This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

CAUTION: Use only the Upgrade procedure included in the Upgrade Kit.
Before upgrading any system, please access Oracle's Tekelec Customer Support site and review any Technical Service Bulletins (TSBs) that relate to this upgrade.

Contact Oracle's Tekelec Customer Care Center and inform them of your upgrade plans prior to beginning this or any upgrade procedure.

1. INTRODUCTION

1.1 Purpose and Scope

This document describes methods utilized and procedures executed to perform an application's software upgrade on in-service HLR Router system running on T1200 servers in an HLR Router network, from HLR Router software release 3.0.0-30.11.0 (or 4.0.0-40.x.0) to a later 4.0.x-40.y.0 software release. The audience for this document includes Oracle's customers as well as Global Software Delivery. This document provides step-by-step instructions to execute any HLR Router Release 4.0.x software upgrade on T1200 servers.

The HLR Router software includes all Oracle's Tekelec Platform Distribution (TPD) software. Any TPD upgrade is included automatically as part of the HLR Router software upgrade. The execution of this procedure assumes that the HLR Router software load (ISO file, CD-ROM or other form of media) has already been delivered to the customer's premises. This includes delivery of the software load to the local workstation being used to perform this upgrade.

NOTE: The distribution of the HLR Router software load is outside the scope of this procedure.

1.3 Acronyms

Acronym	Meaning
CGBU	Communications Global Business Unit
CSV	Comma-separated Values
DB	Database
DP	Database Processor
DR	Disaster Recovery
GUI	Graphical User Interface
HA	High Availability
IMI	Internal Management Interface
IPM	Initial Product Manufacture
ISO	ISO 9660 file system (when used in the context of this document)
MP	Message Processing or Message Processor
NE	Network Element
NOAMP	Network OAM&P
OAM	Operations, Administration and Maintenance
OAM&P	Operations, Administration, Maintenance and Provisioning
SOAM	System OAM
TPD	Tekelec Platform Distribution
VIP	Virtual IP
VPN	Virtual Private Network
XMI	External Management Interface
XSI	External Signaling Interface

Table 1 - Acronyms

1.4 Terminology

This section describes terminology as it is used within this document.

Term	Meaning
Upgrade	The process of converting an application from its current release on a System to a newer release.
Major Upgrade	An upgrade from a current major release to a newer major release. An example of a major upgrade is: HLRR 3.0.0_30.11.0 to HLRR 4.0.0_40.14.0
Incremental Upgrade	An upgrade from a current build to a newer build within the same major release. An example of an incremental upgrade is: HLRR 4.0.0_40.5.0 to HLRR 4.0.0_40.14.0.
Software Only Upgrade	An upgrade that does not require a Database Schema change, only the software is changed.
DB Conversion Upgrade	An upgrade that requires a Database Schema change performed during upgrade that is necessitated by new feature content or bug fixes. For release 1.0, this is a manual procedure not performed automatically by software.
Single Server Upgrade	The process of converting an HLR Router server from its current release on a single server to a newer release.
Backout	The process of converting a single HLR Router server to a prior version. This could be performed due to failure in Single Server Upgrade.
Downgrade	The process of converting an HLR Router server from its current release to a prior release. This could be performed due to a misbehaving system.
Rollback	Automatic recovery procedure that puts a server into its pre-upgrade status. This procedure occurs automatically during upgrade if there is a failure.
Source Release	Software release to upgrade from.
Target Release	Software release to upgrade to.
Health Check	Procedure used to determine the health and status of the network. This includes statuses displayed from the GUI. This can be observed Pre-Server Upgrade, In-Progress Server Upgrade, and Post-Server Upgrade.
Upgrade Ready	State that allows for graceful upgrade of a server without degradation of service. It is a state that a server is required to be in before it can be upgraded. The state is defined by the following attributes: <ul style="list-style-type: none"> • Server is Forced Standby • Server is Application Disabled (Signaling servers will not process any traffic)
UI	User interface. "Platcfg UI" refers specifically to the Platform Configuration Utility User Interface, which is a text-based user interface.

Table 2 – Terminology

1.5 How to use this Document

When executing this document, there are a few key points which help to ensure that the user understands the author's intent. These points are as follows;

1. Before beginning a procedure, completely read the instructional text (it will appear immediately after the Section heading for each procedure) and all associated procedural WARNINGS or NOTES.
2. Before execution of a STEP within a procedure, completely read the left and right columns including any STEP specific WARNINGS or NOTES.
3. If a procedural STEP fails to execute successfully or fails to receive the desired output, STOP and contact Oracle's Tekelec Customer Service (*US: 1-888-367-8552, Intl: +1-919-460-2150*) for assistance before attempting to continue.

1.5.1 Executing Procedures

The user should be familiar with the structure and conventions used within these procedures before attempting execution.

Table 3 and the details below provide an example of how procedural steps might be displayed within this document.

Column 1: Step

- Column 1 in
- **Table 3** contains the Step number and also a checkbox if the step requires action by the user.
- Sub-steps within a given Step X are referred to as Step X.Y. (See example: Step 1 has sub-steps Steps 1.1 to 1.2).
- Each checkbox should be checked-off in order to keep track of the progress during execution of the procedure.

Column 2: Procedure

- Column 2 in
- **Table 3** contains a heading which indicates the server/IP being accessed as well as text instructions and/or notes to the user. This column may also describe the operations to be performed or observed during the step.

Column 3: Result

- Column 3 in
- **Table 3** generally displays the results of executing the instructions (shown in column 2) to the user.
- The Result column may also display any of the following:
 - Inputs (commands or responses) required by the user.
 - Outputs which should be displayed on the terminal.
 - Illustrations or graphic figures related to the step instruction.
 - Screen captures from the product GUI related to the step instruction.

Procedure XYZ: Verifying Time in GMT

Step	Procedure	Result
1. <input type="checkbox"/>	Active NOAMP VIP (SSH): 1) Access the command prompt. 2) Log into the server as the “root” user.	login as: root Password: <root_password> NOTE: The password will not appear on the screen as the characters are typed.
2.	Active NOAMP VIP (SSH): Output similar to that shown on the right will appear as the server returns to a command prompt.	*** TRUNCATED OUTPUT *** VPATH=/opt/TKLCcomcol/runcm5.13:/opt/TKLCcomcol/cm5.13 RELEASE=5.16 RUNID=00 VPATH=/var/TKLC/rundb:/usr/TKLC/appworks:/usr/TKLC/awpss7:/usr/TKLC/exhr PRODPATH=/opt/TKLCcomcol/cm5.13/prod RUNID=00 [root@tk5031304 ~]#
3. <input type="checkbox"/>	Active NOAMP VIP (SSH): Verify that the correct Date & Time are displayed in GMT (+/- 4 min.)	# date -u Thu Mar 20 15:31:06 UTC 2014 #
THIS PROCEDURE HAS BEEN COMPLETED		

Table 3 - Sample Procedure

1.6 Activity Logging

All activity while connected to the system should be logged using a convention which notates the **Customer Name**, **Site/Node** location, **Server hostname** and the **Date**. All logs should be provided to the Oracle's Tekelec Upgrade Center for archiving post upgrade.

1.7 Recommendations

No specific recommendations have been identified for the current version of this procedure.

1.7.1 Use of Health Checks

The user may execute the **Perform Health Check** or **View Logs** steps freely or repeat as many times as desired in between procedures during the upgrade process. It is not recommended to do this in between steps within a procedure, unless there is a failure to troubleshoot.

1.7.2 Large Installation Support

For large systems containing multiple Signaling Network Elements, it may not be feasible to apply the software upgrade to every Network Element within a single maintenance window. However, whenever possible, Primary and DR NOAMP Network Elements should be upgraded within the same maintenance window. When multiple maintenance windows are required, replication may be allowed and provisioning re-enabled between scheduled maintenance windows.

2. GENERAL DESCRIPTION

This document defines the step-by-step actions performed to execute a software upgrade of an in-service HLR Router application (running on T1200 servers) from the source release to the target release.

2.1 Supported Upgrade Paths

The supported HLR Router upgrade path is shown in **Figure 1**.

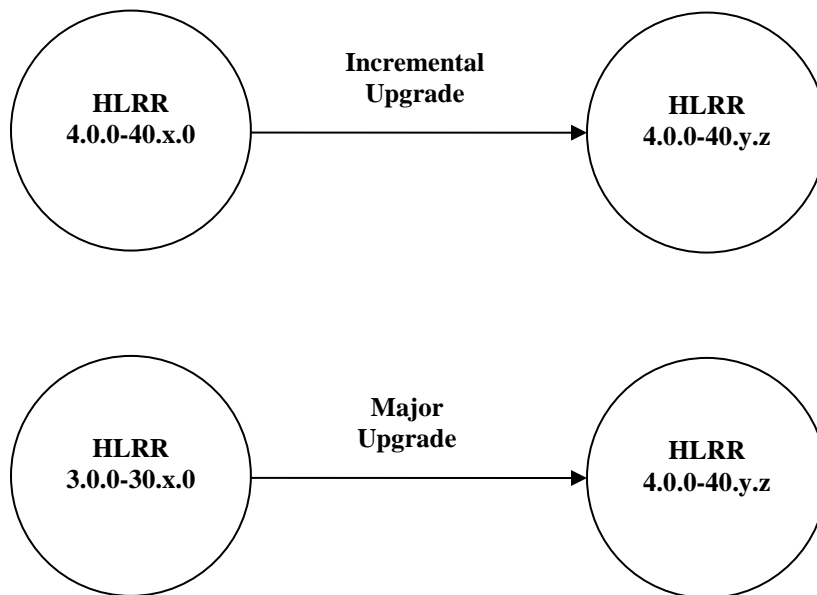

Figure 1: Supported Upgrade Paths

NOTE: Initial installation is not within the scope of this upgrade document. See [1] for initial installation requirements.

