(Relate)**

Installation Guide - Installer

Release 11.1

E79518-01

Revision 2

September 2016

Copyright © 2016, Oracle and/or its affiliates. All rights reserved.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Introduction

The rebranding for the latest version of this documentation set is in development as part of post MICROS acquisition activities. References to former MICROS product names may exist throughout this existing documentation set.

The *Relate Installation Guide - Installer* provides the procedures and instructions necessary to perform either a full installation/configuration of the Relate application and its associated database, or an upgrade to Oracle Relate™ 11.1.

If you are upgrading from a previous version of Relate earlier than version 11.0, please contact your project manager for more information.

This document is intended only as a guide for a typical implementation. Since implementations will differ from customer-to-customer, it is up to the person performing the implementation to know when and how to deviate from this guide.

Refer to the following chapters for the information you need to get started:

- [Chapter 2, "Installation" on page 13](#), describes the installation and configuration of Relate Services and the database using an installer that will guide you through the entire installation process.
- [Chapter 3, "Initial Configuration" on page 49](#), provides instructions for configuring Relate Services after it has been installed.
- [Appendix A: "Start/Stop Relate Services" on page 61](#), provides instructions for starting and stopping Relate in Windows and Linux.
- [Appendix B: "Secure Sockets Layer \(SSL\)" on page 64](#) provides procedures for creating SSL certificates and enabling SSL in Relate.

Who Should Use This Guide

This guide is intended for anyone responsible for the installation and configuration of, or the upgrade to, Relate 11.1, including Operations Technical Support and Customer Technical Support.

Anyone using this guide should have a working knowledge of XML, the network system being used and, depending upon the environment and system you are using, SQL Server or Oracle database, and the Windows or the Linux operating system.

Related Documents

The following documents are part of the Relate CRM documentation suite and may be helpful when configuring/validating the Relate application. These documents can be found on the Relate 11.1 Installation CD-ROM in the `/documentation` directory.

Relate User Guide - The *Relate User Guide* provides the end user with instructions/details on how to use the Web Interface to the CRM Server. It aids the user by describing information required to perform an operation, what the information is used for (if necessary), and how different pieces of information interact with each other (if necessary).

Batch Processing & Web Services Guide - Provides users with information, examples, and guidelines needed to compose SOAP-based and XML messages for the Relate application (through batch file processing and the web interface), and how to integrate applications with Relate through WSDL interfaces.

Relate Database Dictionary - The *Relate Database Dictionary* provides users with a description of the Relate database tables, fields, relationship diagrams, and default data.

Relate Configuration Guide - The *Relate Configuration Guide* provides a description of the Relate configuration tool as well as instructions, requirements, and information concerning the configuration of the Relate application and database. The settings include both those set at the time of installation and those that may be changed at a later date.

Supported Platforms

The following list describes the minimum requirements necessary to install and run Relate 11.1 and its associated database.

Application Server Operating System

- ❑ Windows Server 2008 R2 SP1 running a 64-bit Java Virtual Machine
- ❑ OpenSuse version 12.3

At least 8 GB of RAM is required on the application server.

Database Server Software

- ❑ MS SQL Server 2012 SP1 (running on Windows Server 2008 R2 SP1)
- ❑ Oracle 11gR2 - Release 11.2.0.2 (running on Windows Server 2012)

Required Materials

The following materials are required to complete the installation and configuration of the Relate application and the associated database.

“Installed” means that the item must be installed before the Relate installation can begin.

- ❑ Relate 11.1.xx Installation CD-ROM
- ❑ Operating System (Installed)
- ❑ Database Server (Installed)
- ❑ Java™ SE Development Kit 7 (JDK version 1.7) (Installed)

For instructions on installing JDK 1.7, see [“Installing Java Development Kit \(JDK\) Version 1.7.x” on page 8](#).

Installing Java Development Kit (JDK) Version 1.7.x

Oracle's Java Development Kit (JDK) is used for running Java applets and applications. The latest version of the kit can be downloaded from:

<http://www.oracle.com/technetwork/java/javase/downloads/jdk7-downloads-1880260.html>

Similar steps will need to be performed in Linux to install the Java Development Kit (JDK) Version 1.7.x.

1. Check to see if there is an existing version of Java on the server by entering the following command:

```
C:\> java -version
```
2. The system will present the version number if there is an existing Java version. Note the version number of the Java version installed.
 - If nothing is returned, continue with next step.
 - If an older version exists (e.g. Java 1.6.x_xx) continue with next step.
 - If the command returns Java 1.7.x_xx, skip to ["Modifying the Environment Variables \(Windows\)" on page 10](#).
3. Download and run the `jdk-7uXX-windows-yyyv.exe` application, where:
 - `xx` is the revision number.
 - `yyyv` is either `i586` or `x64`, depending upon the system on which the installation is being performed.

The Java installer opens.

Figure 1-1: Java Installer

4. Click **Next** to continue.

The Choose Program Features step opens.

Figure 1-2: Choose Program Features

5. Click **Next** to perform the installation.

While performing the setup, accept all of the defaults.

The program installs Java SDK 7, which includes JDK 1.7, the Java FX SDK, the Java Runtime Environment (JRE), and the Java plug-in on the web server.

6. Click **Finish** to complete the JDK installation.

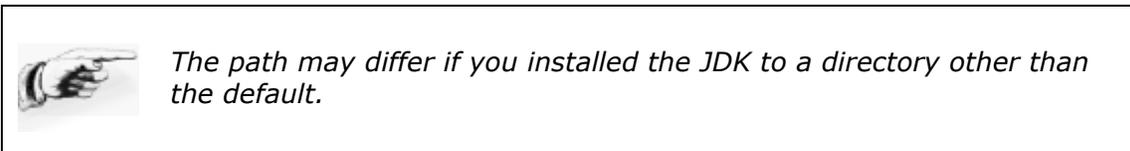

Figure 1-3: Finish Installation

Once the JDK has been installed, add an Environment Variable for Java and add the Java directories to the web server's path.

Modifying the Environment Variables (Windows)

Update the server's Environment Variables and path by performing the following:

1. In the **Start** menu, select **Control Panel**.
2. If Control Panel is organized by category, click to open **System and Security**.
3. Click **System**.
4. Click the **Advanced system settings** link on the left side of the window.
The System Properties window opens on the Advanced tab.
5. Click the **Environment Variables** button.
The Environment Variables window opens.
6. Check to see if the `JAVA_HOME` variable already exists.
 - If the variable does not exist, continue with the next step.
 - If the variable does exist, check whether its value is `c:\Program Files\Java\jdk1.7.0_XX` (where `XX` is the revision number).
Note: *The short name cannot be used here.*
 - If the variable exists, but the value is not correct, continue with step 12.
 - If the value is correct, continue with step 15.

7. In the System Variables pane, click **New** to open the New System Variable dialog box.

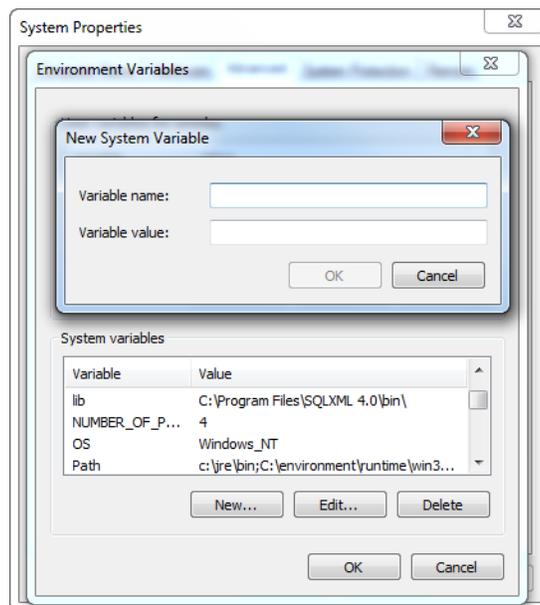

Figure 1-4: Add New System Variable

8. Enter `JAVA_HOME` in the **Variable name** field. Ensure that the variable name is all upper case.
9. Enter `c:\Program Files\Java\jdk1.7.0_XX`, where `XX` is the revision number. If the JDK has been installed somewhere other than in `c:\Program Files`, enter the absolute path to the `\jdk1.7.0_XX` directory.
10. Click **OK** to save the system variable information.
Continue with step 15.
11. If the `JAVA_HOME` variable exists, but is not set to the correct value, click the **JAVA_HOME** variable in the System Variables list to select it.
12. Click **Edit**.

The Edit System Variable window opens.

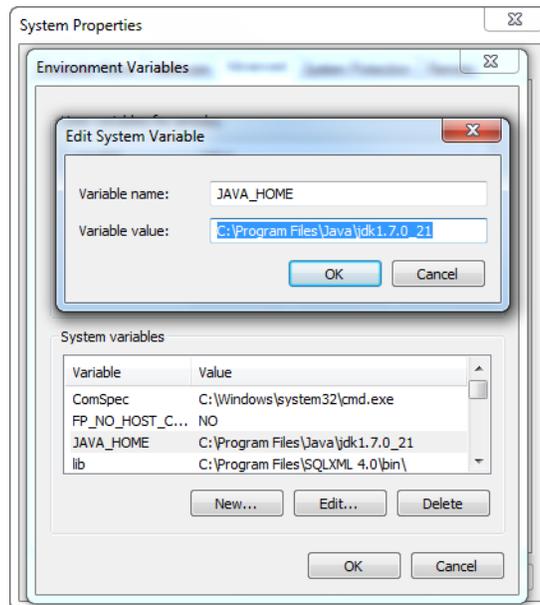

Figure 1-5: Edit Java Home

13. In the **Variable value** field, enter `c:\Program Files\Java\jdk1.7.0_XX`, where `XX` is the revision number. If the JDK has been installed somewhere other than in `c:\Program Files`, enter the absolute path to the `jdk1.7.0_XX` directory.
14. Click **OK** to save the system variable information.
Continue with the next step.

15. While in the Environment Variables window, from the System Variables pane, click to highlight the **Path** system variable, then click **Edit**.

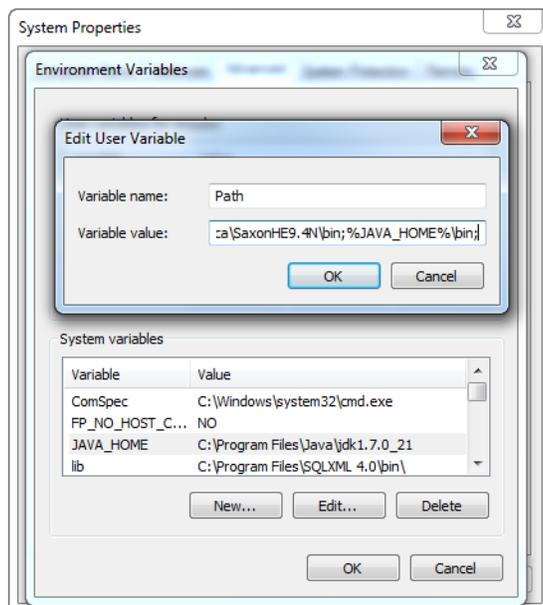

Figure 1-6: Edit Path

16. Check whether the value `%JAVA_HOME%\bin` already exists. If it does, you are finished with this procedure.
- Otherwise, continue with the next step.
17. In the **Edit System Variable** dialog box, click to place the cursor in the **Variable value** field, then press the [End] key. This places the cursor at the end of the path.
18. Append the following to the end of the value in the **Variable value** field:
- ```
;%JAVA_HOME%\bin
```
19. Click **OK** to save the System Variables.
20. In the Environment Variables window, click **OK** to save the Environment Variable information.
21. Exit the Control Panel.

## Modifying the Environment Variables (Linux)

Several commands must be run to prepare Java for Relate. However, the commands required for setting environment variables in Linux will depend upon the Linux distribution used, the shell used, and the installation directory for Java. Therefore, you will need to determine the commands required to perform the following tasks.

1. Check whether the **\$JAVA\_HOME** variable is set to the `jdk1.7.0_XX` directory. If it is not, set **\$JAVA\_HOME** to the absolute path to the `jdk1.7.0_XX` directory.
2. Check whether the **\$PATH** variable includes the `$JAVA_HOME\bin` value. If it does not, add `$JAVA_HOME\bin` to the **\$PATH** variable.

# Installation

## Overview

This chapter describes:

- The installation procedure for Relate 11.1.
- The upgrade procedure for Relate 11.1 from an earlier version.

*This installation will not completely configure Relate, it will only configure the system settings. The rest of the settings must be configured before Relate can be used. See [Chapter 3, "Initial Configuration" on page 49](#) and the **Relate Configuration Guide** for more information.*

## Assumptions

This chapter assumes the following:

- The host computer has a server Operating System (OS) installed (see ["Application Server Operating System" on page 7](#)).
- Java Development Kit (JDK) 1.7.x has been installed.
- The database software (see ["Database Server Software" on page 7](#)) has been installed.
- Information such as Organization ID, database name, database username/password, etc. is available.
- An SSL certificate is available for Relate (["Create the SSL Certificate" on page 65](#)).

*New installations of Relate require an SSL certificate. Upgrades do not require an SSL certificate.*

## Installation Process

The installation process consists of the following steps:

1. Run the database installer for your database.
  - If you are installing an SQL Server database, see ["SQL Server Installation" on page 15](#).
  - If you are installing an Oracle database, see ["Oracle Installation" on page 24](#).
2. Create or upgrade the database.
  - If you are creating a SQL Server database, see ["SQL Server" on page 33](#).
  - If you are creating an Oracle database, see ["Oracle" on page 34](#).
  - If you are upgrading a SQL Server database, see ["Upgrade the Database" on page 35](#).
3. Run the Relate installer (see ["Relate Installation" on page 36](#)).
4. Configure the software (see [Chapter 3, "Initial Configuration" on page 49](#)).

