## 1 Introduction

## 2 Overview
- 2.1 Out-of-the-box Periodic Reports ........................................................................................................ 2-1
- 2.2 Supported Output Formats ................................................................................................................. 2-1
- 2.3 Security Limitations ............................................................................................................................ 2-1
- 2.3.1 Authorization ................................................................................................................................ 2-2
- 2.3.2 Authentication ............................................................................................................................... 2-2
- 2.4 Catalog .............................................................................................................................................. 2-2
- 2.5 Scheduler Support .............................................................................................................................. 2-2
- 2.6 Template Design ............................................................................................................................... 2-2
- 2.7 Database Code Wrapping .................................................................................................................. 2-2

## 3 Generic Architecture
- 3.1 Generic Architecture......................................................................................................................... 3-1

## 4 Database Architecture
- 4.1 Database Architecture ..................................................................................................................... 4-1
- 4.1.1 BI Publisher Periodic Reporting Owner Schema ......................................................................... 4-1
- 4.1.2 Tables .......................................................................................................................................... 4-2
- 4.1.3 Views .......................................................................................................................................... 4-3
- 4.1.4 Database Link .............................................................................................................................. 4-4
- 4.1.5 Java Objects and Function Call ................................................................................................. 4-4
- 4.1.6 Packages ................................................................................................................................... 4-4
- 4.1.7 BI Publisher Owner Schema Database Jobs ............................................................................. 4-7
- 4.2 Argus Safety Database Updates ....................................................................................................... 4-7
5 Design Structure

5.1 BI Publisher Periodic Reports Design Structure ........................................ 5-1
5.1.1 BI Publisher Data Model ................................................................. 5-1
5.1.1.1 Data Sets ................................................................................. 5-1
5.1.1.2 Event Triggers ......................................................................... 5-2
5.1.1.3 Parameters .............................................................................. 5-2
5.1.2 BI Publisher Report Layout .............................................................. 5-4
5.2 Report Data Flow ............................................................................. 5-4
5.2.1 Argus Safety UI Entry ................................................................. 5-4
5.2.2 BI Publisher Data Flow ................................................................. 5-5

6 Extending a BIP Report

6.1 Database Layer .................................................................................. 6-1
6.1.1 Configuration Extensibility ............................................................ 6-2
6.1.2 Extending with User Exits .............................................................. 6-2
6.1.3 Extending Global Temporary Tables .......................................... 6-4
6.1.4 Extending using Custom Objects .................................................. 6-4
6.1.4.1 Adding New Columns to GTT or RM Tables ......................... 6-4
6.1.4.2 Filling Custom Tables .............................................................. 6-4
6.1.4.3 Filling Custom Views ............................................................... 6-4
6.1.4.4 Filling Custom Packages ....................................................... 6-5
6.1.5 BIP Custom Schema for Cloud .................................................... 6-5
6.1.6 Adding or Modifying a View .......................................................... 6-5
6.1.7 Adding a Column to the Existing Table ......................................... 6-5
6.2 Extending the BI Publisher Data Model .......................................... 6-5
6.2.1 Data Model Query Naming Convention .................................... 6-5
6.2.2 Data Model Nested Queries .......................................................... 6-6
6.2.3 Data Structure Groups ................................................................. 6-7
6.2.4 DSUR Summary Table Naming Conventions ........................... 6-8
6.2.5 Case Series Tables ........................................................................ 6-9
6.2.5.1 Common Queries (lexicals) Used in Reports ......................... 6-9
6.2.6 Lexical Parameters ...................................................................... 6-10

7 Managing Users and Roles

7.1 Creating Users and Assigning Roles .............................................. 7-1
7.1.1 Creating Custom Roles ................................................................. 7-3
7.2 Configuring BIP Roles and Permissions ......................................... 7-5
7.2.1 Out-of-the-box BIP Configuration .............................................. 7-5
7.3 Fusion Middleware Security Model .................................................. 7-6
7.3.1 Creating Roles, Adding Data Sources, and Assigning Roles in WebLogic Enterprise Manager 7-6
7.4 Creating Application Policy ............................................................... 7-7
7.5 Configuring BIP Users and Roles: Oracle Fusion Middleware Security Model.............. 7-10
7.5.1 BI Admin User........................................................................................................... 7-10
7.5.2 Data Modeler User................................................................................................... 7-10
7.5.3 Report Writer User.................................................................................................. 7-10
7.5.4 Global Admin User................................................................................................. 7-10
7.5.5 Configuring BIP Roles............................................................................................. 7-11
7.5.6 Folder Level Permissions........................................................................................ 7-11

A Parameters

B Blinding
B.1 Blinding Logic .............................................................................................................. B-1

C Flexible Data Re-Categorization
C.1 Flexible Data Re-Categorization................................................................................ C-1

D Troubleshooting
D.1 BIP Icon not Displayed Against Corresponding BIP Specific Fields in the Periodic Reporting Configuration D-1
D.2 BI Publisher Periodic report does not Execute from Argus UI .................................... D-2
D.3 Database Connection Errors....................................................................................... D-3
D.4 BI Publisher Scheduled Report Output does not Show up ...................................... D-4
BI Publisher Periodic Reporting enables flexible handling of periodic reports in Argus Safety. The Oracle Argus Safety BI Publisher Periodic Reporting Extensibility Guide provides Argus Safety–BI Publisher integration details, and out-of-the-box periodic report details along with data models, algorithms, and methods to customize or extend these reports as needed.

This preface includes the following topics:

- **Audience**
- **Documentation Accessibility**
- **Related Documents**
- **Finding Information and Patches on My Oracle Support**
- **Finding Oracle Documentation**
- **Conventions**

**Audience**

This guide assumes that your organization has the expertise to perform the job functions listed in this section. If your staff lacks these skills, we recommend that you engage Oracle Health Sciences Consulting.

**Oracle Database Administrators**

Customizing the database package supplied with Oracle Argus Safety BI Publisher Periodic Reporting requires a level of knowledge equivalent to having mastered the material in Oracle’s DBA Architecture and Administration course. You must be able to read SQL*Plus scripts and edit them. You must be able to run SQL scripts and review logs for Oracle errors.

**System Administrators**

Customizing and maintaining an Oracle Argus Safety BI Periodic Reporting requires mastery of the following tools:

- Microsoft Windows Operating System
- Unix or Linux based Operating Systems
- OBIEE and (or) Oracle BI Publisher
- Oracle Web Logic Administration
Documentation Accessibility

For information about Oracle’s commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support
Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Related Documents
For more information, see the following documents in the Oracle Argus Safety documentation set:

- Oracle Argus Safety User’s Guide
- Oracle Argus Safety Administrator’s Guide
- Oracle Argus Safety Database Administrator’s Guide
- Oracle Argus Dossier User’s Guide
- Oracle Argus Unblinding User’s Guide
- Oracle Business Intelligence Quick Start Guide
- Oracle Business Intelligence Report Designer’s Guide
- Oracle Business Intelligence Administrator’s Guide
- Oracle Business Intelligence User’s Guide
- Oracle Business Intelligence Data Modeling Guide

Finding Information and Patches on My Oracle Support

Your source for the latest information about Argus Safety is Oracle Support’s self-service website My Oracle Support.

Before you install and use Argus Safety, always visit the My Oracle Support website for the latest information, including alerts, White Papers, and bulletins.

Creating a My Oracle Support Account

You must register at My Oracle Support to obtain a user name and password account before you can enter the website.

To register for My Oracle Support:

1. Open a web browser to https://support.oracle.com.
2. Click the Register link to create a My Oracle Support account. The registration page opens.
3. Follow the instructions on the registration page.
Signing In to My Oracle Support
To sign in to My Oracle Support:

1. Open a web browser to https://support.oracle.com.
2. Click Sign In.
3. Enter your user name and password.
4. Click Go to open the My Oracle Support home page.

Finding Information on My Oracle Support
There are many ways to find information on My Oracle Support.

Searching by Article ID
The fastest way to search for information, including alerts, White Papers, and bulletins is by the article ID number, if you know it.

To search by article ID:

2. Locate the Search box in the upper right corner of the My Oracle Support page.
3. Click the sources icon to the left of the search box, and then select Article ID from the list.
4. Enter the article ID number in the text box.
5. Click the magnifying glass icon to the right of the search box (or press the Enter key) to execute your search.

The Knowledge page displays the results of your search. If the article is found, click the link to view the abstract, text, attachments, and related products.

Searching by Product and Topic
You can use the following My Oracle Support tools to browse and search the knowledge base:

■ Product Focus — On the Knowledge page under Select Product, type part of the product name and the system immediately filters the product list by the letters you have typed. You do not need to type Oracle. Select the product you want from the filtered list and then use other search or browse tools to find the information you need.

■ Advanced Search — You can specify one or more search criteria, such as source, exact phrase, and related product, to find information. This option is available from the Advanced link on almost all pages.

Finding Patches on My Oracle Support
Be sure to check My Oracle Support for the latest patches, if any, for your product. You can search for patches by patch ID or number, or by product or family.

To locate and download a patch:

2. Click the Patches & Updates tab. The Patches & Updates page opens and displays the Patch Search region. You have the following options:
In the **Patch ID or Number** field, enter the number of the patch you want. (This number is the same as the primary bug number fixed by the patch.) This option is useful if you already know the patch number.

To find a patch by product name, release, and platform, click the **Product or Family** link to enter one or more search criteria.

3. Click **Search** to execute your query. The Patch Search Results page opens.

4. Click the patch ID number. The system displays details about the patch. In addition, you can view the Read Me file before downloading the patch.

5. Click **Download**. Follow the instructions on the screen to download, save, and install the patch files.

### Finding Oracle Documentation

The Oracle website contains links to all Oracle user and reference documentation. You can view or download a single document or an entire product library.

### Finding Oracle Health Sciences Documentation

To get user documentation for Oracle Health Sciences applications, go to the Oracle Health Sciences documentation page at:

http://www.oracle.com/technetwork/documentation/hsgbu-154445.html

---

**Note:** Always check the Oracle Health Sciences Documentation page to ensure you have the latest updates to the documentation.

---

### Finding Other Oracle Documentation

To get user documentation for other Oracle products:

1. Go to the following web page:

   http://www.oracle.com/technology/documentation/index.html

   Alternatively, you can go to http://www.oracle.com, point to the Support tab, and then click **Documentation**.

