This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services..

CAUTION: Use only the Upgrade procedure included in the Upgrade Kit.
Before upgrading any system, please access My Oracle Support (MOS) (<https://support.oracle.com>) and review any Technical Service Bulletins (TSBs) that relate to this upgrade.

My Oracle Support (MOS) (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration. Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. See more information on MOS in the Appendix section.

Installing SPR 9.0 on HP C-Class G8

1.0 PURPOSE AND SCOPE

The purpose of this document is to document the installation of SDM/SPR 9.0.0 software on the TPD 5.2.1 Linux environment, on HP C-CLASS G8 hardware.

This document describes only methods utilized and procedures executed to configure the 9.0 SDM/SPR application.

It is assumed that:

- The hardware installation and network cabling were executed beforehand.
- The HP c-Class system to be used with Policy 9.x and SDM 9.0 has been setup following WI006729 [TK8]Policy 9.x Software Installation Guide procedures 1 to 13 listed below :
 - Procedure 1. Install TVOE 2.0 on Management Server (DL360/DL380)
 - Procedure 2. Upgrade DL360/380 Server Firmware
 - Procedure 3. TVOE/Management Server Network Configuration
 - Procedure 4. Install PM&C Application
 - Procedure 5. Configure PM&C Access to Cisco 4948 Aggregation switch
 - Procedure 6: Verify and Update Switch IOS
 - Procedure 7: Configure Aggregation Switches with netConfig
 - Procedure 8. Configure the PM&C Application
 - Procedure 9. Configure OA IP Address (via front panel display)
 - Procedure 10. Performing the Initial OA Configuration (OA Configuration Wizard)
 - Procedure 11. Adding the Cabinet and Enclosure to PM&C
 - Procedure 12: Configuring Enclosure Bay iLO Passwords
 - Procedure 13. Configure HP 6120XG Switch Pair(s) using NetConfig

This document is intended for Oracle Tekelec field personnel who need to install SDM software on C-CLASS hardware running TPD. This document may be used in discussions with the customer to determine if this product satisfies their expectations. The reader is assumed to be familiar with TPD and C-CLASS servers, and this document focuses on the specifics of the installation unique to an SDM/SPR installation in a TPD environment.

1.1 ACRONYMS

Acronym	Description
ILO	Integrated Lights Out manager
SDM	Subscriber Data Management
TPD	Oracle Platform Distribution
SDM1	SDM C-CLASS Servers located on site 1
SDM2	SDM C-CLASS Servers located on site 2
OA	HP Onboard Administrator
IPM	Initial Product Manufacture – the process of installing TPD on a hardware platform

Table 1: Acronyms

Table 2: References

Installing SPR 9.0 on HP C-Class G8

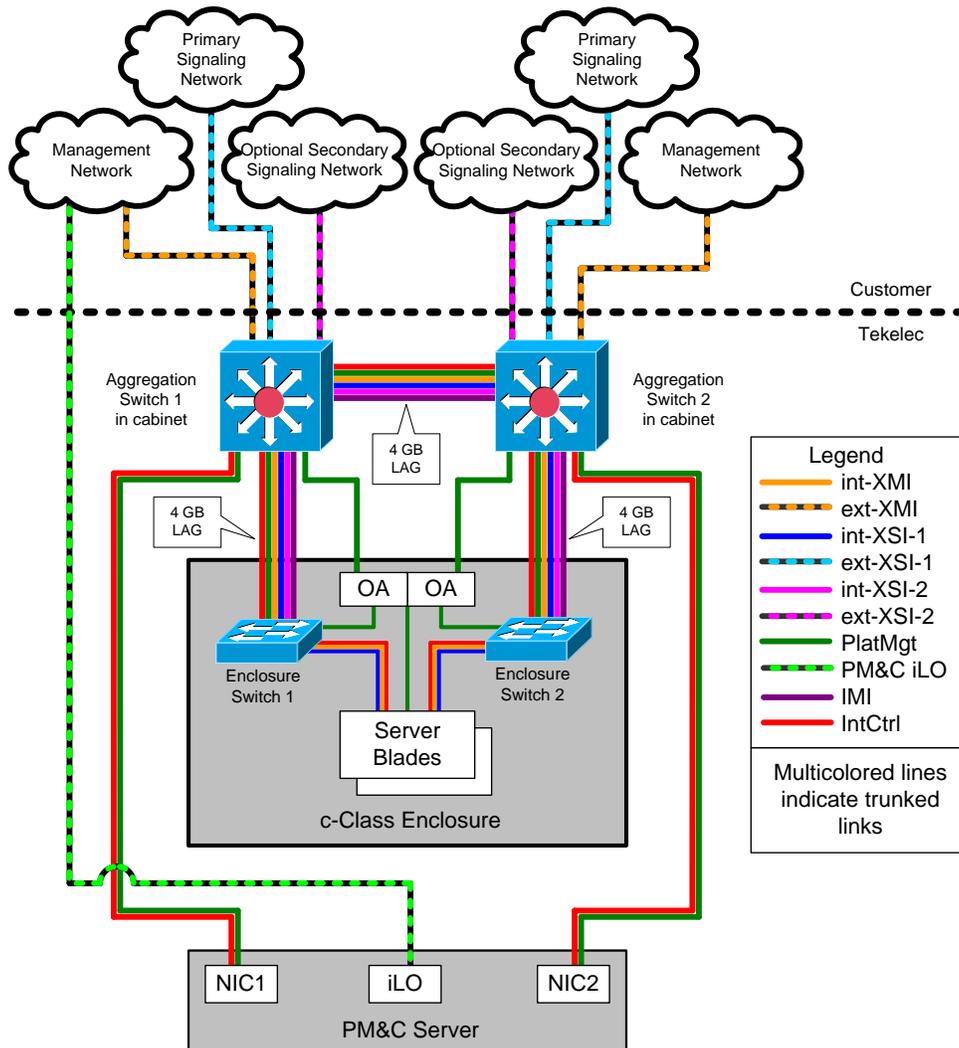

1.3 HIGH LEVEL NETWORKING DESCRIPTION

There are three IP networking options for a C-class system. These are:

- With Cisco 4948 Aggregation (top-of-rack) switch, and Layer 3 uplinks (preferred)
- With Cisco 4948 Aggregation (top-of-rack) switch, and Layer 2 uplinks
- Layer 2 uplinks direct from c-Class Enclosure switches (HP Proliant 6120XG) to customer network, with 10G uplinks.

The decision of what interconnect method will be used is typically made even before the equipment order is placed.

Figure 1: SPR on C-CLASS Connectivity figure

Installing SPR 9.0 on HP C-Class G8

1.4 INSTALLATION RESTRICTIONS

The TPD software version combination for which this installation procedure is applicable is the following:

- TPD 5.0.1-73.3.0 x64 + SDM 9.0.0

1.5 INSTALLATION PREREQUISITES

In order to complete this installation, you should have the following:

- C-CLASS environment setup ready and Network configuration performed on enclosure and aggregation switches. PM&C server application installed.
- A valid recent **TPD 5.0.1-73.3.0 x64** release of TPD 64-bit must be on. This must be available either in CD/DVD format or on a Windows PC that has network access to the OA of the C-CLASS
- The TPD ISO file available on a Windows PC, connecting to the ILO in HTTP with Internet Explorer from the PC will allow using the Virtual Media feature to make the file appear as a CD mounted in the CD/DVD drive.
- A valid recent 9.0.0 release of SPR software must be on hand. This should be an iso image format with a filename 872-2409-101-9.0.0_5.0.0-SDM-x86_64.iso
- The script named “create_SDMdiskconfig.pl” (included in SDM iso media)
- The HP Diameter license and SDM license codewords are needed
- The SDM SPR 9.0 Subscriber license file is needed
- sdm-ssh.conf file and sdm-ssh-tool script (included in SDM iso media)

Installing SPR 9.0 on HP C-Class G8

1.5.1 Networks List in C-CLASS server

The table below shows a list of the networks used in the SDM configuration on C-CLASS servers (SDM Server A and Server B):

Network Name	Identifier	Default VLAN ID	Subnet Size, Mask	Routable	Usage
Control	IntCtrl	1	/24	No	PM&C and server internal control and maintenance
Management	PlatMgt ¹	2	/26	Yes	Management and ILO
OAM/Geo	XMI	3	/27	Yes	External management access and Geo redundancy replication
Internal Messaging	IMI	4	/16	No	Internal Communication Network - Requires 2 static IPs (fixed to 169.254.0.0/16)
Signaling – A	XSI-1	5	/28	Yes	First External Signaling Network
Signaling – B	XSI-2	6	/28	Yes	Second External Signaling Network

Table 3: Network List in C-CLASS server

1.5.2 XMI configuration

Table 4: XMI configuration

Description	IP
OAM VLAN ID	XMI_Subnet_ID (default 3)
OAM NETWORK	OAM_NET
OAM Subnet mask	XMI_MASK
OAM Default gateway	XMI_GATEWAY
OAM VIPs for SDM	XMI_SDM_VIP
PROVISIONING VIPs for SDM	PROV_SDM_VIP
OAM Planned IP addresses of SDM servers:	
OAM IP Address for SDM 1	XMI_SDM_1
OAM IP Address for SDM 2	XMI_SDM_2
OAM IP Address for SDM n	XMI_SDM_N
Planned host name of SDM servers:	
Host Name for SDM 1	XMI_SDM_Hostname_1
Host Name for SDM 2	XMI_SDM_Hostname_2
Host Name for SDM n	XMI_SDM_Hostname_N

¹ Note that choosing the minimum required subnet size might minimize the option of co-mingling with other applications in the same frame.

Installing SPR 9.0 on HP C-Class G8

1.5.3 Traffic or XSI-1 configuration

The network configuration needed for the traffic connection to the customer network XSI-1 :

Table 5: XSI-1 configuration

Description	IP
XSI-1 VLAN ID	XSI-1_Subnet_ID (default 5)
XSI-1 NETWORK	XSI-1_NET
XSI-1 Subnet mask	XSI-1_MASK
XSI-1 VIP1	XSI-1_SDM_VIP1
XSI-1 VIP2	XSI-1_SDM_VIP2

1.5.4 Traffic or XSI-2 configuration

Eventually the network configuration needed for the second traffic connection to the customer network XSI-2 should be known:

Table 6: XSI-2 configuration

Description	IP
XSI-2 VLAN ID	XSI-2_Subnet_ID (default 6)
XSI-2 NETWORK	XSI-2_NET
XSI-2 Subnet mask	XSI-2_MASK
XSI-2 VIP1	XSI-2_SDM_VIP1
XSI-2 VIP2	XSI-2_SDM_VIP2

1.5.5 NTP

At least one time synchronization NTP server IP address which is accessible through the XMI network should be known: NTP_IP.