# Database Installation

## SQL Server Installation

At any time during the installation process, click **Cancel** to exit the process without saving any settings that may have been entered.

Use the following procedure to install a SQL Server database:

- A SQL Server database installation can only be performed by the Windows installer. The Linux database installer does not include the option to install a SQL Server database.
- A SQL Server database server should not be used with a Linux application server. This configuration is not supported and may result in unpredictable behavior in Relate.

1. Insert the Database Installation CD into the CD-ROM drive.

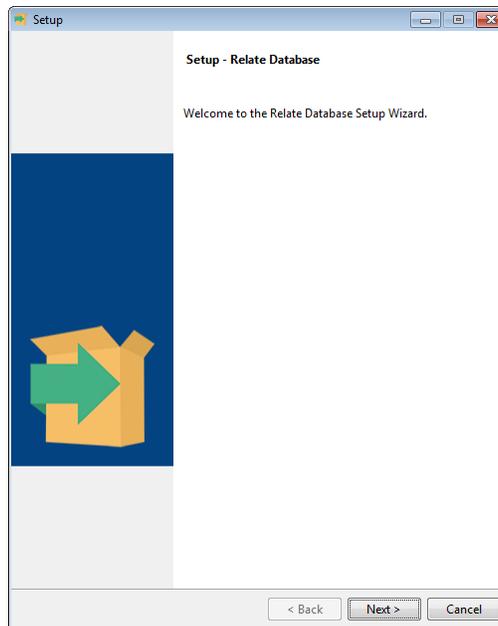

Figure 2-1: Welcome Screen

If the Installer does not automatically start:

- a. Open a browser and navigate to the CD drive.
- b. Double-click the `Relate-db-11.1.00.xx.exe` file.  
The Welcome screen will be displayed.
- c. Click **Next** to move to the next step.

2. If necessary, change the Installation Directory. Click **Next** to move to the next step.

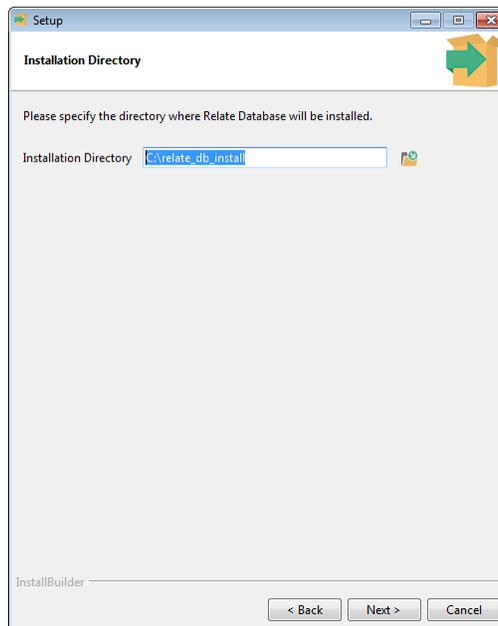

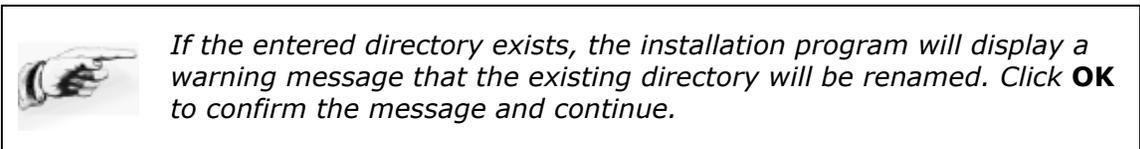

Figure 2-2: Installation Directory

To browse for a directory, do the following:

- a. Select the folder icon next to the entry field. A Browse for Folder window opens.

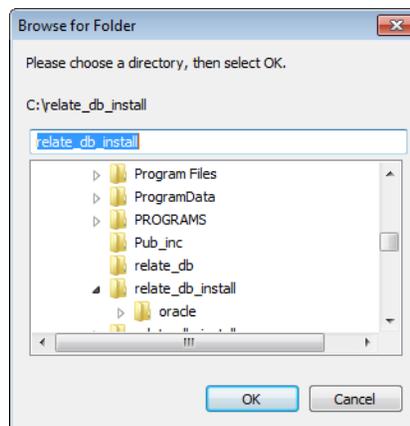

Figure 2-3: Browse for Folder

- b. Navigate through the directory structure to locate the proper folder.
- c. Click on the folder to select it, then click **OK**.

The full path of the folder appears in the entry box.

3. Click the checkbox for the database and installation type you are performing. Click **Next** to move to the next step.

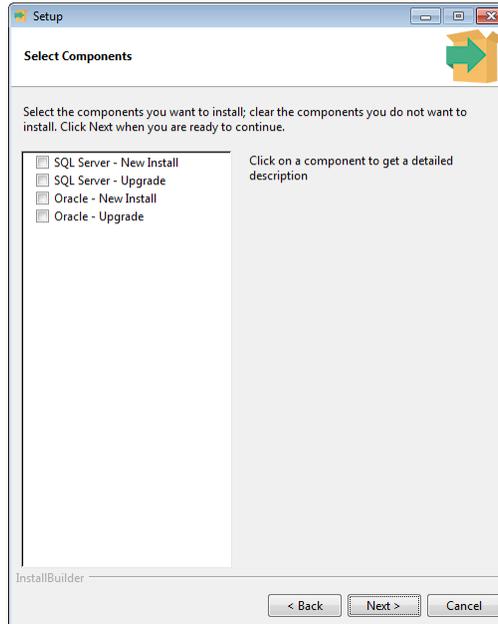

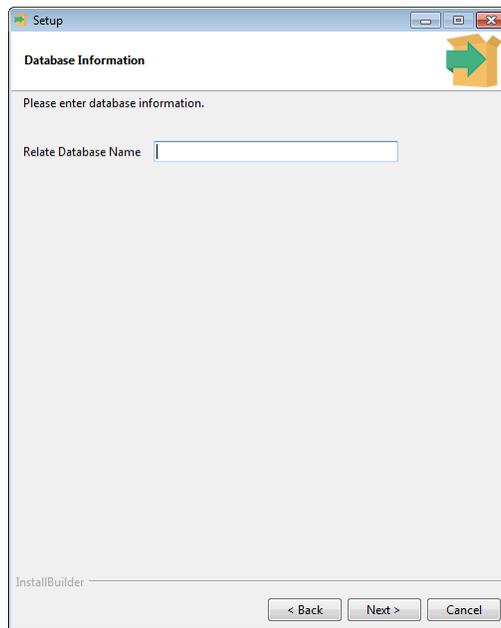

Figure 2-4: Select Components

Select one, and only one, database component.

- a. If this is a new installation for SQL Server:
  - 1) Check **SQL Server - New Install**.
  - 2) Click **Next**, then continue with step 5.
- b. If this is an upgrade installation for SQL Server:
  - 1) Check **SQL Server - Upgrade**.
  - 2) Click **Next**, then continue with the next step.

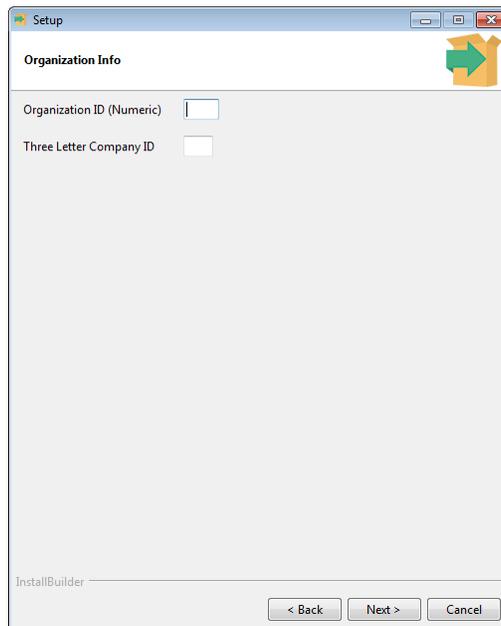

4. Enter the name of the Relate database. Click **Next** to continue with [step 9 on page 22](#).

The screenshot shows a Windows-style window titled "Setup" with a subtitle "Database Information". The window contains a text input field labeled "Relate Database Name". Below the input field, there are three buttons: "< Back", "Next >", and "Cancel". The window also features a green arrow icon in the top right corner and the text "InstallBuilder" in the bottom left corner.

Figure 2-5: Database Information

5. Enter the following information for your organization:

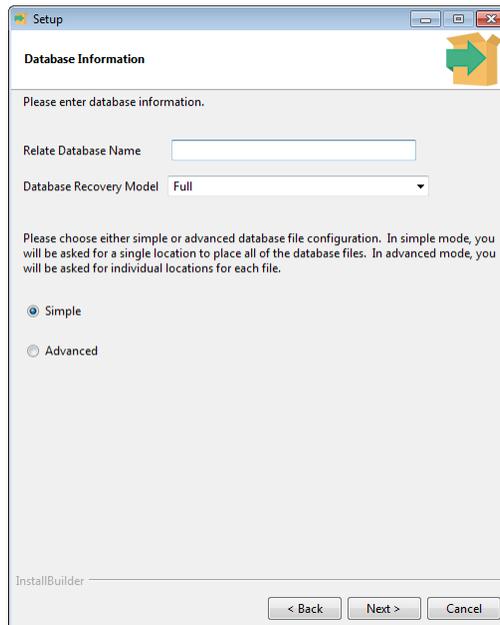

The screenshot shows a Windows-style window titled "Setup" with a subtitle "Organization Info". The window contains two text input fields: "Organization ID (Numeric)" and "Three Letter Company ID". Below the input fields, there are three buttons: "< Back", "Next >", and "Cancel". The window also features a green arrow icon in the top right corner and the text "InstallBuilder" in the bottom left corner.

Figure 2-6: Organization Info

- a. **Organization ID (Numeric)** - The 3-digit identification number assigned to your organization.
- b. **Three Letter Company ID** - This 3-character company ID is also assigned to your organization.

When you are finished, click **Next** to move to the next step.

**6.** Define the database information.

*Figure 2-7: Database Information (New Install)*

- a.** Enter the **Relate Database Name**.
- b.** Select the **Database Recovery Model: Full** or **Simple**.
- c.** Select whether you are performing a **Simple** or **Advanced** database file configuration, then click **Next** to continue with the next step.
  - Simple** - All database files are placed in a single specified directory.
  - Advanced** - Different database files are placed in separate directories that are specified individually.
- d.** Click **Next** to continue.
  - If you selected **Simple** database file, continue with the next step.
  - If you selected **Advanced** database file configuration, continue with step 8.

7. Select the location of the database files, then click **Next** to continue with step 9.

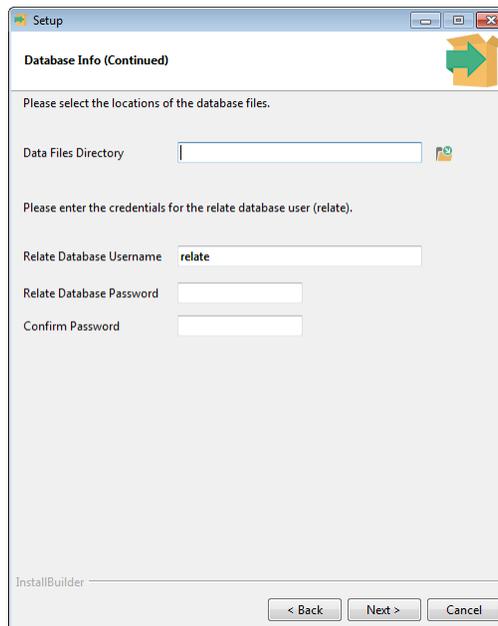

Figure 2-8: Database File Locations - Simple

To browse for a directory, do the following:

- a. Select the folder icon next to the entry field. A Browse for Folder window opens.

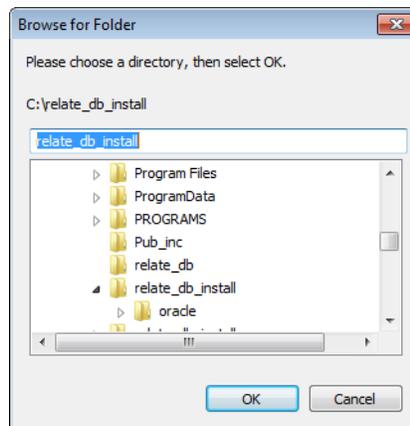

Figure 2-9: Browse for Folder

- b. Navigate through the directory structure to locate the proper folder.
- c. Click on the folder to select it, then click **OK**.  
The full path of the folder appears in the entry box.
- d. Click **Next** to continue with step 9.

8. If you selected **Advanced** database file configuration in step c:

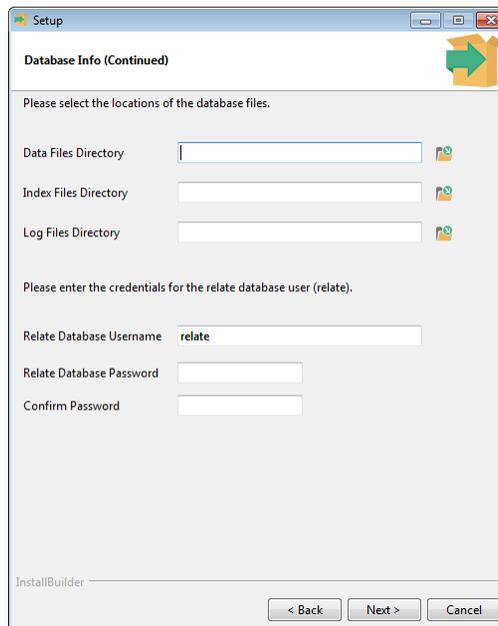

Figure 2-10: Database File Locations (SQL Server)

a. Select the locations for the database files.