2. Scroll to the product you need and click the link.

3. Click the link for the documentation you need.

### Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td><code>monospace</code></td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Argus Safety BI Publisher Periodic Reporting leverages the capabilities of the Oracle BI Publisher reporting solution for Argus Safety Periodic Reports. This solution helps customers overcome the challenges of periodic reporting to meet a variety of business needs.

This document provides Argus Safety–BI Publisher integration details, describes the BI Publisher Periodic Reports framework, and describes ways to customize the report as per customer needs.

This chapter provides a basic overview of the topics in this guide.

| Table 1–1  Components of the Extensibility Guide |
|-----------------|------------------------------------------------|
| Chapter Name    | Description                                      |
| Introduction    | Provides an overview of the topics in this guide.|
| Overview        | Provides an overview of the product.             |
| Generic Architecture | Describes the generic architecture.              |
| Database Architecture | Describes the database architecture.          |
| Design Structure | Describes access grants.                        |
| Extending a BIP Report | Describes the report architecture.          |
| Managing Users and Roles | Describes users and their roles. Also discusses application policy. |
This chapter provides an overview of the product. It contains:

- **Section 2.1, "Out-of-the-box Periodic Reports"**
- **Section 2.2, "Supported Output Formats"**
- **Section 2.3, "Security Limitations"**
- **Section 2.4, "Catalog"**
- **Section 2.5, "Scheduler Support"**
- **Section 2.6, "Template Design"**
- **Section 2.7, "Database Code Wrapping"**

### 2.1 Out-of-the-box Periodic Reports

The out-of-the-box Argus Safety BI Publisher Periodic Reporting feature provides the following periodic reports:

- The Periodic Benefit Risk Assessment Report (PBRER)
- The Development Safety Update Report (DSUR) also known as Clinical Trial Periodic Report (CTPR)
- The Post Marketed Aggregate Report (PMAR, also called PSUR)

### 2.2 Supported Output Formats

Out-of-the-box Argus Safety BI Publisher Periodic reports support the following output formats by default:

- PDF
- RTF

You can also get the output in an XML format. The out-of-the-box reports are not designed to support the CSV format. However, you can prepare a custom report supporting the CSV format.

### 2.3 Security Limitations
2.3.1 Authorization

Argus Safety BI Publisher Periodic Reporting has been certified for the following security models:

- BI Publisher Security
- Fusion Middleware Security

2.3.2 Authentication

The Argus Safety BI Publisher Periodic Reporting feature is certified for Oracle Access Manager (OAM) and Single Sign-on (SSO).

2.4 Catalog

Argus Safety BI Publisher Periodic Reporting supports the Oracle BI Publisher File System Catalog.

2.5 Scheduler Support

Argus Safety BI Publisher Periodic Reporting supports Quartz scheduler.

2.6 Template Design

Out-of-the-box (OOTB) Aggregate reports use RTF templates.

2.7 Database Code Wrapping

All Argus Safety objects are code wrapped. However, to facilitate and encourage customers to handle their own customizations, the system does not wrap database code under the BIP Owner user.

Oracle recommends that customers use the APIs to alter or extend the functionality. Using the APIs enables upward compatibility and Oracle support.
This chapter discusses BI Publisher Periodic Reporting generic architecture.

### 3.1 Generic Architecture

The BI Publisher Periodic Reporting functionality is an Argus Safety add-on feature that you can enable.

For more information on enabling this feature, refer to the Enabling and Configuring BI Publisher Periodic Reporting section in the *Argus Safety Install Guide*.

Figure 3-1 displays the architecture of BI Publisher Periodic Reporting with Argus Safety.

*Figure 3–1  BIP Periodic Reporting Architecture*

BI Publisher reports can be executed from Argus Safety UI or through the BI Publisher console. Table 3-1 explains the core components involved in the architecture diagram.
### Table 3–1 Core Components of the Architecture Diagram

<table>
<thead>
<tr>
<th>Component</th>
<th>Functionality</th>
</tr>
</thead>
<tbody>
<tr>
<td>Argus Web Console</td>
<td>The first piece of the application for configuring Argus Safety. Handles the following:</td>
</tr>
<tr>
<td></td>
<td>- Enabling the BIP module</td>
</tr>
<tr>
<td></td>
<td>- Supplying the necessary BIP security credentials and setting up the persist duration</td>
</tr>
<tr>
<td></td>
<td>- Setting up the report template path</td>
</tr>
<tr>
<td>Argus Web</td>
<td>Provides the report configuration for ICH PSUR and CTPR reports. Supplies the criteria that generates the case series.</td>
</tr>
<tr>
<td></td>
<td>The batch print screen runs either a legacy periodic report or a BIP report based on user selection. It also lets you generate or reuse already generated case series.</td>
</tr>
<tr>
<td>AG Service</td>
<td>Internally invokes the BIP Periodic report through WebServices and runs the report in the background.</td>
</tr>
<tr>
<td>Argus Database - BIP</td>
<td>New schema created during the schema creation that holds all objects used for generating the periodic reports.</td>
</tr>
<tr>
<td>Schema</td>
<td>The objects in the schema are responsible for generating the data needed.</td>
</tr>
<tr>
<td>BIP Server</td>
<td>Server where BI Publisher reports are located and executed. Report output is temporarily stored in the BIP server.</td>
</tr>
</tbody>
</table>

For more information on the Argus Web Console, Argus Web, and AG Service, refer to the *Argus Safety User Guide*.

**Note:** The OAM server, if chosen, also needs authentication.
This chapter contains the following sections:
- Section 4.1, "Database Architecture"
- Section 4.2, "Argus Safety Database Updates"
- Section 4.3, "Access Grants to BI Publisher Owner"

4.1 Database Architecture

BI Publisher Periodic Reporting is a customizable Argus Safety feature. The database components and changes specific to BIP reports are explained in the sections that follow.

4.1.1 BI Publisher Periodic Reporting Owner Schema

Installing the Argus Safety database prompts for the creation of the BI Publisher Owner user. This schema contains all database objects needed for BI Publisher Periodic Reporting. It also has access to some Argus Safety schema objects through synonyms.

---

**Note:** You cannot update case data from the BIP Publisher Owner schema. You can only update the Periodic Report status related tables such as `CMN_REG_REPORTS`, `PER_REPORT_QUEUE` and `PER_REPORT_STS`. The system updates the `CASE_REG_REPORTS` table for final reports. The system accesses the report blob tables from the BIP Owner to store the report output in Argus Safety.

---

The schema name is configurable at the time of creation. The system makes an entry in the Common Profile switches to store this schema name for reference by Argus Mart.

For report generation, this schema holds:
- Tables
- Views
- The unzip utility function
- A Java object
- Packages
- Database links
- Database jobs
4.1.2 Tables

Tables in the BIP schema populate the case data:

- **Global Temporary tables** (GTT) temporarily store data for report output generation. These are the only tables used in the BIP data model.
- **RM_tables** store persist data and are copies of the GTT tables. The system stores parameters in these tables based on the Persist data.
- **Configuration tables** handle parameters and transactions.
- **SUPPORT tables** store information such as parameters and their values, case series details, and BIP job details.

Table 4-1 provides the list of tables in the BIP Owner schema and their users.

<table>
<thead>
<tr>
<th>Table Name</th>
<th>Type</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>RPT_AGG_PARAMS</td>
<td>SUPPORT</td>
<td>Stores the list of parameters that are passed down to run the report.</td>
</tr>
<tr>
<td>RPT_AGG_CASE_SERIES</td>
<td>SUPPORT</td>
<td>Stores case series information.</td>
</tr>
<tr>
<td>RPT_AGG_CS_CASES</td>
<td>SUPPORT</td>
<td>Stores all cases in the case series that are selected for BIP report generation. For example, Main case series, Cumulative case series, Section 6.2 case series, Ad hoc1 case series, and so on.</td>
</tr>
<tr>
<td>RPT_AGG_BIP_JOB</td>
<td>SUPPORT</td>
<td>Stores BIP job information and other transactional data. This table data is retained without purging.</td>
</tr>
<tr>
<td>GTT_RPT_AGG_CASE</td>
<td>Global Temp</td>
<td>Stores case information.</td>
</tr>
<tr>
<td>GTT_RPT_AGG_DRUG</td>
<td>Global Temp</td>
<td>Stores drug related information.</td>
</tr>
<tr>
<td>GTT_RPT_AGG_EVENT</td>
<td>Global Temp</td>
<td>Stores event related information.</td>
</tr>
<tr>
<td>GTT_RPT_AGG_EV2DRUG</td>
<td>Global Temp</td>
<td>Stores event to drugs related assessment details.</td>
</tr>
<tr>
<td>GTT_RPT_AGG_HEALTHAUTHID</td>
<td>Global Temp</td>
<td>Stores health authority details.</td>
</tr>
<tr>
<td>GTT_RPT_AGG_UNIQ_CASES</td>
<td>Global Temp</td>
<td>Maintains a list of unique cases.</td>
</tr>
<tr>
<td>GTT_RPT_AGG_DET_LIST</td>
<td>Global Temp</td>
<td>Temporary support table that fetches assessment data.</td>
</tr>
<tr>
<td>GTT_RPT_AGG_DRUGNAMES</td>
<td>Global Temp</td>
<td>Stores the drug names for reporting.</td>
</tr>
<tr>
<td>GTT_RPT_AGG_BIP_BLOB</td>
<td>CONFIG</td>
<td>Copies and holds the report output blob between the BIP Owner schema and the BIP Metadata repository database.</td>
</tr>
<tr>
<td>RPT_AGG_JOB_EXEC_STS</td>
<td>CONFIG</td>
<td>Used to avoid multiple report jobs fetching the report output at the same time.</td>
</tr>
<tr>
<td>RM_RPT_AGG_CASE</td>
<td>PERSIST</td>
<td>Persist table for GTT_RPT_AGG_CASE.</td>
</tr>
<tr>
<td>RM_RPT_AGG_DET_LIST</td>
<td>PERSIST</td>
<td>Persist table for GTT_RPT_AGG_DET_LIST.</td>
</tr>
<tr>
<td>RM_RPT_AGG_DRUG</td>
<td>PERSIST</td>
<td>Persist table for GTT_RPT_AGG_DRUG.</td>
</tr>
<tr>
<td>RM_RPT_AGG_DRUGNAMES</td>
<td>PERSIST</td>
<td>Persist table for GTT_RPT_AGG_DRUGNAMES.</td>
</tr>
<tr>
<td>RM_RPT_AGG_EV2DRUG</td>
<td>PERSIST</td>
<td>Persist table for GTT_RPT_AGG_EV2DRUG.</td>
</tr>
<tr>
<td>RM_RPT_AGG_EVENT</td>
<td>PERSIST</td>
<td>Persist table for GTT_RPT_AGG_EVENT.</td>
</tr>
<tr>
<td>RM_RPT_AGG_HEALTHAUTHID</td>
<td>PERSIST</td>
<td>Persist table for GTT_RPT_AGG_HEALTHAUTHID.</td>
</tr>
</tbody>
</table>
For details about tables, columns, and column mappings with Argus Safety, refer to the embedded Argus Aggregate Reporting Data Model.

