Preface

1.1. Intended Audience

This document is intended for the following audience:

- Customers
- Partners

1.2. Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.3. Access to OFSS Support

<https://support.us.oracle.com>

1.4. Structure

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual

Introduction provides brief information on the overall functionality covered in the User Manual

Chapters are dedicated to individual transactions and its details, covered in the User Manual

1.5. Related Information Sources

For more information on Oracle FLEXCUBE Core Banking Release 5.2.0.0.0, refer to the following documents:

- Oracle FLEXCUBE Core Banking Licensing Guide

Branch Operations

Branch operations form the key element of the financial service provider's infrastructure, with an objective to augment customer service systems and improve internal efficiencies.

Branch Operations (BROP) in **FLEXCUBE Retail** terminology covers internal activities done at branches where the customer is not involved. From the branch management perspective, the **BROP** module of **FLEXCUBE Retail** facilitates activities, which include controlling the branch vault, opening and closing the branch for the day, and monitoring the transactions done during the day teller-wise and generation of adhoc reports.

FLEXCUBE Retail can work in the offline mode also. When the branch to the local office/ head office central data center link is down, the teller terminals are said to be off-line. In this mode, teller transactions may still be performed and stored at the branch. Later, when the link is up, the stored transactions may be automatically forwarded to the local office.

For all the cash transactions, the system will ask for denomination details only when denomination tracking is enabled.

Key Features

FLEXCUBE Retail Banking Solution offers features in the **BROP** module that allows bank branches to perform internal activities.

- Branch Batch activities that involve opening and closing of the branch
- Cash Management transactions that include managing the teller and vault cash
- Authorization control of teller transactions during the day
- Transactions can be customized to be executed "OFF-LINE"
- Inquiries pertaining to teller transactions and transaction batches
- Report-generation transactions, which include customer advices and statements as well as internal branch reports

Terminologies

The following terminologies are used in the **BROP** module:

Batch

A batch is a bunch of transactions performed at a time as an activity by respective users at different levels in a bank. Certain parameters can be configured to define a batch for users at different levels such as, branch batch, vault batch and teller batch. Each user can perform the

batch depending on the rights given to the user, and the kind of transactions she/he is going to perform.

Branch Batch

A branch batch is the process by which a supervisor initiates a branch open. The supervisor is allowed to open the branch for running the business for a particular posting date, and close the branch batch when all the transactions have been successfully processed to a logical end. The vault teller batch followed by the individual teller batch can start the activities, only after the branch batch is opened. The branch batch can be closed only if the individual teller batch followed by Vault teller batch is closed. The branch batch can be closed only once, for a particular posting date.

Vault Batch

A vault batch is a set of transactions performed by the vault teller or chief cashier during a posting date. All transactions such as buying cash from the Central Bank and the cashier of the bank, or selling cash to the Central Bank and the teller, and settling the cash with the Central Bank and the cashier are performed during the posting date before closing the vault batch.

Teller Batch

A teller batch is a set of transactions performed by an individual teller or the cashier. All transactions performed during a posting date should be closed only once.

Split Day Processing

If a branch batch could not be closed for a posting date due to an emergency, the system facilities the branch to open a branch batch for the next posting date to process the transaction. Thus, a branch can process the transactions for multiple days.

Database

Database in **FLEXCUBE Retail**, refers to organized data, stored on a server that can be searched and retrieved by a computer program. The database located at the Central office is known as Host database, and the database located at the branch level is known as Branch database.

Operational Control and Cash Management Transactions

To mitigate or limit operational risks, the bank management implements a number of specific measures within the branch. This includes taking care of the sequence of activities performed by a branch for every posting date on **FLEXCUBE Retail**.

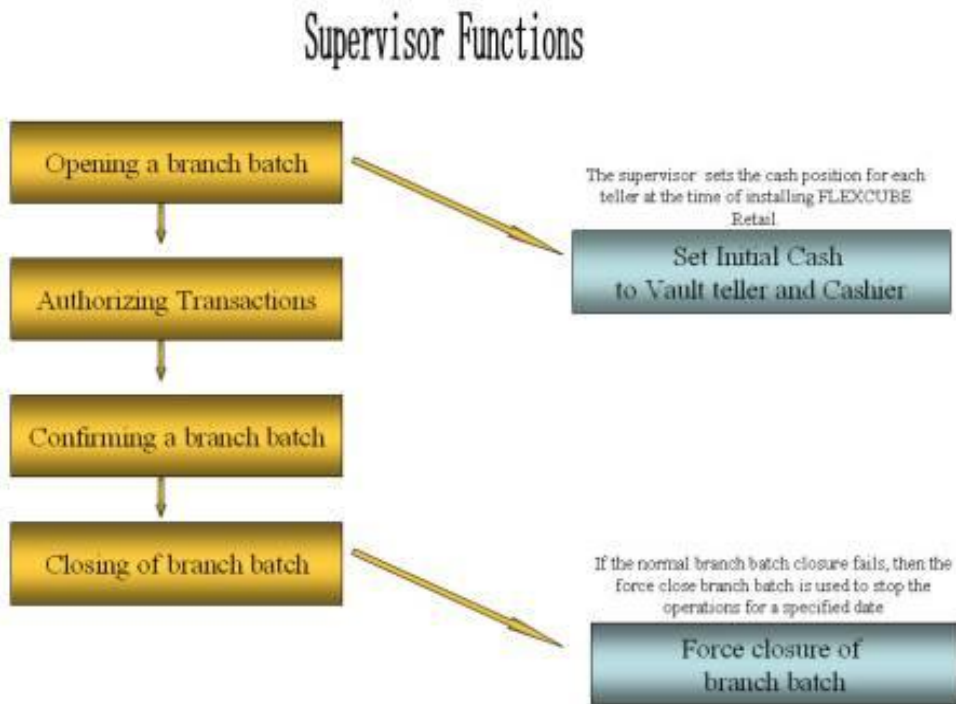

The operational controls to initiate branch operations require clearly defined procedures establishing a control environment, which provides authorisation and authentication of transactions.

FLEXCUBE Retail maintains cash balances both currency-wise and teller-wise. Every committed cash transaction taken to its logical end affects the previously mentioned cash balance. Hence, at any given point of time, the physical cash present with a teller has to match with that in the system. In addition, each of the above cash transactions passes GL entries to the cash GL thus affecting the cash GL balances. Thus the consolidated total of all the teller cash balances, together with the vault teller cash balance, has to match with the balance in the cash GL for that branch.

In a cash balancing exercise for each teller, the system displays the system cash balance with that specific teller and requests for a match with the physical cash held by the teller. In case of a mismatch in the above exercise, the teller has to book an Overage or Shortage depending on the mismatch, and proceed with the cash balancing exercise.

The functions could be broadly classified into:

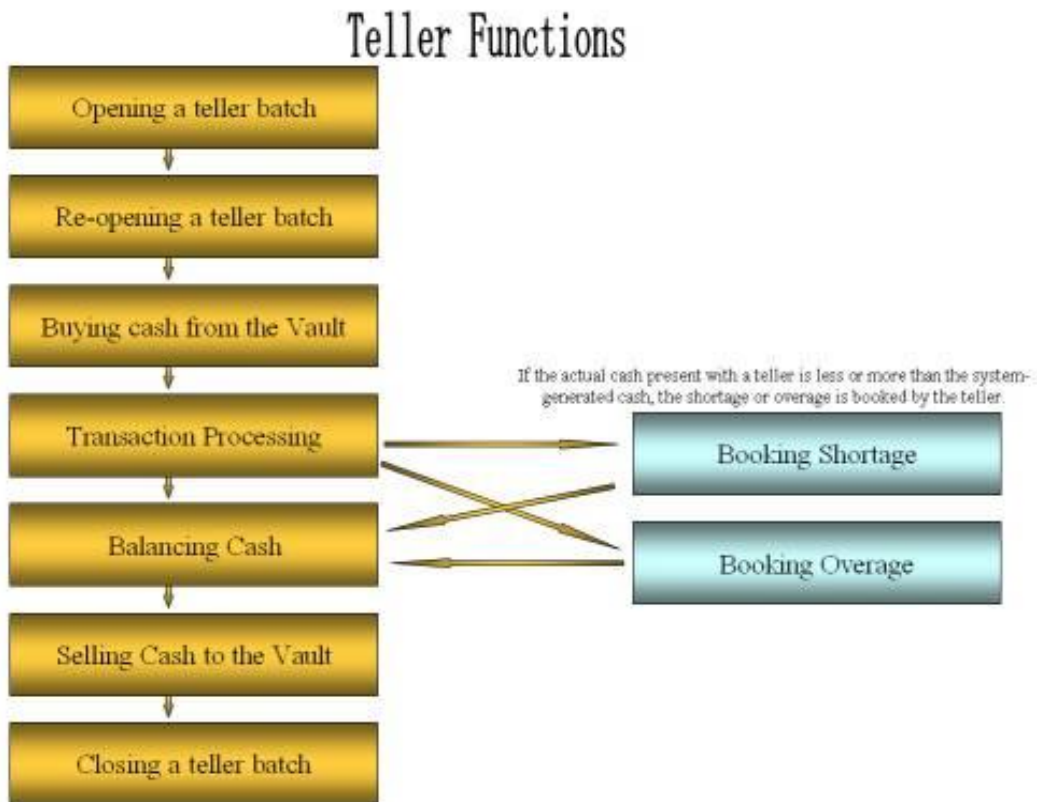

Supervisor Functions

Vault Teller Functions

Teller Functions

Ideally, in a bank, a supervisor opens the branch batch and then the vault teller performs cash activities. The tellers then open their respective batches and buy cash from the vault teller.

At the end of the processing day after all the transactions are completed, the tellers sell cash to the vault teller, if required, and then close their respective batches. After which the vault teller closes the vault batch and then the supervisor closes the branch batch for that day.

Supervisor

1.1.1. 6001 - Batch Open

Using this option the branch operations can be initiated for a specified date. This option can be executed from any workstation by any supervisor with access rights.

The tellers will not be able to perform any branch operations till the branch batch is opened by the supervisor.

The system allows the branch to be active for a maximum of two consecutive posting dates at a time by specifying the current and the next posting dates. Although a branch batch can be opened for two consecutive days teller batches can be opened only for one posting date at any given time.

The teller batch can be opened for the next posting date, only when it has been closed for the current posting date or it has not been opened for the current posting date. The teller batches cannot be opened for a posting date till the branch batch is opened for that date. When a branch batch is closed for a day by the supervisor the next working day is determined automatically by the system based on the branch calendar present in the branches.

Definition Prerequisites

- BA090 - Bank Calendar Maintenance

Modes Available

Not Applicable

To open a branch batch

1. Type the fast path **6001** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Batch Open**.
2. The system displays the **Batch Open** screen.

Batch Open

Batch Open*

Posting Date : 15/02/2008

Field Description

Field Name	Description
Posting Date	<p>[Mandatory, dd/mm/yyyy]</p> <p>Type the posting date to open a new branch batch.</p> <p>By default the system displays the current date.</p> <p>In case of a split day processing, the system displays the current posting date. Change this date to a new posting date if the user wants to open a new branch for the next posting date.</p> <p>Opening of the branch batch for a particular date indicates to the head office that the branch is open for business operations for the selected date.</p>

3. Click the **Ok** button.

1.1.2. 6002 - Branch Batch Close

Using this option, the branch batch has to be closed, after confirming that all branch transactions have been accounted for in the account books, through the **Confirming Branch Batch** (Fast Path: 6005) option.

The branch batch can be closed to stop the operations for a specified date using the **Branch Batch Close** option. All the teller batches and the vault batches of that branch have to be closed before closing the branch batch for that posting date.

In case of split days, where the branch batch is opened for two consecutive posting dates, the branch batch should be closed in the ascending order, i.e. the branch batch with the previous posting date should be closed first followed by the branch batch with the later posting date. The posting date for closing a branch batch should be the same date on which the respective branch batch was opened.

Definition Prerequisites

- 9005 - Close Teller Batch
- 9006 - Close Vault Batch

Modes Available

Not Applicable

To close a branch batch

1. Type the fast path **6002** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Branch Batch Close**.
2. The system displays the **Branch Batch Close** screen.

Branch Batch Close

Posting Date	<p>[Mandatory, dd/mm/yyyy]</p> <p>Type the posting date to close an open branch batch.</p> <p>By default, the system displays the date for which the branch batch is open.</p> <p>Closing of the branch batch for a particular date indicates to the head office that the branch is now closed for business operations for the selected date.</p> <p>This date should be the same date for which the branch batch is opened.</p>

3. Click the **Ok** button.

1.1.3. 6005 - Branch Batch Confirm

Transactions done at the branch are posted through the branch database. These posted transactions are picked up by services running on the **FLEXCUBE Retail** Application Server and are finally posted in the host database. This synchronization ensures that ideally, all transactions performed at the branch and posted through the branch database are also present in the host database.

However in some situations, all transactions posted in the branch database do not get posted in the host database. This happens when the link between the branch database and the host database goes down or when the requisite services fail to pick up such branch transactions. There can also be a possibility that the transaction posted through the branch database has hit the host database but the transaction has not been completed due to a drop in the link between host and branch databases. In this case, the number of transactions posted at host will be more than the number of transactions posted in the branch. Such cases give rise to a mismatch between the branch and the host in terms of the count and value of transactions.

Branch batch confirmation is a system check to tally the number and amount of transactions processed at the branch with the number and amount of transactions posted to the host database. The details which are used for comparison include the total number of transactions, total amounts of credits and debits, the number of transfer transactions and the number of reversal of transfer transactions, credit reversals and debit reversals during the day. This supervisor option can be run from any workstation by any supervisor with access rights. This is essential to ensure that all transactions taken place at the branch have been accounted in the bank books.

This is an inquiry option and can be run from any workstation, any time, any number of times and by any supervisor having access rights.

Definition Prerequisites

- 6001 - Batch Open

Modes Available

Not Applicable

To confirm a branch batch

1. Type the fast path **6005** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Branch Batch Confirm**.
2. The system displays the **Branch Batch Confirm** screen.

5. If there is any outstanding transaction pending then the system displays a message "Some instrument are outstanding for Inward Clearing run". The branch batch confirmation will not proceed unless the transaction is completed.
6. Click the **Close** button.

1.1.4. 6009 - Force Close Branch Batch

Using this option you can close the branch batch by the branch manager/ supervisor and stop the operations for a specified date, if the normal **Branch Batch Close** (Fast Path: 6002) option fails. Once the branch batch is closed, it cannot be reopened for the same date.

Prior to closing the branch batch, the branch manager or the authorized supervisor has to ensure that all teller batches and vault batches have been closed, and the mismatch displayed in the **Branch Batch Confirm** (Fast Path: 6005) option has been noted down for further investigation.

This is the last option that can be performed for a posting date. However, you can generate reports after running this option.

Definition Prerequisites

- 6001 - Batch Open
- 6005 - Branch Batch Confirm
- 9005 - Close Teller Batch
- 9006 - Close Vault Batch

Modes Available

Not Applicable

To close the branch batch forcefully

1. Type the fast path **6009** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Force Close Branch Batch**.
2. The system displays the **Force Close Branch Batch** screen.

Force Close Branch Batch

Force Close Branch Batch*

Posting Date : 15/02/2008

Please use this option ONLY if Normal Branch Batch Close Option failed

Ensure that you have noted down the Mismatch displayed in the Batch confirm option

OK Close Clear

Field Description

Field Name	Description
Posting Date	<p>[Mandatory, dd/mm/yyyy]</p> <p>Type the posting date to force close the branch batch for that particular date.</p> <p>By default, the system displays the date for which the branch batch is open.</p> <p>Closing of the branch batch for a particular date indicates to the head office that the branch is now closed for business operations for the selected date.</p> <p>This date should be the same date for which the branch batch is opened.</p>

3. Click the **OK** button.

1.1.5. 9888 - Set Initial Cash

Using this option, the supervisor can set the cash position of each teller at the time of initial implementation of the **Oracle FLEXCUBE** branch or at the time of the branch database setup after a branch database crash.

