1. Preface

1.1 Introduction

This manual is designed to help you quickly get acquainted with the Relationship Pricing module of Oracle FLEXCUBE.

It provides an overview to the module, and provides information on using this module of Oracle FLEXCUBE.

You can further obtain information specific to a particular field by placing the cursor on the relevant field and striking <F1> on the keyboard.

1.2 Audience

This manual is intended for the following User/User Roles:

Role	Function
Back office clerk	Input functions for contracts
Back office managers/officers	Authorization functions
Product Managers	Product definition and authorization
End of day operators	Processing during end of day/ beginning of day
Financial Controller/Product Managers	Generation of reports

1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.4 Organization

The manual is organized in the following manner:

Chapter 1	<i>About this Manual</i> gives a brief introduction of the module, the audience it addresses and the organization of the various chapters. It also includes the list of related documents to be referred, if any, and the conventions used in the document.
Chapter 2	<i>Customer Relationship Pricing</i> explains the maintenances required to provide services to customers based on the total business that the customer conducts or could potentially conduct.
Chapter 3	<i>Function ID Glossary</i> has alphabetical listing of Function/Screen ID's used in the module with page references for quick navigation.

1.5 Related Documents

The Procedures User Manual

1.6 Glossary of Icons

This User Manual may refer to all or some of the following icons:

Icons	Function
	Exit
	Add row
	Delete row
	Option List

2. Customer Relationship Pricing

2.1 Introduction

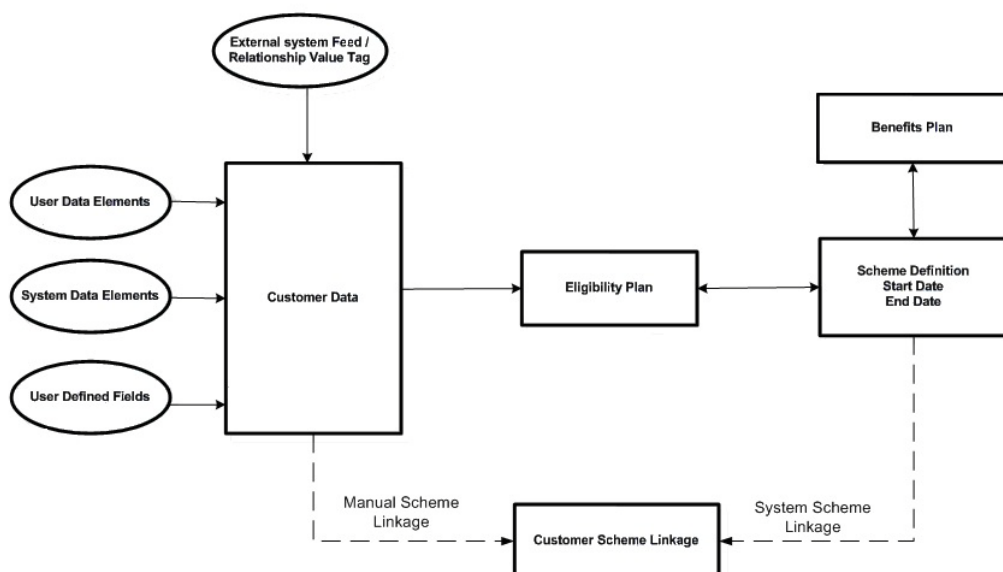

Relationship pricing is the pricing of services offered to a customer based on the total business that the customer conducts or could potentially conduct. In this case, a set of eligible customers is offered a special pricing over and above the standard product pricing. This is commonly implemented by way of discounts, rebates, or offsets against standard pricing. A combination of products wrapped as a product bundle could also be offered to customers. Pricing benefits are offered to customers based on customer relation, product bundling or a combination of both. For e.g., for keeping a minimum daily balance of \$2,500, a bank may offer its customers a fee waive-off on credit cards, lines of credit, checking and savings, as well as 100 free trades and bonus interest rates on savings accounts.

Pricing benefits are offered to customers as a variance over the standard product pricing. A pricing scheme is defined and details like eligibility criteria, validity period, and the benefits of the scheme are maintained. The relation between different components involved in relationship pricing can be explained as follows:

1. User Data Elements (UDE) are defined to extract data from Oracle FLEXCUBE
2. External relationship values of customers are captured using relationship value tags (RVT). The RVT value can also be extracted from external systems
3. System Data Elements (SDE) are defined to be used in the special pricing rules
4. User defined fields are maintained to be used in the pricing rules
5. Eligibility criteria to identify the set of customer to avail the benefits of the scheme are defined using the values of UDE, SDE, RVT, and UDF
6. Pricing variance rules are defined based on which the scheme benefits are offered to customers
7. Scheme benefits are applied to eligible customers based on their eligibility and also based on the product bundle the customer has opted for

The following diagram displays the relation between various components involved in the calculation of relationship pricing.

Customer – Pricing Scheme Linkage

The various maintenances required to provide relationship pricing to customers is explained in the subsequent sections.

2.2 Maintaining User Data Elements

You can maintain the data elements to be used to compose pricing scheme rules in 'Relationship Pricing User Data Elements Maintenance' screen. You can invoke this screen by typing 'CODUDMNT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The data elements could be relevant fields from tables in the database or could be complex stored procedures derived from values of other UDEs or constant values.

The screen appears as shown below:

The screenshot shows the 'Relationship Pricing User Data Elements Maintenance' application window. At the top, there are 'New' and 'Enter Query' buttons. The main form area is titled 'User Data Element (UDE)' and includes the following fields:

- UDE Code * (text input)
- UDE Description * (text input with a help icon)
- UDE Basis * (dropdown menu, currently set to 'Query')
- UDE Data Type * (dropdown menu, currently set to 'Numeric')

Below the form, there are two tabs: 'Query' and 'Function'. The 'Query' tab is selected, displaying a large text area for the 'SQL Statement'. A 'Validate Query' button is located below the text area, and an 'Error' field is positioned below the button. At the bottom of the window, there is a 'Fields' section with three columns: 'Input By Date Time', 'Authorized By Date Time', and 'Modification Number'. The 'Modification Number' column contains two checkboxes: 'Authorized' and 'Open'.

You can maintain the following details in this screen:

UDE Code

Specify a unique alphanumeric code for the User Data Element

UDE Description

Specify a suitable description for the User Data Element

UDE Basis

Select the basis for deriving the UDE value from the drop-down list provided. The options available are as follows:

- Query - the UDE value is derived using a PL/SQL query on Oracle FLEXCUBE database, which returns a single value

- Function - the UDE value is derived using pre-defined database functions returning a particular value. You need to provide proper inputs to the function to return the UDE value

UDE Datatype

Select the data type of the UDE value from the drop-down list provided. The possible options are as follows:

- Numeric
- String
- Date

2.2.1 Query Tab

If you have selected 'Query' as the basis for deriving UDE value, you need to specify the SQL query statement to return the UDE output value.

You can frame the query statement using one or more database tables in Oracle FLEXCUBE. You can also use aggregate functions and multiple conditions in the where clause of the SQL statement. You need to provide customer number as an input to the query and the result of the query will be the UDE value.

You can validate the query statement by clicking the 'Validate Query' button. Any errors in the query statement will get displayed in the 'Error' field.

For example, the UDE to get the number of accounts opened for a customer in the logged in Branch can be defined as follows:

```
Select count (1) from STTM_CUST_ACCOUNT
```

```
Where Cust_No = @CUSTOMER_NO
```

```
And branch_code = global.current_branch;
```

2.2.2 Function Tab

If you have selected 'Function' as the basis for deriving UDE value, you need to specify the parameters related to the function in the 'Function' tab.

The screenshot shows the 'Relationship Pricing User Data Elements Maintenance' application. The 'User Data Element (UDE)' section has the following fields: UDE Code * (text input), UDE Description * (text input with a help icon), UDE Basis * (dropdown menu set to 'Query'), and UDE Data Type * (dropdown menu set to 'Numeric'). Below this is the 'Function' tab, which includes a 'Function Name' field, a 'Get Parameters' button, and a 'Delete Rows' button. The 'Function Description' section is a table with columns for 'Parameter Name', 'UDE', and 'Constant'. The 'Fields' section at the bottom shows 'Input By Date Time', 'Authorized By Date Time', and 'Modification Number' with checkboxes for 'Authorized' and 'Open'.

You can specify the following details here:

Function Name

Select the database function you wish to use from the pre-defined set of functions available in the option list.

Click the 'Get Parameter' button to get the parameters linked to the function name selected.

Parameter Name

All function parameters, which can be mapped to an existing UDE or a constant value to arrive at the required output, get displayed here

You can specify either a UDE code or a constant value as input for the function parameter

UDE

Specify the UDE code to be used as a value for the function parameter

Note

You can specify the '@CUSTOMER_NO' keyword as a parameter value

Constant

Specify a constant value of the function parameter

Note

You cannot close a UDE record if it is used in Eligibility Criteria maintenance or in Variance Rule maintenance.