4.1.3 Views

The BIP Reporting data model uses the views in the BIP Owner schema to fetch data from Global Temporary tables. These views are:

- V$RPT_ALL_CLINICALSUMMARY
4.1.4 Database Link

A default database link appears when you enable BI Publisher Periodic reporting. This link is created between the BI Publisher Owner schema and the BI Publisher Repository database and copies the report output blob to the Argus Safety database.

4.1.5 Java Objects and Function Call

BIP report output is stored in the metadata repository object in a zipped format. A Java object in the BI Publisher schema extracts the output file. This Java object is embedded in a function.

4.1.6 Packages

The BI Publisher Owner schema holds the following package types:

- Utility package
- Data load package
- User exits package

**PKG_AGG_RPT_UTIL Utility Package**

The utility package holds minor utility features for the data load. Table 4-2 provides a list of functions and procedures and their usage.

<table>
<thead>
<tr>
<th>Procedure/Function</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>f_get_query_details</td>
<td>Populates the case series or query prompts that the user can access.</td>
</tr>
<tr>
<td>f_print_as_text</td>
<td>Determines the water mark.</td>
</tr>
<tr>
<td>f_get_cs_name</td>
<td>Returns the case series name for a Case Series ID.</td>
</tr>
<tr>
<td>f_get_agency_name</td>
<td>Gets the agency name for the passed Agency ID.</td>
</tr>
<tr>
<td>p_fetchrptoutput</td>
<td>Copies the report output data into Argus tables, updates CMN_REG_REPORTS, updates the report status tables and stores the submission details of the final report.</td>
</tr>
<tr>
<td>f_get_duration</td>
<td>Returns a formatted duration for printing in a report. For example, 10 days.</td>
</tr>
<tr>
<td>f_get_codelist_val</td>
<td>Gets the code list display value.</td>
</tr>
<tr>
<td>f_get_enterprises</td>
<td>Gets the Active Enterprise list on the BIP console.</td>
</tr>
<tr>
<td>f_get_cmn_profile_flag</td>
<td>Fetches the cmn_profile value on key.</td>
</tr>
<tr>
<td>f_ConvertBlobToClob</td>
<td>Converts the blob data into clob.</td>
</tr>
</tbody>
</table>
PKG_AGG_RPT Data Load Package

The data load package handles the data extraction and derivations that prepare the data for reporting. Table 4-3 provides the complete list of procedures and functions present in this package.

Table 4–3 Data Load Package Details

<table>
<thead>
<tr>
<th>Procedure/Function</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Global Variables</td>
<td>Describes all parameters shown or hidden on the BIP report screen as package level variables. Parameter values are automatically stored by the BIP report during execution.</td>
</tr>
<tr>
<td>Lexical Variables</td>
<td>Normal package variables described according to the lexical parameters used in the BIP report.</td>
</tr>
<tr>
<td>p_pop_psur_case_temp</td>
<td>Populates the temp table GTT_RPT_AGG_CASE.</td>
</tr>
<tr>
<td>p_pop_psur_drug_temp</td>
<td>Populates the temp table GTT_RPT_AGG_DRUG.</td>
</tr>
<tr>
<td>p_pop_psur_event_temp</td>
<td>Populates the temp table GTT_RPT_AGG_EVENT.</td>
</tr>
<tr>
<td>p_pop_psur_ev2drug_temp</td>
<td>Populates the table GTT_RPT_AGG_EV2DRUG.</td>
</tr>
<tr>
<td>p_pop_psur_healthauthids_temp</td>
<td>Populates the temp table GTT_RPT_AGG_HEALTHAUTHID.</td>
</tr>
<tr>
<td>p_pop_psur_drugnames_temp</td>
<td>Populates the table GTT_RPT_AGG_DRUGNAMES.</td>
</tr>
<tr>
<td>f_before_data</td>
<td>The main function invoked from BI Publisher. Called from the Before Report trigger of the BI Publisher report.</td>
</tr>
<tr>
<td>f_get_report_id</td>
<td>Retrieves the PN_REG_REPORT_ID parameter value.</td>
</tr>
<tr>
<td>p_set_report_id</td>
<td>Sets the PN_REG_REPORT_ID parameter value to the global variable so it can be retrieved through f_get_report_id in BIP reports.</td>
</tr>
<tr>
<td>p_check_cs_case_ctr</td>
<td>Checks the counts of cases needed for the trailer page.</td>
</tr>
<tr>
<td>p_ins_rpt_status</td>
<td>Inserts the record into PER_RPT_STATUS for log reporting.</td>
</tr>
<tr>
<td>p_upd_rpt_status</td>
<td>Updates the status of the report on completion with success or failure.</td>
</tr>
<tr>
<td>f_after_report</td>
<td>Final trigger invoked by BI Publisher.</td>
</tr>
<tr>
<td>f_get EVTseriouscr_list</td>
<td>Gets the event seriousness criteria list.</td>
</tr>
<tr>
<td>f_get_dose_stringlist</td>
<td>Generates the dose string list.</td>
</tr>
<tr>
<td>f_getuniq_patient_id</td>
<td>Obtains the unique patient ID.</td>
</tr>
<tr>
<td>p_updclinicaldrugrole</td>
<td>Updates the clinicaldrugrole column in GTT_RPT_AGG_DRUG table.</td>
</tr>
<tr>
<td>p_update_gtt_tables</td>
<td>Updates the GTT tables for follow-up.</td>
</tr>
<tr>
<td>FindAggRptJobID</td>
<td>Local procedure that hits the BI Publisher metadata repository tables, obtains the blob data, converts into clob for easy processing, and arrives at the Job ID through the supplied parameters to the BIP reports. The Job ID is then inserted into the RPT_AGG_BIP_JOB table.</td>
</tr>
<tr>
<td>pop_user_security_tables</td>
<td>Populates user security tables based on the user-security level.</td>
</tr>
<tr>
<td>p_populate_cover_params</td>
<td>Fills in the data for the RPT_AGG_PARAMS table needed for the cover page.</td>
</tr>
<tr>
<td>p_populate_listedness</td>
<td>Determines and populates listedness for each case-event-product based on the chosen algorithm.</td>
</tr>
</tbody>
</table>
Customers can place their code directly in this package to modify the data loaded. For example, the customer can modify the loaded case data by calling the user exit `p_modify_case_temp`.

Table 4-4 describes the procedures and functions in the user exit package.

**Table 4-4  User Exit Package Details**

<table>

</tbody>
</table>
4.1.7 BI Publisher Owner Schema Database Jobs

The BI Publisher Owner holds the following database jobs. You must create these jobs manually during installation.

For more information on these, refer to the Argus Safety Installation Guide.

**Job for Report Output Copying**

This is the first job created for calling the utility procedure `p_fetchrptoutput`. This transfers the completed report to Argus Safety.

The output is connected to the configuration using the configuration ID, BIP report name, and the draft/final option. The new output replaces the output with the same combination of key values.

Oracle recommends you execute this job every 3 minutes. However, you can customize execution according to your needs.

For large customers who run multiple concurrent reports, you can execute job runs every 3-10 minutes. For small customers who run only a few reports the whole day, you can execute runs on an hourly basis.

If required, you can customize the job to push the completed report output to other data sources instead of the Argus Safety database.

**Job for Persist Data Purging**

Another database job needed to purge the data present in the Persist (RM) tables is the Remove the data that exceeds the purge duration job.

This job is not needed if you prefer not to use the Persist data mechanism. This can be set to run once a day or once a week based on the data load.

4.2 Argus Safety Database Updates

The Argus Safety database has been enhanced to support BI Publisher Reporting.

4.2.1 Table Changes Required

Table 4-5 describes the database tables added to the Argus Safety database to handle the internal operations related to BI Publisher Periodic Reporting.
### Table 4–5  Argus Safety Database tables

<table>
<thead>
<tr>
<th>Table Name</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>CFG_RPT_AGG_PARAMS</td>
<td>Contains the parameters passed for each report, segregates the parameters that are part of the report header, and selects the default values.</td>
</tr>
<tr>
<td>SAFETY_ERR_LOG</td>
<td>Stores errors, warnings and debugs that occur during execution. Pushes errors into the Argus Safety error log.</td>
</tr>
<tr>
<td>CFG_BIP_REPORT_PARAMETERS</td>
<td>Stores the list of parameters that are passed in through the BI Publisher WebServices API.</td>
</tr>
</tbody>
</table>

#### 4.2.2 Package Changes Required

Packages related to case series have been updated to store case series data.

The **GSS_UTIL** package has been updated to find if a user’s access has expired.

A new package, **pkg_rpt_log**, is called from BIP packages and stores the error, warning and debug messages in the SAFETY_ERR_LOG table. Additionally, it stores the error messages in the traditional Argus Safety error log tables by calling **Pkg_Console_Common.p_error_log**.

#### 4.3 Access Grants to BI Publisher Owner

You must provide access to the Argus database objects so the BIP schema can access them.

- SELECT access for Case related, Code list, and Configuration tables.
- SELECT, INSERT, UPDATE access for process tables such as CMN_REG_REPORTS, PER_RPT_QUEUE, PER_RPT_STS, CMN_SUB_REPORTS, and so on.
- EXECUTE access for various common packages such as **PKG_RLS** and **GSS_UTIL**.

