Table of Contents

Preface	4
RL001 - UDE Master Maintenance	6
RL002 - Rule Definition Master Maintenance	22
RL010 - Rule Debug Maintenance.....	30
RP004 - Interest Variance Package Maintenance	33
RP003 - Benefit Plan Maintenance	42
RP001 - Scheme Definition Maintenance	46
RP002 - Eligibility Criteria Maintenance.....	54
RP015 - Eligibility Debug Maintenance.....	60
RP010 - Eligibility Scheme Linkage	62
RP011 - Customer Scheme Linkage.....	67
CIM50 - Relationship Value Tag Definition	75
CIM51 - Customer Group Definition Maintenance	78
CIM52 - Customer Group Inquiry (Applicable Customer Groups)	84
Examples for Relationship Pricing	89

Preface

1.1. Intended Audience

This document is intended for the following audience:

- Customers
- Partners

1.2. Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.3. Access to OFSS Support

<https://support.us.oracle.com>

1.4. Structure

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual

Chapters are dedicated to individual transactions and its details, covered in the User Manual

1.5. Related Information Sources

For more information on Oracle FLEXCUBE Core Banking Release 5.2.0.0.0, refer to the following documents:

- Oracle FLEXCUBE Core Banking Licensing Guide

RL001 - UDE Master Maintenance

Using this option you can maintain user data elements that are used to define rules in Relationship Pricing. The main purpose of this option is to represent various data elements in the **FLEXCUBE** database in simple user understandable terms.

There are four types of UDEs defined in **FLEXCUBE**:

- **Table Columns** - Defines a query returning a single value. It also supports aggregation functions for the selected columns.
- **DB Functions** - Uses pre-defined database functions returning a particular value.
- **Expressions** - Uses other UDEs to create complex UDEs. The expressions will use simple mathematical operators or string operators on the existing UDEs or constant values, to arrive at the output.
- **Transactional** - Uses transactional data, which is not yet saved in the database.

Definition Prerequisites

Not Applicable

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the UDE master details

1. Type the fast path **RL001** and click **Go** or navigate through the menus to **Global Definitions > Rules > UDE Master Maintenance**.
2. The system displays the **UDE Master Maintenance** screen.

UDE Master Maintenance

Field Description

Field Name	Description
UDE Code	[Mandatory, Alphanumeric, 16] Type the unique identification code of the created UDE.
Version	[Display] This field displays the version number of the UDE code.
UDE Name	[Mandatory, Alphanumeric, 80] Type the description of the UDE.

Field Name	Description
UDE Type	<p>[Mandatory, Drop-Down] Select the type of UDE from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Table Column - This option contains the list of tables which can be used for setting up a UDE. Data of tables are provided for selection as part of setup. You can select only one table. Based on the table selected, relevant column names are populated. Rationalization of columns to populate data is done as part of factory shipped data creation. This is to ensure that no system calculation column or MU fields are populated, which may not be used as attributes. To define the UDE, you are provided with the facility to frame a simple SQL command, using columns in the selected table. The result fetched on execution of the SQL command would be the UDE output and would be utilized for rule definition. • Database Function - This option contains the list of stored functions which are written for setting up the user defined entity. You can select the stored function from the pick list. The stored functions follow a standard naming convention, to facilitate a small subset of functions available for UDE definition. Once a stored function is selected, the maintenance displays all the parameters of the function, which can be mapped to another existing UDE or an absolute value to arrive at the required output. For more information, refer to Example 01 provided at the end of this option. • Expression - An expression allows you to relate existing UDEs to define an output. Expression can be built using the following: 1) Existing UDE 2) Constant Values 3) Brackets (to group certain conditions) 4) Mathematical operators - +,-,*,/, MOD(), Trunc(), Round(), Abs() For more information, refer to Example 02 provided at the end of the topic • Transactional - It is equivalent to System Data elements. These fields are available as part of a particular context. For example: Transaction amount will always be available as part of Online SC calculation and will not be required or available for interest computation. So a transactional UDE called Transaction amount in Transaction currency will become a transactional UDE for Online SC Context.
UDE Context	<p>[Mandatory, Pick List] Select the UDE context from the pick list.</p> <p>It denotes the context and the place where the rules are linked to the UDE.</p>

Field Name	Description
UDE Domain	<p>[Mandatory, Drop-Down] Select the domain of the UDE from the drop-down list. The options are:</p>
	<ul style="list-style-type: none"> • None • Query • List
UDE Data Type	<p>[Display] This field displays the data type of the UDE. The options are:</p>
	<ul style="list-style-type: none"> • STRING • NUMERIC • BOOLEAN • DATE

3. Click the **Add** button.
4. Enter the UDE code and name.
5. Select the UDE type and domain from the drop-down list.
6. Select the UDE context from the pick list.

UDE Master Maintenance

7. Depending on the UDE type and domain selected from the drop-down list, the respective tabs are enabled.
8. Enter the required information in the various tabs.