This has to be done for all the currencies for which the teller will carry out the transactions.

Definition Prerequisites

- BAM25 - Currency Definition
- Teller IDs to be created.

Modes Available

Not Applicable

To set initial cash

1. Type the fast path **9888** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Cash > Set Initial Cash**.
2. The system displays the **Set Initial Cash** screen.

Set Initial Cash

The screenshot shows a window titled "Set Initial Cash" with a yellow border. Inside the window, there are three input fields: "Teller Id" with a dropdown menu showing "SDOC5", "Txn Ccy" with a dropdown menu, and "Amount" with a text input field. At the bottom right of the window, there are "Ok" and "Cancel" buttons.

Field Description

Field Name	Description
Teller Id	[Mandatory, Drop-Down] Select the user identification of the teller for whom the initial cash has to be set from the drop-down list.
Txn Ccy	[Mandatory, Drop-Down] Select the currency in which the initial cash has to be set from the drop-down list.
Amount	[Mandatory, Numeric, 13, Two] Type the amount which has to be set as initial cash for the teller.
TIL ID	[Display] This field displays the TIL ID to the selected teller ID for which initial cash position is defined.
TIL Description	[Display] This field displays the description of the TIL.

3. Select the currency from the drop-down list.
4. Enter the initial amount.

Set Initial Cash

The screenshot shows a dialog box titled "Set Initial Cash". The dialog contains the following fields:

- Teller Id :
- Txn Ccy :
- Amount :

At the bottom right of the dialog, there are two buttons: "Ok" and "Cancel".

5. Click the **Ok** button.

Vault Teller

1.1.6. 9003 - Open Vault Batch

Using this option the vault teller can open a vault batch for a specified date. The vault teller is the main cashier of a branch and can be opened from any workstation.

For any given posting date only one vault batch can be opened. To open another vault batch, the first one should be closed. All the tellers buy additional cash or inventory and sell their excess cash or inventory to this teller. The cash/inventory balancing is automatically initiated and the balances are displayed on the screen for confirmation. The system will default the cash balances on opening a vault batch.

Definition Prerequisites

- 6001 - Batch Open
- BAM97 - Currency Codes Cross Reference

Modes Available

Not Applicable

To open a vault batch

1. Type the fast path **9003** and click **Go** or navigate through the menus to **Transaction Processing > Open Vault Batch**.
2. The system displays the **Open Vault Batch** screen.

Open Vault Batch

Field Description

Field Name	Description

1.1.7. 9009 - Buy Cash From Central Bank

The vault teller is the main cashier of a branch. All the tellers will buy additional cash or TC's and will sell their excess cash or TC's to this teller. The vault teller can open a vault batch for a specified date using the **Open Vault Batch** (Fast Path: 9003) option.

Using this option, after opening the vault batch , the vault teller can get cash from the Central Bank and deposit it into the vault. Once the cash is bought from the Central Bank, the system updates the cash position. This transaction is performed by a vault teller.

Definition Prerequisites

- 9003 - Open Vault Batch
- BAM97 - Currency Codes Cross Reference
- Denomination details should be maintained in case denomination-tracking facility is being used.

Modes Available

Not Applicable

To buy cash from central bank

1. Type the fast path **9009** and click **Go** or navigate through the menus to **Transaction Processing > GL Transactions > Cash > Buy Cash From Central Bank**.
2. The system displays the Buy Cash From Central Bank screen.

Buy Cash From Central Bank

Field Description

Field Name	Description
TIL ID	[Optional, Pick List] Select the TIL Id linked to the teller who is selling cash to the vault from the pick list. Supervisor will be able to sell cash from vault for any TIL.
TIL Description	[Display] This field displays the description of the TIL.
Currency	[Mandatory, Drop-Down] Select the currency in which the vault teller wants to buy cash, from the Central Bank, from the drop-down list. For example, the vault teller can buy USD from the Central Bank.

Field Name	Description
Ccy Rate	<p>[Display]</p> <p>This field displays the exchange rate, at which the currency will be purchased from the Central Bank.</p> <p>The currency rate is derived for the option selected in the Currency field.</p> <p>This field displays the effective exchange rate of the selected currency against the local currency of the bank. If the selected currency is the local currency of the bank, the value in this field is defaulted as 1.</p> <p>The rates are defined in the currency table and can be changed by the teller within the variance set at the template level.</p>
Amount	<p>[Mandatory, Numeric, 13, Two]</p> <p>Type the amount that the vault teller wants to purchase from the central bank.</p>

1.1.8. 9010 - Sell Cash To Central Bank

Using this option the vault teller can sell cash to the Central Bank from the vault after all the tellers have sold the additional cash to the vault teller. The vault teller cannot close the batch if some excess cash remains at the end of the day.

The amount of cash to be sold by the vault teller cannot exceed the amount of cash held by the vault teller at that point of time. This transaction could be performed even if the vault teller has less cash than the assigned limit.

After the cash is sold to the Central Bank, the system updates the cash position of the vault teller.

If the system maintained cash position is less than the input amount to be sold to the Central Bank, the system displays an error message in which case the transaction should be retried with the correct amount.

Definition Prerequisites

- 9003 - Open Vault Batch
- Denomination details should be maintained in case denomination tracking facility is being used.

Modes Available

Not Applicable

To sell cash to central bank

1. Type the fast path **9010** and click **Go** or navigate through the menus to **Transaction Processing > GL Transactions > Cash > Sell Cash To Central Bank**.
2. The system displays the **Sell Cash To Central Bank** screen.

1.1.9. 9006 - Close Vault Batch

Using this option the vault batch can be closed for a specified date. The vault teller can log in and close the vault batch from any workstation. The system will allow the vault teller to close a vault batch only if all teller batches are closed.

Cash balancing is done automatically and cash balances are displayed on the screen for confirmation. There is also a limit, different from the teller cash limit, on the cash that can be held by the vault teller. If the cash held by the vault teller exceeds the specified limit at the end of the day, the excess cash should be sold to the Central Bank. The vault teller can close the batch only after all the tellers of the branch have sold their excess cash to the vault and have closed their respective teller batches.

If there is a difference in the actual total cash/inventory with the vault teller and the cash/inventory available as shown by the system, the vault teller will have to book overage/shortage for the difference before closing the vault batch, till the differences are closed out.

Definition Prerequisites

- 9003 - Open Vault Batch
- All the teller batches have to be closed.

Modes Available

1.1.11. 9007 - Buy Cash From Vault

Using this option you can get cash from the vault. After completing this transaction, the system updates the cash position of the vault teller and the teller. If the vault teller's cash position is less than the total cash requested by the teller, the system displays an error message and the teller should perform this transaction after the vault has been replenished.

The teller can buy any amount up to the amount available with vault. If the amount exceeds the maximum limit that the teller is allowed to retain with him/her, the system will prompt the teller to sell the excess cash to the vault using **Sell Cash to Vault** (Fast Path: 9008) option.

Definition Prerequisites

- 9003 - Open Vault Batch
- Denomination details should be maintained in case denomination tracking facility is being used.

Modes Available

Not Applicable

To buy cash from vault

1. Type the fast path **9007** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Cash > Buy Cash From Vault**.
2. The system displays the **Buy Cash From Vault** screen.

1.1.13. 6201 - Cash Balancing

Using this option you can check if the physical cash held by a teller / vault teller matches with the system cash for that teller as per **Oracle FLEXCUBE**. This can be verified anytime during the day or before closing the teller batch.

This option displays approved currencies in which the teller / vault teller can perform transactions. The total amount for a particular currency available in the cash drawer / vault should be entered to check the overage/shortage of cash amount maintained in the system.

In case of an overage/shortage for a particular currency, the teller should perform the transaction in the **Book Cash Overage** (Fast Path: 7552) option or **Book Shortage** (Fast Path: 7551) option and then perform the cash balancing transaction again.

