

## **JD Edwards World**

Service Enablement Guide

Release A9.4

**E58809-01**

April 2015

Describes how Service Enablement allows you to integrate JD Edwards World Software with other software packages through the use of Java-based Web services.

Copyright © 2015, Oracle and/or its affiliates. All rights reserved.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

# Preface

Welcome to the JD Edwards World Service Enablement Guide.

## Audience

This guide is intended for implementers and end users of JD Edwards World Service Enablement.

## Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at  
<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

### Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit  
<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit  
<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

## Related Information

For additional information about JD Edwards World applications, features, content, and training, visit the JD Edwards World pages on the JD Edwards Resource Library located at:

<http://learnjde.com>

## Conventions

The following text conventions are used in this document:

Convention	Meaning
<b>boldface</b>	Indicates cautionary information or terms defined in the glossary.
<i>italic</i>	Indicates book titles or emphasis.

---

# Introduction

This chapter contains the topic:

- [Section 1.1, "Overview of JD Edwards World Service Enablement."](#)

## 1.1 Overview of JD Edwards World Service Enablement

The purpose of the JD Edwards World Service Enablement product is to expose JD Edwards World business processes to the outside world.

JD Edwards created a Java API layer, which is exposed to outside applications through Web services. To communicate with JD Edwards World applications, the Java API layer uses one of several options.

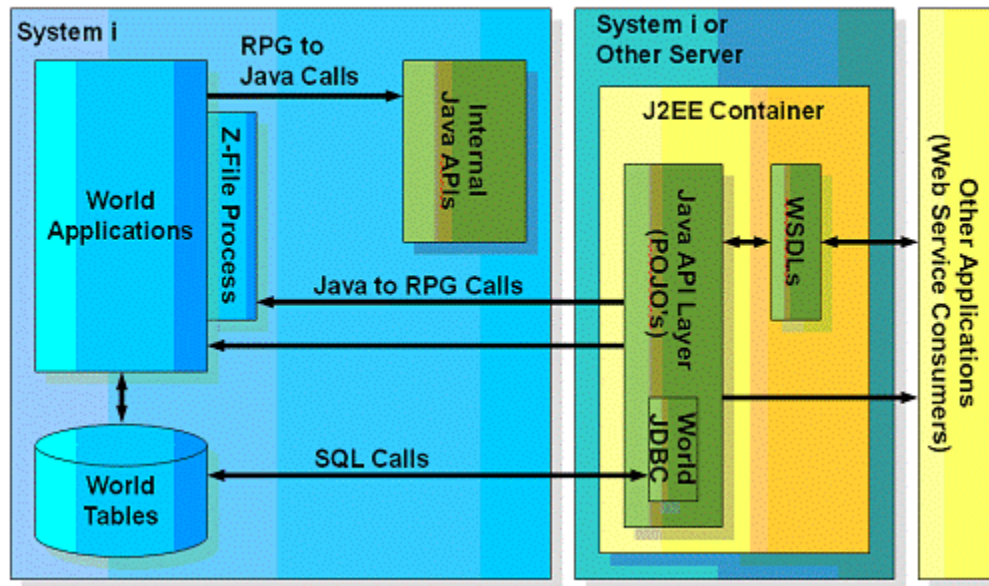

The first option is to utilize a new JD Edwards World Z-File Process; wherein the Java API layer writes to Z-Tables using the JD Edwards World JDBC database connector, then the Java program calls DREAM Writer to access the JD Edwards World interactive applications in a batch mode.

Another option is having the API layer make RPG program calls from the Java code using the JT400 toolset.

A third communication option used is to perform SQL calls from the Java code to the JD Edwards World database tables. The JD Edwards World JDBC database connector is used to process the SQL, as it allows for data conversion from the JD Edwards World database. Finally, RPG programs might call the internal Java API layer. The communication option used depends on the type of business process and could include more than one of the choices described here.

Data objects were created for each business processes. The data objects are exposed to outside applications by utilizing Web services (that use a WSDL interface) for each business process. The Web services are bundled inside an Enterprise Archive file, or .ear file, which can be deployed to a Java application server. The Web services are J2EE compliant and can be used, or consumed, by other Java programs. The WSDL interface also allows for the Web services to be consumed by third-party integration applications, such as Oracle's BPEL Process Manager or IBM's WebSphere Business Integrator.

The following diagram displays a graphical view of the JD Edwards World Service Enablement architecture.

**Figure 1–1 World A9.2 Service Enablement Architecture****World A9.2 Service Enablement**

The different colors in the diagram represent different components of Service Enablement:

- Light blue - JD Edwards World RPG, DB2 for i components
- Light green - JD Edwards World Java, J2EE components
- Yellow - non-JD Edwards World applications

Following is a brief explanation of the terms used in the diagram:

- Z-File Process - new JD Edwards World process for accessing interactive applications using a batch Z-File mode
- API - Application Programming Interface
- J2EE - Java 2 Platform, Enterprise Edition
- J2EE Container - J2EE application server (environment)
- Java - programming language designed for distributed environments
- World JDBC - Oracle custom JDBC database connector, includes JD Edwards World data scrubbing
- RPG - programming language in which JD Edwards World is written
- SQL - Structured Query Language
- WSDLs - Web Service Definition Language (web service document)

---

# Installation Components

This chapter contains these topics:

- [Section 2.1, "Components of JD Edwards World Service Enablement,"](#)
- [Section 2.2, "Application Areas with Installed Web Services,"](#)
- [Section 2.3, "Oracle Enterprise Repository \(OER\)."](#)

## 2.1 Components of JD Edwards World Service Enablement

The following components are installed when you install JD Edwards World Service Enablement:

- JD Edwards World A9.2 / A9.2.1 Service Enablement Java application .ear file for either the Oracle WebLogic Application Server (WLS) or the IBM WebSphere Application Server (WAS).
  - For WLS, the file is WebServices\_v4\_WLS.ear
  - For WAS, the file is WebServices\_v4\_WAS.ear

This file contains the Java API .jar file, the Web services files, and all the supporting files. If needed, the file deploys to the application servers and then you can run the Web services.

