Micros Supply Chain myCreations

Release Notes

Release 1.9.15.3

March 2017

> **Note:** The rebranding for the latest version of this documentation set is in development as part of post MICROS acquisition activities. References to former MICROS product names may exist throughout the existing documentation set.

This document highlights the major changes for Release 1.9.15.3 of Micros Supply Chain myCreations.

Overview

Micros Supply Chain myCreations is an integrated suite of applications designed to meet all aspects of sourcing, developing, and protecting retailer brands. The suite provides solutions for product development, compliance, quality, and traceability. It is designed specifically for retail, food service, and manufacturing businesses to develop and protect their brands, manage their suppliers, and ensure full end-to-end product lifecycle management.

Micros Supply Chain myCreations is composed of the following applications:

- myLibrary enables the issue, receipt, and acceptance of policies, guidelines, and key working documents.

- myProduct supports the development of products and production specifications.

- myProject supports the development of project briefs, plans, and workflow management.

- myReports allows for searches and reporting across the application.

- mySupplier enables the identification, selection, and approval of suppliers.

ORACLE®

Post Release Tasks

For existing implementations, there is new system text which needs to be uploaded with this release. The following table lists which areas require new system text:

Area	Key (Column A)	Label (Column B)	Label (Column C)	Label (Column E)
Admin	QuidRounding		Quid Rounding Configuration	
	quidRoundingConfiguration			Quid Rounding Configuration
	quidRoundingButton		Quid Rounding Configuration	
	QuidRoundinginstanceTitle		Quid Rounding Configuration	
	quidRoundingRuleConfig.quidDetailsPage		Quid Rounding Rules	
	quidDetailsPage.quidDetailsFieldSet		Quid Rounding Rules	
	fieldSet.quidDetails.roundingRules		Quid Rounding Rules	
	fieldSet.quidDetails.comments		Comments	
	quidRoundingRuleConfig.listActionsButton.editQuidRounding		Edit	
Messages	invalidQuidRoundingRules	The supplied rule data is invalid.		
Specification	productSpecificationInstanceFlow.view.food.productSpecification.page.productSpecificationRecipeAndRawMaterials.page.recipeDeclarationsPage.field			Country of Origin Mark (Mandatory to Complete)
	view.glossaryNutrient.page.glossaryNutrientDetailsPage.fieldSet.details.spaceBeforeUnit			Space Before Unit
User	listViewTitle.supplierUsersUnregisteredUsers			Unregistered Supplier Users

Functional Enhancement

Note: Where new fields or User Interface (UI) changes are introduced as part of a change, the portal owner may need to set up any new system text and associated translations to support it.

The following functional enhancement is included in this release:

Product Nutrition Table Support for South African Legislation

Defect Number: 24391673

In order to meet South African legislation requirements, a new field is added to the nutrient glossary called "Space before unit." This can be used to add a space between the nutrients value and the units when it is displayed in the Back of Pack Declaration table. For example, Fat could be set up to show 10 g instead of 10g.

Fixed Issues

The following tables list issues fixed in this release:

Table 1   General Fixed Issues

Defect Number	Description
24598507	Performance improvements are made to the way the system handles embedded List Views, such as the list of specifications within a site record. These List Views now only refresh once when the record is opened rather than constantly refreshing while the record is open.
24659476	The system no longer allows users to select the "Mark as Read" action for a news item if the news item has been archived.
24807106	A fix is applied so that the default set of roles are generated when a new environment is created.

Table 2   Administration Fixed Issues

Defect Number	Description
23518114	A fix is applied which ensures that the Validation Messages table within a Web Service Log message is correctly populated with the Severity and Message whenever a web service call is made using the ProductSpecificationRestService.
24703676	The Contact Roles selector in the PRI01 email template is now populated when the Associated To field has been set to "Specification." An error no longer occurs when a Produce specification is approved and there is no Contact Role set in the To/ External recipients field of the PRI01 email template.

Table 3   Alerts Fixed Issue

Defect Number	Description
24904765	When sending an alert marked urgent, the system now shows "-Urgent" on the subject line of the email instead of "?-Urgent?".

Table 4　mySupplier Fixed Issues

Defect Number	Description
24909101	A fix is applied to prevent a batch job failing when deleting suppliers in the system.
24960822	The system no longer gives an error when printing a site record either from the List View of sites or when viewing a site record.

