Preface

Oracle MICROS is proud to offer the next generation Epson thermal printer for our global customers. The printer is based on the Epson Asian model of the TM-T88VI, which includes expanded memory and custom Oracle MICROS firmware. This setup guide describes the unique features and setup required for operation specific to Oracle MICROS and multilingual printing from Oracle Food & Beverage point of sale applications. Multilingual printing can be accomplished using the native built-in ethernet interface or the new UB-IDN02 interface card. Custom printer and IDN firmware eliminates the need for designated ethernet and IDN multilingual interface boards. All multilingual fonts and Unicode command sets are now printer-resident and preloaded at the factory.

Audience

This document is intended for those who set up, install, and operate the Oracle TM-T88VI.

Important Information

Additional information regarding integration with the POS system or other related software applications can be obtained from the respective application guides. The Epson User's and Technical Reference Guide should also be referenced to understand the standard features of the printer.

The following product specifications and/or manual content may be changed by Oracle MICROS or Epson without prior notice.

Customer Support

To contact Oracle Customer Support, access My Oracle Support at the following URL:

<https://support.oracle.com>

When contacting Customer Support, please provide the following:

- Product version and program/module name
- Functional and technical description of the problem (include business impact)
- Detailed step-by-step instructions to recreate
- Exact error message received and any associated log files
- Screenshots of each step you take

Documentation

Oracle Food & Beverage product documentation is available on the Oracle Help Center at <http://docs.oracle.com/en/industries/food-beverage>

Epson TM-T88VI Standard documentation is available from their global website at: https://epson.com/Support/Point-of-Sale/OmniLink-Printers/Epson-TM-T88VI-Series/s/SPT_C31CE94061#manuals

Epson TM-T88VI User's Manual

https://files.support.epson.com/pdf/pos/bulk/tm-t88vi_um_en_02.pdf

Epson Technical Reference Guide

Revision History

Date	Description of Change
November 2020	Initial publication.
June 2023	Added USB-IDN functionality.

1

Oracle TM-T88VI Features

- Two models, Serial/Ethernet & IDN, will support all the Oracle Food & Beverage global language capabilities and safety compliance that was once more region specific with the legacy TM-T88IV and TM-T88V printers.
- Unicode multilingual fonts and Epson native multilingual fonts preinstalled on the printer (firmware version 3.02B or above is required).
- IDN/IDN-ML protocol supported through the non-multilingual UB-IDN interface board (firmware version A4.52 or above is required).
- Ethernet multilingual functions supported through the built-in Ethernet interface. No separate Ethernet interface required.
- Compatible with previous Epson tools such as Font Manager.
- Oracle Discovery Protocol supported on the built-in Ethernet interface.
- RFID Tag w/printer identifier (not currently used by Oracle Food & Beverage applications).
- SNMP is disabled.
- All Wi-Fi dongle and Bluetooth dongle support is disabled.
- New – USB-IDN functionality introduced with printer FW version 3.14

Oracle Part Numbers and Description

Table 1-1 – Oracle Part Numbers and Description

Oracle Marketing P/N	Oracle Marketing Description
7602414	Epson TM-T88VI thermal receipt printer with power supply, serial and ethernet interfaces, and 3-foot RJ45 to DB25 serial cable
7602415	Epson TM-T88VI thermal receipt printer with power supply, IDN interfaces, and 3-foot IDN 8-pin to 6-pin cable

What's in the Printer Box

Aside from what is noted in the above descriptions, each printer contains the following items:

Note: You must order the country-specific C-13 straight power cord separately.

- Connector cover
- Sample Roll paper
- Roll paper guide
- Bottom I/O Connector cover
- Screws
- Power switch cover
- Epson Standard Setup Guide
- IDN Switch Settings Sheet (IDN printer SKU only)

Before Use

Refer to the *Epson TM-T88VI User's Manual* to get acquainted with the part names and functions of the printer. The manual describes basic setup, paper installation, and printer cleaning. For details about the functions and operating procedures of this product and other Epson related software, refer to the *Technical Reference Guide*.