- Source code for the services is in the WebServices\_v4\_SourceFiles.zip. Source code is stored in the .zip files for use in any Java IDE.
- Javadoc is included to help further explain the Web Services and the underlying source code. The Javadoc is included in the WebServices\_v4\_Javadoc.zip file.
- Converged Application Repository files are located in the WorldCARV1.zip. These files are to be used with Oracle Enterprise Repository.

## 2.2 Application Areas with Installed Web Services

The following lists the JD Edwards World application areas that have Web services installed with World Service Enablement:

- Address Book
- Customer Master
- Supplier Master
- Item Master Information
- G/L Account

- Journal Entry
- Fixed Asset Master Information
- Fixed Asset Cost Summary
- Purchase Order
- Sales Order
- Item Master Information

## 2.3 Oracle Enterprise Repository (OER)

OER serves as the core element to the Oracle SOA Governance solution. An industry-leading metadata repository, OER provides a solid foundation for delivering governance throughout the service-oriented architecture (SOA) lifecycle by acting as the single source of truth for information surrounding SOA assets and their dependencies. OER provides a common communication channel for the automated exchange of metadata and service information between service consumers, providers, policy decision points, and additional governance tooling. It provides the visibility, feedback, controls, and analytics to keep your SOA on track to deliver business value. The intense focus on automation helps to overcome barriers to SOA adoption and streamline governance throughout the lifecycle.

To make it easier to get started with OER, Oracle's Application Integration Architecture (AIA) team has developed an easier way to load services metadata into OER. Called the Converged Application Repository (CAR) project, this is an XML-based front-end to OER.

If you want to have an OER instance on site, you can purchase OER. This allows for loading JD Edwards World Web services metadata using the WorldCARV1.zip after installing JD Edwards World Service Enablement.

---

## Components of a World Web Service

This chapter contains these topics:

- [Section 3.1, "Java Layer,"](#)
- [Section 3.2, "Retrofitting Web Services."](#)

### 3.1 Java Layer

The Java API layer used for JD Edwards World Service Enablement has several different parts. The parts include the data objects that represent the data in JD Edwards World, implementation classes, connection classes and other supporting classes. The source code for the Java API layer is included with the install. Both an Oracle JDeveloper project and an IBM WebSphere workspace have been provided.

When creating a Web Service, all of the above components need to be in place. Direct calls to JD Edwards World RPG programs and database queries are necessary to collect the data. In these cases, the IBM JT400 API and the JD Edwards World JDBC database connector process the calls to the program and the database queries.

The implementation classes use the data objects as inputs and outputs. The implementation classes are used to create the Web services. The Web services are created using the internal Integrated Development Environment (IDE) tools. By doing this, the WSDL and all the other necessary parts of the web service are created. Refer to your selected IDE documentation for further instructions on creating Web services.

### 3.2 Retrofitting Web Services

In some cases, retrofitting the Web Services to a prior JD Edwards World release might be required. Though this is considered a customization of the software, the following are some suggestions on how to approach the task.

- Create a copy of the Java source delivered so that when updates are issued changes are not overridden.
- When creating classes to handle prior release processing, identify them differently from the base classes delivered

## Processing Options

This appendix contains the topic:

- [Section A.1, "Processing Options."](#)

### A.1 Processing Options

The following table lists the applications and DREAM Writer versions used by Service Enablement. If the processing options are changed for any of these versions, it might cause the processing of the Web services to fail. Proceed with caution if you choose to change any of these versions.

Description	Form ID	Version No
Item Master Information - Revisions	P4101	ZJDES001
Address Book Information	P01051	ZJDES001
A/R Information	P01053	ZJDES001
Accounts Payable Information	P01054	ZJDES001
Address Revisions	P0116	ZJDES001
Asset Master Information	P1201	ZJDES001
Item Cost Summary	P122101	ZJDES001

Purchase Order Batch Entry Edit Object	P471411	XJDES001
Purchase Order Batch Entry Edit Object	P471411	XJDES002
Accounts by Business Unit	P0901	ZJDES001

## List of Web Services

This appendix contains the topic:

- [Section B.1, "List of Web Services."](#)

### B.1 List of Web Services

The following are the individual Web services provided with JD Edwards World A9.2 / A9.2.1 Service Enablement. For a more in depth description of the services, please refer to the JavaDoc provided with the install.

---

**Note:** You can use most services with A9.2 and A9.2.1. The following services require A9.2.1:

---

ECOHeaderImplService  
 ECOPartsListImplService  
 ECORelatedItemImplService  
 EngineeringChangeOrderManagerService  
 IntegrationTimeStampManagerService  
 WorkOrderCategoryCodesImplService

Item	Description
Accounts Payable	SupplierImpl_v4Service
Accounts Receivable	CustomerImpl_v4Service
Address Book	AddressBookImpl_v4Service
BankAccountImpl_v4Service	
ContactAddressesImpl_v4Service	
ContactPhonesImpl_v4Service	
ContactImpl_v4Service	
EmailAddressImpl_v4Service	
RelatedAddressImpl_v4Service