Table 5　myProduct Fixed Issues

Defect Number	Description
23320843	Where selections are made using the Editable Text Selector, these are now listed in the same order in the Pack Copy as they are seen on screen within the specification.
23665009	The system now only shows specifications that require review when they are actually due.
23857529	The Servings per Package shown on the Nutrition panel is now displayed according to the Food Standards Australia New Zealand (FSANZ) standards.
24367856	Supplier users are now able to see a task in the Task App covering produce specifications which are awaiting supplier approval.
24375090	The Specification Type field remains editable if a specification has not been linked to the Product Record (as per other fields). Therefore, if the user has the necessary access rights to edit the Product Record, it is at a status where it can be edited, and no specifications have yet been linked to it, then the Specification Type will be editable.
	If the Product Record does have any specifications linked to it, if the user attempts to change the type to something different to that of the specifications, validation prevents the change, with the message: *Specification Type must be consistent between Product Record and any linked Specifications*.
24497775	The nutrition section validation now reports an error to make the user aware that Total Sugar + Starch cannot be greater than Carbohydrate.
24569171	An FNF specification now shows the FNF Ingredient field when a new version is created.
24606010	The system now allows the Provide Ingredient Information field within an FNF specification to be set and saved correctly.
24660265	The system now correctly rounds the QUID output within the ingredients list according to EU and ANZ regulations.
24793896	The system now uses the calculation rules correctly for Energy for a specification that has been set to use the Korean legislation.
24835271	The system allows sites to be de-selected from a produce specification without any issues.
24842653	An error is no longer produced when a new version of a specification is created.
24909654, 24926268, 25379876	The system now allows a Food specification to be progressed correctly when Micro tests have been added within the Finished Product Standards section.
24918229	Produce specifications, with multiple products covered, can now be progressed without the system reporting an error regarding site section coverage.

Table 5   (Cont.) myProduct Fixed Issues

Defect Number	Description
24932877	An error no longer occurs when progressing a specification to Collaborative Draft when the system detects there is too much content to add to the notification email. Should this situation occur, the system will truncate the data added to the email.
24949086	The Product API now returns the correct number of matching products according to the filters used.
25033948	An error no longer occurs when an active specification linked to a non-active site is set to Superseded.
25077219	An error no longer occurs when exporting the recipe table from a specification.
25245176	An error no longer occurs opening a specification which has a nutrition section requiring a large number of translations.

Table 6   myProject Fixed Issue

Defect Number	Description
24747596	The system now allows attachments on activities to be opened without any issues.

Table 7   Audits & Visits Fixed Issues

Defect Number	Description
24460305	All updates to Checklist Answers are now being correctly saved.
24680756	An error no longer occurs when attempting to open an audit in edit mode.

Table 8   Application Programming Interfaces (APIs) Fixed Issues

Defect Number	Description
23563157	A fix is applied to the ProductRecordRestService so that a suitable error response is returned when an unidentifiable user is submitted using the Create function.
23563330	A fix is applied to the SupplierRestService so that a suitable error response is returned when the supplier status is missing in the Create function.
24565093	A fix is applied to allow suppliers to be created through the user interface without error when others have been created using the SupplierRestService.
24573339	A fix is applied to allow Product Records to be created through the user interface without error when others have been created using the ProductRecordRestService.
24594236	A fix is applied to the ProductRecordRestService to prevent an error being returned when the specification Version and specification Number parameters are used to locate either produce or non-produce product records.
24594244	A fix is applied to the UserRestService to allow the retrieval of retailer user data without having to specify a Site Status.
24594363, 25049391	A fix is applied to the TaskRest Services to ensure that any links received in the return message are valid.

Micros Supply Chain myCreations Release Notes, Release 1.9.15.3

Value-Added Reseller (VAR) Language

Oracle Retail VAR Applications

The following restrictions and provisions only apply to the programs referred to in this section and licensed to you. You acknowledge that the programs may contain third party software (VAR applications) licensed to Oracle. Depending upon your product and its version number, the VAR applications may include:

(i) the **MicroStrategy** Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.

(ii) the **Wavelink** component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Mobile Store Inventory Management.

(iii) the software component known as **Access Via™** licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.

(iv) the software component known as **Adobe Flex™** licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.

You acknowledge and confirm that Oracle grants you use of only the object code of the VAR Applications. Oracle will not deliver source code to the VAR Applications to you. Notwithstanding any other term or condition of the agreement and this ordering document, you shall not cause or permit alteration of any VAR Applications. For purposes of this section, "alteration" refers to all alterations, translations, upgrades, enhancements, customizations or modifications of all or any portion of the VAR Applications including all reconfigurations, reassembly or reverse assembly, re-engineering or reverse engineering and recompilations or reverse compilations of the VAR Applications or any derivatives of the VAR Applications. You acknowledge that it shall be a breach of the agreement to utilize the relationship, and/or confidential information of the VAR Applications for purposes of competitive discovery.

The VAR Applications contain trade secrets of Oracle and Oracle's licensors and Customer shall not attempt, cause, or permit the alteration, decompilation, reverse engineering, disassembly or other reduction of the VAR Applications to a human perceivable form. Oracle reserves the right to replace, with functional equivalent software, any of the VAR Applications in future releases of the applicable program.