**Note:** You need access for compiling BIP Packages in the BIP Owner schema.
This chapter contains the following sections:

- Section 5.1, "BI Publisher Periodic Reports Design Structure"
- Section 5.2, "Report Data Flow"

5.1 BI Publisher Periodic Reports Design Structure

This section provides an overview of the BI Publisher Periodic Reporting data model and report layout. Oracle recommends you go through BI Publisher guides for more information.

Each report in Argus Safety BI Publisher Periodic Reporting has categories:

- BI Publisher data model comprising parameters and XML file triggers
- BI Publisher Layout templates
- Database package

5.1.1 BI Publisher Data Model

The BI Publisher data model comprises:

- The data set for each report
- Event triggers
- Parameters and associated lists

5.1.1.1 Data Sets

Each BIP report has its own data sets. A data set is the XML data file used to generate the report output. Figure 5-1 displays the data set of the Periodic Benefit Risk Assessment Report (PBRER).
Each box represents a query that can fill in a group.

5.1.1.2 Event Triggers
The Before data trigger and the After data trigger are the two event trigger types.

The Before data trigger is the starting point of the report after submission. The Before data trigger executes the `pkg_agg_rpt_f_before_data` procedure. You can customize trigger names per your requirements.

The Before data trigger call to the `pkg_agg_rpt_f_before_data` package passes the following arguments:

- XDO User name: The user logged in.
- Template ID: 1 represents PBRER, 2 represents PMAR, and 3 represents DSUR.

You can create multiple Before data triggers, and the system executes them in the arranged order.

The After data type trigger fires after the completion of the Before data triggers. OOTB reports call an empty function in this trigger so that the end user can modify the function.

5.1.1.3 Parameters
Parameters are part of the data model. Figure 5-2 displays the parameters of the PBRER.
The data model has the following types of parameters:

- **Text**
- **Menu (list of values)**
- **Date**

**Text parameters** are the simplest form. If you provide a default value, the system considers it automatically when no value is passed.

**Menu parameters** are LOVs and are associated with attached queries. For example, the **AGENCY** parameter is associated with the query in Figure 5-3.

**Figure 5–3 Menu Parameters**

Argus Safety does not use date type parameters.

---

**Note:** The default values take precedence even if there is a value present in the report configuration and you did not select a value during report execution.

You may see many -999999999 values as the default values. Inputting a value of -999999999 would show the -- SELECT -- record on the BIP Parameters screen. When no value is selected, the report tries to fetch any default value present in the report configuration.

For example, for **Main Case Series**, when the parameter value is not selected and is left at -- SELECT --, the report selects the main case associated with the report configuration.
Enterprise ID and Report Configuration Name are mandatory parameters. The report fails if either of these parameters is not submitted.

5.1.2 BI Publisher Report Layout

BI Publisher Periodic Reporting uses Rich Text Format (RTF) for its templates. The layout maps the data sets and displays data at run time. You can also design the data model so the template calls other layouts within itself.

Figure 5-4 displays a portion of the PBRER data model. The report template calls other templates from the Cover and Summary pages.

Figure 5–4  PBRER Data Model

5.2 Report Data Flow

This section explains the flow of data from the time the user creates the report configuration until the report is executed completely.

5.2.1 Argus Safety UI Entry

To configure a report, navigate to the Periodic Report Configuration screen and enter the required configuration. The system saves this data in the required configuration tables.

You can either generate the case series or run the BIP report in a single step. A case series is generated in both cases.

For an ICH PSUR configuration, the following case series can be generated:

- Main Case Series
- Cumulative Case Series
- Section 6.2 Case Series
- Ad hoc Case series (1-4) when ad hoc listings are supplied

For a CTPR configuration, only Main Case Series and Cumulative Case Series tables are present.

The case series are stored in the case series tables.
5.2.2 BI Publisher Data Flow

If you run the report from the Argus Safety UI directly, the system passes only the Enterprise ID, Report Configuration, Print As, and Reg Report ID parameters. Other parameters are picked up if no default values are provided at the BIP level.

1. Navigate to the BIP report that displays the parameter page.
2. Select the mandatory parameter ENTERPRISE ID.
   This selection executes the associated LOV query.
   The selected value is verified by the query present in the CFG_RPT_AGG_PARMS table for the parameter.
   After verification, the enterprise ID is set for the session.
3. Select the mandatory parameter REPORT_CONFIGURATION.
   This parameter determines whether the report will be in the Data Lock Point (DLP).
   If the case series parameters are not selected, the default case series associated with this report configuration is set automatically.
   This parameter is an LOV and the query present in the CFG_RPT_AGG_PARMS table for the parameter validates the selected value.
4. Input the other parameters, and click Submit.
   This invokes the Before data trigger that calls the f_beforedata function of the pkg_agg_rpt package.

This function:
1. Sets up all parameter values from the BI Publisher to Package variables.
2. Validates whether the mandatory parameters have been supplied.
3. Checks if the user’s access has expired.
4. Determines whether the BIP report call is made from the Argus Safety UI or from the BIP console.
5. Handles case, study, or site security.
6. Finds the BIP report job.
7. Inserts records in CMN_REG_REPORTS.
8. Inserts records in PER_RPT_QUEUE and PER_RPT_STATUS.
9. Obtains the default values of all parameters using CFG_RPT_AGG_PARAMS.
10. Determines whether the report is DLP.
11. Populates the data for listedness, drugs, events, event to drugs, and case data.
12. After the case data has been populated, fills in the health authority details and drug names.
13. Sets up the lexical parameters, if any.
14. Based on the persist data common switches, fills in the data for MART tables:
   a. PERSIST_BIP_DATA: whether data from GTT needs to be moved to RM tables.
   b. PERSIST_DURATION: number of days for which the data is to be left at RM tables.
This results in the package filling in the complete data for data sets.

1. After the PLSQL code is complete, the BI report internally generates the data XML, renders the pages, and stores the output in its repository data.

2. The database job calls the `pkg_rpt_util.p_fetchrptoutput` function, which obtains the list of reports that are run based on the RPT_AGG_BIP_JOB table.

3. The database then queries the BIP Metadata Repository (MDR) and verifies that the report is complete. If the report has failed, the database updates the failure status and proceeds to the next report.

4. If the report is successful, the database checks if the Draft/Final tables are updated.

5. The system copies the report output blob to the reporting tables. It updates `CMN_REG_REPORTS` and the corresponding records in the `PER_RPT_QUEUE` and `PER_RPT_STATUS` tables.

After this operation is complete, you can view the report output in BIP and Argus Safety.

---

**Note:** The report output in BIP might be completed earlier than in Argus UI. This is because the job picks up the output and pushes it to the Argus database.
This chapter describes the options available for extending an out-of-the-box BI Publisher Periodic report. It contains the following sections:

- Section 6.1, "Database Layer"
- Section 6.2, "Extending the BI Publisher Data Model"

**Note:** Oracle encourages customers to extend reports for their use but is not obliged to support the custom or extended code and is not responsible for any loss or damage caused by the extended code.

BI Publisher Periodic Reporting has the following customizable layers:

- Database layer
- BI Publisher layer
  
This further comprises:
  - Data Model layer
  - Report Layout layer

### 6.1 Database Layer

Objects specific to BIP Periodic Reporting are present in a separate schema created during the installation of the Argus Safety database. This schema only has a limited set of objects and access privileges. Table 6-1 illustrates these objects and privileges.

<table>
<thead>
<tr>
<th>Table 6–1</th>
<th>Objects and Access Privileges</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tables</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Global Temporary tables populate the report.</td>
</tr>
<tr>
<td></td>
<td>RM tables persist data for Argus Mart OBIEE dashboards.</td>
</tr>
<tr>
<td></td>
<td>Configuration tables store report parameter prompts and case series data.</td>
</tr>
<tr>
<td>Packages</td>
<td>There are 3 packages:</td>
</tr>
<tr>
<td></td>
<td>The main package loads the temp table data.</td>
</tr>
<tr>
<td></td>
<td>The utility package holds the commonly used functions while loading the temp table data.</td>
</tr>
<tr>
<td></td>
<td>The user exit package customizes the loaded temp table data.</td>
</tr>
<tr>
<td>Views</td>
<td>Used for grouping and accessed in the BI Publisher data model.</td>
</tr>
<tr>
<td></td>
<td>None of the packages are wrapped.</td>
</tr>
</tbody>
</table>
6.1.1 Configuration Extensibility

You can update the out-of-the-box data in the `CFG_RPT_AGG_PARAMS` table to modify report names. This configuration change is used for:

- Updating the parameter prompt text in the report output.
- Modifying the order of displaying report parameter prompts.
- Validating details of the parameter.

**Note:** These are configuration changes and do not impact any other functionality. Also, there is no UI for this table. You can use any database tool connecting to the Argus Safety application schema.

6.1.2 Extending with User Exits

You can use user exits to customize BIP Periodic Report data present in the GTT and RM Tables. Every population algorithm contains a user exit at the end during the database selection. A user exit lets you:

- Update Records
- Insert Records
- Delete Records

Table 6-2 contains the list of user exits.
### Table 6–2  List of User Exits

<table>
<thead>
<tr>
<th>Procedure</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>p_modify_case_temp</td>
<td>Executed at the end of case population procedure. Customization to populated cases can be done here.</td>
</tr>
<tr>
<td>p_modify_event_temp</td>
<td>Executed at the end of event population procedure. Customization to populated cases can be done here.</td>
</tr>
<tr>
<td>p_modify_drug_temp</td>
<td>Executed at the end of drug population. Customization of populated drugs can be taken up here.</td>
</tr>
<tr>
<td>p_modify_evt_assess_temp</td>
<td>Executed at the end of event assessment population. Customization of populated event assessment data can be taken up here.</td>
</tr>
<tr>
<td>p_modify_healthauthids_temp</td>
<td>Executed at the end of Health authority details population.</td>
</tr>
<tr>
<td>p_modify_drugnames_temp</td>
<td>Executed at the end of drug name details population.</td>
</tr>
</tbody>
</table>

There is also a user exit for each RM table.

