>
</table>

Body
You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>GL Code</th>
<th>The code that identifies the general ledger</th>
</tr>
</thead>
<tbody>
<tr>
<td>GL Description</td>
<td>Indicates the description of general ledger</td>
</tr>
<tr>
<td>Financial Year</td>
<td>The financial year for which you require the general ledger average balance</td>
</tr>
<tr>
<td>Period Code</td>
<td>The code that identifies the period for which the details are required</td>
</tr>
<tr>
<td>Currency</td>
<td>The code of the transaction currency</td>
</tr>
<tr>
<td>Currency Bal</td>
<td>The GL balance amount in terms of transaction currency</td>
</tr>
<tr>
<td>LCY Bal</td>
<td>The GL balance amount in terms of local currency</td>
</tr>
</tbody>
</table>
11.7 General Ledger Report

The general ledger report displays credit and debit balances in various accounts maintained in Oracle FLEXCUBE. You can set preferences as to generation of the report using 'General Ledger Report' screen.

To invoke the screen, type ‘GLRPBAL’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

11.7.1 Report Option

You can set the following preferences for the report:

Report Branch
The system defaults report branch.

Report Name
Specify the name of the report. The option list displays all valid report names maintained in the system. Choose the appropriate one.

From General Ledger
You can generate the report with details of a particular general ledger alone. The option list displays all valid GL codes maintained in the system. Choose the appropriate one. If you do not specify a GL code here, the system will generate the report for all general ledgers.

General Ledger MIS Break
If you check this option, the report will represent GL balances break-up details with corresponding MIS codes. If you do not check this, the system will not generate the breakup in the report.

Only Leaf General Ledger
Leaf general ledgers are maintained under Nod general ledgers. If you check this option, the system will include only the Leaf general ledger details in the report. If you do not check this, the report will be generated for the Leaf general ledger as well as the corresponding Nod general ledgers.
Skip Zero Balances
Check this option to exclude details of zero balance general ledgers from the report. If you do not check this option, the system will include details of zero balance general ledgers in the report.

Category
Specify the category to which the general ledger belongs. You can choose one of the following categories from the dropdown list:
- Asset
- Liability
- Expense
- Income
- Contingent asset
- Contingent liability

Category Groups
Specify the category group. You can choose one of the following groups:
- Asset / Liability
- Income / Expense
- Contingence

Level
Chart of accounts have been grouped hierarchically under six levels. You can generate the report for accounts that fall under a certain level of this hierarchical structure. Specify the level of hierarchy.

Customer / Internal
Choose the general ledger types for which the report is being generated. You can choose one of the following options:
- Only customer general ledgers
- Only internal general ledgers
- Both

Past Period
Check this option to indicate that the report is being generated a period in the past.

Financial Year
Specify the financial year for which you are generating the report.

Period Code
Period codes are maintained for each financial year. If this report is being generated for a particular period within a financial year, specify the period code. The option list displays all valid period codes maintained under the financial year selected above.

Consolidation
Check this option to generate a report that is consolidated across the branches in the reporting structure defined for your branch.

Date
Specify the date of the report.

Once you have specified the details, click OK button. The system displays the print option screen. Set your preferences as to printing the report and click OK button.
11.7.2 Contents of the Report

The contents of General Ledger report have been discussed under the following heads:

Header
The ‘Header’ carries the title of the report, branch code, branch date, financial year/period code, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

Body
You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>GL/MIS Code</th>
<th>Description</th>
<th>Debit Balance LCY</th>
<th>Credit Balance LCY</th>
<th>Total Real Balance</th>
<th>Total Contingent Balance</th>
<th>Grand Total</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The code that identifies the GL</td>
<td>The debit balance in the selected account</td>
<td>The credit balance in the selected account</td>
<td>The total real credit as well as debit balances and equivalent values in terms of Euro</td>
<td>The total contingent credit as well as debit balances and equivalent values in terms of Euro</td>
<td>The grand total credit as well as debit balances and equivalent values in terms of Euro</td>
</tr>
</tbody>
</table>

11.8 Cash Flow Report

Cash flow report gives you details of inflow, outflow and the net inflow of cash for each product. You can set preferences as to generation of this report using ‘Cash Flow Report’ screen.
To invoke the screen, type ‘GLRPCFLO’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

11.8.1 Report Options

You can set the following record preferences:

**From Product**
Specify the product code. The system will generate the report of cash flow from this product to the product selected in ‘To Product’ field.