2.3 Viewing UDE Details

You can view the details of UDEs maintained and search for a UDE in the 'Relationship Pricing – User Data Elements Summary' screen. You can invoke this screen by typing 'COSUDEMT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screen appears as shown below:

Authorization Status	Record Status	UDE Code
----------------------	---------------	----------

You can search for a UDE value in this screen by specifying any of the following:

Authorization Status

Select the authorization status of the record you want to search for, from the drop-down list provided. The options possible are:

- Authorized
- Unauthorized

Record Status

Select the status of the record which you want search for, from the drop-down list provided. The options possible are:

- Open
- Closed

UDE Code

Select the code of the data element you want to search for, from the option list provided

Click the 'Search' button to search for records according to the search criteria specified. You can also perform an advanced search using combinations of conditions by clicking the 'Advanced Search' button.

2.4 System Data Elements

For defining the eligibility criteria and the variance rule for a customer, you need to use the following SDEs available in the system:

- CUST_AVGSAL- to calculate the average salary of the customer for the last six months. The system calculates the average salary based on the salary amount credited to the account using the 'salary' or 'advance salary' transaction codes. Any reversal of salary with DR amount is not considered for calculating the average salary.
- CUST_EMPLOYER- to determine the customer's current employer code maintained in customer maintenance screen.

Otameshi Gaika is a foreign currency deposit account for individual customers. When the customer opens foreign currency deposit, he/she is eligible for additional interest benefit when following conditions are met:

- Deposit Amount \geq Particular JPY Amount (Say JPY 100,000)
- TD Currency = Particular Currency (Say USD/AUD/CNY/TRY/EUR/NZD/ZAR).
- Deposit Term = Particular tenor (Say 1 Month).

Additional interest rate benefits can be provided to a deposit account using the following SDEs available in the system:

- SDE SDE_CCY - To identify the currency of the deposit account
- SDE SDE_DEPOSIT_AMOUNT -To fetch the value of Term Deposit Amount
- SDE SDE_DEP_AMT_LCY -To provide the deposit amount in LCY equivalent amount

Note

- For the existing account, SDE SDE_DEP_AMT_LCY will return value from Current (LCY) field from STDCUSTD screen.
- If the enquiry is done in STDVAENQ screen this SDE will return the deposit amount in LCY as follows:
 - The deposit amount of a particular deposit account will be identified.
 - Standard mid rate applicable for the two currencies involved will be identified from CYDRATEE.
 - The FCY deposit amount will be converted into LCY equivalent by applying the exchange rate.
 - If the deposit is in LCY this SDE SDE_DEP_AMT_LCY will return the same value by applying the exchange rate as 1.

-
- SDE SDE_TENOR -To fetch the value of Term Deposit Tenor.

Note

- For Non-Rate Chart TDs the SDE SDE_TENOR value will always be in days.
- For Rate Chart Tenor
 - If Rate chart tenor at Account class level is maintained as Days then the tenor of the TD will be converted to days

- If Rate Chart Tenor at Account class level is maintained as months then the tenor of the TD will be converted to months. If it is maintained as a combination of month and days, then the round of value of the month will be considered

- SDE SDE_DEBIT_AMOUNT - To identify the pay in amount of the deposit account. This SDE will return the total pay in amount of the deposit only when the currency of all the pay in modes are the same. This SDE will return value as '0' when one of the pay in currency is different.
- SDE SDE_PAYIN_CCY - To provide currency of the pay in account. This SDE will return the pay in currency of the pay in account when the currency of all the pay in modes are same. This SDE will return a blank value if any one of the pay in currency is different.

2.5 Maintaining Relationship Value Tag Codes

A customer can avail the benefits of a scheme offered by your bank, based on certain attributes like credit card reward points, bonus points etc. You can maintain these attribute tags in the 'Relationship Value Tag Code Maintenance' screen. The values for these attribute tags can be specified either manually or uploaded from an external system.

You can invoke this screen by typing 'CODRVTCM' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows the 'Relationship Value Tag Code Maintenance' application window. The window title is 'Relationship Value Tag Code Maintenance'. It features a toolbar with 'New' and 'Enter Query' buttons. The main area is titled 'Relationship Value Tag (RVT)' and contains two input fields: 'RVT Code *' and 'RVT Description *'. Below the input fields is a 'Fields' section with a table of attributes: 'Input By' (Date Time), 'Authorized By' (Date Time), and 'Modification Number'. There are also checkboxes for 'Authorized' and 'Open'.

You can specify the following details in this screen:

RVT Code

Specify a unique code for customer relationship value tag.

RVT Description

Specify a suitable description for the relationship value tag.

Note

You cannot close an RVT record if it has been used for any customer-RVT code mapping.

2.6 Viewing RVT Code Details

You can view the details of the RVT code and also search for a desired code in the 'Relationship Value Code Maintenance Summary' screen. You can also invoke this screen by typing 'COSRVMT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screen appears as shown below:

Authorization Status	Record Status	RVT Code	RVT Description
----------------------	---------------	----------	-----------------

You can specify any of the following details to perform a search.

Authorization Status

Select the authorization status of the record you want to search for, from the drop-down list provided. The options possible are:

- Authorized
- Unauthorized

Record Status

Select the status of the record which you want search for, from the drop-down list provided. The options possible are:

- Open
- Closed

RVT Code

Select the code of the relationship value tag you want to search for, from the option list provided.

Click the 'Search' button to search for records according to the search criteria specified. You can also perform an advanced search using combinations of conditions by clicking the 'Advanced Search' button.

2.7 Maintaining Values for Relationship Tags

You can maintain the values for the relationship tags either manually or you can upload the same from an external system. You can maintain the values manually using the 'Customer Relationship Value Tag Code Maintenance' screen.

You can invoke this screen by typing 'CODCURVC' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Fields
Input By Date Time
Authorized By Date Time
Modification Number
<input type="checkbox"/> Authorized
<input type="checkbox"/> Open

You can specify the following details in this screen:

Customer Number

Select the name of the customer for whom you want to specify the relationship tag value from the option list provided

Customer Name

Customer name gets displayed automatically once you specify the customer number

RVT Code

Select the relationship tag code for which you want to specify the value, from the option list provided

RVT Description

Relationship tag description gets displayed once you specify the RVT code

RVT Code Value

Specify a value for the relationship tag selected

Source Code

Select the source code for the desired external system, from the option list provided

2.8 Viewing Relationship Tag Value Details

You can view the details of the relationship tag values and also search for a desired value in the 'Customer Relationship Value Code Maintenance Summary' screen. You can invoke this screen by typing 'COSCURVT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows a web application window titled "Summary". At the top, there is a search bar with "Advanced Search" and "Reset" buttons. Below the search bar, there are several input fields: "Authorization Status" (a dropdown menu), "Record Status" (a dropdown menu), "Customer Number" (a text box with a search icon), "Source Code" (a text box with a search icon), and "RVT Code" (a text box with a search icon and a help icon). Below the input fields, there is a pagination bar showing "Records per page 15", "First", "Previous", "1 Of 1", "Next", "Last", and "Go" buttons. Below the pagination bar, there is a table with columns: "Authorization Status", "Record Status", "Customer Number", "RVT Code", "RVT Code Value", and "Source Code". The table is currently empty. At the bottom of the screen, there are buttons for "Authoriza", "Record St", and "Exit".

You can specify any of the following details to perform a search.

Authorization Status

Select the authorization status of the record you want to search for, from the drop-down list provided. The options possible are:

- Authorized
- Unauthorized

Record Status

Select the status of the record which you want search for, from the drop-down list provided. The options possible are:

- Open
- Closed

Customer Number

Select the customer number whose relationship value you want to search for, from the option list provided.

RVT Code

Select the relationship value tag code you want to search for, from the option list provided

RVT Code Value

Select the relationship value you want to search for, from the option list provided

Source Code

Select the source code for the desired external system, from the option list provided

Click the 'Search' button to search for records according to the search criteria specified. You can also perform an advanced search using combinations of conditions by clicking the 'Advanced Search' button.

2.9 Maintaining Eligibility Plan

You need to maintain the eligibility criteria based on which a customer can avail the benefits of scheme. Eligibility criteria can be defined based on various customer attributes maintained as User Data Elements (UDE) or pre-shipped set of System Data Elements (SDE) and it helps to identify the target customers for a scheme. The eligibility criteria can be defined using customer RVT codes also. You can maintain the eligibility criteria for a scheme in 'Relationship Pricing Eligibility Plan' screen.