### Figure 6–1  Extending with User Exits

```java
Procedure pcp_rpt_app_case
    <var1>
    ...  
    <var2>
Begin
    data load queries;
    ...  
    ...  
    data load statements;
    --[ User Exit Call ]--
    pck_rpt_rpt_user_exit.p_modify_case_temp;
Exception
    <exceptions>
End;
```

Figure 6-2 displays the structure of an out-of-the-box user exit.

### Figure 6–2  Structure of an Out-of-the-box User Exit

An out-of-the-box user exit only has a null statement between the log handlers. You can add logic (as necessary) to insert, update, or delete rows from corresponding or related tables.

A sample extension requirement is shown below:

**Requirement**

Update the CUSTOMCASE01 column using truncated or formatted study name value based on a condition.

**Solution**
Modify the p_modify_case_temp user exit. Write the following update statement within the p_modify_case_temp procedure:

Update GTT_RPT_AGG_CASE
Set CUSTOMCASE01 = Uformat(studyname)
Where <condn>

6.1.3 Extending Global Temporary Tables

You might not need to extend the Global Temporary tables as the out-of-the-box table itself contains multiple flexible columns. Each GTT and RM table contains:

- 15 columns of type VARCHAR2 (4000)
- 4 columns to support DATE fields. The data type is VARCHAR2(8)
- 2 clob columns

You can fill these columns by using user exits.

6.1.4 Extending using Custom Objects

You must retain the integrity of the reports while extending out-of-the-box periodic report database objects. You must create a new custom schema (using the naming standard BIP_CUSTOM) where you can deploy your custom objects.

6.1.4.1 Adding New Columns to GTT or RM Tables

To add new columns to GTT and RM tables:

1. Create a replica of the GTT in the custom schema. For example, if the customer needs new columns in the GTT_RPT_AGG_CASE table, create the replica of this table in the custom schema, named XX_ GTT_RPT_AGG_CASE.
2. Add the new columns to the replica table in the custom schema.
3. Grant the new table access to the out-of-the-box BIP schema.
4. Create a synonym for this object (public synonym). The BIP schema can access this new object.
5. Modify the user exit package corresponding to this GTT to fill in the new custom table and logistics to load the additional two columns.

6.1.4.2 Filling Custom Tables

Follow the same procedure for filling custom tables. You do not need to replicate a table from the BIP schema.

6.1.4.3 Filling Custom Views

You might need to deploy custom views for solving complicated logistics. This functionality is limited to accessing the objects of the BIP schema only.

To fill custom views, perform the following steps:

1. Create the view in the custom schema.
2. Grant BIP schema access to the view.
3. Create a synonym for the view (public synonym).

You can use this view either in the BIP schema or in the BI data model.
6.1.4.4 Filling Custom Packages
Follow the same procedure for filling custom packages.

6.1.5 BIP Custom Schema for Cloud
For Argus Safety on Cloud, you might not be allowed to make changes as in the BIP Owner schema. Therefore, you can execute a script that creates a new schema on which you can add your own views, synonyms, packages, functions, and so on.

The new schema is created in the Argus Safety database and grants access to the BIP Owner.

6.1.6 Adding or Modifying a View
You can create your own view in the custom schema. If these views directly access BIP schema objects, you might need to provide grants. After the BIP schema is created, it has access to this view and can be utilized in the package through user exits.

6.1.7 Adding a Column to the Existing Table
Temp tables provide custom columns for customer use. However, there might be instances when you want to add further tables. You can do this in the following ways:

- Adding the columns directly into the table and manipulating it.
- If you are not allowed to add directly, you can create a replica of the table in the custom schema along with the new columns needed.

The BIP schema is provided a grant for the new object and a synonym is created. Then, the data can be inserted in the new table.

6.2 Extending the BI Publisher Data Model

Note: While extending BI Publisher reports, irrespective of whether the extension is in the data model layer or the layout, Oracle recommends taking a complete backup of the report in another catalog folder and then proceeding with the extension.

This section contains the following:
- Section 6.2.1, "Data Model Query Naming Convention"
- Section 6.2.2, "Data Model Nested Queries"
- Section 6.2.3, "Data Structure Groups"
- Section 6.2.4, "DSUR Summary Table Naming Conventions"
- Section 6.2.5, "Case Series Tables"
- Section 6.2.6, "Lexical Parameters"

6.2.1 Data Model Query Naming Convention
The BI Publisher data model queries follow a standard naming convention:
Q<Query level no>_<Report section identification>
For example,
Q1_DSURLINELISTING: First level query of the DSUR line listing section.
Q1_MAINDSURSUMTAB: First level query of DSUR Main Summary tabulation.
Q2_DEATHDSURSUMTAB: Second level query of DSUR Fatal Summary Tabulation.
Q4_CMAINDSURSUMTAB: Fourth level query of DSUR Cumulative Main ST.
Q2_CONSUMTAB: Second level query of Consumer ST.

6.2.2 Data Model Nested Queries

BIP Periodic reports follow the model of Nested queries.
Consider the PBRER 6.2 Cumulative Summary Tabulation queries.

Query 1: Q1_PBRER62

```
SELECT ct.soc g1pbrer62soc,
       COUNT (ct.CASE_STUDY_DRUG)  cnt_study_drug,
       COUNT (ct.CASE_COMPARATOR)  cnt_case_comparator,
       COUNT (ct.case_blinded)     cnt_blinded,
       COUNT (ct.case_placebo)     cnt_placebo,
       COUNT (ct.case_nosdgiven)   cnt_nosdgiven,
       COUNT (ct.case_num)         cnt_case_num
FROM v$rpt_clinicalsummary ct
WHERE ct.REG_REPORT_ID = pkg_agg_rpt.f_get_report_id
     AND (ct.Sec62cumflag = 'Y' AND NVL(ct.sec63nonintcumflag,'N') <> 'Y')
     AND (ct.casetype = 'C' AND ct.eventseriousflag = 'Y')
     AND ct.clinicaldrugrole != 6
GROUP BY ct.ev_socdisplaynbr,ct.soc
ORDER BY ct.ev_socdisplaynbr,ct.soc;
```

In QUERY 1, the column SOC is given an alias `g1pbrer62soc`

Grouping: g1 -> Group 1
pbrer62 -> Report section
soc -> Column name

Sorting: Order by SOCDISPLAYNBR and SOC. Users can modify the sorting columns by changing the data model queries for each group.

Query 2: Q2_PBRER62

```
SELECT ct.reaction g2pbrer62reaction,
       COUNT (ct.CASE_STUDY_DRUG)  cnt_study_drug,
       COUNT (ct.CASE_COMPARATOR)  cnt_case_comparator,
       COUNT (ct.case_blinded)     cnt_blinded,
       COUNT (ct.case_placebo)     cnt_placebo,
       COUNT (ct.case_nosdgiven)   cnt_nosdgiven,
       COUNT (ct.case_num)         cnt_case_num
FROM v$rpt_clinicalsummary ct
WHERE ct.REG_REPORT_ID = pkg_agg_rpt.f_get_report_id
     AND (ct.Sec62cumflag = 'Y' AND NVL(ct.sec63nonintcumflag,'N') <> 'Y')
     AND (ct.casetype = 'C' AND ct.eventseriousflag = 'Y')
     AND ct.clinicaldrugrole != 6
     AND ct.soc = :g1pbrer62soc
GROUP BY ct.ev_socdisplaynbr,ct.soc
ORDER BY ct.ev_socdisplaynbr,ct.soc;
```
GROUP BY ct.reaction
ORDER BY ct.reaction;

In the above QUERY 2 the column REACTION given an alias "g2pbrer62reaction"
Grouping: g2 -> Group 2
pbrer62 -> Report section
reaction -> Column name.
Sorting: Order by Event Reaction, Users can modify the sorting columns by changing
the data model queries for each group.

In Query 2, the group1 column SOC is passed in the where condition AND ct.soc =
:g1pbrer62soc.
Hence, Query 2 fetches rows only for the SOCs from Query 1. This NESTED query
model is used throughout BIP Periodic reports.

6.2.3 Data Structure Groups

For Queries 1 and 2, the sample data structure is depicted below. This can be found in
Datamodel -> Code tab.
Query 1 -> Q1_PBRER62 is source for the group G1_PBRER62 and the group G2_-
PBRER62 is NESTED under G1_PBRER62.

```xml
<group name="G1_PBRER62" label="" source="Q1_PBRER62">
  <element name="CNT_STUDY_DRUG" value="CNT_STUDY_DRUG" label="CNT_STUDY_DRUG"
dataType="xsd:double" breakOrder="" fieldOrder="2"/>
  <element name="CNT_CASE_COMPARATOR" value="CNT_CASE_COMPARATOR" label="CNT_CASE_-
COMPARATOR" dataType="xsd:double" breakOrder="" fieldOrder="3"/>
  <element name="G1_TEXT" value="G1PBRER62SOC" label="G1PBRER62SOC"
dataType="xsd:string" breakOrder="" fieldOrder="1"/>
  <element name="CNT_BLINDED" value="CNT_BLINDED" label="CNT_BLINDED"
dataType="xsd:double" breakOrder="" fieldOrder="4"/>
  <element name="CNT_PLACEBO" value="CNT_PLACEBO" label="CNT_PLACEBO"
dataType="xsd:double" breakOrder="" fieldOrder="5"/>
  <element name="CNT_CASE_NUM" value="CNT_CASE_NUM" label="CNT_CASE_NUM"
dataType="xsd:double" breakOrder="" fieldOrder="7"/>
  <element name="CNT_NOSDGIVEN" value="CNT_NOSDGIVEN" label="CNT_NOSDGIVEN"
dataType="xsd:double" breakOrder="" fieldOrder="6"/>
</group>
<group name="G2_PBRER62" label="" source="Q2_PBRER62">
  <element name="CNT_STUDY_DRUG" value="CNT_STUDY_DRUG" label="CNT_STUDY_DRUG"
dataType="xsd:double" breakOrder="" fieldOrder="2"/>
  <element name="CNT_CASE_COMPARATOR" value="CNT_CASE_COMPARATOR" label="CNT_CASE_-
COMPARATOR" dataType="xsd:double" breakOrder="" fieldOrder="3"/>
  <element name="G2_TEXT" value="G2PBRER62REACTION" label="G2PBRER62REACTION"
dataType="xsd:string" breakOrder="" fieldOrder="1"/>
  <element name="CNT_BLINDED" value="CNT_BLINDED" label="CNT_BLINDED"
dataType="xsd:double" breakOrder="" fieldOrder="4"/>
  <element name="CNT_PLACEBO" value="CNT_PLACEBO" label="CNT_PLACEBO"
dataType="xsd:double" breakOrder="" fieldOrder="5"/>
  <element name="CNT_CASE_NUM" value="CNT_CASE_NUM" label="CNT_CASE_NUM"
dataType="xsd:double" breakOrder="" fieldOrder="7"/>
  <element name="CNT_NOSDGIVEN" value="CNT_NOSDGIVEN" label="CNT_NOSDGIVEN"
dataType="xsd:double" breakOrder="" fieldOrder="6"/>
</group>
```
There can be multiple rows in the group G2_PBRER62 for one row from G1_PBRER62. For group columns such as SOC (QUERY 1) and REACTION (QUERY 2), the element names vary. In the sample data structure, the element name G1_TEXT denotes that it is a group column and the value is G1PBRER62SOC alias name given in QUERY 1. For QUERY 2 the element name G2_TEXT denotes that it is the second group column and the value is G2PBRER62REACTION alias name given in QUERY 2.