3. UPGRADE OVERVIEW

This section lists the required materials and information needed to execute an upgrade. It also provides a brief timing overview of the activities needed to upgrade the source release software that is installed and running on an HLR Router server to the Target Release software. The approximate time required is outlined in **Sections 3.3- 3.7**. These tables are used to plan and estimate the time necessary to complete your upgrade.

Timing values are estimates only. They estimate the completion time of a step or group of steps for an experienced user. These tables are not to be used to execute procedures. Detailed steps for each procedure begin with **Procedure 1** in **Section 5**.

3.1 Upgrade Requirements

The following levels of access, materials and information are needed to execute an upgrade:

- Target-release ISO image file (*Example: 872-2696-101-4.0.0-40.14.0-x86_64.iso*)
- VPN access to the customer's network.
- GUI access to the HLR Router NOAMP VIP with administrator privileges.
- SSH/SFTP access to the HLR Router NOAMP XMI VIP as the "root" user.

NOTE: *All logins into the HLR Router NOAMP servers are made via the External Management (XMI) VIP unless otherwise stated.*

- User logins, passwords, IP addresses and other administration information. See Section 3.1.2.
- Direct access to server IMI IP addresses from the user's local workstation is preferable in the case of a Backout.

NOTE: *If direct access to the IMI IP addresses cannot be made available, then target server access can be made via a tandem connection through the Active Primary NO (i.e. An SSH connection is made to the Active Primary NOAMP XMI first, then from the Active Primary NOAMP, a 2nd SSH connection can be made to the target server's IMI IP address).*

3.1.1 ISO Image File

You must obtain a copy of the target release ISO image file. This file is necessary to perform the upgrade. The HLR Router ISO image file will be in the following format:

Example: 872-2696-101-4.0.0-40.14.0-x86_64.iso

NOTE: *Actual number values may vary between releases.*

Prior to the execution of this upgrade procedure it is assumed that the HLR Router ISO image file has already been delivered to the customer's system. The delivery of the ISO image requires that the file be placed on the disk of a PC workstation with GUI access to the Active Primary NOAMP XMI VIP. If the user performing the upgrade is at a remote location, it is assumed the ISO file is has already been transferred to the Active Primary NOAMP server prior to starting the upgrade procedure.

3.1.2 Logins, Passwords and Site Information

Obtain all the information requested in the following table. This ensures that the necessary administration information is available prior to an upgrade. Consider the confidential nature of the information recorded in this table.

While all of the information in the table is required to complete the upgrade, there may be security policies in place that require secure disposal once the upgrade has been completed.

NE Type	NE Name [†]
Primary NOAM&P	
DR NOAM&P	
Software	Values
Source Release Level:	
Target Release Level:	
Target Release ISO file name:	
Access Information	Values
‡ Primary NOAMP XMI VIP (GUI):	
‡ DR NOAMP XMI VIP:	
GUI Administrator Username:	
GUI Administrator Password:	
Customer VPN Instructions:	

Table 4 – Logins, Passwords and Site Information

	† NOTE: The NE Name may be viewed from the Primary NOAMP GUI under this page [Main Menu → Configuration → Network Elements]
-------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------

	‡ NOTE: The XMI VIP may be viewed from the Primary NOAMP GUI under this page [Main Menu → Configuration → Server Groups]
-------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------

3.2 Upgrade Maintenance Windows

!! WARNING !!

IT IS RECOMENDED THAT SOAM SITES CONTAINING MATED MESSAGE PROCESSORS BE UPGRADED IN SEPARATE MAINTENANCE WINDOWS IF AT ALL POSSIBLE.

NOTE:

*The **NE Name** may be viewed from the Primary NOAMP GUI under this page [Main Menu → Configuration → Network Elements]*

Table 5 - Upgrade Maintenance Windows

3.3 Upgrade Preparation Overview

The pre-upgrade procedures shown in the following table should be executed prior to the upgrade maintenance window and may be executed outside a maintenance window if desired.

Procedure Number	Procedure Title	Elapsed Time (Hours:Minutes)	
		This Step	Cumulative
1	<i>Required Materials Check</i>	00:15	00:15
2	<i>ISO Administration</i>	*	*

Table 6 - Upgrade Preparation Procedures

***NOTE:** ISO transfers to the target systems cannot be estimated since times will vary significantly depending on the number of systems and the speed of the network.

These factors significantly affect the total time needed to complete upgrade and therefore require the scheduling of multiple maintenance windows to complete all activities.

The ISO transfers to the target systems should be performed prior to, outside of, the scheduled maintenance window. The user should schedule the required maintenance windows accordingly.

3.4 Primary NOAMP / DR NOAMP Execution Overview

The procedures shown in the following table are executed inside a maintenance window.

Procedure Number	Procedure Title	Elapsed Time (Hours:Minutes)	
		This Step	Cumulative
3	<i>Disable Global Provisioning</i>	00:05	00:20
4	<i>Inhibit DR NOAMP Servers</i>	00:05	00:25
5	<i>Inhibit Primary NOAMP Servers</i>	00:05	00:30
6	<i>Database Backup</i>	01:00	01:30
7	<i>Upgrade DR NOAMP NE</i>	01:00	02:30
8	<i>Upgrade Primary NOAMP NE</i>	01:00	03:30
9	<i>Allow DR NOAMP Servers</i>	00:05	03:35
10	<i>Allow Primary NOAMP Servers</i>	00:05	03:40
11	<i>Enable Global Provisioning</i>	00:05	03:45

Table 7 - Primary NOAMP / DR NOAMP Upgrade Procedures

3.5 SOAM Upgrade Execution Overview

The procedures shown in the following table should be executed inside a maintenance window.

Procedure Number	Procedure Title	Elapsed Time (Hours:Minutes)	
		This Step	Cumulative
12	<i>Inhibit SOAM Servers</i>	00:05	03:50
13	<i>Upgrade SOAM NE</i>	01:30	05:20
14	<i>Allow SOAM Servers</i>	00:05	05:25

Table 8 - SOAM Upgrade Procedures

***NOTE:** Times estimates do not include optional Procedures referenced in **Appendix E** for manipulation of Signaling traffic at the MP.

3.6 Upgrade Acceptance Overview

The procedures shown in the following table should be executed inside a maintenance window.

Procedure Number	Procedure Title	Elapsed Time (Hours:Minutes)	
		This Step	Cumulative
15	<i>Turn off COMCOL compatibility mode (major upgrade 3.0 to 4.0 only)</i>	00:05	05:30
16	<i>Accept Upgrade</i>	00:05	05:35

Table 9 - Upgrade Acceptance Procedures

***NOTE:** Times estimates do not include optional Procedures referenced in **Appendix E** for manipulation of Signaling traffic at the MP.

3.7 Recovery Procedures Overview

Recovery procedures are covered under the Disaster Recovery Guide, [3].

***NOTE:** Time estimates do not include optional Procedures referenced in **Appendix E** for manipulation of Signaling traffic at the MP.

4. HLR ROUTER UPGRADE MATRIX

Upgrading the HLR Router product in the customer network is a task which requires multiple procedures of varying types. The matrix shown below provides a guide to the user as to which procedures are to be performed on which site types. As always, the user should contact the Oracle's Tekelec Customer Care Center for assistance if experiencing difficulties with the interpretation or execution of any of the procedures listed.

NOTE: Primary Provisioning and DR NOAMPs must be upgraded in the same maintenance window.

Site Type															
		1	2	3	4	5	6	7	8	9	10	11	12	13	14
<input type="checkbox"/>	NOAMP / DR NOAMP Query Server	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✗	✗	✗
<input type="checkbox"/>	SOAM / MP	✓	✓	✗	✗	✗	✗	✗	✗	✗	✗	✗	✓	✓	✓

Table 10 – HLR Router Upgrade Matrix

HLR Router Upgrade: List of Procedures

Procedure No :	Title :	Page No :
1	Required Materials Check	18
2	ISO Administration & Pre-Upgrade Checks	19
3	Disable Global Provisioning	27
4	Inhibit DR NOAMP Servers	31
5	Inhibit Primary NOAMP Servers	34
6	Database Backup (All Network Elements, All Servers)	37
7	Upgrade DR NOAMP NE	40
8	Upgrade Primary NOAMP NE	44
9	Allow DR NOAMP Servers	51
10	Allow Primary NOAMP Servers	54
11	Enable Global Provisioning	54
12	Inhibit SOAM Servers	59
13	Upgrade SOAM NE	64
14	Allow SOAM Servers	68
15	Turn off COMCOL compatibility mode (major upgrade 3.0 to 4.0 only)	72
16	Accept Upgrade	73

Table 11 – HLR Router Upgrade: List of Procedures

5. UPGRADE PREPARATION

This section provides detailed procedures to prepare a system for upgrade execution. These procedures may be executed outside of a maintenance window.

!! STOP !!

If upgrade is being performed from HLRR 3.0.0-30.11.0, then execute following steps on every server in HLRR system:

1. Obtain the tar file “hlrr_3.0_to_4.0_upgrade.tar.bz2” from the repository at :
`/export/home/eagle/releases/TPD/prod/EXHR/4.0/UpgradeSupport/`
2. Drop this tar file at `/tmp` directory of the HLRR server (use either SCP or SFTP)

Example:

```
# scp hlrr_3.0_to_4.0_upgrade.tar.bz2 root@<server XMI
address>:/tmp/.
```

3. Login to server as root user via SSH connection
`ssh <server XMI IP address>`
4. Extract the tar file:
`# tar -xvjf /tmp/hlrr_3.0_to_4.0_upgrade.tar.bz2 -C /.`
5. Upon completion, remove the tar file:
`# rm -rf /tmp/hlrr_3.0_to_4.0_upgrade.tar.bz2`
6. Repeat all above on all remaining servers in HLRR system.