Definition Prerequisites

- 9003 - Open Vault Batch
- 9001 - Open Teller Batch

5. If there is an overage/shortage the system will display the cash not balanced message.
6. Click the **Close** button.

7551 - Book Shortage

Using this option the teller / vault teller can book the shortage, if the actual/physical cash present with the teller / vault teller is less than the system cash.

While booking a shortage, the system lowers the cash balance and brings it in sync with the physical cash balance with the teller by passing the difference to a cash shortage GL. Once the system cash and the physical cash are synchronized, the teller has to perform the cash balancing.

Definition Prerequisites

- 9001 - Open Teller Batch
- 9003 - Open Vault Batch
- BAM56 - Currency Code Maintenance

Modes Available

Not Applicable

To book a shortage

1. Type the fast path **7551** and click **Go** or navigate through the menus to **Transaction Processing > GL Transactions > Cash > Book Shortage**.
2. The system displays the **Book Shortage** screen.

Book Shortage

Field Description

Field Name	Description
Teller Id	<p>[Conditional, Pick List, Display]</p> <p>Select the teller ID against who's TIL supervisor needs to book cash shortage from the pick list.</p> <p>In case if the teller accesses this screen, Teller ID field will be disabled and by default the logged in teller ID will be displayed.</p>
TIL Id	<p>[Display]</p> <p>This column displays the TIL ID linked to the selected teller ID.</p>
TIL Description	<p>[Display]</p> <p>This column displays the description of the TIL linked.</p>
Currency	<p>[Mandatory, Drop-Down]</p> <p>Select the currency for which the teller wants to book the shortage from the drop-down list.</p> <p>The drop-down list displays only those currencies in which the teller can deal.</p>

Field Name	Description
Amount	[Mandatory, Numeric, 13, Two] Type the shortage amount. The system will reduce the calculated cash balance by this amount, to synchronize the same with the cash balance, which is physically held by the teller.
Narrative	[Mandatory, Alphanumeric, 40] Type the narration of the transaction. The system displays the default narration "Book Shortage". The vault teller can change the narration, if required.
Reference Number	[Mandatory, Alphanumeric, 16] Type the reference number for the transaction.

3. Select the currency from the drop-down list.
4. Enter the amount and the reference number for the shortage.

Book Shortage

The screenshot shows a window titled "Book Shortage" with the following fields and values:

- Teller ID: TSUBIT9999
- TIL ID: 111
- TIL Description: TSUBIT9999
- Currency: CNY
- Amount: 1,000.00
- Narrative: Book Shortage
- Reference Number: 7888

At the bottom of the window, there is a navigation bar with buttons for "UDF", "OK", "Close", and "Clear".

5. Click the **Ok** button.
6. The system displays the message "Authorization Required. Do you want to continue". Click the **OK** button.

7. The system displays the **Authorization Reason** screen.
8. Enter the required information and click the **Grant** button.
9. The system displays the transaction sequence number. The transaction number is system generated that uniquely identifies each transaction performed by a teller and can be used for tracking the transaction. Click the **OK** button.
10. The system displays the **Document Receipt** screen.
11. If you want to print the receipt, select the record that needs to be printed. The system displays the message "Do You Want To Print". Click the **Ok** button.
OR
Click the **Cancel** button.
12. Click the **Close** button.

Note: For more information on Authorization transactions, refer to the *Oracle FLEXCUBE Introduction User Manual*.

7552 - Book Cash Overage

Using this option the teller / vault teller has to book the physical cash held in a particular currency, which exceeds the cash in that currency as shown by the system. The teller can close the batch for a posting date only if the cash balances tally.

While booking a cash overage, the system increases the cash balance and brings it in sync with the physical balance with the teller, by passing the difference to a cash overage liability GL.

Definition Prerequisites

- BAM56 - Currency Codes Maintenance
- The vault batch and the teller batch should be opened for the posting date.

Modes Available

Not Applicable

To book an overage

1. Type the fast path **7552** and click **Go** or navigate through the menus to **Transaction Processing > GL Transactions > Cash > Book Cash Overage**.
2. The system displays the **Book Cash Overage** screen.

Book Cash Overage

The screenshot shows the 'Book Cash Overage' screen with the following fields and values:

- Teller ID: TSUBIT9999
- TIL ID: 111
- TIL Description: TSUBIT9999
- Currency: (dropdown menu)
- Amount: (empty text box)
- Narrative: Book Cash Overage
- Reference Number: (empty text box)

The bottom navigation bar includes buttons for: Card, Change Pin, Cheque, Cost Rate, FCY Change, Denomination, Instrument, Inventory, Pin Validation, Service Charge, Signature, Travellers Cheque, UDF, OK, Close, and Clear.

OR
Click the **Cancel** button.
12. Click the **Close** button.

Note: For more information on authorization transactions, refer to the *Oracle FLEXCUBE Introduction User Manual*.

9005 - Close Teller Batch

Using this option you can close the teller batch for the given posting date.

The system allows the teller batch to be closed for the day only when all the transactions are successfully processed. In case any transaction is pending, like an unauthorized or an incomplete batch data entry, the system prompts you to either complete or reverse the transactions so that the teller can close the batch for the day. In addition to this, there is a specified limit on the cash that a teller can retain at the end of the day. The bank maintains the specified limit for each currency. Whenever a transaction is performed or while closing the teller batch, the system checks the cash balances for each currency with the respective limits and prompts the teller in case of violation. If the limit is exceeded, the teller sells the excess cash to the main vault, to bring his cash holding within the retention limit. After selling the excess cash the teller has to ensure that the physical cash held, is same as that shown by the system.

For a teller, if there is a difference in the physical cash/inventory and that calculated by the system, the overage or shortage has to be booked accordingly and only then each teller can close the teller batch for that day.

Before closing the teller batch, the teller should ensure completion of all the incomplete batches for consolidated cheques, outward clearing batches, inward clearing batches, etc. This is applicable if the teller has done the header transaction of the consolidated cheque deposit but has not performed the detailed data entry of consolidated cheques. Once it is closed, the teller batch cannot be re-opened for the same posting date.

Definition Prerequisites

- 9001 - Open Teller Batch
- 9003 - Open Vault Batch

Modes Available

Not Applicable

To close a teller batch

1. Type the fast path **9005** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Batch > Close Teller Batch**.
2. The system displays the **Close Teller Batch** screen.

6203 - TC Balancing*

Bank may buy and sell Traveler's cheques from the existing customers as well as walk-in customers. Balancing the TC is a prerequisite for the teller before closing the teller batch for the day.

Using this option, tellers authorized to deal with TC, balance their physical TC in custody with the system count at the beginning of the branch operations. During the day the count is altered vide TC purchases and sales. Balancing the TC is a prerequisite for the teller before closing the teller batch for the day. In case of any overage/shortage of TC, the same is displayed in the screen for the user for reconciliation and balancing.

Definition Prerequisites

- Issuer Maintenance (Fast Path: BAM09)
- BAM56 - Currency Codes Maintenance
- Bank Codes Maintenance (Fast Path: BAM20)

Modes Available

Ok Cancel

5. Click the **Ok** button.
6. If there is any overage, the system displays the message "TC Not Balanced".
7. Click the **Cancel** button.

6202 - Inventory Balancing

Using this option you can perform inventory balancing during the day. The total physical inventory quantity belonging to a particular stock is updated after performing the inventory transactions for the day. Once the total quantity is entered, the system compares the total physical quantity with the available system quantity and calculates an Overage/ Shortage (if any). The system also displays any previously booked overage/shortage.

Before closing the teller batch, you must book/cancel inventory overage/shortage and tally the inventory balance.

8007 - Book or Cancel Overage/Shortage

Oracle FLEXCUBE monitors the inventories held by tellers to keep track of available stocks. While closing a teller batch, if the teller realizes that physical quantity in hand is not matching with the system count and teller is not able to find the details of inventory causing shortage or overage, the teller can book overage or shortage of the inventory using this option.