**To Product**
Specify the product code. The system will generate the report of cash flow to this product from the product selected in ‘From Product’ field.

**Report**
Specify the name of the report. The option list displays all valid report names maintained in the system. Choose the appropriate one.

Once you have specified the details, click OK button. The system displays the print options screen. Set your preferences as to printing the report and click OK button.

11.8.2 Contents of the Report

The contents of cash flow report have been discussed under the following heads:

**Header**
The ‘Header’ carries the title of the report, branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

**Body**
You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>Product</th>
<th>The product of which the details are generated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interval</td>
<td>The duration of time in (days) for which the currency record is fetched</td>
</tr>
<tr>
<td>Currency</td>
<td>The corresponding currency for each product</td>
</tr>
</tbody>
</table>
11.9 Currency-wise Cash Flow Report

To invoke the screen, type ‘GLRPNFLO’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

11.9.1 Report Options

You can set the following record preference:

**Report**
Specify the name of the report. The option list displays all valid report names maintained in the system. Choose the appropriate one.

Once you have specified the details, click OK button. The system displays the print option screen. Set your preferences as to printing the report and click OK button.

11.9.2 Contents of the Report

The contents of cash flow report have been discussed under the following heads:

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amount In</td>
<td>Inflow of cash for each product and the corresponding currency</td>
</tr>
<tr>
<td>Amount Out</td>
<td>Outflow of cash for each product and the corresponding currency</td>
</tr>
<tr>
<td>Net Inflow</td>
<td>Net inflow for each product and the corresponding currency</td>
</tr>
<tr>
<td>Euro Eqv.</td>
<td>The equivalent of each of the above values in terms of Euro</td>
</tr>
<tr>
<td>Total for Product</td>
<td>This is the total inflow, outflow and total net inflow for the product</td>
</tr>
<tr>
<td>Total for Currency</td>
<td>This is the total inflow, outflow and total net inflow for the currency</td>
</tr>
</tbody>
</table>
**Header**

The ‘Header’ carries the title of the report, branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

**Body**

You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>Currency</th>
<th>The currency for which the cash flow details are generated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amount In</td>
<td>Inflow of cash for each currency</td>
</tr>
<tr>
<td>Amount Out</td>
<td>Outflow of cash for each currency</td>
</tr>
<tr>
<td>Interval</td>
<td>The duration of time in (days) for which the currency record is fetched</td>
</tr>
<tr>
<td>Net Inflow</td>
<td>Net inflow for each product and the corresponding currency</td>
</tr>
<tr>
<td>Total for Currency</td>
<td>Total inflow and outflow of cash for the specific currency</td>
</tr>
</tbody>
</table>

### 11.10 Uncollected Funds Report

This report provides the details of uncollected funds related to the GL for a selected period. You can set preferences as to generation of this report using ‘Uncollected Funds Report’ screen. To invoke the screen, type ‘GLRPUNC’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

Once you have specified the details, click OK button. The system displays the print option screen. Set your preferences as to printing the report and click OK button.

#### 11.10.1 Contents of the Report

The parameters specified while generating the report are printed at the beginning of the report. Other content displayed in the report is as follows:
Header
The following details are displayed in the header section:

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Field Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Branch</td>
<td>Indicates Branch Code and Branch Name</td>
</tr>
<tr>
<td>Branch Date</td>
<td>Indicates Current Date of the Branch</td>
</tr>
<tr>
<td>User ID</td>
<td>Indicates User ID</td>
</tr>
<tr>
<td>Date &amp; Time</td>
<td>Indicates the Date and Time when the report was generated</td>
</tr>
<tr>
<td>Module</td>
<td>Indicates module for which report is generated.</td>
</tr>
</tbody>
</table>

Body
You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>GL / Currency Code</th>
<th>The code of the GL whose details are displayed in the report</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
<td>The description</td>
</tr>
<tr>
<td>Uncollected Amount</td>
<td>Uncollected amount from each GL</td>
</tr>
</tbody>
</table>

11.11 Currency Position Report

You can set preferences as to generation of this report using ‘Currency Position Report’ screen. To invoke the screen, type ‘GLRPCCY’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

The screen is as shown below:

Once you have specified the details, click OK button. The system displays the print option screen. Set your preferences as to printing the report and click OK button.
11.11.1 Contents of the Report

The contents of this report have been discussed under the following heads:

Header

The ‘Header’ carries the title of the report, consolidation status, financial year / period code, indication as to whether the period is closed, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