### 6.2.4 DSUR Summary Table Naming Conventions

Let us consider the DSUR Main summary tabulation data structure to explain the naming conventions and drug key table functionality.

1. The first group name is G1_DSURSUMTAB. It is different for all DSUR summary sections.
   - For fatal summary tabulation, the group name is G1_DSURSUMTAB1.
   - For Cumulative main ST section, the group name is G1_DSURSUMTAB3.
   - For Cumulative fatal ST section, the group name is G1_DSURSUMTAB4.
   The grouping column is Follow-Up text. The element name is G1_TEXT1 and is used in dsur_sum.rtf.

2. The second group name is G2_DSURSUMTAB. The second (and subsequent) group names are the same for all DSUR summary tabulation sections. This effectively uses the DSUR summary sub-template. The grouping column is Sponsor study Number. The element name is G2_TEXT1 and is used in dsur_sum.rtf.

3. G3_DRUGKEY is the third group which prints Study and Comparator drugs in a table format.

4. The fourth group name is G4_DSURSUMTAB. It is the same for all DSUR summary tabulation sections. The grouping column is SOC. The element name is G4_TEXT1 and is used in dsur_sum.rtf.

5. The fifth group name is G5_DSURSUMTAB. It is the same for all DSUR summary tabulation sections. The grouping column is Event Reaction. The element name is G5_TEXT1 and is used in dsur_sum.rtf. The Column title appears from the code list BIP_PROD_CATEGORY and element name is G5_TEXT2.

<table>
<thead>
<tr>
<th>Drug Role</th>
<th>Column Number</th>
<th>Drug Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Study ID: Study Name</td>
<td></td>
<td></td>
</tr>
<tr>
<td>IMP Treatment</td>
<td>1</td>
<td>Prod1+Prod2</td>
</tr>
<tr>
<td>IMP Treatment</td>
<td>2</td>
<td>Prod3</td>
</tr>
<tr>
<td>Comparator Treatment</td>
<td>1</td>
<td>Prod4</td>
</tr>
</tbody>
</table>

In the summary tabulation, IMP 1 is printed under IMP Treatment1 and IMP 2 is printed under IMP Treatment2. The titles are configurable (flexible code list: BIP_PROD_CATEGORY).

6. The fourth group name is G4_DSURSUMTAB. It is the same for all DSUR summary tabulation sections. The grouping column is SOC. The element name is G4_TEXT1 and is used in dsur_sum.rtf.

7. The fifth group name is G5_DSURSUMTAB. It is the same for all DSUR summary tabulation sections. The grouping column is Event Reaction. The element name is G5_TEXT1 and is used in dsur_sum.rtf. The Column title appears from the code list BIP_PROD_CATEGORY and element name is G5_TEXT2.
6.2.5 Case Series Tables

The procedure pkg_agg_rpt.p_copy_rpt_case_series copies all case-series required for report execution into the RPT_AGG_CASE_SERIES and RPT_AGG_CS_CASES tables.

6.2.5.1 Common Queries (lexicals) Used in Reports
The following queries are available in the package header pkg_agg_rpt.
Table 6–3  pkg_agg_rpt Queries

<table>
<thead>
<tr>
<th>Query</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q_MESSAGE</td>
<td>Returns all WARNING type log messages that appear in the trailer section Warning Messages.</td>
</tr>
<tr>
<td>Q_ERROR</td>
<td>All ERROR type messages appear in trailer page under Error Messages section.</td>
</tr>
<tr>
<td>Q_CASES</td>
<td>Lists Cases of only Main Case series from the BIP tables RPT_AGG_CASE_SERIES and RPT_AGG_CS_CASES on the Cover page.</td>
</tr>
<tr>
<td>Q_REPORTCASESUMMARY</td>
<td>Returns Totals section on the Trailer page. The Total of valid and invalid case count appears (only cases from MAIN CASE SERIES are considered).</td>
</tr>
<tr>
<td>Q_WMARK</td>
<td>Populates water marks for the reports. For example, DRAFT, INTERNAL.</td>
</tr>
<tr>
<td>Q_MODCS</td>
<td>Case Series Modification history appears on the cover page for all BIP reports.</td>
</tr>
<tr>
<td>Q_HEAD</td>
<td>Fetches reg_report_id, report title, report hash, report footer, report from and to date, Previous date and DLP/Non-DLP values for printing on the Cover page as headers.</td>
</tr>
<tr>
<td>Q_TITLE</td>
<td>Defines titles for the DSUR Main line listing and Cumulative Summary tabulations based on the parameter Print Serious Adverse Events or Reactions.</td>
</tr>
</tbody>
</table>

The following queries are used in QA sections of the reports.

Table 6–4  QA Section Queries

<table>
<thead>
<tr>
<th>Query</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q_QA1</td>
<td>Lists case numbers without any qualifying drugs. Considers all cases not available in the GTT_RPT_AGGR гор DRUG table but available in GTT_RPT_AGG_CASE.</td>
</tr>
<tr>
<td>Q_QA2</td>
<td>Lists Case numbers without any qualifying events. Considers all cases not available in the GTT_RPT_AGG_EVENT table but available in GTT_RPT_AGG_CASE.</td>
</tr>
<tr>
<td>Q_QA3</td>
<td>Lists Case numbers with undefined case level unlabeledness. Considers all cases with the column GTT_RPT_AGG_CASE.CASEUNLABELEDNESSCODE value set to NULL.</td>
</tr>
<tr>
<td>Q_QA4</td>
<td>Lists Case numbers with undefined event level unlabeledness. Considers all cases with the column GTT_RPT_AGG_EVENT.EVENTUNLABELEDNESSCODE value set to NULL.</td>
</tr>
<tr>
<td>Q_QA5</td>
<td>Lists Case numbers with undefined Case level seriousness. Considers cases with column GTT_RPT_AGG_CASE.CASESERIOUSFLAG value set to NULL.</td>
</tr>
<tr>
<td>Q_QA6</td>
<td>Lists Case numbers with undefined Event level seriousness. Considers cases with column GTT_RPT_AGG_EVENT.EVENTSERIOUSFLAG value set to NULL.</td>
</tr>
<tr>
<td>Q_QA7</td>
<td>Lists the Labels configured for drugs in the drug list. The query is different for PMAR, PBRER and DSUR and is available in the data models.</td>
</tr>
<tr>
<td>Q_QA9</td>
<td>Lists Non-Clinical Case numbers (where the column GTT_RPT_AGG_CASE.CASETYPE !='C')</td>
</tr>
<tr>
<td>Q_QA13</td>
<td>Summary of Unlocked Cases.</td>
</tr>
<tr>
<td>Q_QA14</td>
<td>Cases with Missing Assessment.</td>
</tr>
</tbody>
</table>

6.2.6 Lexical Parameters

The following lexical parameter code is available in the pkg_agg_rpt package.

1. Include only HCP cases in summary tabulation: For value 1 (YES/HCP, AND ct.casemedicallyconfirmflag =Y), only medically confirmed cases are shown.

   IF PN_HCP_ONLY = 1 THEN
   GL_ST_FILTER_HCP:= ' AND ct.casemedicallyconfirmflag =''Y'';

Oracle Argus Safety BI Publisher Periodic Reporting Extensibility Guide
The variable GL_ST_FILTER_HCP is used in the Data model of the PMAR Summary Tabulation sections to filter HCP cases.

2. Include Follow-up cases from summary tabulations: To filter out Follow-up cases in summary tabulation sections.

   IF PN_INC_FOLLOWUP = 1 THEN
   GL_ST_EXCLUDE_FOLLOWUP := ' ';
   ELSE
   GL_ST_EXCLUDE_FOLLOWUP := ' AND ct.psurfollowupflag ='N';
   END IF;

3. Exclude Non-Serious cases from summary tabulations: If the report parameter Exclude non serious cases from summary tabulations is set to Y, Grouping and Counts based on Non-Serious events that are part of serious cases are still printed. Only Non-serious cases and corresponding events are ignored based on the parameter value of Y.

   IF PN_EXC_NS_ST = 1 THEN
   GL_ST_FILTER_SERIOUS      := ' AND ct.caseseriousflag = 'Y'; --' AND ct.eventseriousflag ='Y';
   ELSE
   GL_ST_FILTER_SERIOUS      := ' ';
   END IF;

4. List cases in the line listing under SOC for each diagnosis: Line Listing-> List Cases only once, under the primary event and List Cases under all events, details under the primary event.