Printer Specifications

Printing Method		Thermal line printing
Print Speed		250mm/sec
Roll paper	Paper Width	80 mm paper width setting: 79.5 mm \pm 0.5 mm {3.13" \pm 0.02"} 58 mm paper width setting: 57.5 mm \pm 0.5 mm {2.26" \pm 0.02"}
	External Diameter	Maximum 83 mm {3.27"}

	Core Internal Diameter	12 mm {0.47"}	
	Core External Diameter	18 mm {0.71"}	
Oracle Supported Interfaces	T88VI w/Serial Interface:	T88VI w/IDN Interface:	
	Serial: RS-232 Ethernet: 10BASE-T/100BASE-TX USB: USB 2.0 Full-speed (12 Mbps)	IDN: RS-485 Ethernet: 10BASE-T/100BASE-TX USB: USB 2.0 Full-speed (12 Mbps)	
NFC (RFID Tag)	Transmission Standard: ISO1443A Frequency: 13.56 MHz Resonance Frequency: 14.30 +- 0.55MHz Memory: 144 Bytes Transmission Distance: Approx 10mm (0.39") from the RFID Tag		
Supply Voltage	DC + 24 V ± 7%		
Current Consumption	1.8 A		
AC Power Consumption*3(100 V to 230 V/50 to 60 Hz)	Operating: Approx. 30.8 W Standby: Approx. 0.8 W		
Temperature	Operating:5 to 45°C {41 to 113°F} Storage:−10 to 50°C {14 to 122°F}, except for paper		
Humidity	Operating:10 to 90% RH Storage:10 to 90% RH, except for paper		
Overall dimensions	148 × 145 × 195 mm {5.83 × 5.71 × 7.68"} (H × W × D)		
Weight (mass)	Approx. 1.6 kg {3.5 lb}		

- A. RJ-45 Ethernet**
- B. RJ-11 Drawer Kick**
- C. RS-232 Serial Interface**
- D. 24v Power Port**
- E. USB Type A** (*disabled*)
- F. USB Type B** (*Normally covered, supported by USB-IDN connection*)

Printer Dimensions

Dimensions shown in millimeters.

Printer Self-Test

The printer provides a self-test operation that checks the operation of the printer hardware and reports current operating parameters.

Start the Self-Test

To start the self-test operation, close the roll paper cover, and then hold the **Feed** button while powering up the printer.

You can check the following items using the self-test:

- Product name
- Firmware version
- Product serial number
- Interface type

- Resident fonts
- Maintenance counter information (head running length, number of times of autocutting)
- DIP switch settings

Figure 1-1 - Self-Test Example

Printer Name TM-T88VI	Printing Mode for Thai Character Thai 1 pass
Printer Firmware Version 3.14B ORA-RTSC	Multilingual Font(s) in Printer
Main : 3.14 ORA-RTSC	NAME ID VER TYP
Network : 05.01_r03-Ora	C/P map (Arabic) Amap 0.10
TM-i : 01.27_r02-Ora	Unicode_24 U24 0.81 THF
	Uni_Japanese24 U24J 0.81 THF
	Uni_TradChin24 U24T 0.81 THF
	Codepage Map Vmap 0.10
SERIAL No. X6Y5000195	ML Font Memory
	Available in KByte: 2885
	Used in KByte: 4283
USB Interface or other	ML Configuration
	Mixed width: ON
Serial Interface	Arabization: ON
Baud rate : 9600 bps	Indic Digits: OFF
Data bits : 8 bits	
Parity : none	Virtual IDN
Stop bit : 1 bit or more	Device ID: 01
Handshaking : XON/XOFF	Automatic Line Feed
Receive error: prints '?'	(CR command function)
	Disable
Ethernet Interface	Print Density
MAC Address : 50-57-9C-F4-EE-95	LIGHT [1 2 3] DARK
IP Address : (None)	^
Subnet Mask : (None)	
Default Gateway: (None)	
Buffer Capacity	Recovery Point
4K bytes	Factory
Handshaking Operation (busy condition)	Maintenance Information
Receive buffer full	Thermal Head : 0.465 km
	Autocutter : 3734 cuts
Resident Character	DIP Switch 1
Alphanumeric	1 2 3 4 5 6 7 8
Simple Chinese	
Japanese	
Korean	DIP Switch 2
Traditional Chinese	1 2 3 4 5 6 7 8
Thai 3 pass	
Thai 1 pass	
Vietnamese	
Default Active Multi-Language Font	Select Modes by pressing Feed button.
South Asia	Continue SELF-TEST: Less than 1 second
	Mode Selection : 1 second or more

To continue the self-test:

- Briefly press the **Feed** button (less than one second)

The printer prints a rolling pattern on the roll paper using the built-in character set. After “*** completed ***” prints, the printer initializes and switches to standard mode.