Body

You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>GL / Currency Code</th>
<th>The code of the GL whose details are displayed in the report</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
<td>The description</td>
</tr>
<tr>
<td>Debit Balance</td>
<td>The debit balances in terms of local currency as well as Euro</td>
</tr>
<tr>
<td>Credit Balance</td>
<td>The credit balances in terms of local currency as well as Euro</td>
</tr>
<tr>
<td>Currency</td>
<td>The currency</td>
</tr>
<tr>
<td>Currency Description</td>
<td>Description of the currency</td>
</tr>
</tbody>
</table>

11.12 GL Summary Report

This is a summary report of transactions posted to asset and liability, income or expense GLs defined at the product level. The transactions are grouped by GL types and the totals are provided. This report is generated at EOD.

11.12.1 Contents of the Report

The contents of the report are discussed under the following heads:

Header

The Header carries the Branch, Date, User ID and the Module for which the report is generated,

Body of the report

The generated report will have the following information:

<table>
<thead>
<tr>
<th>GL Account No</th>
<th>This indicates the GL Account Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>GL Name</td>
<td>This indicates the GL Name</td>
</tr>
<tr>
<td>Currency</td>
<td>This indicates the Currency</td>
</tr>
<tr>
<td>Debit Balance LCY</td>
<td>This indicates the Debit Balance in Local Currency</td>
</tr>
<tr>
<td>Credit Balance LCY</td>
<td>This indicates the Credit Balance in Local Currency</td>
</tr>
<tr>
<td>Debit Balance FCY</td>
<td>This indicates the Debit Balance in Foreign Currency</td>
</tr>
</tbody>
</table>
11.13 **Balance Sheet Report**

You can set preferences as to generation of this report using ‘Balance Sheet Report’ screen. This report summarizes the net balance of all general ledgers under assets, liabilities, income and expense. To invoke the screen, type ‘GLRPBASH’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

The screen is as shown below:

| Credit Balance FCY | This indicates the Credit Balance in Foreign Currency |

**Period Code**
Specify the period code.

**Financial Cycle**
Specify the financial cycle for which you want to generate the report from the adjoining option list.

**Level**
Specify the level.

**Category**
Check category of the balance sheets for which you need to generate the report, from the following:
- Asset
- Liability
- Income
- Expense
- Debit
- Credit

Once you have specified the details, click OK button. The system displays the print option screen. Set your preferences as to printing the report and click OK button.
11.13.1 Contents of the Report

The contents of this report have been discussed under the following heads:

**Header**
The ‘Header’ carries the title of the report, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

**Body**
You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>GL Code</th>
<th>The code of the GL whose details are displayed in the report</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
<td>The description</td>
</tr>
<tr>
<td>Amount in LCY</td>
<td>The amount in Local Currency</td>
</tr>
<tr>
<td>Amount FCY</td>
<td>The amount in Foreign Currency</td>
</tr>
<tr>
<td>Total</td>
<td>The total Amount</td>
</tr>
</tbody>
</table>

11.14 Profit and Loss Internal Transactions Report

You can set preferences as to generation of this report using ‘Profit and Loss Internal Transactions Report’ screen. To invoke the screen, type ‘GLRPLTXN’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

The screen is as shown below:

Once you have specified the details, click OK button. The system displays the print option screen. Set your preferences as to printing the report and click OK button.

11.14.1 Contents of the Report

The contents of this report have been discussed under the following heads:
**Header**

The ‘Header’ carries the title of the report, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

**Body**

You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>Account Number</th>
<th>Indicates the account number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account Name</td>
<td>Indicates the name of the account</td>
</tr>
<tr>
<td>Debit/Credit Indicator</td>
<td>Indicates whether the transaction is debit or credit</td>
</tr>
<tr>
<td>Currency</td>
<td>Indicates the currency of the account</td>
</tr>
<tr>
<td>Amount</td>
<td>Indicates the amount</td>
</tr>
<tr>
<td>Description</td>
<td>Indicates the description</td>
</tr>
<tr>
<td>Value Date</td>
<td>Indicates value date</td>
</tr>
<tr>
<td>Input Branch</td>
<td>Indicates the input branch</td>
</tr>
<tr>
<td>Maker ID</td>
<td>Indicates the maker ID</td>
</tr>
<tr>
<td>Input Date</td>
<td>Indicates the input date</td>
</tr>
<tr>
<td>Reference Number</td>
<td>Indicates the reference number</td>
</tr>
</tbody>
</table>

**11.15 Monthly Average Balance for Entire GL Report**

You can set preferences as to generation of this report using ‘Monthly Average Balance for Entire GL Report’ screen. To invoke the screen, type ‘GLRPMABR’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.
The screen is as shown below:

**Period Code**
Specify the period code from the adjoining option list.

**Financial Year**
Specify the financial year for which you want to generate the report.

Once you have specified the details, click OK button. The system displays the print option screen. Set your preferences as to printing the report and click OK button.

