Chapter 1

Overview

This guide describes the installation steps that must be completed before Oracle PeopleSoft Financials for General Ledger and Accounts Payable can be integrated with Oracle Utilities Customer Care and Billing.

This installation is placed on top of an Oracle SOA Suite 11gR1 PS3. Oracle PeopleSoft Financials for General Ledger and Accounts Payable and Oracle Utilities Customer Care and Billing interact with the middleware to initiate the housed services.

Note: Review the entire guide before you begin installation.

Additional Resources

For more information refer to the following documents:

Resource	Location
Oracle Utilities Customer Care and Billing Integration to Oracle PeopleSoft Financials for General Ledger and Accounts Payable Implementation Guide	Same folder as this document, with the distribution for this product.
Oracle PeopleSoft Financials for General Ledger and Accounts Payable Installation Guide	Refer to Oracle PeopleSoft Financials for General Ledger and Accounts Payable installation documentation located on the Oracle Software Delivery Cloud, depending on which version you are using.
Oracle Utilities Customer Care and Billing Installation Guide	Refer to Oracle Utilities Customer Care and Billing installation documentation located on the Oracle Software Delivery Cloud, depending on which version you are using.

Note: For specific edge application patch level details, refer to the Oracle Utilities Integrations page at:

<http://my.oracle.com/site/tugbu/productsindustry/productinfo/utilities/integration/index.htm>

Abbreviations

Abbreviations used in this guide are listed below:

- CCB - Oracle Utilities Customer Care and Billing
- PS - Oracle PeopleSoft Financials for General Ledger and Accounts Payable
- DDL - Data Definition Language
- MDS - Metadata Services

Chapter 2

Installation

The following sections describe the settings and requirements for a successful installation of Oracle Utilities Customer Care and Billing Integration to Oracle PeopleSoft Financials for General Ledger and Accounts Payable.

This section provides information on the following:

- [Software Requirements](#)
- [Pre-Installation Tasks](#)
- [Installation Steps](#)
- [Post-Installation Checklist](#)
- [Configuring the Edge Applications](#)

2.1 Software Requirements

Before installing the integration package, verify that the following software is properly installed and configured:

- Oracle Utilities Customer Care and Billing v2.3.1 installed on an Oracle database with the latest supported service pack.
- Oracle PeopleSoft Financials for General Ledger and Accounts Payable v 9.0 installed on an Oracle database with the latest supported service pack.

Note: Oracle Utilities Customer Care and Billing Integration to Oracle PeopleSoft Financials for General Ledger and Accounts Payable works with Oracle PeopleSoft Financials for General Ledger and Accounts Payable v9.2 only if the patch 21341496 is installed.

- Oracle SOA Suite 11g (11.1.1.4.0) or higher.
- WebLogic Server 10.3.4.0.

Note: This integration does not require AIA Foundation Pack to be installed.

2.2 Pre-Installation Tasks

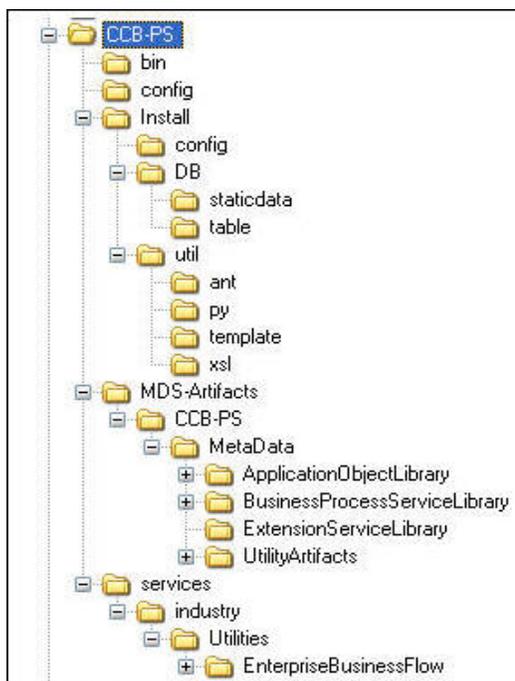

Before you begin installing the integration package, complete the following tasks:

1. Ensure that Oracle SOA Suite 11g R1 PS3 (11.1.1.4.0) is installed and running. For more information, refer to the documentation at [http://www.oracle.com/technetwork/middleware/soasuite/documentation/index.html - 111140](http://www.oracle.com/technetwork/middleware/soasuite/documentation/index.html-111140).
2. Login to the **WebLogic** console to confirm there are no changes in **Pending Activation** status.
3. Restart the **Enterprise Manager** and the **WebLogic Admin** server.