1.5.6 Adding Private Network

The TPD/SDM servers need to communicate together on an IP subnet that is private (169.254.0.0/16). Such a small subnet that does not conflict with the customer network must have been selected:

Table 7: IMI configuration

Description	IP
IMI VLAN ID	IMI_Subnet_ID(default 4)
IMI Subnet mask	255.255.0.0
IMI IP Address for SDM 1	169.254.1.1
IMI IP Address for SDM 2	169.254.1.2
IMI IP Address for SDM n	169.254.1.N

Installing SPR 9.0 on HP C-Class G8

1.5.7 Adding Additional Parameters

SDM software requires additional networking parameters for its operation. All these parameters must be specified in file `/etc/sysconfig/blue` on each SDM/TPD server:

Description	Information
SDM site Name	SDM_CUSTOMER_SITE_NAME
SDM SRP communication Domain	SDM_CUSTOMER_SRP_DOMAIN
For each SDM/TPD server, a slot ID (a unique integer in the range 1-16)	SDM_UNIQUE_SLOT_ID

1.6 AUTHENTICATION

1. The usernames and passwords that can login to the ILO in full privilege mode should be known. On an C-CLASS server coming straight from the factory, the initial ILO username/password is of the server is written on a little pull-out tab located left of the left-most hard-drive bay of the unit.
2. The default password of the “root” account of the Oracle Tekelec TPD installation must be known to the installer.
3. The default password of the “admin” account of the Oracle Tekelec SDM installation must be known to the installer.

1.7 BASIC INSTALLATION OF TPD

This installation should be repeated for C-CLASS on all blades on both sites (SDM1 and SDM2) planned to be part of the SDM/TPD configuration. The TPD and SDM application is performed via PM&C server.

1.8 ACQUIRING FIRMWARE

Procedure Update APPLICATION BLADE FIRMWARE in this document pertains to the upgrading of firmware on SDM blades and hardware devices. The required firmware media and binaries are managed and distributed as part of the HP Solutions Firmware Upgrade Pack 2.2.1, released under Oracle Tekelec Part Number 795-0000-2yy . The current minimum firmware release required for this product is HP Solutions Firmware Upgrade Pack 2.2.1.

The HP Solutions Firmware Upgrade Pack contains multiple BOM items including media and documentation. This document only requires access to the media (CD/DVD or ISOs) as well as the Release Notes document.

The two pieces of required firmware media provided in the HP Solutions Firmware Upgrade Kit 2.2.1 release are:

- HP Smart Update Firmware DVD/ISO - 872-2488-101-2.2.1-10.26.0.iso
- HP Misc Firmware CD/ISO - 872-2161-114-2.2.1_10.27.0.iso

Refer to the Release Notes of the target release of the HP Solutions Firmware Upgrade Pack used to determine specific media part numbers to use and the specific firmware versions provided.

Installing SPR 9.0 on HP C-Class G8

Policy/SDM 9.x Servers and devices that may require firmware updates are:

- HP c7000 Blade System Enclosure Components:
 - o Onboard Administrator (Rev 3.50 or greater is REQUIRED to support GEN 8)
 - o HP 6120XG Network Switches
 - o BL460c Blade Servers
- HP Rack Mount Servers (DL360 / DL380)
- Cisco 4948E-F Rack Mount Network Switch

1.9 C-CLASS CONFIGURATION WITH ADDITIONAL DRIVES

	Hardware Configuration	Servers/ site	RAM /server	HD /server (BE)
6352	2 x BL460c (64GB) + 2 x Storage Arrays	2	48GB	2x 600GB in RAID1
6552	2 x BL460c (128GB) + 2 x Storage Arrays	2	64GB	4x (2x 600GB in RAID1)
6654	2 x BL460c (192GB) + 2 x Storage Arrays	2	128GB	4x (2x 600GB in RAID1)
6754	2 x BL460c (64GB)+ 2 x BL460c (256GB)+ 2 x Storage Arrays	4		

Table 8: C-CLASS HW configuration types

Installing SPR 9.0 on HP C-Class G8

2.0 INSTALLATION (AND NETWORKING) IN A C-CLASS ENVIRONMENT

The C-Class environment installation procedures are not within the scope of this document.

WI006855 Policy 9.x Software Installation Guide covers the procedures to setup the Policy C-Class environment and must be followed from procedure 1 to 15.

2.1 PM&C INSTALLATION

This section provides the procedures to install the PM&C server.

The PM&C server is a rack mount server (DL360/DL380) with an Oracle Tekelec Application that provides tools to manage multiple c-class enclosures and blade software, as well as networking equipment (Aggregation and Enclosure switches) for the c-class environment.

- Procedure 1. Install TVOE 2.0 on Management Server (DL360/DL380)

PMAC 5.0 is deployed on a Virtual OS (TVOE) environment. The TVOE OS must be installed first, and then the PMAC application iso is installed. PMAC install is not service affecting for the SDM system.

Note that in SDM Rel 9.x, PMAC is used for Installation activities, growth of new servers and Field repair activities. It is also used for deploying Firmware upgrades.

- Procedure 2. Upgrade DL360/380 Server Firmware

This procedure upgrade the PM&C DL360 or DL380 server firmware

- Procedure 3. TVOE/Management Server Network Configuration
- Procedure 4. Install PM&C Application

2.2 CONFIGURE AGGREGATION SWITCH

XML configuration files are used as input to the netConfig tool. These must prepared before starting the Installation, as it may take some time to prepare these. See Appendix for instructions on how to prepare these files.

The following procedures use the netConfig tool, with the Xml configuration files, to configure the aggregation switches.

- Procedure 5. Configure PM&C Access to Cisco 4948 Aggregation switch
- Procedure 6. Verify and Update Switch IOS
- Procedure 7. Configure Aggregation Switches with netConfig

2.3 COMPLETE THE PM&C INSTALLATION

- Procedure 8. Configure the PM&C Application

Installing SPR 9.0 on HP C-Class G8

2.4 HP C-7000 ENCLOSURE CONFIGURATION

- Procedure 9. Configure OA IP Address (via front panel display)
- Procedure 10. Performing the Initial OA Configuration (OA Configuration Wizard)
- Procedure 11. Adding the Cabinet and Enclosure to PM&C
- Procedure 12. Configuring Enclosure Bay iLO Passwords
- Procedure 13. Configure HP6120XG Enclosure Switches

Installing SPR 9.0 on HP C-Class G8

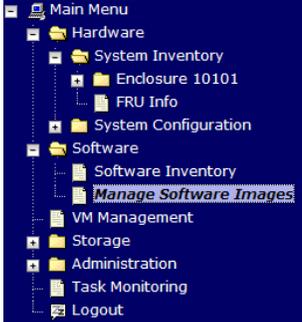

3.0 LOADING SDM AND TPD SOFTWARE IMAGES ONTO THE PM&C

Procedure 1. Loading Software Images onto the PM&C

S T E P #	<p>This procedure will load the Software Images needed for the SDM/SPR Application onto the PM&C.</p> <p>Needed material:</p> <ul style="list-style-type: none"> - SDM release 9.0 software image 872-2409-101-9.0.0_5.0.0-SDM-x86_64.iso - TPD Image (64 bit) 872-2462-101-7.7.1_1.11.0-SDM-x86_64.iso <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT ORACLE TEKELEC TECHNICAL SERVICES AND ASK FOR ASSISTANCE.</p>	
1. <input type="checkbox"/>	Load SPR 9.0 ISO	<p>Insert USB Key containing Software Images into PM&C USB port.</p> <p>Mount the usb to /mnt/upgrade</p> <p># mount /dev/sda1 /mnt/upgrade</p> <p>Verify that there is space in the /var/TKLC/upgrade directory.</p> <p># ls /var/TKLC/upgrade</p> <p>Select Image to transfer:</p> <p># ls /mnt/upgrade</p> <p>Copy a Application Image file to /var/TKLC/upgrade:</p> <p># cp /mnt/upgrade/<TPD or Application.iso> /var/TKLC/upgrade</p> <ul style="list-style-type: none"> - Alternative: Burn image to DVD, and Insert the Application Image DVD into the removable media drive of the management server. - Alternative: Scp an Application iso file to the management server and place it under /var/TKLC/upgrade (if networking is available) <p># scp <ISO_filename> root@<pmac_management_network_ip>:/var/TKLC/upgrade</p>
2. <input type="checkbox"/>	PM&C GUI: Login	<p>Open web browser and enter: <a href="http://<management_network_ip>">http://<management_network_ip></p> <p>Login as pmacadmin user.</p>

Installing SPR 9.0 on HP C-Class G8

Procedure 1. Loading Software Images onto the PM&C

<p>3. <input type="checkbox"/></p>	<p>Navigate to Manage Software Images</p>	<p>Navigate to Main Menu -> Software -> Manage Software Images</p> 
<p>4. <input type="checkbox"/></p>	<p>PM&C GUI: Add image</p>	<p>Press Add Image button. Use the dropdown to select the image. If the optical media was used in step 1, the device will appear as <code>device://dev/scd0</code>, If the ISO image was copied over in step 1, the device will appear as <code>/var/TKLC/upgrade/872-2409-101-9.0.0_5.0.0-SDM-x86_64.iso</code></p>  <p>Select the appropriate path and Press Add New Image button.</p> <p>You may check the progress using the Task Monitoring link. Observe the green bar indicating success.</p>
<p>5. <input type="checkbox"/></p>	<p>Verify Image Loaded</p>	<p>Navigate to Main Menu -> Software -> Manage Software Images</p> <p>Just loaded image will be shown.</p>
<p>6. <input type="checkbox"/></p>	<p>Remove image file or Media</p>	<p>Remove the image file from <code>/var/TKLC/upgrade</code> directory.</p> <pre># ls /var/TKLC/upgrade # rm /var/TKLC/upgrade/<image>.iso</pre> <p>If DVD Media was used, remove this from the drive.</p>
<p>7. <input type="checkbox"/></p>	<p>Add additional images</p>	<p>Repeat above steps to add other images.</p> <p>- Or -</p> <pre># unmount /mnt/upgrade</pre>