To browse for a directory, do the following:

1) Select the folder icon next to the entry field. A Browse for Folder window opens.

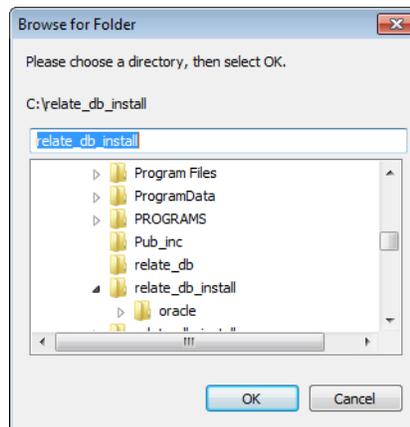

Figure 2-11: Browse for Folder

2) Navigate through the directory structure to locate the proper folder.

3) Click on the folder to select it, then click **OK**.

The full path of the folder appears in the entry box.

b. Enter the database owner credentials:

- 1) **Relate Database Username** - This will be used by Relate to connect to the database.
- 2) **Relate Database Password** - Password for the username.
- 3) **Confirm Password** - If this does not match the password already entered, a dialog box is displayed with a warning. Click **OK** to return to the Relate User Credentials screen.

When you are finished, click **Next** to continue.

9. Click **Next** to begin the installation. When the installation is complete, the Finish screen is displayed.

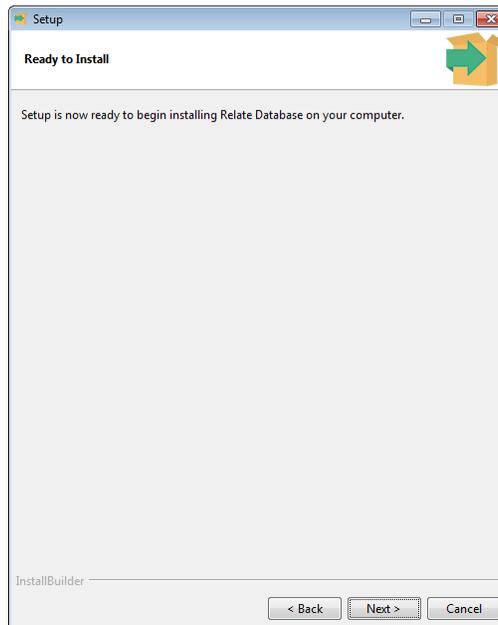

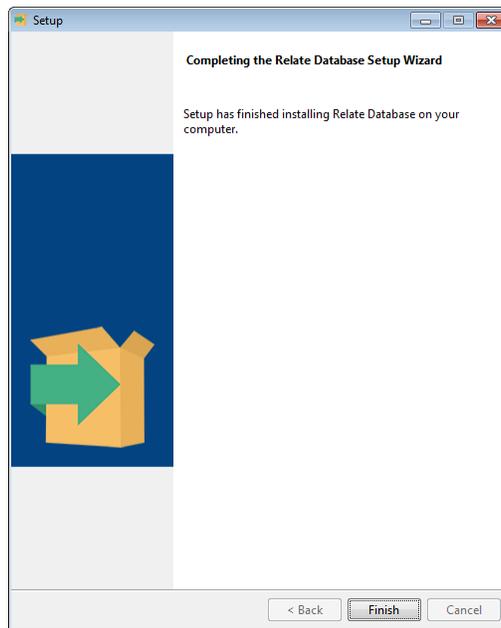

Figure 2-12: Ready to Install

10. Click **Finish** to close the Installation Wizard.

*Figure 2-13: Installation Complete*

## Oracle Installation

At any time during the installation process, click **Cancel** to exit the process without saving any settings that may have been entered.

Use the following procedure to install an Oracle database:

1. Insert the Database Installation CD into the CD-ROM drive.

The look and feel of the installer and installation paths entered will be different if you are installing in a Linux environment; however, the steps will mostly be the same.

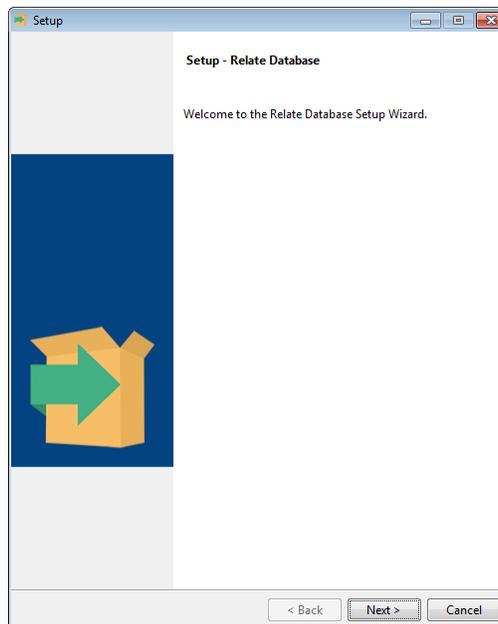

Figure 2-14: Welcome Screen

If the Installer does not automatically start:

- a. Open a browser and navigate to the CD drive.
- b. Run the installation program for your operating system:
  - **Windows** - Double-click the `Relate-db-11.1.00.xx.exe` file.
  - **Linux** - Double-click the `Relate-db-11.1.00.xx.run` file.

The Welcome screen will be displayed.

- c. Click **Next** to move to the next step.

2. If necessary, change the Installation Directory. Click **Next** to continue with the next step.

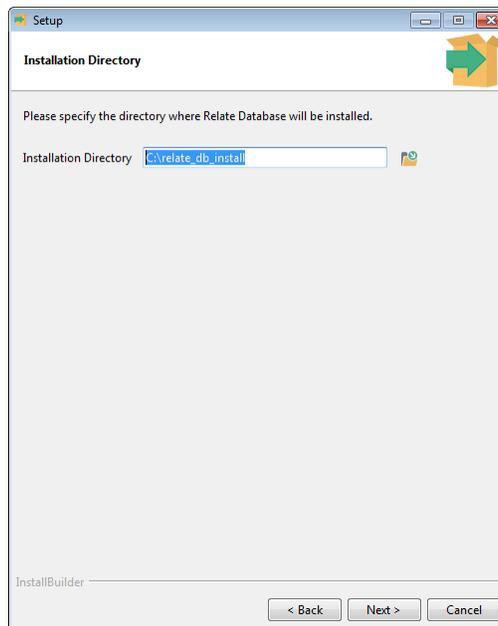

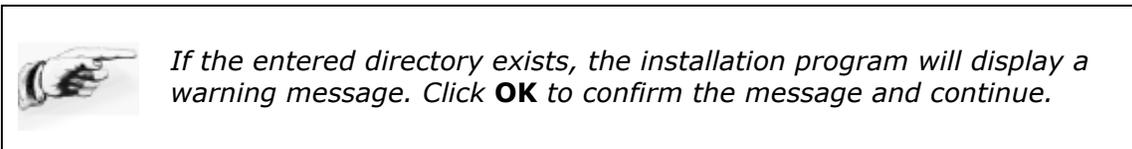

Figure 2-15: Installation Directory

To browse for a directory, do the following:

- a. Select the folder icon next to the entry field. A Browse for Folder window opens.

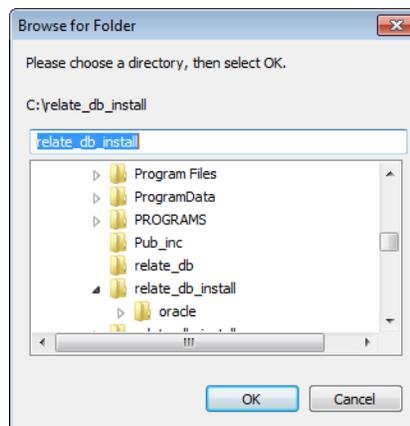

Figure 2-16: Browse for Folder

- b. Navigate through the directory structure to locate the proper folder.
- c. Click on the folder to select it, then click **OK**.

The full path of the folder appears in the entry box.

3. Click the checkbox for the database and installation type you are performing. Click **Next** to move to the next step.

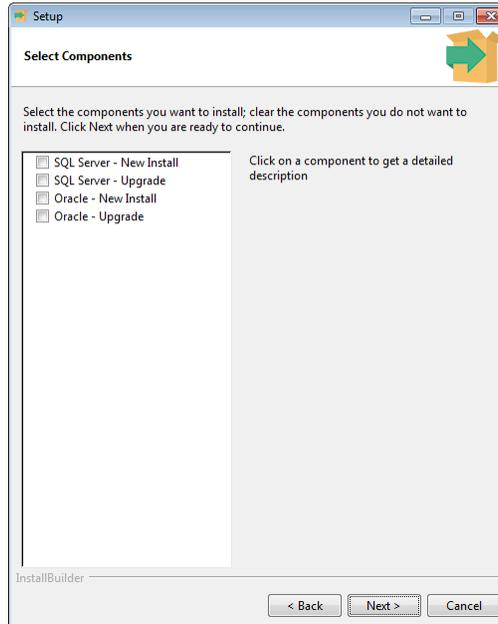

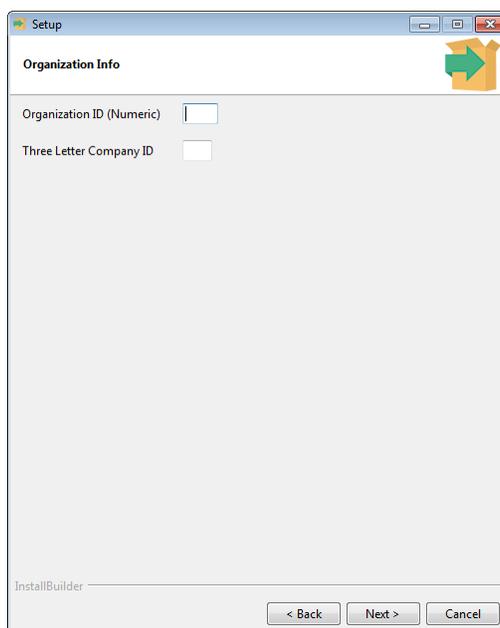

Figure 2-17: Select Components

- Select one, and only one, database platform.
- The Linux database installer will only provide the "Oracle" options.

- a. If this is a new installation:
  - 1) Check **Oracle - New Install**.
  - 2) Click **Next**, then continue with step 4.
- b. If this is an upgrade installation for Oracle:
  - 1) Check **Oracle - Upgrade**.
  - 2) Click **Next**, then continue with step 8.

4. Complete the following information for your organization:

The image shows a screenshot of a Windows-style setup window titled "Setup". The window has a title bar with standard minimize, maximize, and close buttons. Below the title bar, the text "Organization Info" is displayed in the top left corner, and a green arrow icon pointing right is in the top right corner. The main area of the window contains two input fields: "Organization ID (Numeric)" with a small square input box, and "Three Letter Company ID" with a small square input box. At the bottom of the window, the text "InstallBuilder" is visible on the left, and three buttons are on the right: "< Back", "Next >", and "Cancel".

*Figure 2-18: Organization Info*

- a. **Organization ID** - The 3-digit identification number assigned to your organization.
- b. **Three Letter Company ID** - This 3-character company ID is also assigned to your organization.

When you are finished, click **Next** to move to the next step.

5. Select whether you are performing a **Simple** or **Advanced** database file configuration, then click **Next** to continue.

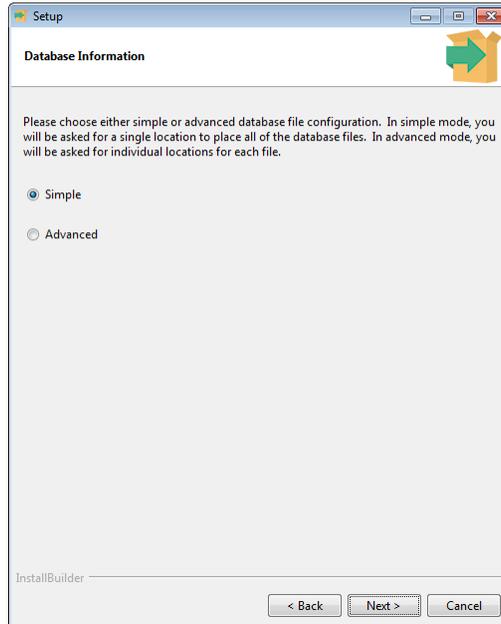

Figure 2-19: Simple or Advanced Database File Locations

- ❑ **Simple** - All database files are placed in a single specified directory.  
After selecting **Simple**, click **Next** to continue with the next step.
- ❑ **Advanced** - Different sets of database files are placed in separate directories that are specified individually.  
After selecting **Advanced**, click **Next** to continue with step 7.