2.3 Installation Steps

Perform the following steps to complete the installation procedure:

1. Download the Integration Product zip file from e-delivery(<http://edelivery.oracle.com/>).
- Note:** For specific instructions about installing this integration on non-Windows/ Linux platforms see Oracle Support Knowledge article ID 1349320.1.
2. Extract the zip downloaded from e-delivery to retrieve the CCB-PS.zip file containing everything required for the installation of CCB-PS Integration.
 3. Extract the CCB_PS.zip file.
This results in a CCB-PS folder with subfolders such as bin, config, Install, MDS-Artifacts and services.

4. Set the following environment variables for Unix and Windows OS:

Variable	Example
Unix/Linux and Windows OS	
SOA_HOME	XXX/Middleware/Oracle_SOA1
ORACLE_HOME	XXX/Middleware/Oracle_SOA1
MW_HOME	XXX/Middleware
WL_HOME	XXX/Middleware
PRODUCT_HOME	Directory where CCB-PS.zip is extracted
Examples: Unix/Linux: PRODUCT_HOME=/slot/oracle/CCB-PS Windows: PRODUCT_HOME=D:\Oracle\CCB-PS	

Note: The syntax for PRODUCT_HOME changes depending on whether you are installing on Linux or Windows. The following sections refer to this as \$PRODUCT_HOME - in the Linux syntax. However, if you are installing on Windows, it should be referred to as: %PRODUCT_HOME%. Wherever \$PRODUCT_HOME is mentioned in this document please replace with %PRODUCT_HOME% for Windows.

Please note that on Linux only / works as path separator. If you are installing on Linux environment then please ensure that the command mentioned here have appropriate path separator.

The following commands set the environment variables used for executing installation scripts:

- **Unix/ Linux:**
source "\${WL_HOME}/wlserver_10.3/server/bin/setWLSEnv.sh"
- **Windows:**
cd %WL_HOME%\wlserver_10.3\server\bin\execute setWLSEnv.bat

Note: The **setWLSEnv.sh** on Linux and **setWLSEnv.bat** on Windows is used to set the environment variables used for executing the installation scripts.

5. Modify the \$PRODUCT_HOME\config\deploy.properties file and ensure that the values are relevant to the server where the integration product is to be installed. Login to the WebLogic console to cross verify the values being entered for these properties, as the build fails due to inappropriate values. The following table lists the properties available in the deploy.properties file along with their usage. The default values are specified wherever applicable.

Note: Do not delete the CCB-PS directory. This directory will be used as the download location for patches as they are released.

For a Windows installation, when updating any of the properties below, please add the "/" to the path. For example: C:/CCB-PS

MultiDatasource names should be "CCBPS-SOADS", "CCBPS-CCBDS" and "CCBPS-PSDS" as these DS names are referred in respective composites.

The following table lists the properties available in deploy.properties file along with their usage. The default values are specified wherever applicable.