Installing SPR 9.0 on HP C-Class G8

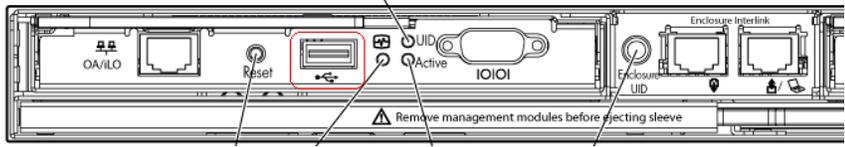

4.0 UPDATE APPLICATION BLADE FIRMWARE

Procedure 2. Update Application Blade Firmware

S T E P #	<p>This procedure will provide the steps to upgrade the firmware on the SDM Blade servers.</p> <p>The Firmware Update ISO (on a USB key) will be inserted into the Active OA, and then the OA GUI used to apply the update to the blade servers in the Enclosure.</p> <p>At the end of this procedure, some or all the servers in the Enclosure will have the correct Firmware version.</p> <p>NOTE: A Firmware patch (Errata) may also need to be installed on the servers. This can be done after the servers are fully networked (using scp to copy the patch to each server, and execute it). See the HP Solutions Firmware Upgrade Pack Release notes for more information on required Errata.</p> <p>Prerequisite: Procedure 13: Configure Enclosure switches has been completed.</p> <p>Needed material:</p> <ul style="list-style-type: none"> - HP Smart Update Firmware DVD, or ISO file on USB Key - HP Solutions Firmware Upgrade Pack Release Notes Error! Reference source not found. <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT ORACLE TEKELEC TECHNICAL SERVICES AND ASK FOR ASSISTANCE.</p>																																					
1. <input type="checkbox"/>	Check if Firmware upgrade is needed	<p>Log onto the OA iLO using IE and navigate to Rack Firmware, you should be presented with the overview of all components in the enclosure as shown below. Scroll down the view the blades firmware. Check the ROM Version for all the blades in the enclosure.</p> <p>Device Firmware Information</p> <table border="1" data-bbox="537 1234 1406 1604"> <thead> <tr> <th>Bay</th> <th>Device Model</th> <th>Firmware Component</th> <th>Current Version</th> </tr> </thead> <tbody> <tr> <td rowspan="3">1</td> <td rowspan="3">ProLiant BL460c G6</td> <td>System ROM</td> <td>24 05/20/2010</td> </tr> <tr> <td>iLO2</td> <td>iLO2 2.00 Jun 21 2010</td> </tr> <tr> <td>Power Management Controller</td> <td>3.4</td> </tr> <tr> <td rowspan="3">2</td> <td rowspan="3">ProLiant BL460c G6</td> <td>System ROM</td> <td>24 05/20/2010</td> </tr> <tr> <td>iLO2</td> <td>iLO2 2.00 Jun 21 2010</td> </tr> <tr> <td>Power Management Controller</td> <td>3.4</td> </tr> <tr> <td rowspan="3">3</td> <td rowspan="3">ProLiant BL460c G6</td> <td>System ROM</td> <td>24 05/20/2010</td> </tr> <tr> <td>iLO2</td> <td>iLO2 2.00 Jun 21 2010</td> </tr> <tr> <td>Power Management Controller</td> <td>3.4</td> </tr> <tr> <td rowspan="3">4</td> <td rowspan="3">ProLiant BL460c G6</td> <td>System ROM</td> <td>24 05/20/2010</td> </tr> <tr> <td>iLO2</td> <td>iLO2 2.00 Jun 21 2010</td> </tr> <tr> <td>Power Management Controller</td> <td>3.4</td> </tr> </tbody> </table> <p>If the current verion is at or greater than the minimum supported version, skip this procedure, no upgrade is necessary.</p>	Bay	Device Model	Firmware Component	Current Version	1	ProLiant BL460c G6	System ROM	24 05/20/2010	iLO2	iLO2 2.00 Jun 21 2010	Power Management Controller	3.4	2	ProLiant BL460c G6	System ROM	24 05/20/2010	iLO2	iLO2 2.00 Jun 21 2010	Power Management Controller	3.4	3	ProLiant BL460c G6	System ROM	24 05/20/2010	iLO2	iLO2 2.00 Jun 21 2010	Power Management Controller	3.4	4	ProLiant BL460c G6	System ROM	24 05/20/2010	iLO2	iLO2 2.00 Jun 21 2010	Power Management Controller	3.4

2. <input type="checkbox"/>	Is ISO available USB?	If you have the HP Smart Update Firmware ISO image on a USB key, then skip to Step 7. Otherwise continue with the next steps to extract the ISO from the DVD.																																				

Installing SPR 9.0 on HP C-Class G8

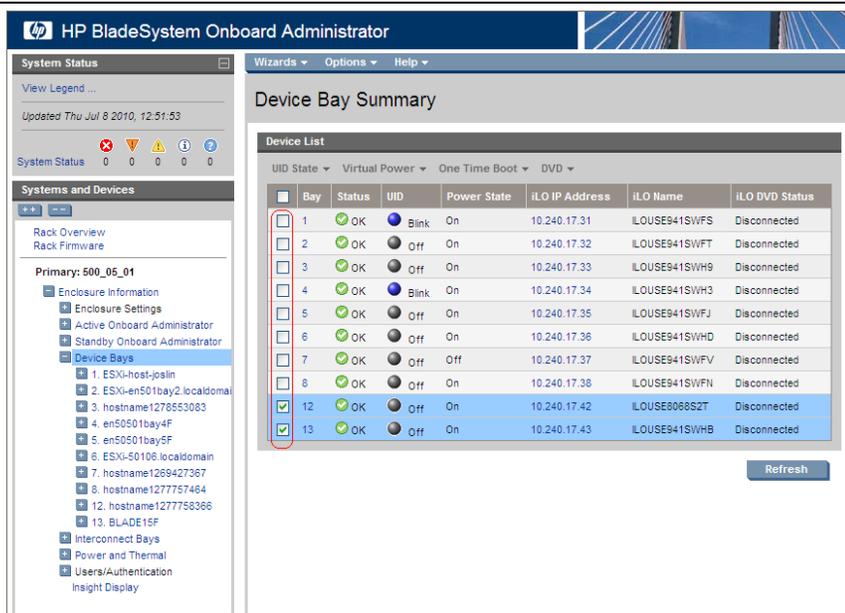

Procedure 2. Update Application Blade Firmware

<p>3. <input type="checkbox"/></p>	<p>Import HP Firmware Maintenance CD</p>	<p>Insert the HP Smart Update Firmware DVD into the removable media drive of the management server.</p> <p>Log into the management server shell as the user "root" using ssh.</p> <p>Execute the following command to extract the iso image onto the /var/TKLC/smac/image directory of the PM&C server. (Use the correct iso image part number from HP Solutions Firmware Upgrade Pack Release Notes Error! Reference source not found.)</p> <pre># getCDROM</pre> <pre># dd if=/dev/scd0 of=/var/TKLC/smac/image/<image_part_number>.iso</pre> <p>Verify image extraction completes without error.</p>
<p>4. <input type="checkbox"/></p>	<p>Verify extracted image</p>	<p>Verify checksum of the extracted ISO with the value listed in HP Solutions Firmware Upgrade Pack Release Notes Error! Reference source not found.</p> <pre># md5sum /var/TKLC/smac/image/<image_part_number>.iso</pre> <pre>422275a25353030fb5338876761ee1ca /var/TKLC/smac/image/872-XXXX-XXX-firmware.iso</pre> <p>Note: The actual iso image in the output is for illustrative purposes only</p>
<p>5. <input type="checkbox"/></p>	<p>Copy HP Firmware Maintenance iso image to laptop</p>	<p>Copy the image from the management server to your laptop using an scp client:</p> <pre>/var/TKLC/smac/image/<image_part_number>.iso</pre>
<p>6. <input type="checkbox"/></p>	<p>Copy ISO to USB Media</p>	<p>Take the ISO you just copied to your laptop and copy it to USB media.</p>
<p>7. <input type="checkbox"/></p>	<p>Insert USB Flash Drive</p>	<p>Insert the USB Flash Drive with the <i>HP Smart Update Firmware</i> ISO into the USB port of the Active OA Module on Enclosure. (Active OA is indicated by the Active LED)</p> 
<p>8. <input type="checkbox"/></p>	<p>Access the Active OA</p>	<p>Access the Active OA Login Page from an Internet Explorer® session using the following URL:</p> <pre>https://<OA_IP>/</pre>
<p>9. <input type="checkbox"/></p>	<p>Log in to the Active OALog in as an administrator user.</p>	<p>User Name = <OA_admin_user> Password = <OA_admin_password></p>

Installing SPR 9.0 on HP C-Class G8

Procedure 2. Update Application Blade Firmware

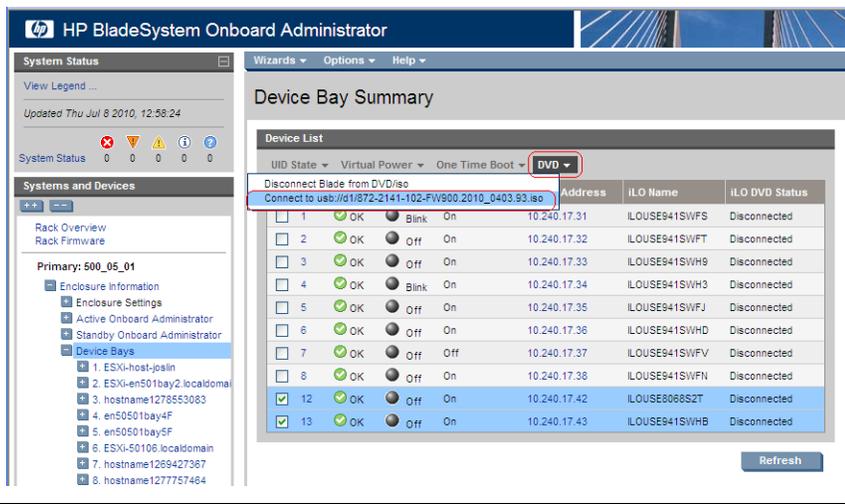

10. Access the Device Summary page On the left pane, expand the Device Bays node to display the Device Bay Summary window. Select the individual blades to be upgraded by clicking and enabling the corresponding UID checkbox.