Figure 1-2 - Self-Test Example

*** completed ***
```

Dynamic Status Sheet

The dynamic status sheet displays the following network-related information:

- MAC address
- Physical Layer settings
- Connection status
- QR code (MAC address)
- Network firmware version
- IP address setting method
- IP address, subnet mask, default gateway
- NTP server connection information
- Time of internal settings
- Results of operation check of TM-Intelligent function
- Installed Unicode fonts

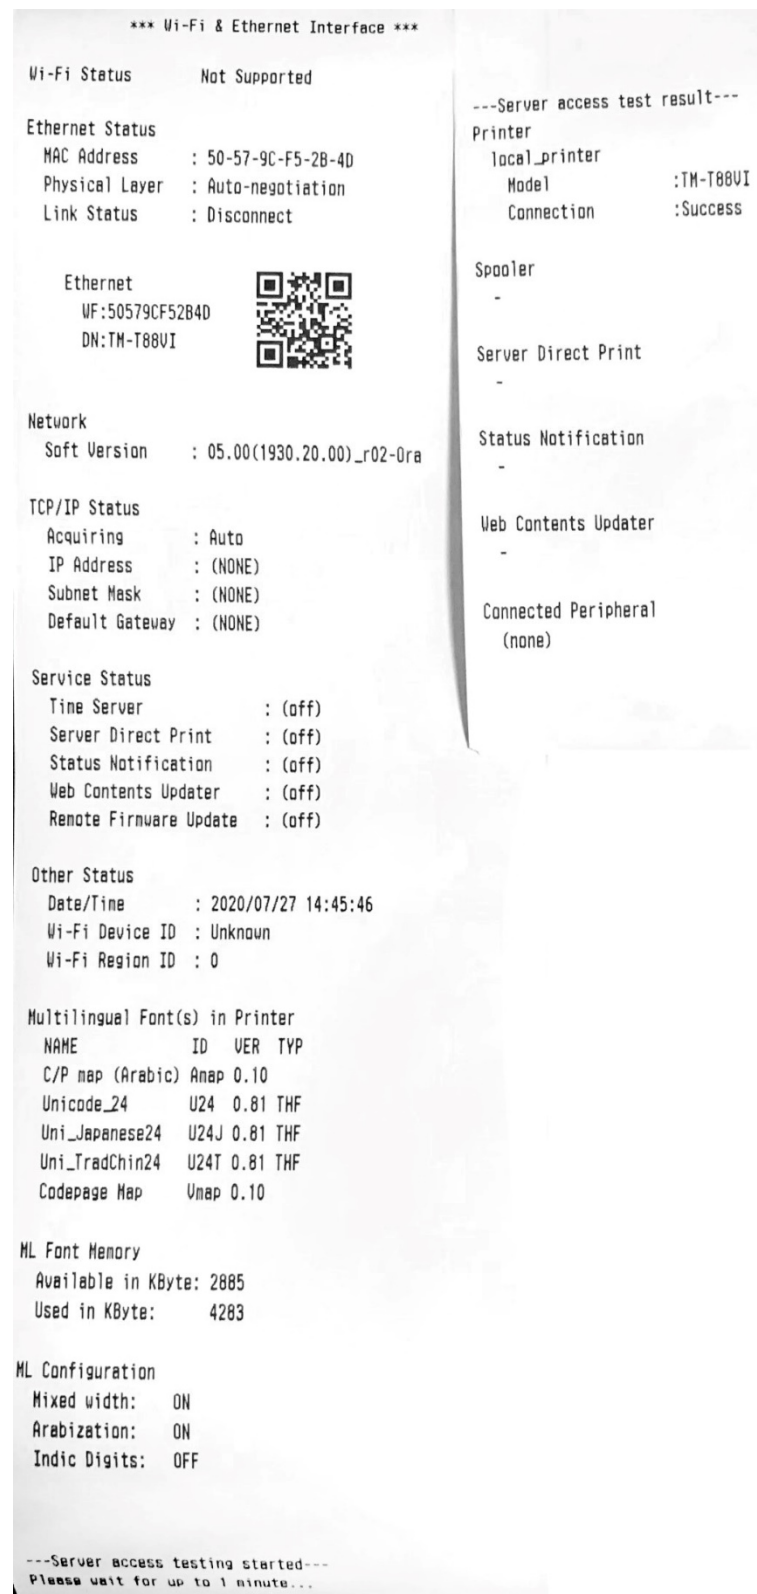

Dynamic Status Sheet Operation

There are two methods to print a dynamic status sheet.

1. Print method using the status sheet button:
 - With the roll paper cover closed, press and hold the status sheet button for 3 seconds or longer.
2. Print method using the Feed button:
 - Open the roll paper cover.
 - Press and hold the Feed button for approximately 1 second until the Paper LED begins flashing.

- Within 1 minute, close the roll paper cover.

Figure 1-3 - Dynamic Status Sheet

2

Printer Configuration

The following tables describe the mandatory and recommended switch settings for the printer. "x" means "don't care." Switches not described in the tables may be configured according to the requirements of the application.

OFF	or	ON	= Mandatory Setting
OFF	or	ON	= Recommended Setting
X			= Don't care

With UB-IDN or UB-S01 (Serial Interface) Installed

Switch	1-1	1-2	1-3	1-4	1-5	1-6	1-7	1-8
Setting	X	X	OFF	OFF	OFF	OFF	ON	OFF

Switch	2-1	2-2	2-3	2-4	2-5	2-6	2-7	2-8
Setting	X	OFF	ON	X	X	OFF	X	OFF

Printer Switch Definitions

There are two DIP switches located under the printer behind a cover plate.

Dip Switch 1

Switch Number	Function	ON	OFF	Factory Setting
1	Data reception error	Ignored	"?" is printed	OFF
2	Receive buffer capacity	45 bytes	4 KB	OFF
3	Handshake	XON/XOFF	DTR/DSR	OFF
4	Bit length	7 bits	8 bits	OFF
5	Parity check	Yes	No	OFF
6	Parity selection	Even	Odd	OFF
7	Transmission speed selection	See Table Below		ON
8				OFF

Transmission Speed (bits/sec)	Switch Number	
	7	8
Soft Panel Setting	ON	ON
4800	OFF	ON
9600	ON	OFF
19200	OFF	OFF

 **NOTE:**

For Oracle's TM-T88VI with the new IDN card installed, the internal transmission speed will autobaud up to 38400. To take full advantage of this the IDN transmission speed switch settings will also be factory set to 38400. IDN external speed selection on legacy printers must be set to 9600.

DIP Switch 2

Switch Number	Function	ON	OFF	Factory Setting
1	Handshaking (Busy Condition)	Receive buffer full	Offline Receive buffer full	OFF
2	Reserved (Do not change)	Fixed to OFF		OFF
3	Print density selection	See Table Below		ON
4				OFF
5	Recovery conditions from receive buffer BUSY (Enabled when the receive buffer capacity is set to 4 KB)	When the remaining becomes 138 bytes	When the remaining becomes 256 bytes	OFF