6. Select the location of the database files, then click **Next** to continue with step 8.

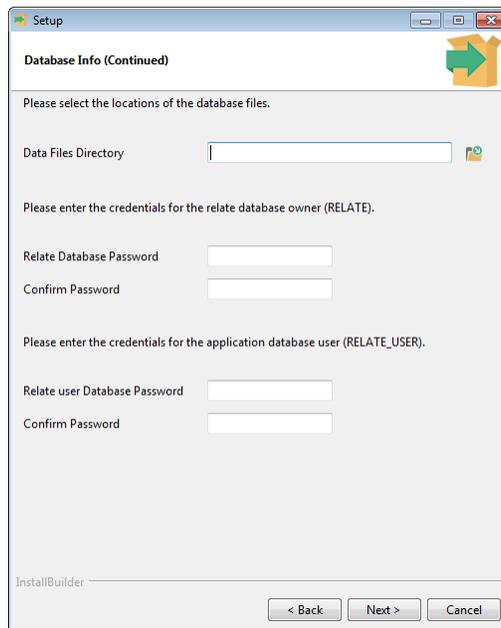

Figure 2-20: Database File Locations - Simple

- a. Select the locations for the database file.  
To browse for a directory, do the following:
- 1) Select the folder icon next to the entry field. A Browse for Folder window opens.

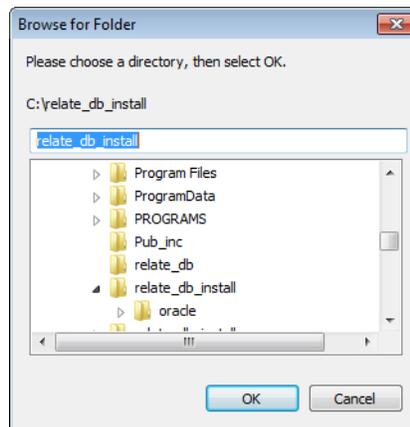

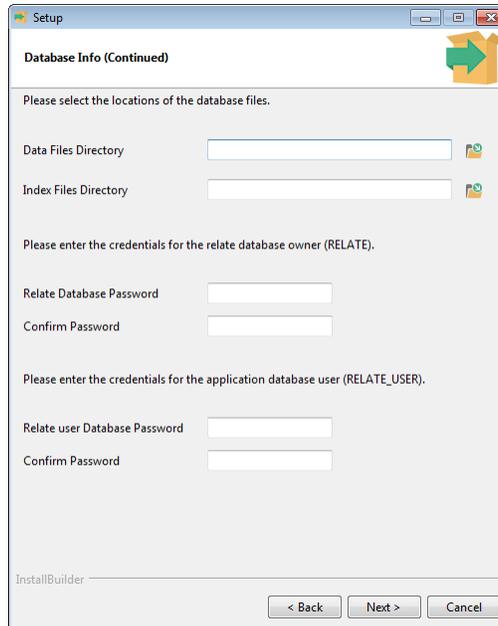

Figure 2-21: Browse for Folder

- 2) Navigate through the directory structure to locate the proper folder.
  - 3) Click on the folder to select it, then click **OK**.  
The full path of the folder appears in the entry box.
- b. Enter the login credentials for the user RELATE:
- 1) **Relate Database Password** - Password for the RELATE username.

- 2) **Confirm Password** - If this does not match the password already entered, a dialog box is displayed with a warning.
- c. Enter the login credentials for the user RELATE\_USER:
  - 1) **Relate User Database Password** - Password for RELATE\_USER username.
  - 2) **Confirm Password** - If this does not match the password already entered, a dialog box is displayed with a warning.

When you are finished, click **Next** to continue with step 8.

7. Select the locations of the database files.

The screenshot shows a Windows-style dialog box titled "Setup" with a sub-header "Database Info (Continued)". The main instruction is "Please select the locations of the database files." There are two rows of input fields: "Data Files Directory" and "Index Files Directory", each followed by a folder icon button. Below this, the instruction is "Please enter the credentials for the relate database owner (RELATE).", followed by "Relate Database Password" and "Confirm Password" fields. The next instruction is "Please enter the credentials for the application database user (RELATE\_USER).", followed by "Relate user Database Password" and "Confirm Password" fields. At the bottom, there are three buttons: "< Back", "Next >", and "Cancel". The "InstallBuilder" logo is visible in the bottom left corner.

Figure 2-22: Database File Locations - Advanced

- a. Select the locations for the database file.  
To browse for a directory, do the following:

- 1) Select the folder icon next to the entry field. A Browse for Folder window opens.

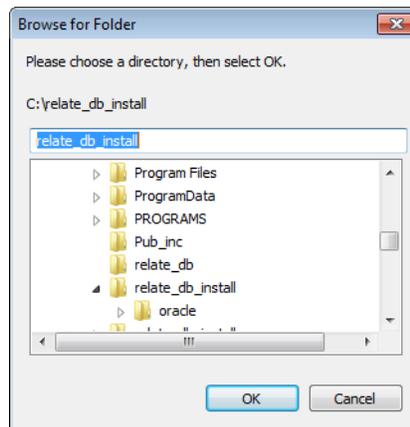

Figure 2-23: Browse for Folder

- 2) Navigate through the directory structure to locate the proper folder.
- 3) Click on the folder to select it, then click **OK**.

The full path of the folder appears in the entry box.

- b. Enter the login credentials for the user RELATE:

- 1) **Relate Database Password** - Password for the RELATE username.
- 2) **Confirm Password** - If this does not match the password already entered, a dialog box is displayed with a warning.

- c. Enter the login credentials for the user RELATE\_USER:

- 1) **Relate User Database Password** - Password for RELATE\_USER username.
- 2) **Confirm Password** - If this does not match the password already entered, a dialog box is displayed with a warning.

When you are finished, click **Next** to continue with the next step.

- Click **Next** to begin the installation. When the installation is complete, the Finish screen is displayed.

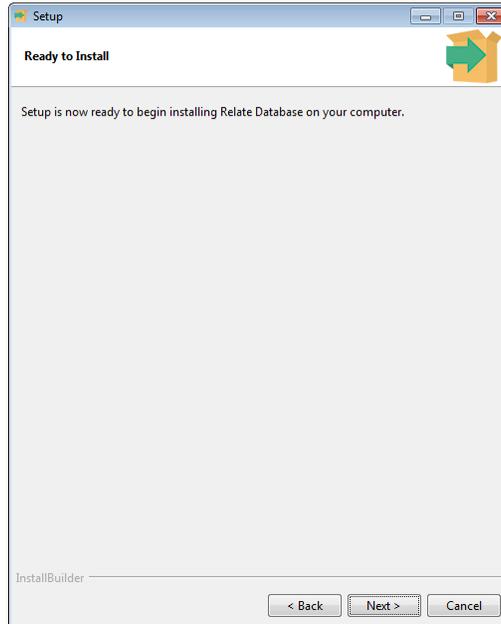

Figure 2-24: Ready to Install

- Click **Finish** to close the Installation Wizard.

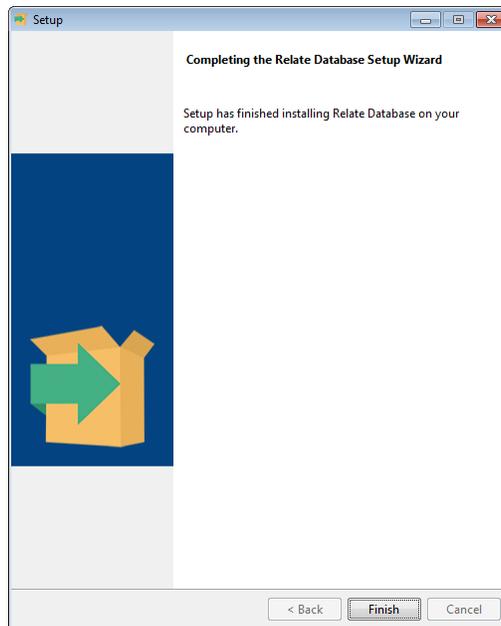

Figure 2-25: Installation Complete

## Create the New Database

*If you selected an Upgrade installation option in the Relate Database Setup Wizard, do NOT perform the procedures in this section. Proceed to ["Upgrade the Database" on page 35](#).*

This process will create a new Relate database. This sample database contains tables, fields, etc. for Relate to use.

## SQL Server

*Look for errors after running each of the following scripts. If any errors occur, contact your product representative for assistance.*

1. Locate the database creation files. These files are located in the `sqlserver` directory within the directory specified in step 2 of the ["Database Installation" on page 15](#) procedure.
2. Open the file `01CreateDB.sql` using your database interface software (e.g. SQL Server Management Studio).
3. Execute the script `01CreateDB.sql`.  
The database is created.
4. Open and execute the script `02CreateUser.sql`.  
Usernames and passwords for the database are created.
5. Open and execute the script `03CreateRelate.sql`.  
Database tables are created.
6. Open and execute the script `04LoadData.sql`.  
Sample data is loaded into the Relate database.
7. Open and execute the script `05OrgID.sql`.  
Organization information is set in the Relate database.
8. Open and execute the script `06InsertReports.sql`.  
Reports are created for Relate.

## Oracle

*Look for errors in the log files after running each of the following scripts. If any errors occur, contact your product representative for assistance.*

*The name of the log file is similar to the name of the script, though without a number at the beginning, and with a file extension of .log. For example, the log file for 01CreateTBS.sql is CreateTBS.log.*

1. Locate the database creation files. These files are located in the `oracle` directory within the directory specified in step 2 of the ["Database Installation" on page 15](#) procedure.
2. Open the file `01CreateTBS.sql` using your database interface software (e.g. `sqlplus`).
3. Execute the script `01CreateTBS.sql`.  
The tablespaces are created.
4. Open and execute the script `02CreateUsers.sql`.  
Usernames and passwords for the database are created.
5. Open and execute the script `03CreateRELATE.sql`.  
Database tables are created.
6. Open and execute the script `04LoadQRTZRS.sql`.  
Quartz locks are set.
7. Open and execute the script `05OrgID.sql`.  
Organization information is set in the Relate database.

*The script `05OrgID.sql` does not create a log file.*

8. Open and execute the script `06InsertReports.sql`.  
Reports are created for Relate.

*The script `06InsertReports.sql` does not create a log file.*

9. As the `sysdba` user, run the following command in Oracle:

```
GRANT EXECUTE on sys.dbms_crypto to public;
```

## Upgrade the Database

*If you selected a New Installation option in the Relate Database Setup Wizard, do NOT perform the procedure in this section. Go to ["Create the New Database" on page 33](#), or proceed to ["Relate Installation" on page 36](#) if you have already created the database.*

In this section you will run database scripts that will upgrade the existing database.

### SQL Server

*Look for errors after running each of the following scripts. If any errors occur, contact your product representative for assistance.*

1. Locate the database creation files. These files are located in the `sqlserver` directory within the directory specified in step 2 of the ["Database Installation" on page 15](#) procedure.
2. Open the file `db-updates.sql` using your database interface software (e.g. SQL Server Management Studio).
3. Execute the script `db-updates.sql`.  
The database schema is updated for Relate 11.1.

### Oracle

- *Look for errors after running each of the following scripts. If any errors occur, contact your product representative for assistance.*
- *Upgrades on Oracle will only succeed if the current version of Relate was installed by the 11.0 installer.*
- The upgrade scripts should be run by Oracle's Relate user.

1. Locate the database creation files. These files are located in the `oracle` directory within the directory specified in step 2 of the ["Database Installation" on page 15](#) procedure.
2. Open the file `db-updates.sql` using your database interface software (e.g. sqlplus).
3. Execute the script `db-updates.sql`.  
The database schema is updated for Relate 11.1.

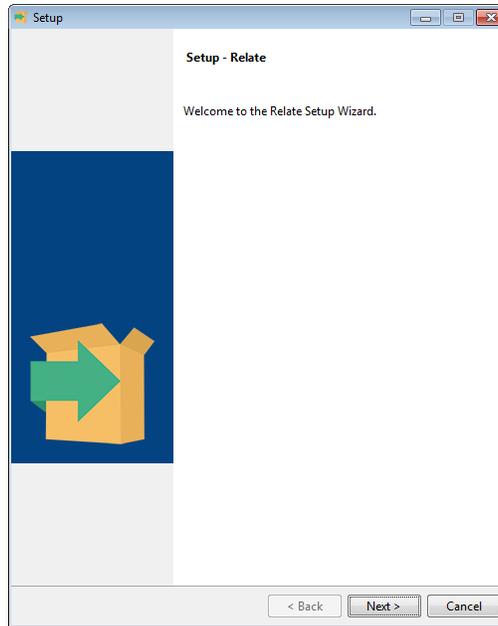

# Relate Installation

This procedure will install the Relate software.

*A SQL Server database server should not be used with a Linux application server. This configuration is not supported and may result in unpredictable behavior by Relate.*

1. Insert the Application Installation CD into the CD-ROM drive.

*Figure 2-26: Welcome Screen*

If the Installer does not automatically start:

- a. Open a browser and navigate to the CD drive.
- b. Run the installation program for your operating system:
  - **Windows** - Double-click the `Relate-11.1.00.xx.exe` file.
  - **Linux** - Double-click the `Relate-11.1.00.xx.run` file.
- c. Click **Next** to move to the next step.

2. If necessary, change the Installation Directory from the default. If you are performing an upgrade, this directory must be set to the path in which Relate is currently installed.