5.1 Required Materials Check

This procedure verifies that all required materials needed to perform an upgrade have been collected and recorded.

Procedure 1: Required Materials Check

Step	This procedure verifies that all required materials are present. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT ORACLE’S TEKELEC TECHNICAL SERVICES AND ASK FOR ASSISTANCE.	
1. <input type="checkbox"/>	Verify all required materials are present.	<ul style="list-style-type: none"> Materials are listed in Section 3.1: Required Materials. Verify all required materials are present.
2. <input type="checkbox"/>	Verify all administration data needed during upgrade.	<ul style="list-style-type: none"> Double-check that all information in Section 3.1.2 is filled-in and accurate.

5.2 Release Notes

This section contains any release-specific information that might be helpful to complete software upgrade procedure.

5.2.1 Discrepancies in Primary NOAMP / DR NOAMP Release Levels

When upgrading HLR Router to the target release, the following alarms *may be reported* on the GUI during the period of time period when the Primary NOAMP NE is at the new software level and the DR NO Network Element is at the old software level:

- 31124: A DB replication audit command detected errors
- 31105: The DB merge process (inetmerge) is impaired by a s/w fault

These alarms, if present, will exist for the Active and Standby DR NOAMP servers. They should clear themselves automatically within 5 minutes, and will cease to be raised once the DR NOAMP NE is upgraded to the same software level as the NOAMP. To avoid seeing these alarms altogether, the upgrade of the Primary NOAMP and DR NOAMP NEs should be performed within the same maintenance window.

5.3 Perform Health Check (Upgrade Preparation)

☐ This procedure is part of Software Upgrade Preparation and is used to determine the health and status of the HLR Router network and servers. This may be executed multiple times but must also be executed at least once within the time frame of 24-36 hours prior to the start of a maintenance window.

- Execute HLR Router Health Check procedures as specified in **Appendix B**.

5.4 Perform Firmware Verification (Upgrade Preparation)

☐ This procedure is part of Software Upgrade Preparation and is used to determine whether a firmware update is required. If [4] has been provided with the upgrade kit, follow its instructions to verify the firmware on HLR Router T1200 servers. Execute firmware upgrade procedures if required by [4]:

- Execute firmware upgrade procedures if required by [4].

5.5 ISO Administration & Pre-Upgrade Checks

ISO transfers to the target servers may require a significant amount of time depending on the number of systems and the speed of the network. The ISO transfers to the target servers should be performed prior to the first scheduled maintenance window. Schedule the required maintenance windows accordingly before proceeding.

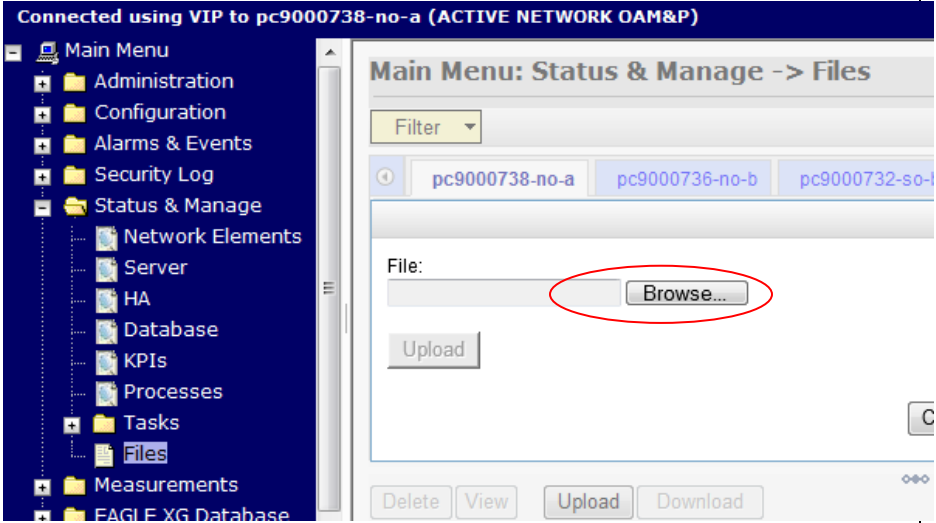

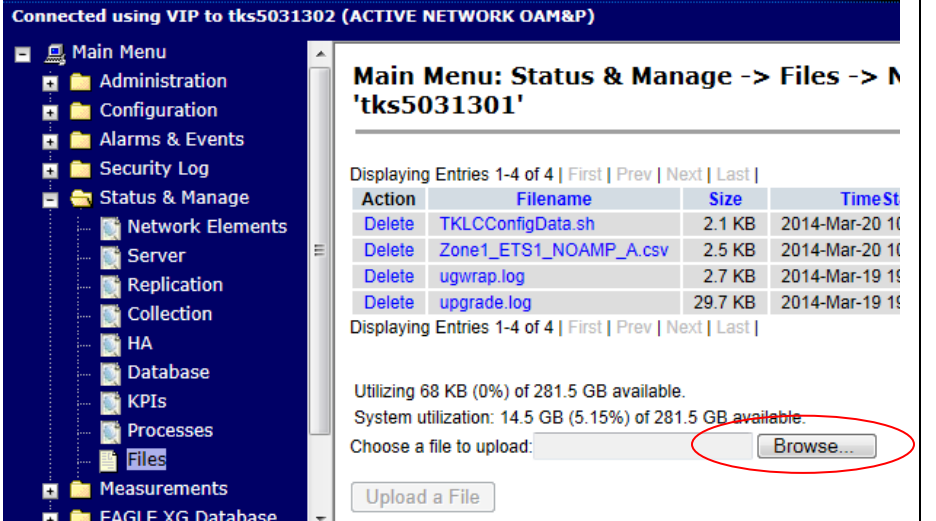

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

SHOULD ANY STEP IN THIS PROCEDURE FAIL, STOP AND CONTACT ORACLE'S TEKELEC TECHNICAL SERVICES FOR ASSISTANCE BEFORE CONTINUING!

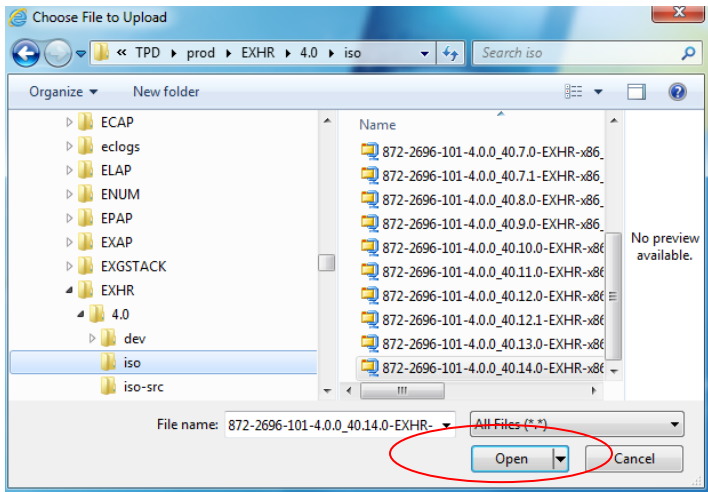

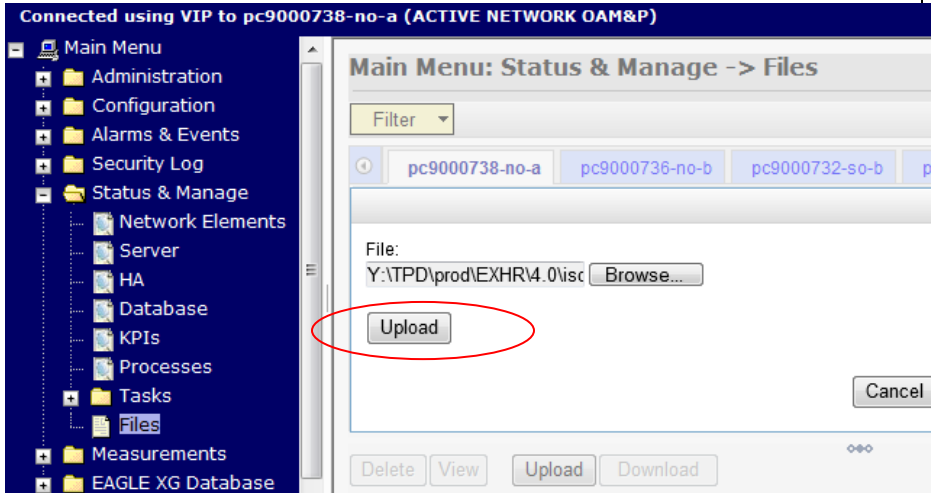

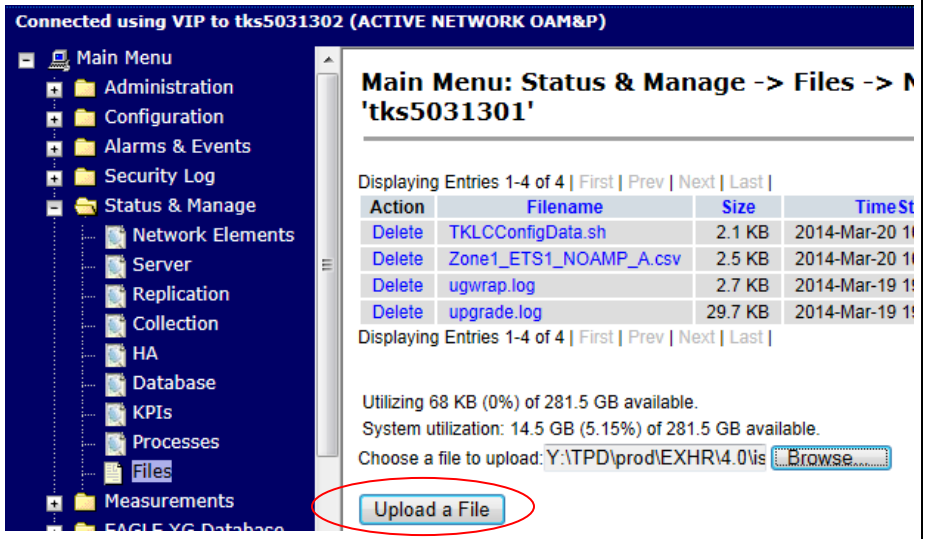

Procedure 2: ISO Administration & Pre-Upgrade Checks

Step	Procedure	Result
1. <input type="checkbox"/>	Using the VIP address, access the Primary NOAMP GUI.	<ul style="list-style-type: none"> • Access the Primary NOAMP GUI as specified in Appendix A.