6	Reserved (Do not change)	Fixed to OFF		OFF
7	Pin 6 reset signal	Used	Not used	OFF
8	Pin 25 reset signal	Used	Not used	OFF

Function	Switch Number	
	3	4
Print Density (Standard)	OFF	OFF
Print Density (Medium)	ON	OFF
Print Density (Dark)	OFF	ON
Prohibited	ON	ON

Multilingual Support

The TM-T88VI provides enhanced language support, adding Unicode fonts available through the built-in ethernet interface, the non-multilingual UB-IDN interface and the new USB-IDN interface. Fonts are maintained inside TM-T88VI in approximately 7 MB of non-volatile memory. This is supported with Symphony using the IDN, USB-IDN & ethernet interface.

 **NOTE:**

- *The Serial interface does not support multilingual with Symphony and RES*
- *RES will require that the default printer resident font be changed to match the desired language when using the IDN or ethernet interface*

The standard fonts are derived from the Arial Unicode MS font. The following font files are loaded to the printer. Current size of the provided font files is approximately 4.5 MB

Font	Target printer	Glyph Size
Arial Unicode MS (full set) with default combined Simplified Chinese and Korean localization	Thermal	24 x 24
Arial Unicode MS subset, including only Traditional Chinese localization	Thermal	24 x 24
Arial Unicode MS subset, including only Japanese localization	Thermal	24 x 24

Epson Printer Resident Fonts

Epson-native multilingual Kanji fonts, including Simplified Chinese, Traditional Chinese, Japanese, Korean and South Asia coexist along with the Unicode font. However, only one of the Epson Kanji fonts is activated and can be used for printing at a time. For applications other than Symphony, the printer native resident font may need to be changed. The default font can be selected through a control command or front panel button operation as described in the next section.

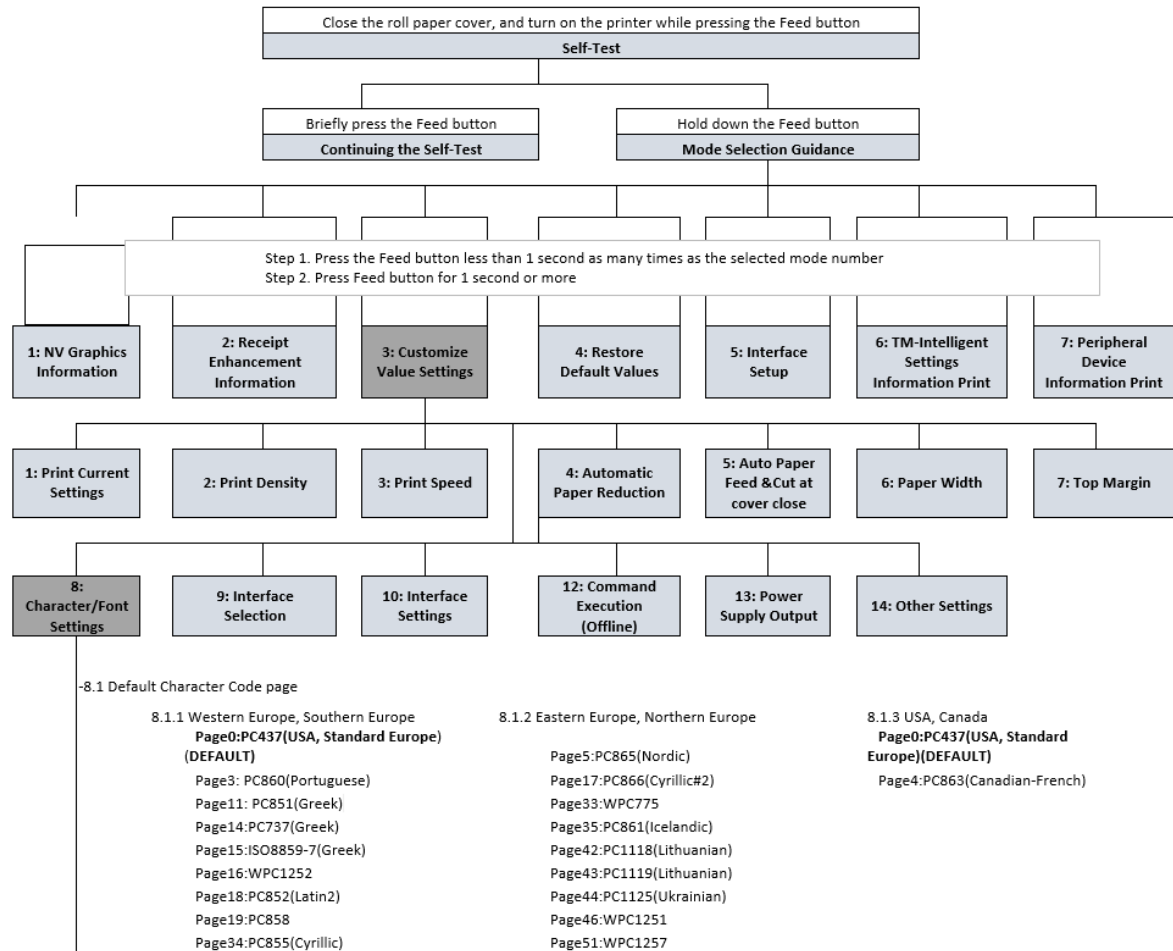

Front Panel Configuration

TM-T88VI printer provides a software setting mode through panel button operations. Refer to *TM-T88VI Technical Reference Guide* for the complete list of the software settings available in this mode. The Oracle TM-T88VI provides additional operations for configuring the default Epson printer native fonts.

Changing the Default Epson Native Font

1. Hold the **Feed** button while powering up the printer. This will print the self-test sheet.
2. Press and hold the **Feed** button until the next sheet is printed.
 - a. Follow the instructions at bottom of the sheet, to select "3. Customize Value Settings".
 - b. Follow the instructions at bottom of the sheet, to select "8. Character/Font Settings".
 - c. Select "5. Multi-Language Font"
 - d. Choose the default font from this list.
