## Chapter 1: Introduction

- Overview
- Scope and Audience
- Manual Organization
- Documentation Admonishments
- Related Publications
- Locate Product Documentation on the Oracle Technology Network Site
- Customer Training
- My Oracle Support (MOS)
- Emergency Response

## Chapter 2: User Interface Introduction

- User Interface Organization
- User Interface Elements
- Main Menu Options
- Missing Main Menu options
- Common Graphical User Interface Widgets
  - Supported Browsers
  - System Login Page
  - Main Menu Icons
  - Work Area Displays
  - Customizing the Splash Page Welcome Message
  - Column Headers (Sorting)
  - Page Controls
  - Clear Field Control
  - Optional Layout Element Toolbar
  - Filters
  - Pause Updates
  - Max Records Per Page Controls

## Chapter 3: Administration

- Options Administration
  - General Options Administration elements

This section contains a brief description of the Operations, Administration, and Maintenance (OAM) feature. The contents include sections about the manual scope, audience, and organization; how to find related publications; and how to contact Customer Support for assistance.
Overview

This documentation:

- Gives a conceptual overview of the application's purpose, architecture, and functionality
- Describes the pages and fields on the application GUI (Graphical User Interface)
- Provides procedures for using the application interface
- Explains the organization of, and how to use, the documentation

Scope and Audience

This manual is intended for anyone responsible for configuring and administering the Operations, Administration, and Maintenance options. Users of this manual must have a working knowledge of telecommunications and network installations.

Manual Organization

This document is organized into the following chapters:

- **Administration** contains information about the administration of users, passwords, groups, sessions, and other OAM functions.
- **Configuration** contains information about the configuration of network elements, services, resource domains, servers, server groups, places, place associations and networks on the OAM.
- **Alarms and Events** contains information about viewing, exporting and generating reports on active and historical alarms and events in OAM.
- **Security Log** contains information on the security log files included with OAM.
- **Status and Manage** contains information on the status and management of network elements, servers, high availability servers, databases, KPIs, processes, tasks, and files on the OAM.
- **Measurements** contains information on the measurement elements on the OAM.

Documentation Admonishments

Admonishments are icons and text throughout this manual that alert the reader to assure personal safety, to minimize possible service interruptions, and to warn of the potential for equipment damage.

Table 1: Admonishments

<table>
<thead>
<tr>
<th>Icon</th>
<th>DANGER:</th>
</tr>

<td>(This icon and text indicate the possibility of personal injury.)</td>
</tr>
</tbody>
</table>
WARNING:
(This icon and text indicate the possibility of equipment damage.)

CAUTION:
(This icon and text indicate the possibility of service interruption.)

Related Publications

For information about additional publications that are related to this document, refer to the Related Publications Reference document, which is published as a separate document on the Oracle Technology Network (OTN) site. See Locate Product Documentation on the Oracle Technology Network Site for more information.

Locate Product Documentation on the Oracle Technology Network Site

Oracle customer documentation is available on the web at the Oracle Technology Network (OTN) site, http://docs.oracle.com. You do not have to register to access these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at http://www.adobe.com.

2. Click Industries.
3. Under the Oracle Communications subheading, click the Oracle Communications documentation link. The Oracle Communications Documentation page appears with Tekelec shown near the top.
4. Click the Oracle Communications Documentation for Tekelec Products link.
5. Navigate to your Product and then the Release Number, and click the View link (the Download link will retrieve the entire documentation set). A list of the entire documentation set for the selected product and release appears.
6. To download a file to your location, right-click the PDF link, select Save target as, and save to a local folder.

Customer Training

Oracle University offers training for service providers and enterprises. Visit our web site to view, and register for, Oracle Communications training:

http://education.oracle.com/communication

To obtain contact phone numbers for countries or regions, visit the Oracle University Education web site:

www.oracle.com/education/contacts
My Oracle Support (MOS)

MOS (https://support.oracle.com) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at http://www.oracle.com/us/support/contact/index.html. When calling, make the selections in the sequence shown below on the Support telephone menu:

1. Select 2 for New Service Request
2. Select 3 for Hardware, Networking and Solaris Operating System Support
3. Select one of the following options:
   - For Technical issues such as creating a new Service Request (SR), Select 1
   - For Non-technical issues such as registration or assistance with MOS, Select 2

You will be connected to a live agent who can assist you with MOS registration and opening a support ticket.

MOS is available 24 hours a day, 7 days a week, 365 days a year.

Emergency Response

In the event of a critical service situation, emergency response is offered by the Customer Access Support (CAS) main number at 1-800-223-1711 (toll-free in the US), or by calling the Oracle Support hotline for your local country from the list at http://www.oracle.com/us/support/contact/index.html. The emergency response provides immediate coverage, automatic escalation, and other features to ensure that the critical situation is resolved as rapidly as possible.

A critical situation is defined as a problem with the installed equipment that severely affects service, traffic, or maintenance capabilities, and requires immediate corrective action. Critical situations affect service and/or system operation resulting in one or several of these situations:

- A total system failure that results in loss of all transaction processing capability
- Significant reduction in system capacity or traffic handling capability
- Loss of the system’s ability to perform automatic system reconfiguration
- Inability to restart a processor or the system
- Corruption of system databases that requires service affecting corrective actions
- Loss of access for maintenance or recovery operations
- Loss of the system ability to provide any required critical or major trouble notification

Any other problem severely affecting service, capacity/traffic, billing, and maintenance capabilities may be defined as critical by prior discussion and agreement with Oracle.
Chapter 2

User Interface Introduction

Topics:
- User Interface Organization.....19
- Missing Main Menu options.....25
- Common Graphical User Interface Widgets.....26

This section describes the organization and usage of the application user interface. In it you can find information about how the interface options are organized, how to use widgets and buttons, and how filtering and other page display options work.
User Interface Organization

The user interface is the central point of user interaction within an application. It is a Web-based graphical user interface (GUI) that enables remote user access over the network to an application and its functions.

The core framework presents a common set of Main Menu options that serve various applications. The common Main Menu options are:

- Administration
- Configuration
- Alarm & Events
- Security Log
- Status & Manage
- Measurements
- Help
- Legal
- Logout

Applications, such as DSR, build upon this framework to present features and functions. For example, the DSR Network OAM GUI may present the following Main Menu options in addition to the common options:

- Communication Agent
- Diameter Common
- Diameter
- Policy and Charging
- MAP-Diameter IWF

The DSR System OAM GUI may present even more Main Menu options as listed below. The end result is a flexible menu structure that changes according to the application needs and features activated.

- Transport Manager
- SS7/Sigtran
- RBAR
- FABR
- IPFE
- GLA

Note that the DSR System OAM Main Menu options will differ from the Network OAM options. Some Main Menu options are configurable from the DSR Network OAM server and view-only from the System OAM server. This remains true for other applications.

User Interface Elements

*Table 2: User interface elements* describes elements of the user interface.
Table 2: User interface elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Location</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Identification Banner</td>
<td>Top bar across the web page</td>
<td>Displays the company name, product name and version, and the alarm panel.</td>
</tr>
</tbody>
</table>
| Session Banner        | Next bar across the top of the web page | The left side of the banner just above the Main Menu provides the following session information:  
- The name of the machine to which the user is connected, and whether the user is connected via the VIP or directly to the machine.  
- The HA state of the machine to which the user is connected.  
- The role of the machine to which the user is connected.  

The right side of the banner:  
- Shows the user name of the currently logged-in user.  
- Provides a link to log out of the GUI. |
| Main Menu             | Left side of screen, under banners | A tree-structured menu of all operations that can be performed through the user interface. The plus character (+) indicates that a menu item contains subfolders.  
- To display submenu items, click the plus character, the folder, or anywhere on the same line.  
- To select a menu item that does not have submenu items, click on the menu item text or its associated symbol. |
| Work Area             | Right side of panel under status  | Consists of three sections: Page Title Area, Page Control Area (optional), and Page Area.  
- **Page Title Area**: Occupies the top of the work area. It displays the title of the current page being displayed, the date and time, and includes a link to context-sensitive help.  
- **Page Control Area**: Is located below the Page Title Area, and is used to show controls for the Page Area (this area is optional). When available for an option, filter controls display in this area. The Page Control Area contains the optional layout element toolbar, which displays different elements depending on which GUI page is selected. For more information, see *Optional Layout Element Toolbar*.  
- **Page Area**: Occupies the bottom of the work area. This area is used for all types of operations. It |
Main Menu Options

Table 3: Main Menu Options describes all main menu user interface options.

Note: The menu options can differ according to the permissions assigned to a user’s log-in account. For example, the Administration menu options would not appear on the screen of a user who does not have administrative privileges.

Note: Some menu items are configurable only on the Network OAM and view-only on the System OAM; and some menu options are configurable only on the System OAM.

Note: Some features do not appear in the main menu until the features are activated.

Table 3: Main Menu Options

<table>
<thead>
<tr>
<th>Menu Item</th>
<th>Function</th>
</tr>
</thead>
</table>
| Administration | The Administration menu allows the user to:  
| | • General Options. Configure options such as password history and expiration, login message, welcome message, and the number of failed login attempts before an account is disabled  
| | • Set up and manage user accounts  
| | • Configure group permissions  
| | • View session information  
| | • Manage sign-on certificates  
| | • Authorize IP addresses to access the user interface  
| | • Configure SFTP user information  
| | • View the software versions report  
| | • Upgrade management including backup and reporting  
| | • Authenticate LDAP servers  
| | • Configure SNMP trapping services  
| | • Configure an export server  
| | • Configure DNS elements  
| Configuration | On the NOAM, allows the user to configure:  
| | • Network Elements  
| | • Network Devices  

Table 3: Main Menu Options

<table>
<thead>
<tr>
<th>Function</th>
</tr>
</thead>
</table>
| displays all options, status, data, file, and query screens. Information or error messages are displayed in a message box at the top of this section. A horizontal and/or vertical scroll bar is provided when the displayed information exceeds the page area of the screen. When a user first logs in, this area displays the application user interface page. The page displays a user-defined welcome message. To customize the message, see Customizing the Splash Page Welcome Message.  

E63628 Revision 01, July 2015
<table>
<thead>
<tr>
<th>Menu Item</th>
<th>Function</th>
</tr>
</thead>
</table>
| Network Routes | - Network Routes  
- Services  
- Servers  
- Server Groups  
- Resource Domains  
- Places  
- Place Associations  
- Interface and Port DSCP |
| Alarms and Events | Allows the user to view:  
- Active alarms and events  
- Alarm and event history  
- Trap log |
| Security Log | Allows the user to view, export, and generate reports from security log history. |
| Status & Manage | Allows the user to monitor the individual and collective status of Network Elements, Servers, HA functions, Databases, KPIs, system Processes, and Tasks. The user can perform actions required for server maintenance, database management, data, and ISO file management. |
| Measurements | Allows the user to view and export measurement data. |
| Transport Manager (optional) | On the SOAM, allows the user to configure adjacent nodes, configuration sets, or transports. A maintenance option allows the user to perform enable, disable, and block actions on the transport entries. |
| Communication Agent (optional) | Allows the user to configure Remote Servers, Connection Groups, and Routed Services. The user can perform actions to enable, disable, and block connections. Also allows the user to monitor the status of Connections, Routed Services, and HA Services. |
| SS7/Signtran (optional) | On the SOAM, allows the user to configure various users, groups, remote signaling points, links, and other items associated with SS7/Signtran; perform maintenance and troubleshooting activities; and provides a command line interface for bulk loading SS7 configuration data. |
| Diameter Common (optional) | Allows the user to view or configure:  
- Dashboard. Configure on the NOAM; view on both OAMs  
- Network Identifiers on the SOAM - MCC Ranges  
- Network Identifiers on the NOAM - MCCMNC and MCCMNC Mapping  
- MPs (on the SOAM) - editable Profile parameters and Profile assignments  
The DSR Bulk Import and Export functions are available on both OAMs for the data that is configured on that OAM. |
<table>
<thead>
<tr>

</thead>
</table>
| Diameter (optional)                           | Allows the user to configure, modify, and monitor Diameter routing:  
  • On the NOAMP, Diameter Topology Hiding configuration and Egress Throttle List  
  • On the SOAM, Diameter Configuration, Maintenance, Reports, Troubleshooting with IDIH, AVP Dictionary, and Diameter Mediation configuration                                                                                                                                                                        |
| RBAR (Range-Based Address Resolution) (optional) | Allows the user to configure the following Range-Based Address Resolution (RBAR) settings:  
  • Applications  
  • Exceptions  
  • Destinations  
  • Address Tables  
  • Addresses  
  • Address Resolutions  
  • System Options  
  This is accessible from the SOAM only.                                                                                                                                                                                                                                     |
| FABR (Full Address Based Resolution) (optional) | Allows the user to configure the following Full Address Based Resolution (FABR) settings:  
  • Applications  
  • Exceptions  
  • Default Destinations  
  • Address Resolutions  
  • System Options  
  This is accessible from the SOAM only.                                                                                                                                                                                                                                     |
| Policy and Charging (optional)                | On the NOAMP, allows the user to perform configuration tasks, edit options, and view elements for:  
  • General Options  
  • SBR Databases  
  • Access Point Names  
  • SBR Database Resizing Plans  
  • SBR Data Migration Plans  
  • Policy DRA  
    • PCRF Pools  
    • PCRF Sub-Pool Selection Rules  
    • Network-Wide Options  
  • Online Charging DRA  
    • OCS Session State  
    • Realms  
    • Network-Wide Options                                                                                                                                                                                                                                                  |

### Missing Main Menu options

Permissions determine which Main Menu options are visible to users. Permissions are defined through the **Group Administration** page. The default group, **admin**, is permitted access to all GUI options and functionality. Additionally, members of the **admin** group set permissions for other users.

Main Menu options vary according to the group permissions assigned to a user’s account. Depending on your user permissions, some menu options may be missing from the Main Menu. For example, Administration menu options do not appear on your screen if you do not have administrative permissions. For more information about user permissions, see **Group Administration** in the OAM section of the online help, or contact your system administrator.
Common Graphical User Interface Widgets

Common controls allow you to easily navigate through the system. The location of the controls remains static for all pages that use the controls. For example, after you become familiar with the location of the display filter, you no longer need to search for the control on subsequent pages because the location is static.

Supported Browsers

This application supports the use of Microsoft® Internet Explorer 8.0, 9.0, or 10.0.

System Login Page

Access to the user interface begins at the System Login page. The System Login page allows users to log in with a username and password and provides the option of changing a password upon login. The System Login page also features a current date and time stamp and a customizable login message.

The user interface is accessed via HTTPS, a secure form of the HTTP protocol. When accessing a server for the first time, HTTPS examines a web certificate to verify the identity of the server. The configuration of the user interface uses a self-signed web certificate to verify the identity of the server. When the server is first accessed, the supported browser warns the user that the server is using a self-signed certificate. The browser requests confirmation that the server can be trusted. The user is required to confirm the browser request.

Customizing the Login Message

Before logging in, the System Login page appears. You can create a login message that appears just below the Log In button on the System Login page.
1. From the **Main Menu**, select **Administration > General Options**.
   The **General Options Administration** page appears.

2. Locate **LoginMessage** in the **Variable** column.
3. Enter the login message text in the **Value** column.
4. Click **OK** or **Apply** to submit the information.

   The next time you log in to the user interface, the login message text is displayed.

### Accessing the DSR Graphical User Interface

In a DSR, some configuration is done at the NOAM server, while some is done at the SOAM server. Because of this, you will access the DSR graphical user interface (GUI) from two servers. Certificate Management (Single Sign-On) can be configured to simplify accessing the DSR GUI on the NOAM and the SOAM.

For information on configuring Single Sign-On certificates, see **OAM > Administration > Access Control > Certificate Management** in the DSR online help.

After the certificates have been configured, you can log into the DSR GUI on any NOAM or SOAM, and then access the DSR GUI on other servers (NOAM or other SOAMs) without having to re-enter your login credentials.
1. In the browser URL field, enter the fully qualified hostname of the NOAM server, for example https://dsr-no.yourcompany.com.
   When using Single Sign-On, you cannot use the IP address of the server.

2. When prompted by the browser, confirm that the server can be trusted.
   The System Login page appears.

3. Enter the Username and Password for your account.
   The DSR GUI for the NOAM appears.

4. To access the DSR GUI for the SOAM, open another browser window and enter the fully qualified hostname of the SOAM.
   The DSR GUI for the SOAM appears.

   You can toggle between the DSR GUI on the NOAM and the DSR GUI on the SOAM as you perform configuration tasks.

**Main Menu Icons**

This table describes the icons used in the **Main Menu**.

<table>
<thead>
<tr>
<th>Icon</th>

<td>File with Question Mark</td>
<td>Contains operations in a Query page.</td>
</tr>
<tr>
<td>![User]</td>
<td>User</td>
<td>Contains operations related to users.</td>
</tr>
</tbody>
</table>
Work Area Displays

In the user interface, you will see a variety of page formats. Tables, forms, tabbed pages, and reports are the most common formats in the user interface.

**Note:** Screenshots are provided for reference only and may not exactly match a specific application's GUI.

### Tables

Paginated tables describe the total number of records being displayed at the beginning and end of the table. They provide optional pagination with **First | Prev | Next | Last** links at both the beginning and end of this table type. Paginated tables also contain action links on the beginning and end of each row. For more information on action links and other page controls, see *Page Controls*.

<table>
<thead>
<tr>
<th>Action</th>
<th>System ID</th>
<th>IP Address</th>
<th>Permission</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Edit</td>
<td>lisa</td>
<td>10.25.62.4</td>
<td>READ_WRITE</td>
<td>Edit</td>
</tr>
</tbody>
</table>

**Figure 2: Paginated table**

Scrollable tables display all of the records on a single page. The scroll bar, located on the right side of the table, allows you to view all records in the table. Scrollable tables also provide action buttons that operate on selected rows. For more information on buttons and other page controls, see *Page Controls*. 
Figure 3: Scrollable table

**Note:** Multiple rows can be selected in a scrollable table. Add rows one at a time using CTRL-click. Add a span of rows using SHIFT-click.

**Forms**

Forms are pages on which data can be entered. Forms are typically used for configuration. Forms contain fields and may also contain a combination of pulldown lists, buttons, and links.

![Form page](image)

**Tabbed pages**

Tabbed pages provide collections of data in selectable tabs. Click on a tab to see the relevant data on that tab. Tabbed pages also group Retrieve, Add, Update, and Delete options on one page. Click on the relevant tab for the task you want to perform and the appropriate fields will populate on the page. Retrieve is always the default for tabbed pages.
Reports

Reports provide a formatted display of information. Reports are generated from data tables by clicking the **Report** button. Reports can be viewed directly on the user interface, or they can be printed. Reports can also be saved to a text file.
Customizing the Splash Page Welcome Message

When you first log in to the user interface, the User Interface splash page appears. You can display a customized welcome message on the User Interface splash page. Use this procedure to customize the message.

1. From the Main Menu, select Administration > General Options.
   
   The General Options Administration page appears.

2. Locate WelcomeMessage in the Variable column.

3. Enter the welcome message text in the Value column.

4. Click OK or Apply to submit the information.

The next time you log in to the user interface, the welcome message text is displayed.

Column Headers (Sorting)

You can sort a table by a column by clicking the column header. However, sorting is not necessarily available on every column. Sorting does not affect filtering.

When you click the header of a column that the table can be sorted by, an indicator appears in the column header showing the direction of the sort. See Figure 8: Sorting a Table by Column Header. Clicking the column header again reverses the direction of the sort.

Figure 8: Sorting a Table by Column Header
Page Controls

User interface pages contain controls, such as buttons and links, that perform specified functions. The functions are described by the text of the links and buttons.

**Note:** Disabled buttons are grayed out. Buttons that are irrelevant to the selection or current system state, or which represent unauthorized actions as defined in Group Administration, are disabled. For example, Delete is disabled for users without Global Data Delete permission. Buttons are also disabled if, for example, multiple servers are selected for an action that can only be performed on a single server at a time.

*Table 5: Example Action buttons* contains examples of Action buttons.

<table>
<thead>
<tr>
<th>Action button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insert</td>
<td>Insert data into a table</td>
</tr>
<tr>
<td>Edit</td>
<td>Edit data within a table</td>
</tr>
<tr>
<td>Delete</td>
<td>Delete data from table</td>
</tr>
<tr>
<td>Change</td>
<td>Change the status of a managed object</td>
</tr>
</tbody>
</table>

Some Action buttons take you to another page.

Submit buttons, described in *Table 6: Submit buttons*, are used to submit information to the server. The buttons are located in the page area and accompanied by a table in which you can enter information. The submit buttons, except for Cancel, are disabled until you enter some data or select a value for all mandatory fields.

*Table 6: Submit buttons*  

<table>
<thead>
<tr>
<th>Submit button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
<td>Submits the information to the server, and if successful, returns to the View page for that table.</td>
</tr>
<tr>
<td>Apply</td>
<td>Submits the information to the server, and if successful, remains on the current page so that you can enter additional data.</td>
</tr>
<tr>
<td>Cancel</td>
<td>Returns to the View page for the table without submitting any information to the server.</td>
</tr>
</tbody>
</table>

Clear Field Control

The clear field control is a widget that allows you to clear the value from a pulldown list. The clear field control is available only on some pulldown fields.

Click the X next to a pulldown list to clear the field.

*Figure 9: Clear Field Control X*
Optional Layout Element Toolbar

The optional layout element toolbar appears in the Page Control Area of the GUI.

![Optional Layout Element Toolbar](image)

Figure 10: Optional Layout Element Toolbar

The toolbar displays different elements depending on which GUI page is selected. The elements of the toolbar that can appear include:

- **Filter** - Allows you to filter data in a table.
- **Errors** - Displays errors associated with the work area.
- **Info** - Displays information messages associated with the work area.
- **Status** - Displays short status updates associated with the main work area.
- **Warning** - Displays warnings associated with the work area.

Notifications

Some messages require immediate attention, such as errors and status items. When new errors occur, the Errors element opens automatically with information about the error. Similarly, when new status items are added, the Status element opens. If you close an automatically opened element, the element stays closed until a new, unacknowledged item is added.

![Automatic Error Notification](image)

Figure 11: Automatic Error Notification

**Note:** Viewing and closing an error does not clear the Errors element. If you reopen the Errors element, previously viewed errors are still in the list.

When new messages are added to Warning or Info, the styling of the element changes to indicate new messages are available. The styling of the Task element changes when a task changes state (such as, a task begins or ends).

Opening an Element in the Toolbar

Use this procedure to open an element in the optional layout element toolbar.

1. Click the text of the element or the triangle icon to open an element.
   The selected element opens and overlays the work area.
2. Click X to close the element display.
Filters

Filters are part of the optional layout element toolbar and appear throughout the GUI in the Page Control Area. For more information about optional layout element toolbar functionality, see Optional Layout Element Toolbar.

Filters allow you to limit the data presented in a table and can specify multiple filter criteria. By default, table rows appear unfiltered. Three types of filters are supported, however, not all filtering options are available on every page. The types of filters supported include:

- **Network Element** - When enabled, the Network Element filter limits the data viewed to a single Network Element.
  
  **Note:** Once enabled, the Network Element filter will affect all pages that list or display data relating to the Network Element.

- **Collection Interval** - When enabled, the collection interval filter limits the data to entries collected in a specified time range.

- **Display Filter** - The display filter limits the data viewed to data matching the specified criteria.

Once a field is selected, it cannot be selected again. All specified criteria must be met in order for a row to be displayed.

The style or format of filters may vary depending on which GUI pages the filters are displayed. Regardless of appearance, filters of the same type function the same.

![Figure 12: Examples of Filter Styles](image)

**Filter Control Elements**

This table describes filter control elements of the user interface.

**Table 7: Filter control elements**

<table>
<thead>
<tr>
<th>Operator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>=</td>
<td>Displays an exact match.</td>
</tr>
<tr>
<td>!=</td>
<td>Displays all records that do not match the specified filter parameter value.</td>
</tr>
<tr>
<td>&gt;</td>
<td>Displays all records with a parameter value that is greater than the specified value.</td>
</tr>
<tr>
<td>&gt;=</td>
<td>Displays all records with a parameter value that is greater than or equal to the specified value.</td>
</tr>
<tr>
<td>Operator</td>
<td>Description</td>
</tr>
<tr>
<td>----------</td>
<td>-------------</td>
</tr>
<tr>
<td>&lt;</td>
<td>Displays all records with a parameter value that is less than the specified value.</td>
</tr>
<tr>
<td>&lt;=</td>
<td>Displays all records with a parameter value that is less than or equal to the specified value.</td>
</tr>
<tr>
<td>Like</td>
<td>Enables you to use an asterisk (*) as a wildcard as part of the filter parameter value.</td>
</tr>
<tr>
<td>Is Null</td>
<td>Displays all records that have a value of Is Null in the specified field.</td>
</tr>
</tbody>
</table>

**Note:** Not all filterable fields support all operators. Only the supported operators will be available for you to select.

### Filtering on the Network Element

The global Network Element filter is a special filter that is enabled on a per-user basis. The global Network Element filter allows a user to limit the data viewed to a single Network Element. Once enabled, the global Network Element filter affects all sub-screens that display data related to Network Elements. This filtering option may not be available on all pages.

1. Click **Filter** in the optional layout element toolbar. The filter tool appears.
2. Select a Network Element from the **Network Element** pulldown menu.
3. Click **Go** to filter on the selection, or click **Reset** to clear the selection.

Records are displayed according to the specified criteria.

### Filtering on Collection Interval

The Collection Interval filter allows a user to limit the data viewed to a specified time interval. This filtering option may not be available on all pages.

1. Click **Filter** in the optional layout element toolbar. The filter tool appears.
2. Enter a duration for the **Collection Interval** filter.
   The duration must be a numeric value.
3. Select a unit of time from the pulldown menu.
   The unit of time can be seconds, minutes, hours, or days.
4. Select **Beginning** or **Ending** from the pulldown menu.
5. Click **Go** to filter on the selection, or click **Reset** to clear the selection.

Records are displayed according to the specified criteria.

### Filtering using the Display Filter

Use this procedure to perform a filtering operation. This procedure assumes that you have a data table displayed on your screen. This process is the same for all data tables. However, all filtering operations are not available for all tables.

1. Click **Filter** in the optional layout element toolbar.
The filter tool appears.

2. Select a field name from the Display Filter pulldown menu.
   This selection specifies the field in the table that you want to filter on. The default is None, which indicates that you want all available data displayed.
   The selected field name displays in the Display Filter field.

3. Select an operator from the operation selector pulldown menu.
   The selected operator appears in the field.

4. Enter a value in the value field.
   This value specifies the data that you want to filter on. For example, if you specify Filter=Severity with the equals (=) operator and a value of MINOR, the table would show only records where Severity=MINOR.

5. For data tables that support compound filtering, click the Add button to add another filter condition. Then repeat steps 2 through 4.
   Multiple filter conditions are joined by an AND operator.

6. Click Go to filter on the selection, or click Reset to clear the selection.
   Records are displayed according to the specified criteria.

Pause Updates

Some pages refresh automatically. Updates to these pages can be paused by selecting the Pause updates checkbox. Uncheck the Pause updates checkbox to resume automatic updates. The Pause updates checkbox is available only on some pages.

Max Records Per Page Controls

Max Records Per Page is used to control the maximum number of records displayed in the page area. If a page uses pagination, the value of Max Records Per Page is used. Use this procedure to change the Max Records Per Page.

1. From the Main Menu, select Administration > General Options.
   The General Options Administration page appears.

2. Change the value of the MaxRecordsPerPage variable.
   Note: MaxRecordsPerPage has a range of values from 10 to 100 records. The default value is 20.

3. Click OK or Apply.
   OK saves the change and returns to the previous page.
   Apply saves the change and remains on the same page.

The maximum number of records displayed is changed.
Chapter 3

Administration

Topics:

• Options Administration.....39
• Access Control.....41
• Software Management.....76
• Remote Servers.....83

This section describes administrative tasks. These tasks are at the system-level and are limited to users with administrative privileges. The associated menu items do not appear in the user interface for non-administrative users.
Options Administration

The **Options Administration** page enables the administrative user to view a list of global options.

General Options Administration elements

This table describes the elements of the **General Options Administration** page.

**Table 8: General Options Administration Elements**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LastLoginExpiration</td>
<td>Number of days of inactivity before a user account is disabled. (0 = never disable) [Default = 0; Range = 0-200]</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> This feature is not enabled by default.</td>
</tr>
<tr>
<td>LockoutWindow</td>
<td>Amount of time (in minutes) in which exceeding the maximum number of consecutive failed logins will cause an account to be locked out. (0 = unlimited)</td>
</tr>
<tr>
<td>MaxConsecutiveFailed</td>
<td>Maximum number of consecutive failed login attempts before account is disabled. (0 = never disable) [Default = 3; Range = 0-10]</td>
</tr>
<tr>
<td>MaxPasswordHistory</td>
<td>Maximum number of passwords maintained in history list before reuse of password is allowed. (0 = no password history) [Default = 3; Range = 0-10]</td>
</tr>
<tr>
<td>MaxRecordsPerPage</td>
<td>The maximum number of records to display per page [Default = 20; Range = 10-100]</td>
</tr>
<tr>
<td>MinPasswordLength</td>
<td>The minimum length of a password. [Default = 8; Range = 8-16]</td>
</tr>
<tr>
<td>PasswordExpiration</td>
<td>Time (in days) before passwords expire (0 = never) [Default = 90; Range = 0-90]</td>
</tr>
<tr>
<td>SAMLEnabled</td>
<td>Enables SAML authentication of users. (0 = disabled, 1 = enabled). [Default = 0]</td>
</tr>
<tr>

<td>Configurable portion of login message seen on the login screen</td>
</tr>
<tr>
<td>WelcomeMessage</td>
<td>Welcome message seen after successful login.</td>
</tr>
<tr>
<td>exportDataSpaceReplace</td>
<td>Replace a space in an export data filename or directory. (Default = underscore)</td>
</tr>
</tbody>
</table>

### Viewing options

Use this procedure to view a list of global options:

Select **Administration > General Options**.