<table>
<thead>
<tr>
<th>Code snippet:</th>
</tr>
</thead>
<tbody>
<tr>
<td>IF PN_LL_SOC = 1 THEN</td>
</tr>
<tr>
<td>GL_LL_MAIN_NONPRI_CASEREF := ' AND EXISTS (SELECT 1 FROM gtt_rpt_agg_event pdt WHERE pdt.reg_report_id = pc.reg_report_id AND pdt.case_id = pc.case_id AND pdt.soc = :g4mainsoc) '</td>
</tr>
<tr>
<td>GL_LL_ADHOC1_NONPRI_CASEREF := ' AND EXISTS (SELECT 1 FROM gtt_rpt_agg_event pdt WHERE pdt.reg_report_id = pc.reg_report_id AND pdt.case_id = pc.case_id AND pdt.soc = :g4adhocsoc) '</td>
</tr>
<tr>
<td>GL_LL_ADHOC3_NONPRI_CASEREF := ' AND EXISTS (SELECT 1 FROM gtt_rpt_agg_event pdt WHERE pdt.reg_report_id = pc.reg_report_id AND pdt.case_id = pc.case_id AND pdt.soc = :g4adhoc3soc) '</td>

Extending the BI Publisher Data Model

5. **Print Serious Adverse Events or Reactions:** Filters out related events.

```sql
IF PN_SAR_SAE = 1 THEN
    GL_SAR_SAE_PBRER_COND := ' AND ct.eventrptrelatedcode = 'Y';
    GL_SAR_SAE_DSUR_COND := ' AND (ct.eventcorelatedcode = 'Y' OR ct.eventrptrelatedcode = 'Y') ';
    GL_SAR_SAE_DSUR_LL := ' AND (pet.eventcorelatedcode = 'Y' OR pet.eventrptrelatedcode = 'Y') ';
ELSE
    GL_SAR_SAE_PBRER_COND := ' ';
    GL_SAR_SAE_DSUR_COND := ' ';
    GL_SAR_SAE_DSUR_LL := ' ';
END IF;
```
This chapter contains the following sections:

- Section 7.1, "Creating Users and Assigning Roles"
- Section 7.2, "Configuring BIP Roles and Permissions"
- Section 7.3, "Fusion Middleware Security Model"
- Section 7.4, "Creating Application Policy"
- Section 7.5, "Configuring BIP Users and Roles: Oracle Fusion Middleware Security Model"

### 7.1 Creating Users and Assigning Roles

To create users and assign them roles:

1. Log in to BI Publisher using your administrator credentials. Navigate to the Administration page. Click and navigate to the Users page.

   ![Administration Page](image)

2. Click Create Users.
3. Enter a user name and password and click **Apply**. The system creates a new user.

4. To assign roles to the user, click the **Assign Roles** icon corresponding to the new user.

5. The **Assign Roles** screen appears and displays the BIP system roles. These are:
   - BI Publisher Administrator
   - BI Publisher Excel Analyzer
   - BI Publisher Online Analyzer
   - BI Publisher Developer
   - BI Publisher Scheduler
   - BI Publisher Template Designer
   These roles are available by default along with the custom roles you create.
In Figure 7-5, ASAdmin and BIAdmin are custom roles. Select a role from the Available Roles section and click **Move (>)** to move the selected role to the Assigned Roles section. Click **Apply**. This assigns the selected roles to the user.

### 7.1.1 Creating Custom Roles

This section describes the steps to create custom roles and assign data sources to them.

1. Log in to BI Publisher using your administrator credentials. Navigate to the Administration page. Click and navigate to the Roles and Permissions page.

   **Figure 7–6 Roles and Permissions Screen**

2. On the Roles and Permissions page, click **Create Role**.

   **Figure 7–7**

3. On the Create Role page, provide a role name and description and click **Apply**. This creates the new custom role.

   **Figure 7–8 Create Role Screen**

You can now view the new role.
Creating Users and Assigning Roles

4. To assign data sources to the created role, click the **Add Data Sources** icon.

5. Select a data source from the Available Data Sources section, and click **Move (>)** to add it to the Allowed Data Sources section.

6. To assign the required roles to the custom role, click **Add Roles**.

7. On the Add Roles page, select the roles to be included from **Available Roles**, and click **Move (>)** to add the selected roles to **Included Roles**.
7.2 Configuring BIP Roles and Permissions

This section explains a sample set of user types and corresponding roles that can be created. You can utilize this sample to enhance security as needed.

7.2.1 Out-of-the-box BIP Configuration

Argus Safety BI Publisher Periodic Reports contain the following folders in an out-of-the-box installation.

- Main Argus Safety folder under the Shared folders
  - Cover Trailer
  - PBRER
  - PMAR
  - DSUR

Each report (except the cover trailer) contains two sub-sections—one for the data model and the other for reports.

Table 7-1 describes the three types of Argus Safety specific users and roles.

<table>
<thead>
<tr>
<th>User Name</th>
<th>Role Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASAdmin</td>
<td>ASAdminRole</td>
</tr>
<tr>
<td>ASDataModeler</td>
<td>ASDataModelerRole</td>
</tr>
<tr>
<td>ASUsers</td>
<td>ASUserRole</td>
</tr>
</tbody>
</table>

Additionally, there is a default BI Admin User for the application. This user is a super user having BIP administration access and can upload to the Argus Safety repository.

Access to the Data Models and Reports folder depends on the user type and the role assigned. The BI publisher also lets you add roles.

For example, a user has been assigned the X role and you add the Y role to the X role. The user now has the privileges of the Y role despite the Y role not being directly assigned to the user.

Table 7-2 describes the relationships of users, roles, and privileges.
Table 7–2  Users, Roles and Privileges

<table>
<thead>
<tr>
<th>Name of the user/role</th>
<th>Users/Roles to be added</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BI Admin User</td>
<td>BI Administration (Functional Role)</td>
<td>Can upload to the Argus Safety repository and works as a super user who has BIP Administration access.</td>
</tr>
<tr>
<td>ASAdminRole Users</td>
<td>ASAdminRole</td>
<td>Has complete access to the Argus Safety folder.</td>
</tr>
<tr>
<td>ASDataModelerRole</td>
<td>BIAuthor (Functional Role) or BI Publisher Developer (in BIP Standalone system) or ASUserRole</td>
<td>Has access to the Argus Safety Data Models and Reports folders.</td>
</tr>
<tr>
<td>ASDataModeler Users</td>
<td>ASDataModelerRole</td>
<td>Has access to Argus Safety Data Models and Reports folders.</td>
</tr>
<tr>
<td>ASUserRole Users</td>
<td>BIRelationship (Functional Role) or BITemplate Designer role (in BIP Standalone system)</td>
<td>Has read-only access to the Argus Safety Data Models folder and complete access to the Reports folder.</td>
</tr>
<tr>
<td>ASUsers</td>
<td>ASUserRole</td>
<td>Has read-only access to the Argus Safety Data Models folder and complete access to the Reports folder.</td>
</tr>
</tbody>
</table>

7.3 Fusion Middleware Security Model

This section describes the steps to be executed to create users, assign them roles and permissions, and configure server settings for the Oracle Fusion Middleware Security Model.

Configure the BI Publisher server settings for the BI Publisher Security model. However, in this case the security model is the Fusion Middleware Security model.

7.3.1 Creating Roles, Adding Data Sources, and Assigning Roles in WebLogic Enterprise Manager

To create roles, add data sources, and assign roles in the WebLogic Enterprise Manager:

1. Log in to Enterprise Manager. This displays the Enterprise Manager home page with a list of folders in the left pane.
2. Expand the Business Intelligence folder and click coreapplication.
   The coreapplication screen appears in the right pane.
3. Click Configure and Manage Application Roles in the Application Policies and Roles section.
   The Application Policies and Roles screen appears.
4. Select an application stripe from the Application Stripe drop-down list.
5. Select an existing role (such as BIConsumer) and click Create Like.
   The Create Application Role screen appears.
6. Enter the name of the role in the Role Name field.
7. Enter the display name and description in the Display Name and Description fields. These are optional fields.
8. Click **Add** to add any existing application role, group or user to the new role. The Create Application Role screen appears.

9. Click the > icon near the Display Name field. The list of all the roles, groups, and users created in LDAP server appears.

10. Select the name of a role, group, or user and click **OK**. For example, for the BIReportWriter role, BIConsumer and authenticated-role are mandatory members.

    **Note:** The ASRole must also be a part of the BIReportWriter Role. These roles appear in the Members section of the Create Application Screen.

    The BIReportWriter role must be added to the BIReportWriter application policy.

11. Repeat steps 8 to 10 to add additional roles, users, and groups to the new role.

12. Click **OK** on the Create Application Role screen.

    After you have created the role and added the required list of users, roles, and groups to the new role, you must add the ASBIP data source to the new role.

13. Log in to BIP using your administrator credentials. This displays the BIP Home page.

14. Click Administration.

15. Click Roles and Permissions in the Security Center section.

    The Roles and Permissions screen appears. You can view the name of the new role that you have just created in the list of role names.

16. Click the **Add Data Sources** icon corresponding to the name of the new role.

    The Add Data Sources screen appears.

17. Select ASBIP from the Available Data Sources section, and click the **Move (>)** icon to move the ASBIP data source to the Allowed Data Sources section.

    The Add Data Sources screen appears. Click **Apply**.

    For more information, refer to the Creating Application Roles Using Fusion Middleware Control section of the Oracle BIP Administrator's guide.

### 7.4 Creating Application Policy

After creating and assigning roles, users, and data sources to the role, you must create the application policy for the new role.

Before creating a BI Publisher Report Writer policy, you must have created an empty role in Enterprise Manager.

**Note:** The steps mentioned in this section are valid for creating a BIReportWriter application policy.

To create the application policy for the new role:

1. Log in to the Enterprise Manager. This displays the Enterprise Manager home page with a list of folders in the left pane.
2. Expand the **Business Intelligence** folder in the left pane, and click `coreapplication`.

**Figure 7–14 Coreapplication Folder**

The `coreapplication` screen appears in the right pane.

3. Click **Configure and Manage Application Policies** in the Application Policies and Roles section.

**Figure 7–15 Configure and Manage Application Policies Screen**

The Application Policies screen appears.

4. Select `obi` from the **Application Stripe** drop-down list.
5. Select BIAuthor policy and click Create Like.

**Figure 7–16  BIAuthor**

The Create Application Grant Like screen appears with the Grantee and Permissions sections.

6. Click Add in the Grantee section.

**Figure 7–17  Create Application Grant Like Screen**

The Add Principal screen appears.

7. Click the > icon near the Principal Name field to retrieve the list of all available application roles.
8. Select the name of the role from the Searched Principals section (for example, BIReportWriter), and click OK. The Create Application Grant Like screen appears.