You can invoke this screen by typing 'CODELGPL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

RDE Code	RDE Parameter Value
<input checked="" type="checkbox"/>	<input type="text"/>

You can maintain the following details in this screen:

Eligibility Plan ID

Specify a unique ID for the eligibility plan

Eligibility Plan Description

Specify a unique description for the eligibility plan

RDE Code

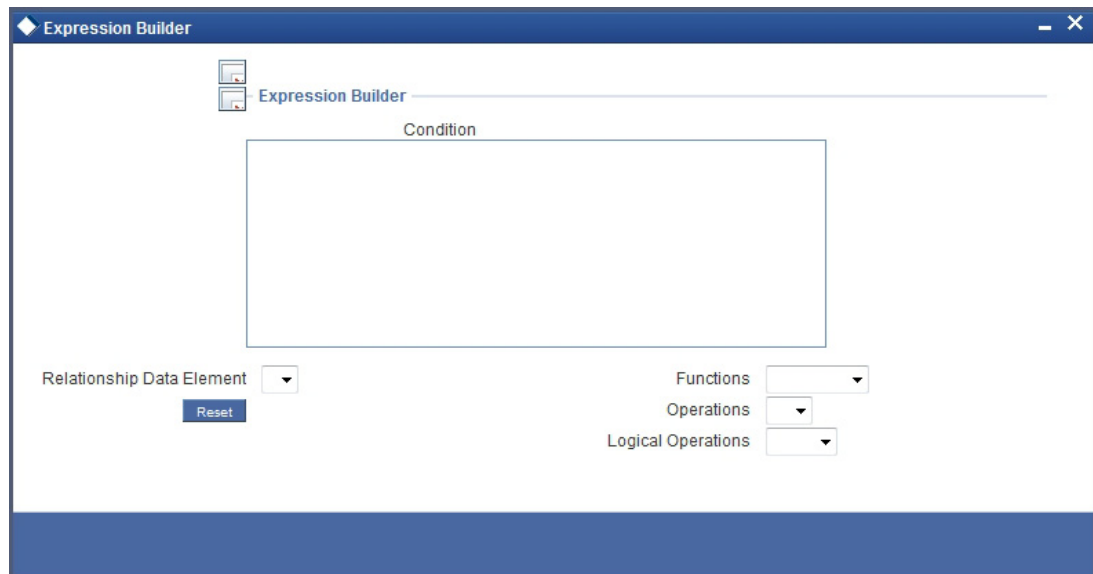

Select the relationship data element to be used to build the eligibility criteria expression. All system data elements, user data elements, and customer RVT codes are available for selection in the option list provided.

RDE Parameter Value

Specify a value for the relationship data element selected

2.9.1 Creating Eligibility Condition

You can build the condition to be evaluated to verify the eligibility of a customer by clicking the 'Expression Builder' button. The 'Expression Builder' screen is displayed.

You can specify the following details to build the eligibility criteria expression:

Condition

Specify the eligibility evaluation condition, using the relationship data elements, functions, operations, and logical operations provided.

Relationship Data Element

Select the relationship data element to be used to build the eligibility condition. The RDE codes specified in 'Relationship Pricing Eligibility Plan' screen are displayed in the drop-down list provided.

Functions

Select the mathematical function to be used to build the eligibility condition. The following options are available:

- Abs
- Greatest
- Round
- Trunc
- Floor
- Ceil
- Power
- Mod

Operations

Select the operator to be used to build the eligibility criteria expression. The following options are possible:

- + (Addition)
- - (Subtraction)
- * (Multiplication)
- / (Division)

Logical Operations

Select the logical operator to be used to build the eligibility criteria expression. The following options are possible:

- AND
- OR
- <
- <=
- >
- >=
- <>

2.10 Viewing Eligibility Plan Details

You can view the details of the eligibility plans and also search for a desired plan in the 'Relationship Pricing Eligibility Plan Summary' screen. You can invoke this screen by typing 'COSELPLN' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screen appears as shown below:

The screenshot shows a web application window titled "Summary". At the top, there are "Advanced Search" and "Reset" buttons. Below these are two dropdown menus: "Authorization Status" and "Record Status". There is also a text input field for "Eligibility Plan Id" with a search icon. A pagination bar shows "Records per page 15", "First", "Previous", "1 Of 1", "Next", "Last", and "Go". Below the pagination is a table with the following columns: "Authorization Status", "Record Status", "Eligibility Plan Id", "Eligibility Plan Description", and "Condition". The table is currently empty. At the bottom of the window, there are buttons for "Authoriza", "Record St", and "Exit".

You can specify any of the following details to perform a search.

Authorization Status

Select the authorization status of the record you want to search for, from the drop-down list provided. The options possible are:

- Authorized
- Unauthorized

Record Status

Select the status of the record which you want search for, from the drop-down list provided. The options possible are:

- Open
- Closed

Eligibility Plan ID

Select the eligibility plan you want to search for, from the option list provided.

Click the 'Search' button to search for records according to the search criteria specified. You can also perform an advanced search using combinations of conditions by clicking the 'Advanced Search' button.

2.11 Maintaining Pricing Variance Rule

You can maintain the price or rate variance rules at module level where you can specify the rule conditions based on the module specific attributes available. You can specify multiple conditions based on which the preferential variance for eligible customers can be derived. You can define the variance rule in 'Relationship Pricing Variance Rule Maintenance' screen.

You can invoke this screen by typing 'CODVARRM' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

You need to specify the following details in this screen:

Variance Rule ID

Specify a unique ID for the variance rule.

Variance Rule Description

Specify a suitable description for the variance rule.

Module

Select the module to which you wish to associate the variance rule, from the option list provided.

Variance Rule Basis

Select the price component based on which you want to define the variance rule. The following options are available:

- Interest

- Charge
- Commission
- Fees
- Exchange Rate

Variance Rule Type

Select the type of the value being returned by the variance rule, from the option list provided. The following options are available for selection:

- Fixed Rate - applicable if you have selected 'Interest' as Variance Rule Basis. Variance rule returns a fixed rate, in this case, which can be used for pricing computation
- Fixed Amount - variance rule returns a fixed amount, which can be used for pricing computation
- Variance Rate – applicable if you have selected 'Interest' as Variance Rule Basis. Variance rule returns the variance rate over the base rate computed, which is added to or subtracted from the base rate
- Variance Amount - returns the variance amount to be added to or subtracted from the base rate
- Percentage - returns a percentage to be applied to the base amount or base rate computed to arrive at the final value

Note

The options 'Fixed Amount' and 'Variance Amount' are not applicable if you have specified 'Interest' as Variance Rule Basis

Variance Rule Currency 1

Select the currency associated with the variance rule from the option list provided. You need to specify this if you have selected 'Fixed Amount' or 'Variance Amount' as Variance Rule Type.

If you have selected the Variance Rule Basis as 'Exchange Rate', you need to select the first currency of the currency pair from the option list provided.

Variance Rule Currency 2

Select the second currency of the currency pair from the option list provided, if you have selected the Variance Rule Basis as 'Exchange Rate'.

2.11.1 Specifying Relationship Data Elements

Relationship Data Element is a collection of UDE, SDE (module specific and customer specific) and Customer RVT codes which is used to build the variance rule. You can maintain the following details to build the variance rule:

Relationship Data Element

Select the relationship data element to be used to build the variance rule. The option list contains all SDEs, UDEs, and customer RVT codes, available for selection.

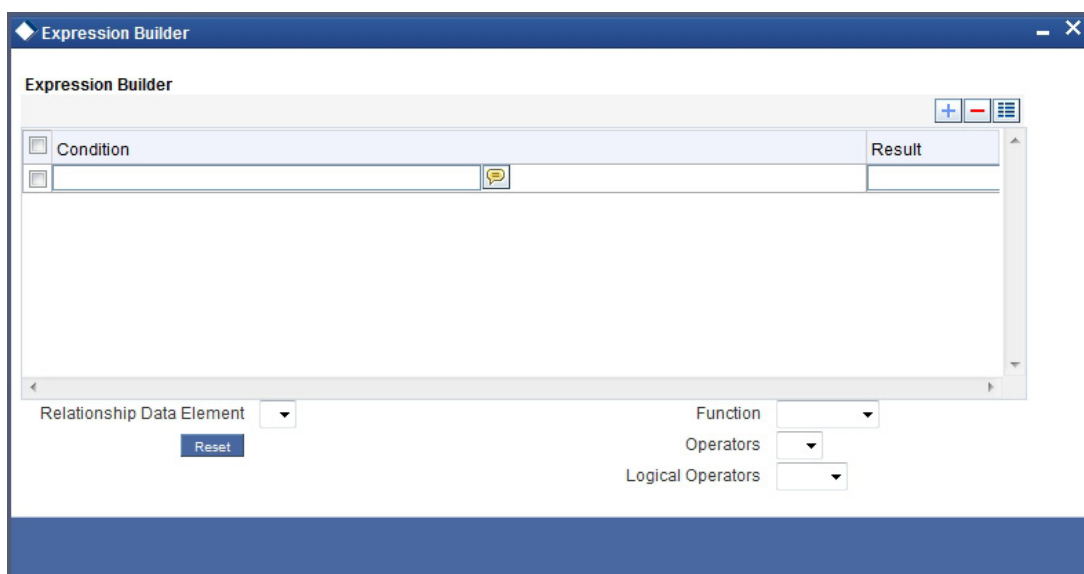

RDE parameter value

Specify a value for the RDE parameter selected.