The **General Options Administration** page appears. The **General Options** pane lists all global options on the system. You can view the details of each option.

### Updating a current global option

Use this procedure to update a global option.

1. Select **Administration > General Options**.
   
   The **General Options** administration page appears.
2. Locate the option you want to change.
3. Change the value of the option.
4. Click **OK** to submit the information. 
   This submits the information, updates the database tables, and allows you to input additional data.

   The global option is changed.

Access Control

The Access Control page enables you to perform functions such as adding, modifying, enabling, or deleting user accounts, passwords, groups, sessions, single sign-on certificates, IPs and SFTP user information.

Users administration

The **Users Administration** page enables you to perform functions such as adding, modifying, enabling, or deleting user accounts.

Each user who is allowed access to the user interface is assigned a unique **Username**. This **Username** and the associated password must be provided during login. After three consecutive, unsuccessful login attempts, a user account is disabled. The number of failed login attempts before an account is disabled is a value that is configured through **Administrations > Options**. For more information, see **Options Administration**.

Each user is also assigned to a **group or groups**. Permissions to a set of functions are assigned to each group. The permissions determine the functions and restrictions for the users belonging to the group.

A user must have user/group administrative privileges to view or make changes to user accounts or groups. The administrative user can set up or change user accounts and groups, enable or disable user accounts, set password expiration intervals, and change user passwords.

Insert New User elements

The **Insert User** page displays the following elements:

**Table 9: User Administration Elements**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
</table>
| Username  | A field for the Username. The Username allows access to the GUI and must be unique. | Format: String  
Range: 5-16 lowercase alphanumeric characters (a to z, 0 to 9) |
| Group     | The groups to which the selected Username is assigned. Groups define the permissions assigned to the user. The permissions determine the functions and restrictions for the users belonging to the group. | Range: provisioned groups  
Default: admin |
## Adding a new user

**Note:** Prior to performing this procedure, you should know to which user groups this user should be assigned. The group assignment determines the functions that a user has access to. If you need to create a new group for this user, you should do so prior to adding the user (see *Adding a group*).

Use this procedure to add a new user who will be allowed to log in to the user interface and access some or all of its functions:

1. **Select** Administration > Access Control > Users.
   
The Users administration page appears.

2. **Click** Insert.
   
The Insert User Page appears.

3. **Enter a Username** that consists of 5-16 characters.
   
   For more information about Username, or any field on this page, see *Insert New User elements*.

4. **Select a Group or Groups** for the user.

5. **Select the Authentication Options** to be used with this account.
6. Select whether the account is enabled using the Access Allowed checkbox.

7. Enter the Maximum Concurrent Logins.

   Note: Maximum Concurrent Logins cannot be enabled for users in the admin group.

8. Enter the Session Inactivity Limit.

9. Enter text about this user in the Comment field.
   This field is required.

10. Perform one of the following actions:

    - Click Apply.
      A confirmation message appears at the top of the Insert Users page to inform you that the new user has been added to the database. To close the Insert Users page, click Cancel.

    - Click OK.
      The Users administration page re-appears with the new user displayed.

The new user is added to the database.

User Administration elements
The User Administration page displays the following elements:

Table 10: User Administration Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>The currently selected Username. The Username allows access to the GUI and must be unique.</td>
</tr>
<tr>
<td>Account Status</td>
<td>Enabled or disabled. If a user account is disabled, the user is unable to log in until an administrative user manually enables the account. If the user account is currently logged in, this action does not disrupt the session.</td>
</tr>
<tr>
<td>Remote Auth</td>
<td>Whether remote authorization is enabled or disabled.</td>
</tr>
<tr>
<td>Local Auth</td>
<td>Whether local authorization is enabled or disabled.</td>
</tr>
<tr>
<td>Consecutive Failed Login Attempts</td>
<td>The number of consecutive failed login attempts.</td>
</tr>
<tr>
<td>Concurrent Logins Allowed</td>
<td>The number of concurrent logins allowed.</td>
</tr>
<tr>
<td>Inactivity Limit</td>
<td>The limit set on account inactivity after login.</td>
</tr>
<tr>
<td>Comment</td>
<td>An optional field for user-defined text about this account (64 character maximum).</td>
</tr>
<tr>
<td>Groups</td>
<td>The groups to which the selected Username is assigned. Also provides a pull down list of</td>
</tr>
</tbody>
</table>
provisioned groups. A user’s groups determine the permissions assigned to the user. The permissions determine the functions and restrictions for the users belonging to the group.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
</table>

### Viewing user account information

Use this procedure to view user account information.

1. Select **Administration > Access Control > Users**.
   
   The *Users Administration* page appears with the user account information displayed.

2. To view more detailed information, select a user and then click **Report**.
   
   The *Users Report* displays with detailed information on the user account.

### Updating user account information

Use this procedure to update user account information on the user interface:

1. Select **Administration > Access Control > Users**.
   
   The *Users administration* page appears.

2. Select a user from the listing.

3. Select **Edit**.

4. Modify one or more of the user account information fields.

5. Click **Ok** or **Apply**.
   
   The *Users administration* page re-appears. The user account information is updated in the database, and the changes take effect immediately.

### Deleting a user

Use this procedure to delete a user from the database. The next time the user attempts to log in, the user will be unable to log in. If the user is currently logged in to the system, this operation will not disrupt the user’s current session. To stop a current user session, see *Deleting user sessions*, or to disable a user’s account, see *Enabling or disabling a user account*.

1. Select **Administration > Access Control > Users**.
   
   The *Users administration* page appears.

2. Select the appropriate user from the listing.

3. Click **Delete**.
   
   A confirmation box appears.

4. Click **OK** to delete the user.
   
   The *Users administration* page re-appears.

   The user has been deleted from the database and no longer appears in the *Username* menu.
Enabling or disabling a user account

The user interface automatically disables a user account after five consecutive failed login attempts. The administrative user can also manually disable a user account to prevent a user from logging on to the system. If a user account is disabled, the user is unable to log in until an administrative user manually enables the account.

Use this procedure to enable or disable a user account:

1. Select Administration > Access > Users.
   The Users administration page appears.
2. Select a Username from the listing.
3. Select Edit.
   The Edit Users page appears.
4. Click the Account Enabled checkbox to enable/disable the account. A check mark indicates that the account is enabled.
5. Click Ok.
   The account is enabled/disabled as selected.

Changing a user's assigned group

Use this procedure to change a user's assigned groups. The group assignment determines the functions that a user has access to (see Groups Administration). The next time the user logs in, the new assignment takes effect. If the user is currently logged in to the system, this operation will not affect the user's current session.

1. Select Administration > Access Control > Users.
   The Users Administration page appears.
2. Select the appropriate user from the listing.
3. Select Edit.
   The Edit Users page appears.
4. Select the appropriate groups from the Group listing.
5. Click Ok.
   The user's assigned groups are updated in the database and will take effect the next time the user attempts to log in to the user interface.

Generating a user report

A user account usage report can be generated from the users page. This type of report provides information about a user's account usage including last login date, the number of days since the user last logged in, and the user's account status.

Use this procedure to generate a user account usage report.

1. Select Administration > Access Control > Users.
   The Users administration page appears.
2. Select one or more users.
Note: If no users are selected then all users will appear in the users report.

3. Click Report.
   The Users Report is generated. This report can be printed or saved to a file.
4. Click Print to print the report.
5. Click Save to save the report to a file.

Passwords

Password configuration, such as setting passwords, password history rules, and password expiration, occurs in Administration. The application provides two ways to set passwords: through the user interface, see Setting a password from the Users Administration page, and at login, see Setting a password from the System Login page.

The user interface provides two forms of password expiration. The administrative user can configure password expiration on a system-wide basis. By default, password expiration occurs after 90 days. The administrative user can also disable the password expiration function. For procedural information on configuring password expiration, see Configuring the expiration of a password.

Password expiration is also forced the first time a user logs in to the user interface. During initial user account setup, the administrative user grants the user a temporary password. When the user attempts to log in for the first time, the software forces the user to change the password. The user is redirected to page where the user must enter the old password and then enter a new, valid password twice.

A valid password:

- must contain from 8 to 16 characters.
- must contain at least three of the four types of characters: numerics, lower case letters, upper case letters, or special characters (! @ # $ % ^ & * ? ~).
- cannot be the same as the Username or contain the Username in any part of the password (for example, Username=jsmith and password=$@jsmithJS would be invalid).
- cannot be the inverse of the Username (for example, Username=jsmith and password=$@htimsj would be invalid).
- cannot contain three or more consecutively repeated characters, or three or more ascending or descending alpha-numeric characters in a row, for example, 1234, aaaa, dcba.
- cannot reuse any of the last three passwords.

Setting a password from the Users Administration page

Use this procedure to change an existing user’s password.

Note: Only an administrative user may use this procedure. For information about how a non-administrative user can change a password, see Setting a password from the System Login page.

1. Select Administration > Access Control > Users.
   The Users Administration page appears.

2. Select the appropriate user from the listing.

3. Click Change Password.
   The Set Password page appears. The selected user appears in the New Password box.
4. Enter a password in the **New Password** and **Retype New Password** fields. For information on valid passwords, see *Passwords*.

   The system verifies that the values entered in both fields match.

5. Click **Continue**.

   A confirmation message appears.

6. Select **Administration > Users** to return to the User Administration page.

   The password has been updated in the database and will take effect the next time the user attempts to log in to the user interface.

**Setting a password from the System Login page**

Use this procedure to change an existing, non-administrative user’s password on login.

**Note:** This procedure is for non-administrative users. For information about how an administrative user can set a password, see *Setting a password from the Users Administration page*.

1. Select **Change password** checkbox on the **System Login** page.
2. Enter the user name and password.
3. Click **Login**.

   The **Password Change Requested** page appears.

4. Enter a password in the **New Password** and **Retype New Password** fields. For information on valid passwords, see *Passwords*.

   The system verifies that the values entered are valid and that both fields match.

5. Click **Continue**.

   The password has been updated in the database and will take effect the next time the user attempts to log in to the user interface.

   You have now completed this procedure.

**Configuring the expiration of a password**

Use this procedure to change the variable that controls the length of time for password expiration:

1. Select **Administration > General Options**.

   The **General Options** page appears.

2. Locate **PasswordExpiration** in the **Variable** column.
3. Enter an integer in the **Value** column. The integer indicates the number of days that elapse before the password expires. To disable password expiration, enter **0**.
4. Click **OK** or **Apply** to submit the information.

   The password expiration variable is changed to the new value.
Groups Administration

The Groups Administration page enables you to create, modify, and delete user groups.

A group is a collection of one or more users who need to access the same set of functions. Permissions are assigned to the group for each application function. All users assigned to the same group have the same permissions for the same functions. In other words, you cannot customize permissions for a user within a group.

You can assign a user to multiple groups. You can add, delete, and modify groups except for the Pre-defined user and group that come with the system.

The default group, admin, provides access to all GUI options and actions on the GUI menu. You can also set up a customized group that allows administrative users in this new group to have access to a subset of GUI options/actions. Additionally, you can set up a group for non-administrative users, with restricted access to even more GUI options and actions.

For non-administrative users, a group with restricted access is essential. To prevent non-administrative users from setting up new users and groups, be sure User and Group in the Administration Permissions section are unchecked. Removing the check marks from the Global Action Permissions section will not prevent groups and users from being set up. The following figure displays these sections of the Group Administration page.

Permissions:

<table>
<thead>

Figure 13: Global Action and Administration Permissions
Each permission option check box on the Groups Administration page corresponds to a menu option on the GUI main menu or a submenu. If a check box is checked for a group, the group has access to this option on the menu. If a check box is not checked, the group does not have access to this option, and the option is not visible on the GUI menu.

These check boxes are grouped according to the main menu’s structure; most folders in the main menu correspond to a block of permissions. The exceptions to this are the permission option check boxes in the Global Action Permissions section.

The Global Action Permissions section allows you to control all insert (Global Data Insert), edit (Global Data Edit), and delete (Global Data Delete) functions on all GUI pages (except User and Group). For example, if the Network Elements check box is selected (in the Configurations Permissions section), but the Global Data Insert checkbox is not selected, the users in this group cannot insert a new Network Element.

By default, all groups have permissions to view application data and log files.

**Pre-defined user and group**

The following user account and group are delivered with the system and cannot be deleted or modified.

**Table 11: Pre-defined User and Group**

<table>
<thead>
<tr>
<th>User</th>
<th>Group</th>

Policy DRA Group Administration permissions

Table 20: Policy DRA Configuration Permissions and Table 21: Policy DRA Maintenance Permissions describe the Policy DRA Group Administration permissions.

The Administration > Group GUI page displays permissions check boxes for all Policy DRA pages, both NOAM and SOAM pages.

- All of the permissions can be updated only on the NOAM Administration > Group page.
- All of the permissions can be viewed but not updated on the SOAM Administration > Group page.
### Table 20: Policy DRA Configuration Permissions

<tr>
<td>Subscriber Query</td>
<td>Allows a user to perform a subscriber query.</td>
</tr>
<tr>
<td>Connections</td>
<td>Allows a user to view current external connections.</td>
</tr>
<tr>
<td>Command Log</td>
<td>Command Log: Allows a user to view command log history.</td>
</tr>
</tbody>
</table>
### Adding a group

Use this procedure to add a new group:

1. Select **Administration > Access Control > Groups**.
   The Groups administration page appears.

2. Click **Insert**.
   The Add Groups page appears.

3. Enter a unique name in the **New Group Name** field, and optionally, in the **Description** field, enter text to describe the group.

4. To allow View, Insert, Edit, Delete or Manage actions on all pages accessed from the GUI, selectively check mark each action in the **Global Action Permissions** row.
   Checks will appear next to each page under that action.

5. Check mark the remaining menu permissions to which you want this group to have access.

   **Note:** To quickly select all permissions in a given section, place a check beside the desired section under the desired action. For example, if the group needs only view access for the **Alarms and Events** section, place a single check next to **Alarms and Events Permissions** and under the **View** action. For more information on the options displayed on the Group page, see [OAM Groups Administration permissions](#).

6. Perform one of the following actions:
   - Click **Apply**.
     A confirmation message appears at the top of the Add Groups page to inform you that the new group has been added to the database. To close the Add Groups page, click **Cancel**.
   - Click **OK**.
     The Groups administration page re-appears with the new group displayed.

   **Note:** The Group Members pane at the bottom of the page displays the entry *None* for a new group. If you would like to add users to the new group now, double-click *None* to launch the Add User page. See [Adding a new user](#) for more information.

The new group is added to the database.

### Viewing members of a group

Use this procedure to view a list of users assigned to a group:

<table>
<thead>
<tr>
<th>Permission Group</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Import Status</td>
<td>Allows a user to view the status of import operations.</td>
</tr>
<tr>
<td>Export Schedule</td>
<td>Allows a user to view, add, edit, or delete an export schedule.</td>
</tr>
<tr>
<td>Export Status</td>
<td>Allows a user to view the status of exports.</td>
</tr>
<tr>
<td>Subscribing Client Status</td>
<td>Allows a user to view the status of subscribing clients.</td>
</tr>
</tbody>
</table>
1. Select Administration > Access Control > Groups.
   The Groups administration page appears.
2. Scroll down as needed to bring the desired group into the viewing area.
   The Users pane displays all users belonging to that group.

A list of group members is displayed.

**Modifying a group**

You cannot modify a predefined group provided during installation. See Pre-defined user and group for more information on this topic.

Use this procedure to modify a group:

1. Select Administration > Access Control > Groups.
   The Groups administration page appears.
2. Select the desired group from the Groups administration page.
3. Click Edit. For information on permission options, see OAM Groups Administration permissions.
   The Groups edit page appears.
4. Modify the group permissions as needed. For information on permission options, see OAM Groups Administration permissions.
5. Click Ok or Apply.
   Clicking Ok returns you to the Groups administration page and clicking Apply leaves you in the Groups edit page but applies the changes.

The modifications are written to the database. The main GUI menu of the affected user(s) is not changed until the user logs out and back in to the system, or the user refreshes the menu (using the web browser’s Refresh function). The change in accessibility to menu options for affected user(s) takes effect immediately.

**Deleting a group**

Note: The system does not allow any user to delete a predefined group provided during installation. See Pre-defined user and group for more information on this topic.

Use this procedure to delete a group:

1. Select Administration > Access Groups > Groups
   The Groups administration page appears.
2. Select the desired group from the Groups administration page and take note of any users presented in the Users pane.
   Note: The Users pane lists all users associated with the group. If there are users associated with the group, you must delete the users or assign them to another group prior to deleting the group. See Changing a user’s assigned group.
3. Once all users have been cleared from the Users pane click Delete.
   A Confirmation box appears.
4. Click **OK** to delete the group.
   A status box displays the results of the action.

The group is removed from the database.

**Generating a group report**

A group report can be generated from the **Groups** administration page. This type of report provides information about a group's global action and administrative permissions.

1. Select **Administration > Access Control > Groups**.
   The **Groups** administrative page appears.

2. Select one or more groups.
   *Note*: If no groups are selected then all groups will appear in the group report.

3. Click **Report**.
   The group report is generated. This report can be printed or saved to a file.

4. Click **Print** to print the report or **Save** to save the report to a file.

**Sessions Administration**

The **Sessions Administration** page enables the administrative user to view a list of current user sessions and to stop user sessions that are in progress. This function does not disable the user's login account. To end a user session that is in progress, delete the user session. For other methods of controlling user access to a system, see *Enabling or disabling a user account* and *Deleting a user*.

**Sessions Administration elements**

This table describes elements of the **Sessions Administration** page.

**Table 35: Sessions Administration Elements**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sess ID</td>
<td>Shows a system-assigned ID for the session.</td>
</tr>
<tr>
<td>Expiration Time</td>
<td>Shows the date and UTC time the session will expire.</td>
</tr>
<tr>
<td>Login Time</td>
<td>Displays the UTC login time.</td>
</tr>
<tr>
<td>User</td>
<td>Displays the <strong>Username</strong> of the user logged in to the session.</td>
</tr>
<tr>
<td>Group</td>
<td>Displays the <strong>Group</strong> to which the user belongs.</td>
</tr>
<tr>
<td>TZ</td>
<td>Displays the user time zone: UTC.</td>
</tr>
<tr>
<td>Remote IP</td>
<td>Displays the IP address of the machine from which the user connected to the system.</td>
</tr>
</tbody>
</table>
Viewing user sessions

Use this procedure to view a list of user sessions:

1. Select Administration > Access Control > Sessions.

The Sessions administration page appears. The Sessions page lists all active sessions on the system.

Deleting user sessions

Use this procedure to delete a user session.

Note: You cannot delete your own session.

1. Select Administration > Access Control > Sessions.

The Sessions administration page appears.

2. Click to select the appropriate session from the table.

To distinguish the appropriate session, locate either the User or the IP address found in the corresponding pane. For more information see Sessions Administration elements.

Note: You can select multiple rows to delete at one time. To select multiple rows, press and hold Ctrl as you click to select specific rows.

3. Click Delete.

The session is deleted, and the user is no longer logged in to the system. The next time the user attempts to perform an action, the user is redirected to the System Login page.

Certificate Management

The Certificate Management feature allows users to configure certificates for:

- HTTPS/SSL - allows secure login without encountering messages about untrusted sites
- LDAP (TLS) - allows the LDAP server’s public key to encrypt credentials sent to the LDAP server
- TLS/DTLS over TCP/SCTP Transport - allows transport layer security protocols and encryption on a per connection basis at the application layer. For example, DSR local and peer node connections
- Single Sign-On (SSO) - allows users to navigate among several applications without having to re-enter login credentials
- Certificate Authority (CA) - A digital certificate provided by a trusted source used to make secure connections between a client and server.

When setting up Certificate Management, you must first assign a system domain name for the DNS Configuration before importing any certificates. For more information, see the topic on Adding a DNS Configuration.

After assigning a system domain name, you must configure the LDAP authentication servers used for single sign on. For more information, see the topic on Configuring LDAP Authentication Servers.
Configuring single sign-on zones

The following sections outline the information necessary to configure the single sign-on zones. This includes zone elements and procedures on configuring, updating, viewing and deleting zone information.

Single sign-on zone elements

Establishing the single sign-on zone
Re-establishing the single sign-on local zone
Deleting a single sign-on zone
Generating a Single Sign-On Zones Report

Single sign-on zone elements

The following element is used when configuring single sign-on zones:

Table 36: Single Sign-On Zone Element

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Zone Name</td>
<td>Name of the SSO-compatible remote zone</td>
<td>Range: A to Z, a to z, 0-9 and periods - maximum 15 characters</td>
</tr>
</tbody>
</table>

Establishing the single sign-on zone

Before configuring a single sign-on zone, the single sign-on domain name must be configured.

Use this procedure to configure the single sign-on zone:

   
   The Establish SSO Zone page appears.

2. Select the Establish SSO Zone button at the bottom of the table.
   
   The Establish SSO Zone page appears.

3. Enter a Zone Name that consists of 1-15 characters.
4. Select Apply to save the changes you have made and remain on this screen, or select OK to save the changes and return to the Zones page.

The new single sign-on zone is added to the database.

Re-establishing the single sign-on local zone

Re-establishing the local zone renders all of the certificates for this zone obsolete. After re-establishing the local zone, you will have to re-distribute the certificate for this zone to all the other remote zones in order to re-establish the trusted relationship and re-enable single sign-on between the zones.

Use this procedure to re-establish the single sign-on local zone:

   
   The Certificate Management page appears.

2. Select the local zone from the listing.
3. Click **Reestablish Local Zone**.
   A confirmation message appears stating that reestablishing a local zone will invalidate configured SSO key-exchanges involving this machine.

4. Select **OK** to continue.
   The local zone is re-established in the database.

**Deleting a single sign-on zone**

Use this procedure to delete the single sign-on remote or local zone:

1. Select **Administration > Access Control > Certificate Management**.
2. Select the appropriate zone from the table listing.
3. Click **Delete**.
   A confirmation box appears.

4. Click **OK** to delete the zone.
   The zone is deleted from the database and no longer appears in the table listing.

**Generating a Single Sign-On Zones Report**

Use this procedure to generate a single sign-on zones report:

1. Select **Administration > Access Control > Certificate Management**.
2. Click to select the zone for which you want to create a report.
   
   **Note:** To select multiple servers, press and hold **Ctrl** as you click to select specific rows.

3. Click **Report**.
   The single sign-on zones report appears.

4. Click **Print** to print the report, or click **Save** to save a text file of the report.

**Create CSR**

The Certificate Management feature allows users to build certificate signing requests (CSRs).

A Certificate Signing request is a block of encrypted text that is generated on the single sign-on server. It contains information that will be included in your certificate such as your organization name, common name (domain name), locality, and country.

**Create CSR elements**
The following elements are used when creating a CSR:

**Table 37: Create CSR Elements**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Country</td>
<td>The 2-letter country code of which the entity being described lives in</td>
<td>Range: A to Z</td>
</tr>
<tr>
<td>State or Province</td>
<td>The state or province (full name) which the entity being described lives in</td>
<td>Range: 1-100 character long string. Allowed characters are A-Z, a-z, spaces, and hyphens</td>
</tr>
</tbody>
</table>
### Creating a CSR

The following sections outline the information necessary to create a CSR. A CSR is a certificate signing request, and is sent from an applicant to a certificate authority in order to apply for a digital identity certificate.

1. Select **Administration > Access Control > Certificate Management**.
   
The Certificate Management page appears.

2. Click **Create CSR**.
3. Select a two-character **Country** code for the entity.
   
   For more information about any field on this page, see CSR elements.

4. Select the full name of the **State or Province**.
5. Select the **Locality** name, for example, the city.
6. Select the **Common Name** for the entity being included in the CSR.
7. Select the entity **Organization**.
8. Select the entity **Organizational Unit** for the entity being included in the CSR.
9. Select the entity **Email Address**.
10. Click **Generate CSR** to submit the information.
11. Click **Back** to return to the Certificate Management page. The CSR displays in the table.

---

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Locality</td>
<td>The locality name (eg. city) of the entity being described</td>
<td>Range: 1-100 character long string. Allowed characters are A-Z, a-z, spaces, and hyphens</td>
</tr>
<tr>
<td>Common Name</td>
<td>The common name of the entity being described. Replacing a certificate marked visible or active will result in browser connection errors - which may then require a reload or restart of the browser to restore connectivity. The list includes only those entities that do not already have an associated certificate.</td>
<td>Range: 1-100 character long string. Allowed characters are A-Z, a-z, spaces, and hyphens</td>
</tr>
<tr>

</table>
Import Certificate

The Certificate Management feature allows users to import certificates in cases where this is preferred over configuring certificates. All imported certificates are appended to the Certificate Management table.

Note: Maximum allowed TLS/DTLS certificates is 1000.

Import Certificate elements

The following elements are used when importing a certificate:

Table 38: Import Certificate Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
</table>
| X.509 Certificate| PEM encoded X.509 certificate | Range: 2048 characters
Note: For SSL (TLS/DTLS) certificates, valid range is 1024-2048 characters |
| Private Key      | PEM encoded Private Key      | Range: 2048 characters
Note: For SSL (TLS/DTLS) keys, valid range is 1024-2048 characters |
| Passphrase       | The passphrase used to protect the Private Key |                                  |

Importing a Certificate

The following steps outline the procedures necessary to import a certificate.

   The Certificate Management page appears.

2. Click Import.

3. Enter the X.509 Certificate.

   For more information about any field on this page, see Import Certificate elements.

4. Enter the Private Key.

5. Enter the Passphrase.

6. Click OK to import the certificate.

Bulk Importing of Certificates

The following steps outline the procedures necessary to bulk import certificates by uploading a valid XML certificates file from a local workstation.

Note: The maximum allowed TLS/DTLS certificates is 1000. Attempting to import more than 1000 TLS/DTLS certificates, including existing certificates, will result in an error message.

The Certificate Management page appears.

2. Click **Browse**.
   
   Your browser's file upload window appears.

3. Navigate to the location of the XML certificates file on the local workstation. Select the file then click **Open**.
   
   The browser's upload window clears and the file name is presented next to the **Browse** button.

4. Click **Upload File**.
   
   During the upload process, checks are performed to verify a valid file extension and whether there is invalid data in the XML file being uploaded.

### Updating a Certificate

The following steps outline the procedures necessary to update a certificate.

1. Select **Administration > Access Control > Certificate Management**.
   
   The Certificate Management page appears.

2. Select the appropriate certificate from the table listing.
3. Click **Update**.
4. Update the **X.509 Certificate**.
5. Click **OK** to update the certificate.

### Deleting a Certificate

Use this procedure to delete a certificate:

1. Select **Administration > Access Control > Certificate Management**.
2. Select the appropriate certificate from the table listing.
3. Click **Delete**.
   
   A confirmation box appears.

4. Click **OK** to delete the certificate.
   
   The certificate is deleted from the database and no longer appears in the table listing.

### Exporting Certificates

The following steps outline the procedures necessary to export certificates.

1. Select **Administration > Access Control > Certificate Management**.
   
   The Certificate Management page appears.

2. Select one or more certificates for export.
   
   If no certificates are selected then all of the configured certificates shall be exported.

3. Select the **Export** button.
   
   Your browser's 'open file' dialogue box appears.

4. Choose the appropriate action presented in the 'open file' dialogue box.
Depending on the action selected, the file will open in the preferred application or be saved to the local workstation.

**Generating a Certificate Report**

Use this procedure to generate a certificate report:

2. Click to select the certificate for which you want to create a report.
   
   **Note:** To select multiple servers, press and hold **Ctrl** as you click to select specific rows.

3. Click Report.
   
   The certificate report appears.

4. Click **Print** to print the report, or click **Save** to save a text file of the report.

**Authorized IPs**

IP addresses that have permission to access the GUI can be added or deleted on the Authorized IPs page. If a connection is attempted from an IP address that does not have permission to access the GUI, a notification appears on the GUI.

**Note:** This feature cannot be enabled until the IP address of the client is added to the authorized IP address table. You must add the IP address of your own client to the list of authorized IPs first before you enable this feature.

**Authorized IPs elements**

This table describes the elements on the Authorized IPs page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP Address</td>
<td>IP address with permission to access the GUI</td>
</tr>
<tr>
<td>Comments</td>
<td>Users can insert additional information (up to 64 characters) to describe the server, or the field can be left blank.</td>
</tr>
</tbody>
</table>

**Enabling Authorized IPs functionality**

Enabling Authorized IPs functionality prevents unauthorized IP addresses from accessing the GUI. Use this procedure to enable the Authorized IPs functionality.

**Note:** This procedure pertains to GUI access only.

1. Select Administration > Access Control > Authorized IPs.
   
   The Authorized IPs page appears.
   
   **Note:** This feature cannot be enabled until the IP address of the client is added to the authorized IP address table. You must add the IP address of your own client to the list of authorized IPs first before you enable this feature.

2. Select the Info box in the upper left corner of the screen and click **Enable**.
   
   The Authorized IPs functionality is enabled. Only authorized IPs can access the GUI.
Disabling Authorized IPs functionality

Use this procedure to disable the Authorized IPs functionality.

Note: This procedure pertains to GUI access only.

1. Select Administration > Access Control > Authorized IPs.
   The Authorized IPs page appears.
2. Select the Info box in the upper left corner of the screen and click Disable.
   The Authorized IPs functionality is disabled.

Inserting authorized IP addresses

Use this procedure to insert authorized IP addresses.

Note: This procedure pertains to GUI access only.