Property	Description	Example
Server Installation Information		
SOA.AdminServer.hostname	Host name of the server where Admin Server is installed	adcxxx.abc.oracle.com
SOA.AdminServer.portnumber	Port Number Admin Server is listening to	7043
SOA.ManagedServer.servername	SOA Managed Server Name	soa_server1
SOA.AdminServer.servername	Admin Server name	AdminServer
SOA.AdminServer.domainname	SOA Domain name	soa_domain
SOA.ManagedServer.hostname	Host name of the server where SOA server is installed.	adcxxx.abc.oracle.com
SOA.ManagedServer.portnumber	Port Number SOA server is listening to	8043
SOA.AdminServer.username	User name used to log in to the WebLogic console	
SOA.AdminServer.password	Password used to log in to the WebLogic console	
SOA.ManagedServer.username	User name used to log in to the EM console	
SOA.ManagedServer.password	Password used to log in to the EM console	
middleware_home	Path on the server where middleware is installed	/slot/emsXXX/ Middleware
middleware_wls_home	Path on the server where WebLogic is installed.	/slot/emsXXX/ Middleware/wlserver_10.3
middleware_soa_home	Path on the server where SOA is installed.	/slot/emsXXX/oracle/ Middleware/Oracle_SOA1
JDBC Properties Section For SOA Database		
soa.db.hostname	Database hostname	adcXXXX.abc.oracle.com
soa.db.port	Database port number	1521
soa.db.sid	Databse SID	xxxdev2
soa.db.adminuser	Database admin user name.	System
soa.db.adminpwd	Database admin password.	Manager
soa.db.user	user name used by CCB-PS application to access SOA database for CCB-PS Lookup tables etc	ccbpsuser
soa.db.pwd	ErrorHandling schema password	ccbpspwd
soa.db.multids	JDBC multi data source name for SOA data source	CCBPS-SOADS

Property	Description	Example
soa.db.dsnameslist	Data sources list for SOADS multi data source	CCBPS-SOADS1
multids.algorithmtype	The algorithm determines the connection request processing for the multi data source	Load-Balancing / Failover
ps.db.multids	JDBC multi data source name for PS data source	CCBPS-PSDS
ps.db.dsnameslist	Data sources list for PSDS multi data source	CCBPS-PSDS1
ccb.db.multids	JDBC multi data source name for CCB data source	CCBPS-CCBDS
ccb.db.dsnameslist	Data sources list for CCBDS multi data source	CCBPS-CCBDS1
SOA.mdsconfig.mdsdbhostname	MDS repository host name	adcXXXX.abc.oracle.com
SOA.mdsconfig.mdsdbportnumber	MDS repository port number	1521
SOA.mdsconfig.mdsdbsid	MDS repository's database SID	xxxdev2
SOA.mdsconfig.mdsdbusername	MDS repository user name	DEV_MDS
SOA.mdsconfig.mdsdbuserpassword	MDS repository password	XXX_MDS
Client CCB Instance URL WITH PORT		
ccb.client.stag.instance	Points to the client CCB instance being used for integration in stage environment	xyz.us.oracle.com:9900
ccb.client.prod.instance	Points to the client CCB instance being used for integration in Production	abc.us.oracle.com:9900

Also note the following:

- \$PRODUCT_HOME/Install/util/ant folder contains all the ant build scripts
- \$PRODUCT_HOME/bin/InstallBuild.xml is used for installing CCB-PS integration code
- \$PRODUCT_HOME/bin/UnInstallBuild.xml is used for uninstalling CCB-PS integration code
- \$PRODUCT_HOME/bin/DeployUndeployUtility.xml is used for deploying/undeploying individual composite/MDS folder and restarting managed server
- Installation/uninstallation process may take considerable amount of time. Please be patient during installation/uninstallation.

2.3.1 Running the Installation Script

After you set the environment variables, perform the following:

1. Open a command prompt and execute the command:

```
cd CCB-PS/bin
```

2. Execute: **ant -f InstallBuild.xml -DInstallProperties=\$PRODUCT_HOME/config/deploy.properties** to invoke the script.

This completes the end to end CCB-PS integration installation by performing the following tasks:

- Creates database user / tables required for the integration at the SOA database.

Table Name	Description
INTEGRATION_LOOKUP_TABLE	A lookup table to store all the configuration parameters used by the BPEL processes. This table is also used to configure the e-mail addresses to be notified if errors occur. This table is seeded with data at the time of integration product installation.
INTEGRATION_PROCESS_ACTIVATION	This table is used to activate or de-activate various integration points. During the installation process this table is seeded with data. By default, it is populated to activate all the available integration points in the product.
INTEGRATION_ERROR_STORE	The table is used to hold the information regarding the errors encountered during integration transactions. A record is inserted for each error encountered by the BPEL processes. The mail notification process, MailNotification, accesses this table to get the error information needed to construct the notification email. This table is delivered with no data.

