Installing and Configuring Help Locally	38

This document describes the accessibility features of Oracle Smart View for Office. For information regarding supported assistive technologies, refer to the *Oracle Enterprise Performance Management System Installation Start Here*.

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program web site at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Enabling Accessibility for Smart View

You do not need to enable accessibility specifically for Smart View; it is always in accessible mode. Smart View output is in the form of Excel spreadsheets, Word documents, and PowerPoint slides, which are accessible through Microsoft Office. For information about Excel, Word, or PowerPoint accessibility, refer to Microsoft Office product documentation.

Note: If you are using JAWS® Screen Reading Software, Oracle recommends using the Internet Explorer browser.

Enabling JAWS to Read ListView Headers

ListViews display information in a table format within the Smart View user interface. Examples of dialog boxes that display information in the ListView format are **Select Forms** or **Manage Journals**.

ListView headers are the column headings within a ListView. By default, JAWS does not read the ListView headers; however, you can enable JAWS to read them.

► To enable JAWS to read ListView headers:

- 1 Ensure that JAWS is running.
- 2 Within a ListView, select a row containing data, then press **Insert+F2**.
- 3 In the **Run JAWS Manager** dialog box, select **Customize ListView** and press **Enter**.
The **Customize Headers** dialog box is displayed
- 4 In the **Column Headers** group, select the **Speak Custom Text AND Header** option.
- 5 Click **OK** to save the changes.

JAWS should begin speaking the column headers in the ListView element. If this doesn't happen, restart the Office application.

Smart View Keyboard Equivalents

Keyboard equivalents for provider ribbons may vary if other Office add-ins or extensions are installed. For example, Y may become Y1 or Y2 if there are ribbons created by add-ins in addition to Smart View.

Keyboard equivalents for languages other than English may be different from those listed in these tables.

The topics in this section describes the keyboard equivalents for the following:

Installing and Configuring Help Locally

After installing Smart View, the online help is retrieved from a URL hosted on the Oracle.com web site. This is the default behavior for Smart View, and no changes are required by users to launch help.

However, you may require that the help be installed locally for Section 508 accessibility purposes. To accommodate this, help must be downloaded from My Oracle Support and placed on a local drive, and the Smart View `properties.xml` file must be modified.

► To install and configure Smart View help locally:

- 1 Obtain the patch zip file for this release from My Oracle Support.**
- 2 Extract the contents of the patch zip file to a local folder on the computer where Smart View is installed.**

For example, extract the contents locally to:

```
C:\Oracle\SmartView\
```

Under the `smartview_help` folder, there are 28 language folders; for example:

```
C:\Oracle\SmartView
    \smartview_help
        \ar
        \cs
        \da
        \de
        \el
        \en
        \es
        \fi
        \fr
        \fr_CA
        \he
        \hu
        \it
        \ja
        \ko
        \nl
        \no
        \pl
        \pt
        \pt_BR
        \ro
        \ru
        \sk
        \sv
        \th
        \tr
        \zh_CN
        \zh_TW
```

The following language folders contain translated versions of the Smart View help:

```
\de
\es
\fr
\it
\ja
\ko
\nl
\pt_BR
\zh_CN
```

The remaining language folders contain the English version of the help. When you run Smart View in one of those languages (for example, Swedish) and you click a button for Help, the English help is displayed.

Additionally, the English folder contains a copy of the help in PDF format, `smartview_user.pdf`.

3 Modify the `helpurlcontext` property in the Smart View `properties.xml` file:

- a. In your Smart View installation, navigate to the `SmartView\cfg` folder.
- b. Make a backup copy of the original `properties.xml` file.
- c. Open `properties.xml` for editing.
- d. Modify the `helpurlcontext` property, providing the path to the folder that is parent to the language folders, providing the path to the folder that is parent to the language folders using the following syntax:

```
<helpurlcontext>file:///parent_language_folder_path/</helpurlcontext>
```

Tip: Use forward slashes in the syntax and ensure that you enter a final forward slash (/) after the parent language folder path that you provide.

Using the example from [step 2](#), after extracting the zip contents to `C:\Oracle\SmartView`, the `smartview_help` folder is the parent folder of the language folders. Thus, you would modify the `parent_language_folder_path` placeholder as follows:

```
<helpurlcontext>file:///C:/Oracle/SmartView/smartview_help/</helpurlcontext>
```

4 Restart your Microsoft Office applications and access the help from the Smart View ribbon.

5 Repeat this procedure for each computer that requires Oracle Smart View for Office local help.