1. Select Administration > Access Control > Authorized IPs.
   The Authorized IPs page appears.
2. Click Insert.
   The Authorized IPs Insert page appears.
3. Enter an IP address in the IP Address Value field.
4. Enter a comment in the Comment Value field.
   Note: This step is optional.
5. Do one of the following:
   • Click OK.
     The Authorized IP page reappears, and the IP address you entered is visible in the table. The IP address is authorized to access the GUI.
   • Click Apply.
     The IP address you entered is authorized to access the GUI. You can now enter additional IP addresses. Click Apply after each IP address entered. When you have finished entering IP addresses, click OK to return to the Authorized IPs page. All of the IP addresses you entered are visible in the table.

Deleting authorized IP addresses

Use this procedure to delete authorized IP addresses.

1. Select Administration > Access Control > Authorized IPs.
   The Authorized IPs page appears.
2. Click to select the IP address you want to delete from the Authorized IP Address table.
   Note: Do not delete your own IP address. If you delete your own IP address, you will lose access to the GUI. If this happens, contact the Customer Care Center.
3. Click Delete.
   A delete confirmation message appears in a pop up window.
4. Click OK. This deletes the IP address from the table, and the IP address no longer has permission to access the GUI when the feature is enabled.

You have now completed this procedure.

**SFTP Users Administration**

The SFTP Users feature adds the ability to configure remote access accounts for SFTP access, and provide restricted access through those accounts to the export area of the file management directory to use for exporting MEAL data.

**SFTP User elements**

This table describes the elements on the SFTP Users page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>The SFTP user name account. Range = Lowercase alphanumeric (a-z, 0-9) string between 5 and 32 characters long.</td>
</tr>
</tbody>
</table>
| Permissions | The permissions associated with the account. The user will only access export files that match the assigned permission. Valid permissions are:  
  - Measurements, Alarms and Events  
  - Security Logs  
  - Measurements, Alarms, Events and Security Logs |
| Comment   | Comments about the SFTP user. Range = A string between 1 and 100 characters long. |
| SSH Key   | The SSH public key to be used with this account.                              |

**Adding a SFTP User**

Use this procedure to add a SFTP user:

1. Select Administration > Access Control > SFTP.  
   The SFTP Administration page appears.

2. Select insert.

3. Enter a Username to be used to identify the SFTP User. For more information about any field on this page, see SFTP User Elements.

4. Select the Permissions to be associated with the SFTP user.
5. Enter a **Comment**, if necessary, about the SFTP User.

6. Enter the **SSH Key** to be used with the account.

7. Click **OK** to submit the information and return to the SFTP Administration page, or click **Apply** to submit the information and continue entering additional data.

The new SFTP user information and related settings are saved and activated.

**Viewing SFTP Users**

Use this procedure to view SFTP user information.

Select **Administration > Access Control > SFTP User**.

The **SFTP Users** page appears. The **SFTP Users** page lists all SFTP options on the system.

**Updating SFTP User information**

Use this procedure to update SFTP user information:

1. Select **Administration > Access Control > SFTP Users**.
   The **SFTP Users** page appears.
2. Select the appropriate user from the listing.
3. Click **Edit**.
   The **SFTP Users** edit page appears for the selected user.
4. Make the desired updates to the user information.
5. Click **OK** or **Apply** to submit the information.

The SFTP user changes are saved and activated.

**Showing SFTP User Logs**

A SFTP user access log can be generated. Use this procedure to generate a SFTP user access log.

1. Select **Administration > Access Control > SFTP User**.
   The SFTP Users page appears.
2. Highlight a user from the listing and click **Show Logs**.
   The SFTP Users log is generated showing all activity for the user. This report can be printed or saved to a file.
3. Click **Print** to print the report.
4. Click **Save** to save the report to a file.

**Deleting a SFTP User**

Use this procedure to delete a SFTP user:

1. Select **Administration > Access Control > SFTP Users**.
   The SFTP Users page appears.
2. Select the appropriate user name from the listing for the SFTP user to delete.
3. Click Delete.
   A confirmation box appears.

4. Click OK to delete the user.
   The SFTP Users page re-appears.

The user is deleted from the database and no longer appears in the listing.

Generating a SFTP User report
A SFTP user report can be generated. Use this procedure to generate a SFTP user report.

1. Select Administration > Access Control > SFTP User.
   The SFTP Users page appears.

2. Click Report.
   
   Note: It is unnecessary to select a particular user, because all users appear in the Users Report.
   The SFTP Users report is generated. This report can be printed or saved to a file.

3. Click Print to print the report.
4. Click Save to save the report to a file.

Showing SFTP User Logs
A SFTP user access log can be generated. Use this procedure to generate a SFTP user access log.

1. Select Administration > Access Control > SFTP User.
   The SFTP Users page appears.

2. Highlight a user from the listing and click Show Logs.
   The SFTP Users log is generated showing all activity for the user. This report can be printed or saved to a file.

3. Click Print to print the report.
4. Click Save to save the report to a file.

Updating SFTP User password settings
Use this procedure to update SFTP user password settings:

1. Select Administration > Access Control > SFTP Users.
   The SFTP Users SFTP Users page appears.

2. Select the appropriate user from the listing and select Change Password.
   The SFTP Users [Change Password] screen displays.
   The SFTP Users change password page appears.

3. Enter the new SFTP password for this user. Confirm the entry by retyping the password.
   
   Note: Passwords must contain at least three of the following characters to be valid: numeric, lowercase letters, uppercase letters, or a special character.

4. Select Continue to save the password information.
The SFTP user password changes are saved and activated.

Software Management

The Software Management options allow you to administer:

- Versions
- Upgrade

For more information, see each individual section.

Versions

The Versions page is a report that displays the software release levels for the server. The report can be viewed on the screen, printed, or saved to a file.

Printing and saving the Software Versions report

Use this procedure to print or save the Software Versions report.

1. Select Administration > Software Management > Versions.
   The Versions page appears.
2. Click Print to print the report.
   A Print window appears. Click OK.
3. Click Save to save the report to a file.

You have now completed this procedure.

Upgrade

The Upgrade page is used to perform a software upgrade on in-service servers in a network. Several steps in the upgrade process are required before using the Upgrade GUI option.

Warning: Contact the Customer Care Center and inform them of your upgrade plans prior to beginning any upgrade procedure.

Upgrade Administration elements

This table describes the elements on the Upgrade Administration page.

Table 39: Upgrade Administration Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hostname</td>
<td>Lists the Hostname of the server.</td>
</tr>
</tbody>
</table>
### Element | Description
--- | ---
Upgrade State | Displays the state that allows for graceful upgrade of server without degradation of service. Based on HA Status and Application State. Available states are:
- Backup Needed
- Backup in Progress
- Ready
- Pending
- Upgrading
- Accept or Reject
- Failed
- Backout Ready

Server Status | Overall server status. Selecting the link displays the full 'Server Status' report for the server.

OAM Max HA Role | The OAM maximum HA role for this server.¹

Appl Max HA Role | The application maximum HA role for the server.

Max Allowed HA Role | The maximum allowed HA role for the server.

Server Role | Role of this server in the system. Role is configured on the Configuration > Server page.

Network Element | Lists the Network Element to which the server belongs.

Function | Function of this server in the system. NOAMP and SOAM function are assigned on the Configuration > Server page. For message processors, function is assigned on the related configuration page.

Application Version | Application version currently installed and running on each server.

Upgrade ISO | The ISO used for the upgrade.

Start Time | The time upgrade started.

Status Message | The current upgrade status message.

Finish Time | The time upgrade finished.

---

### Overview of the upgrade procedure
The information in this section is a general overview of the Upgrade page and what changes occur during the upgrade process.

¹ See [HA status elements](#) for more information
There is a recommended procedure to follow when upgrading a server:

1. Backup your server.
2. Upload and Verify ISO file. (Refer to the sections on Uploading a Local File, Deploying an ISO file and Validating an ISO file.)
3. Initiate an upgrade.
4. Accept the upgrade.

The sections that follow contain detailed information and steps for upgrading a server.

**Caution:** Contact My Oracle Support and inform them of your upgrade plans prior to beginning this or any upgrade procedure. Before upgrading any system, go to the My Oracle Support website and review any relevant Technical Service Bulletins (TSBs). Use only the upgrade procedure provided by My Oracle Support.

### Backing up full configuration prior to an upgrade

It is recommended that you back up your server's full configuration prior to an upgrade. The configuration backup of a server runs in the background, enabling you to continue working while a backup is in process.

Two options are available to the user to perform a backup. The option *Backup* allows backups on a server and server group basis. The option *Backup All* allows backups on a network element basis.

**Backing up using the Backup option**

1. Select Administration > Software Management > Upgrade.

   The Upgrade page appears.

2. (Optional) If you would like to selectively back up individual servers, highlight the server(s) from the listing. Prior to backup, the server must be in the Backup Needed or Ready state. If you would like to back up the entire server group, leave all servers unselected.

3. Select Backup.

   The Upgrade (Backup) form appears.

4. On the Upgrade (Backup) form, select Exclude (to perform a full backup of the COMCOL run environment, excluding the database parts specified in the files) or Do Not Exclude (to perform a full backup of the COMCOL run environment without excluding any database parts, which is a longer procedure and produces larger backup files).

5. Select OK to run the back up procedure.

The backup process saves server information in the background for either all the servers that are available for backup, or just for the selected server(s).

**Upgrade Backup elements**

This table describes the elements on the Upgrade Backup form.

#### Table 40: Upgrade Backup elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Top Section</td>
<td></td>
</tr>
</tbody>
</table>
### Element | Description
--- | ---
Hostname | Hostname of the server
Action | The action available during the backup. This field is not editable. Valid values include:
  - Back up
  - No back up
Current application version | The current version of the application.

### Full Backup Options

| Database parts exclusion | Valid values are:
--- | ---
  - **Exclude** - performs a full backup of the COMCOL run environment, excluding the database parts specified in the files in the exclude_parts.d directory.
  - **Do Not Exclude** - performs a full backup of the COMCOL run environment without excluding any database parts, which is a longer procedure and produces larger backup files in the filemgmt directory.

---

**Backing up using the Backup All option**

To create a full backup on a Network Element basis:

1. Select **Administration > Software Management > Upgrade**.
   The **Upgrade** page appears.

2. Select **Backup All**.
   The **Upgrade (Backup All)** form appears.

3. On the Upgrade (Backup All) form all Networks Elements are selected for backup by default. Deselect any Network Elements that do not require a backup or alternatively, deselect **Action** and select any Network Elements required to be backed up. Take notice of the server list for all selected Network Elements. Confirm that all target servers are presented. If any target servers are not presented select **Cancel** and review the server status.

4. In the **Full backup options** pane of the Upgrade (Backup All) form, select **Exclude** (to perform a full backup of the COMCOL run environment, excluding the database parts specified in the files) or **Do Not Exclude** (to perform a full backup of the COMCOL run environment without excluding any database parts, which is a longer procedure and produces larger backup files).

5. Select **OK** to run the back up procedure.

The backup all process saves server information in the background for all servers of a selected network element group that are in the proper state for backup.

**Upgrade Backup All elements**

This table describes the elements on the **Upgrade Backup All** form.
Table 41: Upgrade Backup All elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Top Section</strong></td>
<td></td>
</tr>
<tr>
<td>Network element</td>
<td>Name of the Network Element</td>
</tr>
<tr>
<td>Action</td>
<td>This action defines which Network Element is included in the backup. By default all are selected. To limit the backup to a select group deselect the Action checkbox then selectively choose which Network Elements are to be included in the backup.</td>
</tr>
<tr>
<td>Server(s) in the proper state for backup</td>
<td>Defines which servers in each Network element are in a proper state for backup.</td>
</tr>
<tr>
<td><strong>Full Backup Options</strong></td>
<td></td>
</tr>
<tr>
<td>Database parts exclusion</td>
<td>Valid values are:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Exclude</strong> - performs a full backup of the COMCOL run environment, excluding the database parts specified in the files in the exclude_parts.d directory.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Do Not Exclude</strong> - performs a full backup of the COMCOL run environment without excluding any database parts, which is a longer procedure and produces larger backup files in the filemgmt directory.</td>
</tr>
</tbody>
</table>

**Initiating Upgrade**

After backing up the server configuration information and deploying the ISO images, it is time to initiate the upgrade. The user has the option to upgrade individual servers or perform an automated upgrade for the entire server group.

**Server Upgrade**

Use the following procedure to initiate a server upgrade:

1. Select **Administration > Software Management > Upgrade**.
   
   The Upgrade page appears.

2. Select one or more servers by highlighting them from the list.

3. Select **Upgrade Server**.
   
   The Initiate Upgrade form appears.

4. Select the appropriate ISO image from the **Upgrade ISO** drop down list.

5. Select **OK**.

   The system initiates the upgrade.
Initiate Server Upgrade elements

This table describes the elements on the Initiate Upgrade form for individual server upgrades.

Table 42: Initiate Upgrade elements (Individual Servers)

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Top Section</strong></td>
<td></td>
</tr>
<tr>
<td>Hostname</td>
<td>Hostname of the server</td>
</tr>
<tr>
<td>Action</td>
<td>The action available during the upgrade. This field is not editable. Valid value is:</td>
</tr>
<tr>
<td></td>
<td>• Upgrade</td>
</tr>
<tr>
<td>Status</td>
<td>The current status of the server. Includes:</td>
</tr>
<tr>
<td></td>
<td>• OAM Max HA Role</td>
</tr>
<tr>
<td></td>
<td>• Appl Max HA Role (MP server groups only)</td>
</tr>
<tr>
<td></td>
<td>• Network Element</td>
</tr>
<tr>

<td>• Application Version</td>
</tr>
<tr>
<td><strong>Upgrade Settings Section</strong></td>
<td>A drop down list that contains the file names of available ISO images.</td>
</tr>
<tr>
<td>Upgrade ISO</td>
<td></td>
</tr>
</tbody>
</table>

Server Group Automated Upgrade

Use the following procedure to initiate an automated upgrade for an entire server group:

1. Select Administration > Software Management > Upgrade.

   The Upgrade page appears.

2. Leave all servers unselected.

3. Select Auto Upgrade.

   The Initiate Upgrade form appears.

4. Select the appropriate Mode from the available listing.

   For information on the available upgrade settings, see the Initiate Server Group Upgrade elements.

5. For MPs only, select the desired Availability from the drop down list.

   In serial upgrade mode Availability is not an option.

6. Select the appropriate ISO image from the Upgrade ISO drop down list.

7. Select OK.

   The system initiates the upgrade.

Initiate Server Group Upgrade elements

This table describes the elements on the Initiate Upgrade form for an automated Server Group upgrade.

Note: For OAM server groups, HA groups are created according to the "OAM HA Role" of the server. The non-active HA role order is spare, observer and standby. For MP server groups, HA groups are
created according to the "Application HA Role" of the server. The HA role order is spare, observer, standby and active.

The options in the Upgrade Settings section vary by server group type.

**Table 43: Initiate Upgrade elements (Server Group)**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Top Section</strong></td>
<td></td>
</tr>
<tr>
<td>Hostname</td>
<td>Hostname of the server</td>
</tr>
<tr>
<td>Action</td>
<td>The action available during the upgrade. This field is not editable. Valid values include:</td>
</tr>
<tr>
<td></td>
<td>• No upgrade</td>
</tr>
<tr>
<td></td>
<td>• Upgrade</td>
</tr>
<tr>
<td></td>
<td>• Auto Upgrade</td>
</tr>
<tr>
<td>Status</td>
<td>The current status of the server. Includes:</td>
</tr>
<tr>

<td>• Serial - Upgrades individual servers sequentially in HA order</td>
</tr>
<tr>
<td></td>
<td>• Grouped Bulk - Upgrades all non-active OAM servers by HA groups. For MPs only, upgrades servers in HA groups according to the availability setting</td>
</tr>
<tr>
<td>Availability</td>
<td>For MPs only. A drop down list that specifies the desired percent availability of the servers in a server group during a bulk upgrade.</td>
</tr>
<tr>
<td></td>
<td>Selecting <strong>None</strong> leads to all servers with an Action status of Auto Upgrade being unavailable.</td>
</tr>
</tbody>
</table>
Accepting an Upgrade

After backing up the server configuration information, deploying the ISO images, and initiating the upgrade, the upgrade must be accepted. Accepting the upgrade confirms that the upgrade is correct and signals the end of the upgrade process.

Use the following procedure to complete an upgrade:

1. Select Administration > Software Management > Upgrade.
   The Upgrade page appears.
2. Highlight the server(s) from the listing.
3. Select Accept to complete the upgrade.
   
   **Note:** It is not necessary to select Accept in any timely fashion. The decision may be made to test the new upgraded system and confirm there is no need to revert before accepting the upgrade. Once an upgrade is accepted, the backup configuration files are deleted.

The upgrade is complete.

Generating an Upgrade Report

Use this procedure to generate a server report:

1. Select Administration > Software management > Upgrade.
   The Upgrade page appears.
2. Generate a report using one of the options listed below:
   
   • To generate a report for specific servers in a server group, click to select the server for which you want to create a report, and then click Report.
   • To generate a report for all servers in a server group, do not select any server in the group, and then click Report.
   • To generate a report for all servers in all server groups, click Report All.
3. Click Print to print the report, or click Save to save a text file of the report.

Remote Servers

The Remote Servers options allow you to administer:

• LDAP Authentication
• SNMP Trapping
• Data Export
• DNS Configuration

For more information, see each individual section.
LDAP Authentication

The following sections outline the information necessary to configure the authentication or LDAP servers. This includes server elements and procedures on configuring, updating, viewing and deleting server information.

Single sign-on (SSO) can be configured to work either with or without a shared LDAP authentication server. If an LDAP server is configured, SSO can be configured to require remote (LDAP) authentication for SSO access on an account by account basis. The default user account (guiadmin) cannot be configured to use remote (LDAP) authentication.

If multiple LDAP servers are configured, the first available server in the list will be used to perform the authentication. Secondary servers are only used if the first server is unreachable.

If the system is not using a DNS server or IP address for the LDAP server, the LDAP server must be added to the etc/hosts file.

LDAP Authentication elements

This table describes the elements of the LDAP Authentication page.

Table 44: LDAP Authentication Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hostname</td>
<td>Unique case-sensitive name for the server.</td>
<td>Format: Valid IPv4 or IPv6 address or a valid hostname.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Format: Case-sensitive alphanumeric [a-z, A-Z, 0-9], period (.) and minus sign (-). The first character must be alpha.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: 1 to 255-character string</td>
</tr>
<tr>
<td>Account Domain Name</td>
<td>Domain name of the LDAP server.</td>
<td>Format: &lt;name&gt;.&lt;tld&gt; (ex. website.com).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range = 1-20 character alphanumeric [a-z, A-Z, 0-9], period (.)</td>
</tr>
<tr>
<td>Account Domain Name Short</td>
<td>The short version of the domain name listed above (ex. WEBSITE).</td>
<td>Must be a capitalized version of the domain name, without the extension.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range = 1-10 character alphanumeric [a-z, A-Z, 0-9]</td>
</tr>
<tr>
<td>Port</td>
<td>Port that the LDAP servers can be accessed by on the host machine</td>
<td>Default = 389</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range = Integer with value between 0 and 65535</td>
</tr>
</tbody>
</table>
Configuring LDAP authentication servers

Use this procedure to configure LDAP authentication servers:

2. Click Insert at the bottom of the table.
   
   The LDAP Authentication Insert page appears.

3. Enter a Hostname. This is a user-defined name for the server. The hostname must be unique.
4. Enter an Account Domain Name. This is the name of the LDAP server.
5. Enter an Account Domain Short Name. This is a shorter version of the domain name, for example, WEBSITE.
6. Enter the Port for the LDAP server on the remote machine.
7. Enter the Base DN. This is the directory path of the user being authenticated.
8. Enter the User Name for the user domain name.
9. Enter the Password for the user domain.
10. Enter the **Account Filter Format**. This is the user account search filter.
11. Enter the **Account Canonical Form**. This is the format for the user name listing.
12. Select whether or not to follow **Referrals**.
13. Select whether or not to enable **Bind Requires DN**, which determines whether the LDAP required the user name in DN format.
14. Click **OK** to submit the information and return to the LDAP Authentication page, or click **Apply** to submit the information and continue entering additional data.

   **Note:** Once you have entered LDAP servers to the listing, you can order them using the **Move Up** and **Move Down** buttons on the LDAP Authentication screen. The server order in the listing determines the order that servers are tried against.

15. When finished adding LDAP servers, use the **Test Server** button to validate the server connection. This button allows you to confirm the server settings (by entering the correct userid/password combination) without logging out.

### Updating LDAP Authentication Servers

Use this procedure to update LDAP authentication server information:

1. Select **Administration > Remote Servers > LDAP Authentication**.

   The **LDAP Authentication** page appears.

2. Update LDAP settings as needed.
3. Click **OK** or **Apply** to submit the information.

The LDAP server changes are saved and activated.

### Generating a LDAP Authentication report

Use this procedure to generate a LDAP Authentication report.

1. Select **Administration > Remote Servers > LDAP Authentication**.

   The LDAP Authentication page appears.

2. Click **Report**.

   **Note:** It is unnecessary to select a particular user, because all users appear in the Users Report.

   The LDAP Authentication report is generated. This report can be printed or saved to a file.

3. Click **Print** to print the report.
4. Click **Save** to save the report to a file.

### Deleting a LDAP Authentication Server

Use this procedure to delete a LDAP Authentication server:

1. Select **Administration > Remote Servers > LDAP Authentication**.

   The **LDAP Authentication** page appears.

2. Select the appropriate host name from the listing for the LDAP Authentication server to delete.
3. Click **Delete**.
   A confirmation box appears.

4. Click **OK** to delete the authentication server.
   The **LDAP Authentication** page re-appears.
   The server is deleted from the database and no longer appears in the listing.

**SNMP Trapping**

The **SNMP Trapping** page enables the user to configure up to five remote managers to receive traps using the industry-standard Simple Network Management Protocol (SNMP). The user can choose between versions v2c, v3, or both along with the typical security parameters associated with each of the versions. In addition, traps from individual servers can be enabled from this view.

**Note:** The SNMP Manager is provided by the customer.

The SNMP agent is responsible for SNMP-managed objects. Each managed object represents a data variable. A collection of managed objects is called a Management Information Base (MIB). In other words, a MIB is a database of network management information that is used and maintained by the SNMP protocol. The MIB objects contain the SNMP traps that are used for alarms; a readable SNMP table of current alarms in the system; and a readable SNMP table of KPI data.

By default, system-wide traps are sent from the active Network OAM&P server while site-specific traps are sent from active Site OAM servers. Alternately, functionality may be enabled that allows individual servers to send traps, in which case individual servers interface directly with SNMP managers.

**Note:** Note that only the Active Network server allows SNMP administration.

![Figure 14: SNMP Support](image-url)
The application sends SNMP traps to SNMP Managers that are registered to receive traps. IP addresses and authorization information can be viewed and changed using the SNMP administration page. For SNMP to be enabled, at least one Manager must be set up.

SNMP administration elements

On the active network OAM&P server, the SNMP Administration page provides for the configuration of SNMP services. This table describes the elements of the SNMP Administration page.

Table 45: SNMP Administration Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
</table>
| Manager 1 | Manager to receive SNMP traps and send requests. It could be a valid IP address or a valid hostname. | Valid IP address or a valid hostname  
IPv4 addresses are 32 bits, represented in a dot-decimal notation like this: x.x.x.x where each x (called an octet) is a decimal value from 0 to 255. They are separated by periods. For example: 1.2.3.4 and 192.168.1.100 are valid IPv4 addresses.  
IPv6 addresses are 128 bits, represented in a colon-hexadecimal notation like this: z:z:z:z:z:z:z:z where each z is a group of hexadecimal digits ranging from 0 to ffff. They are separated by colons. Leading zeros may be omitted in each group. "::" can be used (at most once) in an IPv6 address to represent a range of as many zero fields as needed to populate the address to eight fields. So the IPv6 address 2001:db8:c18:1:260:3eff:fe47:1530 can also be represented as 2001:0db8:0c18:0001:0260:03eff:fe47:1530 and the IPv6 address ::1 is the same as 0000:0000:0000:0000:0000:0000:0000:0001  
Hostname Format: Alphanumeric [a-z, A-Z, 0-9] and minus sign (-)  
Hostname Range: 1 to 255-character string |

## Adding a SNMP manager

Use this procedure to add a SNMP Manager:

1. Select **Administration > Remote Servers > SNMP Trapping**.
   The SNMP Trapping page appears.

2. Update **Enabled Versions** as appropriate.
   For more information about **Enabled Versions**, or any field on this page, see *SNMP administration elements*.

3. Select an empty **Manager** field and populate it with the hostname or IP address of the SNMP manager.

4. Enable traps from individual servers.
   This step is optional.

5. For SNMPv2c managers, optionally change the **SNMPV2c Read-Only Community Name**.

6. For SNMPv2c managers, optionally change the **SNMPV2c Read-Write Community Name**.

7. For SNMPv3 managers, choose an **SNMPv3 Security Level**, and optionally change the **SNMPv3 Engine ID**, **SNMPv3 Authentication Type**, and **SNMPv3 Privacy Type**.

8. For SNMPv3 managers with user authentication enabled, configure **SNMPv3 Username**.

9. For SNMPv3 managers with privacy enabled, configure **SNMPv3 Password**.

10. Click **OK** or **Apply** to submit the information.

The new manager and related settings are saved and activated.

## Viewing SNMP trap settings

Use this procedure to view SNMP trap settings:
Select Administration > Remote Servers > SNMP Trapping.
The SNMP Trapping page appears. The page lists all SNMP options on the system.

Updating SNMP trap settings
Use this procedure to update SNMP trap settings:
   The SNMP Trapping page appears.
2. Update SNMP trap settings as needed.
   For more information, see SNMP administration elements.
3. Click OK or Apply to submit the information.
The SNMP trap changes are saved and activated.

Deleting an SNMP trap managers
Use this procedure to remove one or more SNMP trap managers:
   The SNMP Trapping page appears.
2. Delete the SNMP hostnames and IP addresses from the Manager fields for which you want traps removed.
3. Click OK or Apply.
The SNMP configuration changes are saved. If the SNMP manager hostnames and IP addresses are cleared from all Manager fields, the SNMP feature is effectively disabled.

Data Export
From the Data Export page you can set an export target to receive exported selected data. Several types of data can be filtered and exported using this feature. For more information about how to create data export tasks, see:
- Exporting active alarms
- Exporting alarm and event history
- Exporting security log files
- Exporting KPIs
- Exporting measurements reports
From the Data Export page you can manage file compression strategy and schedule the frequency with which data files are exported.

Data Export elements
This table describes the elements on the Data Export page.
Table 46: Data Export Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hostname</td>
<td>Name of export server.</td>
<td>Must be a valid hostname or a valid IP address.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: Maximum length is 255 characters; alphanumeric characters (a-z, A-Z, and 0-9) and minus sign. Hostname must start and end with an alphanumeric.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To clear the current export server and remove the file transfer task, specify an empty hostname and username.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Default: None</td>
</tr>
<tr>
<td>Username</td>
<td>Username used to access the export server</td>
<td>Format: Textbox</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: Maximum length is 32 characters; alphanumeric characters (a-z, A-Z, and 0-9).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To clear the current export server and remove the file transfer task, specify an empty hostname and username.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Default: None</td>
</tr>
<tr>
<td>Directory on Export Server</td>
<td>Directory path on the export server where the exported data files are to be transferred</td>
<td>Format: Textbox</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: Maximum length is 255 characters; valid value is any UNIX string.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Default: None</td>
</tr>
<tr>
<td>Path to rsync on Export Server</td>
<td>Optional path to the rsync binary on the export server</td>
<td>Format: Textbox</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: Maximum length is 4096 characters; alphanumeric characters (a-z, A-Z, and 0-9), dash, underscore, period, and forward slash.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Default: If no path is specified, the username’s home directory on the export server is used</td>
</tr>
<tr>
<td>Backup File Copy Enabled</td>
<td>Enables or disables the transfer of the backup files.</td>
<td>Format: Checkbox</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Default: Disabled (unchecked)</td>
</tr>
</tbody>
</table>
### Configuring data export

The Data Export page enables you to configure a server to receive exported performance and configuration data. Use this procedure to configure data export.

1. Select **Administration > Remote Servers > Data Export**.

The Data Export page appears.

2. Enter a **Hostname**.

See the Data Export elements for details about the **Hostname** field and other fields that appear on this page.