- Creates JDBC DataSource for the SOA Database hosting tables mentioned above.
- Creates JDBC DataSource for the CCB database the integration should connect to.
- Creates JDBC DataSource for the PS database the integration should connect to.
- Creates outbound connection pool instance for Database used by CCB / PS and SOA DB by updating DBAdapter.rar file.
- Creates JDBC Multi DataSource for the SOA Database.
- Creates JDBC Multi DataSource for the CCB database.
- Creates JDBC Multi DataSource for the PS database.

Note: Add data source list comma separated in deploy.properties

- Updates MDS repository with all the artifacts.
- Creates the application partition where the composites are going to be deployed. For example: CCB-PS
- Compiles / Packages and then deploy all the composites to the enterprise manager.

- Attaches "oracle/Utilities_wss_http_token_service_policy_OPT_ON" and "oracle/Utilities_wss_http_token_client_policy_OPT_ON" local security policies for all the services and references for CCB-PS composites.

2.4 Post-Installation Checklist

After running the installation scripts, complete the following tasks to finalize the installation:

1. Restart WebLogic Admin server
2. Restart the SOA server

Re-starting the servers activates the processes that require a restart after installation and ensures that the installation of all artifacts is successful.

Review the logs under `$WL_HOME/user_projects/domains/soa_domain/servers/soa_server1/logs` to check for deployment errors

3. Verify that all JDBC resources were created
4. Verify composites in the Enterprise Manager

2.4.1 Verify JDBC Configuration

Data Source

1. Ensure that following multi data sources are created on the server:
 - CCBPS-CCBDS1 - Data source used for establishing connection with CCB application database
 - CCBPS-PSDS1 - Data source used for establishing connection with the Oracle PeopleSoft Financials for General Ledger and Accounts Payable application database
 - CCBPS-SOADS1 - Data source used for establishing connection with SOA database
 - CCBPS-CCBDS - Multi Data source contains list of CCBDS data sources
 - CCBPS-PSDS - Multi Data source contains list of PSDS data sources
 - CCBPS-SOADS - Multi Data source contains list of SOADS data sources
2. Open the WebLogic Admin Console and select **Services > Data Sources**. Verify that the Multi data sources and data sources are created.
3. Verify whether all the data sources are included under their respective multi data source.

4. Verify whether the URL settings are correctly pointed to the database.

Select **Services > Data Sources**.

In the **Main** page, select the **Configuration** tab then the **Connection Pool** sub tab.

Verify the URL and credentials (in the Properties text area).

The screenshot displays the Oracle WebLogic Server Administration Console interface. The main content area is titled "Settings for CCBPS-CCBDS1" and is under the "Configuration" tab, specifically the "Connection Pool" sub-tab. The "URL" field is populated with "jdbc:oracle:thin:@st-lindb-06.us.oracle.com:1521:C2311". The "Driver Class Name" field is populated with "oracle.jdbc.xa.client.OracleXADataSource". The "Properties" section contains a text area with "user=c13adm". The "System Properties" section is empty. The "Password" and "Confirm Password" fields are masked with dots. On the left side, the "Domain Structure" tree shows the navigation path: soa_domain > Environment > Deployments > Services > Data Sources. The "System Status" section at the bottom left shows the health of running servers: Failed (0), Critical (0), Overloaded (0), Warning (0), and OK (2).

- Test the database for the correct configurations.

Select **Services > Data Sources**.

In the **Main** page, select **Monitoring** then select the **Testing** sub tab.

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area displays the 'Settings for CCBPS-CCBD51' page. The 'Monitoring' tab is selected, and the 'Testing' sub-tab is active. A message indicates a successful test: 'Test of CCBPS-CCBD51 on server soa_server1 was successful.' Below this, there is a table titled 'Test Data Source (Filtered - More Columns Exist)'. The table has two columns: 'Server' and 'State'. The 'soa_server1' server is listed with a 'Running' state.