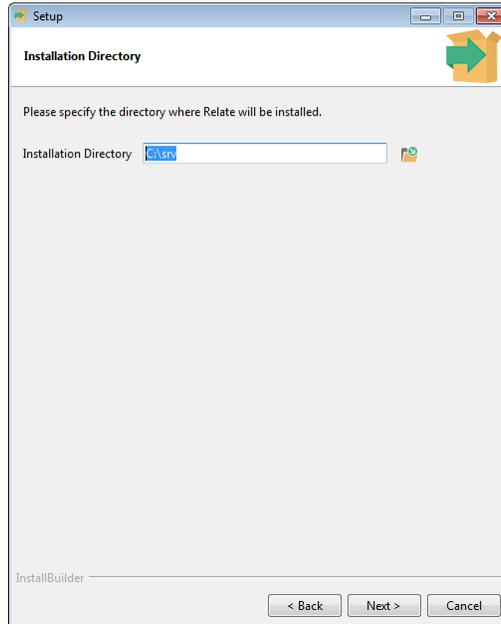

Figure 2-27: Installation Directory

*If this is an upgrade, the path should be set to the directory where Relate is currently installed.*

*If you change the installation directory, the path cannot contain any spaces. If the path contains spaces, the installation will fail.*

Click **Next** to continue:

- If Relate is already installed on your system, continue with the next step.
- If you are installing Relate on a Windows system, and Relate is not installed on your system, continue with step 4.
- If you are installing Relate on a Linux system, and Relate is not installed on your system, continue with step 6.

3. If the Installer detects another instance of Relate, the screen shown below will be displayed.

If this screen does not appear, and you are not performing an upgrade, continue with step 4 (Windows) or step 6 (Linux).

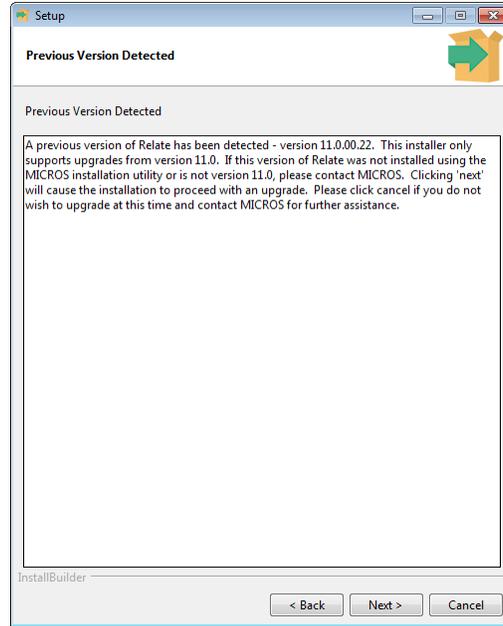

Figure 2-28: Previous Version Detected

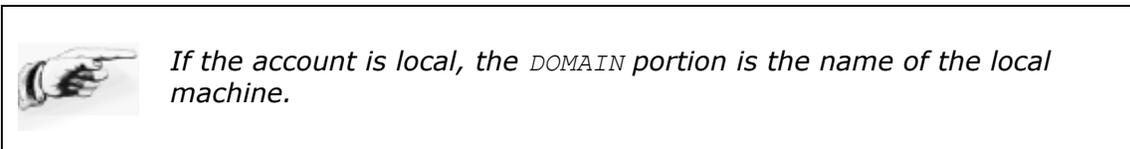

- a. If the previous version is Relate 11.0 and you wish to continue, click **Next**. The Installer will do the following:
  - Stop Relate if it is currently running (Windows Only).
  - Delete the services (Windows Only).
  - Rename the existing `<install_directory>` to `<install_directory>.preupg`.
  - Continue with step 4.
- b. If the previous version is not Relate 11.0:
  - 1) Contact your project manager for assistance.
  - 2) Click **Cancel** and then **OK** when asked if you want to stop.
- c. If you do not wish to continue, click **Cancel**, then click **OK** when asked if you want to stop.

4. Enter the following information (Windows Only):

Figure 2-29: Service Username and Password

- a. **Service Username** - Enter the Windows Username under which the Relate service will run (Administrator, SYSTEM (recommended), Root, etc.).

The user name must be in the form `DOMAIN\USERNAME`.

- b. **Service Password** - Enter the Password for the Username in the Service Password text box.
- c. **Confirm Service Password** - Enter the Password a second time in the Confirm Service Password text box.

If this does not match the password already entered, a dialog box is displayed with a warning. Click **OK** to return to the Service Logon Information screen.

- d. Click **Next** to move to the next step:
- If this is a new installation, continue with the next step.
  - If this is an upgrade installation, continue with step 10.

5. Enter the SSL configuration information:

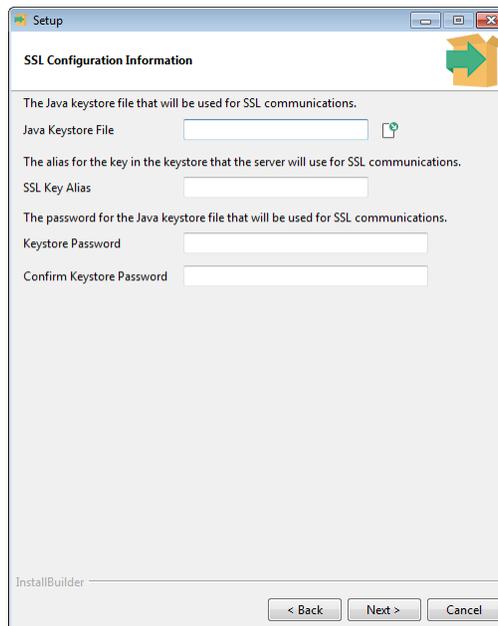

Figure 2-30: Service Logon Information

- a. Enter the full path for the **Java Keystore File** (see ["Create the SSL Certificate" on page 65](#) for more information).

 *If you place the keystore file with the filename `relate.keystore` in the same directory as the installer program, this field will be populated automatically. The installer will then place the keystore file in the `ssl` directory of the Installation Directory (see step 2).*

- b. Enter the **SSL Key Alias**. This is the alias used by Relate.

 *This value will depend upon the configuration of your system. In the line commands given in the procedure ["Create the SSL Certificate" on page 65](#) in [Appendix B: "Secure Sockets Layer \(SSL\)"](#), the alias is `tomcat`.*

- c. Enter the **Keystore Password** used to access the keystore.  
 d. Re-enter the password in the **Confirm Keystore Password** file.  
 e. Click **Next** to continue with the next step.

6. Select the database you will be using. Click **Next** to move to the next step.

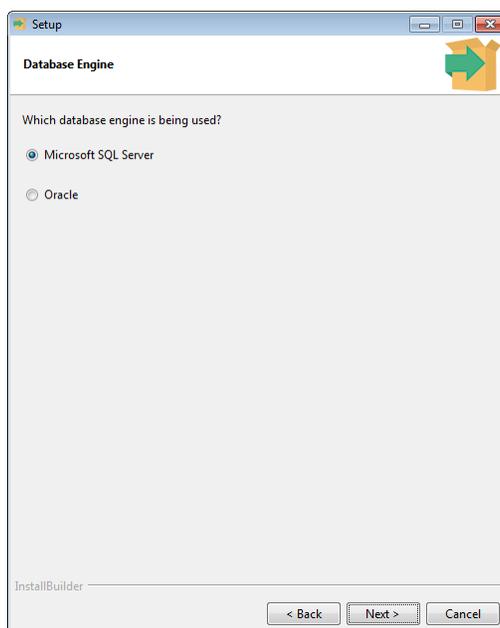

Figure 2-31: Database Engine

- If you selected **Oracle**, continue with the next step.
- If you selected **Microsoft SQL Server**, continue with step 8.

*A SQL Server database server should not be used with a Linux application server. This configuration is not supported and may result in unpredictable behavior.*

7. If you selected Oracle as your database, enter the database information:

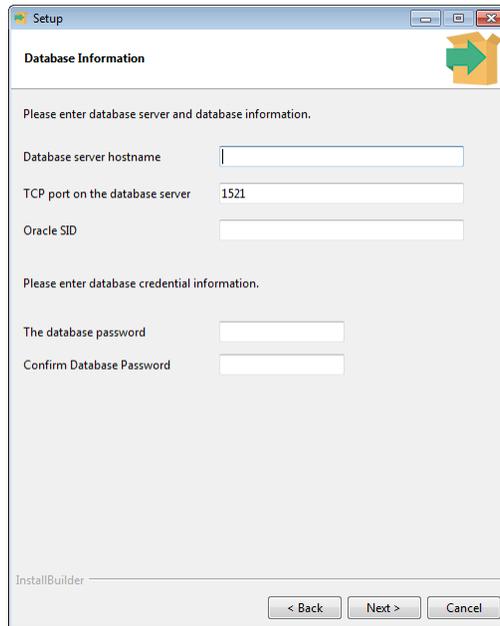

Figure 2-32: Database Information (Oracle)

- a. **Database Server Hostname** - Name of the server.
- b. **TCP Port on the Database Server** - This is typically "1521", but if you are going to use another port, enter the number here.
- c. **Oracle SID** - The SID for Oracle.
- d. **Database Password** - Used by Relate to connect to the `relate_user` database account.
- e. **Confirm Password** - If this does not match the password already entered, a dialog box is displayed with a warning. Click **OK** to return to the Database Credentials screen.

When you are finished, click **Next** to continue with step 9.

8. If you selected Microsoft SQL Server as your database, enter the database information:

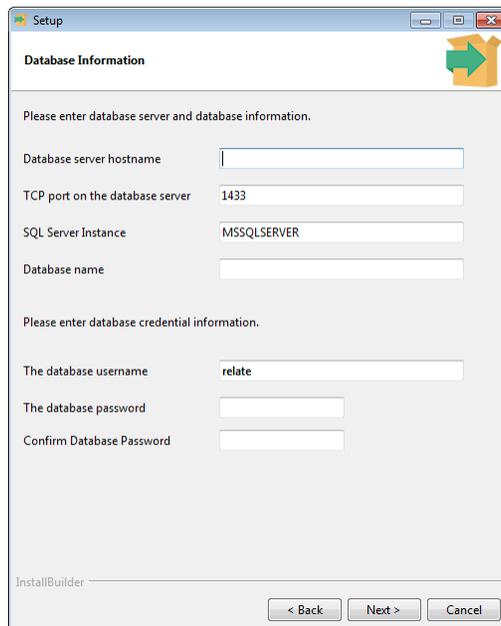

Figure 2-33: Database Information (SQL Server)

- a. **Database Server Hostname** - Name of the server.
- b. **TCP Port on Database Server** - This is typically "1433", but if you are going to use another port, enter the number here.
- c. **SQL Server Instance** - SQL Server Instance to use. If necessary, leave this field blank.
- d. **Database Name** - This must agree with the database name you used when installing the database.
- e. **Database Username**- This will be used by Relate to connect to the Relate database.
- f. **Database Password** - Used by Relate to connect to the Relate database.
- g. **Confirm Password** - If this does not match the password already entered, a dialog box is displayed with a warning. Click **OK** to return to the Database Credentials screen.

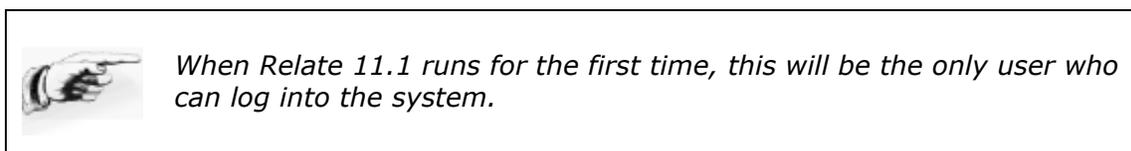

When you are finished, click **Next** to continue with the next step.

## 9. Enter the Organization Information:

Figure 2-34: Organization Information

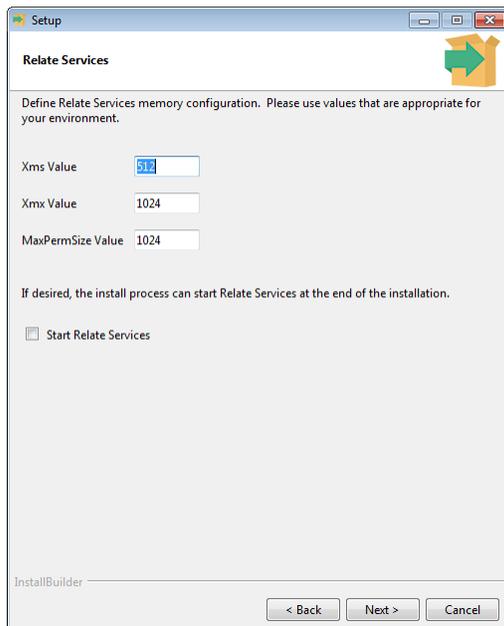

- a. **Organization ID** - This is the identification number assigned to your organization. This must match the Organization ID you provided in the Database Installer.
- b. **Descriptor** - This is the 3-Letter company code assigned to your organization. This must match the Company ID you provided in the Database Installer.
- c. Enter the necessary information for the superuser. Click **Next** to move to the next step.

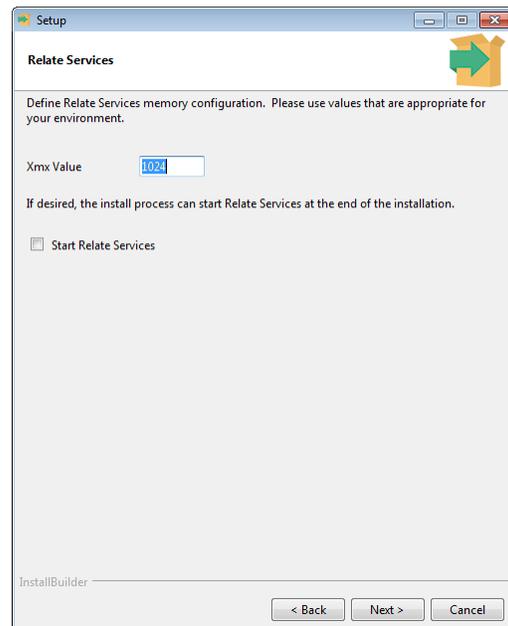

- 1) **User ID** - The username to use when logging into the system as the superuser.
- 2) **Password** - The password to use when logging into the system as the superuser.
- 3) **Confirm** - Confirm the password for the superuser.  
If this does not match the password already entered, a dialog box is displayed with a warning. Click **OK** to return to the Relate Super User Credentials screen.
- 4) **E-Mail Address** - The e-mail address to which Relate will send all messages to be delivered to the superuser.
- 5) Click **Next** to move to the next step.

