CM07 - Card Master Setup

Using this option, the bank can setup a card product with a validity period in years. You can select the following mode for issue of card:

- Online
- Batch
- Online & batch

The cards can be issued / reissued using the **Card Maintenance** option.

Definition Prerequisites

Not Applicable

Modes Available

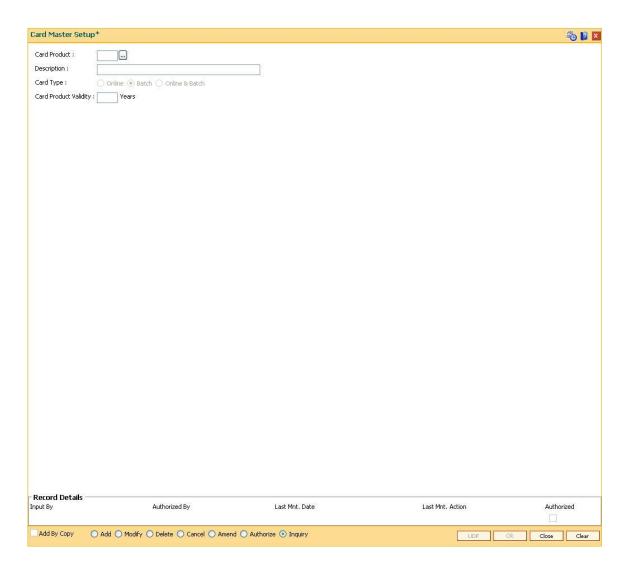

Add By Copy, Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add a new card product

- Type the fast path CM07 and click Go or navigate through the menus to Transaction Processing > Customer Transactions > Card Master Setup.
- 2. The system displays the **Card Master Setup** screen.

CM01 - Card Maintenance

Using this option the bank can issue or reissue a card in batch or an online mode. The card details tab allows you to link the primary account number and the default account number to the card and modify the existing account linkage of a card.

Definition Prerequisites

• 8053 - Customer Addition

Modes Available

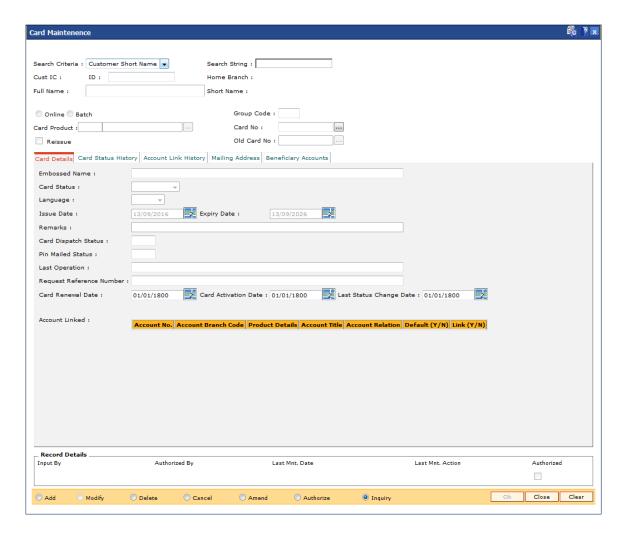

Add, Modify, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To issue or reissue a card

- 1. Type the fast path **CM01** and click **Go** or navigate through the menus to **Transaction Processing > Customer Transactions >** Card Maintenance.
- 2. The system displays the Card Maintenance screen.

Card Maintenance

Field Name

Description

Search Criteria

[Mandatory, Drop-Down]

Select the search criteria to search for the customer from the dropdown list.

The options are:

- Customer short name: The short name of the customer.
- Customer IC: The identification criteria (IC) arrived at by the bank during customer addition.
- Customer ID: The unique identification given by the bank.

Search String

[Mandatory, Alphanumeric, 20]

Type the search string, to search for a customer, corresponding to the search criteria selected in the **Search Criteria** field.

If the search criterion is specified as customer's short name or IC then any letter of the short name or IC can be entered. The system displays the pick list of all those customers having those letters in their

respective criteria. Choose the appropriate customer from the existing customer list.