Server	State
soa_server1	Running

2.4.1.1 Database Outbound Connection Pool

- Ensure the following three connection pools are created on the server:
 - eis/DB/CCBPS-CCBDS for CCB database connection pool.
 - eis/DB/CCBPS-PSDS for PS database connection pool
 - eis/DB/CCBPS-SOADS for SOA 11g database connection pool
- Select **Deployments**.
- Select **DBAdapter**, and then select the **Configuration** tab.
- Select the **Outbound Connection Pools** tab under the **Configuration** tab.
- Expand javax.resource.cci.ConnectionFactory.

2.4.2 Verifying Composites in Enterprise Manager

Verify that the CCB-PS partition was created with all the composites deployed.

- Login to the Enterprise Manager.
- Expand **SOA > soa-infra > CCB-PS partition**.
- Verify that all composites are deployed and in an active state.

2.5 Configuring the Edge Applications

Configure Oracle Utilities Customer Care and Billing and Oracle PeopleSoft Financials for General Ledger and Accounts Payable installation according to the guidelines in the Implementation Guide for this integration package.

Chapter 3

Undeploying / Deploying Composites

This section describes how to deploy/ undeploy individual composites for incremental builds or patches:

- [Undeploying Composites](#)
- [Deploying Individual Composites](#)

3.1 Undeploying Composites

If the composite being deployed involves changes made to the MDS artifacts, you must first undeploy the composite. Perform the following steps to undeploy individual composites:

1. Set the environment variables as described above in the installation steps.
2. Open a Command prompt and execute the command

- **In Linux:**

```
cd $PRODUCT_HOME/bin
```

- **In Windows:**

```
cd %PRODUCT_HOME%\bin
```

3. Execute:

- **In Windows:**

```
ant -f %PRODUCT_HOME%/Install/util/ant/  
DeployUndeployUtility.xml -DInstallProperties=%PRODUCT_HOME%/  
config/deploy.properties UnDeployComposite
```

- **In Linux:**

```
ant -f $PRODUCT_HOME/Install/util/ant/DeployUndeployUtility.xml  
- DInstallProperties=$PRODUCT_HOME/config/deploy.properties  
UnDeployComposite
```

4. Validate the following parameters. To use the default value, press Enter. Default values are picked up from InstallProperties file that you specified as part of Ant command above.

Note: You may choose to provide a different value compared to the default and press Enter.

- SOA Server Hostname - Hostname of server hosting SOA server
- SOA Server Portnumber - Portnumber of server hosting SOA server
- SOA Server Username - Username to connect to SOA server
- SOA Server Password - Password to connect to SOA server
- Composite Name - Name of composite which needs to be undeployed to SOA server. There is no default value for this parameter
- Composite folder location - Folder name should be absolute path starting <PRODUCT_HOME>/services/industry/Utilities/<EnterpriseBusinessFlow/utility>

For example, if you are planning to undeploy composite from <PRODUCT_HOME>/services/industry/Utilities/EnterpriseBusinessFlow then pass <PRODUCT_HOME>/services/industry/Utilities/EnterpriseBusinessFlow for this property.

The default value is %PRODUCT_HOME%/services/industry/Utilities/EnterpriseBusinessFlow, as most of the business specific composites reside in this folder.

- Partition Name - This is the SOA partition name to which this composite should be undeployed.
5. Enter composite name that you wish to undeploy from the partition.

3.2 Deploying Individual Composites

Perform the following steps to deploy individual composites:

1. Open a command prompt and execute the command:
cd \$PRODUCT_HOME\bin
2. Execute:
 - **In Windows:**

```
ant -f %PRODUCT_HOME%/Install/util/ant/
DeployUndeployUtility.xml -DInstallProperties=%PRODUCT_HOME%/
config/deploy.properties DeployComposite
```
 - **In Linux:**

```
ant -f $PRODUCT_HOME/Install/util/ant/DeployUndeployUtility.xml
-DInstallProperties=$PRODUCT_HOME/config/deploy.properties
DeployComposite
```
3. Validate the following parameters. To use the default value, press Enter. Default values are picked up from InstallProperties file that you specified as part of Ant command above.

Note: You may choose to provide a different value compared to the default and press Enter.