**10.** Configure Relate services. Click **Next** to continue with the next step.

*Figure 2-35: Relate Services Memory Allocation (Windows and Linux New Installation)*

*Figure 2-36: Relate Services Memory Allocation (Linux Upgrade)*

*Speak with your product representative to determine the proper values to enter in these fields.*

- a.** If necessary, update the memory allocations for Relate services.
- b.** If necessary, click to enter a checkmark () in the Start Relate Services checkbox to start Relate services when installation is finished.

When you are finished, click **Next** to continue:

- New Installation** - Continue with step 12.
- Upgrade Installation** - Continue with the next step.

11. If you are performing an upgrade installation, confirm the upgrade by clicking **Next** to continue with the next step.

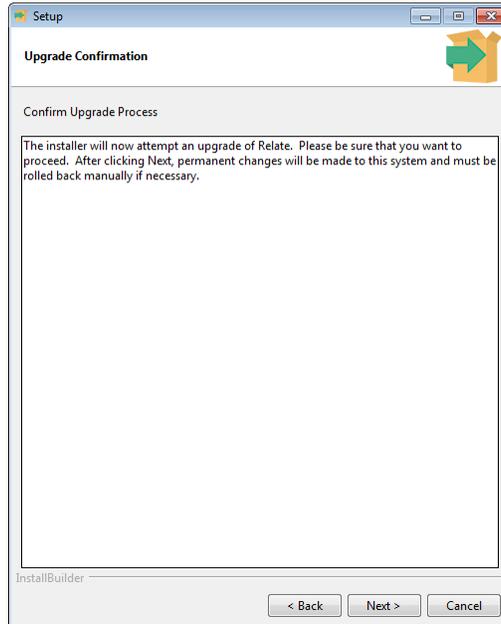

Figure 2-37: Upgrade Confirmation

12. Click **Next** to start the installation process. This process will install the files necessary to run Relate and configure the system settings.

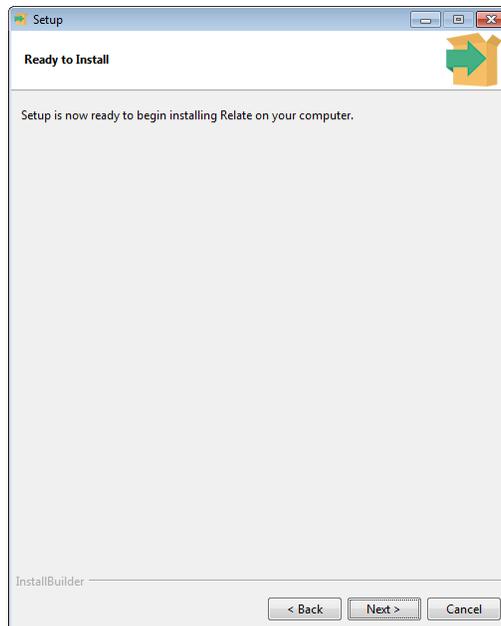

Figure 2-38: Ready to Install

13. After the installation is complete, if you selected the option to start services in step 10, the Installer alerts you that the services will take some time to start. Click **Next** to complete the Relate installation.

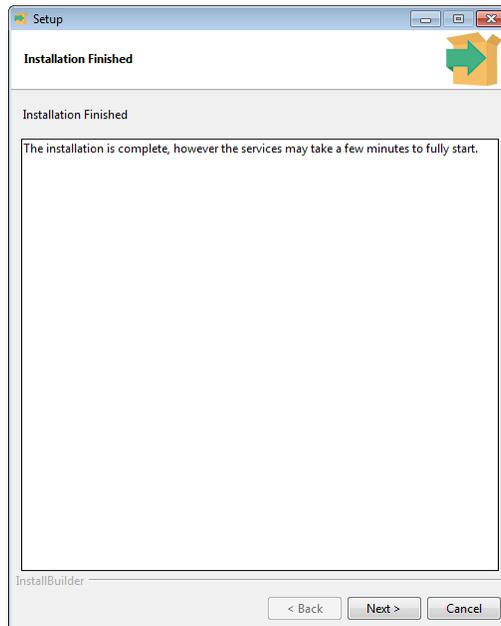

Figure 2-39: Installation Finished

14. Click **Finish** to complete the Relate setup.

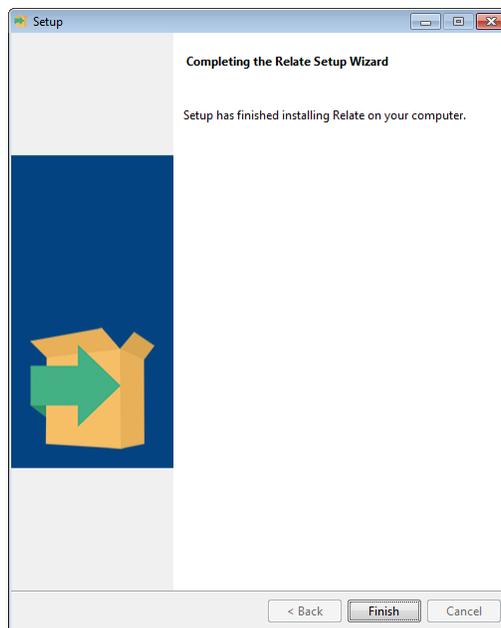

Figure 2-40: Complete Relate Setup Wizard

## Initial Configuration

Refer to [Chapter 3, "Initial Configuration" on page 49](#) for instructions on the initial configuration of Relate.

# Initial Configuration

## Overview

This procedure describes the initial configuration of Relate following installation.

*If Relate 11.1 has not been installed, configuration cannot be performed. Perform the installation procedure in [Chapter 2, "Installation" on page 13](#) before performing the actions in this chapter.*

The following tasks need to be performed in order to configure Relate:

- ["Start Relate Services" on page 50](#)
- ["Log In" on page 51](#)
- ["Perform Initial Configuration" on page 52](#)

## Segment Management Query Templates

Query templates for Segment Management are now in a different location and use a different format than previous versions of Relate. If you are upgrading from Relate 11.0 and you have customized Segment Management query templates, these customizations must be migrated properly to be available in Relate 11.1.

*Speak with your product representative before attempting to move these configurations to Relate 11.1 from a previous version.*

The values in the current query template file(s) must be configured in the file(s)

```
\srv\relate-services-deploy\apache-tomcat\webapps\relateui#ORG\
qry_resource_XX.js
```

where **ORG** is the Organization ID and **XX** is the two-letter ISO language code (upper-case) for the properties being set.

- *Each Organization on the server has a separate directory for these configurations. The universal configuration used in earlier versions of Relate must now be configured for each Organization.*
- *After configuring the new file(s), back up the new file(s) in a safe location. **These directories will be overwritten if you redeploy the .WAR files.***

## Start Relate Services

If Relate Services is not running, start the application or service. See [Appendix A: "Start/Stop Relate Services" on page 61](#) for more information.

## Log In

Use the following procedure to log into the Relate application:

1. Use a Web Browser to navigate to the URL provided at the time of installation (similar to: <http://<hostname>:<port number>/relateui/<ORG ID>/>).

The Relate login page is displayed.

Figure 3-1: Relate Login

2. Enter your username in the **Username** field.
3. Enter password in the **Password** field.
4. Click the **Login** button, or press the [Enter] key.

The Relate main page opens.

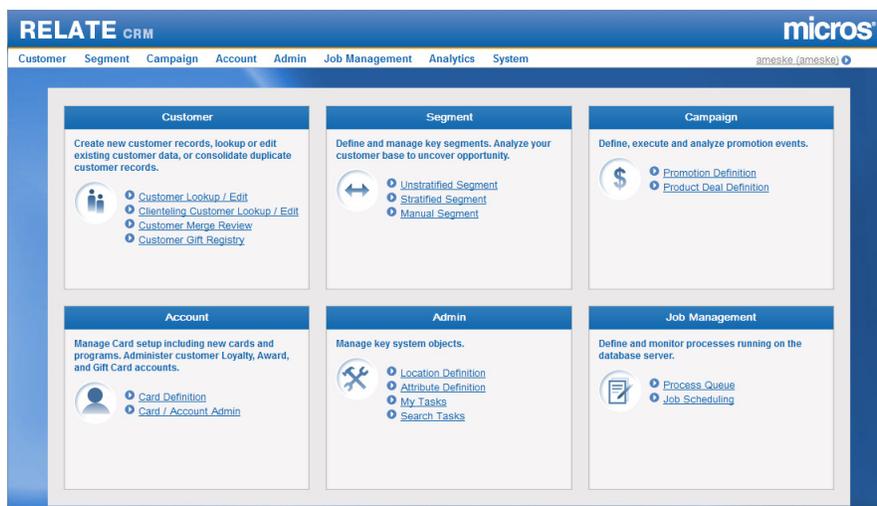

Figure 3-2: Relate Main Page

## Perform Initial Configuration

Initial configuration will need to be performed before Relate is ready for use. This configuration includes such requirements as adding organizations, adding and configuring users, creating Role Groups, and making additional configuration changes to Relate. These configuration changes are described in the *Relate Configuration Guide*.

**See also:** The *Relate Configuration Guide* for a full description of configuration procedures and the configuration options available.

## Import Users and User Configurations (New Installation)

If the Relate installation is a new installation, User data may be imported through comma-separated values (CSV) files. These files can be created programmatically from an existing database, allowing Users to be easily moved to Relate.

To import Users into Relate, do the following:

**1.** Import Franchisees into Relate (if Relate is configured to use Franchisees):

**a.** Create the Franchisees CSV file:

The Create Franchisees CSV file will have the following line format for each new Franchisee:

```
FRANCHISEE_ORG_NAME,FRANCHISEE_ORG_DESCRIPTION
```

where:

- FRANCHISEE\_ORG\_NAME - Is the name of the Franchisee.
- FRANCHISEE\_ORG\_DESCRIPTION - Is a description of the Franchisee.

*The first line in a Create Franchisees CSV file must define the Location ID for a user. The next lines will then be used to add as many Franchisee IDs as desired.*

**b.** Import the Franchisee CSV file. See ["Import New Franchisee CSV File" on page 54](#) for a description of the procedure.

**2.** Import Users into Relate:

**a.** Create the Users CSV file.

The Users CSV file will have the following line format for each new User:

```
USR_EMAIL,USR_LNAME,USR_FNAME,USR_LANGCODE,USR_ID,USER_LOCATION_ID,
COUNTRY_CODE
```

where:

- `USR_EMAIL` - User email address.
- `USR_LNAME` - User last name.
- `USR_FNAME` - User first name.
- `USR_LANGCODE` - ISO language code for the User's default language.
- `USR_ID` - Unique ID for the User.
- `USER_LOCATION_ID` - Unique ID for the User's Location.
- `COUNTRY_CODE` - ISO country code for the User's country.

**b.** Import the User CSV file. See ["Import User CSV File" on page 56](#).

### 3. Import Roles into Relate:

**a.** Create the Roles CSV file.

The Roles CSV file will have the following line format for each Role assigned to a User:

```
ROL_EMAIL,ROL_ROLENAME,ROL_USR_ID
```

where:

- `ROL_EMAIL` - Email address of the User being assigned the Role.
- `ROL_ROLENAME` - Name of the Role.
- `ROL_USR_ID` - ID of the User being assigned the Role.

*The Roles `Relate_SystemAdmin` and `Relate_UserAdmin` cannot be assigned to a User through the import process.*

**b.** Import the Roles CSV. See ["Import Roles CSV File" on page 58](#).

### 4. Import the Franchisee Assignments in Relate:

**a.** Create the Franchisee Assignment CSV file.

The Franchisee Assignment CSV file will have the following line format for each Franchisee assignment:

```
FRANCHISEE_EMAIL,FRANCHISE_ORGNAME,FRANCHISE_LOCFLAG,
FRANCHISEE_USR_ID
```

where:

- `FRANCHISEE_EMAIL` - Email address of the User being assigned to the Franchisee.
- `FRANCHISE_ORGNAME` - Name of the Franchisee, or the ID of the Location to which the User is assigned. The value in this field depends upon the value of the `FRANCHISE_LOCFLAG`.
- `FRANCHISE_LOCFLAG` - This flag indicates the information included in the `FRANCHISE_ORGNAME` field.  
 TRUE - The `FRANCHISE_ORGNAME` contains the ID of the Location to which the User will be assigned.

FALSE - The `FRANCHISE_ORGNAME` contains the name of the Franchisee to which the User will be assigned.

- `FRANCHISEE_USR_ID` - ID of the User being assigned to the Franchisee.