For example, if the customer's short name is George Abraham. One can search the above customer by entering Geo in the **Search String** field.

Cust IC

[Display]

This field displays the identification code of the customer.

A customer IC along with customer type is a unique method of customer identification across the bank (covering all branches). Based on the combination, the system can identify the customer as an existing customer even when the customer opens a new account in another branch. A social security number, passport number, birth certificate or corporate registration can be used as a customer IC.

ID

[Display]

This field displays the ID of the customer.

A customer ID is an identification number, generated by the system after customer addition is completed successfully. This running number, unique to a customer across the system, is generated after the system has identified the customer IC and the customer category combination to be non-existent in the system. This ID is used for searching and tracking the customer in the system.

Home Branch

[Display]

This field displays the short name of the branch, where the customers account is opened.

The customer signature record and the other customer papers are kept in this branch.

These short names are maintained in the **Branch Master Maintenance** (Fast Path: BAM03) option.

Full Name

[Display]

This field displays the full name of the customer.

The full name of the customer is defaulted from the **Customer Addition** (Fast Path: 8053) option.

Short Name

[Display]

This field displays the short name of the customer.

The short name of the customer is defaulted from the **Customer Addition** (Fast Path: 8053) option.

Card Issue Mode

[Mandatory, Radio Button]

Select the appropriate card issue mode.

The options are:

- Online: It allows the user to issue the card in online mode. In online mode the card number needs to be specified.
- Batch: It allows the user to issue card in batch mode. In batch mode, a request reference number is generated and displayed

in the card number field

Group Code [Display]

This field displays the group code to which the customer belongs.

Card Product [Conditional, Editable/Pick List]

This field displays the card product.

If the card is to be issued, enter the card product or select from the pick

list.

Card No [Mandatory, Numeric, 20]

Select the card number from the pick list.

In online issuing mode the card number is mandatory and will be

validated against the branch inventory.

Reissue [Optional, Check Box]

Select the Reissue check box to reissue a card.

The **Card Product** field gets disabled if this check box is selected.

Old Card No [Conditional, Pick List]

Select the old card number from the pick list.

In case of reissue, an old card number is mandatory and the card

status will be validated for Lost or Damaged status.