THIS PROCEDURE HAS BEEN COMPLETED																							

5.6 Perform Health Check (Post ISO Administration)

- ☐ This procedure is part of Software Upgrade Preparation and is used to determine the health and status of the HLR Router network and servers.
- Execute HLR Router Health Check procedures as specified in **Appendix B**.

6. PRIMARY NOAMP / DR NOAMP UPGRADE EXECUTION

Call the **Oracle's Tekelec Customer Care Center** at **1-888-FOR-TKLC** (1-888-367-8552); or 1-919-460-2150 (international) and inform them of your plans to upgrade this system prior to executing this upgrade.

Before upgrade, users must perform the system Health Check **Appendix B**.

This check ensures that the system to be upgraded is in an upgrade-ready state. Performing the system health check determines which alarms are present in the system and if upgrade can proceed with alarms.

***** WARNING *****

If there are servers in the system, which are not in Normal state, these servers should be brought to the Normal or the Application Disabled state before the upgrade process is started.

The sequence of upgrade is such that servers providing support services to other servers will be upgraded first.

***** WARNING *****

Please read the following notes on this procedure:

Procedure completion times shown here are estimates. Times may vary due to differences in database size, user experience, and user preparation.

Where possible, command response outputs are shown as accurately as possible. EXCEPTIONS are as follows:

- Session banner information such as time and date.
- System-specific configuration information such as hardware locations, IP addresses and hostnames.
- ANY information marked with "XXXX" or "YYYY." Where appropriate, instructions are provided to determine what output should be expected in place of "XXXX or YYYY"
- Aesthetic differences unrelated to functionality such as browser attributes: window size, colors, toolbars and button layouts.

After completing each step and at each point where data is recorded from the screen, the technician performing the upgrade must mark the provided Check Box.

For procedures which are executed multiple times, a mark can be made below the Check Box (in the same column) for each additional iteration the step is executed.

Retention of Captured data is required for as a future support reference this procedure is executed by someone other than Oracle's Tekelec Technical Services.

NOTE: *For large systems containing multiple Signaling Network Elements, it may not be feasible to apply the software upgrade to every Network Element within a single maintenance window. However, whenever possible, Primary and DR NOAMP Network Elements should be upgraded within the same maintenance window. If multiple maintenance windows are required, replication may be allowed and provisioning re-enabled between scheduled maintenance windows.*

6.1 Perform Health Check (Pre Upgrade)

☐ This procedure is part of Software Upgrade Preparation and is used to determine the health and status of the HLR Router network and servers. This may be executed multiple times but must also be executed at least once within the time frame of 24-36 hours prior to the start of a maintenance window.

- Execute HLR Router Health Check procedures as specified in **Appendix B**.

6.2 Primary NOAMP / DR NOAMP Upgrade

The following procedures detail how to disable Database Audit, disable global provisioning and inhibit replication to the Primary NOAMP and DR NOAMP sites. This procedure must be executed before these Network Elements can be upgraded.

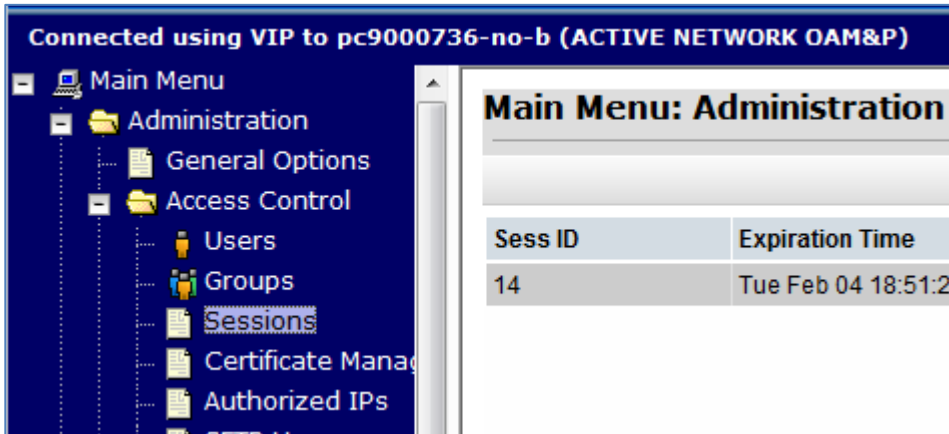

WARNING: The Database Audit stays disabled throughout the whole upgrade, until all of the SOAM sites are upgraded!

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

SHOULD ANY STEP IN THIS PROCEDURE FAIL, STOP AND CONTACT ORACLE'S TEKELEC TECHNICAL SERVICES FOR ASSISTANCE BEFORE CONTINUING!

6.2.1 Disable Global Provisioning

1. <div></div>	Using the VIP address, access the Primary NOAMP GUI.	<ul style="list-style-type: none">Access the Primary NOAMP GUI as specified in Appendix A.														
2. <div></div>	Active NOAMP VIP: Select... <u>Main Menu</u> → Status & Manage → Database ...as shown on the right.	<div><div>Connected using VIP to pc9000632-no-a (ACTIVE NETWORK OAM&P)</div><div><div>Main Menu<ul style="list-style-type: none">AdministrationConfigurationAlarms & EventsSecurity LogStatus & Manage<ul style="list-style-type: none">Network ElementsServerReplicationCollectionHADatabase</div><div><div>Main Menu: Status & Manage -> Data</div><div><div>Filter</div><div>Info</div></div><table><thead><tr><th>Network Element</th><th>Server</th></tr></thead><tbody><tr><td>NOAMP_NE</td><td>pc9000632-no-a</td></tr><tr><td>NOAMP_NE</td><td>pc9000632-no-b</td></tr><tr><td>SOAM_NE</td><td>pc9000632-so-a</td></tr><tr><td>SOAM_NE</td><td>pc9000632-so-b</td></tr><tr><td>SOAM_NE</td><td>pc9000630-mp-1</td></tr><tr><td>SOAM_NE</td><td>pc9000630-mp-2</td></tr></tbody></table></div></div></div>	Network Element	Server	NOAMP_NE	pc9000632-no-a	NOAMP_NE	pc9000632-no-b	SOAM_NE	pc9000632-so-a	SOAM_NE	pc9000632-so-b	SOAM_NE	pc9000630-mp-1	SOAM_NE	pc9000630-mp-2
Network Element	Server															
NOAMP_NE	pc9000632-no-a															
NOAMP_NE	pc9000632-no-b															
SOAM_NE	pc9000632-so-a															
SOAM_NE	pc9000632-so-b															
SOAM_NE	pc9000630-mp-1															
SOAM_NE	pc9000630-mp-2															
3. <div></div>	Active NOAMP VIP: Record the names of all servers.	<ul style="list-style-type: none">Using the information provided in Section 3.1.2 (<i>Logins, Passwords and Site Information</i>) record the names of all servers to the Servers Worksheet in Appendix C.5 (print or photocopy additional pages if necessary to accommodate your number of Network Elements).														
4. <div></div>	Active NOAMP VIP (SSH): SSH to active NOAMP server	Use your SSH client to connect to the server (ex. ssh, putty): Note: You must consult your own software client's documentation to learn how to launch a connection. For example: ssh <server address>														
5. <div></div>	Active NOAMP VIP (SSH): Login as root user.	Login as "root": login as: root Password: <enter password>														
<div></div>	NOTE: The following steps provide a full backup of COMCOL run environment. These shall run from the command line of every server in every Network Element.															
6. <div></div>	Active NOAMP VIP (SSH): Access each server on the Server Worksheet via SSH.	Reference the complete Servers Worksheet in Appendix C.5 for a list of servers. Select the next server and SSH there from the Active NOAMP. Note: The Active NOAMP active server, which is our local host now, should be the first server for backup. No SSH session is required to reach this first server. # ssh <server name>														

Procedure 6: Database Backup

Step	Procedure	Result
7. <input type="checkbox"/>	Remote Server (SSH): Edit this file Appworks.db_parts	Note: If logged in as admusr , you must use sudo to execute this command. # [sudo] vim /usr/TKLC/appworks/etc/exclude_parts.d/Appworks.db_parts
8. <input type="checkbox"/>	Remote Server (SSH): Delete lines	Delete all lines after the header comments; the resulting file should look similar to this example: ##### # Name: Appworks.db_parts # Title: Lists the IDB database parts to be excluded from a full backup # of all COMCOL DB parts. # Author: J Crosson # Description: # This file lists the Comcol IDB parts that are to be excluded from a # pre-upgrade full backup of all COMCOL DB parts. # # The utility full_backup.pl reads this and any other Application supplied # files named <some filename>.db_parts (a db_parts suffix) and located in # the directory /usr/TKLC/appworks/etc/exclude_parts.d. # # File pattern: # # 1. Lines with leading # are treated as comments # 2. Blank lines are ignored # 3. Only ONE part name per line is allowed # # NOTE: Ref: TR005672 Section 3.2 for the parts listed below. # # Revision History # 22-Sep-2011 R Kress remove AppworksSNMPlog from list, table ##### # Def parts
9. <input type="checkbox"/>	Remote Server (SSH): Save file and exit	Save the file and exit the editor with the command “:wq!” :wq!
10. <input type="checkbox"/>	Remote Server (SSH): Run backup utility.	Note: If logged in as admusr , you must use sudo to execute this command. # [sudo] /usr/TKLC/appworks/sbin/full_backup Output similar to the following will indicate successful completion: Success: Full backup of COMCOL run env has completed. Archive file /var/TKLC/db/filemgmt/Backup.EXHR.tks5031311.FullRunEnv.MP.20140324_1450 34.UPG.tar.bz2 written in /var/TKLC/db/filemgmt. (Errors will also report back to the command line.)
11. <input type="checkbox"/>	Remote Server (SSH): Mark this server's backup as complete.	Reference the Servers Worksheet in Appendix C.5 and check off the server which just completed backup.