3. Enter a **Username**.

4. Enter a **Directory Path** on the Export server.

#### Data Input Notes

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>File Compression</td>
<td>Compression algorithm used when exported data files are initially created on the local host.</td>
<td>Radio button</td>
</tr>
<tr>
<td></td>
<td>Range: gzip, bzip2, or none</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Default: gzip</td>
<td></td>
</tr>
<tr>
<td>Upload Frequency</td>
<td>Frequency at which the export occurs</td>
<td>Radio button</td>
</tr>
<tr>
<td></td>
<td>Range: fifteen minutes, hourly, daily or weekly</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Default: weekly</td>
<td></td>
</tr>
<tr>
<td>Minute</td>
<td>If The Upload Frequency is Hourly, this is the minute of each hour when the transfer is set to begin</td>
<td>Scrolling list</td>
</tr>
<tr>
<td></td>
<td>Range: 0 to 59</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Default: zero</td>
<td></td>
</tr>
<tr>
<td>Time of Day</td>
<td>If the Upload Frequency is Daily of Weekly, this is the time of day the export occurs</td>
<td>Time textbox</td>
</tr>
<tr>
<td></td>
<td>Range: HH:MM AM/PM in 15-minute increments</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Default: 12:00 AM</td>
<td></td>
</tr>
<tr>
<td>Day of Week</td>
<td>If Upload Frequency is Weekly, this is the day of the week when exported data files will be transferred to the export server</td>
<td>Radio button</td>
</tr>
<tr>
<td></td>
<td>Range: Sunday through Saturday</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Default: Sunday</td>
<td></td>
</tr>
<tr>
<td>SSH Key Exchange</td>
<td>This button launches a dialog box. The dialog requests username and password and initiates SSH key exchange.</td>
<td>Button</td>
</tr>
<tr>
<td>Transfer Now</td>
<td>This button initiates an immediate attempt to transfer any data files in the export directory to the export server.</td>
<td>Button</td>
</tr>
</tbody>
</table>
5. Enter the Path to Rsync on the Export server.
6. Select whether to enable the transfer of the backup file. To leave the backup disabled, do not check the box.
7. Select the File Compression type.
8. Select the Upload Frequency.
9. If you selected hourly for the upload frequency, select the Minute intervals.
10. If you selected daily or weekly for the upload frequency, select the Time of Day.
11. If you selected weekly for the upload frequency, select the Day of the Week.
12. Click Exchange SSH Key to transfer the SSH keys to the export server.
   A password dialog box appears.
13. Enter the password.
   The server will attempt to exchange keys with the specified export server. After the SSH keys are successfully exchanged, continue with the next step.
14. Click OK or Apply.
   The export server is now configured and available to receive performance and configuration data.

DNS Configuration

The following sections discuss the procedures used to set up the DNS (Domain Name System) configuration.

DNS configuration elements

The DNS Configuration page provides for configuration of the domain name system. This table describes the elements of the DNS Configuration page.

Table 47: DNS Configuration Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain</td>
<td>System Domain Name</td>
<td>Format: alphanumeric, hyphen and decimal characters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: Up to 255 characters</td>
</tr>
<tr>
<td>Name Server 1</td>
<td>Address of a DNS name server</td>
<td>Format: Must be a valid ipv4 or ipv6 address</td>
</tr>
<tr>
<td>Search Domain 1</td>
<td>A valid domain name</td>
<td>Format: alphanumeric, hyphen and decimal characters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: Up to 255 characters</td>
</tr>
<tr>
<td>Search Domain 2</td>
<td>A valid domain name</td>
<td>Format: alphanumeric, hyphen and decimal characters</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: Up to 255 characters</td>
</tr>
</tbody>
</table>
Adding a DNS Configuration

Use this procedure to add a DNS Configuration:

1. Select Administration > Remote Servers > DNS Configuration.
   The DNS Configuration page appears.

2. Enter the Domain Name.
3. Enter a Name Server for the external DNS name server.
4. Enter the Search Domain in the domain search order. You may add up to six search domain names.
5. Click OK or Apply to submit the information.
   The new DNS configuration is saved and activated.

Updating a DNS Configuration

Use this procedure to update a DNS configuration:

1. Select Administration > Remote Servers > DNS Configuration.
   The DNS Configuration page appears.

2. Enter the updated Domain for the system.
   For more information about Domain, or any field on this page, see the DNS configuration elements.
3. Enter the updated Name Server in the appropriate field.
4. Enter the updated search domain name in the appropriate fields. You may add up to six search domain names.
5. Click OK to submit the information.
   The updated DNS configuration is saved and activated.
Chapter 4

Configuration

Topics:

- Network Elements.....98
- Network .....101
- Services.....115
- Servers.....116
- Server Groups.....122
- Resource Domains.....127
- Places.....130
- Place Associations.....132
- DSCP.....134

This section describes configuration functions. Configuration data defines the network topology for the network. The topology determines the network configuration, the layout or shape of the network elements, and their components. It defines the interlinking and the intercommunicating of the components. The network topology represents all server relationships within the application. The server relationships are then used by MiddleWare to control data replication and data collection, and define HA relationships.
Network Elements

This application is a collection of servers linked by standardized interfaces. Each server can be used multiple times in a network for load balancing or organizational issues. Network Elements are containers that group and create relationships among servers in the network. These relationships allow the software and hardware to properly work together. Understanding the relationships among the servers allows you to configure the system. The primary network element relationship is the network element to server. Servers are assigned to network elements. A network element can contain multiple servers but a single server is part of only one network element. The attributes of a server include the network element to which it belongs.

Configuration of Network Elements must follow a specific chronology.

1. Configure the first Network Element, beginning with the configuration of switches. After the switches are configured, the first NOAMP server must be configured through the GUI interface.
2. After the first NOAMP server has been configured, configure the second NOAMP.
3. If the system supports SOAMs, and after the first Network Element is configured and running, additional Network Elements can be configured to support SOAM servers.

Network Elements Insert elements

These tables describe the elements of the Network Elements Insert page.

**Note:** Networks are no longer configured using the Network Element pages. Networks can still be added when uploading an XML file to configure a network element. To complete network configuration, see the Networks section.

**Note:** A signaling network element can only be added after a NOAMP with at least one server has been added.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network Element Name</td>
<td>The user-defined name for the network element.</td>
<td>Format: 1 to 32 character string containing alphanumeric characters and underscore. It must contain at least one alphabetic character and must not start with a digit</td>
</tr>
</tbody>
</table>

Inserting a network element

You define a network by configuring network elements and adding servers to the network elements. A maximum of sixteen (16) network elements can be configured.

**Note:** Network information is no longer configured using the Network Element pages. To complete network configuration, see the Networks section.

Use this procedure to configure and insert a network element:

1. Select **Configuration > Network Elements**.
The Network Elements page appears.

2. Click Insert.
   
   The Network Elements Insert page appears.

3. Enter a unique name across the network element table in Network Element Name.
   
   See Network Elements Insert elements for details about the Network Element Name field and other fields that appear on this page.

4. Click OK to submit the information and return to the Network Elements page.
   
The network element is added to the topology database tables, and the GUI displays the updated Network Elements table.

Uploading a configuration file

Use this procedure to upload an XML file to configure a new network element:

1. Select Configuration > Network Elements.
   
   The Network Elements page appears.

2. Click Choose File to locate the file you want to use to configure a new network element.
   
   The File Upload window appears.

3. Select the file you want to use to configure a new network element.
   
   The selected file appears in the text box.

4. Click Upload File.
   
   Data validation is performed immediately. If the file is valid, a new network element is created. Alternately, a file that contains invalid parameters returns an error message, and no network element is created.

Viewing Network Elements

Use this procedure to view network elements:

1. Select Configuration > Network Elements.
   
   The Network Elements Configuration page appears.

2. Click on the folder icon beside the Network Element Name to view additional information about the selected network element.

Deleting a Network Element

Before a network element can be deleted there must be no servers associated with the network element.

Use this procedure to delete a network element:

1. Select Configuration > Network Elements.
   
   The Network Elements page appears.
2. Click to select the network element you want to delete and click **Delete**.
   A delete confirmation message appears.

3. Click **OK** to delete the network element from the database tables.
   The updated **Network Elements Configuration** page appears.
   The network element is deleted from the topology databases.

**Network Element Report Elements**

The report is divided into three sections, and each section contains subsections. Any field for which there is no data will display the value "n/a".

**Table 48: Layer-3 Network Element Report**

<table>
<thead>
<tr>

</table>
Generating a Network Element Report

A network element report provides a summary of the network element configuration. This report can be used to:

- View network element configurations
- Compare network element configurations to system manager network configurations
- Relate network elements to servers, VLANs, and systems
- View a list of the locations the application occupies
- View a list of the IP addresses in the application topology

This report can also be printed or saved to a file.

Use this procedure to generate a network element report:

1. Select Configuration > Network Elements.
   
   The Network Elements page appears.

2. To generate a report for a single network element, click to select the network element and click Report. To generate a report for all configured network elements, click Report.
   
   Alternately, you can select multiple rows and generate a report using those. To select multiple rows, press and hold Ctrl as you click to select specific rows.
   
   The Network Element Report is generated.

3. Click Print to print the report.
4. Click Save to save the report to a file.

Exporting a network element

The network element export button generates an installation script file used for hardware configuration.

Use this procedure to export the configuration parameters of a network element:

1. Select Configuration > Network Elements.
   
   The Network Elements page appears.

2. Click to select a network element from the table.
3. Click Export.
   
   A CSV file is created.

Network

The Network pages allow the user to configure signaling networks, devices, and routes. Through the Network Configuration page, network IDs and subnets can be added to enable servers to communicate with the signaling networks. Route configuration allows the user to define specific routes for signaling traffic. Device configuration allows the user to configure additional interfaces on MP servers used in signaling networks.
Network Insert elements

This table describes the elements of the Network Insert page.

Table 49: Network Insert Elements

<table>
<thead>
<tr>

### Inserting a Network

Use the following procedure for inserting a network. Alternatively, you can also use the procedures included in the Network Elements topics.

1. Select **Configuration > Network**
   The **Network** page appears.
2. Click the **Insert** button.
   The **Network Insert** page appears.
3. Enter a **Network Name**.
   For more information about **Network Name**, or any field on this page, see **Network Insert elements**.
4. Enter a **VLAN ID**.
5. Enter a **Network Address**.
6. Enter a **Netmask**.
7. Click **OK** to submit the information and return to the Network page, or click **Apply** to submit the information and continue entering additional data.

The new network is added.

### Configuration Network elements

This table describes the elements of the **Configuration Network** page.

**Table 50: Configuration Network Elements**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network Name</td>
<td>The name associated with the network</td>
<td></td>
</tr>
<tr>
<td>VLAN</td>
<td>VLAN ID associated with the network</td>
<td></td>
</tr>
<tr>
<td>Network</td>
<td>The IP address associated with the network in the format: IP Address/Prefix Length</td>
<td></td>
</tr>
</tbody>
</table>

### Editing a Network

Not all networks can be edited. Pre-configured networks created during the install process, for example, cannot be edited. A network that cannot be edited is distinguished using italic font.
Note: Prior to editing a network, generate a network report. The network report will serve as a record of the network’s original settings. Print or save the network report for your records. For more information about generating a network report, see Generating a Network Report.

1. Select Configuration > Network
   The Network page appears.
2. Click to select a network and click Edit.
   Note: If the network is currently unlocked, the button will read Lock. If the button is currently locked, the button will read Unlock.
   If the network can be edited, the Network Edit page appears.
3. Edit the available fields as necessary.
   See Network Insert elements for details about the fields that appear on this page.
   Note: Fields that cannot be edited are disabled.
4. Click OK to submit the changes and return to the Network page, or click Apply to submit the information and continue editing additional data.
   The network is changed.

Locking and Unlocking a Network

Any network on the system can be locked or unlocked. When a network is locked, no modifications may be made to any device or route that uses that network. To add route or a device to a network, the network would have to be in an unlocked state.

1. Select Configuration > Network
   The Network page appears.
2. Click to select a network and click Lock/Unlock.
   Note: If the network is currently unlocked, the button will read Lock. If the button is currently locked, the button will read Unlock.
3. At the confirmation window, click OK. When unlocking a network, you will also have to confirm your decision using a check box.
   The network is locked or unlocked.

Deleting a Network

Not all networks can be deleted. In-use networks and pre-configured networks created during the install process, for example, cannot be deleted. A network that cannot be deleted is distinguished using italic font.

Note: Prior to deleting a network, generate a network report. The network report will serve as a record of the network’s original settings. Print or save the network report for your records. For more information about generating a network report, see Generating a Network Report.

1. Select Configuration > Network.
   The Network page appears.
2. Click to select the network you want to delete. Alternately, you can delete multiple networks. To delete multiple networks, press and hold Ctrl and click to select specific networks.
Note: If the network cannot be deleted, the Delete button will be disabled.

Note: To delete multiple networks at one time, all selected networks must be deletable.

3. Click Delete.
   A confirmation box appears.
4. Click OK to delete the network.
   The network is deleted.

Generating a Network Report

A network report provides a summary of the configuration of one or more networks. Reports can be printed or saved to a file.

1. Select Configuration > Network
   The Network page appears.
   The Network Report is generated.
3. Click Print to print the report.
4. Click Save to save the report to a file.

Devices

Device configuration allows the user to configure interfaces on MP servers used in signaling networks.

Device Insert elements

This table describes the elements of the Devices Insert page.

Table 51: Devices General Options

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>

**Inserting a Device**

Devices cannot be created which use management networks (those configured after installation and designated in the Network listing in blue italic text). This ensures continued access to the GUI via the management networks.

1. Select **Configuration > Network > Devices**. The Devices page appears.
2. Select a server.
3. Click the **Insert** button. The Device Insert page appears.
4. Select a **Device Type**. For more information about **Device Type**, or any field on this page, see **Device Insert elements**.
   **Note:** Device Type of Ethernet cannot be selected.
5. Select a **Device Monitoring** style. **Note:** Device Monitoring is only used when the Device Type is Bonding.
6. By default, Start on Boot is enabled. Uncheck the check box if you want to disable Start on Boot.
7. Select the Boot Protocol.
8. Select the Base Device(s) if the device type is one of the following: Bond, Alias, or VLAN.
   Note: Alias and VLAN devices require one selection; bond devices require two selections.
9. Click OK to submit the information and return to the Device page, or click Apply to submit the information and continue entering additional data.

The device is added. You can now update MII and ARP monitoring options and add IP interfaces, if applicable.

Inserting MII Monitoring Options
Inserting MII monitoring options is only required if the device type is Bonding. For all other device types, the MII Monitoring Options tab is disabled.

2. Select a server.
3. Click the Insert button. The Device Insert page appears.
4. Click the MII Monitoring Options tab. The MII Monitoring Options tab appears.
5. Click Primary Interface to select None (for no interface) or the preferred interface from the pulldown list.
6. Enter the Monitoring Interval, if you do not wish to use the default setting.
7. Enter the Upstream Delay, if you do not wish to use the default setting.
8. Enter the Downstream Delay, if you do not wish to use the default setting.
9. Click the General Options tab.
10. Click OK to submit the information and return to the Device page, or click Apply to submit the information and continue entering additional data.

The MII monitoring options are updated.

Inserting ARP Monitoring Options
Inserting ARP monitoring options is only required if the device type is Bonding. For all other device types, the ARP Monitoring Options tab is disabled.

2. Select a server.
3. Click the Insert button. The Device Insert page appears.
4. Click the ARP Monitoring Options tab. The ARP Monitoring Options tab appears.
5. Click Primary Interface to select None (for no interface) or the preferred interface from the pulldown list.
6. Enter the Monitoring Interval, if you do not wish to use the default setting.
7. Click ARP Validation to select a validation method from the pulldown list, if you do not wish to use the default setting.
8. Enter one or more IP addresses for the target device.
   
   **Note:** Multiple IP addresses are comma separated.

9. Enter an IP Address for the device.

10. Click **OK** to submit the information and return to the Device page, or click **Apply** to submit the information and continue entering additional data.

   The ARP monitoring options are updated.

**Inserting IP Interfaces**

The IP interfaces tab allows interfaces to be associated with a device.

1. Select **Configuration > Network > Devices**.
   
   The **Devices** page appears.

2. Select a server.

3. Click the **Insert** button.
   
   The **Device Insert** page appears.

4. Click the **IP Interfaces** tab.
   
   The **IP Interfaces** tab appears.

5. Click **Add Row**.
   
   A textbox appears in which you can enter an IP Address for the device.

6. Enter an **IP Address** for the device.

7. Select a **Network Name**.

8. For each row, only one IP Address and Network Name can be specified. To specify additional rows, select **Add Row** and following Steps 6 and 7.

9. When you are finished adding IP Addresses, click **OK** to submit the information and return to the Device page, or click **Apply** to submit the information and continue entering additional data.

   The IP addresses are added.

**Devices elements**

This table describes the elements of the **Configuration Devices** page.

**Table 55: Devices Elements**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server</td>
<td>The server host name displayed in tabbed format at the top of the table</td>
</tr>
<tr>

<tr>
<td>Configuration Status</td>
<td>The configuration status of the device. The possible states are:</td>
</tr>
<tr>
<td></td>
<td>• Discovered (provisioned directly on the server)</td>
</tr>
<tr>
<td></td>
<td>• Configured (provisioned through the GUI; server update is complete)</td>
</tr>
<tr>
<td></td>
<td>• Pending (update in progress)</td>
</tr>
<tr>
<td></td>
<td>• Deferred (server cannot be reached for updates)</td>
</tr>
<tr>
<td></td>
<td>• Error (specific error text is displayed in the Configuration Status field)</td>
</tr>
</tbody>
</table>

**Editing a Device**

Not all devices can be edited. Pre-configured devices created during the install process, for example, cannot be edited. A device that cannot be edited is distinguished using italic font.

**Note:** Prior to editing a device, generate a device report. The device report will serve as a record of the device’s original settings. Print or save the device report for your records. For more information about generating a device report, see *Generating a Device Report*.

1. Select **Configuration > Network > Devices**
   The **Devices** page appears.
2. Click to select a server.
   The device data for the selected server appears.
3. Click to select a device and click **Edit**.
   **Note:** If the device cannot be edited, the **Edit** button will be disabled.
   If the device can be edited, the **Device Edit** page appears.
4. Edit the available fields as necessary.
   See **Device Insert elements** for details about the fields that appear on this page.
   **Note:** Fields that cannot be edited are disabled.
5. Click **OK** to submit the changes and return to the **Devices** page, or click **Apply** to submit the information and continue editing additional data.

   The device is changed.

**Deleting a Device**

Not all devices can be deleted. In-use devices and pre-configured devices created during the install process, for example, cannot be deleted. A device that cannot be deleted is distinguished using italic font.

**Note:** Prior to deleting a device, generate a device report. The device report will serve as a record of the device’s original settings. Print or save the device report for your records. For more information about generating a device report, see *Generating a Device Report*.

1. Select **Configuration > Network > Devices**.
The Devices page appears.

2. Click to select a server.
The device data for the selected server appears.

3. Click to select the device you want to delete. Alternately, you can delete multiple devices. To delete multiple devices, press and hold Ctrl and click to select specific devices.
   
   **Note:** If the device cannot be deleted, the Delete button will be disabled.

   **Note:** To delete multiple devices at one time, all selected devices must be deletable.

4. Click Delete.
   A confirmation box appears.

5. Click OK.
The device is deleted.

Generating a Device Report

1. Select Configuration > Network > Devices
   The Devices page appears.

2. Click to select a server.
The device data for the selected server appears.

3. To generate a report for all devices, click Report. To generate a report for a single device, click to select the device and click Report. Alternately, you can select multiple devices. To generate a report for multiple devices, press and hold Ctrl as you click to select specific devices.
   The Device Report is generated.

4. Click Print to print the report.

5. Click Save to save the report to a file.

Routes

Use the Route Configuration page to define specific routes for signaling traffic. You can specify routes for the entire network, specific servers, or specific server groups.

Routes Insert elements

This table describes the elements of the Routes Insert page. Elements are displayed for the selected server or server group.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Route Type</td>
<td>The type of route</td>
<td>Format: Radio button</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: Default, Net, Host</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Note:</strong> The Default route option is available only if there is no default</td>
</tr>
</tbody>
</table>
**Field** | **Description** | **Data Input Notes**
--- | --- | ---
 | route configured on the target server. There can be no more than one IPv4 and one IPv6 default route defined. | 
**Device** | The network device name through which traffic is routed | Format: Pulldown list
Range: Provisioned devices on the selected server

**Destination** | The destination network address
*Note:* This field is disabled if the Route Type is default. | Format: Valid network address
Range: Dotted quad decimal (IPv4) or colon hex (IPv6)

**Netmask** | A valid netmask for the destination network
*Note:* This field is disabled if the Route Type is default. This field is disabled and set to 32 (IPv4) or 128 (IPv6) if the Route Type is host. | Format: Valid netmask
Range: Valid netmask for the network in prefix length (IPv4 or IPv6) or dotted quad decimal (IPv4)
Default: 24 for IPv4; 64 for IPv6

**Gateway IP** | The IP Address of the gateway for the route | Format: Valid IP address
Range: Dotted quad decimal (IPv4) or colon hex (IPv6)

---

**Inserting a Route**

Routes cannot be created which use management networks (those configured after installation and designated in the Network listing in blue italic text). This ensures continued access to the GUI via the management networks.

1. Select Configuration > Network > Routes
   The Routes page appears.

2. Using the tabs, select to add a server or server group to the entire network, or a specific network group.

3. Click the Insert button.
   The Routes Insert page appears.

4. Select a Route Type.

   For more information about Route Type, or any field on this page, see Routes Insert elements.
5. Select a **Device**.

6. Enter a **Destination**.
   
   **Note:** This step is required only if the **Route Type** is Net or Host. The field is disabled if the **Route Type** is Default.

7. Enter the **Netmask**.
   
   **Note:** This step is required only if the **Route Type** is Net. The field is disabled if the **Route Type** is Default or Host.

8. Enter the **Gateway IP**.

9. Click **OK** to submit the information and return to the Route page, or click **Apply** to submit the information and continue entering additional data.

The route is added.

**Routes elements**

This table describes the elements of the **Configuration Routes** page.

**Table 57: Routes Elements**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server/Server Group</td>
<td>The server host name and server groups are displayed in tabbed format at the top of the table</td>
</tr>
<tr>
<td>Route Type</td>
<td>The type of route</td>
</tr>
<tr>
<td>Destination</td>
<td>The destination network IP address and prefix length in the format: IP Address/Prefix Length</td>
</tr>
<tr>
<td>Netmask</td>
<td>A valid netmask for the destination network</td>
</tr>
<tr>
<td>Gateway</td>
<td>The IP Address of the gateway for the route</td>
</tr>
<tr>
<td>Scope Status</td>
<td>The current number of servers where the route was successfully configured out of the total servers in the server group. (Note: This column is only present for server group routes)</td>
</tr>
<tr>
<td>Configuration Status</td>
<td>The configuration status of the route. The possible states are:</td>
</tr>
<tr>
<td></td>
<td>• Discovered (provisioned directly on the server)</td>
</tr>
<tr>
<td></td>
<td>• Configured (provisioned through the GUI; server update is complete)</td>
</tr>
<tr>
<td></td>
<td>• Pending (update in progress)</td>
</tr>
<tr>
<td></td>
<td>• Deferred (server cannot be reached for updates)</td>
</tr>
<tr>
<td></td>
<td>• Error (specific error text is displayed in the Configuration Status field)</td>
</tr>
</tbody>
</table>
Editing a Route
Not all routes can be edited. Pre-configured routes created during the install process, for example, cannot be edited. A route that cannot be edited is distinguished using italic font.

Note: Prior to editing a route, generate a route report. The route report will serve as a record of the route's original settings. Print or save the route report for your records. For more information about generating a route report, see Generating a Route Report.

1. Select Configuration > Network > Routes.
   The Routes page appears.
2. Click to select a server or server group using the tabs at the top of the table.
   The route data for the selected server or server group appears.
3. Click to select a route and click Edit.
   Note: If the route cannot be edited, the Edit button will be disabled.
   If the route can be edited, the Routes Edit page appears.
4. Edit the available fields as necessary.
   See Routes Insert elements for details about the fields that appear on this page.
   Note: Fields that cannot be edited are disabled.
5. Click OK to submit the changes and return to the Routes page, or click Apply to submit the information and continue editing additional data.

The route is changed.

Deleting a Route
Not all routes can be deleted. In-use routes and pre-configured routes created during the install process, for example, cannot be deleted. A route that cannot be deleted is distinguished using italic font.

Note: Prior to deleting a route, generate a route report. The route report will serve as a record of the route's original settings. Print or save the route report for your records. For more information about generating a route report, see Generating a Route Report.

1. Select Configuration > Network > Routes.
   The Routes page appears.
2. Click to select a server or server group from the tabs at the top of the table.
   The route data for the selected server or server group appears.
3. Click to select the route you want to delete. Alternately, you can delete multiple routes. To delete multiple routes, press and hold Ctrl and click to select specific routes.
   Note: If the route cannot be deleted, the Delete button will be disabled.
   Note: To delete multiple routes at one time, all selected routes must be deletable.
4. Click Delete.
   A confirmation box appears.
5. Click OK to delete the route
   The route is deleted.
Generating a Route Report

1. Select Configuration > Network > Routes
   The Routes page appears.
2. Click to select a server or server group from the tabs at the top of the table.
3. Click Report to generate a report for all routes. To generate a report for a single route, click to select the route and click Report. Alternately, you can select multiple routes. To generate a report for multiple routes, press and hold Ctrl as you click to select specific routes.
   The Route Report is generated.
4. Click Print to print the report.
5. Click Save to save the report to a file.

Services

This application allows for flexible network deployment, with each installation being able to configure network elements with one or more networks and map a specific service to those networks. This flexibility allows for individual configuration of network routes. The system only defines the default route if the default network is defined for the network element.

Configuration of services must follow a specific chronology.

1. Configure the first NOAMP Network Element And Server.
2. Use the Services screen to map networks to services.
   Note: It is important that Services be configured after the insertion of the NOAMP NE and before configuring any servers.
3. Configure the first NOAMP server.
4. Configure the NOAMP server group.
5. Add the first NOAMP server to the group.
6. Configure the second NOAMP server.
7. Add the second NOAMP server to the group.
8. Configure the SOAM NE.
9. Configure the SOAM servers.
10. Configure the SOAM server group.
11. Add the SOAM servers to the group.
12. Configure any MP servers.
13. Add MP servers into server groups, as necessary.

Editing Service information

Services are set during installation of the system. However, you can edit network characteristics of the services. Use this procedure to edit existing service information:

1. Select Configuration > Services.
   The Services page appears.
2. Click **Edit**.
   The Services [Edit] page appears.

3. Select from the available choices to determine the Intra-NE Network.
4. Select from the available choices to determine the Inter-NE Network.
5. Select **Apply** to save the changes you have made and remain on this screen, or select **OK** to save the changes and return to the Services page.

### Generating a Service Report

A service report provides a summary of the service configuration. This report can also be printed or saved to a file.

Use this procedure to generate a service report:

1. Select **Configuration > Services**.
   The Services page appears.

2. Click **Report**.
   The Services Report is generated.

3. Click **Print** to print the report.

4. Click **Save** to save the report to a file.

5. Click **Back** to return to the Services page.

### Servers

Servers are the processing units of the application. Servers perform various roles within the application. The roles are:

- **Network OAMP (NOAMP)** - The NOAMP is one active and one standby server running the NOAMP application and operating in a high availability global configuration. It also provides a GUI which is used for configuration, user administration and the viewing of alarms and measurements.

- **System OAM (SOAM)** - The SOAM is the combination of an active and a standby application server running the SOAM application and operating in a high availability configuration. SOAM also provides a GUI used for local configuration and viewing alarms and measurements details specific to components located within the frame (SOAM, MP). The SOAM supports up to 8 MPs.

  **Note:** SOAM is not an available role in systems that do not support SOAMs.

- **MP** - MPs are servers with the application installed and are configured for MP functionality.

- **Query Server (QS)** - The Query Server is an independent application server containing replicated application data. A Query Server is located in the same physical frame as each NOAMP component.

The role you define for a server affects the methods it uses to communicate with other servers in the network. For more information about how each interface is used, refer to the Network Installation Guide that came with the product.
Add new server configuration elements

This table describes the elements on the Adding a new server page:

Table 58: Add New Server Configuration Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hostname</td>
<td>The defined name for the server. The name must be unique across the server table. Alphanumeric (A-Z, a-z, 0-9) and hyphen (-) characters are allowed. The Hostname must begin and end with an alphanumeric character.</td>
<td>Format: Alphanumeric (A-Z, a-z, 0-9) and hyphen (-) characters. Hostname must begin and end with an alphanumeric character. Range: Maximum length is 20 characters</td>
</tr>
</tbody>
</table>
| Role                  | The defined type for the network element The Role selected here affects which of the following IP Addresses are available to be configured.                                                                  | Format: Pulldown list  
Range: Network OAM&P, System OAM, MP, Query Server  
Note: System OAM is not an available role in systems that do not support SOAMs.                          |
| System ID             | System ID for the NOAMP or SOAM server.                                                                                                                                                                   | Default = none  
Range = A 64-character string. Valid value is any text string.                                           |
| Hardware Profile      | The hardware profile of the server                                                                                                                                                                       | Format: Pulldown list of customized options                                                        |
| Network Element Name  | The network element must first be set up using the Configuration > Network Elements page.                                                                                                                | Format: Pulldown list  
Range: A valid Network Element                                                                          |
| Location              | Optional, user supplied field to identify the location of the server.                                                                                                                                     | Format: Text string  
Range: Maximum length is 15 characters                                                                   |
<p>| Interfaces: Network   | The list of available interfaces from the hardware profile.                                                                                                                                               | Format: n/a                                                                                           |
| Interfaces: IP Address| The IP address of the network                                                                                                                                                                               | Format: numeric                                                                                       |
| Interfaces: Interface | The interface with which the IP address is associated. The list is populated with the available interfaces from the hardware profile.                                                                     | Format: drop down list                                                                                |</p>
<table>
<thead>
<tr>

<td>The IP address of the NTP Server</td>
<td>Format: numeric</td>
</tr>
</tbody>
</table>

**Inserting a Server**

Servers can be inserted only after a network element has been provisioned.

Use this procedure to insert a server:

1. Select Configuration > Servers.
2. Click Insert at the bottom of the table.
   
   The Adding a new server page appears.
3. Enter a Hostname. This is a user-defined name for the server. The server name must be unique across the server table.
   
   For more information about Hostname, or any field on this page, see Add new server configuration elements.
4. Select a Role.
5. Enter the System ID.
6. Select a **Hardware Profile**.

7. Select a **Network Element Name**.

   Select from the network element names defined previously on the Network Element Configuration page.