 - e. Cycle power to the printer.

The following menu tree overview shows the top level branches and associated mode settings and all language possibilities. The **(DEFAULT)** label indicates a factory default setting.

3

UB-IDN02 Specifications (IDN model only)

Communication Standard	RS-485
Data transmission	Serial
Synchronization	Asynchronous
Handshaking	XON/XOFF, or using IDN status requests
Baud rate settings	9600, 19200, or 38400 bps
Data word length	8 bits
Parity Setting	None
Stop bits	2
Cable interface connector	Two RJ-12 female connectors
Interface Board dimensions	70 x 40 mm (2.76 x 1.57")
Operating temperature	5 to 50°C (41 to 122°F)
Humidity	10 to 90% RH (non-condensing)
Storage temperature	-10 to 50°C (14 to 122°F)
Compatibility	<ul style="list-style-type: none"> • TM-T88IV/V/VI • TM-U220

Switches and Indicators

Seven DIP switches are provided to configure the IDN interface. The DIP Switches perform the following functions:

Switch Number	Function	OFF	ON
1	IDN Device ID	See IDN Device ID Table Below	
2			
3			
4			
5	Baud Rate Selection	See Baud Rate Table Below	
6			
7	Operating mode	Normal	Self-Test

IDN Device ID Table

Device ID	Dip Switch			
	1	2	3	4
USB-IDN**	-	-	-	-
01	-	-	-	ON*
02	-	-	ON	-
03	-	-	ON	ON
04	-	ON	-	-
05	-	ON	-	ON
06	-	ON	ON	-
07	-	ON	ON	ON

Device ID	Dip Switch			
	1	2	3	4
08	ON	-	-	-
09	ON	-	-	ON
10	ON	-	ON	-
11	ON	-	ON	ON
12	ON	ON	-	-
13	ON	ON	-	ON
14	ON	ON	ON	-
15	ON	ON	ON	ON

Baud Rate Table

Baud Rate	DIP Switch	
	5	6
9600	OFF	OFF
19200	ON	OFF
38400	OFF	ON

NOTE:

The default DIP switches are set to device ID = 1, baud rate = 38400 bps. DIP switch 4 and 6 ON, others OFF.

**ID = 0 is required to be set to support daisy chain printing in the new USB-IDN operational mode.

If there is a need to load new firmware into the UB-IDN control board, the board must be placed into re-flash mode. This mode is selected by turning off the printer, placing the DIP switches in the following state, then applying power to the printer.

IDN Re-flash mode DIP Switch Settings

Switch	1	2	3	4	5	6	7
Setting	OFF	OFF	OFF	OFF	ON	ON	ON

IDN Annunciator

An annunciator can sound on paper cut command mode flag. Default flag state is set to OFF (buzzer is silent on paper cut)

DIP switches are read only once when power is applied. Any changes made to the switch settings while the power is on will be ignored. If the annunciator is currently OFF and you desire to turn it on, place the IDN switches in annunciator mode as shown in the table below and cycle power to the printer to toggle the setting to ON.

Annunciator Mode Toggle DIP Switch Setting

Switch No	1	2	3	4	5	6	7
State	ON	ON	ON	OFF	ON	ON	ON

Once you have achieved the desired setting, place the switches in runtime mode by setting the desired IDN device ID, baud rate and SW7=OFF, then cycle power to the printer in order to lock in the new setting.