Procedure 6: Database Backup

Step	Procedure	Result
12. <input type="checkbox"/>	Remote Server (SSH): Exit from the remote server to return to the Active NOAMP server	Unless you are already on the Active NOAMP active server, exit to return to the Active NOAMP Server. # <code>exit</code> logout
13. <input type="checkbox"/>	Active NOAMP VIP (SSH): Backup all remaining servers	Repeat Steps 6 - 12 of this Procedure for each additional server in the Servers Worksheet Appendix C.5 .
14. <input type="checkbox"/>	Active NOAMP VIP (SSH): Exit from the the Active NOAMP server	# <code>exit</code> logout

15. <input type="checkbox"/>	Active NOAMP VIP: Complete Upgrade for the Primary NOAMP - Standby NOAMP Server .	<ul style="list-style-type: none"> Complete Upgrade for the PRIMARY NOAMP – Standby NOAMP Server (identified in Step 7 of this Procedure) as specified in Appendix C.4 (Complete Upgrade).

If a major upgrade is being performed from HLRR 3.0.0-30.11.0 release, then:

1. Login to Primary NOAMP server as root user via SSH connection

```
ssh <Primary NOAMP VIP IP address>
```

2. Remove the **PRIMARY NOAMP – Standby NOAMP Server** from "Forced Standby" (identified by <hostname> in **Step 7** of this Procedure)

```
# iset -finhibitFlag='S' NodeInfo where "hostName='<hostname>'"
```

3. Move the **PRIMARY NOAMP – Active NOAMP Server** to "Forced Standby" (it's hostname identified in **Step 7** of this Procedure)

```
# iset -finhibitFlag='SH' NodeInfo where "hostName='<hostname>'"
```

NOTE: At this time, the user's SSH session will automatically terminate and the user will be logged out of the NOAMP VIP GUI.

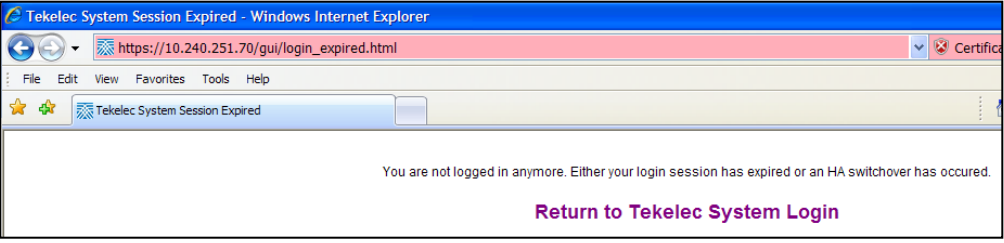

!! STOP !!

!! WARNING !! Steps 8 - 15 MUST BE COMPLETED BEFORE CONTINUING ON TO STEP 16.

Procedure 8: Upgrade Primary NOAMP NE

Step	Procedure	Result
16. <input type="checkbox"/>	Active NOAMP VIP: Prepare Upgrade for the Primary NOAMP - Active NOAMP Server .	Prepare Upgrade for the PRIMARY NOAMP - Active NOAMP Server (identified in Step 7 of this Procedure) as specified in Appendix C.1 (Prepare Upgrade).
<div>  !! IMPORTANT !! </div> <div> NOTE: THIS APPLIES TO INCREMENTAL 4.0 UPGRADE ONLY ONCE THE USER COMPLETES STEP 5 IN APPENDIX C.1, THEN THE USER SESSION WILL AUTOMATICALLY TERMINATE AT THIS TIME AND THE USER WILL BE LOGGED OUT OF THE GUI. </div>		
17. <input type="checkbox"/>	<p>The “Security Alert” dialogue box shown to the right may or may not appear at this time depending on “Internet Explorer” settings.</p> <p>If experienced, click the “Yes” dialogue button to continue.</p> <p>Otherwise: Select “Logout” at the top right of the screen.</p>	 
18. <input type="checkbox"/>	Active NOAM VIP: The user's session will end and the screen shown to the right will appear as the Standby NOAMP&P Server goes through HA switchover and becomes the “ Active ” server.

THIS PROCEDURE HAS BEEN COMPLETED		

6.3 Perform Health Check (Post Primary NOAMP / DR NOAMP Upgrade)

☐ This procedure is part of Software Upgrade Preparation and is used to determine the health and status of the HLR Router network and servers.

- Execute HLR Router Health Check procedures as specified in **Appendix B**.

7. SOAM UPGRADE EXECUTION

Call the **Oracle's Tekelec Customer Care Center** at **1-888-FOR-TKLC** (1-888-367-8552); or 1-919-460-2150 (international) and inform them of your plans to upgrade this system prior to executing this upgrade.

Before upgrade, users must perform the system Health Check **Appendix B**. This check ensures that the system to be upgraded is in an upgrade-ready state. Performing the system health check determines which alarms are present in the system and if upgrade can proceed with alarms.

**** WARNING ****

If there are servers in the system, which are not in Normal state, these servers should be brought to the Normal or the Application Disabled state before the upgrade process is started. The sequence of upgrade is such that servers providing support services to other servers will be upgraded first.

**** WARNING ****

Please read the following notes on this procedure:

Procedure completion times shown here are estimates. Times may vary due to differences in database size, user experience, and user preparation.

Where possible, command response outputs are shown as accurately as possible. EXCEPTIONS are as follows:

- Session banner information such as time and date.
- System-specific configuration information such as hardware locations, IP addresses and hostnames.
- ANY information marked with "XXXX" or "YYYY." Where appropriate, instructions are provided to determine what output should be expected in place of "XXXX or YYYY"
- Aesthetic differences unrelated to functionality such as browser attributes: window size, colors, toolbars and button layouts.

After completing each step and at each point where data is recorded from the screen, the technician performing the upgrade must mark the provided Check Box.

For procedures which are executed multiple times, a mark can be made below the Check Box (in the same column) for each additional iteration that is executed.

Retention of Captured data is required for as a future support reference this procedure is executed by someone other than Oracle's Tekelec Technical Services.

NOTE: For large systems containing multiple Signaling Network Elements, it may not be feasible to apply the software upgrade to every Network Element within a single maintenance window. However, whenever possible, Primary and DR NOAMP Network Elements should be upgraded within the same maintenance window. If multiple maintenance windows are required, replication may be allowed and provisioning re-enabled between scheduled maintenance windows.

7.1 Perform Health Check (Pre Upgrade)

☐

This procedure is part of Software Upgrade Preparation and is used to determine the health and status of the HLR Router network and servers. This may be executed multiple times but must also be executed at least once within the time frame of 24-36 hours prior to the start of a maintenance window.

- Execute HLR Router Health Check procedures as specified in **Appendix B**.

7.2 SOAM Upgrade

The following procedure details how to upgrade HLR Router SOAM sites.

NOTE: When upgrading HLRR system containing multiple SOAM sites, an entire SOAM site should be upgraded as one before starting up the upgrade on another SOAM site.

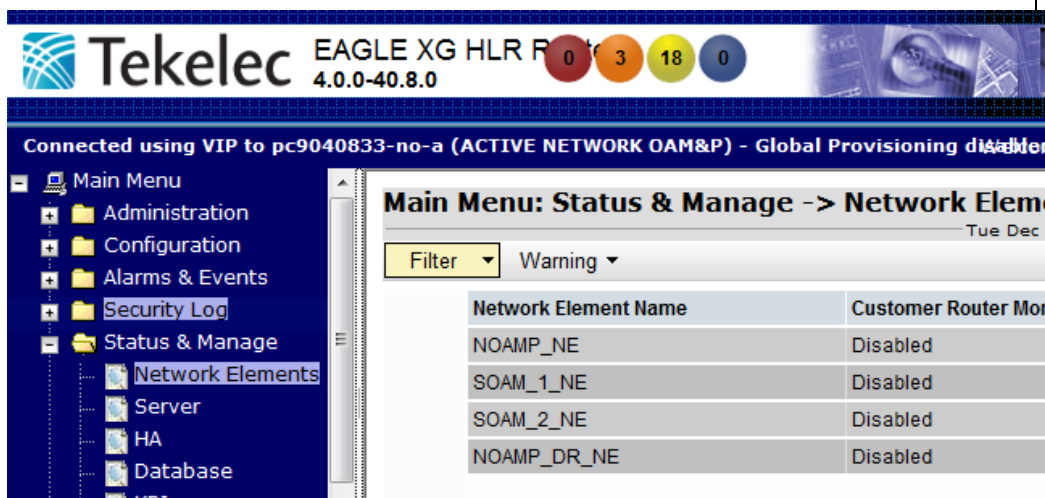

While one SOAM site is being upgraded, all traffic should be diverted to another SOAM site and the MPs cannot be brought into service until all Section 7.2 procedures have been completed for all servers in this SOAM site.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

SHOULD ANY STEP IN THIS PROCEDURE FAIL, STOP AND CONTACT ORACLE'S TEKELEC TECHNICAL SERVICES FOR ASSISTANCE BEFORE CONTINUING!