8. Enter the **IP address** for the appropriate network in the Interfaces grid.

9. Select the **Interface** in the Interfaces grid.

10. Select the **VLAN ID** for the network in the Interfaces grid, if applicable.

11. Select the **Prefer** checkbox for preferred sources.

12. Select **Add** to add the NTP Server IP Address. Enter the NTP Server IP Address in the text box.

13. Enter the **NTP Server IP Address** in the text box.

14. Select the **Prefer** checkbox for the NTP Server IP Addresses.

15. Enter a **Location**.

16. Click **OK** to submit the information and return to the Servers Configuration page, or click **Apply** to submit the information and continue entering additional data.

The server is added to the network databases.

**Servers Configuration elements**

The **Servers Configuration** page lists all servers that are provisioned. This table describes the elements of the **Servers Configuration** page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hostname</td>
<td>The defined name for the server. The name must be unique across the server table. Alphanumeric (A-Z, a-z, 0-9) and hyphen (-) characters are allowed. The Hostname must begin and end with an alphanumeric character.</td>
</tr>
</tbody>
</table>
| Role | The defined role for the network element. Types are:
  - Network OAMP - A pair of servers implementing OAMP functions for the entire network. There is only one pair of NOAMP Servers per network, and they comprise the NOAMP Network Element. There can be only two servers of this type in the Servers table.
  - System OAM - Pairs of servers implementing a centralized database and local OAM functions for each SO Network Element deployed. There can be only two servers of this type per signaling Network Element. **Note:** System OAM is not an available role in systems that do not support SOAMs.
  - MP - Each pair or cluster of servers implementing message processing functions. |
<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Query Server</td>
<td>An independent application server that contains a replicated version of the PDBI database. It accepts replicated subscriber data from the NOAMP and stores it in a customer accessible database. The Role selected here affects which of the following IP Addresses and VLAN IDs are available to be set up.</td>
</tr>
<tr>
<td>System ID</td>
<td>The system ID</td>
</tr>
<tr>
<td>Server Group</td>
<td>The server groups to which the server belongs.</td>
</tr>
<tr>
<td>Network Element</td>
<td>The name of the network element that is associated with each server. The network element must first be configured using the Configuration &gt; Network Elements page before it can be associated with a server.</td>
</tr>
<tr>
<td>Location</td>
<td>The location of the server. This field is optional.</td>
</tr>
<tr>
<td>Place</td>
<td>The Place that the server is assigned to.</td>
</tr>
<tr>
<td>Details</td>
<td>Lists provisioned IP addresses.</td>
</tr>
</tbody>
</table>

**Viewing Servers**

Use this procedure to view servers:

Select Configuration > Servers.

The Servers Configuration page appears.

**Deleting a Server**

Before a server can be deleted the following conditions must be true:

- The server is not part of a server group.
- The server is not configured as a server pair.

Use this procedure to delete a server:

1. Select Configuration > Servers.

   The Servers Configuration page appears.

2. Click to select the server you want to delete.

3. Click Delete.

   Click Yes to confirm.

   The server is deleted from the network database table.
Exporting a server

The server export button generates an installation script file used for hardware configuration. Use this procedure to export a single server. For information about how to export multiple servers at once, see Exporting multiple servers.

1. Select Configuration > Servers.
2. Click to select a server to export.
3. Click Export.
   The server data is exported to an SH file.
4. Click Info.
   The Info box appears.
5. Click the download link to download the file.

Exporting multiple servers

The server export button generates an installation script file used for hardware configuration. Use this procedure to export more than one server.

1. Select Configuration > Servers.
2. Press and hold Ctrl as you click to select multiple servers.
3. Click Export.
   Data for the selected servers is exported to individual SH files located on the Status and Manage > Files page.
4. Click Info.
   The Info box appears.
5. Click the Status and Manage > Files link.
   The Status and Manage > Files page appears. The SH files for the server data exported in this procedure is located on the Status and Manage > Files page.

Generating a Server Report

Use this procedure to generate a server report:

1. Select Configuration > Servers.
2. Click to select the server for which you want to create a report.
   Note: To select multiple servers, press and hold Ctrl as you click to select specific rows.
3. Click Report.
   The servers report appears.
4. Click Print to print the report, or click Save to save a text file of the report.
Server Groups

The Server Groups feature allows the user to assign a function, parent relationships, and levels to a group of servers that share the same role, such as OAMP, SOAM, and MP servers. The Server Groups feature also enables users to create new groups, add servers to existing groups, edit groups, delete servers and server groups, and generate reports that contain server group data.

The Server Group parent selection can now be modified for C-Level servers, dependent upon application allowing the change.

Server Groups Insert elements

This table describes the elements of the Insert Server Groups page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Group Name</td>
<td>A unique name used to label the server group.</td>
<td>Format: Alphanumeric characters and underscore &quot;_&quot; are allowed. A minimum of one alphabetic character is required. Note: Server Group Name must not start with a digit. Range: Maximum length is 32 characters.</td>
</tr>
</tbody>
</table>
| Level                          | The level of the servers belonging to this group.                           | Format: Pulldown menu
Range: Levels A, B, or C                                                        |
| Parent                         | The parent server group that functions as the replication parent of the selected server group | Format: Pulldown menu
Note: If the level of the group being inserted is A, then the parent field is not editable and NONE is displayed in the pulldown menu. |
| Function                       | The defined function for the server group.                                  | Format: Pulldown menu
Range: Functions supported by the system                                         |
| WAN Replication Connection Count | Specify the number of TCP connections that will be used by replication over any WAN connection associated with this Server Group. | Range = An integer between 1 and 8
Default = 1                                                                         |
Inserting a Server Group

Use this procedure to configure a server group:

1. Select Configuration > Server Groups.
2. Click Insert.

   The Insert Server Groups page appears.

3. Enter the Server Group Name.
   For more information about Server Group Name, or any of the fields on this page, see Server Groups Insert elements.

4. Select a Level from the pulldown menu.
5. Select a Parent from the pulldown menu.
6. Select a Function from the pulldown menu.
7. Enter a WAN Replication Connection Count.
8. Click OK to submit the information and return to the Server Groups page, or click Apply to submit the information and continue adding additional data.

Server Groups configuration elements

The Server Groups Configuration screen lists all server groups. The following information is displayed.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Group Name</td>
<td>A unique name used to label the server group. Alphanumeric characters and '_' are allowed. A minimum of one alphabetic character is required. The name cannot start with a digit. Maximum length is 32 characters.</td>
</tr>
<tr>
<td>Level</td>
<td>The level of the servers belonging to this group.</td>
</tr>
<tr>
<td>Parent</td>
<td>The parent server group that functions as the replication parent of the selected server group.</td>
</tr>
<tr>
<td>Function</td>
<td>The defined function for the server group.</td>
</tr>
<tr>
<td>Connection Count</td>
<td>The number of TCP connections that will be used by replication over any WAN connection associated with this Server Group.</td>
</tr>
<tr>
<td>Servers</td>
<td>The list of servers in the server group.</td>
</tr>
</tbody>
</table>
Server Groups Edit elements

The **Edit Server Groups** page allows you to edit existing server groups. This table describes the elements of the **Edit Server Groups** page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Group Name</td>
<td>A unique name used to label the server group.</td>
<td>Format: Alphanumeric characters and underscore &quot;_&quot; are allowed. A minimum of one alphabetic character is required. Must begin with an alphabetic character. Range: Maximum length is 32 characters.</td>
</tr>
<tr>
<td>Function</td>
<td>The defined function for the server group.</td>
<td>This field cannot be edited.</td>
</tr>
<tr>
<td>WAN Replication Connection Count</td>
<td>The number of TCP connections that will be used by replication over any WAN connection associated with this Server Group.</td>
<td>Range = An integer between 1 and 8 Default = 1</td>
</tr>
<tr>
<td>Server</td>
<td>IP Address of the server to be used for clock synchronization. This field is optional.</td>
<td>Format: Valid IP address, or field may be left blank Range: Dotted quad decimal (IPv4) or colon hex (IPv6) <strong>Note</strong>: Server is editable for A-Level server groups. C-Level server groups are editable if allowed by the application.</td>
</tr>
<tr>
<td>SG Inclusion</td>
<td>When checked, the server is included in the server group.</td>
<td>Checkbox</td>
</tr>
<tr>
<td>Preferred HA Role</td>
<td>When checked, the server is marked as a preferred spare. When marked as a preferred spare, the server only assumes an active or standby role if all the other servers in the server group are unavailable.</td>
<td>Checkbox</td>
</tr>
<tr>
<td>VIP Assignment: VIP Address</td>
<td>A virtual IP address shared by the servers in this group that have networking interfaces on the same layer-2 network.</td>
<td>Format: Valid IP address Range: Dotted quad decimal (IPv4) or colon hex (IPv6)</td>
</tr>
</tbody>
</table>
Editing a Server Group

Once a server group is created, certain values can be edited, and available servers can be added to or deleted from the server group. Use this procedure to edit a server group:

1. Select Configuration > Server Groups.
2. From the table, click to select the server group you want to edit.
3. Click Edit.
   The Edit Server Groups page appears.
4. Edit the values you want to change.
   Fields that cannot be edited will be grayed out. For more information about these fields, or any of the fields in this procedure, see Server Groups Edit elements.
5. Click OK to submit the information and return to the Server Groups page, or click Apply to submit the information and continue adding additional data.

Adding a server to a server group

Once a server group is created, servers can be added. Use this procedure to add a server to a server group:

1. Select Configuration > Server Groups.
2. From the table, click to select the server group you want to edit.
3. Click Edit.
   The Edit Server Groups page appears. The Edit Server Groups page displays the servers in the network element that are possible candidates for inclusion in the server group.
4. To add a server to the server group, select the checkbox for SG Inclusion. When checked, the server will be included in the server group.
5. To add a virtual IP address, select Add in the VIP Assignment section and enter the virtual IP address.
6. Click OK to submit the information and return to the Server Groups page, or click Apply to submit the information and continue adding additional data.

Deleting a server from a server group

Use this procedure to delete a server from a server group:

1. Select Configuration > Server Groups.
2. From the table, click to select the server group you want to edit.
3. Click Edit.
   The Edit Server Groups page appears.
4. To delete a server from the server group, select the checkbox for SG Inclusion. When checked, the server will be included in the server group.
5. Click OK to submit the information and return to the Server Groups page.

Assigning a VIP to a server group

Use this procedure to assign a VIP to a server group.
Note: This procedure is optional and is only supported if the system supports VIP.

1. Select Configuration > Server Groups.
2. From the table, click to select the server group you want to edit.
3. Click Edit.
   The Edit Server Groups page appears.
4. Click Add to add a new VIP address to the server group.
   Note: Multiple VIP addresses can be added.
5. Insert the VIP address.
6. Click OK to submit the information and return to the Server Groups page, or click Apply to submit the information and continue adding additional data.

Removing a VIP from a server group
Use this procedure to remove a VIP address from a server group:

1. Select Configuration > Server Groups.
2. From the table, click to select the server group you want to edit.
3. Click Edit.
   The Edit Server Groups page appears.
4. Click to select the VIP you want to remove from the server group.
5. Click Remove.
   The VIP address is removed from the server group.
6. Click OK to submit the information and return to the Server Groups page, or click Apply to submit the information and continue adding additional data.

Deleting a Server Group
Use this procedure to delete a server group.

Note: Only a server group with no existing servers in the group can be deleted. For information about how to delete a server from a server group, see Deleting a Server.

1. Select Configuration > Server Groups.
2. Click to select the server group you want to delete from the table.
3. Click Delete.
   A delete confirmation message appears in a pop up window.
4. Click OK to delete the server group.
   If you click Cancel, the server group will not be deleted, and you will be returned to the Server Groups page.

Server Group Report Elements
The report is divided into two sections and each section contains subsections.
Note: Fields with no data display “n/a” with the exception of Virtual IP Address(es) and NTP Server(s). Virtual IP Address(es) and NTP Servers(s) fields are optional. If no data exists for those fields, then the fields will not display in the report.

<table>
<thead>
<tr>
<th>Section</th>

<td>• Function</td>
</tr>
<tr>
<td></td>
<td>• Server(s)</td>
</tr>
<tr>
<td></td>
<td>• Virtual IP Address(es)</td>
</tr>
<tr>
<td>Server Report</td>
<td>Each network element is listed individually with information about the related servers.</td>
</tr>
</tbody>
</table>

Generating a Server Group Report

Use this procedure to generate a server group report:

1. Select Configuration > Server Groups.
2. Click to select the server group for which you want to create a report.
   Note: To select multiple servers, press and hold Ctrl as you click to select specific rows.

3. Click Report.
   The server group report appears.

4. Click Print to print the report, or click Save to save a text file of the report.

Resource Domains

The Resource Domains function allows you to assign servers to domains.

Add new resource domain elements

This table describes the elements for adding a resource domain element:
### Table 59: Add New Resource Domain Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resource Domain Name</td>
<td>The name for the resource domain.</td>
<td>Format: Alphanumeric (A-Z, a-z, 0-9) and underscore (_) characters. Range: Maximum length is 32 characters</td>
</tr>
<tr>
<td>Resource Domain Profile</td>
<td>The profile associated with the resource domain.</td>
<td>Format: Pulldown list Range: None, Alexa1, Alexa2 Range for PDRA: Policy Binding, Policy DRA, Policy Session</td>
</tr>
<tr>
<td>Server Groups</td>
<td>The server groups associated with the resource domain</td>
<td>Format: Checkbox Range: NO_MP, NO_SG, SO_MP, SO_SG Range for PDRA Policy Binding: NO Server Group, Site1BindingPsbrMpSg, Site1DsrMp1Sg, Site1DsrMp2Sg, Site1SessionPsbrMpSg, Site1SoServerGroup Range for Policy DRA: BindingPsbr1MpSg, IpfeServerGroup, LabCSOAMSG2, LABDDSRMSG, LabDSOAMSG, NOAMP_SG, PDRASG, SOAM_SG, SessionPsbr1MpSg Range for Policy Session: NO Server Group, Site1BindingPsbrMpSg, Site1DsrMp1Sg, Site1DsrMp2Sg, Site1SessionPsbrMpSg, Site1SoServerGroup</td>
</tr>
</tbody>
</table>

### Inserting a Resource Domain

Use this procedure to insert a resource domain:

1. Select **Configuration > Resource Domains**.
2. Click **Insert** at the bottom of the table.

   The **Resource Domains Insert** page appears.
3. Enter a **Resource Domain Name**. This is a user-defined name for the domain. The domain name must be unique.
4. Select a **Resource Domain Profile**.
5. Select a **Server Group**.
6. Click **OK** to submit the information and return to the Resource Domains Configuration page, or click **Apply** to submit the information and continue entering additional data.

The resource domain is added to the network database.

**Editing a Resource Domain**

Use this procedure to edit resource domain information

1. Select **Configuration > Resource Domains**.
2. Select the resource domain from the listing.
3. Click **Edit** at the bottom of the table.

   The Edit Resource Domains page appears.

4. Modify one or more of the resource domain information fields.
5. Click **OK** to submit the information and return to the Resource Domains Configuration page, or click **Apply** to submit the information and continue editing additional data.

The resource domain information is updated in the network database and the changes take effect immediately.

**Viewing Resource Domains**

Use this procedure to view resource domains:

1. Select **Configuration > Resource Domains**.

The Resource Domains configuration page appears.

**Deleting a Resource Domain**

Use this procedure to delete a resource domain:

1. Select **Configuration > Resource Domains**.

   The **Resource Domains Configuration** page appears.

2. Click to select the resource domain you want to delete.

   **Note**: To prevent large service disruptions, you cannot delete a Resource Domain with a profile type or Policy Binding or Policy Session, unless the Policy DRA feature is deactivated. However, resource domains with a profile type of Policy DRA can be deleted without deactivation of the Policy DRA feature.

3. Click **Delete**.

   Click **Yes** to confirm.
The resource domain is deleted from the network database table.

**Generating a Resource Domains Report**

Use this procedure to generate a resource domains report:

2. Click to select the resource domain for which you want to create a report.
   
   **Note:** To select multiple servers, press and hold Ctrl as you click to select specific rows.

3. Click Report.
   The resource domain group report appears.
4. Click Print to print the report, or click Save to save a text file of the report.

**Places**

The Places feature allows you to build associations for groups of servers at a single geographic location. These places can then be grouped into place associations, which create relationships between one or more place.

**Places Insert elements**

This table describes the elements of the Places Insert page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Place Name</td>
<td>A unique name used to label the place.</td>
<td>Format: Alphanumeric characters and underscore &quot;_&quot; are allowed. A minimum of one alphabetic character is required. Range: Maximum length is 32 characters.</td>
</tr>
<tr>
<td>Parent</td>
<td>The parent place group that functions as the replication parent of the selected place</td>
<td>Format: Pulldown menu. Any place that has no servers assigned is eligible to be a parent.</td>
</tr>
<tr>
<td>Place Type</td>
<td>The place type.</td>
<td>Format: Pulldown menu. Range: Site (default option) or defined by the application.</td>
</tr>
<tr>
<td>Servers</td>
<td>List of the available servers in the NO or SO</td>
<td>Format: Checkbox.</td>
</tr>
</tbody>
</table>
Inserting a Place

Use this procedure to configure a place:

1. Select Configuration > Places.
2. Click Insert.

The Insert Places page appears.

3. Enter the Place Name.
   For more information about Place Name, or any of the fields on this page, see Place Insert Elements.
4. Select a Parent from the pulldown menu.
5. Select a Place Type from the pulldown menu.
6. Select the available Servers from the checklist.
7. Click OK to submit the information and return to the Places page, or click Apply to submit the information and continue adding additional data.

Editing a Place

Use this procedure to edit place information

1. Select Configuration > Places.
2. Select the place from the listing.
3. Click Edit at the bottom of the table.
   The Places Edit page appears.
4. Modify one or more of the place information fields.
5. Click OK to submit the information and return to the Places page, or click Apply to submit the information and continue editing additional data.

The place information is updated in the network database and the changes take effect immediately.

Deleting a Place

Use this procedure to delete a place.

1. Select Configuration > Places.
2. Click to select the place you want to delete from the table.
   Note: A Place cannot be deleted if it includes servers or is a Parent Place. Before deleting, disassociate any servers or remove Parent status.
3. Click Delete.
   A delete confirmation message appears in a pop up window.
4. Click OK to delete the place.
   If you click Cancel, the place will not be deleted, and you will be returned to the Places page.
Generating a Places Report

Use this procedure to generate a places report:

1. Select Configuration > Places.
2. Click to select the place for which you want to create a report.
   
   Note: To select multiple servers, press and hold Ctrl as you click to select specific rows.

3. Click Report.
   The place report appears.
4. Click Print to print the report, or click Save to save a text file of the report.

Place Associations

The Place Association function allows you to create relationships between places. Places are groups of servers at a single geographic location.

Place Association Insert elements

This table describes the elements of the Place Association Insert page.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Place Association Name</td>
<td>A unique name used to label the place association.</td>
<td>Format: Alphanumeric characters and underscore &quot;_&quot; are allowed. A minimum of one alphabetic character is required. Range: Maximum length is 32 characters.</td>
</tr>
<tr>
<td>Place Association Type</td>
<td>The type of place association.</td>
<td>Format: Pulldown menu Range: defined by the application</td>
</tr>
<tr>
<td>Places</td>
<td>The places available to be grouped in this association</td>
<td>Format: Checkbox Range: list of places defined using Places function</td>
</tr>
</tbody>
</table>

Inserting a Place Association

Use this procedure to configure a place association:

1. Select Configuration > Place Association.
2. Click Insert.
The Insert Place Associations page appears.

3. Enter the Place Association Name.

For more information about Place Association Name, or any of the fields on this page, see Place Association Elements.

4. Select a Place Association Type from the pulldown menu.

5. Click OK to submit the information and return to the Place Associations page, or click Apply to submit the information and continue adding additional data.

Editing a Place Associations

Use this procedure to edit place associations information

1. Select Configuration > Place Associations.
2. Select the place association from the listing.
3. Click Edit at the bottom of the table.

The Edit Place Associations page appears.

4. Modify one or more of the place associations information fields.

5. Click OK to submit the information and return to the Place Associations Configuration page, or click Apply to submit the information and continue editing additional data.

The place association information is updated in the network database and the changes take effect immediately.

Deleting a Place Association

Use this procedure to delete a place association.

1. Select Configuration > Place Associations.
2. Click to select the place association you want to delete from the table.

Note: You cannot delete a Place Association that includes grouped Places. Before deleting the Place Association, disassociate the Places from the Place Association.

3. Click Delete.

A delete confirmation message appears in a pop up window.

4. Click OK to delete the place association.

If you click Cancel, the place association will not be deleted, and you will be returned to the Place Association page.

Generating a Place Associations Report

Use this procedure to generate a place associations report:

1. Select Configuration > Place Associations.
2. Click to select the place associations for which you want to create a report.
3. Click Report.
The place associations report appears.

4. Click **Print** to print the report, or click **Save** to save a text file of the report.

**DSCP**

The Differentiated Services Code Point (DSCP) pages allow the user to configure service point codes. Through the DSCP Configuration page, Interface and Port DSCP information can be inserted and saved to the configuration.

**Interface DSCP**

The Interface Differentiated Services Code Point (DSCP) pages allow the user to configure server interfaces for service point codes. Through the Interface DSCP Configuration page, DSCP information can be inserted and saved to the configuration.

**Interface DSCP Insert elements**

This table describes the elements of the Interface DSCP Insert page.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>The network interface name</td>
<td>Format: Drop down list</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: valid server interfaces</td>
</tr>
<tr>
<td>DSCP</td>
<td>DSCP value for the associated network interfaces</td>
<td>Format: Numeric</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: 0 to 63, inclusive</td>
</tr>
<tr>
<td>Protocol</td>
<td>TCP or SCTP protocol</td>
<td>Format: Drop down list</td>
</tr>
</tbody>
</table>

**Inserting an Interface DSCP**

Use the following procedure for inserting an interface DSCP.

1. Select **Configuration > DSCP > Interface DSCP**
   
The Interface DSCP page appears.

2. Select the tab for Entire Network, NO_NE or SO_NE1.

3. Click the **Insert** button.
   
The Insert Interface DSCP page appears.

4. Select the **Interface** from the drop down listing of available server interfaces.

5. Enter a valid **DSCP** value. A valid value is an integer between 0 and 63, inclusive.

6. Select **TCP or SCTP protocol** from the drop down list.
7. Click **OK** to submit the information and return to the DSCP page, or click **Apply** to submit the information and continue entering additional data.

The new DSCP is added.

**Deleting an Interface DSCP**

Use the following procedure for deleting an interface DSCP.

1. Select **Configuration > DSCP > Interface DSCP**  
   The Interface DSCP page appears.
2. Select the DSCP configuration to be deleted.
3. Click **Delete**.  
   A confirmation box appears.
4. Click **OK** to delete the DSCP  
   The DSCP is deleted.

**Generating an Interface DSCP Report**

An interface DSCP report provides a summary of the configuration of one or more DSCPs. Reports can be printed or saved to a file.

1. Select **Configuration > DSCP > Interface DSCP**  
   The Interface DSCP page appears.
2. Click **Report** to generate a report for all DSCPs.  
   The DSCP Report is generated.
3. Click **Print** to print the report.
4. Click **Save** to save the report to a file.

**Port DSCP**

The Port Differentiated Services Code Point (DSCP) pages allow the user to configure server ports for service point codes. Through the Port DSCP Configuration page, DSCP information can be inserted and saved to the configuration.

**Port DSCP Insert elements**

This table describes the elements of the Port DSCP Insert page.

**Table 61: Port DSCP Insert Elements**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
</table>
| Port  | A valid TCP or SCTP port | Format: Numeric  
|       |              | Range: 1 to 65535, inclusive |
| DSCP  | DSCP value for the associated port | Format: Numeric  
|       |              | Range: 0 to 63, inclusive |
Inserting a Port DSCP

Use the following procedure for inserting a Port DSCP.

1. Select Configuration > DSCP > Port DSCP
   The Port DSCP page appears.
2. Select the tab for Entire Network, NO_NE or SO_NE1.
3. Click the Insert button.
   The Insert Port DSCP page appears.
4. Enter a valid Port value. A valid value is an integer between 1 and 65535, inclusive.
5. Enter a valid DSCP value. A valid value is an integer between 0 and 63, inclusive.
6. Select TCP or SCTP protocol from the drop down list.
7. Click OK to submit the information and return to the DSCP page, or click Apply to submit the information and continue entering additional data.

The new DSCP is added.

Deleting a Port DSCP

Use the following procedure for deleting a Port DSCP.

1. Select Configuration > DSCP > Port DSCP
   The Port DSCP page appears.
2. Select the DSCP configuration to be deleted.
3. Click Delete.
   A confirmation box appears.
4. Click OK to delete the DSCP
   The DSCP is deleted.

Generating a Port DSCP Report

A Port DSCP report provides a summary of the configuration of one or more DSCPs. Reports can be printed or saved to a file.

1. Select Configuration > DSCP > Port DSCP
   The Port DSCP page appears.
2. Click Report to generate a report for all DSCPs.
   The DSCP Report is generated.
3. Click Print to print the report.
4. Click Save to save the report to a file.
This section provides an overview of alarms and events. Application alarms and events are unsolicited messages used in the system for trouble notification and to communicate the status of the system to Operations Services (OS). The application merges unsolicited alarm messages and unsolicited informational messages from all servers in a network and notifies you of their occurrence. Alarms enable a network manager to detect faults early and take corrective action to prevent a degradation in the quality of service.

Since alarms from each server are merged into one table of alarms at the SOAM and NOAMP servers, alarms should be viewed at the SOAM or NOAMP servers. When you log in to the GUI at the SOAM server, only alarms within that Network Element are visible. However, if you log in to the GUI at the NOAMP server, all alarms in the entire system are visible.

The Alarms and Events menu also features a page for viewing and generating reports of SNMP traps.
Alarms and events defined

Alarms provide information pertaining to a system's operational condition that a network manager may need to act upon. An alarm might represent a change in an external condition, for example, a communications link has changed from connected to a disconnected state. Alarms can have these severities:

- Critical
- Major
- Minor
- Cleared - An alarm is considered inactive once it has been cleared, and cleared alarms are logged on the Alarms & Events > View History page.

Events note the occurrence of an expected condition, such as an unsuccessful login attempt by a user. Events have a severity of Info and are logged on the View History page.

The following figure shows how alarms and events are organized in the application.

Figure 15: Flow of Alarms
Alarms and events are recorded in a database log table. Application event logging provides an efficient way to record event instance information in a manageable form, and is used to:

- Record events that represent alarmed conditions
- Record events for later browsing
- Implement an event interface for generating SNMP traps

Alarm indicators, located in the User Interface banner, indicate all critical, major, and minor active alarms. A number and an alarm indicator combined represent the number of active alarms at a specific level of severity. For example, if you see the number six in the orange-colored alarm indicator, that means there are six major active alarms.

**Figure 16: Flow of Alarms**

**Figure 17: Alarm Indicators Legend**

**Figure 18: Trap Count Indicator Legend**
Alarm and event ID ranges

The AlarmID listed for each alarm falls into one of the following process classifications:

Table 62: Alarm/Event ID Ranges

<td>Name of the server where the alarm occurred</td>
</tr>
<tr>
<td>Type</td>
<td>Alarm or Event Type, e.g. Process, Disk, Platform. See <em>Alarm and event types</em> for more information.</td>
</tr>
<tr>
<td>Instance</td>
<td>Instance of the alarm, e.g. Link01 or Disk02. The Instance provides additional information to help differentiate two or more alarms with the same number. This field may be blank if differentiation is not necessary</td>
</tr>
</tbody>
</table>

**Viewing active alarms**

Active alarms are displayed in a scrollable, optionally filterable table. By default, the active alarms are sorted by time stamp with the most recent alarm at the top.

Use this procedure to view active alarms.

**Note:** The alarms and events that appear in View Active vary depending on whether you are logged in to an NOAM or SOAM. Alarm collection is handled solely by NOAM servers in systems that do not support SOAMs.

1. Select Alarms & Events > View Active.
   The View Active page appears.
2. If necessary, specify filter criteria and click Go.
   The active alarms are displayed according to the specified criteria.

   The active alarms table updates automatically. When new alarms are generated, the table is automatically updated, and the view returns to the top row of the table.
3. To suspend automatic updates, click any row in the table.
   The following message appears: (Alarm updates are suspended.)
   If a new alarm is generated while automatic updates are suspended, a new message appears:
   (Alarm updates are suspended. Available updates pending.)
   To resume automatic updates, press and hold Ctrl as you click to deselect the selected row.
## Active alarms data export elements

This table describes the elements on the View Active Export alarms page.

**Table 65: Schedule Active Alarm Data Export Elements**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Task Name</td>
<td>Name of the scheduled task</td>
<td>Format: Textbox</td>
</tr>
<tr>

<td>Range: 0 to 59</td>
</tr>
<tr>
<td>Time of Day</td>
<td>Time of day the export occurs</td>
<td>Format: Time textbox</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: 15-minute increments</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Default: 12:00 AM</td>
</tr>
<tr>
<td>Day of Week</td>
<td>Day of week on which the export occurs</td>
<td>Format: Radio button</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Range: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, or Saturday</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Default: Sunday</td>
</tr>
</tbody>
</table>
Exporting active alarms

You can schedule periodic exports of alarm data from the Alarms and Events View Active page. Active alarm data can be exported immediately, or you can schedule exports to occur daily or weekly. If filtering has been applied in the View Active page, only filtered data is exported.

During data export, the system automatically creates a CSV file of the filtered data. The file will be available in the file management area until you manually delete it, or until the file is transferred to an alternate location using the Export Server feature. For more information about using Export Server, see Data Export.

Alarm details can be exported to a file by clicking the Export button on the View Active page. The system automatically creates and writes the exported active alarm details to a CSV file in the file management area.

If filtering has been applied in the View Active page, only filtered, active alarms are exported.