2.11.2 Specifying Conditions for Variance Rule

You can build the expressions and specify conditions to derive the variance rule using the 'Expression Builder' screen.

Click the 'Expression Builder' button to invoke the 'Expression Builder' screen.

You can specify the conditions for deriving the variance rule, in this screen

Condition

Specify the condition for building the variance rule.

Result

Specify the result of the execution of the variance rule, in terms of rate or amount.

Relationship Data Element

Select the RDE to be used to build the variance rule expression. All the RDEs selected previously for this variance rule are displayed in the option list.

Function

Select the mathematic function to be used to build the variance rule, from the drop-down list provided. The following options are available:

- Abs
- Greatest
- Round
- Trunc
- Floor
- Ceil
- Power
- Mod

Operators

Select the operator to be used to build the variance rule expression. The following options are available:

- + (add)
- - (subtract)
- * (multiply)
- / (divide)

Logical Operators

Select the logical operator to be used to build the variance rule expression. The following options are available:

- AND
- OR
- <
- <=
- >
- >=
- <>

You can specify any number of conditions using combinations of mathematical functions, operators, and logical operators.

The following example demonstrates the building of a variance rule.

A variance rule needs to be set up to derive beneficial interest rates for customers based on loan amount. If the loan amount is greater than 250,000 then interest rate needs to be decreased by 1% and if the loan amount is greater than 500,000 then the decrease should be 1.5%.

For the above rule, the setup can be as follows.

Setup	Values
Module	LD
RDE	TXN_AMOUNT
Variance Rule basis	Interest rate
Return type	Percentage
Condition1	TXN_AMOUNT > 250000 AND TXN_AMOUNT < 500000
Result 1	-1
Condition2	TXN_AMOUNT >= 500000
Result 2	-1.5

2.12 Viewing Variance Rule Details

You can view the details of the variance rule and also search for a rule for a specific module or type in the 'Relationship Pricing Variance Rule Maintenance Summary' screen. You can invoke this screen by typing 'COSVARRL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screen appears as shown below:

The screenshot shows a web application window titled "Summary". At the top, there are "Advanced Search" and "Reset" buttons. Below this, there are several search filters: "Authorization Status" (dropdown), "Record Status" (dropdown), "Variance Rule Id" (text input with a search icon), "Variance Rule Basis" (dropdown), and "Variance Rule Type" (dropdown). Below the filters is a pagination bar showing "Records per page" set to 15, with "First", "Previous", "1 Of 1", "Next", "Last", and "Go" buttons. Below the pagination bar is a table header with columns: "Authorization Status", "Record Status", "Variance Rule Id", "Variance Rule Description", "Variance Rule Basis", "Variance Rule Type", and "Module". The table body is currently empty. At the bottom of the window, there are buttons for "Authoriza", "Record St", and "Exit".

You can specify the following details to search for a variance rule:

Authorization Status

Select the authorization status of the record you want to search for, from the drop-down list provided. The options possible are:

- Authorized
- Unauthorized

Record Status

Select the status of the record which you want search for, from the drop-down list provided. The options possible are:

- Open
- Closed

Variance Rule ID

Select the variance rule you want to search for, from the option list provided.

Module

Select the module for which you want view the variance rule details, from the option list provided.

Variance Rule Basis

Select the basis of the variance rule which you want to search for, from the option list provided. The following options are available:

- Interest
- Charge
- Commission
- Fees

Variance Rule Type

Select the type of the variance rule you want to search for, from the option list provided. The following options are available for selection:

- Fixed Rate
- Fixed Amount
- Variance Rate
- Variance Amount
- Percentage

Click the 'Search' button to search for records according to the search criteria specified. You can also perform an advanced search using combinations of conditions by clicking the 'Advanced Search' button.

2.13 Maintaining Benefit Plan

You can define the benefits offered to eligible customers on availing a scheme, in the 'Relationship Pricing Benefit Plan Maintenance' screen. Benefits can be defined in terms of any of the following:

- Preferential interest rates for loan products
- Beneficial charges/fees for various transactions
- Preferential commission variance
- Preferential rates for periodic interest and charges
- Preferential exchange rates

You can define benefits at module level, for more than one product and price component combination. You can invoke this screen by typing 'COdBENDT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Product *	Price Component Types	Price Components *	BenefitType	Variance Type	Variance Currency	Variance Value
-----------	-----------------------	--------------------	-------------	---------------	-------------------	----------------

You can specify the following details in this screen:

Benefit Plan ID

Specify a unique identification for the pricing benefit plan.

Benefit Plan Description

Specify a suitable description for the benefit plan.

Module

Select the module for which you want to maintain the benefit plan from the option list provided.

Priority Number

Specify the priority number to be associated with the benefit plan for the selected module.

When more than one benefit plan with the same 'Price Component' is eligible for a customer account and the same needs to be applied for an account, the applicable variance in the benefit plan with priority 0 will be applied always subject to the condition that the rule maintained inside the benefit plan is satisfied. i.e., irrespective of the other applicable priorities. Priority 0 needs to be applied mandatorily. However, if the rule within the benefit plan is not satisfied no need to apply that benefit plan.

Note

The system will display an error message if you try to maintain Priority as 0 for any other module other than IC.

Application of more than one benefit plan is applicable only for the following combination:

- Price Component Type – Interest
- Benefit Type - Variance
- Variance Type – Variance Rate

You can change the priority to '0' in CODBENPR (Relationship Pricing Benefit Plan Priority Change) screen.

Note

You can maintain the benefit plans with priority as 0 only on need basis. This has to be controlled operationally.

2.13.1 Specifying Pricing Benefit Details

You can specify the following pricing preferences for the benefit plan:

Product

Select the product to which you want to associate the benefit plan from the option list provided. All the valid product codes for the selected module are displayed in the list.

Price Component Type

Select the type of the price component from the drop-down list. The following options are available:

- Interest
- Charge
- Fee
- Commission
- Exchange Rate

Price Components

Select the price class components to be associated with the benefit plan. The option list displays the valid price class components maintained, based on the product code and price component type specified.

For example, if you select the price component type as Interest for an LD product, the price components list will display Interest Class components mapped to the LD product.

If you specify price component type as Charge, the price components list will display Charge Class components.

Benefit Type

Select the type of benefit from the drop-down list. The following options are available:

- Variance – a price variance is offered as benefit to the customer
- Waive – a price component waive-off is offered as benefit to the customer

Note

Waive-off benefit is applicable for price components of type charges, fees and commission.

Variance Type

Select the type of variance to be attached to the benefit plan. This is applicable if you have specified 'Variance' as the benefit type. The following options are available:

- Fixed Rate - fixed rate will be applied over the computed base rate computed
- Variance Rate - variance rate will be either added to or subtracted from the base rate computed
- Fixed Amount - fixed amount will be applied over the computed price amount
- Variance Amount - variance amount will be added to or subtracted from the base amount computed
- Percentage - percentage of base rate or amount computed will be increased or decreased from the base rate or amount
- Free Txn – indicates the number of free transactions available for the combination of a given Module id, Product, Price component type, and Price Component for a calendar month

Note

To avail this feature, you must setup the charge through the 'IC' module and select 'ITEM-COUNT' as charge basis. For a product, the system overrides the free transaction count maintained at account class level with the free transaction count maintained at the RP benefit plan level.

If you have selected the price component type as 'Exchange Rate', you need to select 'Variance Rate' as the variance type.

Variance Currency

Select the currency associated with fixed amount or variance amount, from the option list provided. If you have selected the price component type as 'Exchange Rate', you need to select the buy currency of the customer from the option list provided.

Variance Value

Specify the value related to variance. This is applicable if you have selected 'Variance' as the benefit type.

If you have selected the price component type as 'Exchange Rate', the system automatically calculates the variance value using the quotation method maintained for the currency pair.

Variance Rule

Select the variance rule ID to be associated with the benefit plan, from the option list provided.

Once you select a variance rule ID, the type of the variance rule gets defaulted in the benefit plan and you cannot change this.

Maximum Value

Specify the maximum value for interest rate component type.

Minimum Value

Specify the minimum value for interest rate component type.

Note

The system will validate the final interest rate (after application of RP) against the minimum and maximum interest rate maintained at the RP level. If the value of the interest rate is greater than the maximum value, then the system will use the maximum value for computation. If the value of the interest rate is lesser than the minimum value then the system will compute the minimum value computation.

2.13.2 Defining Priority in Benefit Maintenance

You can define the priority as 0 for the benefit plans in 'Benefit Plan Maintenance' screen. When the priority is defined as 0 only, the following components can be used in benefit plan:

- Price Component Type – Interest
- Benefit Type - Variance
- Variance Type – Variance Rate

No other values are permitted if the priority is defined as '0'. If any other price component value is provided for Priority '0' then system will display an appropriate error message.