14. <input type="checkbox"/>	Active NOAMP VIP: From the “ Network Element ” filter pull-down, select the name for the SOAM NE .	
15. <input type="checkbox"/>	Active NOAMP VIP: Click on the “ GO ” dialogue button located on the right end of the filter bar.	
16. <input type="checkbox"/>	Active NOAMP VIP: Verify that all servers in this Network Element now show blank under the “ Repl Status ” column.	
THIS PROCEDURE HAS BEEN COMPLETED		

7.3 Perform Health Check (Post SOAM Upgrade)

☐ This procedure is part of Software Upgrade Preparation and is used to determine the health and status of the HLR Router network and servers.

- Execute HLR Router Health Check procedures as specified in **Appendix B**.

8. UPGRADE ACCEPTANCE

The upgrade needs either to be accepted or rejected before any subsequent upgrades may be performed in the future.

The Alarm 32532 (Server Upgrade Pending Accept/Reject) will be displayed for each server until one of these two actions (accept or reject) is performed.

An upgrade should be accepted only after it was determined to be successful as the accept is final. This frees up file storage but prevents a backout from the previous upgrade.

!! WARNING !!

If performing a major upgrade from HLRR 3.0 to 4.0 release, then executing “Accept” will cause a reboot of the server. Users are cautioned to not select multiple servers before selecting “Accept” button due to multiple servers rebooting as a result.

Incremental upgrades between HLRR 4.0 releases do not cause a reboot upon upgrade acceptance.

8.1 Turn off COMCOL compatibility mode (major upgrade 3.0 to 4.0 only)

Database replication between Comcol version 5.14 database (in HLRR 3.0) and version 6.2 database (in HLRR 4.0) requires a mediation service. Therefore, during the major upgrade servers are placed into a compatibility mode and run this mediation service. The performance and functionality of data replication is degraded while compatibility mode is engaged, so it is recommended that the mode be turned off on all servers once the full system has successfully completed the major upgrade.

This procedure is used to turn off COMCOL compatibility mode on all servers in the topology after a major upgrade from 3.1 to 4.0, and should be executed on the active NOAMP server only.

NOTE:

Once the COMCOL compatibility is turned off, HLRR system will not be allowed to backout to previous release from which the upgrade was done.

Procedure 15: Turn off COMCOL compatibility mode (major upgrade 3.0 to 4.0 only)

Step	Procedure	Result
1. <input type="checkbox"/>	Active NOAMP VIP (SSH): SSH to active NOAMP server	Use your SSH client to connect to the server (ex. ssh, putty): Note: You must consult your own software client's documentation to learn how to launch a connection. For example: <code>ssh <server address></code>
2. <input type="checkbox"/>	Active NOAMP VIP (SSH): Login as root user.	Login as “root”: login as: <code>root</code> Password: <code><enter password></code>
3. <input type="checkbox"/>	Active NOAMP VIP (SSH): Turn off compatibility mode	Execute the setccupgradecomplete script to turn off compatibility mode: <code># /usr/TKLC/appworks/bin/setccupgradecomplete</code>

Procedure 15: Turn off COMCOL compatibility mode (major upgrade 3.0 to 4.0 only)

Step	Procedure	Result																														
4. <div></div>	Active NOAMP VIP (SSH): Verify that compatibility mode has been disabled on all servers in HLRR system	<ul style="list-style-type: none">Query the CCUpgCompStatus database table with the command: <code># iqt CCUpgCompStatus.1</code>The output of this query lists each server in the system with an indication of completion in the "Result" field. (Y for complete, No for incomplete). If the Result field is 'Y' then the "Timestamp" field will indicate the time when compatibility mode was disabled.A few seconds after executing the setccupgradecomplete command the query above should indicate 'Y' as the Result for each server in the HLRR system. Example: <code># iqt CCUpgCompStatus.1</code> <table><thead><tr><th>part</th><th>srcNode</th><th>Hostname</th><th>Timestamp</th><th>Result</th><th>Request_ID</th></tr></thead><tbody><tr><td>1</td><td>tk5031301</td><td>tk5031301</td><td>03/25/2014 13:33:12</td><td>Y</td><td>0</td></tr><tr><td>1</td><td>tk5031302</td><td>tk5031302</td><td>03/25/2014 13:33:12</td><td>Y</td><td>0</td></tr><tr><td>1</td><td>tk5031307</td><td>tk5031307</td><td>03/25/2014 13:33:12</td><td>Y</td><td>0</td></tr><tr><td>1</td><td>tk5031308</td><td>tk5031308</td><td>03/25/2014 13:33:12</td><td>Y</td><td>0</td></tr></tbody></table>	part	srcNode	Hostname	Timestamp	Result	Request_ID	1	tk5031301	tk5031301	03/25/2014 13:33:12	Y	0	1	tk5031302	tk5031302	03/25/2014 13:33:12	Y	0	1	tk5031307	tk5031307	03/25/2014 13:33:12	Y	0	1	tk5031308	tk5031308	03/25/2014 13:33:12	Y	0

THIS PROCEDURE HAS BEEN COMPLETED																																

8.2 Accept Upgrade

**NOTE:**

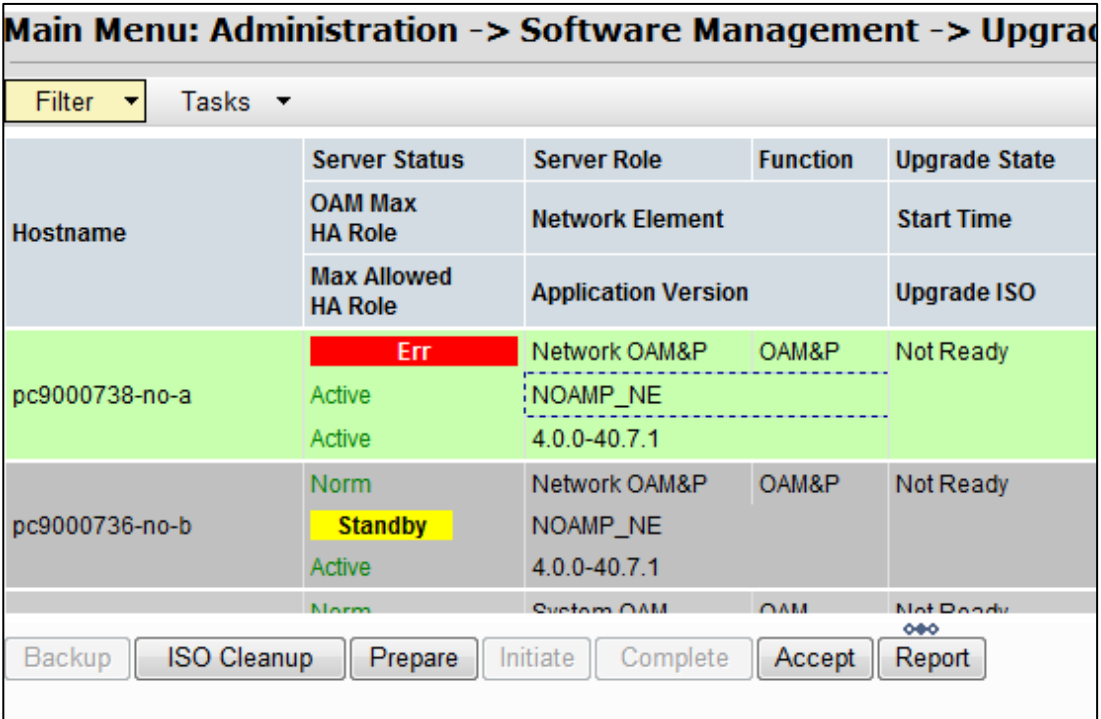

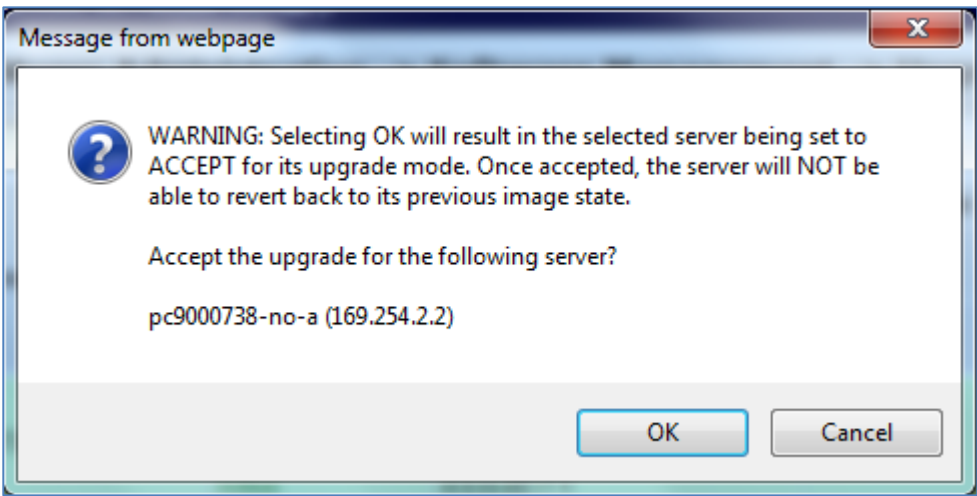

Once the upgrade is accepted for a server, that server will not be allowed to backout to previous release from which the upgrade was done

The following procedure details how to accept a successful upgrade of HLR Router system