 - SOA Server Hostname - Hostname of server hosting SOA server
 - SOA Server Portnumber - Portnumber of server hosting SOA server
 - SOA Server Username - Username to connect to SOA server
 - SOA Server Password - Password to connect to SOA server
 - Admin Server Hostname - Hostname of Admin server

- Admin Server Portnumber - Portnumber of Admin server
 - Admin Server Username - Username to connect to Admin server
 - Admin Server Password - Password to connect to Admin server
 - Composite Name - Name of composite which needs to be deployed to SOA server. There is no default value for this parameter
 - Composite folder location - Folder name should be absolute path starting %PRODUCT_HOME%/services/industry/Utilities/<EBF/utility>. Example if you are planning to deploy composite from %PRODUCT_HOME%/services/industry/Utilities/EBF then pass %PRODUCT_HOME%/services/industry/Utilities/EBF for this property. Default value for this property is %PRODUCT_HOME%/services/industry/Utilities/EBF, as most of business specific composite reside in this folder.
 - Partition Name - This is the SOA partition name to which this composite should be deployed.
4. Enter the composite name that you wish to deploy. For example, PSCCBAPDataRequestScheduler
- This deploys the composite name specified.

Chapter 4

Deploying/Undeploying MDS Folder

This section describes how to deploy/ undeploy MDS folder for incremental builds or patches:

- [Un-Deploy MDS folder](#)
- [Deploying MDS Folder](#)

4.1 Un-Deploy MDS folder

To undeploy a particular folder from MDS, run below command and pass the folder name which needs to be undeployed.

1. Open a command prompt and execute the command:
cd \$PRODUCT_HOME\bin
 - **In Linux:**
cd \$PRODUCT_HOME/bin
 - **In Windows:**
cd %PRODUCT_HOME%\bin
2. In order to undeploy a folder under \$PRODUCT_HOME/MDS-Artifacts from MDS repository, run below command -
 - **In Windows:**
ant -f %PRODUCT_HOME%/Install/util/ant/DeployUndeployUtility.xml -DInstallProperties=%PRODUCT_HOME%/config/deploy.properties UnDeployMDS
 - **In Linux:**
ant -f \$PRODUCT_HOME/Install/util/ant/DeployUndeployUtility.xml -DInstallProperties=\$PRODUCT_HOME/config/deploy.properties UnDeployMDS
3. Validate the following parameters. To use the default value, press Enter. Default values are picked up from InstallProperties file that you specified as part of Ant command above.
 - Note:** You may choose to provide a different value compared to the default and press Enter.
 - SOA Server Hostname - Hostname of server hosting SOA server

- SOA Server Portnumber - Portnumber of server hosting SOA server,
- SOA Server Username - Username to connect to SOA server
- SOA Server Password - Password to connect to SOA server
- MDS Folder Name - Name of folder which needs to be undeployed from MDS repository. The folder name should be relative path inside %PRODUCT_HOME%/MDS-Artifacts, i.e. it should start with CCB-PS. Example, if you are planning to undeploy %PRODUCT_HOME%/MDS-Artifacts/CCB-PS/MetaData/ApplicationObjectLibrary then pass CCB-PS/MetaData/ApplicationObjectLibrary for this property.

Note: Only folder level undeployment is possible using this command. File level undeployment is not supported using this command.

4.2 Deploying MDS Folder

1. Open a command prompt and execute the command:
cd \$PRODUCT_HOME\bin

2. Execute:

- **Windows -**

```
ant -f %PRODUCT_HOME%/Install/util/ant/
DeployUndeployUtility.xml -DInstallProperties=%PRODUCT_HOME%/
config/deploy.properties DeployMDS
```

- **Linux -**

```
ant -f $PRODUCT_HOME/Install/util/ant/DeployUndeployUtility.xml
-DInstallProperties=$PRODUCT_HOME/config/deploy.properties
DeployMDS
```

3. Validate the following parameters. To use the default value, press Enter. Default values are picked up from InstallProperties file that you specified as part of Ant command above.

Note: You may choose to provide a different value compared to the default and press Enter.