Use this procedure to export active alarms to a file. Use this procedure to schedule a data export task.

1. Select Alarms & Events > View Active.
   The View Active page appears.
2. If necessary, specify filter criteria and click Go.
   The active alarms are displayed according to the specified criteria.
3. Click Export.
   The Schedule Active Alarm Data Export page appears.
4. Enter the Task Name.
   For more information about Task Name, or any field on this page, see Active alarms data export elements.
5. Select the Export Frequency.
   Note: Time of Day is not an option if Export Frequency equals Once.
7. Select the Day of Week.
   Note: Day of Week is not an option if Export Frequency equals Once.
8. Click OK or Apply to initiate the active alarms export task.

   From the Status & Manage > Files page, you can view a list of files available for download, including the file you exported during this procedure. For more information, see Displaying the file list.

   Scheduled tasks can be viewed, edited, and deleted, and reports of scheduled tasks can be generated from Status & Manage > Tasks. For more information see:
   - Viewing scheduled tasks
   - Editing a scheduled task
   - Deleting a scheduled task
   - Generating a scheduled task report
9. Click Export.
    The file is exported.
10. Click the link in the green message box to go directly to the Status & Manage > Files page.
From the Status & Manage > Files page, you can view a list of files available for download, including the active alarms file you exported during this procedure.

Generating a report of active alarms

Use this procedure to generate a report.

1. Select Alarms & Events > View Active.
   The View Active page appears.

2. Specify filter criteria, if necessary, and click Go.
   The active alarms are displayed according to the specified criteria. Alternatively, you can select multiple rows and generate a report using those. To select multiple rows, press and hold Ctrl as you click to select specific rows.

3. Click Report.
   The View Active Report is generated. This report can be printed or saved to a file.

4. Click Print to print the report.

5. Click Save to save the report to a file.

Graphing active alarms

The View Active alarm screen includes the ability to produce a set of summary graphs which provide statistical summaries of the active alarms. The active alarms can be graphed based on different topology characteristics or alarm data fields by selecting one or more components from the Graph drop down list. The graphing selections are persistent.

The active alarm graphs display as a series of stacked bar graphs, one bar stack for each server. Each bar stack shows the count of critical, major and minor alarms for the selected items in the Graph drop down list. Multiple graphs display side-by-side for each item selected. The graphs are displayed above the active alarms grid listing.

Use this procedure to graph active alarms:

1. Select Alarms & Events > View Active.
   The View Active Alarms page appears.

2. If necessary, specify filter criteria in the Filter drop down list and click Go.
   The selected Filter criteria are applied to all Server Group tabs. The active alarms that meet the specified criteria will display.

3. Specify one or more graphical information components from the Graph drop down list. Valid components are:
<table>
<thead>
<tr>
<th>Topology Components</th>
<th>Alarm data field components</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network Element</td>
<td>Event ID</td>
</tr>
<tr>
<td>Server</td>
<td>Severity</td>
</tr>
<tr>
<td>Server Group</td>
<td>Product</td>
</tr>
<tr>
<td>Resource Domain</td>
<td>Process</td>
</tr>
<tr>
<td>Place</td>
<td>Server</td>
</tr>
<tr>
<td>Place Association</td>
<td>Type</td>
</tr>
</tbody>
</table>

**Note:** Server is both a topology component and a data field in the active alarm data grid display.

The graphs for the selected components display above the tabbed area.

4. To adjust the graph viewing area, click and hold the slider above the graph while adjusting the proportions with the mouse.

5. To remove one or more graphs, de-select the choices from the **Graph** drop down list.
   If only some choices are deselected, the deselected graphs will disappear. If all choices are deselected, the graph display will disappear.

### Active alarms quick filter

The individual information in the bar stacks of the active alarm graphs can be used to further filter the alarm information in the current Server Group tab. This allows a more focused, quick look at the alarms. The quick filter selection(s) are not persistent. The quick filter settings are cleared once the user browses away from the **View Active Alarms** page.

Quick filter selections from the graph are applied to the grid and all graphs displayed within the current Server Group tab of the **View Active Alarms** page. For example, if the portion of the stacked bar graph that displays the critical alarms is selected, the grid filters to show critical platform alarms and the summary statistics are recalculated to adjust the graphs. If additional portions of the graphs are selected, both the grid and the graphs continue to be filtered according to the selections.

**Note:** Although the quick filter is applied to the grid display, the quick filter criteria are not applied to generated **Reports** and **Exports** of active alarm data. Use the **Filter** pull down menu in the toolbar to filter the data.

Once active alarms have been graphed, use this procedure to apply a quick filter to active alarms in a server group:

1. To add a quick filter, select a portion of the stacked bar graph to filter. The stacked bar displays lists of active alarms by the alarm severity.

   **Note:** Alarm severity types are displayed using the following color distinctions:
   - Critical - Red
   - Major - Orange
   - Minor - Yellow
Upon selection, the filtered graph portion will display green to indicate that it is being used as a filter.

2. Repeat the previous step as needed to filter additional portions of the remaining bar graphs.

3. To remove all quick filtering selections from the active Server Group tab, click **Clear Selections**. The display grid and all graphs display with no quick filtering.

4. To remove individual quick filtering selections from the active Server Group tab, select the portion of the stacked bar graph that is displayed in green. The display grid and all graphs recalculate based on the remaining selections.

### Historical alarms and events elements

This table describes the elements on the **View History** alarms and events page.

**Table 66: Historical Alarms Elements**

<table>
<thead>
<tr>
<th>Historical Alarms Element</th>
<th>Description</th>
</tr>

<tr>
<td><strong>Type</strong></td>
<td>Alarm or Event Type, e.g. Process, Disk, Platform. See <a href="#">Alarm and event types</a> for more information.</td>
</tr>
<tr>
<td><strong>Instance</strong></td>
<td>Instance of the alarm/event, e.g. Link01 or Disk02. The Instance provides additional information to help differentiate two or more alarms/events with the same number. This field may be blank if differentiation is not necessary.</td>
</tr>
</tbody>
</table>

### Viewing alarm and event history

All historical alarms and events are displayed in a scrollable, optionally filterable table. The historical alarms and events are sorted, by default, by time stamp with the most recent one at the top. Use this procedure to view alarm and event history.

**Note:** The alarms and events that appear in View History vary depending on whether you are logged in to an NOAM or SOAM. Alarm collection is handled solely by NOAM servers in systems that do not support SOAMs.

1. Select **Alarms & Events > View History**. The View History page appears.
2. If necessary, specify filter criteria and click **Go**.
   **Note:** Some fields, such as Additional Info, truncate data to a limited number of characters. When this happens, a **More** link appears. Click **More** to view a report that displays all relevant data.
   Historical alarms and events are displayed according to the specified criteria.
   The historical alarms table updates automatically. When new historical data is available, the table is automatically updated, and the view returns to the top row of the table.
3. To suspend automatic updates, click any row in the table.
   The following message appears: (Alarm updates are suspended.)
   If a new alarm is generated while automatic updates are suspended, a new message appears: (Alarm updates are suspended. Available updates pending.)
   To resume automatic updates, press and hold **Ctrl** as you click to deselect the selected row.

### Historical events data export elements

This table describes the elements on the View History Export page.
Table 67: Schedule Event Data Export Elements

<table>
<thead>
<tr>

</tbody>
</table>

Exporting alarm and event history

You can schedule periodic exports of historical data from the Alarms and Events View History page. Historical data can be exported immediately, or you can schedule exports to occur daily or weekly. If filtering has been applied in the View History page, only filtered data is exported.
During data export, the system automatically creates a CSV file of the filtered data. The file will be available in the file management area until you manually delete it, or until the file is transferred to an alternate location using the Export Server feature. For more information about using Export Server, see Data Export.

The details of historical alarms and events can be exported to a file by clicking the Export button on the View History page. The system automatically creates and writes the exported historical alarm details to a CSV file in the file management area.

If filtering has been applied in the View History page, only filtered historical alarms and events are exported. Use this procedure to export alarm and event history to a file. Use this procedure to schedule a data export task.

1. Select Alarms & Events > View History.
   The View History page appears.
2. If necessary, specify filter criteria and click Go.
   The historical alarms and events are displayed according to the specified criteria.
3. Click Export.
   The Schedule Event Data Export page appears.
4. Enter the Task Name.
   For more information about Task Name, or any field on this page, see Historical events data export elements.
5. Select the Export Frequency.
6. If you selected Hourly, specify the Minutes.
7. Select the Time of Day.
   Note: Time of Day is not an option if Export Frequency equals Once.
8. Select the Day of Week.
   Note: Day of Week is not an option if Export Frequency equals Once.
9. Click OK or Apply to initiate the data export task.
   The data export task is scheduled. From the Status & Manage > Files page, you can view a list of files available for download, including the alarm history file you exported during this procedure. For more information, see Displaying the file list.

Scheduled tasks can be viewed, edited, and deleted, and reports of scheduled tasks can be generated from Status & Manage > Tasks. For more information see:
- Viewing scheduled tasks
- Editing a scheduled task
- Deleting a scheduled task
- Generating a scheduled task report

10. Click Export.
    The file is exported.
11. Click the link in the green message box to go directly to the Status & Manage > Files page.
From the Status & Manage > Files page, you can view a list of files available for download, including the alarm history file you exported during this procedure. For more information, see .

Generating a report of historical alarms and events

Use this procedure to generate a report.

1. Select Alarms & Events > View History.
   The View History page appears.

2. Specify filter criteria, if necessary, and click Go.
   The historical alarms and events are displayed according to the specified criteria.

3. Click Report.
   The View History Report is generated. This report can be printed or saved to a file.

4. Click Print to print the report.

5. Click Save to save the report to a file.

View Trap Log

The View Trap Log page allows you to monitor traps from external application equipment, such as switches and enclosures. The purpose of monitoring traps is to gain early warning of possible service impacting conditions. View Trap Log provides a visual indicator of active, existing conditions. It also provides a detailed log recording the historical conditions present in the external monitored hardware and important background information for investigating the root cause of the condition.

View Trap Log elements

This table describes the elements on the View Trap Log page.

Table 68: View Trap Log Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timestamp</td>
<td>The timestamp (in UTC) when the trap record was collected on the current system.</td>
</tr>
<tr>
<td>OID</td>
<td>The Object Identifier (OID) for the trap.</td>
</tr>
<tr>
<td>upTime</td>
<td>The uptime as reported by the monitored external equipment.</td>
</tr>
<tr>
<td>Trap Collector</td>
<td>The name of the server that first logged the trap.</td>
</tr>
<tr>
<td>Element</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Trap Source</td>
<td>The external hostname (or IP, if name cannot be resolved) for the trap source.</td>
</tr>
<tr>
<td>VarBinds</td>
<td>The OID/value pairs found in the varbind list.</td>
</tr>
<tr>
<td>Note:</td>
<td>Only the first few OID/value pairs will be displayed. A link to the report for the record will be added if the varbind list is truncated.</td>
</tr>
<tr>
<td>Acknowledge All</td>
<td>When the <strong>Acknowledge All</strong> button is clicked, up to 2000 traps selected by the filter are cleared. Acknowledged traps are removed from both the trap count indicator and the <strong>View Trap Log</strong> page.</td>
</tr>
<tr>
<td>Acknowledge</td>
<td>Acknowledged traps are removed from both the trap count indicator and the <strong>View Trap Log</strong> page.</td>
</tr>
<tr>
<td>Note:</td>
<td><strong>Acknowledge All</strong> is the default setting for this button. When one or more traps are selected, the button toggles to <strong>Acknowledge</strong>, and only the selected traps are affected.</td>
</tr>
<tr>
<td>Unacknowledge All</td>
<td>When the <strong>Unacknowledge All</strong> button is clicked, all previously acknowledged traps selected by the filter reappear on the page. Unacknowledged traps are added to the trap count indicator.</td>
</tr>
<tr>
<td>Unacknowledge</td>
<td>Unacknowledged traps are added to the trap count indicator.</td>
</tr>
<tr>
<td>Note:</td>
<td><strong>Unacknowledge All</strong> is the default setting for this button. When one or more traps are selected, the button toggles to <strong>Unacknowledge</strong>, and only the selected traps are affected.</td>
</tr>
<tr>
<td>Report All</td>
<td>When the <strong>Report All</strong> button is clicked, a report is generated that contains information about the first 25 traps selected by the filter.</td>
</tr>
<tr>
<td>Report</td>
<td><strong>Report All</strong> is the default setting for this button. When one or more traps are selected, the button toggles to <strong>Report</strong>, and only the selected traps are included in the report.</td>
</tr>
<tr>
<td>Show: Ack'ed</td>
<td>Selection of this checkbox shows (if checked) or hides (if unchecked) the acknowledged trap records.</td>
</tr>
<tr>
<td>Note:</td>
<td>This checkbox is a filter option that is only available on the <strong>View Trap Log</strong> page.</td>
</tr>
</tbody>
</table>

**Viewing trap logs**

Trap logs are displayed in a scrollable, optionally filterable table.

1. Select **Alarms & Events > View Trap Log**.
The View Trap Log page appears.

2. If necessary, specify filter criteria and click **Go**.

3. If necessary, click to select any traps you want to acknowledge.

   **Note:** Acknowledging a trap will cause the trap to be removed from the table and from the trap count indicator. For more information, see View Trap Log elements.

   Alternately, click **Acknowledge All** to acknowledge all traps, or click **Unacknowledge All** to show all traps in the table once again.

   The trap log table updates automatically. When new traps are available, the table is automatically updated, and the view returns to the top row of the table.

4. To suspend automatic updates, click any row in the table.
   The following message appears: (SNMP Trap updates are suspended.)

   If a new trap is generated while automatic updates are suspended, a new message appears: (SNMP Trap updates are suspended. Available updates pending.)

   To resume automatic updates, press and hold **Ctrl** as you click to deselect the selected row.

### View Trap Log Report elements

This table describes the elements on the View Trap Log Report page.

**Table 69: View Trap Log Report Elements**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>acked</td>
<td>Indicates whether the trap has been acknowledged.</td>
</tr>
<tr>
<td></td>
<td>Value = True or False</td>
</tr>

<td>The Network Element of the server that first logged the trap.</td>
</tr>
</tbody>
</table>
### Generating a trap log report

Use this procedure to generate a report..

1. Select **Alarms & Events > View Trap Log**.
   The **View Trap Log** page appears.
2. Click to select the trap log for which you want to create a report.
   
   **Note:** If no trap is selected, the report will contain data about the first 25 traps selected by the filter. Alternately, you can select multiple rows and generate a report using those. To select multiple rows, press and hold Ctrl as you click to select specific rows.

3. Click **Report**.
   
   **Note:** When no trap is selected, the button toggles to **Report All**.
   
   The **View Trap Log Report** page appears.

4. Click **Print** to print the report, or click **Save** to save a text file of the report.
This section provides an overview of security log options. The **Security Log** page allows you to view the historical security logs from all configured servers. Security logs are displayed in a scrollable, optionally filterable table. Security log data can be exported and then retrieved from the **Status & Manage > Files** page.

The **Export** function allows you to export security log files from one or more servers to the file management storage area of the server to which your GUI session is connected. Files in the file management storage area can be viewed from the **Status & Manage > Files** page. The logging feature is an OAM function, so you can be connected to either a NOAMP server or an SOAM server (but not an MP server).

The system automatically creates and writes the exported security log details to a CSV file in the file management area, as the following figure shows. If filtering has been applied in the **View Active** page, only filtered active alarms are exported.

CSV files can be downloaded from the file management storage area to your computer, such as your client PC, using the **Status & Manage > Files** page. See **Files** for steps on how to download files to your computer.
Security Log View History elements

This table describes the elements of the Security Log > View History page.

Table 70: Security Log View History Elements

<table>
<thead>
<tr>
<th>Security Log History Element</th>
<th>Element Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timestamp</td>
<td>The date and time the security record was generated (fractional seconds resolution).</td>
</tr>
<tr>
<td>User</td>
<td>The user initiating the action.</td>
</tr>
<tr>
<td>Sess ID</td>
<td>The session identifier.</td>
</tr>
<tr>
<td>Remote IP</td>
<td>The remote IP address for the user.</td>
</tr>
<tr>
<td>Message</td>
<td>Summary details about the action which generated the security record.</td>
</tr>
<tr>
<td>Status</td>
<td>The status of the action, either SUCCESS or ERROR.</td>
</tr>
<tr>
<td>Screen</td>
<td>The page on which the action occurred, the Login page, for example.</td>
</tr>
<tr>
<td>Action</td>
<td>The user action, login, for example.</td>
</tr>
<tr>
<td>Details</td>
<td>Additional details about the action which generated the security record.</td>
</tr>
<tr>
<td>Server</td>
<td>The server which processed the action.</td>
</tr>
</tbody>
</table>

Viewing security log files

Use this procedure to view security log files.

   The View History page appears.

2. Specify the Collection Interval.
3. If necessary, specify filter criteria and click Go.

   Note: Some fields, such as Details, truncate data to a limited number of characters. When this happens, a More link appears. Click More to view a report that displays all relevant data.

   The security log history displays sorted by collection time stamp.

   Note: There are two relevant time stamps for the security log: the time stamp of the event and the time stamp for when the record was merged. The time stamps display initially using the source time, which makes the report appear unordered. However, the report is indeed sorted by collection time.
Security log data export elements

This table describes the elements on the **View History Export Security Log** page.

Table 71: Schedule Security Log Data Export Elements

<table>

</tbody>
</table>
Exporting security log files

You can schedule periodic exports of security log data from the Security Log View History page. Security log data can be exported immediately, or you can schedule exports to occur daily or weekly. If filtering has been applied in the View History page, only filtered data is exported.

During data export, the system automatically creates a CSV file of the filtered data. The file will be available in the file management area until you manually delete it, or until the file is transferred to an alternate location using the Export Server feature. For more information about using Export Server, see Data Export.

Use this procedure to export security log files. Use this procedure to schedule a data export task.

   The View History page appears.

2. If necessary, specify filter criteria and click Go.
   The security log files are displayed according to the specified criteria.

3. Click Export.
   The Schedule Security Log Data Export page appears.

4. Enter the Task Name.
   For more information about Task Name, or any field on this page, see Security log data export elements.

5. Enter a Description for the export task.

6. Select the Export Frequency.

7. If you selected Hourly as the export frequency, select the Minute of each hour for the data export.

8. Select the Time of Day.
   Note: Time of Day is not an option if Export Frequency equals Once.

9. Select the Day of Week.
   Note: Day of Week is not an option if Export Frequency equals Once.

10. Click OK or Apply to initiate the security log export task.

From the Status & Manage > Files page, you can view a list of files available for download, including the file you exported during this procedure. For more information, see Displaying the file list.

Scheduled tasks can be viewed, edited, and deleted, and reports of scheduled tasks can be generated from Status & Manage > Tasks. For more information see:

- Viewing scheduled tasks
- Editing a scheduled task
- Deleting a scheduled task
- Generating a scheduled task report

11. Click Export.
    The file is exported.

12. Click the link in the green message box to go directly to the Status & Manage > Files page.
From the Status & Manage > Files page, you can view a list of files available for download, including the security log history you exported during this procedure.

If an export fails for any reason, an error message appears indicating this failure.

Generating a Security Log report

Use this procedure to generate a report.

   The View History page appears.

2. Specify the Collection Interval.
3. Specify the filter criteria, if necessary, and click Go.
   The security log files are displayed according to the specified criteria. Alternately, you can select multiple rows and generate a report using those. To select multiple rows, press and hold Ctrl as you click to select specific rows.

   The Security Log Report is generated. This report can be printed or saved to a file.

5. Click Print to print the report.

6. Click Save to save the report to a file.
Chapter 7

Status and Manage

Topics:

- Network Elements.....162
- Server.....163
- HA (High Availability).....171
- Database.....173
- KPIs.....182
- Processes.....185
- Tasks.....187
- Files.....192

This section describes how to view and manage the various types of data generated by the system.
Network Elements

The Network Elements page provides the status of network elements as well as a location in which you can manage Customer Router Monitoring. Customer Router Monitoring, if enabled, monitors connectivity from the system to customer network gateways.

Network elements status elements

This table describes the elements of the Status & Manage > Network Elements page.

Table 72: Network Elements Status Elements

<table>
<thead>
<tr>
<th>Network Elements Status Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network Element Name</td>
<td>The network element name associated with each server hostname. Each configured network element in the system is listed here.</td>
</tr>
<tr>
<td>Customer Router Monitoring</td>
<td>Indicates whether router monitoring is enabled or disabled.</td>
</tr>
<tr>
<td>Enable Ping</td>
<td>A button that enables Customer Router Monitoring for the selected network element.</td>
</tr>
<tr>
<td>Disable Ping</td>
<td>A button that disables Customer Router Monitoring for the selected network element.</td>
</tr>
</tbody>
</table>

Enabling and disabling ping on Network Elements

This procedure describes how to enable or disable Customer Router Monitoring on selected Network Elements.

2. Click to select a Network Element.
3. Click Enable Ping to enable Customer Router Monitoring, or click Disable Ping to disable Customer Router Monitoring.
   A confirmation window appears.
4. Click OK to continue.
   A progress bar that displays the message "Please wait..." appears.

A message appears in the Information area of the screen to confirm the success of the procedure. The Customer Router Monitoring status has been changed.

If the procedure fails, an error message appears. Repeat steps Step 2 through Step 4. If the problem persists, contact My Oracle Support.
Server

The Server page provides a single point for monitoring collected data, isolating problems, and performing actions required for server maintenance. This page provides roll-up status for six subsystems on each server defined in the network. You can navigate to individual subsystem status pages for more detailed information with a single click on the Server page.

Server status elements

This table describes the elements on the Status & Manage > Server page.

Table 73: Server Status Elements

<table>
<thead>
<tr>
<th>Server Status Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network Element</td>
<td>The network element name associated with each Server Hostname.</td>
</tr>
<tr>
<td>Server Hostname</td>
<td>The server hostname. All servers in the system are listed here.</td>
</tr>
<tr>
<td>Appl State</td>
<td>An administrative state that reflects the state of the application running on each server. Possible states are Enabled, Disabled, and Unk (Unknown indicates the application state cannot be determined due to an error).</td>
</tr>
<tr>
<td>Alm</td>
<td>Aggregated alarm status for each server. Possible values are Norm, Err, Warn, and Unk.</td>
</tr>
<tr>
<td>DB</td>
<td>Aggregated database status for each server. Possible values are Norm, Err, Warn, Unk, and Man.</td>
</tr>
<tr>
<td>Reporting Status</td>
<td>Reporting status for each server. Possible values are Norm, Err, Warn, Unk, and Man.</td>
</tr>
<tr>
<td>Proc</td>
<td>Aggregated process status for each server. Possible values are Norm, Err, Unk, and Man.</td>
</tr>
</tbody>
</table>

Server Status

Each server collects performance data and status information for several subsystems. Since the system may consist of hundreds of geographically diverse servers, you need the ability to monitor this data and quickly isolate problems.

There are several aspects to monitoring server status. You can monitor the administrative state of each server in the system, as well as the status of the alarms, replication, collection, high availability, database, and process systems on each server.
The **Application State** field for each server displays the current administrative state of the application running on that server. Stopping application software places it in the Disabled **Application State**. Restarting application software places it in the Enabled **Application State**. Servers that are restarted by clicking **Restart** will restart all application processes, regardless of their current state.

**Note**: Enabled and Disabled are administrative states. They do not reflect the current status or running state of the application software.

The Collection subsystem gathers status and alarm information from all other subsystems. Each of these subsystems reports varying degrees and severities of status. The status reported is not the same between subsystems. For this reason, the **Server Status** page provides a common status reporting framework to help identify problems at a server level.

### Reporting status framework

This table describes the reporting framework:

**Table 74: Reporting Status Framework**

<table>
<thead>
<tr>
<th>Reporting Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Norm</strong> (Normal)</td>
<td>The subsystem is operating as expected.</td>
</tr>
<tr>
<td><strong>Warn</strong> (Warning)</td>
<td>The subsystem is experiencing one or more minor problems.</td>
</tr>
<tr>
<td><strong>Err</strong> (Error)</td>
<td>The subsystem is experiencing one or more Major or Critical problems.</td>
</tr>
<tr>
<td><strong>Man</strong> (Manual Maintenance)</td>
<td>The subsystem has been placed in a manually assigned state.</td>
</tr>
<tr>
<td><strong>Unk</strong> (Unknown)</td>
<td>No information is available for the subsystem. When there is a problem gathering data in the Alarm, HA, or Database subsystems, the Collection subsystem sends a status of <em>unknown</em>.</td>
</tr>
</tbody>
</table>

Not all of the subsystems report status per server. The HA Status subsystem shares some status information between two servers. The **Server** page combines status information into a single status per subsystem per server.

How status is reported for each subsystem is explained in more detail in these sections:

- *Alarm status elements*
- *HA status elements*
- *Database status elements*
- *Process status elements*

### Alarm status elements

Alarm status is derived from all of the alarms present on a server. For information on the alarms subsystem, see *Alarms and events defined*. This table describes the possible alarm severities and their equivalent reporting statuses on the **Server** page.
Table 75: Alarm Status vs Reporting Status

<table>
<thead>
<tr>
<th>Alarm Status</th>
<th>Reporting Status Equivalent</th>
<th>Priority</th>
<th>Color</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unknown</td>
<td>Unk</td>
<td>1 (highest)</td>
<td>Red</td>
</tr>
<tr>
<td>Critical</td>
<td>Err</td>
<td>2</td>
<td>Red</td>
</tr>
<tr>
<td>Major</td>
<td>Err</td>
<td>3</td>
<td>Orange</td>
</tr>
<tr>
<td>Minor</td>
<td>Warn</td>
<td>4</td>
<td>Yellow</td>
</tr>
<tr>
<td>None</td>
<td>Norm</td>
<td>5 (lowest)</td>
<td>-</td>
</tr>
</tbody>
</table>

Database status elements

The Server page combines the individual status, maintenance, and the collection delivery mechanism into a single database status. The highest priority status is the one reported to the Server page.

Note: Unknown is the status reported when a failure prevents the reporting or the collection of database status.

Table 76: Database Status vs Reporting Status

<table>
<thead>
<tr>
<th>Database Status</th>
<th>Reporting Status Equivalent</th>
<th>Priority</th>
<th>Color</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Maintenance in Progress</td>
<td>Maintenance NOT in Progress</td>

</tr>
<tr>
<td>Unknown</td>
<td>Unk</td>
<td>Unk</td>
<td>1 (highest)</td>
</tr>
<tr>
<td>Critical</td>
<td>Man</td>
<td>Err</td>
<td>2</td>
</tr>
<tr>
<td>Major</td>
<td>Man</td>
<td>Err</td>
<td>3</td>
</tr>
<tr>
<td>Minor</td>
<td>Man</td>
<td>Warn</td>
<td>4</td>
</tr>
<tr>
<td>Normal</td>
<td>Man</td>
<td>Norm</td>
<td>5 (lowest)</td>
</tr>
</tbody>
</table>

HA status elements

HA Status is derived from the HA Status and HA Availability fields on the HA Status page. The collection mechanism is combined with status and availability but not with the forced standby state.

The Server page reports High Availability manual maintenance status (forced standby) differently from other status subsystems. Most manual maintenance statuses are stored on the affected server, collected to the reporting server, and displayed. The forced standby state is replicated rather than collected, and is therefore available directly on the reporting server.

Note: Unknown is the status reported when a failure prevents the reporting or the collection of HA availability.
Table 77: HA Status vs Reporting Status

<table>
<thead>
<tr>
<th>HA Status</th>
<th>Reporting Status Equivalent</th>
<th>Priority</th>
<th>Color</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Forced Standby</td>

</tr>
<tr>
<td>Degraded</td>
<td>Man</td>
<td>Warn</td>
<td>4</td>
</tr>
<tr>
<td>Normal</td>
<td>Man</td>
<td>Norm</td>
<td>5 (lowest)</td>
</tr>
</tbody>
</table>

Process status elements

The Server page combines the individual process status and the collection delivery mechanism into a single process status. The highest priority status is the one reported to the Status page. Processes which are intentionally not running on the server do not show up in process status.

Note: Unknown is the status reported when a failure prevents the reporting or the collection of process status.

Table 78: Process Status vs Reporting Status

<table>
<thead>
<tr>

</tbody>
</table>

Server errors

There are three ways to view servers with alarm status other than Normal:

- **Viewing the Server Status page**: All servers appear on this page along with the highest alarm for each subsystem.
- **Mousing over an aggregated server status**: The underlying status reported by the subsystem appears when the cursor moves over that status.
- **Viewing the aggregated server status**: The aggregated status for each subsystem is a link to the selected subsystem’s page. The page provides details for the selected server only. Click on the link to view the status for the selected server.
Aggregated server status elements

Clicking a status link opens the status page that corresponds to the selected column and filters that page by the server corresponding to the selected row.

Table 79: Click-Through Status Screen

<table>
<thead>
<tr>

<td>Processes Page - see Processes</td>
</tr>
</tbody>
</table>

Displaying aggregated server status

Use this procedure to display a corresponding status page:

1. Select Status & Manage > Server.
   
   The Server Status page appears.

2. Click the status field for which you want to view more details.

   The related status page appears with only the selected server in the status table.

Stopping the application

Use this procedure when the application on a server needs to be stopped. Stopping the application software places it in the Disabled Application state. Examples of when to stop the application include times when you need to delete a server, change a server role, or perform a system restore.

GUI sessions are not affected by the stop and restart application software actions. You may continue to use the GUI as these actions progress. You may use GUI sessions connected to servers with stopped application software. GUI provisioning may be affected if the server is the active NOAMP server. Stopping and starting application software may cause a switchover as well; you can observe changes in the status of those servers from the Server Status page.