Note

This is applicable only for IC module. If you try to maintain any other module with Priority '0', the system will display an appropriate error message.

2.14 Viewing Benefit Plan Details

You can view the details of the benefit plan and also search for a benefit plan for a specific module in the 'Relationship Pricing Benefit Plan Summary' screen. You can invoke this screen

by typing 'COSBENDT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows a web application window titled 'Summary'. At the top, there are 'Advanced Search' and 'Reset' buttons. Below these are four search filters: 'Authorization Status' (a dropdown menu), 'Record Status' (a dropdown menu), 'Benefit Plan Id' (a text input field with a search icon), and 'Module' (a text input field with a search icon). Below the filters is a pagination bar showing 'Records per page' set to 15, with buttons for 'First', 'Previous', '1 Of 1', 'Next', 'Last', and 'Go'. Below the pagination bar is a table header with columns: 'Authorization Status', 'Record Status', 'Benefit Plan Id', 'Benefit Plan Description', 'Module', and 'Priority Number'. At the bottom of the window, there are buttons for 'Authoriza...', 'Record St...', and 'Exit'.

You can search for a benefit plan by specifying the following fields:

Authorization Status

Select the authorization status of the record you want to search for, from the drop-down list provided. The options possible are:

- Authorized
- Unauthorized

Record Status

Select the status of the record which you want search for, from the drop-down list provided. The options possible are:

- Open
- Closed

Benefit Plan ID

Select the benefit plan you want to search for, from the option list provided.

Module

Select the module for which you want to view the benefit plans from the option list provided.

Click the 'Search' button to search for records according to the search criteria specified. You can also perform an advanced search using combinations of conditions by clicking the 'Advanced Search' button.

2.15 Maintaining Pricing Scheme

You can maintain the details of the pricing scheme in the 'Relationship Pricing Scheme Maintenance' screen. You can invoke this screen by typing 'CODSCHMM' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot displays the 'Relationship Pricing Scheme Maintenance' application window. The window title is 'Relationship Pricing Scheme Maintenance'. It contains several input fields and dropdown menus for scheme details. The 'Scheme ID' and 'Pricing Scheme ID Description' fields are highlighted with red boxes. The 'Scheme Validity Details' section includes 'Scheme Start Date', 'Scheme End Date', 'Benefit Validity Period', 'Benefit Validity Basis', 'Scheme Advice Description', and 'Scheme Status' (set to 'Active'). To the right, there are dropdowns for 'Valid Type', 'Eligibility Type', 'Apply For', and 'Executable Type', along with a checkbox for 'Benefit End on Scheme Expiry'. Below these fields are tabs for 'Benefit Details' and 'Eligibility Details'. A table below the tabs shows one row with 'Benefit Plan ID' and 'Benefit Plan Description', both highlighted with red boxes. The table has a 'Go' button and navigation arrows. At the bottom, there is a 'Fields' section with columns for 'Maker', 'Checker', 'Date Time', 'Mod No', 'Record Status', 'Authorization Status', and a 'Cancel' button.

You can maintain the following details specific to the scheme in this screen:

Pricing Scheme ID

Specify a unique ID for the pricing scheme

Pricing Scheme ID Description

Specify a suitable description for the pricing scheme

Scheme Start Date

Specify the effective start date of the pricing scheme. Select the start date by clicking the adjoining calendar icon

Scheme End Date

Specify the end date of the scheme. Select the end date by clicking the adjoining calendar icon

Benefit Validity Period

Specify the period through which the benefits will be made available to the customer, in terms of days, months or years. This date is applicable under the following conditions:

- Scheme ceases to exist, but benefits are given to the customers for a period of time
- Scheme is active, but the benefits are given to the customers for a short period of time

Benefit Validity Basis

Select the basis of specifying the validity period, from the drop-down list provided. The following options are available:

- Days
- Months
- Years

Scheme Advice Description

Specify a suitable description for the scheme advice

Scheme Status

Status of the scheme is displayed as 'Active', by default

Note

The status of the scheme changes to 'Expired', on the end date specified for the schema

Validity Type

Select the way of applying the scheme benefits from the drop-down list. The following options are available:

- One-Time – benefits are made available to eligible customers only once
- Renewable – scheme benefits are made available to the customers till the expiry of the scheme
- Perpetual – benefits offered to eligible customers continue to be available to the customers even if they fall out of the eligibility conditions

Eligibility Type

Select the duration of the benefit validity from the drop-down list. The following options are available:

- Benefits Validity Period
- Scheme Validity Period

Apply For

Select the customers for which the pricing scheme is applicable, from the drop-down list. The following options are available:

- New customer
- All customers
- Existing customers

Note

A customer is identified as new or existing based on their creation date and scheme start date

Execution Type

Select the type of application of the pricing scheme, from the drop-down list. The following options are available:

- Manual
- Automatic

Benefit End on Scheme Expiry

Select this checkbox to indicate that the customer scheme benefits expire on reaching the scheme end date, in cases where the validity period exceeds the scheme end date.

2.15.1 Benefit Details Tab

You can select the benefit plans to be applicable for a pricing scheme in the 'Benefit Details' tab. The following details related to the benefit plan are displayed:

- Benefit Plan ID
- Benefit Plan Description

Select the checkbox against any desired benefit plan to make it a part of the pricing scheme

2.15.2 Eligibility Details Tab

You can specify the eligibility details of the pricing scheme in the 'Eligibility Details' tab.

The screenshot displays the 'Relationship Pricing Scheme Maintenance' application window. The 'Eligibility Details' tab is active, showing fields for 'Eligibility Plan Id *' (with a search icon) and 'Eligibility Revision Frequency *' (set to 'Daily'). Other fields include 'First Revision Date *', 'Last Revision Date', and 'Next Revision Date'. The 'Scheme Validity Details' section is collapsed, showing fields for 'Scheme Start Date *', 'Scheme End Date *', 'Benefit Validity Period', 'Benefit Validity Basis', 'Scheme Advice Description', and 'Scheme Status' (set to 'Active'). The 'Validity Type *', 'Eligibility Type *', 'Apply For *', and 'Execution Type *' dropdowns are also visible. A checkbox for 'Benefit End on Scheme Expiry' is present. The bottom of the window shows a 'Fields' section with columns for 'Input By Date Time', 'Authorized By Date Time', and 'Modification Number', with checkboxes for 'Authorized' and 'Open'.

You can specify the following details related to eligibility:

Eligibility Plan ID

Select the eligibility criteria for a customer to avail the benefits of a scheme, from the option list provided. All valid eligibility plans are displayed in the list

Eligibility Revision Frequency

Select the frequency at which the eligibility plan gets revised, from the drop-down list. The following options are possible:

- Daily
- Weekly
- Fortnightly
- Monthly
- Quarterly

- Half Yearly
- Yearly

First Revision Date

The date on which the first execution of the eligibility plan happened, is displayed here

Last Revision Date

The last revision date of the scheme eligibility is displayed here

Next Revision Date

The date on which next revision of the eligibility plan should happen is displayed here. This value is arrived at, based on the last revision date and the revision frequency specified.

2.16 Viewing Pricing Scheme Details

You can view the details of the pricing scheme and also search for a scheme in the 'Relationship Pricing Scheme Maintenance Summary' screen.

You can invoke this screen by typing 'COSSCHME' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

You can search for a pricing scheme by specifying any of the following fields:

Authorization Status

Select the authorization status of the record you want to search for, from the drop-down list provided. The options possible are:

- Authorized
- Unauthorized

Record Status

Select the status of the record which you want search for, from the drop-down list provided. The options possible are:

- Open
- Closed

Pricing Scheme ID

Select the pricing scheme you want to search for, from the option list provided

Scheme Start Date

Specify the start date of the pricing scheme you want to search for

Scheme End Date

Specify the end date of the pricing scheme you want to search for

Validity Type

Select the validity type of the pricing scheme you want to search for, from the drop-down list provided

Apply For

Select the customers for which the pricing scheme you want to search for is applicable, from the drop-down list. The following options are available:

- New customer
- All customers
- Existing customers

Execution Type

Select the type of application of the pricing scheme you want to search for, from the drop-down list. The following options are available:

- Manual
- Automatic

Click the 'Search' button to search for records according to the search criteria specified. You can also perform an advanced search using combinations of conditions by clicking the 'Advanced Search' button.

2.17 Maintaining Customer Scheme Linkage

You can link a customer to a pricing scheme in the 'Customer Scheme Manual Linkage' screen. The benefits of the scheme are applied to the customer for the validity period specified.

You can invoke this screen by typing 'CODCUSML' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows the 'Customer Scheme Manual Linkage' application window. It includes a 'Save' button, input fields for 'Customer No *' and 'Customer Name', a table with columns for 'Scheme ID *', 'Scheme Description', 'Benefit Start Date *', and 'Benefit End Date *', a 'View Benefit Plan' button, and a footer area with fields for 'Maker', 'Checker', 'Date Time:', 'Mod No', 'Record Status', 'Authorization Status', and a 'Cancel' button.