When shortage is booked, the quantity of the inventory for which shortage is booked is reduced from tellers inventory count and the status of such inventory is updated as 'Shortage' and it is not available for issuance. When an overage is booked, the quantity booked as overage gets added to the Tellers inventory count and the status of such inventory is updated as 'Overage' and it will not be available for issue.

When overage or shortage is booked, reconciliation is done manually on the subsequent day and the reason for shortage or overage is identified. The shortage or overage booked is cancelled by using this option. By reverting the booking of shortage/overage, the status and count of the teller inventory is reverted back to original. The status of the inventory for which the shortage/overage was booked has to be updated in the **Stock Adjustment** (Fast Path: IV002) option.

Definition Prerequisites

7. Authorize the Transaction using Fast path **TIL01** from supervisor Login. You will be prompted with "**Record Authorized** .." message on successful Authorization".

TIL02- TIL ID Linkage Maintenance

Using this screen user will be able to link / de-link the TIL ID to teller ID or ATM Terminal ID. On selecting the teller ID radio button, the teller ID of the teller who is logged in will be defaulted in the Teller ID field and will be disabled. If a TIL is already linked to the teller, Option value as '**Delink TIL ID**' will be displayed in "**Option**" field which will be in a non editable state. Similarly, if option value is to link the TIL, 'Link TIL ID will be displayed and will be non editable state in this case, only TIL's available to the teller will be displayed in TIL ID pick list of the branch to which teller belongs and will be in a non editable state.

Definition Prerequisites

- TIL01 - TIL ID Maintenance

Modes Available

- Not Applicable

To Link / De-Link the TIL ID

1. Type the fast path **TIL02** and click **Go** or navigate through the menus to **Global Definitions> Internal Transactions> TIL> TIL Linkage Maintenance**
8. The system will display **TIL Linkage Maintenance** screen.

TIL ID Linkage Maintenance

Field Description

Column Name	Description
Teller Id	[Mandatory, Radio Button] Select the option whether to link the TIL to teller or ATM Terminal ID.
ATM Terminal Id	[Mandatory, Radio Button] Select the option whether to link the TIL to teller or ATM Terminal ID.
Teller Id	[Optional, Pick List] Select the teller ID for whom TIL related operations are to be performed from the pick list. This field will be enabled if the Teller ID radio button is selected.

Column Name	Description
ATM Terminal Id	<p>[Conditional, Alphanumeric, Pick List]</p> <p>Select the ATM terminal Id from the pick list or enter it.</p> <p>The list has the values maintained in ATM Acquirer POS Id Maintenance (FP: ATM02) option. The ATM terminal ID already linked will not be displayed.</p> <p>This field is enabled if the ATM Terminal ID radio button is selected.</p>
Option	<p>[Conditional, Drop-Down]</p> <p>Select the type of TIL operation to be performed from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Link • Delink for Submit • Delink for Transfer
TIL Id	<p>[Mandatory, Numeric, Pick List]</p> <p>Select the TIL ID from the pick list.</p> <p>This field will have TIL IDs, If a TIL is already linked, the TIL No. field will display the linked TIL No. to the Teller Id and will allow to delink the TIL. In case of no TIL is linked, teller will be allowed to link a TIL from the pick list.</p>
TIL Description	<p>[Alphanumeric]</p> <p>This field displays the corresponding TIL name of the selected TIL number.</p>

9. Select the appropriate option by clicking on the respective **Radio button**. The **teller ID** field will default the Teller Id of the teller who is logged in.
10. On selecting the **ATM Terminal ID**, the ATM terminal ID field will be enabled and values will be displayed accordingly in the pick list.
11. Select the **TIL ID** using the pick list.
12. Click the **OK** button, the system will prompt you with a “Transaction completed successfully” message on a pop.

4501 - Centralised Authorisation

Centralised authorization is a security enhancing setup which can be enabled in **Oracle FLEXCUBE** for providing additional authorizations when predefined reasons are encountered in online transactions by a group of supervisors, preferably from those located centrally.

This level of authorization is subsequent to and in addition to the local/remote authorization which would have been provided for the transaction to confirm the overrides.

The predefined reasons are defined in the branch database in an internal table called ba-auth-reason-mast table.

Centralised authorization is done by a specific transaction which can be accessed only by certain supervisors as identified in the Security Management System (SMS) setup. Supervisors accessing this transaction can identify the transaction(s) to be authorised by using the from branch, transaction code, customer id and account number combination.

The centralised authorization process is divided into the following steps namely:

If auto-authorization is disabled:

Step	Activity By	Activity Description
A	Teller	Teller performs online transaction from the branch. If system encounters conditions requiring local/remote authorization, transaction will proceed to step B. If system does not encounter any conditions requiring local/remote authorization but encounters centralised authorization requirement, system will proceed to step D.
B	Supervisor	Supervisor approves the transaction using local authorization or remote authorization. If local authorization is provided, system proceeds for further processing.
C	Teller	Teller resubmits the approved transaction from the Electronic Journal, for transactions sent for remote authorization. System encounters reasons requiring central authorization. Teller sends the transaction for central authorization.
D	Supervisor	Supervisor access the central authorization transaction and authorizes the transaction waiting for authorization.
E	Teller	Teller resubmits the approved transaction from the Electronic Journal and completes the transaction.

If auto-authorization is enabled:

Step	Activity By	Activity Description
A	Teller	Teller performs online transaction from the branch. If system encounters conditions requiring local/remote authorization, transaction will proceed to step B. If system does not encounter any conditions requiring local/remote authorization but encounters centralised authorization requirement, system will proceed to step D.
B	Supervisor	Supervisor approves the transaction using local authorization or remote authorization. If local authorization is provided, system proceeds for further processing.
C	Teller	System encounters reasons requiring central authorization. Teller sends the transaction for central authorization.
D	Supervisor	Supervisor access the Central authorization transaction and authorizes the transaction waiting for authorization.

At Local Branch:

The supervisor authorises the transaction done by the teller locally or remotely. For more information on Local and Remote authorizations refer to **Local Authorization** and **Remote Authorization** earlier in this chapter.

BA995 - Single Account Transfer

Using this option, a bank can transfer a CASA/TD/Loan account from one branch to another, if the customer initiates the transfer. An existing sub-branch/outlet is updated to a branch/sub-branch. The account number of the effected accounts will not change but the branch to which the account reports will change

It is not possible to transfer an account from one product to another product. Also account transfer will be disallowed for the accounts which are members of the group linked in the **Group Accounts Maintenance** (Fast Path: CHM24) option.

Definition Prerequisites

- BAM03 - Branch Master Maintenance
- The branch and transfer branch product should be the same.

Modes Available

Add By Copy, Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To transfer a single account from one branch to another

1. Type the fast path **BA995** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Others > Single Account Transfer**.
2. The system displays the **Single Account Transfer** screen.

Single Account Transfer

Field Description

Field Name	Description
Account Number	[Mandatory, Numeric, 16] Type the account number that has to be transferred to another branch. The account name is populated in the corresponding field.
Account Status	[Display] This field displays the account status.
Product Code	[Display] This field displays the product code under which the account opened.
Branch Name	[Display] This field displays the name of the home branch where the account is currently held.

Field Name	Description
Transfer Branch Name	[Mandatory, Pick List] Select the name of the branch, to which the account is to be transferred, from the pick list.

3. Click the **Add** button.
4. Enter the account number and press the **<Tab>** key.
5. Select the branch name from the pick list.

Single Account Transfer

6. Click the **Ok** button.
7. The system displays the message "Record Added...Authorization Pending...". Click the **Ok** button.
8. The single account transfer record is added once the record is authorized.

BA999 - Bulk Account Transfer

Using this option the bank can transfer all **Oracle FLEXCUBE** accounts across products from one branch to another branch when a branch is closed or merged. This screen allows an existing sub-branch/outlet to merge with another existing sub-branch/outlet. Multiple existing sub-branches/outlets can also merged with another existing sub-branch/outlet. Bulk account transfer can be used for each of the multiple branches intended to be merged. (**FLEXCUBE** currently do not support bulk merging of branches). An existing sub-branch/outlet is updated to a branch/sub-branch. Part of individual accounts in an existing sub-branch/outlet is moved to a new or existing sub-branch/outlet. The account numbers of the affected accounts do not change but the branch to which they report to get changed.