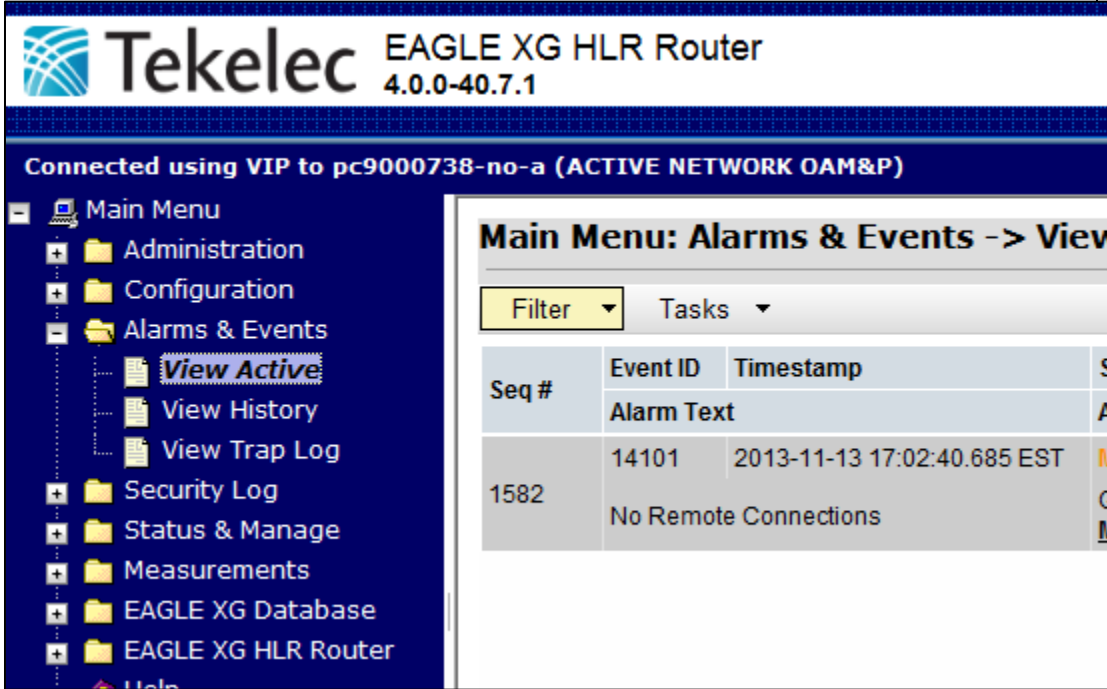

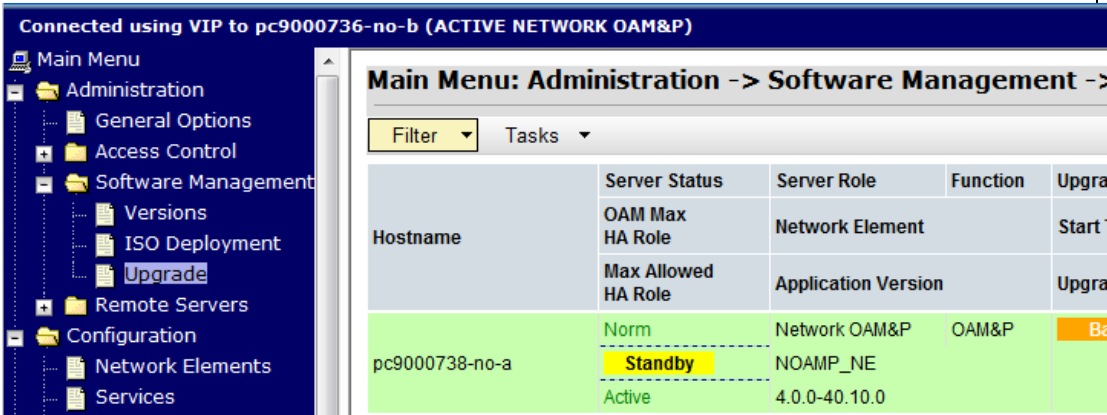

Procedure 16: Accept Upgrade

Step	Procedure	Result
1. <input type="checkbox"/>	Using the VIP IP, access the Primary NOAMP GUI.	<ul style="list-style-type: none"> Access the Primary NOAMP GUI as specified in Appendix A.
2. <input type="checkbox"/>	Active NOAMP VIP: Select... <u>Main Menu</u> → Administration → Software Management → Upgrade ...as shown on the right.	

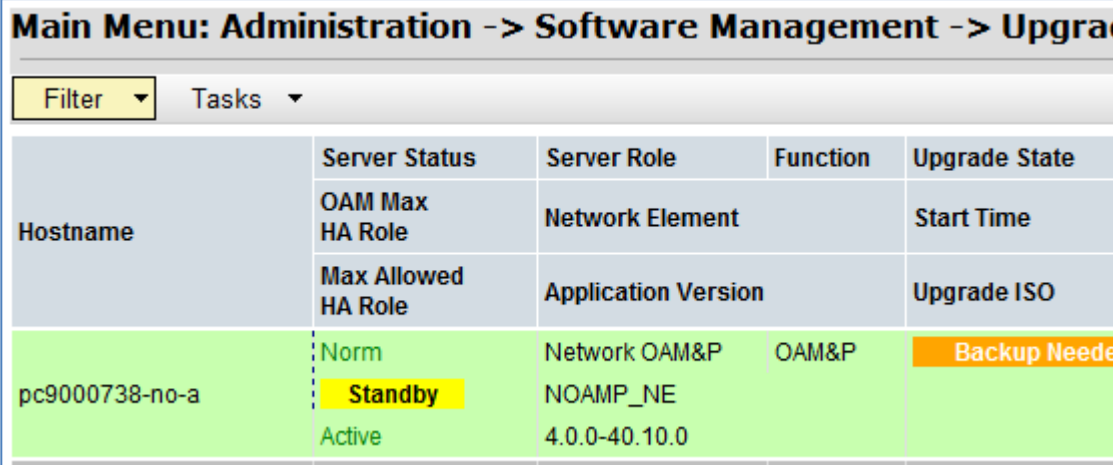

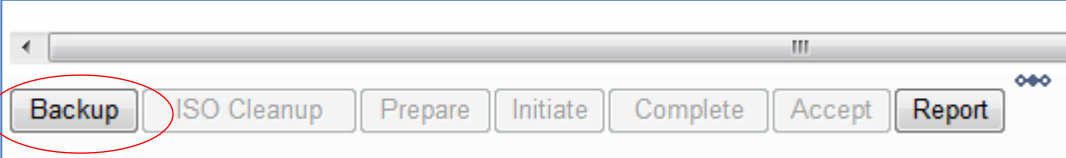

Procedure 16: Accept Upgrade

Step	Procedure	Result
3. <input type="checkbox"/>	<p>Active NOAMP VIP (GUI):</p> <p>Accept upgrade for selected server(s)</p>	<p>Accept upgrade of selected server(s)</p> <ul style="list-style-type: none"> Select the server on which upgrade is to be accepted. Click the “Accept” button  <p>A confirmation dialog will warn that once upgrade is accepted, the servers will not be able to revert back to their previous image states.</p>  <ul style="list-style-type: none"> Click “OK” The Upgrade Administration screen re-displays. A pulldown Info message will indicate the server(s) on which upgrade was accepted.

Procedure 16: Accept Upgrade

Step	Procedure	Result
4. <input type="checkbox"/>	Active NOAMP VIP: Accept upgrade of the rest of the HLRR system	Accept Upgrade on all remaining servers in the HLRR system: <ul style="list-style-type: none"> Repeat all sub-steps of step 3 of this procedure on remaining servers until the upgrade of all servers in the HLRR system has been accepted. <p>Note: As upgrade is accepted on each server the corresponding Alarm ID 32532 (Server Upgrade Pending Accept/Reject) should be removed.</p>
5. <input type="checkbox"/>	Active NOAMP VIP: Verify accept	Check that alarms are removed: <ul style="list-style-type: none"> Navigate to this GUI page Alarms & Events > View Active  <ul style="list-style-type: none"> Verify that Alarm ID 32532 (Server Upgrade Pending Accept/Reject) is not displayed under active alarms on HLRR system
6. <input type="checkbox"/>	Active NOAMP VIP: Select... Main Menu → Administration → Software Management → Upgrade ...as shown on the right.	

Procedure 16: Accept Upgrade

Step	Procedure	Result
7. <input type="checkbox"/>	Active NOAMP VIP: Create backup for Active Primary NOAMP server	<ul style="list-style-type: none"> Select the active Primary NOAMP server  <ul style="list-style-type: none"> Click on “Backup” button  <ul style="list-style-type: none"> When backup completes, server’s Upgrade State should change to “Not Ready”
8. <input type="checkbox"/>	Active NOAMP VIP: Create backups on the rest of the HLRR system	Create backups on all remaining servers in the HLRR system: <ul style="list-style-type: none"> Repeat all sub-steps of step 7 of this procedure on remaining servers in HLRR system
THIS PROCEDURE HAS BEEN COMPLETED		

9. RECOVERY PROCEDURES

Upgrade procedure recovery issues should be directed to the Oracle's Tekelec Customer Care Center. Persons performing the upgrade should be familiar with these documents.

Execute this section only if there is a problem and it is desired to revert back to the pre-upgrade version of the software.

!! WARNING !!

Do not attempt to perform these backout procedures without first contacting the Oracle's Tekelec Customer Care Center at 1-888-FOR-TKLC or 1-888-367-8552; or for international callers 1-919-460-2150.

!! WARNING !!

Backout procedures will cause traffic loss!

NOTES:

These recovery procedures are provided for the Backout of an Upgrade ONLY! (i.e. for the Backout from a failed target release to the previously installed release).

Backout of an initial installation is not supported!

9.1 Backout Setup

Identify IP addresses of all servers that needed to be backed out.

1. Select **Administration → Upgrade** (-or- **Administration → Software Management → Upgrade**)
2. Based on the "Application Version" Column, Identify all the hostnames that need to be backed out.
3. Select **Configuration → Servers**
4. Identify the IMI IP addresses of all the hostnames identified in step 2.
These are required to access the server when performing the backout.