3. Click the Add button.

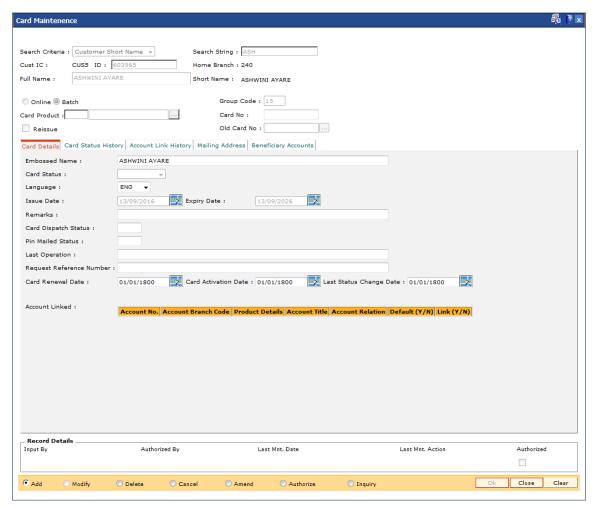

4. Select the search criteria from the drop-down list.

5. Type the search string and press the **<Tab> or <Enter>** key.

6. Select the card product from the pick list.

Card Maintenance

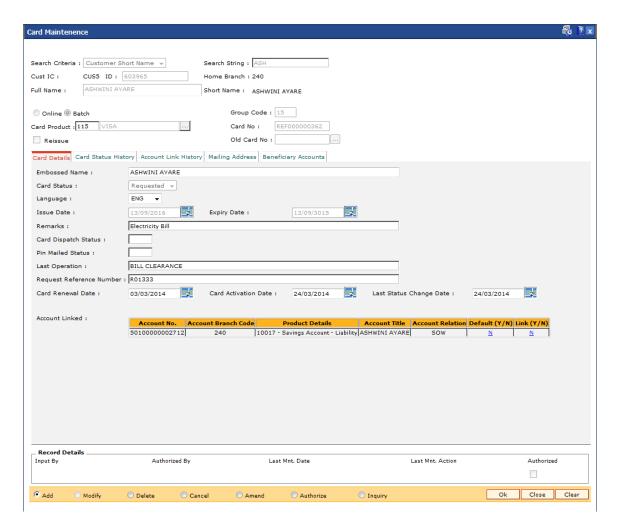

7. Enter the relevant information in the various tabs.

From Status	[Display]

This column displays the initial status of the card.

To Status [Display]

This column displays the changed status of the card after modification.

- 7. Click the Ok button.
- 8. The system displays the message "Record Added...Authorization Pending...Click Ok to Continue". Click the **Ok** button.
- 9. The new card details are added once the record is authorized.

CM04 - Card Activation*

Using this option the bank can activate a card which has status as lost, unblock, generated, mailed or blocked.

The status of the card is changed using the **Card Status Change** (Fast Path: CM03) option as per the functional requirement. Cards having status as active and generated are changed to some other status like lost, block etc through this option.

Definition Prerequisites

- Customer Definition
- · Customer to Card linkage

Modes Available

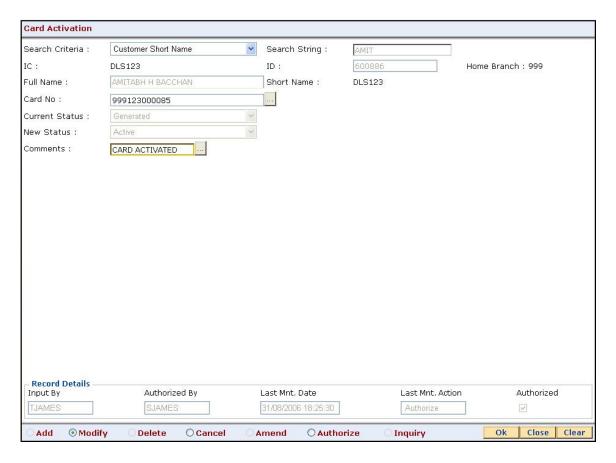

Modify, Cancel, Authorize. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To activate a card

- 1. Type the fast path CM04 and click Go or navigate through the menus to Transaction Processing > Customer Transactions > Card Activation.
- 2. The system displays the **Card Activation** screen.

Card Activation

Field Name

Description

Search Criteria

[Mandatory, Drop-Down]

Select the search criteria to search for the customer from the dropdown list.

The options are:

- Customer short name: The short name of the customer.
- Customer IC: The identification criteria (IC) arrived at by the bank during customer addition.
- Customer ID: The unique identification given by the bank.

Search String

[Mandatory, Alphanumeric, 20]

Type the search string, to search for a customer, corresponding to the search criteria selected in the **Search Criteria** field.

If the search criterion is specified as customers short name or IC then any letter of the short name or IC can be entered. The system displays the pick list of all those customers having those letters in their respective criteria. Choose the appropriate customer from the existing customer list.

For example, if the customer's short name is George Abraham. One can search the above customer by entering Geo in the **Search String**

field.

IC [Display]

This field displays the identification code of the customer.

A customer IC along with customer type is a unique method of customer identification across the bank (covering all branches). Based on the combination, the system can identify the customer as an existing customer even when the customer opens a new account in another branch. A social security number, passport number, birth certificate or corporate registration can be used as a customer IC.

ID [Display]

This field displays the ID of the customer.

A customer ID is an identification number, generated by the system after customer addition is completed successfully. This running number, unique to a customer across the system, is generated after the system has identified the customer IC and the customer category combination to be non-existent in the system. This ID is used for searching and tracking the customer in the system.

Home Branch [Display]

This field displays the short name of the branch, where the customers

account is opened.

The customer signature record and the other customer papers are kept

in this branch.