11.15.1 Contents of the Report

The contents of this report have been discussed under the following heads:

**Header**
The ‘Header’ carries the title of the report, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

**Body**
You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>GL Code</th>
<th>Indicates the code of the GL whose details are displayed in the report</th>
</tr>
</thead>
<tbody>
<tr>
<td>GL Description</td>
<td>Displays the description of the general ledger</td>
</tr>
<tr>
<td>GL Category</td>
<td>Indicates the general ledger category</td>
</tr>
<tr>
<td>Currency</td>
<td>Indicates the currency of the account</td>
</tr>
<tr>
<td>Monthly Average Balance (Account Currency)</td>
<td>Indicates the monthly average balance in account currency</td>
</tr>
</tbody>
</table>
11.16 Daily Expense Tracking Report

This report helps you track the daily expenses. You generate this report using ‘Daily Expense Tracking Report’ screen. To invoke the screen, type ‘GLRDLEXP’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

The screen is as shown below:

![Daily Expense Tracking Report Screen]

All Branches/Specific

You can generate this report for all the branches or a specific branch alone. If you choose ‘All Branches’, the system will generate the report for all the branch codes. If you choose ‘Specific’, you need to select the branch code for which you need to generate the report.

Once you have specified the details, click ‘OK’ button.

11.16.1 Contents of the Report

The contents of this report have been discussed under the following heads:

Header

The ‘Header’ carries the title of the report, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

Body

You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>Monthly Average Balance (Local Currency)</th>
<th>Indicates the monthly average balance in local currency</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Branch</th>
<th>The branch code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account Number</td>
<td>The GL account number</td>
</tr>
<tr>
<td>Transaction number</td>
<td>The expense transaction number</td>
</tr>
</tbody>
</table>
11.17 Back Dated Transaction Report

This report helps you analyse all the backdated transactions entered in the system. You generate this report using 'Back Dated transaction Report' screen. To invoke the screen, type ‘GLRPBDTN’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

The screen is as shown below:

Specify the report options and click ‘OK’ button.

11.17.1 Contents of the Report

The contents of this report have been discussed under the following heads:

**Header**

The ‘Header’ carries the title of the report, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

**Body**

You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>Dr/Cr indicator</th>
<th>The transaction was a credit transaction or debit transaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Posting Date</td>
<td>The date on which the entry was posted</td>
</tr>
<tr>
<td>Expense for the day</td>
<td>The expense incurred on the current date</td>
</tr>
</tbody>
</table>
11.18 Income Expense Report

The income expense report provides details of the income and expenses by displaying the debit, credit and net balances for GL accounts. You generate this report using ‘Income Expense Report’ screen. To invoke the screen, type ‘GLRPINEX’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

The screen is as shown below:

<table>
<thead>
<tr>
<th>Currency</th>
<th>The currency of the transaction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amount</td>
<td>The transaction amount</td>
</tr>
<tr>
<td>Description</td>
<td>The description of the transaction</td>
</tr>
<tr>
<td>Value Date</td>
<td>The value date of the transaction</td>
</tr>
<tr>
<td>Input Branch</td>
<td>The branch at which the transaction was recorded</td>
</tr>
<tr>
<td>Maker ID</td>
<td>The user ID of the maker of the transaction</td>
</tr>
<tr>
<td>Input Date</td>
<td>The date on which the transaction was recorded</td>
</tr>
<tr>
<td>Reference Number</td>
<td>The reference number of the transaction</td>
</tr>
</tbody>
</table>

**All Branches/Specific**

You can generate this report for all the branches or a specific branch alone. If you choose ‘All Branches’, the system will generate the report for all the branch codes. If you choose ‘Specific’, you need to select the branch code for which you need to generate the report.

Specify the report options and click ‘OK’ button.