The reason to execute a backout has a direct impact on any additional backout preparation that must be done. Backout procedure will cause traffic loss. Since all possible reasons cannot be predicted ahead of time, contact the Oracle's Tekelec Customer Care Center as stated in the Warning box above.

NOTE: Verify that the two backup archive files created using the procedure in Section 6.2.4 are present on every server that is to be backed-out.

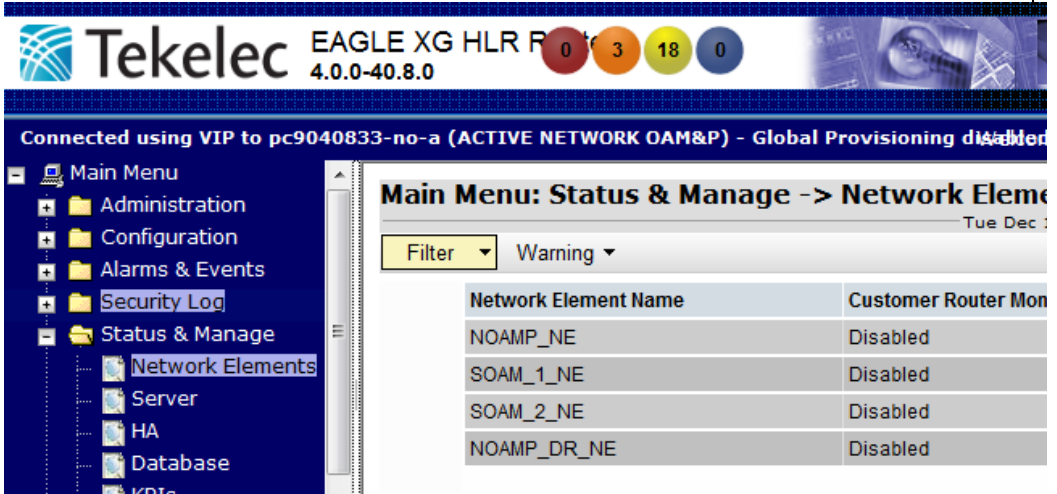

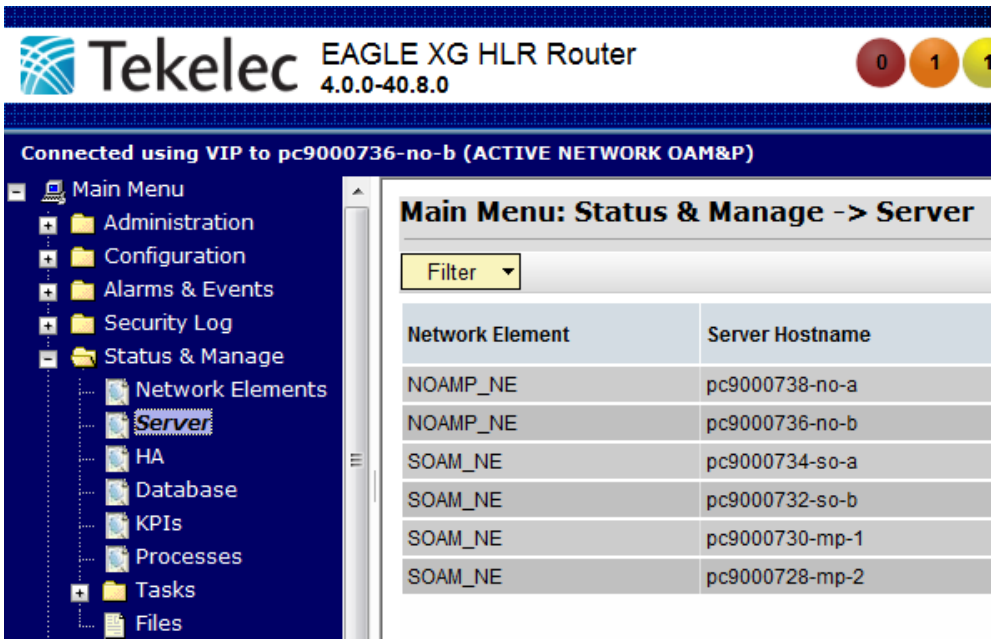

These archive files are located in the `/var/TKLC/db/filemgmt` directory and have different filenames than other database backup files.

The filenames will have the format:

- `Backup.<application>.<server>.FullDBParts.<role>.<date_time>.UPG.tar.bz2`
- `Backup.<application>.<server>.FullRunEnv.<role>.<date_time>.UPG.tar.bz2`

9.2 Backout of SOAM / MP

Procedure 17: Backout of SOAM / MP

Step	Procedure	Result
1. <input type="checkbox"/>	Using the VIP address, access the Primary NOAMP GUI.	<ul style="list-style-type: none"> Access the Primary NOAMP GUI as specified in Appendix A.
2. <input type="checkbox"/>	Active NOAMP VIP: Select... Main Menu → Status & Manage → Network Elements ...as shown on the right.

APPENDIX E. MANIPULATING SIGNALING TRAFFIC AT THE MP

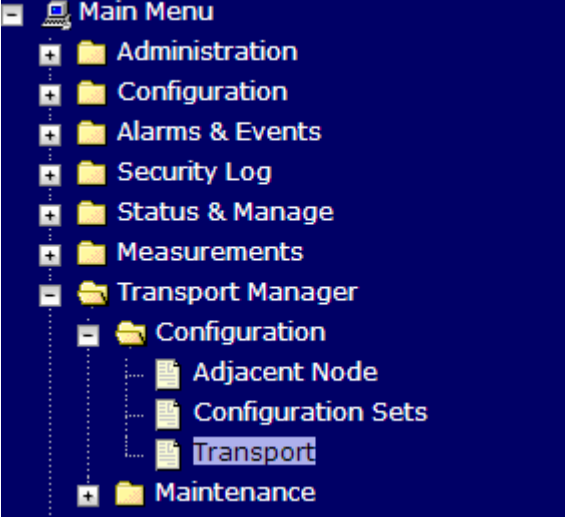

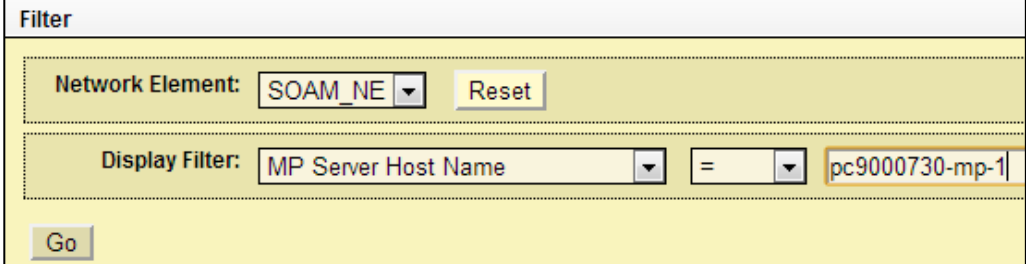

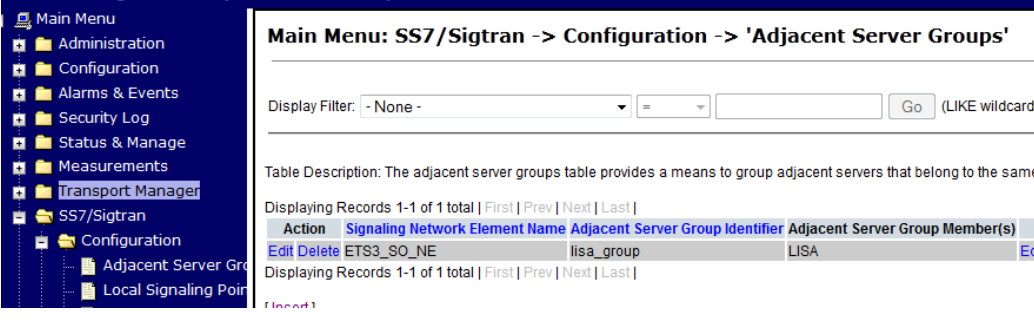

E.1 Diverting Signaling Traffic away from the MP

When doing maintenance activity such as upgrade or backout on an MP, it is recommended to divert signaling traffic away from the MP until maintenance activity has completed. Although each MP has a regionally diverse mate, these steps should eliminate the possibility of traffic loss at the MP which is undergoing maintenance (upgrade or backout).

Appendix E.1: Diverting Signaling Traffic away from the MP

Step	<p>This procedure verifies that all required materials are present.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>SHOULD THIS PROCEDURE FAIL, CONTACT ORACLE'S TEKELEC TECHNICAL SERVICES AND FOR ASSISTANCE.</p>

APPENDIX F. ACCESSING ORACLE'S TEKELEC CUSTOMER SUPPORT SITE

Access to the Oracle's Tekelec's Customer Support site is restricted to current Oracle's Tekelec customers. This section describes how to log into Oracle's Tekelec Customer Support site and how to locate upgrade procedures. Viewing these files requires Adobe Acrobat Reader.

1. Go to Oracle's Tekelec Customer Support login page at <https://support.tekelec.com/index.asp>
2. Enter your assigned username and chosen password and click **Login**.

Or, if you do not have access to the Customer Support site, click **Need an Account?**
Follow instructions on the screen.

NOTE: After 20 minutes of inactivity, you will be logged off, and you must repeat this step to regain access.

3. After successful login, select a product from the Product Support drop-down menu.
4. Select a release number from the Product Support Release drop-down menu.
5. Locate the Upgrade Procedures section.
6. To open the procedure in the same window, click the procedure name. To open the procedure in a new window, right-click the procedure name and select **Open in New Window**.
7. To download the procedure, right-click the procedure name and select **Save Target As**.