These short names are maintained in the Branch Master

Maintenance (Fast Path: BAM03) option.

Full Name [Display]

This field displays the full name of the customer.

The full name of the customer is defaulted from the Customer

Addition (Fast Path: 8053) option.

Short Name [Display]

This field displays the short name of the customer.

The short name of the customer is defaulted from the **Customer**

Addition (Fast Path: 8053) option.

Card No [Mandatory, Pick List]

Select the number of the card whose status has to be changed from

the pick list.

Current Status [Display]

This field displays the current status of the selected card.

New Status [Display]

This field displays the new status.

The new status will be Active.

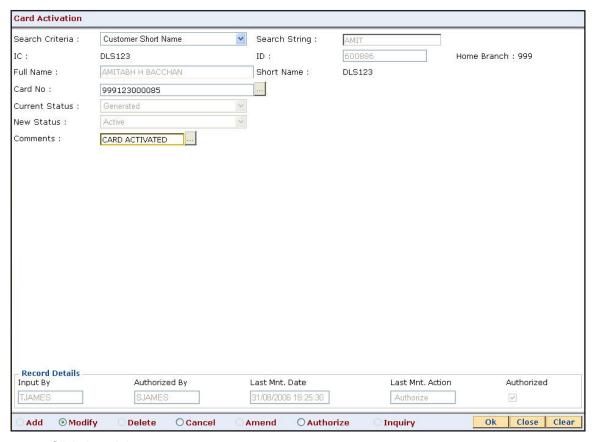

Comments [Optional, Pick List]

Select the reason for changing the card status from the pick list. The user can also enter the comments.

- 3. Select the Modify mode.
- 4. Select the search criteria from the drop-down list.
- 5. Type the search string and press the **<Tab> or <Enter>** key.
- 6. Select the card number from the pick list.
- 7. The system displays current status and new status of the card.
- 8. Select the comment from the pick list or enter the relevant comment.

Card Activation

- 9. Click the **Ok** button.
- The system displays the message "Record Modified...Authorisation Pending...Click Ok to Continue". Click the **Ok** button.
- 11. The card is activated once the record is authorized.

Note: Cards having current status as Generated, Lost, Unblock, Blocked and Mailed are only allowed to be activated.

CM03 - Card Status Change

Using this option the bank can change the status of a card as per the functional requirement. The bank may receive a customer request to block an issued card due to theft/lost/damage. Once the

card is found and customer requests for activation the same is also facilitated in this maintenance. The various card status are available with the user :

- Active
- Lost
- Unblock
- Generated
- Mailed
- Blocked

Note: Cards having current status as active and generated are only allowed to change status. The new status can be changed to lost, damaged and mailed.

Definition Prerequisites

- 8053 Customer Addition
- CM01 Card Maintenance

Modes Available

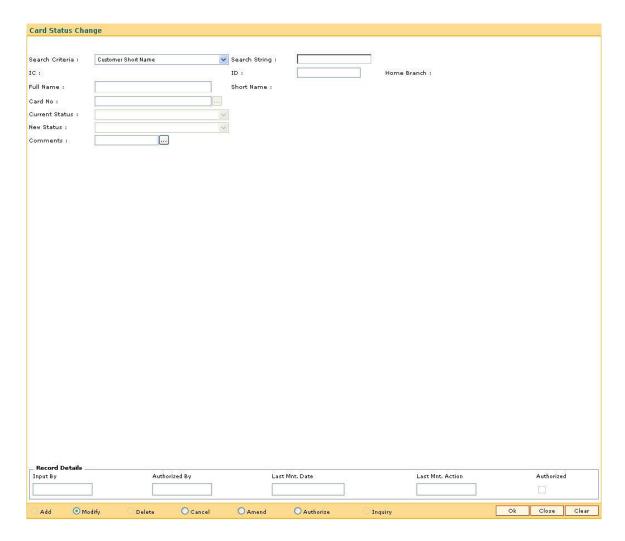

Modify, Cancel, Amend, Authorize. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.