The default DIP switches are set to device ID = 1, baud rate = 38400 bps. In other words, DIP switch 4 and 6 ON, others OFF.

 **IMPORTANT****Use of ethernet port with IDN card installed:**

To use the built-in ethernet port on TM-T88VI, perform one of the following steps:

1. Change the DIP switches on the IDN board to place the IDN board into the re-flash mode, or
2. Remove IDN board from the printer.

IDN LED Indicator

An LED is provided on the card edge to indicate operating status. The LED will indicate the following operating or error conditions:

Error	Description	ERROR LED Blinking Pattern
None	Normal operation (no error).	Continuous blink (120ms on, 120ms off)
Incompatible printer	IDN interface is installed into an incompatible printer.	(160ms on, 160ms off for 2 blinks, then 1.5 sec on)
Printer fault	The printer is not responding to the IDN interface.	(160ms on, 160ms off for 3 blinks, then 1.2 sec on)
RAM read/write error	RAM memory test failed.	(160ms on, 160ms off, then 2 sec on)
CPU execution error	The CPU executes an invalid instruction or address.	(160ms on, 160ms off for four blinks, then 1 sec on)

IDN Protocol Standard

Except as noted herein, the IDN protocol implemented for this printer conforms to the original specification issued April, 2000. Modifications have been made to allow support for multi-byte Unicode characters.

The revised protocol, has been designed to allow a hybrid mix of standard, non-multilingual IDN interfaces and multilingual IDN interfaces to be daisy-chained simultaneously on the same IDN network. For correct operation, however, multilingual characters must not be sent to a non-multilingual interface. Doing so will result in invalid characters being printed.

IDN Self-Test

The IDN interface provides a self-test operation which checks the operation of the hardware, and reports current operating parameters, including the installed Unicode fonts.

To start the self-test, turn the printer off, turn on switch 7 on the UB-IDN interface, then turn the printer on. The firmware revision printed at the top of the self-test consists of a letter followed by three digits, in the format "A4.52". The letter represents the boot block revision, while the three digits are the UB-IDN control firmware revision.

PLEASE REMEMBER
TO
POWER OFF
AND
RESET SWITCH 7

4

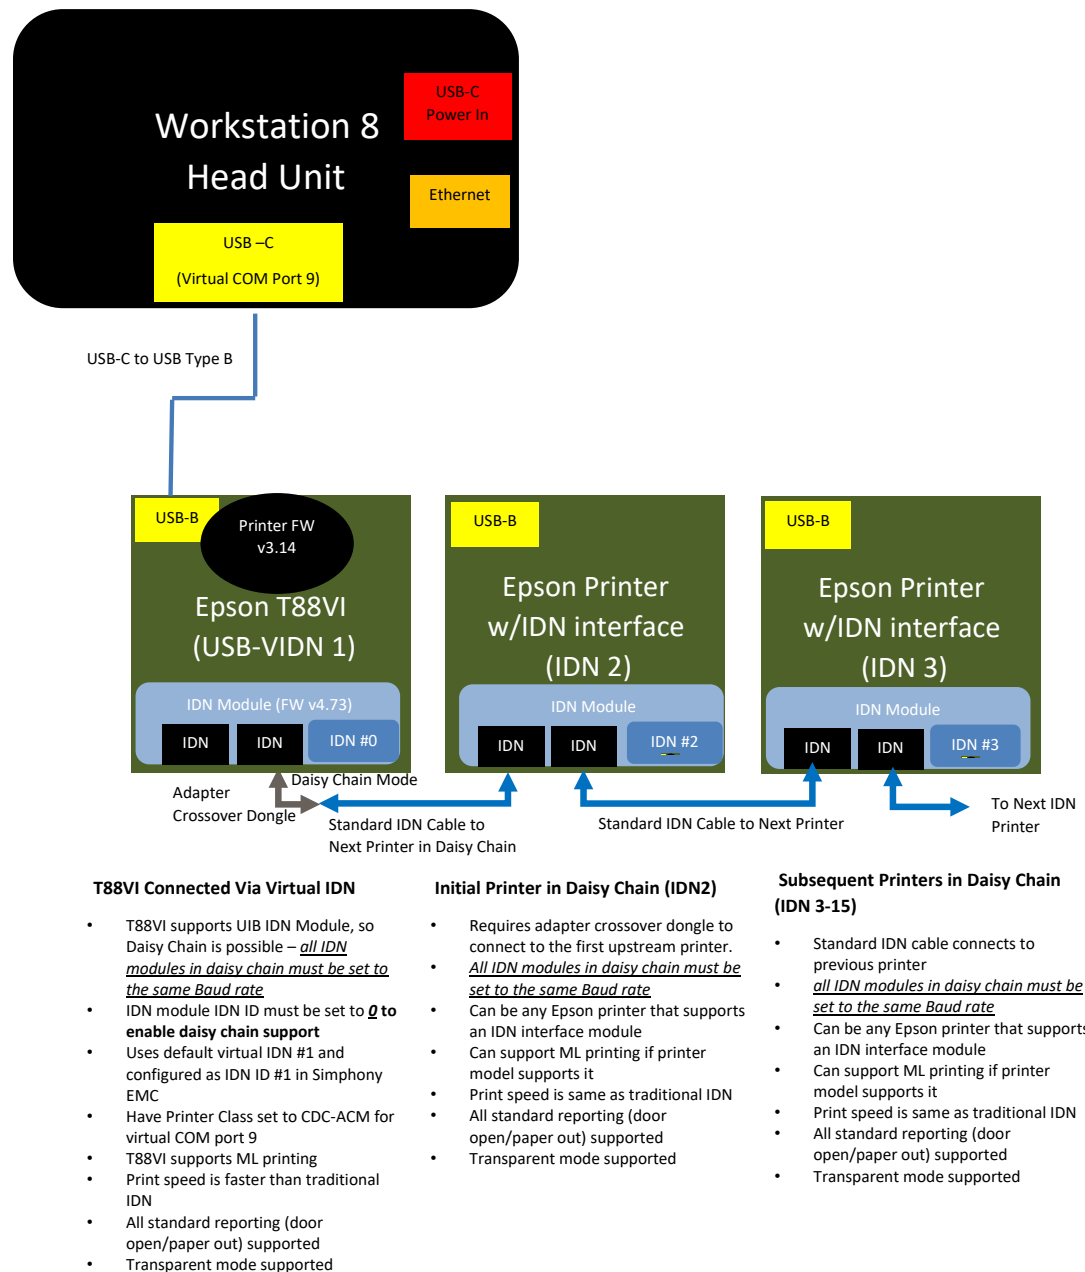

USB-IDN Communication

Starting with printer firmware v3.14 and Symphony 19.5 you can connect the TM-T88VI printer to an Oracle MICROS Workstation 8 using a USB cable. This can be accomplished using a standard USB-A to USB-B cable or a USB-C to USB-B cable. An available USB port is all that is required at the workstation. Future updates will be provided to support this functionality with the Workstation 6 Series and Compact Workstation 3 Series