5. Import the Franchisee Assignment CSV file. See ["Import Franchisee Assignment CSV File" on page 59](#).

## Import New Franchisee CSV File

*Only perform this procedure if Franchises are enabled in Relate.*

Use the following procedure to import a Franchisee comma-separated values (CSV) file:

*Users must be assigned the `Relate_SystemAdmin` role or the `Relate_UserAdmin` role to perform this procedure.*

1. In the **System** menu for Relate, click **Franchisees**.

Figure 3-3: System Menu

The Franchisees page opens.

| Franchisee ID | Name                             | Description                      | City         | State |
|---------------|----------------------------------|----------------------------------|--------------|-------|
| 6713          | NewFranchisee                    | NewFranchisee                    | Solon        | Ohio  |
| 6214          | DO NOT USE Highland Road         |                                  |              |       |
| 6212          | WSDL9076-TestCase1.0-Franchisee  | TestCase1.0 WSDL9076 Franchisee  | Huntsburg    | NC    |
| 6209          | WSDL19416-TestCase1.0-Franchisee | TestCase1.0 WSDL19416 Franchisee | Layettsville | WI    |
| 6208          | WSDL30713-TestCase1.0-Franchisee | TestCase1.0 WSDL30713 Franchisee | Layettsville | WI    |
| 6207          | WSDL60342-TestCase1.0-Franchisee | TestCase1.0 WSDL60342 Franchisee | Layettsville | WI    |
| 6206          | Franchisee Name xmlapi-M4146     |                                  |              |       |
| 5706          | Patrick's Party Store - Ohio     | Patrick's Party Store - Ohio     |              |       |
| 5705          | Patrick's Party Store - Michigan | Patrick's Party Store - Michigan |              |       |
| 5704          | Patrick's Party Store            | Patrick's Party Store            | New York     | NY    |
| 5209          | WSDL8611-TestCase1.0-Franchisee  | TestCase1.0 WSDL8611 Franchisee  | Layettsville | WI    |
| 5208          | WSDL20143-TestCase1.0-Franchisee | TestCase1.0 WSDL20143 Franchisee | Layettsville | WI    |

Figure 3-4: Franchisees Page

- In the ACTIONS menu, click **IMPORT FRANCHISEE CSV FILE**.

Figure 3-5: Import Franchisee CSV File

- A Choose a CSV File window opens.

Figure 3-6: Choose a CSV File Window

- Click the **Browse...** button.

The file selection process for an upload file begins. The procedure for selecting a file depend upon the operating system and browser being used. See the documentation for the operating system and browser for more information about selecting a file for upload.

- Click the **Import** button.

The data is imported into Relate. When the data has been imported, confirmation of the successful import is displayed.

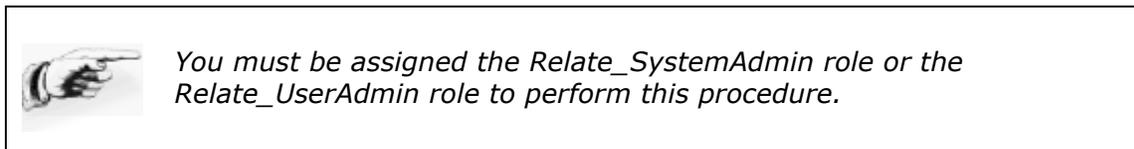

Figure 3-7: Import Success Confirmation

6. Click the **X** () to close the window.

## Import User CSV File

Use the following procedure to import a User-related comma-separated values (CSV) file:

1. In the **System** menu for Relate, click **Import Users CSV File**.

Figure 3-8: System Menu

The Import User CSV File page opens.

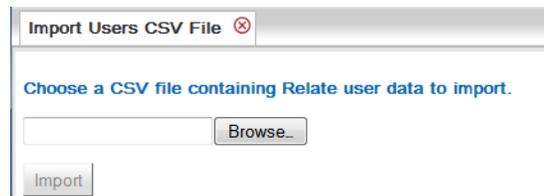

Figure 3-9: Import Users CSV File Page

2. Click the **Browse...** button.

The file selection process for an upload file begins. The procedure for selecting a file depend upon the operating system and browser being used. See the documentation for the operating system and browser for more information about selecting a file for upload.

3. After selecting a file, click the **Import** button.

The data is imported into Relate. When the data has been imported, confirmation of the successful import is displayed.

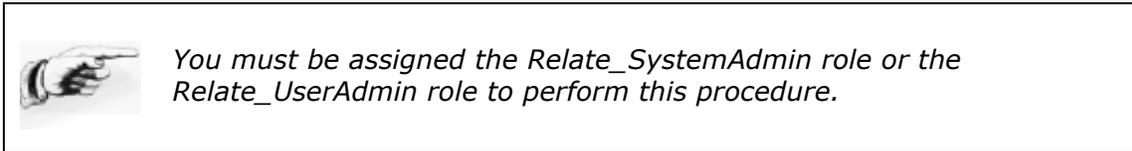

Figure 3-10: Import Success Confirmation

4. Click the red **X** (⊗) to close the tab.

## Import Roles CSV File

Use the following procedure to import the user roles in a comma-separated values (CSV) file:

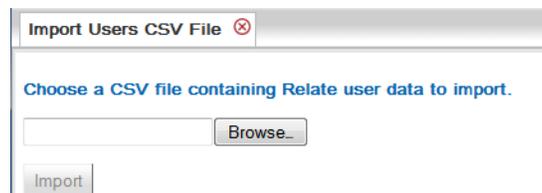

1. In the **System** menu for Relate, click **Import Users CSV File**.

*Figure 3-11: System Menu*

The Import User CSV File page opens.

*Figure 3-12: Import Users CSV File Page*

2. Click the **Browse...** button.

The file selection process for an upload file begins. The procedure for selecting a file depend upon the operating system and browser being used. See the documentation for the operating system and browser for more information about selecting a file for upload.

3. After selecting a file, click the **Import** button.

The data is imported into Relate. When the data has been imported, confirmation of the successful import is displayed.

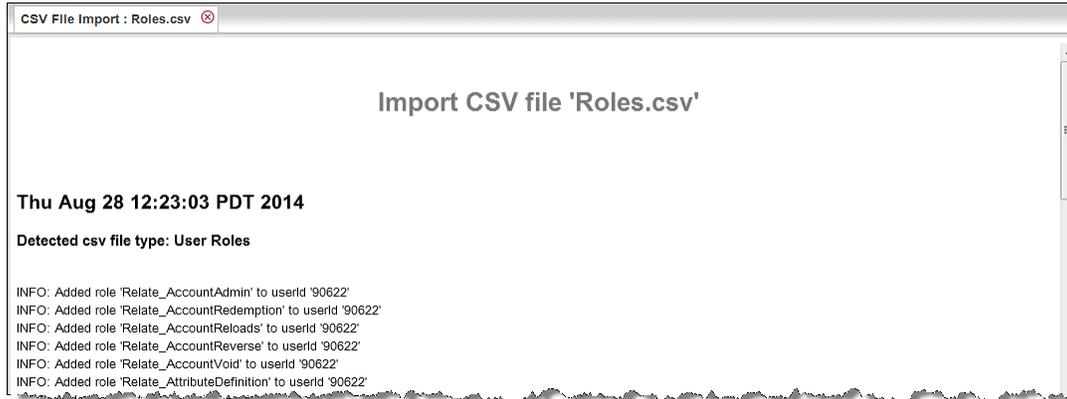

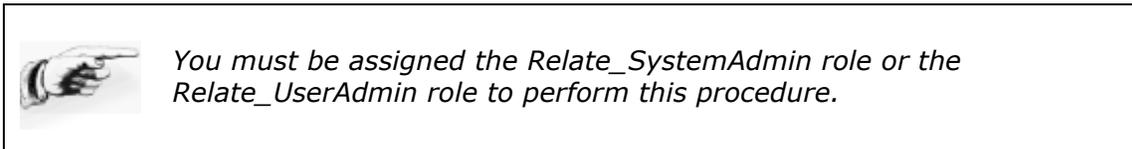

Figure 3-13: Import Success Confirmation

4. Click the red X (⊗) to close the tab.

## Import Franchisee Assignment CSV File

Use the following procedure to import the franchisee assignments in a comma-separated values (CSV) file:

1. In the **System** menu for Relate, click **Import Users CSV File**.

Figure 3-14: System Menu

The Import User CSV File page opens.

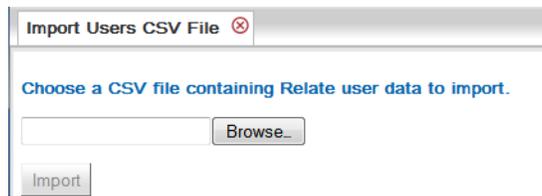

Figure 3-15: Import Users CSV File Page

2. Click the **Browse...** button.

The file selection process for an upload file begins. The procedure for selecting a file depend upon the operating system and browser being used. See the documentation for the operating system and browser for more information about selecting a file for upload.

3. After selecting a file, click the **Import** button.

The data is imported into Relate. When the data has been imported, confirmation of the successful import is displayed.

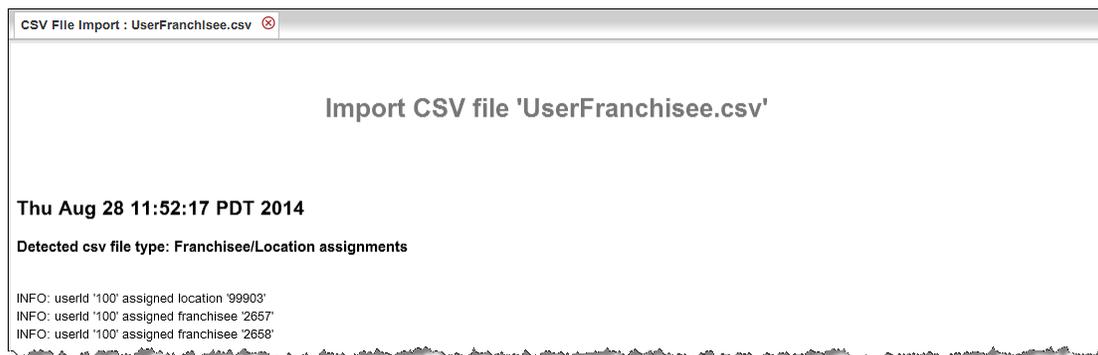

Figure 3-16: Import Success Confirmation

4. Click the red **X** (⊗) to close the tab.

# Start/Stop Relate Services

## Overview

This chapter describes the procedures for starting and stopping Relate Services.

How you start and stop Relate Services depends on whether you are running it as a Windows service, as a Windows non-service application, or as a Linux application.

## Windows

### Service

#### Start

Use the following procedure to start Relate Services where Relate is a Windows service:

1. In the Start menu, open the **Control Panel**.
2. If Control Panel is organized by category, click to open **System and Security**.
3. Open **Administrative Tools**.
4. Double-click **Services** to open the Services window.
5. Click to select the **RelateServices** service.
6. Click the **Start Service** button ().

or

1. Open a command prompt.
2. Run the following command to start Relate Services:  

```
net start relateservices
```
3. Wait 5-15 minutes to give the processes time to fully start.

## Stop

Use the following procedure to stop Relate Services where Relate is a Windows service:

1. In the Start menu, open the **Control Panel**.
2. If Control Panel is organized by category, click to open **System and Security**.
3. Open **Administrative Tools**.
4. Double-click **Services** to open the Services window.
5. Click to select the **RelateServices** service.
6. Click **Stop Service** button (  ).
7. Wait 1-5 minutes to give the process time to fully shut down.

or

1. Open a command prompt.
2. Run the following command to stop Relate Services:  

```
net stop relateservices
```
3. Wait 1-5 minutes to give the process time to fully shut down.

## Non-Service

### Start

Use the following procedure to start Relate Services where Relate is not a Windows service:

1. Open a command prompt.
2. Change the working directory to Tomcat's `bin` directory.  

```
cd \srv\relate-services-deploy\apache-tomcat\bin\
```
3. Start Relate Services by running:  

```
.\startup.bat
```
4. Wait 5-15 minutes to give the processes time to fully start.

### Stop

Use the following procedure to stop Relate Services where Relate is not a Windows service:

1. Open a command prompt.
2. Change the working directory to Tomcat's `bin` directory.  

```
cd \srv\relate-services-deploy\apache-tomcat\bin\
```
3. Stop Relate Services by running:  

```
.\shutdown.bat
```
4. Wait 1-5 minutes to give the process time to fully shut down.

# Linux

## Start

Use the following procedure to start Relate Services:

1. Open a command prompt.
2. Change the working directory to Tomcat's `bin` directory.  

```
cd /srv/relate-services-deploy/apache-tomcat/bin/
```
3. Start Relate Services by running:  

```
./startup.sh
```
4. Wait 5-15 minutes to give the processes time to fully start.

## Stop

Use the following procedure to stop Relate Services:

1. Open a command prompt.
2. Change the working directory to Tomcat's `bin` directory.  

```
cd /srv/relate-services-deploy/apache-tomcat/bin/
```
3. Shut down Relate Services by running:  

```
./shutdown.sh
```
4. Wait 1-5 minutes to give the processes time to fully shut down.

# Secure Sockets Layer (SSL)

## Overview

Secure Sockets Layer (SSL) is a protocol that uses public key encryption to protect sensitive information in communications over the internet.

This chapter provides instructions for enabling SSL for use with Relate. The person(s) performing this procedure should be familiar with internet protocols, SSL, and how SSL is used on the internet.