Note: A maximum of 8 blades should be upgraded concurrently at one time. If the c7000 enclosure has more than 8 blades they will need to be upgraded in multiple sessions.

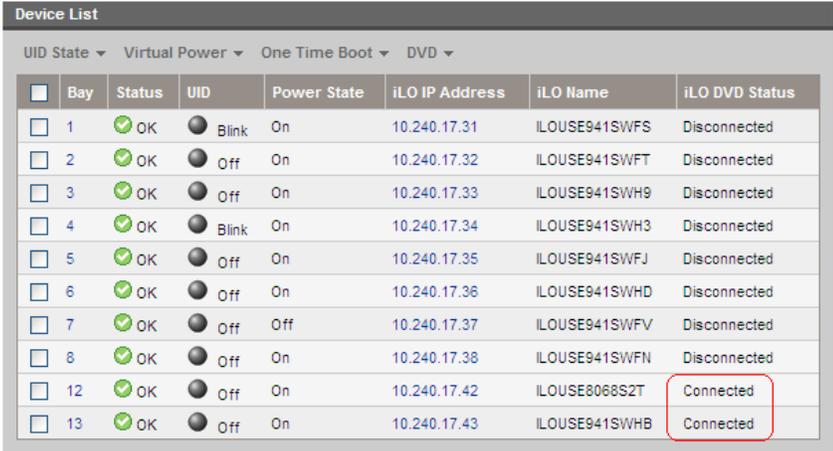

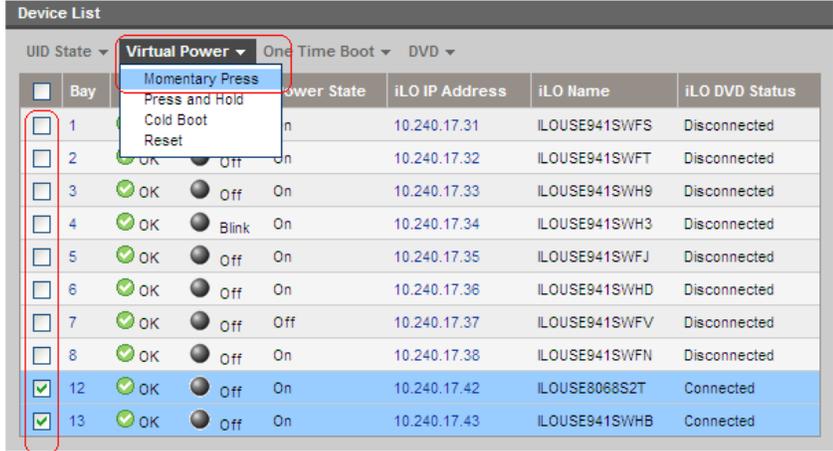

11. Connect to USB Drive

Once the blades are selected, connect them to the ISO on the USB Drive, by selecting the **Connect to usb...** item from the **DVD** menu.

Installing SPR 9.0 on HP C-Class G8

Procedure 2. Update Application Blade Firmware

<p>12. <input type="checkbox"/></p>	<p>Verify Drive Connection</p>	<p>Once each blade has mounted the ISO media the Device List table should indicate an iLO DVD Status as <i>Connected</i> for each blade that was previously selected.</p>  <p style="text-align: right;"><input type="button" value="Refresh"/></p> <p>Note: The Refresh button may need to be clicked in order to see the current status of all blades.</p>
<p>13. <input type="checkbox"/></p>	<p>Power Down Blades</p>	<p>If needed, reselect the UID checkbox for each blade to be upgraded and then select the Momentary Press option under the Virtual Power menu.</p>  <p style="text-align: right;"><input type="button" value="Refresh"/></p> <p>When prompted click the OK button to confirm the action.</p>

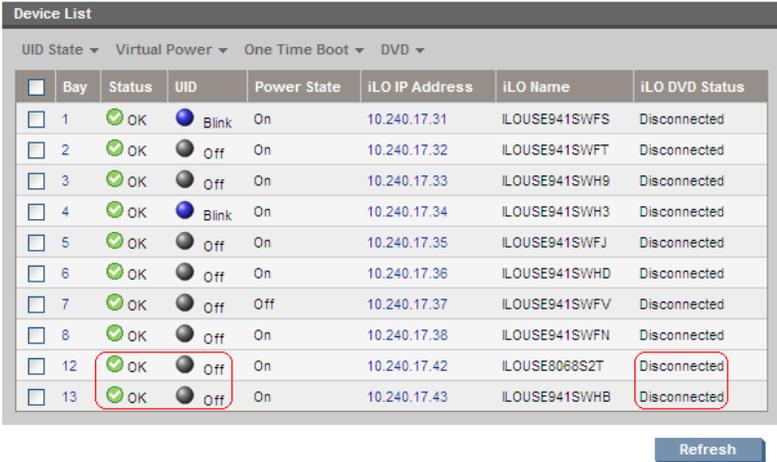

Installing SPR 9.0 on HP C-Class G8

Procedure 2. Update Application Blade Firmware

<p>14. <input type="checkbox"/></p>	<p>Verify Power Down</p>	<p>The power down sequence can take several minutes to complete. When it completes the Device List table will indicate the Power State of each select blade to be Off.</p> <div data-bbox="532 359 1369 852" style="border: 1px solid gray; padding: 5px;"> <p>Device List</p> <p>UID State ▾ Virtual Power ▾ One Time Boot ▾ DVD ▾</p> <table border="1"> <thead> <tr> <th><input type="checkbox"/></th> <th>Bay</th> <th>Status</th> <th>UID</th> <th>Power State</th> <th>iLO IP Address</th> <th>iLO Name</th> <th>iLO DVD Status</th> </tr> </thead> <tbody> <tr> <td><input type="checkbox"/></td> <td>1</td> <td>OK</td> <td>Blink</td> <td>On</td> <td>10.240.17.31</td> <td>ILOUSE941SWFS</td> <td>Disconnected</td> </tr> <tr> <td><input type="checkbox"/></td> <td>2</td> <td>OK</td> <td>Off</td> <td>On</td> <td>10.240.17.32</td> <td>ILOUSE941SWFT</td> <td>Disconnected</td> </tr> <tr> <td><input type="checkbox"/></td> <td>3</td> <td>OK</td> <td>Off</td> <td>On</td> <td>10.240.17.33</td> <td>ILOUSE941SWH9</td> <td>Disconnected</td> </tr> <tr> <td><input type="checkbox"/></td> <td>4</td> <td>OK</td> <td>Blink</td> <td>On</td> <td>10.240.17.34</td> <td>ILOUSE941SWH3</td> <td>Disconnected</td> </tr> <tr> <td><input type="checkbox"/></td> <td>5</td> <td>OK</td> <td>Off</td> <td>On</td> <td>10.240.17.35</td> <td>ILOUSE941SWFJ</td> <td>Disconnected</td> </tr> <tr> <td><input type="checkbox"/></td> <td>6</td> <td>OK</td> <td>Off</td> <td>On</td> <td>10.240.17.36</td> <td>ILOUSE941SWHD</td> <td>Disconnected</td> </tr> <tr> <td><input type="checkbox"/></td> <td>7</td> <td>OK</td> <td>Off</td> <td>Off</td> <td>10.240.17.37</td> <td>ILOUSE941SWFV</td> <td>Disconnected</td> </tr> <tr> <td><input type="checkbox"/></td> <td>8</td> <td>OK</td> <td>Off</td> <td>On</td> <td>10.240.17.38</td> <td>ILOUSE941SWFN</td> <td>Disconnected</td> </tr> <tr> <td><input type="checkbox"/></td> <td>12</td> <td>OK</td> <td>Off</td> <td>Off</td> <td>10.240.17.42</td> <td>ILOUSE8068S2T</td> <td>Connected</td> </tr> <tr> <td><input type="checkbox"/></td> <td>13</td> <td>OK</td> <td>Off</td> <td>Off</td> <td>10.240.17.43</td> <td>ILOUSE941SWHB</td> <td>Connected</td> </tr> </tbody> </table> <p style="text-align: right;">Refresh</p> </div> <p>Note: The Refresh button may need to be clicked in order to see the current status of all blades.</p>	<input type="checkbox"/>	Bay	Status	UID	Power State	iLO IP Address	iLO Name	iLO DVD Status	<input type="checkbox"/>	1	OK	Blink	On	10.240.17.31	ILOUSE941SWFS	Disconnected	<input type="checkbox"/>	2	OK	Off	On	10.240.17.32	ILOUSE941SWFT	Disconnected	<input type="checkbox"/>	3	OK	Off	On	10.240.17.33	ILOUSE941SWH9	Disconnected	<input type="checkbox"/>	4	OK	Blink	On	10.240.17.34	ILOUSE941SWH3	Disconnected	<input type="checkbox"/>	5	OK	Off	On	10.240.17.35	ILOUSE941SWFJ	Disconnected	<input type="checkbox"/>	6	OK	Off	On	10.240.17.36	ILOUSE941SWHD	Disconnected	<input type="checkbox"/>	7	OK	Off	Off	10.240.17.37	ILOUSE941SWFV	Disconnected	<input type="checkbox"/>	8	OK	Off	On	10.240.17.38	ILOUSE941SWFN	Disconnected	<input type="checkbox"/>	12	OK	Off	Off	10.240.17.42	ILOUSE8068S2T	Connected	<input type="checkbox"/>	13	OK	Off	Off	10.240.17.43	ILOUSE941SWHB	Connected

<p>15. <input type="checkbox"/></p>	<p>Initiate Firmware Upgrade</p>	<p>To power the blades back on and begin the automated firmware upgrade process, repeat Steps 18 and 19 this time being sure the Power State indicates On for each selected blade.</p>																																																																																								