Warning: Do not click Stop for an application until you have assessed the impact on the system. Stopping the application on a server can adversely affect processes on this server and/or other servers in the network element.

1. Select Status & Manage > Server.
   
   The Server Status page appears.

2. Click to select the server you want to stop.
Alternately, you can select multiple servers to stop. To select multiple rows, press and hold Ctrl as you click to select specific rows.

3. Click Stop.
   A warning message appears:
   
   Are you sure you wish to stop application software on the following server(s)? <server name>

4. Click OK to continue.

Application processes are disabled on this server. Stopping the application or restarting running software influences the High Availability subsystem by raising an alarm. Stopping application software affects server processing in the following ways:

- Servers continue to emit alarms and collect measurements.
- NOAMP and SOAM servers continue to publish replicated data and accept GUI connections.
- SOAM and Message processing servers continue to subscribe to replicated data.
- NOAMP servers do not accept provisioning/configuration changes.
- MP servers do not maintain signaling connections nor process messages.

**Restarting the application**

If the Application State displays Disabled, Restart starts the software. If the Application State displays Enabled, Restart stops and then starts the software. Restarting the software places it in the enabled state.

A Restart can be used:

- To restart a newly created server, which has software in the disabled state.
- When a server is removed and re-added to topology and has software in the disabled state.

GUI sessions are not affected by the restart application software action. You may continue to use the GUI as these actions progress. You may use GUI sessions connected to servers with application software being restarted. GUI provisioning may be affected if the server is the active NOAMP server. Stopping and starting application software may cause a switchover as well; you can observe changes in the status of these servers from the Server Status page.

**Warning:** Do not click Restart for an application until you have assessed the impact on the system. Restarting the application on a server can adversely affect processes on this server and/or other servers in the network element.

Use this procedure to restart the application on a server:

1. Select Status & Manage > Server.
   The Server Status page appears.

2. Click to select the server you want to restart.
   Alternately, you can select multiple servers to restart. To select multiple rows, press and hold Ctrl as you click to select specific rows.

3. Click Restart
   A warning message appears:
   
   Are you sure you wish to restart application software on the following server(s)? <server name>
4. Click OK to continue.

Application processes are restarted on this server. Restarting running software influences the High
Availability subsystem by raising an alarm. If the software is running when the Restart is selected,
the stopping of the software affects server processing in the following ways:

• Servers continue to emit alarms and collect measurements.
• NOAMP and SOAM servers continue to publish replicated data and accept GUI connections.
• SOAM and Message processing servers continue to subscribe to replicated data.
• NOAMP servers do not accept provisioning/configuration changes.
• Message Processing servers do not maintain signaling connections nor process messages.

Rebooting a server

A server should not be rebooted until you have assessed the full impact on the system. This list describes
what happens when servers of different roles are rebooted:

• **OAM Server controlling GUI session:** Reboot of OAM Servers ends all GUI sessions controlled
  by that server. Note that the reboot may reboot the server controlling your GUI session. After the
  reboot sequence completes, you can re-establish a GUI session with the rebooted server. You are
  presented with a login screen and will need to re-authenticate to create a new session.

• **Active OAM Server:** Stopping and starting application software may cause a switchover. You have
  different capabilities on Active vs. Standby OAM servers, depending on the feature. For example,
  provisioning is only allowed from the Active NOAMP server.

• **Other Servers:** Rebooting Message Processing servers and Standby OAM servers without GUI
  sessions has no direct GUI impact. You can observe changes in the status of these servers. A BR
  tag was used here in the original source.

**Warning:** Do not click Reboot for a server until you have assessed the impact on the
system. Reboot temporarily halts all services on the designated server; do not perform
a Reboot unless other servers within the network element can take over the traffic load.

Use this procedure to reboot a server:

1. Select **Status & Manage > Server**.
   TheServer Status page appears.

2. Click to select the server you want to reboot.
   Alternately, you can select multiple servers to reboot. To select multiple rows, press and hold Ctrl
   as you click to select specific rows.

3. Click **Reboot**.
   A warning message appears:
   **Are you sure you wish to reboot the following server(s)? <server name>**

4. Click OK to continue.
   The specified server is rebooted. Rebooting the server influences the High Availability subsystem.
   The rebooted server’s mate no longer detects HA heartbeats and raises an alarm.
NTP Sync

Periodically a user has the need to sync or resync one or more servers to the preferred NTP source. This might be required for various reasons including a network change, a new NTP server has been added, or a disaster recovery of an existing NTP server has taken place. Capabilities differ depending on the application. For example, The DSR Network OAM will present a broader scope of eligible servers than the DSR System OAM but the functionality remains the same.

Warning: This operation should be planned. Critical processes are temporarily shutdown in order to complete the action. The user should understand the concepts of the High Availability (HA) subsystem related to Max Allowed HA Role. Reference HA (High Availability).

Note: NTP Sync can only be performed on a server that currently reflects a Max Allowed HA Role of Standby, Spare or Observer.

Use this procedure to perform an NTP Sync on one or more servers.

1. Select Status and Manage > HA.
   The HA Status page appears.

2. Identify the target server(s) on which you want to perform the NTP Sync action. Confirm that all target servers reflect a Max Allowed HA Role of either Standby, Spare or Observer.

3. Select Status and Manage > Server.
   The Server Status page appears.

4. Select one or more targets servers and click NTP Sync.
   A warning message appears:
   Are you sure you wish to force an NTP Sync on the following server(s)?

5. Click OK to continue.
   The NTP sync action is invoked on the target server(s). A message is displayed at the top of the work area informing the user of the status of the operation.

Generating a server status report

Use this procedure to generate a server status report on one or more servers. This report differs from the server configuration report in that it presents server status information as defined in the server status elements table. Reference Server status elements.

1. Select Status & Manage > Server.
   The Server status page appears.

2. Select one or more servers.
   Note: If no servers are selected then all servers will appear in the status report.

3. Click Report.
   The server report is generated.

4. Click Print to print the report, or click Save to save a text file of the report to your local workstation.
HA (High Availability)

HA Status provides the status of the HA relationships for OAM and MP servers, which are configured to run as either active-standby server pairs or individual servers. The internal status fields are used to map to a Derived HA Status. The Derived HA Status is displayed as the HA Status.

The Availability state of a server is used by HA to determine when a switchover is necessary. Availability is ranked with a score. A lower score is better and means the server is in better health. The decision to switchover is based on this score. The switchover will only occur if a Standby server is deemed to be in better health (has a lower score) than an Active server. If the Standby’s score is equal to or higher than the Active’s score, then a switchover does not occur. In the HA Status screen, the server taking over shows its HA Status going to Active and HA Role going to Providing Service. The mate will show its unhealthier status.

Availability states are driven from conditions or events which have occurred on a server. As events and conditions change on a server, its Availability status can change. Depending on the set of conditions on an Active-Standby server pair, a switchover may occur.

HA status elements

The HA page displays detailed status of how HA is working in the entire network in tabular form. This table describes the details displayed for all servers:

Table 80: HA Status Elements

<table>
<thead>
<tr>
<th>HA Status Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hostname</td>
<td>The server’s hostname.</td>
</tr>
<tr>
<td>OAM HA Role</td>
<td>The operational OAM HA role of the server:</td>
</tr>
<tr>
<td></td>
<td>• Active: Server is running as the Active server. It is providing service and owns the VIP.</td>
</tr>
<tr>
<td></td>
<td>• Standby: Server is running as the Standby server. It is ready to provide service in the event of a switch over.</td>
</tr>
<tr>
<td></td>
<td>• Spare: Server is running as the Spare server.</td>
</tr>
<tr>
<td></td>
<td>• Observer: Server is running as the Observer server.</td>
</tr>
<tr>
<td></td>
<td>• OOS: Server is out of service for that role.</td>
</tr>
<tr>
<td>Application HA Role</td>
<td>The operational application HA role of the server:</td>
</tr>
<tr>
<td></td>
<td>• Active: Server is running as the Active server. It is providing service and owns the VIP.</td>
</tr>
<tr>
<td></td>
<td>• Standby: Server is running as the Standby server. It is ready to provide service in the event of a switch over.</td>
</tr>
<tr>
<td></td>
<td>• Spare: Server is running as the Spare server.</td>
</tr>
</tbody>
</table>
### Viewing HA status data

Use this procedure to view HA status data:

Select **Status & Manage > HA**.

The **HA Status** page appears.

### Modifying the HA Status

Use this procedure to modify the HA status:

1. Select **Status & Manage > HA**.
   
The HA Status and Manage page appears.
2. Click **Edit**.
3. Change the **Max Allowed HA Role** for any hostname on the list.
   
   **Note**: At least one NOAMP must remain active on the network.
4. Click **Ok** to save the changes.

The modifications are written to the database. The change takes effect immediately.

### Sorting HA status data

HA status data is not displayed in a particular default order. To sort the HA status data, click on any of the column headers in the HA status table to sort the table by that column. Clicking again on the

<table>
<thead>
<tr>
<th>HA Status Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Observer: Server is running as the Observer server.</td>
</tr>
<tr>
<td></td>
<td>• OOS: Server is out of service for that role.</td>
</tr>
<tr>
<td>Max Allowed HA Role</td>
<td>The administrative maximum allowed HA role that the server is allowed to achieve. Defaults are:</td>
</tr>
<tr>
<td></td>
<td>• NOAMP: Active</td>
</tr>
<tr>
<td></td>
<td>• SOAM: Active</td>
</tr>
<tr>
<td></td>
<td>• MP: Active</td>
</tr>
<tr>
<td></td>
<td>• Query Server: Observer</td>
</tr>
<tr>
<td>Mate Hostname List</td>
<td>List of possible hostnames that can act as the server’s mate.</td>
</tr>
<tr>
<td>Network Element</td>
<td>The network element that the server belongs to.</td>
</tr>
<tr>
<td>Server Role</td>
<td>The server’s role (, Query Server, or MP for Message Processor).</td>
</tr>
<tr>
<td>Active VIPs</td>
<td>An indication of all VIPs that are active on the server</td>
</tr>
</tbody>
</table>
same column header reverses the direction of the sort (ascending or descending). To return to the table's original ordering, click **Status & Manage > HA**.

## Database

The **Database** page provides:

- The ability to disable and enable provisioning system-wide on the active NOAM and site-wide on the active SOAM.
- Database status information for each server in the network. The system tracks alarms associated with a database and displays this information on the **Database** page.
- Access to several database functions. These functions include: disabling and enabling provisioning; displaying a database status report; inhibiting and allowing replication; backing up and restoring database and/or provisioning information; comparing the current database version to a backup to ensure schema compatibility; initiate a manual audit and suspend an automated audit. With the exceptions of restore and replication, these functions affect a single OAM server only.
- The status of database backups.
- The durability status.

### Database status elements

The **Database** page displays status information and functions on a per server basis. This table describes the elements on the **Status & Manage Database** page.

**Note:** At the top of the Database Status and Manage screen is an **Info** display. Database maintenance operations, for example, automatic and manual backups, or restore messages, are listed in this information display. While not technically a status table element, this display provides important information and should be viewed periodically.

**Table 81: Database Status Elements**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network Element</td>
<td>The name of the Network Element to which the server belongs.</td>
</tr>
<tr>
<td>Server</td>
<td>Name of the Server.</td>
</tr>
<tr>
<td>Role</td>
<td>The role the server plays in the system.</td>
</tr>
<tr>
<td>OAM Max HA Role</td>
<td>The observed maximum high availability role among all resources in policy 0 on the server:</td>
</tr>
<tr>
<td></td>
<td>• Active: Server is running as the Active server.</td>
</tr>
<tr>
<td></td>
<td>• Standby: Server is running as the Standby server. It is ready to provide service in the event of a switch over.</td>
</tr>
<tr>
<td></td>
<td>• Spare: Server is running as the Spare server.</td>
</tr>
<tr>
<td></td>
<td>• Observer: Server is running as the Observer server.</td>
</tr>
</tbody>
</table>
### Element | Description
--- | ---
Application Max HA Role | The observed maximum HA role among all resources in all other policies on the server:  
- **Active**: Server is running as the Active server for application policies.  
- **Standby**: Server is running as the Standby server. It is ready to provide service in the event of a switch over.  
- **Spare**: Server is running as the Spare server.  
- **Observer**: Server is running as the Observer server.  
- **OOS**: Server is out of service.

Status | Alarm status for a server; status is reported for a server as the highest severity of all database alarms associated with that server. The status of the server affects the color of that server row:  
- **Normal**: No alarms related to DB status (no change in background color).  
- **Minor**: The server has raised a minor alarm that relates to DB status (yellow background).  
- **Major**: The server has raised a major alarm that relates to DB status (orange background).  
- **Critical**: The server has raised a critical alarm that relates to DB status (red background).  
- **Unknown**: Alarm collection is not possible or reports an error (red background).

DB Level | The database update level on a server. This value is incremented by certain types of database updates and allows the user to compare DB levels across different servers.

OAM Repl Status | OAM Replication status for a server as reported by COMCOL:  
- **Unknown**: no current status information.  
- **Normal**: all links are normal.  
- **Degraded**: some replication links are up, some are down.  
- **Failed**: all replication links to this server are down or failed.  
- **Not Applicable**: replication does not apply.  
- **Not Configured**: replication is not configured.  
- **Auditing**: all links are auditing or normal, zero links are down.
Signaling Replication status for a server as reported by COMCOL:

- Unknown - no current status information.
- Normal - all links are normal.
- Degraded - some replication links are up, some are down.
- Failed - all replication links to this server are down or failed.
- Not Applicable - replication does not apply.
- Not Configured - replication is not configured.
- Auditing - all links are auditing or normal, zero links are down.

Displays whether replication is inhibited for the server. The inhibiting of replication on servers occurs automatically during the Restore procedure.

Displays whether replication auditing is in progress for the server.

### Viewing database status

The Database Status page displays a table of all servers and their associated database status. In order to identify servers that require attention, information for each database is condensed into a single status, which is shown in the Status column. The database alarm status indicates the severity of the most severe database-related alarm on each server. This status affects the color of the background for the server status cell. For more details on the Status element and a description of the background colors, see the Status description in the table in the previous section, Database status elements.

Use the following procedure to view the database status for servers:

Select Status & Manage > Database.

### Sorting database data

Database data is not displayed in a particular default order. To sort the database data, click on any of the column headers in the Database status table to sort the table by that column. Clicking again on the same column header reverses the direction of the sort (ascending or descending).

### Generating the server database report

The Server Database Report provides detailed information about a selected server, such as:

- Name of the server on which the report is generated
- Any associated database alarms
- Any associated database maintenance in progress
Current database disk and memory utilization
• Other service information of use to My Oracle Support personnel when diagnosing a problem

Use this procedure to generate a server database report:

1. Select Status & Manage > Database.
   The Database Status page appears.

2. Click to select the server for which you want to generate a report.

3. Click Report.
   The Database Report for the selected server appears on a new page.

4. Click Print to print the report.

5. Click Save to save the report to a file.

Inhibiting/Allowing replication of data

The Database Status page provides manual control for inhibiting and re-allowing database replication on servers.

Note: The inhibiting of replication on servers occurs automatically during the Restore procedure. For information on this process, see Restoring data to the active NOAMP server.

Use this procedure to inhibit replication on a server:

1. Select Status & Manage > Database.
   The Database Status page appears.

2. Click to select the server for which you want to inhibit replication.

3. Click Inhibit Replication.
   A confirmation box displays the message, Inhibit replication to server <servername>. Are you sure?

4. Click OK.

Replication for the selected server is inhibited. The text on the button changes from Inhibit Replication to Allow Replication for the selected server, and Inhibited appears in the last column in the selected server’s row. When you are ready to allow replication on this server again, click Allow Replication.

Backing up data

Backup allows you to capture and archive data configured and/or provisioned on a specific NOAMP or SOAM server. All files that are part of the backup are archived into a single file in the file management storage area. For information on file storage and file name format conventions, see Files.

A backup of configuration and/or provisioning data on the NOAMP or on an SOAM server can be initiated or terminated from the Database Status page. The status of a backup can be viewed from the Backup and Archive page.

Note: You must be logged into the active server to backup data for that server. For example, to perform a backup of NOAMP configuration or provisioning data, you must be logged into the active NOAMP.
To perform a backup of SOAM configuration data, you must be logged into the active SOAM. Data backup is handled solely by NOAMP servers in systems that do not support SOAMs.

**Note:** Depending on the application, the Provisioning button may not be functional. For example, on the active DSR NOAMP, the Provisioning button is presented but disabled. The active UDR NOAMP presents the button as functional and the user may toggle the selection as desired.

**Note:** Only Configuration data can be backed up on SOAM. The Provisioning button is not functional on SOAM and cannot be checked. Only the Configuration button is active.

Use this procedure to backup data for a server.

1. Select **Status & Manage > Database**.
   
   The **Database Status** page appears.

2. Click **Disable Provisioning**, then click **OK**.
   
   Provisioning and configuration updates are disabled for all servers, and the **Disable Provisioning** button changes to **Enable Provisioning**.

   **Note:** On an NOAMP, this means provisioning and configuration are disabled system-wide. On an SOAM, configuration is disabled only on the SO level.

3. Click to select the Active server in the Network Element that contains the data you want to backup.

4. Click **Backup**.
   
   The **Database Backup** page appears.

5. Select the data to be backed up, either **Provisioning**, **Configuration**, or both.

   **Note:** Only Configuration data can be backed up on SOAM. The Provisioning button is not functional on SOAM and cannot be checked. Only the Configuration button is active.

6. Select the backup archive compression algorithm, either gzip, bzip2, or none.

   **Note:** When backing up a database above 300M for SDS provisioning, it is recommended that you do not use bzip2.

7. Enter a comment in the **Comment** field to identify the backup file.
   
   This information is stored as part of the backup file and is displayed before a restore of the file occurs.

8. Change the **Archive Filename**, if desired.

9. Click **Ok**.

   The backup begins. When the backup begins, the **Database Status** page appears again. The status of the backup appears in the information message box with a message similar to this:

   ```
   Backup on <server_name> status MAINT_IN_PROGRESS.
   ```

   The only action that can be taken for this server while a backup is in progress is **Report**. The backup is complete when the status message changes to:

   ```
   Backup on <server_name> status MAINT_CMD_SUCCESS. Success
   ```

10. Click **Enable Provisioning**, then click **OK**.
Note: You do not have to wait until the backup is complete to re-enable provisioning and configuration updates.

Provisioning and configuration updates are enabled for all servers, and the Enable Provisioning button changes to Disable Provisioning.

The backed up data is stored in a compressed file and copied to the file management storage area of the server that was backed up. Use the Status & Manage > Files option to access this file. To transfer the file off-site, use the procedure, Uploading a file to an alternate location.

Database Archive Compare elements

The Database Archive Compare page displays a database report for the selected server. The databases and topologies are compared and the results displayed. This table describes the elements of the Database Archive Compare page.

Table 82: Database Status Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SBR Database Compatibility</td>
<td>The compatibility status of the SBR databases being compared.</td>
</tr>
<tr>
<td>Archive Contents</td>
<td>The type of data that has been archived.</td>
</tr>
<tr>
<td>Database Compatibility</td>
<td>The compatibility status of the databases being compared.</td>
</tr>
<tr>
<td>Node Type Compatibility</td>
<td>The compatibility status of the relevant nodes.</td>
</tr>
<tr>
<td>Topology Compatibility</td>
<td>The compatibility status of the topology.</td>
</tr>
<tr>
<td>User Compatibility</td>
<td>The compatibility of the user and authentication data.</td>
</tr>
<tr>
<td>Contents</td>
<td>The contents of the archived database.</td>
</tr>
<tr>
<td>Table Instance Counts</td>
<td>Compares the number of database tables in the current database versus the database archive.</td>
</tr>
</tbody>
</table>

Comparing a backup file to an active database

The Compare page allows you to select a backup file in the file management storage area to compare and authenticate to the current database on the selected server. You must have at least two backup files in order to do a comparison.

Use this procedure to compare a backed up file with an active database:

1. Select Status & Manage > Database.

The Database Status page appears.

2. Click to select the server whose data you want to compare to a backup.

3. Click Compare.
4. The **Database Compare** page appears.
5. Click a radio button to select the backup to compare.
6. Click **OK**.
   The **Database Archive Compare** page appears displaying a database report for the selected server. The databases and topologies are compared and the results displayed.
7. Click **Print** to print the report.
8. Click **Save** to save the report to a file.

### Restoring data to the active NOAMP server

**Caution:** This information is provided for informational purposes only and does not grant permission to the customer to enact these procedures. The database restore operation is a service affecting procedure and careful consideration needs to be taken before executing database restore. All restore procedures shall be performed by Oracle Communications or its authorized representatives using the product specific Disaster Recovery guide.

Restore allows you to select and re-apply previously stored data across all components. Restorations can only be performed from the active NOAMP server.

**Note:** Restoration to any server other than the active NOAMP prevents proper provisioning and replication control within the network.

Restoration causes HA activity to switch from the targeted NOAMP server at the start to the mate of the target server, and back again on completion.

During restoration, the target server’s database is stopped so that the database tables may be replaced with those contained in the Backup and Archive file. No alarms, events, measurements, or other stateful or collected data is archived by the target server for that time period. The target server begins recollecting that data once restoration is complete.

Restoration automatically enacts replication control on all application servers. This isolates the changes to the server being restored and allows the remainder of the network to operate without impact. Restoration automatically disables provisioning using the provisioning control subsystem. This stabilizes the database contents for the duration of the restoration procedure.

Several procedures are used during the restore process. The order in which they are performed varies depending on the number of servers and the setup of your system. Before data restoration can occur, the archived file being restored must be transferred to the file storage area. For more information, see *Uploading a local file*.

The documentation that came with your application provides a detailed list of all steps to perform during a restore, as well as the order in which to perform them. However, this information is provided for informational purposes only and does not grant permission to the customer to enact these procedures. Contact My Oracle Support for more information about restoring data.
Confirming a restore procedure on the active NOAMP server

**Caution:** This information is provided for informational purposes only and does not grant permission to the customer to enact these procedures. The database restore operation is a service affecting procedure and careful consideration needs to be taken before executing database restore. All restore procedures shall be performed by Oracle Communications or its authorized representatives using the product specific Disaster Recovery guide.

After the restore procedure is initiated, the **Database Restore Confirm** page appears. This page contains information about the compatibility status of the server and the selected archive.

The documentation that came with your application provides a detailed list of all steps to perform during a restore, as well as the order in which to perform them. However, this information is provided for informational purposes only and does not grant permission to the customer to enact these procedures. Contact My Oracle Support for more information.

Replicating restored data to an SOAM server

When data is restored to the NOAMP, the data must be replicated to one SOAM server in each signaling network element, if the system supports SOAMs.

**Caution:** This information is provided for informational purposes only and does not grant permission to the customer to enact these procedures. All restore procedures shall be performed by Oracle Communications or its authorized representatives.

This procedure describes the process used to replicate restored data to an SOAM server:

1. Select **Status & Manage > Database**.
   The **Database Status** page appears.
2. Locate all standby SOAM servers in the server table.
3. Click **Allow Replication** for each of these servers.
   **Allow Replication** displays for servers that are currently inhibited from receiving replicated database updates. This action enables replication for the selected servers. (For servers currently allowed to receive replicated database updates, the word **Inhibit Replication** displays here instead).
4. Select **Status & Manage > Replication**.
   The **Replication** page appears.
5. Verify that Auto Refresh is turned on.
   When the replication audit starts for a specific server, the Replication Status for that server displays **Not Replicating**, and Replication Channel Status displays **Audit**.
6. When the replication audit is complete, Replication Status returns to **Replicating** and Replication Channel Status returns to **Active**.
7. Select **Status & Manage > HA**.
   The **HA** page appears.
8. Switch over the high availability state of the standby SOAM servers.
Replicating restored data to an MP server

When data is restored to SOAM servers, the data must be replicated to each MP server.

Caution: This information is provided for informational purposes only and does not grant permission to the customer to enact these procedures. All restore procedures shall be performed by Oracle Communications or its authorized representatives.

Use this procedure to replicate restored data to an MP server:

1. Select Status & Manage > Database.
   
   The Database Status page appears.

2. Locate all MP servers.

3. Click Allow Replication for each of these servers.

   Replication resumes for each of these servers.

4. Select Status & Manage > Replication.

   The Replication page appears.

5. Verify that Auto Refresh is turned on.

6. When the replication audit starts for a specific server, the Replication Status for that server displays Not Replicating, and Replication Channel Status displays Audit.

7. When the replication audit is complete, Replication Status returns to Replicating and Replication Channel Status returns to Active.

8. Select Status & Manage > HA.

   The HA page appears.

9. Switch over the high availability state of the standby MP servers.

   For more information about setting the high availability state, see HA (High Availability).

   Replication is restored on the selected servers, and the servers are updated with data from the restored backup.

Enabling and disabling provisioning on the active NOAMP server

Use this procedure to enable or disable provisioning updates on the active NOAMP server:

1. Select Status & Manage > Database.

   The Database Status page appears.

2. Click Enable Provisioning.
Provisioning and configuration updates are enabled on all active NOAMP servers in the system. The Enable Provisioning button switches to Disable Provisioning.

3. To disable provisioning on a NOAMP GUI, click Disable Provisioning.

Enabling and disabling provisioning on the active SOAM server

Use this procedure to enable or disable provisioning updates on the active SOAM server:

1. Select Status & Manage > Database.
   The Database Status page appears.

2. Click Enable Site Provisioning.
   Provisioning and configuration updates are enabled on all active SOAMs at the SO level. The Enable Site Provisioning button switches to Disable Site Provisioning.

3. To disable provisioning on a SOAM GUI, click Disable Site Provisioning.

KPIs

The Status & Manage > KPIs page displays KPIs for the entire system. KPIs for the server and its applications are displayed on separate tabs. The application KPIs displayed may vary according to whether you are logged in to an NOAM server or an SOAM server.

KPIs server elements

Table 83: KPIs Server Elements

<table>
<thead>
<tr>
<th>KPIs Status Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>The KPI name.</td>
</tr>
<tr>
<td>Max</td>
<td>Maximum value of the KPI name within the selected scope.</td>
</tr>
<tr>
<td>Min</td>
<td>Minimum value of the KPI name within the selected scope.</td>
</tr>
<tr>
<td>Median</td>
<td>Median value of the KPI name within the selected scope.</td>
</tr>
<tr>
<td>Average</td>
<td>Average value of the KPI name within the selected scope.</td>
</tr>
<tr>
<td>Sum</td>
<td>Summary of all values of the KPI name within the selected scope.</td>
</tr>
<tr>
<td>Description</td>
<td>Description of the KPI name.</td>
</tr>
</tbody>
</table>
Viewing KPIs

Use this procedure to view KPI data.

1. Select Status & Manage > KPIs.

The Status & Manage KPIs page appears with the Server tab displayed. For details about the KPIs displayed on this page, see the application documentation.

2. Click to select an application tab to see KPI data relevant to the application.

Note: The application KPIs displayed may vary according to whether you are logged in to an NOAM server or an SOAM server. Collection of KPI data is handled solely by NOAM servers in systems that do not support SOAMs.

KPIs data export elements

This table describes the elements on the KPIs Export page.

Table 84: Schedule KPI Data Export Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Export Frequency</td>
<td>Frequency at which the export occurs</td>
<td>Format: Radio button&lt;br&gt;Range: Fifteen Minutes, Hourly, Once, Weekly, or Daily&lt;br&gt;Default: Once</td>
</tr>
<tr>
<td>Task Name</td>
<td>Name of the scheduled task</td>
<td>Format: Textbox&lt;br&gt;Range: Maximum length is 40 characters; alphanumeric (a-z, A-Z, and 0-9) and minus sign (-). Task Name must begin and end with an alphanumeric character.</td>
</tr>
<tr>
<td>Description</td>
<td>Description of the scheduled task</td>
<td>Format: Textbox&lt;br&gt;Range: Maximum length is 255 characters; alphanumeric (a-z, A-Z, and 0-9) and minus sign (-). Description must begin with an alphanumeric character.</td>
</tr>
<tr>
<td>Minute</td>
<td>If hourly or fifteen minutes is selected for Upload Frequency, this is the minute of each hour when the data will be written to the export directory.</td>
<td>Format: Scrolling list&lt;br&gt;Range: 0 to 59&lt;br&gt;Default: 0</td>
</tr>
<tr>
<td>Time of Day</td>
<td>Time of day the export occurs</td>
<td>Format: Time textbox&lt;br&gt;Range: 15-minute increments</td>
</tr>
</tbody>
</table>
### Exporting KPIs

You can schedule periodic exports of security log data from the **KPIs** page. KPI data can be exported immediately, or you can schedule exports to occur daily or weekly. If filtering has been applied in the **KPIs** page, only filtered data is exported.

During data export, the system automatically creates a CSV file of the filtered data. The file will be available in the file management area until you manually delete it, or until the file is transferred to an alternate location using the Export Server feature. For more information about using **Export Server**, see Data Export.

Use this procedure to schedule a data export task.

1. Select **Status & Manage > KPIs**.
   
   The **KPIs** page appears.

2. If necessary, specify filter criteria and click **Go**.
   
   The KPIs are displayed according to the specified criteria.

3. Click **Export**.
   
   The Schedule KPI Data Export page appears.

4. Enter the **Task Name**.
   
   For more information about **Task Name**, or any field on this page, see KPIs data export elements.

5. Select the **Export Frequency**.

6. If you selected Hourly, specify the **Minutes**.

7. Select the **Time of Day**.

   **Note:** **Time of Day** is not an option if **Export Frequency** equals **Once**.

8. Select the **Day of Week**.

   **Note:** **Day of Week** is not an option if **Export Frequency** equals **Once**.

9. Click **OK** to initiate the KPI export task.

   From the **Status & Manage > Files** page, you can view a list of files available for download, including the file you exported during this procedure. For more information, see Displaying the file list.