How it works and features:

- Requirements: TM-T88VI Printer Firmware v3.14 or greater, Symphony 19.5 or greater
- The TM-T88VI USB port is configured as CDC-ACM, which creates a virtual serial connection over the USB interface. The firmware v3.14 accepts IDN commands over this virtual serial connection.
 - T88VI printers will ship with CDC-ACM enabled by default. For existing printers, if USB IDN is needed, the printer must be manually configured for CDC-ACM (and printer firmware must be updated.)
 - Installation of firmware update alone will not reconfigure printer for CDC-ACM
 - Steps to update firmware can be found in My Oracle Support (MOS) under patch # 35449208 for the printer, and patch # 35468203 for the IDN interface board, also known as UB-IDN02.
- The Workstation 8 recognizes the USB connected TM-T88VI with firmware v3.14 and automatically assigns it to Com 9
 - Any available USB port on the Workstation 820 System Unit or Peripheral Expansion Module can be used to connect the USB-IDN TM-T88VI
- Within Symphony, configure an IDN printer on Com 9 as IDN ID 1
- If the UBS-IDN connected TM-T88VI has a traditional IDN module installed, it can support traditional IDN daisy chain printing. The USB-IDN connected printer must have an IDN module with v4.74 firmware. Downstream printers can be any legacy printer with an IDN interface (see Connection Diagram.)
 - The IDN module of the USB-IDN printer must be set to IDN ID **0** to **enable Daisy Chain** Support in order to connect additional downstream printers using IDN.
 - Special crossover adapter dongle is required to connect to the first downstream printer using traditional IDN over a standard IDN cable.
 - All existing features continue to function as highlighted in this document.

Workstation 8 Connection Diagram

Virtual IDN Daisy Chain Connection

Daisy chain functionality is available with virtual IDN as shown in the illustration above. The USB connected TM-T88VI must have a UB-IDN02 interface module with firmware version 4.73 installed and this module must be configured as IDN 0.

A crossover adapter dongle is needed to connect this module to a standard IDN cable which is then connected to the first daisy chained printer. Subsequent daisy chained IDN printers can be connected via a regular IDN Cables.

CDC-ACM

The TM-T88VI USB interface must be configured as a CDC-ACM class to create a virtual serial communication connection between the workstation and printer. TM-T88VI firmware version 3.14 allows the printer to recognize IDN commands sent over this virtual serial communication connection.