It is not possible to transfer accounts from one product to another. This option can also be used when banks decide to open special type of branches catering to specific customer needs and decides to transfer the existing accounts from other branches to the new branch.

This screen also supports the transfer of Loan accounts to the destination branch.

A validation is provided to check whether the products available in the old branch is also available in the new branch, if not those products will be automatically linked to the new branch. Bank ensures that:

- No new products are linked to the old branch after the branch merger.
- Other parameters related with the old branch except branch product cross reference will not be updated to the destination branch.
- No customer or account opening happens in that branch.
- It is not allowed to be merged if the branch has child branches. Child branches should be delinked from the branch first.

Definition Prerequisites

- BAM03 - Branch Master Maintenance

Modes Available

Add By Copy, Add, Modify, Delete, Cancel, Amend, Authorize, Inquire. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

5514 - Change Data Entry Batch User

Using this option the ownership of an unauthorised batch can be changed from one teller to another, as system does not allow tellers to work on batches not owned by them.

This is done when the original teller who had done the transaction is not available and the batch needs to be modified. In such situations, this option is used to transfer the ownership of the unauthorised batch to another teller or user.

The owner of the Voucher Entry branch cannot be changed by using this option.

Definition Prerequisites

- Branch batch to be opened and teller batch opened for the change.

Modes Available

Not Applicable

To change the data entry batch user

1. Type the fast path **5514** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Data Entry > Change Data Entry Batch User**.
2. The system displays the **Change Data Entry Batch User** screen.

4. Click the **Close** button.

APM04 - Attribute Application Maintenance

This maintenance is used to apply attribute at a particular level i.e. at customer, sub-account, card, passbook or certificate in add mode.

In modify mode, expiry date of the attribute can be modified only if it is equal to greater than the current process date.

In delete mode, attributes placed at customer/ sub-account/ card/ passbook/ certificate can be deleted.

In inquiry mode, attributes placed at customer/ sub-account/ card/ passbook/ certificate can be inquired which are not expired.

Based on the value selected in the Attribute level, respective field will be enabled for inputting customer ID, sub-account no., card no., passbook or certificate no.

Definition Prerequisites

APM01 - Attributes Parameter Maintenance

Modes Available

Add, Modify, Delete, Inquiry.

To maintain Attribute Application

1. Type the fast path **APM04** and click **Go** or navigate through the menus to **Transaction Processing > Customer Transactions > Attribute Application Maintenance**.
2. The system displays the **Attribute Application Maintenance** screen.

Attribute Application Maintenance

Field Description

Column Name	Description
Attribute Level	[Mandatory, Drop-Down] Select the Level at which a particular attribute is to be applied. The values given are: <ul style="list-style-type: none"> • Customer • Sub-account • Card • Passbook • Certificate
Customer ID	[Optional, Numeric,10] Enter a valid customer ID.
Customer Name	[Display] This field displays the name of the customer.

Column Name	Description
Sub account No.	[Numeric,16] Enter a valid CASA & TD sub account number.
Account Title	[Display] This field displays the account title of the account number entered.
Card No.	[Numeric,20] Enter a valid a valid Active Card Number
Passbook Number	[Numeric,20] Enter a valid a valid Active Passbook Number
Certificate Number	[Numeric,20] Enter a valid a valid Active Certificate Number
Stock Code	[Optional, Pick List] This field will be enabled only if Attribute Level is selected as Passbook and Certificate .
Stock Description	[Display] This filed displays the stock description for selected stock code
MCA Number	[Display] This field enables only if Sub-Account Number, Card Number, Passbook or Certificate Number is entered. In case of Card, default MCA linked to the card will be displayed.
MCA Title	[Display] This field will be displayed only if Sub-Account Number, Card Number, Passbook, Certificate Number is entered.
Attribute Name	[Mandatory, Pick List] Select the name of the attribute.
Expiry Date	[Optional Pick List, DD/MM/YYYY] Select the expiry date of the attribute from the pick list or enter it in DDMMYY format. If not entered then will considered as no expiry date is present. The date should be equal to or greater than current process date. Attribute expiry date cannot be set as holiday.

3. Click the **OK** button.
4. The details are added once the record is authorized.

Inquiries

Transaction inquiries display detailed information about a transaction performed by the user.

This section explains how the system allows the user to view information about branch operations. The user can view the status of the transactions performed by the teller, branch-wise transactions, the errors committed by the tellers, last few transactions performed by each teller, reversal of transactions, etc. through various inquiry screens.

7012 - Account No Check Digit Inquiry

The account number of a customer could consist of the bank code (two digits), branch code (four digits), a running serial number (six digits) and a check digit (two digits). The order of these entities as well as the weightage for each position in the account number for calculation of the check digits depends on the setup done in an internal table of **Oracle FLEXCUBE**.

Using this option you can retrieve the actual account number when the teller queries on an account, without giving the check digit(s). When the teller enters the account number without the check digit(s), the system automatically populates the check digits.

Definition Prerequisites

Not Applicable

Modes Available

Not Applicable

To view the account number check digit

1. Type the fast path **7012** and click **Go** or navigate through the menus to **Transaction Processing > Account Transactions > CASA Account Transactions > Inquiries > Account No Check Digit Inquiry**.
2. The system displays the **Account No Check Digit Inquiry** screen.

Account No Check Digit Inquiry

The screenshot shows a software window titled "Account No Check Digit Inquiry*". Inside the window, there are two input fields: "Module:" with a dropdown arrow and "Account No:" with a text box. Below the main window area is a horizontal navigation bar containing several buttons: "UDF", "OK", "Close", and "Clear". Above these buttons is a row of labels for different transaction types: "Card", "Change Pin", "Cheque", "Cost Rate", "Denomination", "Instrument", "Inventory", "Pin Validation", "Service Charge", "Signature", and "Travellers Cheque".

Field Description

Field Name	Description
Module	<p>[Mandatory, Drop-Down]</p> <p>Select the appropriate FLEXCUBE Retail module from the drop-down list..</p> <p>The options are:</p> <ul style="list-style-type: none"> • LN: Loans • TD: Term Deposit • CH: CASA Account • CI: Customer Information
Account No	<p>[Mandatory, Numeric, 16]</p> <p>The account number of the customer, without the check digits. The system will display the check digits.</p>

3. Select the module from the drop-down list.
4. Type the account number and press the **<Tab>** key.

Account No Check Digit Inquiry

The screenshot shows a software window titled "Account No Check Digit Inquiry*". At the top left, there are two input fields: "Module:" with a dropdown arrow and "Account No:" with a text box containing the value "61000000001410". Below the input fields is a large empty white area. At the bottom of the window, there is a navigation bar with several tabs: "Card", "Change Pin", "Cheque", "Cost Rate", "Denomination", "Instrument", "Inventory", "Pin Validation", "Service Charge", "Signature", and "Traveller Cheque". Below these tabs are four buttons: "UDF", "OK", "Close", and "Clear".

5. The system displays the check digits of the account number. Click the **Close** button.

7017 - Batch Status Inquiry

Using this option you can view the status of all the batches pertaining to the tellers and the vault tellers according to the posting dates in that particular branch. The status displays whether a particular teller, vault batch or branch batch is opened or closed.

Apart from this, the inquiry also displays the open batch of the previous posting date. The batch can be opened simultaneously for maximum two posting dates.

This option is used by the supervisor/manager of the branch to find out the overall status of all batches.

Definition Prerequisites

- 9001 - Open Teller Batch
- 9003 - Open Vault Batch

Modes Available

Not Applicable

To view the batch status

1. Type the fast path **7017** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Batch Status Inquiry**.
2. The system displays the **Batch Status Inquiry** screen.