9. Select the developDataModel Resource Name from the list of Permission Classes and click Delete.

10. Click OK.

7.5 Configuring BIP Users and Roles: Oracle Fusion Middleware Security Model

This section lists the names of the <Admin Users> and roles you need to configure.

7.5.1 BI Admin User

An Admin user has BI Publisher administrative rights. This user belongs to the BIAdministration functional role.

7.5.2 Data Modeler User

An Argus Safety data model user has access to both Data Models and Reports in the Argus Safety folder. This user belongs to the ASDataModeler custom role.

The Enterprise specific modeler users have access to Data Models and Reports in Enterprise specific folders and the Argus Safety folder.

7.5.3 Report Writer User

An Argus Safety Role (ASRole) user has access to Reports and Read-only access to the data model required to create the reports. This user belongs to the ASRole.

Users can have access to reports of specific Enterprises. ASRole users can read or write reports in the Enterprise specific Report and Argus Safety Report folders. However, they have Read-only access to the Data Models in the Enterprise specific Data Model and the Argus Safety Data Model folder. These users belong to Enterprise specific Report roles.

7.5.4 Global Admin User

An AS Admin Role user has complete access to the Argus Safety folder.
An Enterprise specific Admin user has complete access to the Enterprise specific folders and Argus Safety folder.

### 7.5.5 Configuring BIP Roles

Table 7-3 lists the roles that you need to configure using BIP:

<table>
<thead>
<tr>
<th>Role</th>
<th>Users/Roles to be added</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIAdministration (Functional Role)</td>
<td>Super user having complete access to all folders and BIP Administration access.</td>
</tr>
<tr>
<td>ASRole</td>
<td>All Argus Safety role users, ASDataModelerRole, and all Enterprise Report Roles (for specific enterprises).</td>
</tr>
<tr>
<td>ASDDataModelerRole</td>
<td>All AS Data Modeler Users, all Enterprise Modeler Roles, and ASAdminRole.</td>
</tr>
<tr>
<td>Enterprise Report Role</td>
<td>Users belonging to a specific Enterprise with Reports access and Enterprise Modeler Role.</td>
</tr>
<tr>
<td>Enterprise Modeler Role</td>
<td>Users belonging to a particular Enterprise with both Data Models and Reports access.</td>
</tr>
<tr>
<td>Enterprise Admin Role</td>
<td>Enterprise specific Admin users. User with complete access to Enterprise specific folders.</td>
</tr>
<tr>
<td>ASAdminRole</td>
<td>User with complete access to the Argus Safety folder. The Enterprise Admin Role is added to this role.</td>
</tr>
<tr>
<td>BIAdministrator (Functional Role)</td>
<td>BI Admin User.</td>
</tr>
<tr>
<td>BIAuthor (Functional Role)</td>
<td>ASDataModelerRole.</td>
</tr>
<tr>
<td>BIReportWriter</td>
<td>ASRole.</td>
</tr>
</tbody>
</table>

### 7.5.6 Folder Level Permissions

This section explains the folder level permissions that you can grant using BIP.

For more information, refer to the About Catalog Permissions section in Oracle Administrator’s Guide for Oracle BIP.

<table>
<thead>
<tr>
<th>Folder</th>

</tbody>
</table>
For information on Parameters, refer to Appendix A in the *Argus Safety BIP Aggregate Reporting User’s Guide.*
This appendix discusses the blinding functionality.

### B.1 Blinding Logic

BIP Aggregate reports use blinded security (when needed) for users in Argus Safety. The `V_USER_CASE_BLINDING` view contains the blinded logic used in BIP reports. For more information, refer to the definition of this view in the Argus Safety database.

Along with the user's blinded access from Argus Safety, the BIP parameter `Print Unblinded Data` determines the contents to be printed in the report.

This parameter is applicable only if the user has access to view unblinded data; otherwise only blinded data is printed irrespective of the value of this parameter. Table B-1 explains this in detail.

<table>
<thead>

This appendix describes flexible data re-categorization.

C.1 Flexible Data Re-Categorization

The flexible data re-categorization feature is used in OOB BIP Aggregate reports to provide the user with greater control and flexibility on the values they want to print in the report. These code lists are configurable through the Argus Safety console.

This code list data storage design can be leveraged to add new and custom code lists or values by applications and customers without adding new database tables and columns.

The following code lists are provided for BIP aggregate reports:

- **REPORT_TEMPLATE**: Use this code list to manage the BIP report templates available in the system (OOB and Custom) and assign an Argus Safety periodic configuration (ICH PSUR or CTPR) with which you can execute this report template. Whenever a new report template is added in BIP, the system modifies this code list to provide the report template name, path and corresponding Argus Safety configuration.

- **ADHOC_LINE_LISTING**: All list names added to the adhoc_line_listing code list are available in the UD Summaries tab and can be used to attach memorized reports to a particular line listing section of periodic reports. You can rename these using the Flexible Re-categorization UI. The system provides four ad hoc line listings by default. You can increase them using this code list if you have more ad hoc line listing sections in your report. After configuring them, use the Argus Safety UI to attach UD summaries with line listings of your custom report.

- **SOC_DISPLAY_ORDER**: Use this code list to reorder the printing of SOCs in various tabulations.

- **STATE_2, STATE_3 and STATE_4**: These code lists have been modified to print follow-up text, relatedness text, and so on. You can further modify these code list and add new attributes for use in custom reports. For example, you can use the CAUSAL attribute for printing the RELATEDNESS of an event. These are printed as Yes/No or Related/Unrelated using this attribute.

- **AGGREGATE_REPORT_FORMAT**: Use this code list to define the report formats to use with BIP reports. Ensure that you use formats that are supported by the BI Publisher.

- **DOSAGE_STRING_FORMAT**: Use this code list to restrict or add the dosage string formats that are available while BIP report is being executed. You can add more dosage string formats using custom code.
Table C-1 contains the dosage string formats provided out-of-the-box and the print values for each dosage string.

<table>
<thead>
<tr>
<th>Code</th>

<td>DoFoRt</td>
<td>Dose, Formulation, Route</td>
</tr>
<tr>
<td>DoFr</td>
<td>Dose, Frequency</td>
</tr>
<tr>
<td>DoRt</td>
<td>Dose, Route</td>
</tr>
</tbody>
</table>

**UNIQUE_PATIENT_ID_FORMAT**: Use this code list to restrict or add unique patient ID formats available while the BIP report is executing. You can add new unique patient ID formats using custom code.

Table C-2 contains the unique patient ID formats that are provided out-of-the-box and the values they print for patient ID.

<table>
<thead>

<td>Study, Country ISO code, Center, Patient</td>
</tr>
</tbody>
</table>

**LABELING_ALGORITHM**: Use this code list to define new labeling algorithms using custom code. For more information on out-of-the-box algorithms, refer to Labeling Algorithms.

**EventSeriousness**: A new code list for EVENTSERIOUSNESS is provided as part of the factory data. This code list prints the actual value of seriousness defined against a serious event.

**ORGAN_IMPAIRED_HLT**: Use this code list to define high-level terms that are scanned through to find out whether the event reported falls under the organ impairment section. This can be used in custom reports.

**BIP_DFLT_VALUES**: Use this code list to configure the default values for important fields used in various grouping and tabulations, for example, to handle or print an event without SOC. The value configured in this code list
corresponding to SOC is used in the PBRER/DSUR tabulation for events with undefined SOC.

- **Report Type Code list**: This code list has been modified to add new attributes and group existing report types into various categories. For example, existing Argus Safety report types have been grouped into the categories of solicited and non-solicited using the `CASETYPETEXT` attribute.

Updates to Listedness, Seriousness and LM_CAUSALITY code list have been made for printing flags or text values in different line listings.
This appendix lists the probable issues you may encounter while installing, configuring, customizing, and adding a report to the BI Publisher. It contains the following topics:

- BIP Icon not Displayed Against Corresponding BIP Specific Fields in the Periodic Reporting Configuration
- BI Publisher Periodic report does not Execute from Argus UI
- Database Connection Errors
- BI Publisher Scheduled Report Output does not Show up

D.1 BIP Icon not Displayed Against Corresponding BIP Specific Fields in the Periodic Reporting Configuration

Alternately, BIP Aggregate Reporting does not show up under Reporting in Common Profile switches.

- **Cause**
  
  BI Publisher Periodic reports are not enabled.

- **Solution**
  
  On the Argus Console, navigate to System Configuration > Enabled Modules. Make sure that BIP Aggregate Reporting is checked.
D.2 BI Publisher Periodic report does not Execute from Argus UI

The BI Publisher Periodic reports do not run when invoked from the Argus UI. The status of the report remains Pending on the Background Reports screen.

■ Cause
The BIP Common user ID or password entered for the BIP Aggregate Reporting Common Profile Switch is wrong or empty.

■ Solution
Make sure there is a user ID present in the BIP Aggregate Reporting common profile switches. Verify that the user ID and password present in this switch can login to the BI Publisher. Also, make sure that the user ID has complete access to all reports.

■ Cause
The Report path in the REPORT_TEMPLATE is empty or has an incorrect path.

■ Solution
The Report path present in the code list REPORT_TEMPLATE must have a proper value. The value can be verified by comparing it against the actual report path in the BIP Publisher catalogs.
Database Connection Errors

Figure D–2  Verify Report Template Path

■ Cause
The endpoint address present in the AGProc.config file is incorrect.

Solution
Confirm the following:
– The endpoint address is present.
– It points to the BI Publisher Server (including the port number).
– No unnecessary space is present in the URL.
– Services are properly mentioned—SecurityService is mapped against SecurityService, and ScheduleService is mapped against SchedulingService.

■ Cause
The Oracle DataAccess version present in the AGProc.config file is incorrect.

Solution
Refer to the Install guide and make sure the correct entry is provided.

■ Cause
Missing Argus UI user in the BI Publisher.

Solution
Make sure that the Argus UI user exists and is allowed to login and run the required reports.

D.3 Database Connection Errors

Cause
The BI Publisher report cannot utilize the JDBC provided.

Solution
Make sure the JDBC connection is in lowercase.
D.4 BI Publisher Scheduled Report Output does not Show up

Make sure:

- The report is *scheduled* and not *open* if run from the BI Publisher Console.
- The database job used for copying the report output is running correctly.
- The database link `AS_TO_BIPREP` is valid.
