# Licensing Notes for Oracle's PeopleTools 8.51

As part of the sales contract with Oracle, what products you can install and use and how you use them is part of the licensing agreement. That agreement contains information related to your overall PeopleSoft application license. This document contains licensing notes and reminders intended more for product implementation teams to help determine if additional products need to be licensed to achieve the ultimate goals of the PeopleSoft system.

**Note.** Where third party products are discussed, in most cases no specific version number is mentioned, as these can change due to product updates outside the release cycle. You should *a/ways* consult the Product Certifications area on My Oracle Support to determine what product versions are supported with your version of PeopleTools.

## Licensing Notes

The following table contains licensing notes and reminders per product in alphabetical order.

Product	Sub Product	Licensing Description
All	License Codes	<p>PeopleSoft Enterprise installs all products with your PeopleTools and application installation. Activate the products you have purchased after you create the database, install the application server, and install PeopleSoft Internet Architecture.</p> <ol style="list-style-type: none"> <li>1. Log in to PeopleSoft.</li> <li>2. From the Products tab, select <i>Set Up xxx (where xxx is your application), Install, Installation Table</i>.</li> <li>3. De-select the products for which you have not obtained a license.</li> </ol> <p>Deselecting the products from the Installation Table <i>does not</i> automatically remove access by your users of these applications. The license code used when you installed is the generic license code that allows access to all modules.</p> <p>There are two ways that you can remove access to unlicensed product pages:</p> <ul style="list-style-type: none"> <li>• Create new permission lists and roles that only allow access to certain pages. Works well for sites with a relatively small user base</li> <li>• Deactivate the pages in the portal navigation, by selecting <i>Portal Structure and Content</i> and remove the products from the navigation. If the pages are inactive then only PeopleSoft or Portal administrator roles will have access. Works well for customers only needing to inactivate a small number of pages and they know the pages to inactivate.</li> </ul> <p>Select the option that best suits your site or requires less work.</p>

Integration Broker	Oracle Enterprise Service Bus (ESB)	<p>Oracle ESB moves data among multiple endpoints, both within and outside of an enterprise. It uses open standards to connect, transform, and route XML documents among disparate applications. This enables CTI components to attach data to incoming calls.</p> <p>For detailed information about specific PeopleSoft-supported versions, refer to My Oracle Support in the certifications area.</p>