You can specify the following details in this screen:

Customer Number

Select the customer for whom you want to link the pricing scheme, from the option list provided. All customers who have opted for relation pricing are displayed in the list.

Customer Name

Name of the customer gets displayed, once you select the customer number

Scheme ID

Select the scheme ID to be linked to the customer number, from the option list provided

Note

You can link more than one scheme to a customer number

Scheme Description

The description associated with the scheme gets displayed, once you select the scheme ID

Benefit Start Date

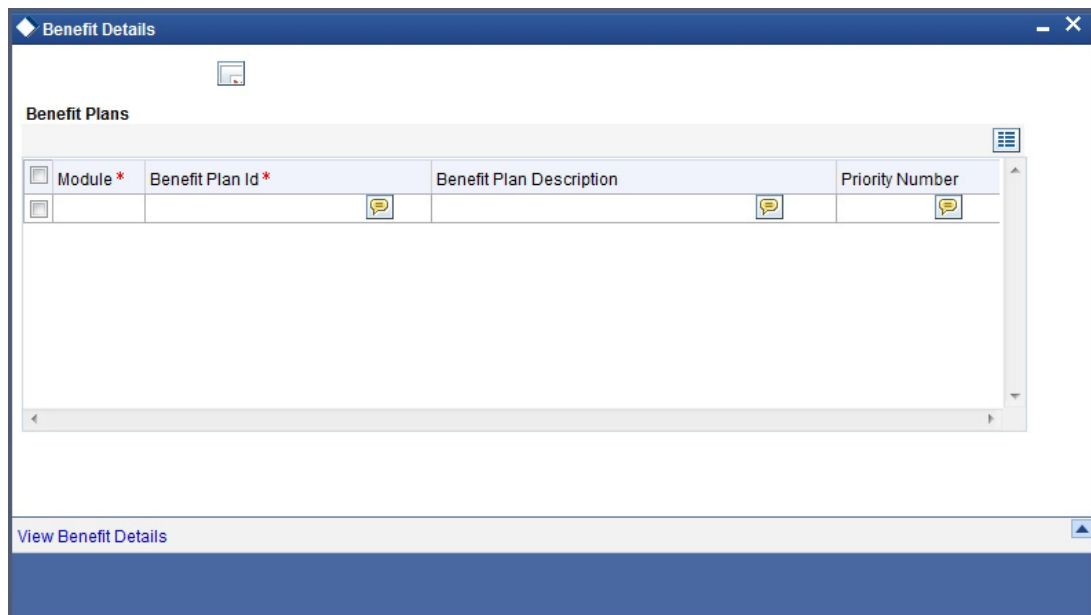

Specify the date on which the scheme benefits starts to be applied for the customer

Benefit End Date

Specify the date on which the scheme benefits cease to exist for the customer

2.17.1 Viewing Benefit Plans

Select a benefit scheme and click the 'View Benefit Plan' button to view the benefit plans associated with the selected scheme.

The following details related to the benefit are displayed:

- **Module** - module to which the benefit is related
- **Benefit Plan ID** - unique identification of the benefit plan
- **Benefit Plan Description** - description linked to the benefit plan ID
- **Priority Number** - priority number assigned to the benefit plan

2.17.2 Viewing Pricing Benefit Details

Select a row in 'Benefit Details' and click the 'View Benefit Details' to view the details associated with the selected benefit plan. The following screen is displayed.

Relationship Pricing Benefit Plan - Detailed

The following details related to the benefit plan selected are displayed:

- Benefit or promotion plan identification and description
- Start date and end date of the promotion
- Tenor details and the holiday period details
- Related UDEs and corresponding values
- Schedule details of the principal and interest components

2.17.3 Viewing Linkage Details

You can view the details of customer scheme linkages and also search for a customer in the 'Customer Scheme Manual Linkage Summary' screen. You can invoke this screen by typing 'COSCUSCM' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows a web application window titled 'Summary'. At the top, there are 'Advanced Search' and 'Reset' buttons. Below these are two dropdown menus: 'Authorization Status' and 'Record Status'. A text input field for 'Customer Number' is also present. A pagination bar shows 'Records per page' set to 15, with buttons for 'First', 'Previous', '1 Of 1', 'Next', 'Last', and 'Go'. Below the pagination is a table with three columns: 'Authorization Status', 'Record Status', and 'Customer Number'. The table is currently empty. At the bottom of the window, there are buttons for 'Authoriza', 'Record St', and 'Exit'.

You can specify any of the following details to perform a search

Authorization Status

Select the authorization status of the record you want to search for, from the drop-down list provided. The options possible are:

- Authorized
- Unauthorized

Record Status

Select the status of the record which you want search for, from the drop-down list provided. The options possible are:

- Open
- Closed

Customer Number

Select the customer number whose relationship value you want to search for, from the option list provided.

Click the 'Search' button to search for records according to the search criteria specified. You can also perform an advanced search using combinations of conditions by clicking the 'Advanced Search' button.

2.18 Changing Benefit Plan Priority

You can modify the priority value associated with a benefit plan for a given module in the 'Relationship Pricing Benefit Plan Priority Change' screen. You can invoke this screen by typing 'CODBEPRI' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

You need to specify the following details to change the priority of a benefit plan.

Benefit Plan Type

Select the type of benefit plan that you are maintaining. The options are as follows:

- Exchange Rate Benefit plans - Selecting this option allows you to change the priority of all the exchange rate benefit plans.
- Pricing Comp Benefit Plans - Selecting this option allows you to change the default pricing component benefit plans of the module selected.

Module

If you have selected the the benefit plan type as 'Pricing Comp Benefit Plans', select the module for which you want to change the benefit plan priority number. All modules for which benefit plans are defined are displayed in the option list.

Module Description

The description associated with the selected module is displayed here.

Click 'Query' button. The exchange rate benefit plans maintained will be listed in 'Benefit Details' section.

Benefit Plan ID

The valid benefit plan IDs for that module is displayed here.

Benefit Plan Description

The description associated with the benefit plan ID is displayed here.

Priority

The priority number linked to the benefit plan is displayed here. You can change the priority as 0 for any number of price benefit plan belonging to module IC.

2.18.1 Viewing Benefit Plan Details

Select a benefit plan ID and click the 'View Benefit Plan' button to view the details of the selected benefit plan

2.19 Changing Customer Scheme Linkage Status

You can view and change the status of customer scheme linkages in the 'Customer Scheme Linkage Status Change' screen. All the schemes linked to the customer are displayed in this screen, with the respective status.

You can invoke this screen by typing 'CODSCHST' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Scheme ID	Eligibility Plan Id	Benefit Start Date	Benefit End Date	Linkage Status	Previous Linkage Status	Linkage C
-----------	---------------------	--------------------	------------------	----------------	-------------------------	-----------

You can specify the following details in this screen:

Customer Name

The system displays the name of the specified customer ID based on the details maintained at 'Customer Maintenance' level.

Scheme ID

Select the ID of the scheme whose status you want to change, from the option list

Scheme Description

The description associated with the scheme gets displayed, once you select the Scheme ID

2.19.1 Viewing Scheme Details

The following details related to the scheme are displayed.

- Scheme ID
- Eligibility plan ID
- Benefit start date and end date

- Linkage status and the status of previous linkage
- Linkage Date
- Date of last status change and the reason for change

Linkage Status

Select the status of the scheme linkage from the drop-down list provided. The following options are available:

- Active
- Waiting for Acceptance
- Expired
- Expired/Renewable
- Rejected

2.19.2 Viewing Status Change Details

You can view the details of scheme linkage status and also search for a linkage in the 'Customer Scheme Status Change Summary' screen.

You can invoke this screen by typing 'COSSCMST' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

You can specify any of the following details to perform a search

Customer Number

Select the customer number you want to search for, from the option list provided

Scheme ID

Select the scheme ID you want to search for, from the option list provided

Click the 'Search' button to search for records according to the search criteria specified. You can also perform an advanced search using combinations of conditions by clicking the 'Advanced Search' button.

2.20 Viewing Customer Scheme Linkages

You can view the schemes linked to a customer number in 'Customer Scheme Linkage Query' screen. You can invoke this screen by typing 'CODSCMQY' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Scheme Id	Eligibility Plan Id	Benefit Start Date	Benefit End Date	Linkage Status	Previous

Customer Number

Select the customer whose scheme linkages you would like to change. All valid customer numbers with scheme linkages are displayed in the option list.

Linkage Status

Select the linkage status of the scheme which you want to modify. The following options are available:

- All
- Active
- Waiting for Acceptance
- Expired
- Expired/Renewable
- Rejected

Click the 'Query' button to get the details of the schemes attached to the customer in 'Scheme Details'.