Debits	
Vault	[Display] This field displays the total cash debit in a branch vault for a particular posting date in the selected currency.
Teller	[Display] This field displays the total debit in cash transactions performed by all the branch tellers for a particular posting date in the selected currency.
Count	
Vault	[Display] This field displays the total count of cash debits in the vault of a branch for a particular posting date in the selected currency.
Teller	[Display] This field displays the total count of the debit cash transactions performed by all branch tellers for a particular posting date in the selected currency.

Field Name	Description
Credits	
Vault	[Display] This field displays the total cash credit in a branch vault for a particular posting date in the selected currency.
Teller	[Display] This field displays the total credit in cash transactions performed by all the tellers of a branch for a particular posting date in the selected currency.
Count	
Vault	[Display] This field displays the total count of cash credit in a branch vault for a particular posting date in the selected currency.
Teller	[Display] This field displays the total count of the credit cash transactions performed by all branch tellers for a particular posting date in the selected currency.
Closing Balance	
Vault	[Display] This field displays the closing balance amount of the branch vault in the selected currency. <i>Closing Balance = (Opening Balance + Credit balance) – Debit balance</i>
Teller	[Display] This field displays the closing balance amount of all branch tellers, for the cash transaction in the selected currency. <i>Closing Balance = (Opening Balance + Credit balance) – Debit Balance</i> For example, if the opening balances of all branch tellers is 100,000 and there was a credit transaction of 50,000 and a debit transaction of 25,000. Thus, the closing balance will be as follows: <i>Closing Balance = (1,00,000 + 50,000) – 25,000</i> Therefore, the closing balance will be 125,000.
Transfer Amount	[Display] This field displays the amount of the funds transferred by the teller for a particular posting date in the selected currency.

Field Name	Description
Transfer Count	[Display] This field displays the count of the funds transferred by the teller for a particular posting date in the selected currency.

3. Select the currency from the drop-down list.
4. Enter the posting date and click the **Ok** button.
5. The system displays the branch totals position details.

7122 - Cross Rate Enquiry

Using this option you can search and view the exchange rate between two different currencies, against the bank's local currency. This option also displays the cross rate between two currencies. Cross rate is helpful when three currencies are involved.

For instance, many countries recognize the major currencies, viz. US Dollar, EURO, Yen and Great Britain Pound for export or import billing.

For example, an Arab Emirates company raises the bill in AED currency for exporting goods to India. At the time of payment, the Indian bank will calculate the equivalent cross rate from AED currency to USD currency. The amount derived in US Dollar will be converted to Indian Rupees, and that amount in Indian Rupees will be debited to the importer's account.

Definition Prerequisites

- BAM25 - Currency Definition
- Exchange rates of all currencies with respect to the local currency for the respective posting date should be defined.

Modes Available

Not Applicable

To view the cross rate

1. Type the fast path **7122** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Cross Rate Enquiry**.
2. The system displays the **Cost Rate Enquiry** screen.

Cost Rate Enquiry

Field Description

Field Name	Description
Source Currency	[Mandatory, Drop-Down] Select the currency, which is to be converted from the drop-down list.
Target Currency	[Mandatory, Drop-Down] Select the currency against which the exchange rates need to be obtained from the drop-down list.
Source Ccy Rate	[Display] This field displays the source currency exchange or conversion rate against the local currency of the bank.
Dest Ccy Rate	[Display] This field displays the target currency exchange or conversion rate against the local currency of the bank.

Field Name	Description
Cross Rate	[Display] This field displays the rate of conversion of the source currency against the conversion rate of the target currency in terms of the bank's local currency.

3. Select the source currency and the target currency from the drop-down list.
4. Click the **Ok** button.
5. The system displays the cross rate details.

Cost Rate Enquiry

The screenshot shows a window titled "Cross Rate Enquiry*" with the following fields and values:

Source Currency :	USD	Target Currency :	CAD
Source Coy Rate :	2.75000	Dest Coy Rate :	2.39000
Cross Rate :	1.15063		

At the bottom of the window, there is a navigation bar with the following tabs: Card, Change Pin, Cheque, Cost Rate, Denomination, Instrument, Inventory, Pin Validation, Service Charge, Signature, Travellers Cheque. Below the tabs are four buttons: UDF, OK, Close, and Clear.

6. Click the **Close** button.

7008 - Last Ten Transactions

Using the option a teller can view the details of the last ten monetary transactions performed on the posting date. You can enquire the transactions for the current or for next posting date.

The system provides details on transaction type, date of transaction with time, account number, currency of the transaction, transaction amount and Dr/Cr indicator.

Definition Prerequisites

- 9001 - Open Teller Batch

Modes Available

Not Applicable

To view the last ten transactions

1. Type the fast path **7008** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Last Ten Transactions**.
2. The system displays the **Last Ten Transactions** screen.

Last Ten Transactions

The screenshot shows the 'Last Ten Transactions' window. At the top, the title bar reads 'Last Ten Transactions*'. Below the title bar, there are two input fields: 'User No' with the value 'TKATDARE' and 'Date' with the value '31/01/2008'. Below these fields is a table with the following columns: 'Seq No', 'Type', 'Txn Date', 'Txn Time', 'Acct No', 'Ccy', 'Txn Amt', and 'Dr / Cr'. The table is currently empty. At the bottom of the window, there is a navigation bar with buttons for 'UDF', 'OK', 'Close', and 'Clear'. Above the navigation bar, there are several menu options: 'Card', 'Change Pin', 'Cheque', 'Cost Rate', 'Denomination', 'Instrument', 'Inventory', 'Pin Validation', 'Service Charge', 'Signature', and 'Travellers Cheque'.

Field Description

Field Name	Description
User No	[Display] This field displays the user ID of the teller who has logged in. Only those transactions performed by the teller who has logged in are displayed.
Date	[Mandatory, Numeric, dd/mm/yyyy] Type the posting date of the transaction. By default, the system displays the current posting date.

Column Name	Description
Seq No	[Display] This column displays the sequence number pertaining to the transaction carried out by the teller.
Type	[Display] This column displays the type of transaction performed by the teller.
Txn Date	[Display] This column displays the date on which the teller performed the transaction.
TxnTime	[Display] This column displays the system time when the teller performed the transaction.
Acct No	[Display] This column displays the account numbers for which the teller has performed the transactions.
Ccy	[Display] This column displays the code of the currency in which the teller performed the transaction.
Txn Amt	[Display] This column displays the amount for which the transaction was performed in the transaction currency.

Column Name	Description
Dr / Cr	<p>[Display]</p> <p>This column displays whether the transaction performed was a debit transaction or a credit transaction.</p> <p>The options are:</p> <ul style="list-style-type: none"> • D: Debit transactions • C: Credit transactions

- Enter the posting date of the transaction.
- Click the **OK** button.
- The system displays the details of the last ten transactions.

Last Ten Transactions

The screenshot shows a window titled "Last Ten Transactions*" with a yellow header. At the top, there are fields for "User No" (TKATDARE) and "Date" (31/01/2008). Below this is a table with the following data:

Seq No	Type	Txn Date	Txn Time	Acct No	Ccy	Txn Amt	Dr / Cr
17	FTD	12/12/2008	16:08:55	60000000714840	CAD	996.58	D

At the bottom of the window, there is a navigation bar with buttons for "LDF", "OK", "Close", and "Clear".

- Click the **Close** button.

7050 - Old To New Account Inquiry

When the bank has migrated from a different system to **Oracle FLEXCUBE** or from an old **Oracle FLEXCUBE** release to a new **Oracle FLEXCUBE** release, the account number of all customer accounts might need to be changed.

Using this option you can support the transition period wherein customers quote the old account numbers at the branch to perform transactions. It determines the new account number on which the transaction(s) are to be performed. The system also provides the customer name for proper verification of old to new account.

Definition Prerequisites

Not Applicable

Modes Available

Not Applicable

To view the new account number

1. Type the fast path **7050** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Old To New Account Inquiry**.
2. The system displays the **Old To New Account Inquiry** screen.

6006 - Search Electronic Journal

The tellers and the supervisors can view the status of all the transactions performed by them during the posting date for which the teller batch is opened. The teller can view the status of only those transactions done by them. However, the supervisor can view the status of all the transactions done by all the tellers.