Installing SPR 9.0 on HP C-Class G8

Procedure 2. Update Application Blade Firmware

<p>16. <input type="checkbox"/></p>	<p>Monitor Firmware Upgrade</p>	<p>From this point on each blade will boot into an automated firmware upgrade process that will last between <i>20 to 25 minutes</i>.</p>  <p>Upon a successful firmware upgrade, the Device List table will list each blade with a Status of <i>OK</i>, UID of <i>Off</i> and the iLO DVD Status as <i>Disconnected</i>. At this time the blades will automatically be rebooted. If the status does not update to disconnected, you can verify completion by opening an iLo window (via the OA) for each blade and watching the console for indication of firmware upgrade progress and successful completion</p> <p>If necessary, repeat Steps 15 through 21 for the remaining blades in the enclosure to be upgraded. Proceed to the next step.</p>
<p>17. <input type="checkbox"/></p>	<p>Remove USB Flash Drive</p>	<p>The USB flash drive may now safely be removed from the Active OA module.</p>
<p>18. <input type="checkbox"/></p>	<p>Remove temporary file</p>	<p>After all blade servers have been upgraded, the file copied to laptop in Step 3 may be removed.</p>
<p>19. <input type="checkbox"/></p>	<p>Check for Additional Updates</p>	<p>Before proceeding, it is necessary to determine if additional firmware upgrades have been included in the HP Smart Update Firmware DVD/ISO [1] to determine which (if any) HP Errata Firmware Component upgrades must be installed manually</p>
<p>20. <input type="checkbox"/></p>	<p>Update Mezzanine Cards Firmware (Optional)</p>	<p>If the blades have mezzanine cards installed, please refer to [1], section 4.10 on how to upgrade the mezzanine cards firmwares.</p>

Installing SPR 9.0 on HP C-Class G8

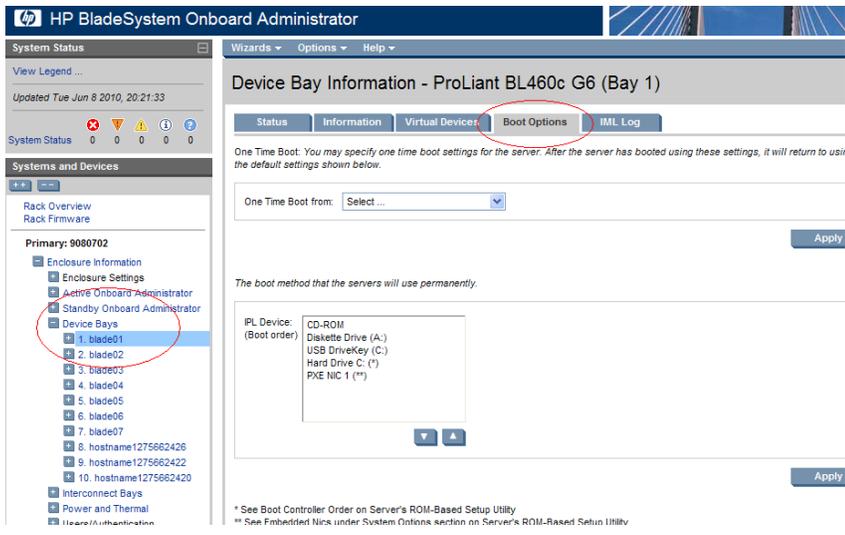

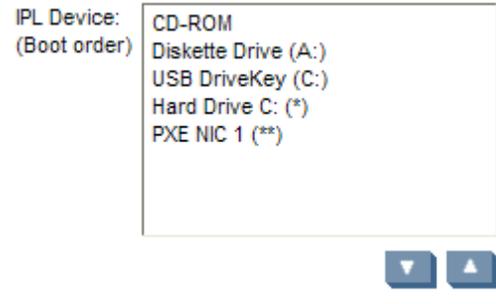

5.0 ADJUST POWER MANAGEMENT AND INSTALL TPD VIA PM&C

Procedure 3. This procedure install TPD on C-CLASS via PM&C

S T E P #	<p>This procedure will install TPD on C-CLASS server and update BIOS settings.</p> <p>Needed material:</p> <ul style="list-style-type: none">- TPD iso Media <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT ORACLE TEKELEC TECHNICAL SERVICES AND ASK FOR ASSISTANCE.</p>	
1. <input type="checkbox"/>	Connect to OA	<p>Open your web browser and navigate to the OA IP address You will see following:</p>  <p>Login to HP OA as Administrator. Original password is on paper card attached to each OA.</p>

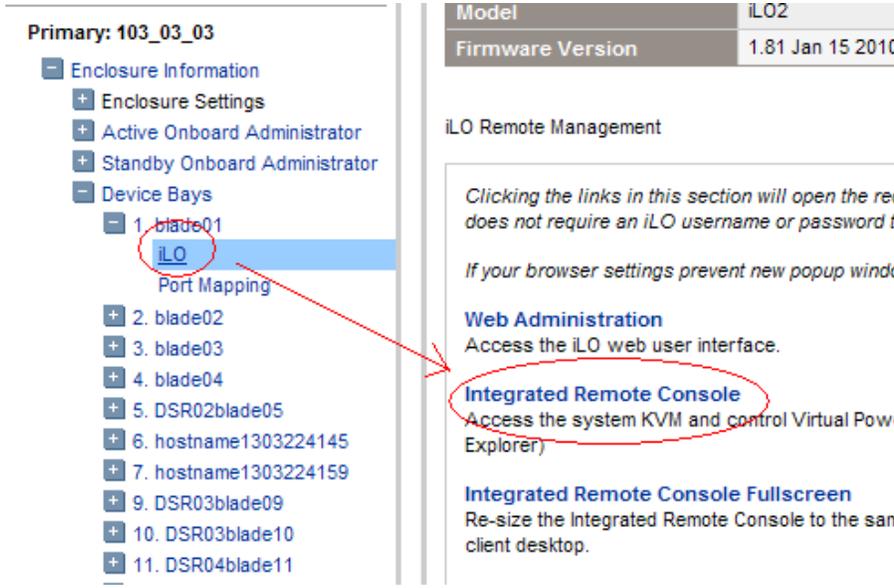

Installing SPR 9.0 on HP C-Class G8

Internal Messaging	IMI	bond0.4																		
Signaling – A	XSI-1	bond0.5																		
Signaling – B	XSI-2	bond0.6																		

Installing SPR 9.0 on HP C-Class G8

		<p>Main Menu -> Network Configuration -> Network Interfaces -> IPv4 -> Add an Interface -> VLAN</p> <p style="text-align: right;"><u>VLAN ID:</u></p> <p>XMI_Subnet_ID</p> <p><u>Select Interface Type:</u> VLAN <u>Select interface:</u></p> <p>bond0</p> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> <ul style="list-style-type: none"> • Navigate the menus back to the main menu and Exit • Set in Bond0 MII Monitor Interval to 30 <pre># netAdm set --device=bond0 --miimon=30 Interface bond0 was updated Interface bond0 updated</pre> <ul style="list-style-type: none"> • Verify <pre># more /proc/net/bonding/bond0</pre>
<p>5</p> <p><input type="checkbox"/></p>	<p>Configure IMI interface on each SDM blade.</p>	<p>Assign an IP address to bond0.4 interface.</p> <pre># netAdm set --device=bond0.4 --address= IMI_SDM_TPD_IP_X --netmask= IMI_MASK --onboot=yes</pre>

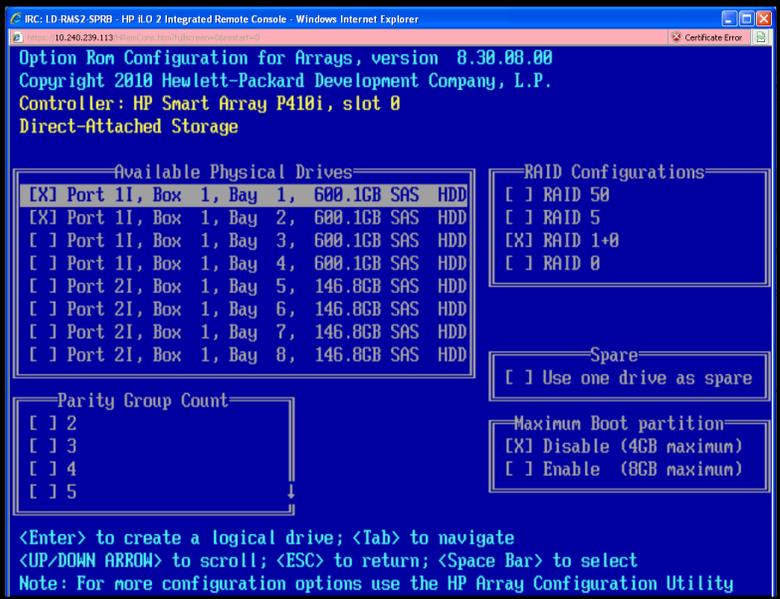

Installing SPR 9.0 on HP C-Class G8

		 The IMI_SDM_IP address must be 169.254.1.1 and 169.254.1.2 has to match exactly the SDM_UNIQUE_SLOT_ID value in /etc/sysconfig/blue file (in section 4.3 of the document)
6	Configure XMI interface on each SDM blade.	<p>Assign an IP address to bond0.3 interface.</p> <pre># netAdm set --device=bond0.3 --address= XMI_SDM_TPD_IP_X --netmask=XMI_MASK --onboot=yes</pre>
7	Configure XMI gateway as the default route on each SDM blade.	<p>Configure the default route to gateway XMI_GATEWAY:</p> <pre>#netAdm add --route=default --device=bond0.3 --gateway=XMI_GATEWAY</pre> <p>From this point, the TPD server should be reachable from the customer network XMI, so it is possible (if more convenient) to log out from the ILO virtual console and connect to the system with SSH to resume the installation.</p> <p># ping XMI_GATEWAY</p> <pre>[root@CSLAB-SPR1-BLADE2 ~]# ping 10.15.26.1 PING 10.15.26.1 (10.15.26.1) 56(84) bytes of data. 64 bytes from 10.15.26.1: icmp_seq=1 ttl=255 time=0.733 ms --- 10.15.26.1 ping statistics --- 1 packets transmitted, 1 received, 0% packet loss, time 0ms</pre>
8 <input type="checkbox"/>	Configure NTP server address on SDM On all back-end blades	<ul style="list-style-type: none"> Use the TPD menu front-end to configure server clock synchronization with NTP: <pre># su - platcfg</pre> <p>navigate through Main Menu -> Network Configuration -> NTP -> Edit :</p> <pre>ntpserver1: NTP_IP</pre> 