**11.18.1 Contents of the Report**

The parameters specified while generating the report are printed at the beginning of the report. The contents of this report have been discussed under the following heads:
Header
The ‘Header’ carries the title of the report, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

Body
You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>Account Number</th>
<th>The GL account number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account Name</td>
<td>The name of the account</td>
</tr>
<tr>
<td>Account Type</td>
<td>The type of account</td>
</tr>
<tr>
<td>Period</td>
<td>The period of the report</td>
</tr>
<tr>
<td>Debit Balance</td>
<td>The debit balance</td>
</tr>
<tr>
<td>Credit Balance</td>
<td>The credit balance</td>
</tr>
<tr>
<td>Net Balance</td>
<td>The net balance</td>
</tr>
</tbody>
</table>

11.19 Profit and Loss Statement

This report provides the details of profit and loss for a selected period. You generate this report using ‘Profit and Loss Statement’ screen. To invoke the screen, type ‘GLRPPLST’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

The screen is as shown below:

Financial year
Select the financial year for which you need to generate the report.

Period Code
Select the period code for which you need to generate the report.

Specify the report options and click ‘OK’ button.
11.19.1 Contents of the Report

The parameters specified while generating the report are printed at the beginning of the report. The contents of this report have been discussed under the following heads:

Header

The ‘Header’ carries the title of the report, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

Body

You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>GL/Currency Code</th>
<th>The general ledger code and the currency</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
<td>The description of the general ledger</td>
</tr>
<tr>
<td>Movement of Period</td>
<td>The movement of period</td>
</tr>
<tr>
<td>YTD Movement</td>
<td>The YTD movement</td>
</tr>
<tr>
<td>Total</td>
<td>The total balance</td>
</tr>
<tr>

<tr>
<td>Excess of Income over Expense</td>
<td>The amount in excess of income over expenses</td>
</tr>
</tbody>
</table>

11.20 Currency wise Profit and Loss Statement

This report provides information on the credit, debit and net balances currency-wise. You generate this report using ‘Currency wise Profit and Loss’ screen. To invoke the screen, type ‘GLRPPNL’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.

The screen is as shown below:
Consolidation
Check this box to consolidate the records maintained with all branches including the head office. If you check this box, you need to indicate the date until which the system should consider consolidation of records across branches.

Date
Specify the date until which the system should consolidate the records.

Past Periods
Check this box to include past periods in the report.

Financial Year
Specify the financial year.

Period Code
Specify the period code.

Specify the report options and click ‘OK’ button.

11.20.1 Contents of the Report
The contents of this report have been discussed under the following heads:

Header
The ‘Header’ carries the title of the report, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

Body
You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>Currency</th>
<th>The GL currency code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Currency Description</td>
<td>The description of the currency code displayed</td>
</tr>
<tr>
<td>GL/Currency Code</td>
<td>The general ledger code</td>
</tr>
<tr>
<td>Description</td>
<td>The description of the GL</td>
</tr>
<tr>
<td>Debit Balance</td>
<td>The debit balance</td>
</tr>
<tr>
<td>Credit Balance</td>
<td>The credit balance</td>
</tr>
<tr>
<td>Debit Balance LCY</td>
<td>The debit balance in local currency</td>
</tr>
<tr>
<td>Credit Balance LCY</td>
<td>The credit balance in local currency</td>
</tr>
<tr>
<td>Euro Equivalent</td>
<td>The Euro equivalent amount</td>
</tr>
</tbody>
</table>

11.21 General Ledger Summary Report
This report provides a summary of the general ledgers with details of debit and credit balances in local currency as well as foreign currency. You generate this report using ‘GL Summary Report’ screen. To invoke the screen, type ‘GLRSUREP’ in the field at the top right corner of the Application tool bar and click the adjoining arrow button.
The screen is as shown below:

![GL Summary report](image)

**Branch Code**
Specify the branch code of the branch for which you need to generate the report.

Specify the report options and click ‘OK’ button.

### 11.21.1 Contents of the Report
The parameters specified while generating the report are printed at the beginning of the report. The contents of this report have been discussed under the following heads:

**Header**
The ‘Header’ carries the title of the report, the branch code, branch date, user ID, module from which the report has been generated, date and time at which the report has been generated and the page number of the report.

**Body**
You can find the following details in the body of the report:

<table>
<thead>
<tr>
<th>GL Account Number</th>
<th>The general ledger account number</th>
</tr>
</thead>
<tbody>
<tr>
<td>GL Name</td>
<td>The name of the general ledger</td>
</tr>
<tr>
<td>Branch Code</td>
<td>The branch code of the selected branch for which the report is generated</td>
</tr>
<tr>
<td>Currency</td>
<td>The currency of the general ledger</td>
</tr>
<tr>
<td>Debit Balance in LCY</td>
<td>The debit balance in local currency</td>
</tr>
