Collaterals

Secured Loans are backed by security. Collaterals are the tangible securities. The collaterals are defined in the system and are attached to the loan accounts. Collaterals mapping is necessary if defined at loan product level. Value of collateral attached to a loan account gains significance at the time of a loan account turning bad. This determines the classification criteria and provisioning amount.

BA434 - Account To Collateral Inquiry

Collateral refers to all property, including the proceeds thereof, assigned, transferred or pledged to the bank by the customer as collateral for loans/overdraft. It also refers to other extensions of credit, and all Capital Stock, Mortgage Collateral, Securities Collateral and other Collateral, including the proceeds thereof, which are now or hereafter pledged to the bank.

Using this option you can view the collaterals that are linked to specific accounts. The system provides information on collateral details like the value of the collateral in percentage, which has been shared with the account, the actual lendable value of the collateral and the type of collateral i.e. primary or secondary.

Definition Prerequisites

- BAM74 - Collateral Header Maintenance

BAM46 - Collateral Propagation

When a collateral is re-evaluated, the new value of the collateral needs to be applied. This is applicable specifically for financial securities wherein the security value of the collateral changes as per market conditions and a feed containing value of each stock comes from the stock exchange.

Using this option, propagation of collateral can be done which will trigger a change in the drawing power of the collateral whose value has changed.