CDC-ACM class can be selected by an ESCPOS command, or by the printer panel operation as detailed below. This setting is enabled by default in printers factory loaded with F/W version 3.14.

Selecting CDC-ACM class using printer panel

1. Hold the feed button while powering up the printer. This will print the self test sheet.
2. Press and hold the feed button until the next sheet is printed.
3. Follow the instructions at bottom of the sheet, to select "3. Customize Value Settings".
4. Follow the instructions at bottom of the sheet, to select "10. Interface Settings".
5. Select "2. USB Interface Settings", then "1: Class"
6. Choose "3: CDC ACM Class".
7. Cycle power to the printer.

10.Interface Settings

Modes

- 0: Return to the previous menu
- 1: Serial Interface Baud Rate
- 2: USB Interface Settings
- 3: Interface switch waiting time
- 4: Main connection interface
- 5: Auto Line Feed
- 6: Output Paper-end Signals
- 7: Error Signal Output

10.Interface Settings

10.2.USB Interface Settings
10.2.1.Class

Modes

- 0: Return to the previous menu
-] 1: Vendor Class
- 2: Printer Class
- * 3: CDC ACM Class

] means default value.

* means current set value.

USB-IDN Device ID

By default the Virtual IDN Device ID is set to 1 and should be left as is. If necessary, it can be changed using the printer panel:

1. Hold the feed button while powering up the printer. This will print the self test sheet.
2. Press and hold the feed button until the next sheet is printed.
3. Follow the instructions at bottom of the sheet, to select "3. Customize Value Settings".
4. Follow the instructions at bottom of the sheet, to select "14. Other Settings".
5. Select "4. Virtual IDN", then 1 for "Device ID"

6. Choose the desired device ID from the list.
7. Cycle printer power.

14.Other Settings

Modes

- 0: Return to the previous menu
- 1: Printer Model
- 2: Buzzer Control
- 3: LED indicator when I/F starting
- 4: Virtual IDN

14.Other Settings

14.4.Virtual IDN

14.4.1.Device ID

Modes

- 0: Return to the previous menu
- 1: Device ID 0
-] *2: Device ID 1
- 3: Device ID 2
- 4: Device ID 3
- 5: Device ID 4
- 6: Device ID 5
- 7: Device ID 6
- 8: Device ID 7
- 9: Device ID 8
- 10: Device ID 9
- 11: Device ID 10
- 12: Device ID 11
- 13: Device ID 12

Windows Regional Language Setting for RES and OPOS

If you want to print in a language other than the default English, you must also change the regional language setting in Microsoft Windows. Also, if you are using OPOS in Symphony, you will need to change this regional language setting as well.

1. In Microsoft Windows, search for and open the **Region** settings.
2. Select the **Administrative** tab.
3. Under the *Language for non-Unicode programs* panel, select a language for the printer. This should match the language selected in the OPOS settings.