- SOA Server Hostname - Hostname of server hosting SOA server SOA Server Portnumber - Portnumber of server hosting SOA server SOA Server Username - Username to connect to SOA server command
- SOA Server Password - Password to connect to SOA server
- MDS Folder Name - Name of folder which needs to be deployed to MDS repository. The folder name should be relative path inside %PRODUCT_HOME%/MDS-Artifacts, i.e., it should start with CCB-PS. Example if you are planning to deploy %PRODUCT_HOME%/MDS-Artifacts/CCB-PS/MetaData/ApplicationObjectLibrary then pass CCB-PS/MetaData/ApplicationObjectLibrary for this property.
- It is recommended to re-deploy the composite which are using the MDS Artifacts modified by the steps mentioned above so that the changes done to MDS Artifacts are used by the composites.

Note: Only folder level deployment is possible using this command. File level deployment is not supported using this command.

Chapter 5

Uninstalling the Integration

To uninstall the integration, complete the following steps:

1. Restart the SOA server and the WebLogic Admin server.
2. Set environment variables as mentioned above in the [Installation Steps](#).
3. Ensure that user soa.db.user is disconnected from the database.

Run the following query on the database as sysdba user. (This should not return any rows.)

```
select username, sid, serial# from v$session where
username='ccbpsuser';
```

4. Open a Command prompt and execute the following command:
cd \$PRODUCT_HOME\Install\util\ant
5. Run the following script:
ant -f UnInstallBuild.xml -DInstallProperties=\$PRODUCT_HOME/config/
deploy.properties
6. This command deletes everything related to CCB-PS from the server by completing the following tasks:
 - Undeploys all composites from the Enterprise Manager partition.
 - Deletes the partition.
 - Undeploys MDS artifacts.
 - Undeploys DB Outbound Connection Pool.
 - Deletes the CCBPS related database objects created in SOA database and deletes Multi data sources and data sources.
7. Restart the WebLogic and SOA servers.

Note: After a successful uninstall, all JDBC resources and CCB-PS partitions created during installation are deleted.

Chapter 6

Installation Commands

The table below lists possible commands for the install scripts.

Command	Description	Restart Required
ant -f InstallBuild.xml - DInstallProperties=\$PRODUCT_HOM E/config/deploy.properties	Install CCB-PS Integration from scratch.	Yes
ant -f \$PRODUCT_HOME/Install/util/ ant/DeployUndeployUtility.xml - DInstallProperties=\$PRODUCT_HOM E/config/deploy.properties UnDeployComposite	This command is used while undeploying a single composite from the server. This prompts for the name of the composite to be undeployed. Name of the composite is nothing but name of the folder under PRODUCT_HOME/services/industry/Utilities/EnterpriseBusinessFlow for example : PSCCBAPDataRequestScheduler	No
ant -f \$PRODUCT_HOME/Install/util/ ant/DeployUndeployUtility.xml - DInstallProperties=\$PRODUCT_HOM E/config/deploy.properties UnDeployMDS	MDS Folder level undeployment is done using this command.	Yes
ant -f \$PRODUCT_HOME/Install/util/ ant/DeployUndeployUtility.xml - DInstallProperties=\$PRODUCT_HOM E/config/deploy.properties DeployMDS	MDS Folder level deployment is done using this command	Yes
ant -f \$PRODUCT_HOME/Install/util/ ant/DeployUndeployUtility.xml - DInstallProperties=\$PRODUCT_HOM E/config/deploy.properties DeployComposite	This command is used while deploying a single composite to the server. This prompts for the name of the composite to be deployed. Name of the composite is the name of the folder under PRODUCT_HOME/services/industry/Utilities/EnterpriseBusinessFlow for example : PSCCBAPDataRequestScheduler	No
ant -f \$PRODUCT_HOME/Install/util/ ant/DeployUndeployUtility.xml - DInstallProperties=\$PRODUCT_HOM E/config/deploy.properties RestartManagedServer	Restarts the SOA managed server	

Command	Description	Restart Required
ant -f UnInstallBuild.xml - DInstallProperties=\$PRODUCT_HOM E/config/deploy.properties	Uninstall CCB-PS Integration	Yes