Scheme ID

All scheme IDs linked to the selected customer are displayed

Eligibility Plan ID

The eligibility plan ID maintained for the scheme is displayed here. For manual linkages the eligibility plan ID is displayed as MANUAL.

Benefit Start Date

The date when the scheme was applied to the customer is displayed

Benefit End Date

The end date of the benefits received by the customer is displayed here

Current Status

The current status of the scheme application to the customer is displayed here. The following values are possible:

- Active
- Expired
- Expired/Renewable
- Waiting for Acceptance
- Rejected

You can change the status of the scheme linkages under the following conditions:

- Reject – this status can be selected if the current status of scheme linkage is any of the following:
 - Active
 - Waiting for Acceptance
 - Expired/Renewable

On rejection, the linkage status changes to 'Rejected'

- Accept - this status can be selected if the current status of scheme linkage is 'Waiting for Acceptance'. On acceptance the linkage status changes to 'Active'

Status Change Reason

The reason for changing the status is indicated here

Last Status Change Date

The date on which the customer scheme linkage status was last changed, either by the system or manually, is displayed here

Previous Linkage Status

The previous status of linkage, in case the current linkage status is changed manually or by system, is displayed here

2.21 Evaluating Customer Scheme Online

You can perform an online evaluation of customer eligibility for a scheme using the 'Online Customer Scheme Eligibility Evaluation' screen. All eligibility plans associated with active schemes are evaluated and if the customer is eligible for a scheme, then customer scheme linkage gets established.

You can invoke this screen by typing 'CODELBEV' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows a dialog box titled "Online Customer Scheme Eligibility Evaluation". It features a "Save" button at the top left. The main content area includes four input fields: "Customer Number" (with a dropdown arrow), "Customer Name", "Scheme Id" (with a dropdown arrow), and "Scheme Description" (with a dropdown arrow). Below these fields is a "Batch Monitor" button. At the bottom right of the dialog are "Ok" and "Cancel" buttons.

You need to specify the following details to evaluate the customer eligibility for a scheme:

Customer Number

Select the customer number for which you would like to evaluate scheme eligibility, from the option list provided.

Customer Name

The name of the selected customer is displayed here

Scheme ID

Select the scheme ID for which you want to perform eligibility evaluation, from the option list provided

Scheme Description

The description associated with the selected scheme is displayed here

Click the 'Ok' button to submit the batch for processing. After submitting the batch, click 'Batch Monitor' button to view the status of the batch. The status of the process is displayed in the 'Journal Batch Log' screen.

Journal Batch Log

The status of the process can be any of the following:

- W – Process in Progress
- U – Unprocessed
- P – Process Completed

2.22 Viewing Customer Aailed Scheme Benefits

You can view the details of the benefits availed by the customers in the 'Customer Aailed Scheme Benefit Details' screen. You can invoke this screen by typing 'CODCUSCH' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows a software application window titled "Login Page". At the top, there are buttons for "New" and "Enter Query". Below these are several input fields: "Customer Number *", "Customer Name", "From Date *", "Scheme Id *", "Scheme Description", and "To Date *". A blue "Query" button is positioned below the "From Date" field. Below the input fields is a section titled "Customer Scheme Application Details" which contains a table. The table has five columns: "RP Reference *", "Customer Number", "Customer Account Number", "Scheme Id", and "Transaction Reference". The table is currently empty.

You need to specify the following to view the benefit details availed by the customer:

Customer Number

Select the customer number for which you would like to view the benefit details

Customer Name

The name of the selected customer is displayed here

Scheme ID

Select the scheme availed by the customer, whose details you want to view

Scheme Description

The description associated with the selected scheme is displayed here

From Date

Specify the date from which the scheme is applicable for the customer

To Date

Specify the date up to which the scheme is applicable to the customer

Click the 'QUERY' button to view the following details related to the benefits availed by the customer.

- Customer Number
- Customer Account Number
- Transaction Reference Number
- Benefit Processing Date
- Scheme ID
- Benefit Plan ID
- Eligibility Plan ID

- Price Component
- Benefit Type
- Variance Type
- Variance Value
- Variance Currency
- Original Computed Price
- Final Price
- Price Currency

2.23 Relationship Pricing Exchange Rates for Customers

You can apply different Relationship Pricing exchange rate spreads to different customers. To do so, you need to basically create Customers Service Models (CSM) and Relationship Pricing Exchange Rate Benefit Plans. Then associate the CSM or customer to the required benefit plan. You can also have multiple benefit plans linked to a CSM.

During exchange rate pick up, the benefit plan linked to CSM will be considered and Relationship Pricing spread will be applied on top of the mid rate calculated for the rate type and currency pair.

This section contains the following topics:

- Maintaining Customer Service Model
- Maintaining Relationship Pricing Exchange Rate Benefit Plan
- Linking CSM/Customer to Benefit Plan
- Viewing Multiple Exchange Rates and CSM Linkage

2.23.1 Maintaining Customer Service Model

You can classify customer into different service models like 'Silver', 'Gold' and 'Platinum' for preferential treatments which facilitates banks to apply different exchange rate spread for different customer service models.

You can maintain various Customer Service Models (CSM) using 'Customer Service Model Maintenance' screen. You can invoke this screen by typing 'STDSRMDL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Specify the following details:

Customer Service Model

Specify a unique service model code for the customer.

Customer Service Model Description

Specify a brief description about the customer service model.

Customer Service Code

Specify the three digit unique customer service code to be associated with the customer service model.

Relationship Pricing

Check this box to indicate if the specified customer is a RP customer.

Default

Check this box to indicate if this is the default customer service model.

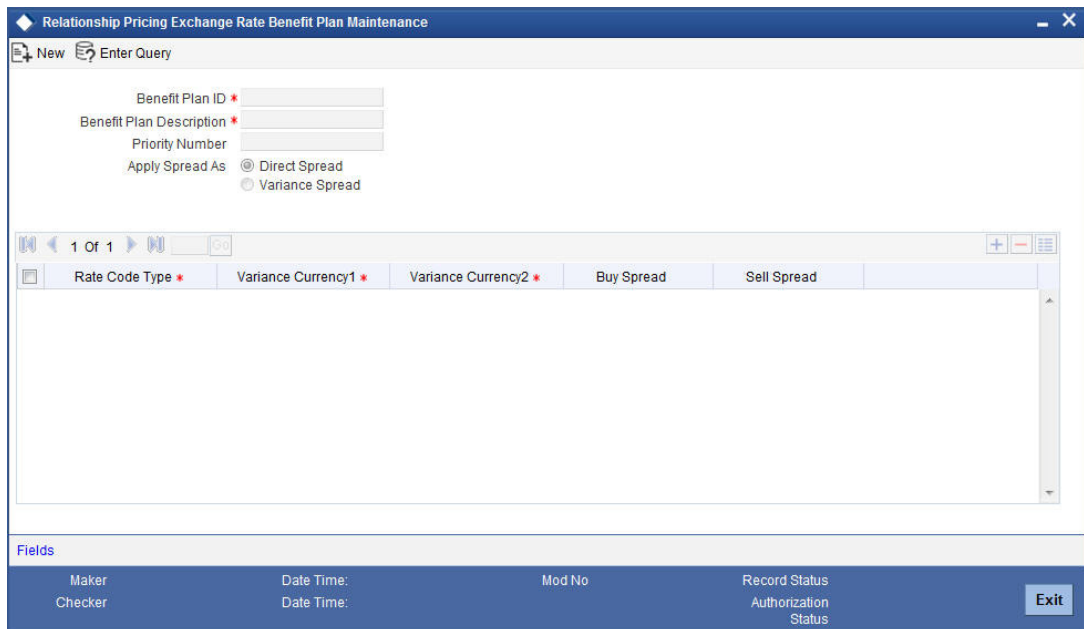

Note

- There can be only one default Customer service model at any point of time.

During customer creation, you can select the RP check box at CIF level and the RP value in CSM will get defaulted to CIF along with the default CSM.

2.23.2 Maintaining Relationship Pricing Exchange Rate Benefit Plan

You can create benefit plans and define exchange rate spreads for different rate types and currency pairs using 'Relationship Pricing Exchange Rate Benefit Plan Maintenance' screen. You can invoke this screen by typing 'CODERBEN' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Specify the following details:

Benefit Plan ID

Specify a unique name for the benefit plan.

Benefit Plan Description

Specify a description for the benefit plan.

Priority Number

Enter the priority to be given to the benefit plan.

Apply Spread As

Select the type of spread you want to apply for the RP benefit plan. The options are as follows:

- Direct Spread
- Variance Spread (variance on the existing spread)

Click '+' and define the exchange rate, currency variance and spread. You can define the buy and sell spread for different rate type and currency pair combinations.

Rate Type

Specify the rate type for which the spread is applicable. Alternatively, you can select the rate type from the option list. The list displays all valid rate types maintained in the system.