Installing SPR 9.0 on HP C-Class G8

		<ul style="list-style-type: none"> • Navigate the menus back to the main menu and Exit • Force the system to synchronize now: #service ntpd stop #service ntpdate start #service ntpd start - Force the system to update immediately the real-time clock managed by the BIOS # hwclock --systohc • Verify system time is now good, and the NTP "offset" value is now small # ntpq -c lpeers <p>Example output:</p> <pre> remote refid st t when poll reach delay offset jitter ===== *ntpserver1 .GPS. 1 u 66 128 377 0.203 0.006 0.005 ntpserver2 .INIT. 16 u 783 1024 0 0.000 0.000 0.000 </pre> <ul style="list-style-type: none"> • The offset with the reference clock should be close to 0.000.
<p>9 <input type="checkbox"/></p>	<p>Create the required SDM RAID1+0 setup on SDM on all back-end blades</p>	<p>Create the RAID configuration from Raid controller menu (only for configuration with additional hard drives/storage blades).</p> <p>The RAID 1+0 configuration can be performed by following steps below :</p> <ul style="list-style-type: none"> - using the iLO, connect to the virtual console of the system - use the "CAD" icon on the virtual console to generate a Ctrl-Alt-Del sequence, or the power button to generate a power-down/power-up sequence - when the message "Press any key to see Option ROM messages", press any key - when the message "Press F8 for Slot 3 controller" appears, press F8 - Select "View Logical Drive" to confirm a drive is configured, then Escape to return to the main menu - You have to use the raid controller menu to configure the hardware RAID the following way: <ul style="list-style-type: none"> • Disk Bay 1&2&3&4 : RAID1+0 • Disk Bay 5&6&7&8 : RAID1+0

Installing SPR 9.0 on HP C-Class G8

		<ul style="list-style-type: none"> • Disk Bay 9&10&11&12 : RAID1+0 <p>- Select the "Create Logical Drive" entry and use the TAB key and the space bar to deselect all the disks except the four first one:</p>  <p>Press enter to confirm you choice, the display should look like :</p>  <p>Press F8 to save the configuration:</p> <ul style="list-style-type: none"> • Repeat the process for the other 8 drives: • Once the RAID1+0 configuration is completed, press <ESC> to exit and let the blade boot normally..
10 <input type="checkbox"/>	Verify the Drive Array configuration from the iLO4.	Check the 4 logical drives From the iLO4 menu <i>Information => System Information</i> under storage :

Installing SPR 9.0 on HP C-Class G8

The screenshot displays the HP iLO System Information - Storage page. The left sidebar contains a navigation menu with categories: Information (System Information, ILO Event Log, Integrated Management Log, Active Health System Log, Diagnostics, Insight Agent), Remote Console, Virtual Media, Power Management, and Administration. The main content area is titled 'System Information - Storage' and includes tabs for Summary, Fans, Temperatures, Power, Processors, Memory, NIC Information, Storage, and Firmware. The 'Storage' tab is active, showing 'Drive Arrays'.

Under 'Drive Arrays', there is an 'Expand All' button and a list of components:

- Controller on System Board
 - Controller Status: OK
 - Serial Number: 500143802277A090
 - Model: HP Smart Array P420i Controller
 - Firmware Version: 3.04
 - Cache Module Status: OK
 - Cache Module Serial Number: PBKUC0ARH20C1V
 - Cache Module Memory: 1048576 KB
- Drive Enclosure Port 1f Box 2
- Drive Enclosure Port 2f Box 2
- Logical Drive 01
- Logical Drive 02
- Logical Drive 03
- Logical Drive 04

Below this list, 'Logical Drive 01' is expanded to show the following details:

Status	OK
Capacity	558 GB
Fault Tolerance	RAID 1/RAID 1+0

Below the table, two physical drives are listed:

- Physical Drive in Port 1f Box 2 Bay 1
- Physical Drive in Port 1f Box 2 Bay 2

Installing SPR 9.0 on HP C-Class G8

7.0 BASIC INSTALLATION AND CONFIGURATION OF SDM SOFTWARE

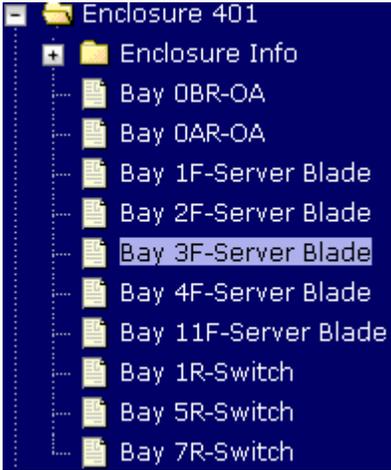

Procedure 5. SDM Installation

<p style="text-align: center;">S T E P #</p>	<p style="text-align: center;">Steps to be completed.</p>	<p>This installation must be repeated for each C-CLASS server planned to be part of the SDM/TPD configuration. It describes how to install edit the configuration files required by SDM platform and how to install the SDM iso.</p> <p>Needed material:</p> <ul style="list-style-type: none"> - SDM release 9.0 software image 872-2409-101-9.0.0_5.0.0-SDM-x86_64.iso <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT ORACLE TEKELEC TECHNICAL SERVICES AND ASK FOR ASSISTANCE.</p>
<p>1 <input type="checkbox"/></p>	<p>Edit blue file on all SDM blades.</p>	<p>Using SSH or the virtual console of each C-CLASS server, login to the root account, and create the file /etc/sysconfig/blue with the following contents:</p> <p>Example of Blue File in SDM Server A</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre>SYSTEMTYPE=RACKMOUNT SITENAME=CSLAB_CC1 SHELFID=1 SLOTID=1 PRIVATEINTERFACE=bond0 PUBLICINTERFACE=bond2 SINGLEFRAGMENTDB=1 INNODDBUFFERPOOL=0.7</pre> </div> <p>Example of Blue File in SDM Server B</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre>SYSTEMTYPE=RACKMOUNT SITENAME=CSLAB_CC1 SHELFID=1 SLOTID=2 PRIVATEINTERFACE=bond0 PUBLICINTERFACE=bond2 SINGLEFRAGMENTDB=1 INNODDBUFFERPOOL=0.7</pre> </div> <p>For Geo-Redundancy Only</p> <p>Note: If geo-redundancy is used, file /etc/sysconfig/blue must contain two extra lines: For C-CLASS servers in SDM1 (site 1), the two extra lines in file /etc/sysconfig/blue should be:</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre>SITESUFFIX=_1 SITESUFFIXREMOTE=_2</pre> </div> <p>For C-CLASS servers in SDM2 (site 2), the two extra lines in file /etc/sysconfig/blue should be:</p>

Installing SPR 9.0 on HP C-Class G8

		<div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;"> SITESUFFIX=_2 SITESUFFIXREMOTE=_1 </div>  <p>Make sure that there are no space characters left in the /etc/sysconfig/blue file and that SRPDOMAIN value is the same in all servers that belong to a same SDM system.</p>
2 <input type="checkbox"/>	Add the sdmvlans.conf file on active system controller.	<ul style="list-style-type: none"> • Prepare a sdm-vlans.conf file for the SDM installation. • Using SSH or the virtual console of each C-CLASS server, login to the root account. • Copy the prepared sdm-vlans.conf file to: /etc/sysconfig/sdm-vlans.conf <p>Example of sdm-vlans.conf file:</p> <div style="border: 1px solid black; padding: 10px; margin-bottom: 10px;"> <pre> 169.254.0.0 16 255.255.0.0 0.0.0.0 bond0 1 main 10.223.65.128 27 255.255.255.224 10.223.65.129 bond0 5 xsi1 # XSI network for Benfica 10.223.65.128 27 255.255.255.224 10.223.65.129 bond0 5 main 10.223.64.128/27 # XSI network for San Andre 10.223.65.128 27 255.255.255.224 10.223.65.129 bond0 5 main 10.192.211.128/27 10.223.65.64 26 255.255.255.192 10.223.65.65 bond0 3 xmi 10.223.65.64 26 255.255.255.192 10.223.65.65 bond0 3 xmi 10.192.212.38/32 PREFSRC 10.223.65.102 10.223.65.64 26 255.255.255.192 10.223.65.65 bond0 3 main 10.192.212.38/32 PREFSRC 10.223.65.102 </pre> </div> <p>Column 1: Network address Column 2: subnet size Column 3: subnet mask Column 4: Gateway address Column 5: Interface Column 6: Vlan Id Column 7: Network name [one of main, SDMxmi, SDMxsi1, SDMxsi2]</p> <ul style="list-style-type: none"> • If geo-redundancy is used, file /etc/sysconfig/sdm-vlans-conf must contain two extra lines: <pre> GEO_NET GEO_MASK_SIZE GEO_MASK GEO_GATEWAY bond1 GEO_Subnet_ID xmi GEO_2_SDM_VIP/32 PREFSRC GEO_1_SDM_VIP GEO_NET GEO_MASK_SIZE GEO_MASK GEO_GATEWAY bond1 GEO_Subnet_ID main GEO_2_SDM_VIP/32 PREFSRC GEO_1_SDM_VIP </pre>

Installing SPR 9.0 on HP C-Class G8

		<p>Note : A sample of sdm-vlans.conf can be found under /blue/etc/sdm-vlans.conf.sample and used for preparing the sdm-vlans.conf file for this installation.</p> <p>Note: For installations that do not use VLANs, this file is still REQUIRED. The value 1 is used in column 6 (... 1 main).</p> <p>Note : You may need to add extra lines in the sdm-vlans.conf file depending on the remote subnets connected to the SPR node (eg . MPEs in different site),please refer to [TK5] TR006928</p> <p> The instructions commented in sdm-vlans.conf.sample file must be followed .Special characters such as underscore “_” are not supported in Column 7.</p>
<p>3 <input type="checkbox"/></p>	<p>Transfer the SDM software to the servers SDM1 and SDM2 On all back-end blades</p>	<ul style="list-style-type: none"> Using the network or some media (ex. A USB key), transport the SDM software to directory /var/TKLC/upgrade on the Blade Server, then verify the results (the exact file name shown here may vary depending on version): <p># ls /var/TKLC/upgrade/</p>
<p>4 <input type="checkbox"/></p>	<p>Select Blade for SDM Application install</p>	<p>Navigate to Cabinet->Enclosure -> Bay xx – Server Blade</p>  <p>Select Software Tab</p>

8 <input type="checkbox"/>	Add Ras services on each SPR server	<p>If RESTful interface is used for provisioning , add the Ras service on the WebCi for both servers and start the service.</p> <p>Otherwise, skip to next step.</p> <ul style="list-style-type: none"> In the WebCI interface, define the Slot ID of that system as a System Controller <p>Oracle Tekelec SDM™ → System - ID:→ Shelf View</p>												

Installing SPR 9.0 on HP C-Class G8

- Got to the far right pull down and select the Ras service
- Select Add Service on **Slot 1** and **Slot 2**

9 Configure the Ras options

If **RESTful** interface is used for provisioning , add the Ras service on the WebCi for both servers and start the service.