   Scheduled tasks can be viewed, edited, and deleted, and reports of scheduled tasks can be generated from **Status & Manage > Tasks**. For more information see:

   - Viewing scheduled tasks
   - Editing a scheduled task

<table>
<thead>

<td>Day of week on which the export occurs</td>
<td>Format: Radio button Range: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, or Saturday Default: Sunday</td>
</tr>
</tbody>
</table>
• Deleting a scheduled task
• Generating a scheduled task report

Graphing KPIs

The graphing function allows for an easy visual display of KPI information over time by network and server. The graph displays below the KPI grid listing, with the key to the right of the graph.

Use this procedure to graph KPIs:

1. Select Status & Manage > KPIs.
   The KPIs page appears.

2. If necessary, specify filter criteria using the Filter pull down menu and click Go.
   The KPIs are displayed according to the specified criteria.

3. Select either the Entire Network tab or the desired server tab, then select the desired KPI group from the listing below the tab.
   The KPIs for the selected group display.

4. Select one or more KPIs.
   Note: Use the Ctrl key to individually select KPIs. Use the Shift key to select a range of KPIs.

5. Click Graph.
   The graph displays below the grid.

6. To adjust the graph viewing area, click and hold the slider above the graph while adjusting the proportions with the mouse.

7. To remove the graphing, select all the KPIs currently being graphed and click Graph. The graph display will disappear.
   Note: If only some KPIs being graphed are selected for removal, or if different KPIs are selected, the new selection of KPIs will be graphed.

Processes

The Processes page displays process status and other process information on a per-process basis for all servers in the system. Processes are controlled at the server level using the Stop, Restart, and Reboot options on the Servers page. See Server for more on Stop, Restart, and Reboot.

Process status elements

This table describes elements on the Status & Manage Processes page.

Table 85: Process Status Elements

<table>
<thead>
<tr>
<th>Process Status Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hostname</td>
<td>The hostname of the server.</td>
</tr>
<tr>
<td>Process Status Element</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>-------------</td>
</tr>
<tr>
<td>Process Name</td>
<td>Name of the process, based on a unique identifying process tag within the application. Multiple processes on a server with the same name are appended with an instance number (#), for example, idbsvc(0) and idbsvc(1).</td>
</tr>
<tr>
<td>Start Time</td>
<td>Date and time the process was last (re)started.</td>
</tr>
<tr>
<td>Status</td>
<td>Status of the process. Possible values are:</td>
</tr>
<tr>
<td></td>
<td>• <strong>Up</strong>: Process is up and running. Processes which are started successfully and reach a steady-state have a status of Up.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Done</strong>: The process is complete.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Kill</strong>: Process is being stopped. This is the normal state for a process to enter while being stopped. If a process is failing to shutdown, it remains in the Kill state for an extended amount of time.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Pend</strong>: Process execution is pending, waiting to be (re)started. Processes that have exited abnormally from the Up state shall fall into the Pend state. Processes that cannot start successfully shall remain in the Pend state.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Unknown</strong>: A failure is preventing the reporting or collection of the process status.</td>
</tr>
<tr>
<td># Starts</td>
<td>Number of times the process started. All counts are 1 when a server boots up. The count increments to 2 if the process restarts and increments with each process restart. The count resets to 1 if the server is rebooted.</td>
</tr>
<tr>
<td>CPU Utilization</td>
<td>An estimate of recent CPU percentage used per process on the server.</td>
</tr>
<tr>
<td>Memory Used (%)</td>
<td>Percent of total memory used per process on the server.</td>
</tr>
<tr>
<td>Memory Used (Total) (K)</td>
<td>Total memory consumption per process including text, data, library, shared memory, etc., in Kilobytes.</td>
</tr>
<tr>
<td>Heap Memory Used (K)</td>
<td>Size of the heap used per process in Kilobytes.</td>
</tr>
</tbody>
</table>

**Viewing Processes**

Use this procedure to view all processes running on application servers:

Select **Status & Manage > Processes**.
The Processes status page appears. For more information about the fields displayed on the Status & Manage > Processes page, see Process status elements.

Tasks

The Tasks pages display the active, long running tasks and scheduled tasks on a selected server. The Active Tasks page provides information such as status, start time, progress, and results for long running tasks, while the Scheduled Tasks page provides a location to view, edit, and delete tasks that are scheduled to occur.

Active Tasks

The Active Tasks page displays the long running tasks on a selected server. The Active Tasks page provides information such as status, start time, progress, and results, all of which can be generated into a report. Additionally, you can pause, restart, or delete tasks from this page.

Viewing active tasks

Use this procedure to view the active tasks.

1. Select Status & Manage > Tasks > Active Tasks.
   
   The Active Tasks page appears.
   
2. Select a server.

   Note: Hovering the mouse over any tab displays the name of the server.
   
   All active tasks on the selected server are displayed.

Active Tasks elements

The Active Tasks page displays information in a tabular format where each tab represents a unique server. By default, the current server's tab is selected when the page is loaded. This table describes elements on the Active Tasks page.

Table 86: Active Tasks Elements

<table>
<thead>
<tr>
<th>Active Tasks Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ID</td>
<td>Task ID</td>
</tr>
<tr>
<td>Name</td>
<td>Task name</td>
</tr>
<tr>
<td>Status</td>
<td>Current status of the task. Status values include: running, paused, completed, exception, and trapped.</td>
</tr>
<tr>
<td>Start Time</td>
<td>Time and date when the task was started</td>
</tr>
<tr>
<td>Update Time</td>
<td>Time and date the task's status was last updated</td>
</tr>
</tbody>
</table>
Deleting a task

Use this procedure to delete one or more tasks.

1. Select Status & Manage > Tasks > Active Tasks.
   
   The Active Tasks page appears.

2. Select a server.
   
   Note: Hovering the cursor over any tab displays the name of the server.
   
   All active tasks on the selected server are displayed.

3. Select one or more tasks.
   
   Note: To delete a single task or multiple tasks, the status of each task selected must be one of the following: completed, exception, or trapped.

   Note: You can select multiple rows to delete at one time. To select multiple rows, press and hold Ctrl as you click to select specific rows.

4. Click Delete.
   
   A confirmation box appears.

5. Click OK to delete the selected task(s).
   
   The selected task(s) are deleted from the table.

Deleting all completed tasks

Use this procedure to delete all completed tasks.

1. Select Status & Manage > Tasks > Active Tasks.
   
   The Active Tasks page appears.

2. Select a server.
   
   Note: Hovering the cursor over any tab displays the name of the server.
   
   All active tasks on the selected server are displayed.

3. Click Delete all Completed.
   
   A confirmation box appears.

4. Click OK to delete all completed tasks.
   
   All tasks with the status of completed are deleted.
Canceling a running or paused task
Use this procedure to cancel a task that is running or paused.
1. Select Status & Manage > Tasks > Active Tasks.
   The Active Tasks page appears.
2. Select a server.
   Note: Hovering the cursor over any tab displays the name of the server.
   All active tasks on the selected server are displayed.
3. Select a task.
4. Click Cancel.
   A confirmation box appears.
5. Click OK to cancel the selected task.
   The selected task is canceled.

Pausing a task
Use this procedure to pause a task.
1. Select Status & Manage > Tasks > Active Tasks.
   The Active Tasks page appears.
2. Select a server.
   Note: Hovering the mouse over any tab displays the name of the server.
   All active tasks on the selected server are displayed.
3. Select a task.
   Note: A task may be paused only if the status of the task is running.
4. Click Pause.
   A confirmation box appears.
5. Click OK to pause the selected task.
   The selected task is paused. For information about restarting a paused task, see Restarting a task.

Restarting a task
Use this procedure to restart a task.
1. Select Status & Manage > Tasks > Active Tasks.
   The Active Tasks page appears.
2. Select a server.
   Note: Hovering the mouse over any tab displays the name of the server.
   All active tasks on the selected server are displayed.
3. Select a paused task.
Note: A task may be restarted only if the status of the task is paused.

4. Click Restart.
   A confirmation box appears.
5. Click OK to restart the selected task.
   The selected task is restarted.

Active Tasks report elements

The Active Tasks Report page displays report data for selected tasks. This table describes elements on the Active Tasks Report page.

Table 87: Active Tasks Report Elements

<table>
<thead>
<tr>
<th>Active Tasks Report Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Task ID</td>
<td>Task ID</td>
</tr>
<tr>
<td>Display Name</td>
<td>Task name</td>
</tr>
<tr>
<td>Task State</td>
<td>Current status of the task. Status values include: running, paused, completed, exception, and trapped.</td>
</tr>
<tr>
<td>Admin State</td>
<td>Confirms task status</td>
</tr>
<tr>
<td>Start Time</td>
<td>Time and date when the task was started</td>
</tr>
<tr>
<td>Last Update Time</td>
<td>Time and date the task’s status was last updated</td>
</tr>
<tr>
<td>Elapsed Time</td>
<td>Time to complete the task</td>
</tr>
<tr>
<td>Result</td>
<td>Integer return code of the task. Values other than 0 (zero) indicate abnormal termination of the task. Each value has a task-specific meaning.</td>
</tr>
<tr>
<td>Result Details</td>
<td>Details about the result of the task</td>
</tr>
</tbody>
</table>

Generating an active task report

Use this procedure to generate an active task report.

1. Select Status & Manage > Tasks > Active Tasks.
   The Active Tasks page appears.

2. Select a server.
   Note: Hovering the mouse over any tab displays the name of the server.
   All active tasks on the selected server are displayed.

3. Select one or more tasks.
   Note: If no tasks are selected, all tasks matching the current filter criteria will be included in the report.

   The Tasks Report page appears.
5. Click **Print** to print the report.
6. Click **Save** to save the report.

### Scheduled Tasks

The periodic export of certain data can be scheduled through the GUI. The **Scheduled Tasks** page provides you with a location to view, edit, delete and generate reports of these scheduled tasks. For more information about the types of data that can be exported, see:

- Exporting active alarms
- Exporting alarm and event history
- Exporting security log files
- Exporting KPIs
- Exporting measurements reports

### Viewing scheduled tasks

Use this procedure to view the scheduled tasks.

Select **Status & Manage > Tasks > Scheduled Tasks**.

The **Scheduled Tasks** page appears, and all scheduled tasks are displayed.

### Scheduled Tasks elements

The **Scheduled Tasks** page displays information in a tabular format where each tab represents a unique server. By default, the current server’s tab is selected when the page is loaded. This table describes elements on the **Scheduled Tasks** page.

**Table 88: Scheduled Tasks Elements**

<table>
<thead>
<tr>
<th>Scheduled Tasks Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Task Name</td>
<td>Name given at the time of task creation</td>
</tr>
<tr>
<td>Description</td>
<td>Description of the task</td>
</tr>
<tr>
<td>Time of Day</td>
<td>The hour and minute the task is scheduled to run</td>
</tr>
<tr>
<td>Day-of-Week</td>
<td>Day of the week the task is scheduled to run</td>
</tr>
<tr>
<td>Network Elem</td>
<td>The Network Element associated with the task</td>
</tr>
</tbody>
</table>

### Editing a scheduled task

Use this procedure to edit a scheduled task.

1. Select **Status & Manage > Tasks > Scheduled Tasks**.

   The **Scheduled Tasks** page appears, and all scheduled tasks are displayed.

2. Select a task.
3. Click **Edit**.
   The **Data Export** page for the selected task appears.
4. Edit the available fields as necessary.
   See **Scheduled Tasks elements** for details about the fields that appear on this page.
5. Click **OK** or **Apply** to submit the changes and return to the **Scheduled Tasks** page.

**Deleting a scheduled task**

Use this procedure to delete one or more scheduled tasks.

1. Select **Status & Manage > Tasks > Scheduled Tasks**.
   
   The **Scheduled Tasks** page appears, and all scheduled tasks are displayed.
2. Select one or more tasks.
3. Click **Delete**.
   A confirmation box appears.
4. Click **OK** to delete the selected task(s).
   The selected task(s) are deleted from the table.

**Generating a scheduled task report**

Use this procedure to generate a scheduled task report.

1. Select **Status & Manage > Tasks > Scheduled Tasks**.
   
   The **Scheduled Tasks** page appears, and all scheduled tasks are displayed.
2. Select one or more tasks.
3. Click **Report**.
   The **Scheduled Tasks Report** page appears.
4. Click **Print** to print the report.
5. Click **Save** to save the report.

**Files**

The **Files** page provides access to the file management storage area of all servers configured on the system. This area is used to store and manage files generated by OAM server operations such as backup data and measurement processes. In addition to viewing and deleting files, you can also use the **Files** page to download existing files to an alternate location and upload new files.
### File status elements

The **Files** page displays information in a tabular format where each tab represents a unique server. By default, the current server's tab is selected when the page is loaded. This table describes the elements on the **Files** page.

**Table 89: File Elements**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>File Name</td>
<td>Name of the file</td>
</tr>
<tr>
<td>Size</td>
<td>File size. Sizes are shown in one of the following units: PB (petabyte), TB (terabyte), GB (gigabyte), MB (megabyte), KB (kilobyte), or B (byte).</td>
</tr>
<tr>
<td>Type</td>
<td>File extension type</td>
</tr>
<tr>
<td>Timestamp</td>
<td>Time and date of file creation on the server</td>
</tr>
</tbody>
</table>

### File name formats

This table describes the file name formats for files written to the file management storage area of the application. These variables are used in the file name formats:

- `<server name>` or `<hostname>` is the server hostname from which the file is generated.
- `<application name>` is the name of the application.
- `<groupname>` is the type of data stored in the backup file.
- `<NodeType>` specifies whether the backup was generated on an NOAMP or SOAM.
- `<time_date>` or `<YYYYMMDD_HHMMSS>` is the date and time that the file was generated.
- `(AUTO | MAN)` indicates whether the backup was automatically or manually generated.

**Note:** The file types listed here are among the most commonly seen in the file management storage area. The list, however, is not exhaustive and other file types may appear in the storage area.

**Table 90: File Name Formats**

<table>
<thead>
<tr>
<th>File Type</th>
<th>File Name and Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Backup</td>
<td>Backup.&lt;application name&gt;.&lt;hostname&gt;.&lt;groupname&gt; [And&lt;groupname&gt; ... [And &lt;groupname&gt;]].&lt;NodeType&gt;.YYYYMMDD_HHMMSS.(AUTO</td>
</tr>
<tr>
<td></td>
<td>A BZIP2 compressed tar file (tape archive format). This format can contain a collection of files in each tbz2 file. This file must be unzipped before it can be viewed.</td>
</tr>
<tr>
<td>Measurements</td>
<td>Meas.&lt;application name&gt;.&lt;server name&gt;.&lt;time_date&gt;.csv</td>
</tr>
</tbody>
</table>
### File Type

<table>
<thead>
<tr>
<th>File Type</th>
<th>File Name and Description</th>
</tr>
</thead>
</table>
|           | Comma-separated value file format used for storing tabular data. Measurement reports can be exported to the file management storage area, and are stored in csv format. See Exporting measurements reports for steps on exporting. Measurements reports generated from the SOAM GUI are limited to measurements for all MP and SOAM servers within that Network Element. A measurements report generated from an active SOAM server is identical to the one generated form a standby SOAM server since the measurements from the MPs are sent to and merged by both the SOAM servers within a Network Element. **Note:** Collection of Measurement data is handled by NOAMP servers in systems that do not support SOAMs. | Logs.

<table>
<thead>
<tr>
<th>Logs</th>
<th>Logs.&lt;application name&gt;.&lt;server name&gt;.&lt;time_date&gt;.tgz</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Log file. This is a g-zipped (GNU zip) tar file (tape archive format). This format can contain a collection of files in each tgz file. This file must be unzipped before it can be viewed.</td>
</tr>
</tbody>
</table>

**Note:** It is recommended that policies be developed to prevent overuse of the storage area. These might include a procedure to delete export files after transferring them to an alternate location, or removing backup files after a week, for example.

The Files option must have a check mark on the Administration > Group page for you to have access to the Files menu option.

### Displaying the file list

Use this procedure to view the list of files located in the file management storage area of a server. The amount of storage space currently in use can also be viewed on the Files page.

1. From the Main menu, select Status & Manage > Files.
   
The Status & Manage Files page appears.

2. Select a server.
   
   All files stored on the selected server are displayed.

### Viewing a file

Use this procedure to view, print, or save the contents of a file in the file management storage area.

1. Select Status & Manage > Files.
The Status & Manage Files page appears.

2. Select a server.
   All files stored on the selected server are displayed.

3. Select the file you want to view.
   
   **Note:** The View button is disabled when the contents of the file cannot be viewed from the GUI.
   For example, if a tar file is selected, the View button will be disabled, because the contents of tar
   files cannot be viewed from the GUI.

4. Click View.
   The contents of the file are displayed.

5. Click Print to print the file contents, or click Save to save the file.

---

### Uploading a file to an alternate location

Use this procedure to move a file from the file management storage area to an alternate location.

1. Select Status & Manage > Files.
   The Status & Manage Files page appears.

2. Select a server.
   All files stored on the selected server are displayed.

3. Select the file you want to move.

4. Click Download.
   Your browser's file download window appears.

5. Click Save.
   You browser's Save As window appears.

6. Navigate to the drive and folder where you want to save the file.

7. Click Save.
   The file is saved to the specified location.

---

### Uploading a local file

This procedure allows you to transfer a file from your local computer to the file management storage area of any server in the topology. A file up to 2 GB in size can be uploaded to the file management storage area.

**Note:** This product currently only supports file uploads and transfers for files less than 2 GB in size. To upload or transfer files greater than 2 GB in size, contact the My Oracle Support for assistance.

Use this procedure when you want to transfer a local file to the file management storage area:

1. Select Status & Manage > Files.
   The Status & Manage Files page appears.

2. Select a server.
   All files stored on the selected server are displayed.
3. Click **Upload**.
   A dialog box appears.
4. Click **Browse** to select the file to upload.
   The **Choose File** window appears, allowing you to select a file to upload.
5. Select the file and click **Open**.
   The selected file and its path display in the file upload field.
   **Note:** Before proceeding, verify the selected file is uniquely named to avoid unintentionally overwriting another file.
6. Click **Upload**.
   A progress bar shows the status of the upload. When the upload is complete, an **Upload Complete** message appears.
   **Note:** Do not close the **Status & Manage Files** page during the upload. If you attempt to navigate away from the **Status & Manage Files** page during the upload, a dialog will appear to confirm the action. If the page is closed before upload completes, the transfer of data is stopped.
   The file is now stored in the selected server's file management storage area.

**Deleting files from the file management storage area**

If a Minor or Major Alarm is raised indicating either a minimum of 80% or 90% of file management space is used, old backup files can be deleted to clear space on that server.

Use this procedure remove one or more files from the file management storage area.

1. Select **Status & Manage > Files**.
   The **Status & Manage Files** page appears.
2. Select a server.
   All files stored on the selected server are displayed.
3. Select the file you want to delete.
4. Click **Delete**.
   A **deletion confirmation** window appears.
5. Click **OK**.
   The file is deleted and space is cleared on the server.
6. Repeat this procedure for each file to be removed.
   The deleted files are cleared from the server, and space becomes available in the file management storage area.

**Deploying an ISO file**

Use this procedure deploy an ISO file:

1. Select **Status & Manage > Files**.
The Status & Manage Files page appears.

2. Select the ISO file.

3. Select Deploy ISO.
   The ISO deploys to the server and is made available for upgrade on the server and all subtending servers. You can view the current deployment status using the Tasks drop down at the top left of the screen.

Undeploying an ISO file

Use this procedure to undeploy an ISO file:

1. Select Status & Manage > Files.
   The Status & Manage Files page appears.

2. Highlight the ISO to be undeployed.

3. Click Undeploy ISO.
   A confirmation message displays.

4. Click on the confirmation message.
   The ISO is recalled and is unavailable for upgrade.

Validating an ISO file

Use this procedure to validate an ISO file:

1. Select Status & Manage > Files.
   The Status & Manage Files page appears.

2. Highlight the ISO to be validated.

3. Click Validate ISO.
   The ISO is validated. If an ISO image fails validation, it will be renamed. An invalid ISO image cannot be deployed.
This section provides an overview of the options on the Measurements page. All components of the system measure the amount and type of messages sent and received. Measurement data collected from all components of the system can be used for multiple purposes, including discerning traffic patterns and user behavior, traffic modeling, size traffic sensitive resources, and troubleshooting. This section provides an overview of measurements, describes how to generate and export a measurements report, and provides a list of register types.
Measurements

The measurements framework allows applications to define, update, and produce reports for various measurements.

- Measurements are ordinary counters that count occurrences of different events within the system, for example, the number of messages received. Measurement counters are also called pegs.
  Additional measurement types provided by the Platform framework are not used in this release.
- Applications simply peg (increment) measurements upon the occurrence of the event that needs to be measured.
- Measurements are collected and merged at the SOAM and NOAM servers as appropriate.
- The GUI allows reports to be generated from measurements.

Measurements that are being pegged locally are collected from shared memory and stored in a disk-backed database table every 5 minutes on all servers in the network. Measurements are collected every 5 minutes on a 5 minute boundary, i.e. at HH:00, HH:05, HH:10, HH:15, and so on. The collection frequency is set to 5 minutes to minimize the loss of measurement data in case of a server failure, and also to minimize the impact of measurements collection on system performance.

All servers in the network (NOAMP, SOAM, and MP servers) store a minimum of 8 hours of local measurements data. More than 5 minutes of local measurements data is retained on each server to minimize loss of measurements data in case of a network connection failure to the server merging measurements.

Measurements data older than the required retention period are deleted by the measurements framework.

Measurements are reported in groups. A measurements report group is a collection of measurement IDs. Each measurement report contains one measurement group. A measurement can be assigned to one or more existing or new measurement groups so that it is included in a measurement report. Assigning a measurement ID to a report group ensures that when you select a report group the same set of measurements is always included in the measurements report.

Note: Measurements from a server may be missing in a report if the server is down; the server is in overload; something in the Platform merging framework is not working; or the report is generated before data is available from the last collection period (there is a 25 to 30 second lag time in availability).

Measurement elements

This table describes the elements on the Measurements Report page.

Table 91: Measurements Elements

</tbody>
</table>

**Generating a measurements report**

Use this procedure to generate and view a measurements report.

1. Select **Measurements > Report**.
The Measurements Report page appears.

2. Select the **Scope**.
   
   For details about this field, or any field on the Measurements Report page, see Measurement elements.

3. Select the **Report**.
4. Select the **Interval**.
5. Select the **Time Range**.
6. Select **Beginning** or **Ending** as the **Time Range** interval reference point.
7. Select the **Beginning** or **Ending** date.
8. Click **Go**.
   
   The report is generated.

   **Note:** Data for the selected scope is displayed in the primary report page. Data for any available sub-scopes are displayed in tabs. For example, if the selected scope is Entire Network, report data for the entire network appears in the primary report page. The individual network entities within the entire network are considered sub-scopes.

9. To view report data for a specific sub-scope, click on the tab for that sub-scope.
   
   The report data appears.

### Measurements data export elements

This table describes the elements on the Measurements Report Export page.

**Table 92: Schedule Measurement Data Export Elements**

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
</table>
| Task Name                | Name of the scheduled task           | Format: Textbox
Range: Maximum length is 40 characters; alphanumeric (a-z, A-Z, and 0-9) and minus sign (-). Task Name must begin and end with an alphanumeric character. |
| Description              | Description of the scheduled task    | Format: Textbox
Range: Maximum length is 255 characters; alphanumeric (a-z, A-Z, and 0-9) and minus sign (-). Description must begin with an alphanumeric character. |
| Export Frequency         | Frequency at which the export occurs | Format: Radio button
Range: Fifteen Minutes, Hourly, Once, Weekly, or Daily |
Exporting measurements reports

You can schedule periodic exports of data from the Measurements Report page. Measurements data can be exported immediately, or you can schedule exports to occur daily or weekly. If filtering has been applied on the Measurements Report page, only filtered data is exported.

During data export, the system automatically creates a CSV file of the filtered data. The file will be available in the file management area until you manually delete it, or until the file is transferred to an alternate location using the Export Server feature. For more information about using Export Server, see Data Export.

Use this procedure to save a measurements report to the file management storage area. Use this procedure to schedule a data export task.

   
   The Measurements Report page appears. For a description of each field, see Measurement elements.

2. Generate a measurements report.
   
   For information about how to generate a measurements report, see Generating a measurements report.

3. Click to select the scope or sub-scope measurement report that you want to export.

4. Click Export.
   
   The measurement report is exported to a CSV file. Click the link at the top of the page to go directly to the Status & Manage > Files page. From the Status & Manage page, you can view a list of files available for download, including the measurements report you exported during this procedure. The Schedule Measurement Log Data Export page appears.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Data Input Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minute</td>
<td>If hourly or fifteen minutes is selected for Upload Frequency, this is the minute of each hour when the data will be written to the export directory.</td>
<td>Default: Once, Format: Scrolling list, Range: 0 to 59, Default: 0</td>
</tr>
<tr>
<td>Time of Day</td>
<td>Time of day the export occurs</td>
<td>Format: Time textbox, Range: 15-minute increments, Default: 12:00 AM</td>
</tr>
<tr>
<td>Day of Week</td>
<td>Day of week on which the export occurs</td>
<td>Format: Radio button, Range: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, or Saturday, Default: Sunday</td>
</tr>
</tbody>
</table>
5. Check the **Report Groups** boxes corresponding to any additional measurement reports to be exported.

   **Note:** This step is optional, but is available to allow the export of multiple measurement group reports simultaneously.

6. Select the **Export Frequency**.

   **Note:** If the selected **Export Frequency** is **Fifteen Minutes** or **Hourly**, specify the **Minutes**.

7. Enter the **Task Name**.

   For more information about Task Name, or any field on this page, see *Measurements data export elements*.

   **Note:** **Task Name** is not an option if **Export Frequency** equals **Once**.

8. Select the **Time of Day**.

   **Note:** **Time of Day** is only an option if **Export Frequency** equals **Daily** or **Weekly**.

9. Select the **Day of Week**.

   **Note:** **Day of Week** is only an option if **Export Frequency** equals **Weekly**.

10. Click **OK** or **Apply** to initiate the data export task.

    The data export task is scheduled. From the **Status & Manage > Tasks** page, you can view a list of files available for download, including the file you exported during this procedure. For more information, see *Displaying the file list*.

    Scheduled tasks can be viewed, edited, and deleted, and reports of scheduled tasks can be generated from **Status & Manage > Tasks**. For more information see:

    - *Viewing scheduled tasks*
    - *Editing a scheduled task*
    - *Deleting a scheduled task*
    - *Generating a scheduled task report*
Glossary

A

AES
Advanced Encryption Standard

AVP
Attribute-Value Pair
The Diameter protocol consists of a header followed by one or more attribute-value pairs (AVPs). An AVP includes a header and is used to encapsulate protocol-specific data (e.g., routing information) as well as authentication, authorization or accounting information.

C

CAPM
Computer-aided policy making

Charging Proxy Application
A DSR Application that is responsible for sending and receiving Diameter accounting messages.

ComAgent
Communication Agent
A common infrastructure component delivered as part of a common plug-in, which provides services to enable communication of message between application processes on different servers.

Communication Agent
See ComAgent.

</tr>
</tbody>
</table>
G
query binding information stored in the pSBR-B. The query can be by either IMSI or MSISDN. GLA processes Diameter Requests and generates Diameter Answers.

GUI
Graphical User Interface
The term given to that set of items and facilities which provide the user with a graphic means for manipulating screen data rather than being limited to character based commands.

I
IP
Intelligent Peripheral
Internet Protocol - IP specifies the format of packets, also called datagrams, and the addressing scheme. The network layer for the TCP/IP protocol suite widely used on Ethernet networks, defined in STD 5, RFC 791. IP is a connectionless, best-effort packet switching protocol. It provides packet routing, fragmentation and re-assembly through the data link layer.

IPFE
IP Front End
A traffic distributor that routes TCP traffic sent to a target set address by application clients across a set of application servers. The IPFE minimizes the number of externally routable IP addresses required for application clients to contact application servers.

ISO
International Standards Organization
Message Processor - The role of the Message Processor is to provide the application messaging protocol interfaces and processing. However, these servers also have OAM&P components. All Message Processors replicate from their Signaling OAM’s database and generate faults to a Fault Management System.

The application that operates the Maintenance and Administration Subsystem that controls the operation of many products.

These functions are generally managed by individual applications and not managed by a platform management application, such as PM&C

Operations – Monitoring the environment, detecting and determining faults, and alerting administrators.

Administration – Typically involves collecting performance statistics, accounting data for the purpose of billing, capacity
planning, using usage data, and maintaining system reliability.

Maintenance – Provides such functions as upgrades, fixes, new feature enablement, backup and restore tasks, and monitoring media health (for example, diagnostics).

Provisioning – Setting up user accounts, devices, and services.

Range Based Address Resolution (RBAR)
A DSR enhanced routing application which allows the user to route Diameter end-to-end transactions based on Application ID, Command Code, “Routing Entity” Type, and Routing Entity address ranges.

Session Binding Repository (SBR)
A highly available, distributed database for storing Diameter session binding data.

Simple Network Management Protocol (SNMP)
An industry-wide standard protocol used for network management. The SNMP agent maintains data variables that represent aspects of the network. These variables are called managed objects and are stored in a management information base (MIB). The SNMP protocol arranges managed objects into groups.
### Glossary

| **S** | **SOAM** | System Operations, Administration, and Maintenance  
Site Operations, Administration, and Maintenance |
|-------|----------|--------------------------------------------------|
| **T** | **TSA** | Target Set Address  
An externally routable IP address that the IPFE presents to application clients. The IPFE distributes traffic sent to a target set address across a set of application servers. |