Using this option, the teller can also reverse the transaction posted by him during the day. This option can be used to view the list of all transactions. The incomplete transactions are those transactions that have been initiated by the teller and require authorization for completion.

After performing a transaction which needs authorization, the system prompts the teller to send the transaction for remote authorization or for local authorization. If the user selects remote authorization, the system prompts the user to select a supervisor. After the teller selects the supervisor, and confirms sending the transaction for authorization, the supervisor can view the transaction on their terminal by using this option. The Teller ID drop-down list in this option displays a list of tellers and the vault tellers who have sent the transactions for authorization to that supervisor.

Whenever any transaction is sent for remote authorization, the transaction sequence number is displayed at the teller / vault teller level. After the authorization of a transaction, the screen remains unchanged, so that the supervisor can select the next transaction for authorization.

This screen allows **Partial Reversal** for transactions that take place through

- a. **Cash Deposit (Fast Path - 1401)**
- b. **Cash Withdrawal (Fast Path - 1001 and Fast Path - 1013)**

It also allows **Same Day/ Any Day Partial Reversal** for following transactions -

- a. **CASA fund transfer (Fast Path - 1006)**
- b. **GL fund transfer (Fast Path - 1005 and Fast Path - 1008)**

Same day reversal is allowed for PPF transactions performed. The PPF which is done in the last needs to be reversed first and so on.

Definition Prerequisites

- Existence of Transactions for authorization / reversal

Modes Available

Not Applicable

To view and authorize the records sent for remote authorization

1. Type the fast path **6006** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > Search Electronic Journal**.
2. The system displays the **Search Electronic Journal** screen.

6010 - View Teller Errors

Using this option errors committed by the branch tellers can be viewed . The screen displays the overage or shortage booked by the teller on any day.

This is a report on the differences a teller has encountered between the actual cash present with the teller and the cash calculated by the system. A supervisor can view the teller errors for all tellers.

Definition Prerequisites

- The teller branch should be open for the current posting date.

Modes Available

Not Applicable

To view the teller errors

1. Type the fast path **6010** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Inquiries > View Teller Errors**.
2. The system displays the **View Teller Errors** screen.

6007-Transaction - Position Squaring Rate x-ref

In case of a cross-currency transaction the position squaring is done based on the rate already decided and maintained (presently Position squaring happens with the TC Rate maintained). While doing some high value cross-currency transactions the branch can negotiate with its higher office / head office and can arrive at a special negotiated position squaring rate so that additional profit can be booked in the branch. This screen helps to capture this negotiated position squaring rate for a transaction. The Search criteria in the screen are used to help the teller to identify the transaction, and then the rate can be added for that particular transaction. This position squaring rate input is not mandatory. If the teller does not input this rate, then the system should pick up the position squaring rate as per the present functionality.

Field Name	Description
Delete	<p data-bbox="505 268 760 296">[Optional, Check Box]</p> <p data-bbox="505 312 1276 373">If the Position squaring rates already maintained are to be deleted then this checkbox to be checked.</p> <p data-bbox="505 390 1187 451">This check box will be enabled for the current posting date transactions only.</p> <p data-bbox="505 468 1284 529">For the earlier posting date transactions this check box will remain disabled.</p> <p data-bbox="505 554 1308 703">The functionality of this field is to delete the modification done in the Position Squaring Buy Rate or Position Squaring Sale Rate done by User. When this check box is checked and clicked on Save button, system will delete the modifications and will display the original rates used at the time of transaction.</p>

16. Click the **Fetch** button to fetch the records.
17. Once the Fetch button is clicked the system will display the cross-currency transactions as per the search criteria selected.
18. The teller can input the position squaring rates if required for the current dated transactions.
19. Click the **Save** button. The system will save new rates.
20. When **Delete** check box is checked and clicked on **Save** button, system will delete the modifications and will display the original rates used at the time of transaction.

Report Generation Transactions

Management, operational staff and customers need reports to acquire information or status of the transactions/activities performed on the system. Every bank branch is responsible for issuing an advice to their customers against every transaction performed in their respective accounts.

By default, all the reports, adhoc and batch, are generated in the central **FLEXCUBE Retail** application server.

This section deals with maintaining the report control, requesting for the reports and advices and generating or canceling the requested reports and advices.

BAM16 - Report Control Maintenance

Using this option the setup can control the generation of various reports by **Oracle FLEXCUBE**. Reports can be generated as adhoc reports or batch reports.

The adhoc reports are generated on demand or online using the **Report Request** (Fast Path: 7775) option from a branch terminal. The batch reports are automatically generated during the end of day or beginning of day operations. You can also maintain the module to which the report belongs to and the frequency of generation of reports in this option.

Definition Prerequisites

Not Applicable

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquire. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the report control details

1. Type the fast path **BAM16** and click **Go** or navigate through the menus to **Global Definitions > Other > Report Control Maintenance**.
2. The system displays the **Report Control Maintenance** screen.

Report Control Maintenance

The screenshot displays the 'Report Control Maintenance' window. It features several input fields and dropdown menus for configuring report details. At the bottom, there is a 'Record Details' section with fields for 'Input By', 'Authorized By', 'Last Mnt. Date', 'Last Mnt. Action', and 'Authorized'. A navigation bar at the very bottom contains radio buttons for 'Add', 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', and 'Inquiry' (which is selected), along with 'Ok', 'Close', and 'Clear' buttons.

7775 - Report Request

Using this option reports and advices can be requested.

The request for two types of reports can be given, viz. adhoc reports and batch reports. The adhoc reports are generated on demand or on request, while the batch reports are automatically generated at the end of day or beginning of day.

The user can select the report type and the module to display the report categories. Each category has different reports, displayed along with their ID and title. The user can select the desired report from the list to generate it.

For more information, please refer to the respective module wise Reports Manual.

Definition Prerequisites

- BAM16 - Report Control Maintenance

Modes Available

Not Applicable

To request for a report

1. Type the fast path **7775** and click **Go** or navigate through the menus to **Transaction Processing > Internal Transactions > Reports > Report Request**.
2. The system displays the **Report Request** screen.

Types of report

Select the appropriate option to generate the report.

The options are:

- Adhoc Reports
- Batch Reports

By default, the **Adhoc Reports** option is selected.

Adhoc Reports

[Mandatory, Radio Button]

Click **Adhoc Reports** to generate and view an adhoc report.

Batch Reports

[Mandatory, Radio Button]

Click **Batch Reports** to view EOD/BOD reports and advices for a particular batch.

Column Name	Description
Report Group	[Display] This column displays the different report groups under the different modules.

3. Select the appropriate option for the report type..
4. Click the appropriate tab for which you can generate/view reports. The system displays the report group lists.
5. Double-click the appropriate report group. The system displays the report title, and the corresponding report ID.
6. Double-click the report title. The system displays the **Input Parameters** screen. The number of input parameters will be determined by the nature of report, which is required.
7. Enter the relevant information and click the **Generate/View** button.

Note: Oracle Flexcube supports report generation in PDF, HTML and Excel formats. Based on the system configuration the reports can be generated in any of the above mentioned format.

7780 - Advice/Report Cancel Request

Using this option, you can cancel advice/report request transactions that are sent for printing /viewing of generated ad-hoc advice /report.

In this option, only those requests placed by a particular user login ID can be cancelled.

Definition Prerequisites

6. Select the **Print** option from the **File** menu.
7. The system displays the **Print** dialog box.
8. Select the appropriate parameters and click the **Print** button.
9. Click the **Close** button.

7778 - Advice/Report Status Inquiry

Using this option the advice /reports are displayed which are requested by the user login Id, through the **Reports Request** (Fast Path: 7775) option. The user who has requested the advices/reports can view the status and generate the advices or reports.

The supervisor can view all the report/advice requests of any teller associated under his/her supervision. In this case, select the teller from the drop-down list whose transaction details you want to view.

For more information, please refer to the respective Module wise Reports Manual.

Definition Prerequisites

- BAM16 - Report Control Maintenance
- 7775 - Report Request

Modes Available

Not Applicable