Otherwise, skip to next step.

Configure the Ras options from the Oracle **Tekelec SDM™** → **Service Management:→ Option**

ServiceOption: Ras

HttpsCertFile:

HttpsKeyFile:

Port:

RequireAuth:

WebSecurity:

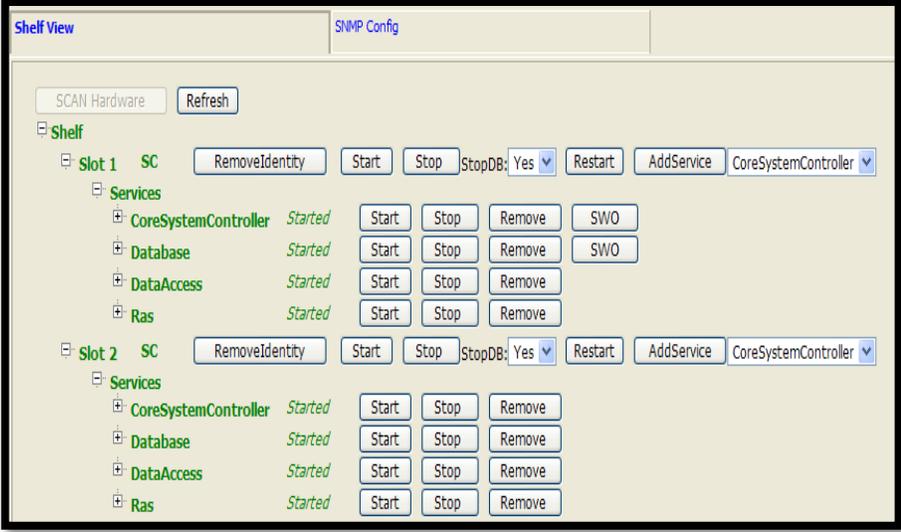

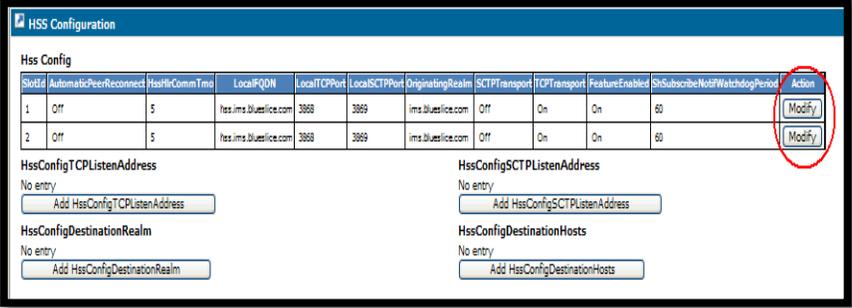

- 1) Specify the certificates and key files for HTTPS (HttpsCertFile, HttpsKeyFile)
- 2) Enable HTTPS if required ; WebSecurity: Enable
- 3) Enable HTTP Authentication if required
- 4) Change the Ras port if required (default 8787)

Update the changes :

Start Ras services :

- Start the Ras Service on **Slot 1**
- Wait a minute then select the refresh button
- Start the Ras Service on **Slot 2**
- Wait a minute then select the refresh button

Installing SPR 9.0 on HP C-Class G8

APPENDIX A: SDM-VLANS.CONF.SAMPLE

```
# File /etc/sysconfig/sdm-vlans.conf.sample
# -----
# Sample config file for "SDM Advanced Routing for Virtual IPs"
#
# File /etc/sysconfig/sdm-vlans.conf is used by SDM to modify
# IP routing to support Virtual IPs (VIPs). IP routing is modified
# when a VIP is activated and when it is deactivated. This also applies
# when a VIP moves from a blade to another (i.e. VIP deactivation
# on blade X, VIP activation on blade Y).
#
# Note that this file has no involvement with IPs declared
# statically (activated by Linux during normal system startup).
# This means that basic IP routing (static default routes, etc.)
# must STILL be configured sufficiently for SDM blades to communicate
# correctly when a blade has no virtual IPs active.
#
#
# IMPORTANT: In order to use SDM Advanced Routing for Virtual IPs,
# copy this file to /etc/sysconfig/sdm-vlans.conf on
# the Active System Controller, and configure the subnets
# according to the customer's network requirements.
#
# If the file /etc/sysconfig/sdm-vlans.conf is very large,
# activation/deactivation time for Virtual IPs may increase.
# You may want to remove most of these comments from
# the actual running file /etc/sysconfig/sdm-vlans.conf ,
# and leave these comments in /etc/sysconfig/sdm-vlans.conf.sample
#
# IMPORTANT: In the following description, a "prefix" is
# an IP subnet base followed by a subnet size,
# for example 10.1.2.0/24
#
# IMPORTANT: The old Linux commands "netstat -rn" and "ifconfig -a"
# are often misleading.
#
# Use the command "ip -f inet addr" to see the list of
# IPv4 addresses on the system.
# Use the command "ip rule list" to see the list
# of policy-routing rules, and the command
# "ip route list table <name>" to see the routing
# entries associated with each table referenced
# by the policy-routing rules.
#
#
# This file is accessed by SDM software on a blade in three scenarios:
# -----
# 1. When SDM software starts (i.e. "service blue start"),
# if a blade is NOT the Active System Controller,
# the file is copied FROM the Active System Controller
# into our local /etc/sysconfig/sdm-vlans.conf.
#
# 2. When a Virtual IP is activated on the blade.
#
```

Installing SPR 9.0 on HP C-Class G8

```
# 3. When a Virtual IP is deactivated on the blade.
#
#
# How to safely modify the VIP routing environment while SDM is running:
# -----
#
# 1. Use SDM software (WebCl, BlueCLI, etc.) to deactivate the Virtual IPs
# that are in subnets for which you need to change the routing
# configuration.
#
# 2. On all SDM blades in the SDM group, verify with "ip -f inet addr"
# that the Virtual IPs for the subnets to be modified are no longer active.
#
# 3. Modify /etc/sysconfig/sdm-vlans.conf for the appropriate subnets.
# Make sure the resulting file is identical on all SDM blades
# in the SDM group.
#
# 4. Reactivate the affected Virtual IPs in SDM software.
#
#
# Syntax of this file:
# -----
# a) Each line that begins with "#" is a comment.
#
# b) Blank lines are ignored.
#
# c) Any other line should contain the following fields
# separated by white space:
#
# <subnet_base> <subnet_size> <subnet_mask> <gateway_ip> <nw_intf> <vlan_id> <table_name>
# [<options>]
#
# where <options>, if present, may take one of the following forms:
#
# <prefix>
# PREFSRC <src_ip>
# <prefix> PREFSRC <src_ip>
#
# d) Rules on configuration lines:
#
# i. If a VIP matches more than one variant of <subnet_base>/<subnet_size>,
# only the most-specific matches are used (the matches with the
# largest size. In other words, if you have lines like this:
#
# 10.1.0.0 16 255.255.0.0 <rest of line 1 config>
# 10.1.0.0 16 255.255.0.0 <rest of line 2 config>
# 10.1.2.0 24 255.255.255.0 <rest of line 3 config>
# 10.1.2.0 24 255.255.255.0 <rest of line 4 config>
#
# when VIP 10.1.1.3 activates or deactivates, only lines 1 and 2 apply
# when VIP 10.1.2.3 activates or deactivates, only lines 3 and 4 apply
#
# ii. a config line is only accepted by SDM if <subnet_size> has the
# exact same meaning as <subnet_mask>, i.e.
#
# a line that begins with "172.30.1.0 24 255.255.255.0 ..." is OK
```

Installing SPR 9.0 on HP C-Class G8

```
# a line that begins with "172.30.1.0 25 255.255.255.128 ..." is OK
# but
# a line that begins with "172.30.1.0 25 255.255.255.0 ..." is rejected
#
# iii. if a subnet is private and non-routable,
# specify <gateway_ip> to be 0.0.0.0 and leave <options> blank
#
# iv. if a subnet must be placed on an interface which has no VLANs,
# or on the "untagged" VLAN of an interface, specify <vlan_id> to be 1
#
# v. If <table_name> is "main", this route is chosen based on the
# destination IP address of a packet emitted by the SDM blade,
# regardless of what the source IP address is.
#
# If <table_name> is not "main", this route is chosen FIRST based
# on the source IP address of a packet emitted by the SDM blade.
# Then, <dest_prefix> needs to be matched for the route to be chosen.
#
# vi. <options> can be one of the following variants:
#
# "" this is a default route,
# i.e. <dest_prefix> = 0.0.0.0/0
#
# <dest_prefix> route applies only to this destination prefix
#
# PREFSRC <src_ip> this is a default route, and use <src_ip>
# as the source IP address in this case
#
# <dest_prefix> PREFSRC <src_ip> route applies only to thi destination prefix, and use <src_ip> as
the source IP address
#
#
# Sample lines that show what can be configured:
# -----
#
# a) When the SDM internal OAM VIP activates
# (SDM requires that the internal OAM subnet must be
# 169.254.0.0/16), SDM configures it on bond0 Vlan 24 ,
# and this subnet is non-routable.
#
# 169.254.0.0 16 255.255.0.0 0.0.0.0 bond0 24 main
#
# b) When a VIP in subnet 10.1.2.0/26 (util1) activates,
# configure it on eth01 (no VLAN). Any packets
# emitted with a source IP address in 10.1.2.0/26
# is sent to gateway 10.1.2.1 regardless of the destination IP.
#
# 10.1.2.0 26 255.255.255.192 10.1.2.1 eth01 1 util1
#
# c) When a VIP in subnet 10.12.13.0/24 (sigtran1) activates,
# configure it on bond0 Vlan 103. Route packets based
# on the destination IP. Packets to 192.168.10.0/24 go to
# 10.12.13.1, packets to 192.168.20.0/24 go to 10.12.13.2.
# Nothing is specified for other subnets (default static routing
# will be used)
#
```