*Relate supports alternate ports for SSL and non-SSL connections.*

## Create the SSL Certificate

The following procedure to create an SSL certificate will create a file named `relate.keystore` in the directory where the commands are

To create an SSL certificate for Relate in Windows, do the following:

1. Open a command prompt.
2. Change to the directory where the keystore file should be located.

*It is recommended that you locate the file in the same directory where the Relate installer is/will be located. See [step 5 on page 40](#) of the [Relate Installation](#) procedure.*

3. Create a new, self-signed certificate:

*You can override the default keystore location by adding a `-keystore` parameter to the command. If you do change the default location, make sure it agrees with the configuration setting.*

- a. Run the following command:

```
keytool -genkey -alias tomcat -keyalg RSA -dname "cn=[hostname]"
 -validity [duration]
```

where:

- [hostname] is the system name (`localhost` may not work on some systems).
- [duration] is the number of days for which the certificate will be valid.

The command-line options are the following:

- `genkey` - Tells the keytool application to generate a new public/private key pair.
- `alias` - The name used to refer to the Relate Services keys.
- `keyalg` - Specifies the algorithm to use when generating the keys.
- `dname` - Distinguished name.
- `validity` - Specifies the number of days for which the key is valid. *The key being created will only last for 90 days unless you use the `"-validity xxx"` switch to extend this length of time. At the end of this period, the key will need to be renewed.*

- b. When prompted, enter a password for the keystore. You may use any password of your choosing.

- c. Press **Enter** to use the same password for the alias.

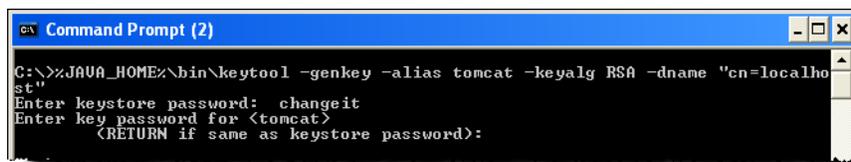

Figure B-1: Create Keystore (Windows)

4. Extract the newly created self-signed certificate from the keystore to a local file:
- a. Run the command to export the certificate:

#### Windows

```
keytool -export -alias tomcat -file [path]\relate.keystore
```

#### Linux

```
keytool -export -alias tomcat -file [path]/relate.keystore
```

where:

- [path] is the full destination path for the certificate file.

- It is recommended that you put the `relate.keystore` file in the same directory as the Relate Installer. This will allow the installer to automatically locate the file (see [step 5 on page 40](#) of the [Relate Installation](#) procedure).
- You can put this file anywhere you would like by specifying the appropriate path. It is important to remember the file location and the file name.

- b. When prompted for the keystore password, enter the password you entered in the previous step.

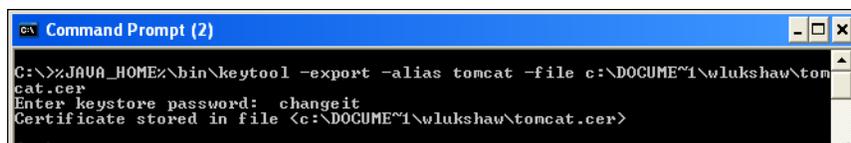

Figure B-2: Export Certificate (Windows)

5. Import the certificate into the Java `cacerts` file:

- a. Run the command to import the certificate:

#### Windows

```
keytool -import -alias relate -file [path]\relate.keystore
-keystore [java_path]/cacerts
```

#### Linux

```
keytool -import -alias relate -file [path]/relate.keystore
-keystore [java_path]/cacerts
```

where:

- [path] is the full destination path for the certificate file.
  - [java\_path] is the full destination path for the Java cacerts file.
- b.** Enter the keystore password when prompted.
  - c.** Press the [y] key, then press the [Enter] key to confirm that you trust the certificate.  
The certificate is now installed.

## Enable SSL for Relate

Use the following procedure to enable SSL for Relate Services:

- 1.** [Create the SSL Certificate.](#)
- 2.** Configure the Relate Services SSL Keystore File, Relate Services SSL Password, and Relate Services SSL Connector Port settings in Conflate:
  - a.** Open a file browser and navigate to `c:\srv\conflate` (Windows) or `/srv/conflate` (Linux).
  - b.** Double-click the `conflate.jar` file.  
The Conflate Main window opens.

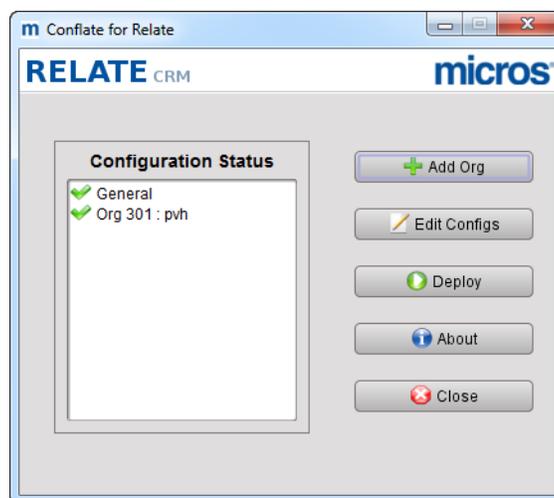

Figure B-3: Conflate Main Window

- c. Click **Edit Configs**.

The Edit Configs window opens.

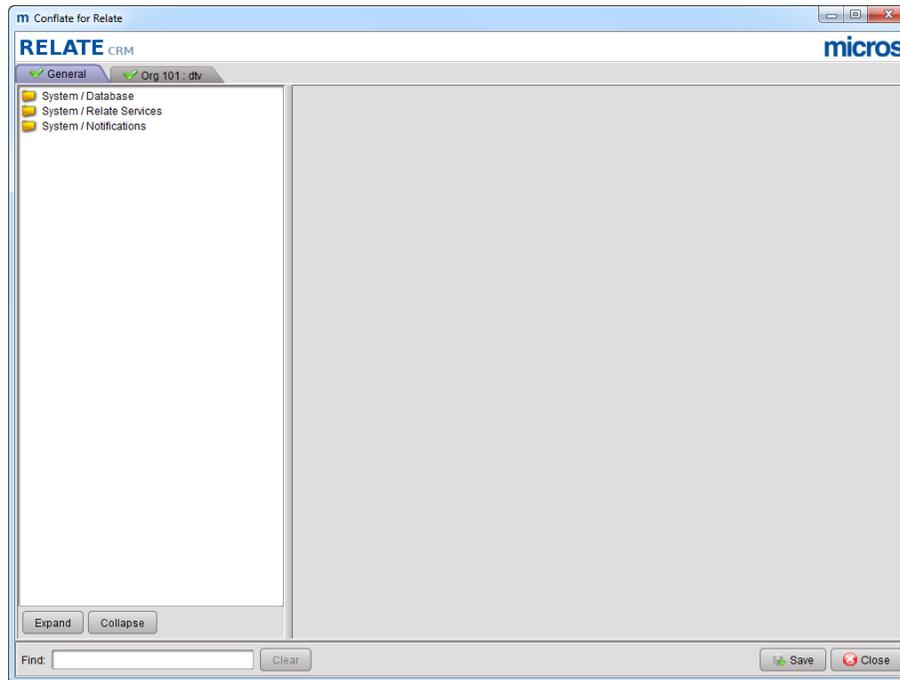

Figure B-4: Edit Configuration Window

- d. Make sure the "General" tab is selected.
- e. Open the System/Relate Services category and select Relate Services SSL KeyStore File.
- f. Type in the File URI for, or use the browser button to navigate to, the directory where the keystore file is located.

If you choose to type in the File URI; it must start with "File:/", each space in the path must be replaced with "%20", and backslashes cannot be used.

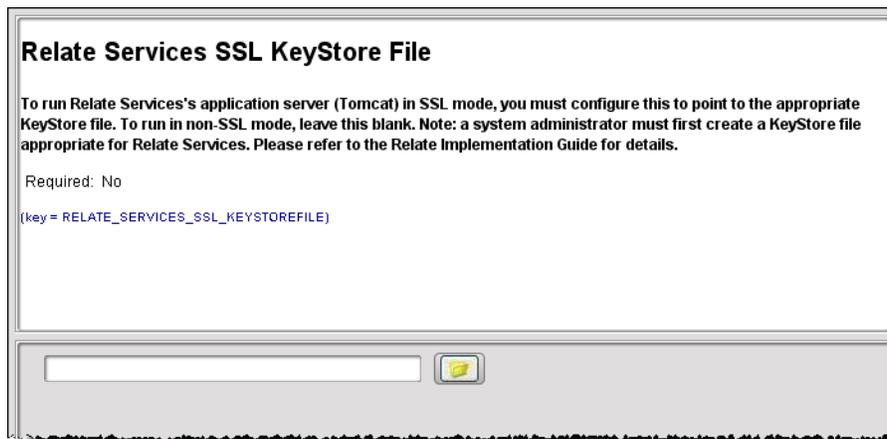

Figure B-5: Relate Services SSL Keystore File Setting

- g. If you choose to use a password for your Keystore file other than the default ("changeit"), perform the following steps:

Figure B-6: Relate Services SSL Keystore Password Setting

- 1) Select Relate Services SSL Keystore Password.
  - 2) Type in the password.
- h. If you choose to use a network port for SSL web service requests other than the default (8443), do the following:

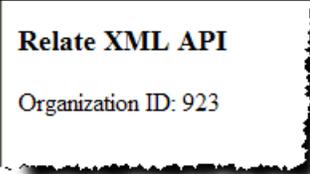

Figure B-7: Relate Services SSL Connector Port Setting

- 1) Select Relate Services SSL Connector Port.
  - 2) Enter the new network port number.
- i. Click **Save**.
  - j. Click **Close**.
  - k. Click **Deploy**.  
Click **Yes** when asked "Configure Relate with the current settings?".
  - l. Click **Close** to close the Conflate Main window.
3. Restart Relate Services (see [Appendix A: "Start/Stop Relate Services" on page 61](#)).

**4.** Verify the Relate Services key:

*Depending on the browser you use, the message you receive may differ from the ones cited below.*

- a.** Open a browser and go to the following address:  
`https://localhost:NNNN/xmlapi/xxx` where "NNNN" is the Relate Services SSL connector port number (**[DEFAULT]** 8443) and "xxx" is 3-character company code used when installing Relate. You should be notified that there is a problem with the certificate (Internet Explorer) or the certificate is from an unknown authority (FireFox).
- b.** Continue to the website (Internet Explorer) or accept the certificate (FireFox). You organization's ID Number should be displayed (see right).
- c.** Close the browser.

**Relate XML API**

Organization ID: 923

## Revision History

| RELATE VERSION    | DATE     | DESCRIPTION OF CHANGE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11.1              | Oct 2014 | In the "Installation" chapter, "Relate Installation" section, removed Licensed Feature Selection and License Key Entry steps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 11.0              | Aug 2014 | <p>In the "Installation" chapter, changed the screenshots to reflect the new design in the installer windows.</p> <p>In the "Installation" chapter, "Relate Installation" section, added Licensed Feature Selection and License Key Entry steps.</p> <p>In the "Installation" chapter, changed the "Relate Installation" steps and ordering to reflect reorganization of the installation procedure.</p> <p>In "Initial Configuration" chapter, added Franchisees, removed User Organizations.</p> <p>In the "Initial Configuration" chapter, added the franchisees CSV import file, updated the format of the users CSV import file, and added the franchise assignment CSV file. Removed the user organizations CSV import file, and removed the user organizations assignment CSV file.</p> |
| 10.8<br>Doc Ver 5 | May 2014 | In the Secure Sockets Layer (SSL) appendix, added missing information describing how to import the generated SSL certificate into Java.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 10.8<br>Doc Ver 4 | Feb 2014 | In the Secure Sockets Layer (SSL) appendix, corrected description of the <code>-dname</code> command line option to read "Distinguished name".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| RELATE VERSION    | DATE      | DESCRIPTION OF CHANGE                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.8<br>Doc Ver 3 | Jan 2014  | Removed OpenSSL installation information.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 10.8<br>Doc Ver 2 | Jan 2014  | In the Secure Sockets Layer (SSL) appendix, corrected broken link and removed incorrect information.                                                                                                                                                                                                                                                                                                                                                           |
| 10.8              | Jan 2014  | In the "Installation" chapter, added SSL Configuration step to the "Relate Installation" section.<br><br>Changed the name of the "Enable Secure Sockets Layer (SSL)" chapter to "Secure Sockets Layer (SSL)".<br><br>In the chapter "Secure Sockets Layer (SSL)", split the procedure "Enabling SSL for Relate" into "Create the SSL Certificate" and "Enable SSL for Relate".                                                                                 |
| 10.5              | Sept 2013 | In the "Installation" chapter, "Database Installation" section, removed all XBR steps from both the "SQL Server Installation" and "Oracle Installation" procedures.<br><br>In the "Installation" chapter, "Create Database" section, removed the 05CreateXBRADMIN.sql and 06LoadXBRADMIN.sql files from the "Oracle" database creation procedure, and changed the numbers for the Org ID and Insert Reports files.<br><br>Updates to installation screenshots. |
| 10.0              | May 2013  | In the "Introduction" chapter, updated Java installation procedure to reflect upgrade to Java version 1.7.<br><br>In the "Installation" chapter, updated images to match installer.<br><br>Separated information about enabling SSL into the "Enable Secure Sockets Layer (SSL)".<br><br>General cleanup and proofreading.                                                                                                                                     |
| 9.7               | Sep 2012  | In "Import Users (New Installation)" section of "Initial Configuration" chapter, added COUNTRY_CODE to fields in Users CSV file.<br><br>General cleanup and proofreading.                                                                                                                                                                                                                                                                                      |
| 9.6               | Jun 2012  | Removed section "Prepare Java JRE 1.6 for Relate (Windows)" from "Introduction" chapter.<br><br>Updated screen captures throughout document.<br><br>General cleanup and proofreading.                                                                                                                                                                                                                                                                          |
