# Preface

This document describes issues that you may encounter with this release. Internal Tracking numbers that appear in the tables are used to identify issues reported by customers. You can use these numbers to identify the issue should you need to contact Oracle Support. Locator numbers that appear in parentheses after some notes are for Oracle internal use only.

# Chapter 1: What's New in This Release

---

*This chapter contains information on new product features for Feature Pack 4.0 of Oracle Agile Product Lifecycle Management for Process.*

---

## **What's New in This Release?**

This release is intended to be a compatibility release so all pre 6.2 feature pack items will continue to function. Features in this release have not been enhanced to include all new 6.2 functionality.

## **Enhancements**

Some of the 6.2 enhancements resulted in updates to the extensibility points in Feature Pack 4.0. New updates are described below.

### *Hierarchy Navigator*

---

Hierarchy Navigator now uses the new Sidebar. The hierarchy tree now appears in the left side of the screen. To learn more see the *Agile Product Lifecycle Management for Process Hierarchy Navigator Solution Pack*. (34755)

### *Object Level Security Widget*

---

We added a new Available In grid in the Object Level Security widget. The grid only displays when the "Secured Object" is set to "Supporting Document". In the grid, the Available In checkboxes control the visibility of the security classifications in PLM for Process.

Existing secured objects "Attachment" and "SDM" were replaced by "Supporting Document".

**Object Level Security Management Widget**

This widget provides a means of managing three security related elements:

- 1) Classifications - what is tied to an object within the system based on Secured Object Type.
- 2) Access Levels - the level of access required to view/edit a given specification or entity within the system.
- 3) Secured Object Type - the object type(s) within the system to which the Classification is tied.

(39210)

### Segment Integration

With Segment added to PLM for Process Release 6.2, the web services have been updated to include a segment condition. See the *Agile Product Lifecycle Management for Process Web Services Guide* for more information. (39516)

## Chapter 2: Resolved Issues

*This chapter contains resolved issues for Feature Pack 4.0 of Oracle Agile Product Lifecycle Management for Process.*

### **Resolved Issues**

The following tables outline known issues that have been resolved for Feature Pack 4.0 of Oracle Agile Product Lifecycle Management for Process.

#### **Global Specification Management (GSM) Resolved Issues**

Table: 2-1 GSM Resolved Issues

Bug/Enh ID	Issue	Resolution
18527164	When the user creates a new LIO from a specification, generates its tree, and then cancels, an unhandled error occurs.	A data load failure caused the error. Now, upon cancel, a search page is displayed. (35614)
18794750	When attempting to edit an LIO and work with the name of an inactive LIO items, the user receives a blank error window.	Needed (36055)

#### **Custom Section Denormalization Resolved Issues**

Table: 2-2 CS Denorm Resolved Issues

Bug/Enh ID	Issue	Resolution
16702253	When attempting to include new rows to a denorm table and save the change to the custom section, the user receives error message. This is due to missing '/' at the end of DENORM_PROC_MAPPING.sql in the EP2.7 Scripts\Oracle\Denormalization\CustomSection\Mapping\5-Execution folder.	Fixes were made to a column and the attrtype issue, and the error no longer occurs. (32250)

**Data Administration Toolkit Resolved Issues**

Table: 2-3 Data Administration Toolkit Resolved Issues

Bug/Enh ID	Issue	Resolution
16411133	When using Data Admin Toolkit to add a new nutrient or activate a nutrient, upon entering the UNID (just by typing the first letter), the system returns an error.	The error no longer occurs. (32095)
16486330	Request for better error message handling in Data Admin Toolkit.	A message popup has been added. (32146)

**Database Schema Resolved Issues**

Table: 2-4 Database Schema Resolved Issues

Bug/Enh ID	Issue	Resolution
14555380	The DatabaseandObjectSchema seems incomplete for troubleshooting issues.	If B is a property of A through a join table C, the join table was shown only under table A in the DatabaseAndObjectSchema docs. Now it appears under both A and B. (31070)

# Chapter 3: Hot Fixes

*This chapter contains hot fixes included in Feature Pack 4.0 of Oracle Agile Product Lifecycle Management for Process.*

## **Hot Fixes**

The following hot fixes are included in Feature Pack 4.0.

Table: 3-1 Hot Fixes

Hot Fix	Issue	Resolution
3.11.2 20261690 (Base: 20261600)	Subcomponents on Label Composition tab should equal 100% of parent.	When normalizing preview wrappers, total percent yield was reset to 1 if it was less than 0.1%, which led to a wrong scale factor.  The solution was to update 0.1% to 1e-18 to make sure total percent yield is not reset. (38935)
3.11.3 20229787 (Base: 20223802)	Cannot reconstitute grouped waters in LIO.	Child elements of a group were not included in the reconstituted source items.  The solution was to include child elements of a group in the reconstituted source items. (39166)
3.11.4 20814038 (Base: 20783957)	When creating the Regulatory Filing formula page, like terms (and associated percentages) should not combine.	Issue was resolved in code by adding a method to combine like terms. (39944)