Installing SPR 9.0 on HP C-Class G8

```
# 10.12.13.0 24 255.255.255.0 10.12.13.1 bond0 103 sigtran1 192.168.10.0/24
# 10.12.13.0 24 255.255.255.0 10.12.13.2 bond0 103 sigtran1 192.168.20.0/24
#
# d) Geo-Redundancy and COS provisioning example:
#
# Subnet 10.35.47.0/24 (sdmadm1) is on interface bond0 Vlan 114,
# the subnet can contain two local VIPs:
#   local Geo-Redundancy VIP is 10.35.47.10,
#   and COS provisioning VIP is 10.35.47.11.
# The remote Geo-redundancy VIP is 172.30.24.113.
#
# Any packets using a source IP in 10.35.47.0/24 are sent to
# gateway 10.35.47.1. If they are sent to the distant Geo-redundancy VIP,
# the preferred source IP is the local Geo-redundancy VIP.
#
# For packets where the source IP does not match any other
# source-based routing rules (we reach routing table "main"),
# if the destination IP is the distant geo-redundant VIP,
# set the preferred source IP to the local Geo-redundancy VIP.
```

Installing SPR 9.0 on HP C-Class G8

APPENDIX B: SDM-SSH.CONF SAMPLE

```
# File /etc/sysconfig/sdm-ssh.conf.sample
# "$Id: sdm-ssh.conf.sample 82563 2011-08-22 14:57:55Z mchatel $"
#
# To be able to use "sdm-ssh-tool", you must make a MODIFIED
# copy of this file in /etc/sysconfig/sdm-ssh.conf ,
# adapted to the specific SDM network configuration being used.
#
# Terminology: SDM member - a single running installation of Linux with SDM
#                (usually on a multi-CPU, multi-core machine)
#
#                SDM group - a collection of SDM members intended to run
#                synchronized with the same Active System Controller
#
#                SDM remote group - a distant SDM group with which we need
#                to run Geo-Redundancy traffic
#
#
# 1- Define the local SDM "group with its logical name.
# This logical name is to be used in the identifier part of the root
# account DSA key pair and is shared by all members in the group.
#
# In this lab example, the name is intended to convey the meaning
# "C-class #1, this SDM group contains blades 1,3,5,6"
#
LOCAL-GROUP CSLAB-SPR1
#
# Define all members of the group. The member logical names
# are only used in SDM-SSH-TOOL diagnostic messages
# and do not need to match the Linux host names.
#
# For each member, list the static IP addresses that may be
# destination IPs for SSH connections initiated by other members.
#
# Typically, for each member, the static private IP and the
# static public IP on the SDM OAM network should be listed.
#
MEMBER CSLAB-SPR1-BLADE1 IP-LIST 169.254.1.1 10.15.63.141
MEMBER CSLAB-SPR1-BLADE2 IP-LIST 169.254.1.2 10.15.63.142
#MEMBER CSLAB-SPR2-BLADE1 IP-LIST 169.254.1.1 10.15.63.145
#MEMBER CSLAB-SPR2-BLADE2 IP-LIST 169.254.1.2 10.15.63.146
#
# Define the list of virtual IPs of the group that may be
# destination IPs for SSH connections initiated by any member.
#
# Virtual IPs that will NEVER be used as destination IPs
# in SSH connections do not need to be listed here.
#
LOCAL-VIPS 169.254.1.20 10.15.63.139
#
#
# There may be zero or more SDM remote groups with which we need
# to run Geo-Redundancy traffic. If SDM-SSH-TOOL is also installed
# and used on the remote group, the remote-group name defined here
```

Installing SPR 9.0 on HP C-Class G8

```
# should match the LOCAL-GROUP name used on the remote group.
#
# One or more remote VIPs may be associated with the remote group.
# These are VIPs that must be reachable as SSH destinations from any
# member in our local group.
#
# Typically, because of firewall or routing restrictions, there may
# be only one local SDM member that is able to reach the remote group,
# usually the member that has the local geo-redundancy Virtual IP active.
# So the remote group specification allows configuring one or more
# Virtual IP for the remote group, and one or more local VIPs.
# SDM-SSH-TOOL can only attempt to check & fix remote group keys if it
# is started on a member that has one or more of these local VIPs active !
#
REMOTE-GROUP CSLAB-SPR2 VIPS 10.15.63.140 USE-LOCAL-VIPS 10.15.63.139
```

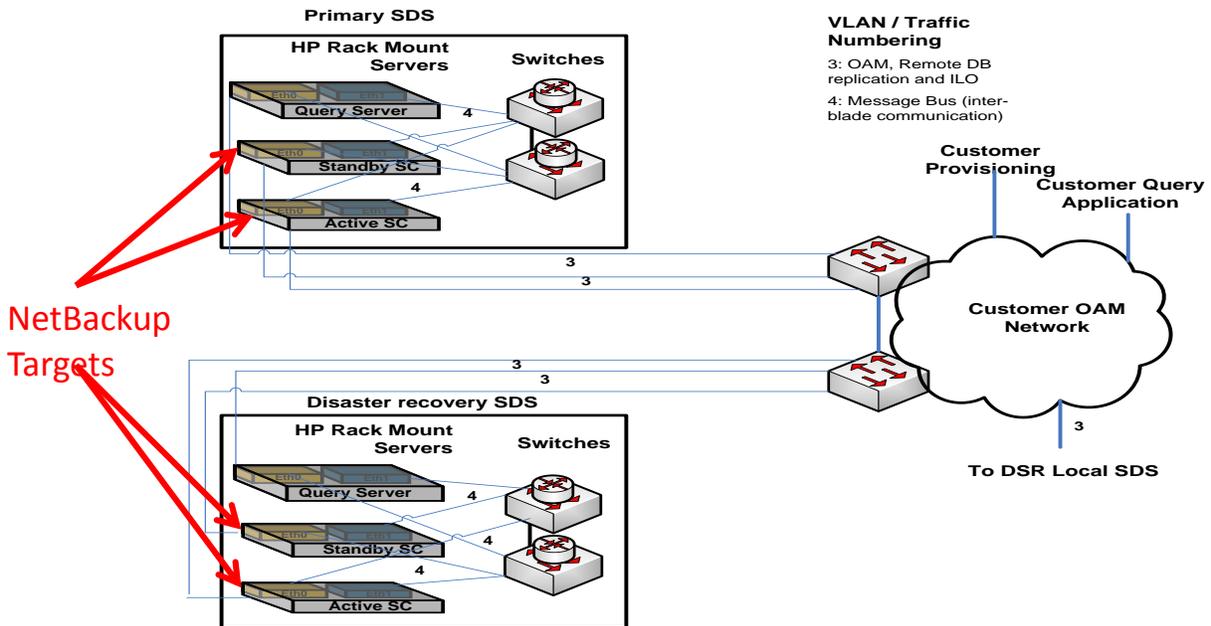

Installing SPR 9.0 on HP C-Class G8

APPENDIX C: NETBACKUP INTERCONNECT STRATEGY

By default, backup activities would share the same bandwidth as XMI and XSI activities (method 1). This can lead to serious performance degradation during the backup time windows, while transfer of backups take place over the network.

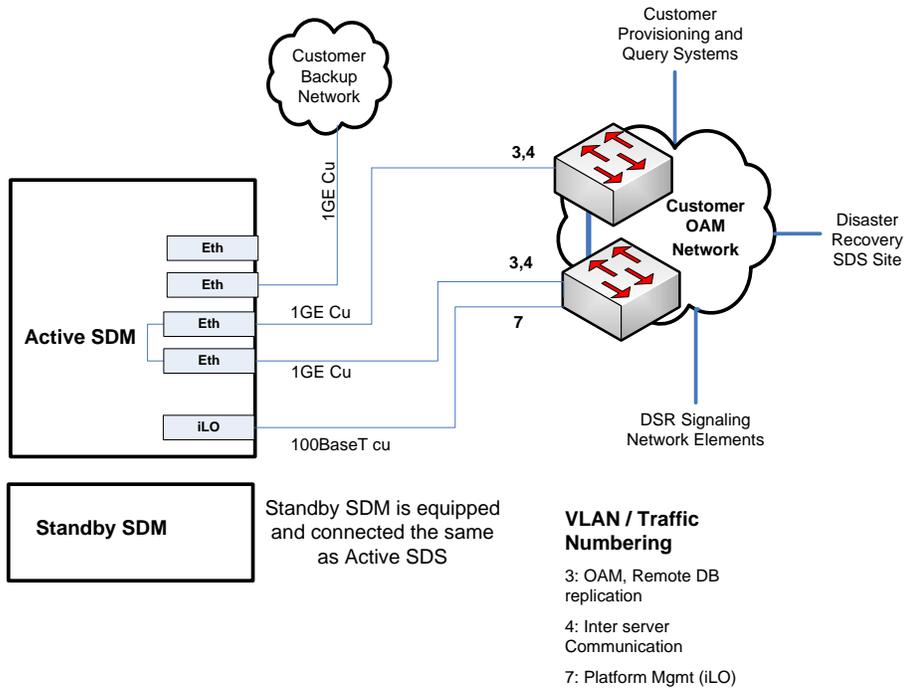

As a result, it is recommended to guarantee bandwidth separation between applications and backups by setting up distinct network paths for them.

For DL380 rackmount servers, one Gigabit Ethernet port on each node should be reserved for connection to the customer's NetBackup infrastructure. If it is decided that not all SDM nodes will be NetBackup clients, only the NetBackup client nodes require the backup Gigabit Ethernet connection. (method 2) XSI-2 interface can be used for this purpose.

Method 1 Example Deployment - SDM uses XMI for NetBackup in Rackmount configuration

Installing SPR 9.0 on HP C-Class G8

Method 2 Example Deployment - SDM utilizes dedicated uplink for NetBackup in Rackmount configuration (XSI-2 recommended)