Variance Currency1

Specify the first currency of the currency pair for which the spread is applicable. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

Variance Currency2

Specify the second currency of the currency pair for which the spread is applicable. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

Buy Spread

Specify the buy spread for the currency pair. It is the profit margin specified over the mid rate when you buy currency 1 for currency2.

The value maintained here will be multiplied with the points multiplier maintained at ccy pair maintenance level for calculation. You can maintain the spread in decimals and also in negative values.

Sell Spread

Specify the sell spread for the currency pair. It is the profit margin specified over the mid rate when you sell currency 1 for currency 2.

The value maintained here will be multiplied with the points multiplier maintained at ccy pair maintenance level for calculation. You can maintain the spread in decimals and also in negative values.

2.23.3 Linking CSM/Customer to Benefit Plan

You can link a customer service model (CSM) or a customer to multiple exchange rate benefit plans using the 'CSM-Benefit Plan Linkage' screen. You can invoke this screen by typing

'CODERCSM' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows a software application window titled "CSM-benefit plan linkage". At the top, there is a toolbar with "New" and "Enter Query" buttons. Below the toolbar, there are input fields for "Customer Service Model *" and "Customer No *". To the right, there are three stacked input fields for "Customer Service Model Description" and "Customer Name". Below these fields is a table with the following columns: "Benefit Plan ID *", "Benefit Plan Description", "Benefit Plan Type", "Module", "Priority Number", "Benefit Start Date", and "Benefit End Date". Below the table is a "View Benefit Plan" button. At the bottom of the window, there is a status bar with fields for "Maker", "Checker", "Date Time", "Mod No", "Record Status", "Authorization Status", and an "Exit" button.

Specify the following details:

Customer Service Model

Specify the customer service model code. Alternatively, you can select the customer service model code from the option list. The list displays all valid customer service model codes maintained in the system.

Customer No

Specify the relationship pricing customer number. Alternatively, you can select the customer number from the option list. The list displays all valid relationship pricing customer details maintained in the system.

You can either link the CSM to one particular customer number or associate the customer number to ALL customer's having the CSM.

Customer Service Model Description

The system displays the description based on the customer service model selected.

Customer Name

The system displays the customer name depending on the customer number selected.

Click '+' and select the benefit plan details. You can add multiple benefit plans to the same CSM.

Benefit Plan ID

Specify the benefit plan ID. Alternatively, you can select the benefit plan ID from the option list. The list displays all benefit plans maintained in the system.

You can click 'View Benefit Plan' button to view the benefit plan details in the 'Relationship Pricing Benefit Plan Maintenance' screen.

Benefit Plan Description

The system displays the benefit plan description depending on the 'Benefit Plan ID'.

Benefit Plan Type

The system displays the associated type of benefit plan as either 'Exchange Rate Benefit Plan' or 'Pricing Component Benefit Plan' is displayed.

Module

The system displays the module based on the 'Benefit Plan ID' selected.

Priority Number

The system displays the priority number based on the 'Benefit Plan ID' selected.

Benefit Start Date

Select the start date from when the CSM-Benefit Plan mapping is applicable from the adjoining calendar.

Benefit End Date

Select the end date till when the CSM-Benefit Plan mapping is applicable from the adjoining calendar.

On 'Save', the CSM is linked to the benefit plan.

2.23.3.1 Linking Benefit Plans

The benefit plans can be directly linked in 'Customer Service Model - Benefit Plan Linkage' (CODERCSM) screen.

The system will check the benefit plans linked to CODERCSM screen for a Customer Service Model/ Customer Number.

Note

The priority number specified should be unique across all benefit plans.

2.23.4 Viewing Multiple Exchange Rates and CSM Linkage

You can view the details of exchange rates for currency pairs involving/not involving local currency based on different customer service models using 'Exchange Rate Inquiry' screen. You can invoke this screen by typing 'CODEXRIQ' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Customer Service Model	Benefit Plan ID	Rate Type	Currency 1	Currency 2	Mid Rate	E
------------------------	-----------------	-----------	------------	------------	----------	---

In the above screen, you can query using the following parameters to fetch records:

Currency Pair Criteria

Select the currency pair criteria based on which exchange rate are to be displayed from the drop-down list. The list displays the following values:

- Specific Currency - On selecting this option, you need to specify the Currency1 and Currency2 details to fetch exchange rates for currency pair.
- Involving Local Currency - On selecting this option, system considers 'Currency1' as local currency of the current branch and fetch exchange rate for all currency pair involving the local currency.
- Not Involving Local Currency - On selecting this option, system considers 'Currency1' as local currency of the current branch and fetch exchange rate for all currency pair which does not involve the local currency.

Currency 1

Specify the first currency of the currency pair for which the exchange rate are to be displayed. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

Currency 2

If you have selected 'Specific Currency' as the Currency Pair Criteria, then you need to specify the second currency of the currency pair for which the exchange rate are to be displayed. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

Rate Type

Specify the rate type for which the exchange rate are to be displayed. Alternatively, you can select the rate code type from the option list. The list displays all valid rate types maintained in the system.

Customer Service Model

Specify the customer service model code. Alternatively, you can select the customer service model code from the option list. The list displays all valid customer service model codes maintained in the system.

Select any or all of the above parameters for a query and click 'Search' button. Records meeting the selected criteria are displayed with the following details:

- Customer Service Model
- Benefit Plan ID
- Rate Type
- Currency 1
- Currency 2
- Mid Rate
- Buy Rate
- Sell Rate

2.24 Processing Relationship Pricing Batch

Relationship pricing batch evaluates the eligibility criteria for customers who have opted for relationship pricing, and links the schemes applicable to the customers. The customer linkage status also gets changed during the batch. This batch is run at the head office level, during EOD, after marking End of Financial Input (EOFI).

The batch process involves the following main activities:

- Changing scheme status
- Evaluating scheme eligibility
- Applying scheme benefits

The linkage status of customers, whose benefits have expired, will change to 'Expired' during EOD as part of the batch

2.24.1 Changing Scheme Status

The status change of the scheme happens before the evaluation of the scheme eligibility. On the end date of the scheme, the status of the scheme changes to 'Expired'. If the scheme has the 'Benefits End on Scheme Expiry' option enabled, then all the related customer scheme linkages will be marked as 'Expired'.

2.24.2 Evaluating Scheme Eligibility

All the active schemes with first revision date or next revision date less than or equal to application date are considered for eligibility evaluation.

Following validations are carried out for schemes with different validity types:

- **Perpetual validity** – customers created within the benefit period are not considered for eligibility evaluation
- **One-time validity** – customers created within the benefit period are considered for eligibility evaluation. If the customer does not satisfy the eligibility conditions, then the benefits will not be given to customer again. The status of such customer scheme linkages will be marked as 'Expired'.
- **Renewable validity** – customers created within the benefit period are considered for evaluation. If the customer does not satisfy the eligibility conditions, then the benefits will not be given to customer till the customer becomes eligible again. The status of such customer scheme linkages will be marked as 'Expired'/'Renewable'.

The eligibility evaluation is carried out as follows in case of new customers and existing customers:

2.24.2.1 New Customers

Following conditions need to be satisfied for a new customer to avail the benefits of relationship pricing schemes:

- Customer should have opted for relationship pricing
- Customer creation date should not be less than the scheme start date
- Customer should satisfy the eligibility criteria associated with scheme eligibility plan

Customer scheme linkage is established with status as 'Active' if the scheme execution type is 'Automatic'. The status will be 'Waiting for Acceptance' if the scheme execution type is 'Manual'.

2.24.2.2 Existing Customers

For existing customers, the customer creation date should be less than scheme start date.

At the end of the batch process, the next revision frequency for the scheme eligibility gets updated based on revision frequency.

Note

Note the following:

- Eligibility evaluation will not happen for customers who already have the schemes linked to them, after the benefit validity period, if the scheme eligibility type is Benefit Validity period.
 - Eligibility evaluation will happen for customers who already have the schemes linked to them, after the benefit validity period, if the scheme eligibility type is Scheme period.
 - Eligibility evaluation will not happen till the end of the benefit period, for customers whose schemes have been manually linked
-

2.24.3 Applying Scheme Benefits

The benefits of the scheme are applied to customers only after the eligibility evaluation of the scheme during EOD. The eligible customers can avail the benefits of the scheme only from next branch working day. The following activities are involved in the application of scheme benefits for eligible customers:

- The system checks if the customer is eligible for any scheme benefits for the product and price component associated with the transactions or contracts involved, and for eligible customers the pricing process is changed based on the benefit type.
- If the customer has more than one benefit plan for the same product and price component combination, then benefit plan with the least priority number is taken up for processing.
- If the benefit plan type is waive-off, then the price component computation is done and the final price will be waived off.
- If the benefit plan is of variance type, then the variance rate or amount is applied. If a variance rule is attached to the price component, then the variance rule is evaluated to get the variance rate or amount.
- After applying benefit variance, the final rate or amount will be checked against the minimum and maximum limits set at module product level.