Table Column

Field Description

Field Name	Description
SELECT FROM table	<p>[Mandatory, Pick List]</p> <p>Select the table name, from which the column is to be selected, from the pick list.</p> <p>Select the function to be performed on the selected column.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Average of • Count of • Maximum of • Minimum of • Sum of
Column	<p>[Mandatory, Pick List]</p> <p>Select the column name from the pick list.</p>

Field Name	Description
IF NULL THEN RETURN	[Optional, Numeric, 13] Type the value to be returned if the query returns a null value.
Column Name	Description
KEYWORD	[Mandatory, Drop-Down] Select the appropriate keyword from the drop-down list. The options are: <ul style="list-style-type: none"> • WHERE • AND • OR
([Mandatory, Alphanumeric, One] This field allows the where clause to have open braces. The user can enter the open bracket for the clause.
COLUMN	[Optional, Pick List] Select the column name, on which the query is to be executed, from the pick list. The system validates either UDE or COLUMN or CONSTANT field.
Condition	[Conditional, Drop-Down] Select the operators used to match a condition from the drop-down list. The system validates either UDE or COLUMN or CONSTANT field. The options are: <ul style="list-style-type: none"> • is less than • is less than or Equal to • is greater than • is greater than or Equal to • is equal to • is not equal to
UDE	[Conditional, Pick List] Select the appropriate UDE from the pick list. Various UDE values are available for selection to the user. The UDE selected is used as a part of condition.
Value	[Conditional, Alphanumeric, 120] Type the value which is to be compared as criteria.

Column Name	Description
COLUMN	<p>[Conditional, Pick List]</p> <p>Select the column name, on which the query is to be executed, from the pick list.</p> <p>The system validates either UDE or COLUMN or CONSTANT field.</p>
)	<p>[Mandatory, Alphanumeric, One]</p> <p>This field allows the where clause to have close braces. The user can enter the close bracket for the clause.</p>
Del?	<p>[Toggle]</p> <p>Click the toggle status to Y to delete the query.</p> <p>The default value is N.</p>
Query	<p>[Display]</p> <p>This field displays the query that is executed.</p> <p>The query is displayed once the Show Query button is clicked.</p>
Errors	<p>[Display]</p> <p>This field displays the errors, if any, on execution of the query.</p> <p>The system displays the query validation result once the Validate Query button is clicked.</p>
<p>Note: For a database function, as it is already compiled and ready, no error message will be displayed.</p>	

Function

Field Description

Field Name	Description
Function Name	[Mandatory, Pick List] Select the database function associated with the UDE from the pick list.
Column Name	Description
#	[Display] This field displays the serial number of the function parameter. This field is auto-generated by the system.
Parameter Name	[Mandatory, Drop-Down] Select the name of the function parameter from the drop-down list.

Column Name	Description
UDE	[Conditional, Pick List] Select the UDE code assigned to the function parameter from the pick list. The system validates either UDE or CONSTANT field.
Constant	[Conditional, Numeric, 13] Type the constant value assigned to the function parameter. The system validates either UDE or CONSTANT field.
Query	[Display] This field displays the query that is executed. The query is displayed once the Show Query button is clicked.
Errors	[Display] This field displays the errors, if any, on execution of the query.

Note: The user can select the **UDE** or enter the value for the **Constant**.

Expression

Field Description

Column Name	Description
(<p>[Mandatory, Alphanumeric, One]</p> <p>This field allows the expression to have open braces.</p>
UDE	<p>[Conditional, Pick List]</p> <p>Select the UDE from the pick list.</p> <p>Various UDE values are available for selection to the user. The UDE selected is used as a part of expression.</p> <p>The system validates either UDE or CONSTANT field.</p>
CONSTANT	<p>[Conditional, Numeric, 13, Two]</p> <p>Type the constant to be used as a part of expression.</p> <p>The system validates either UDE or CONSTANT field.</p>
Op	<p>[Optional, Drop-Down]</p> <p>Select the operators used in the expression from the drop-down list</p> <p>The options are:</p> <ul style="list-style-type: none"> • + • - • / • * • abs • mod • round • trunc
)	<p>[Mandatory, Alphanumeric, One]</p> <p>This field allows the expression to have close braces.</p>
Del?	<p>[Optional, Toggle]</p> <p>Click the toggle status to Y to delete the expression.</p> <p>The default value is N.</p>
Query	<p>[Display]</p> <p>This field displays the query that is executed.</p> <p>The query is displayed once the Show Query button is clicked.</p>
Errors	<p>[Display]</p> <p>This field displays the errors, if any, on execution of the query.</p>

Transactional

Field Description

Field Name	Description
Source Type	[Mandatory, Drop-Down] Select the source type from the drop-down list. The source type can be a procedure parameter or screen based.
Transaction	[Display] This field displays the task code associated with the UDE. The corresponding logical name of the task is displayed in the adjacent field. For future use only.
Source Field	[Display] This field displays the name of the parameter of the procedure.
Query	[Display] This field displays the query that is executed. The query is displayed once the Show Query button is clicked.

Field Name	Description
Errors	[Display] This field displays the errors, if any, on execution of the query.

Domain Query

Field Description

Field Name	Description
SELECT	[Mandatory, Alphanumeric, 30, 30] Type the column names to be selected.
FROM	[Mandatory, Alphanumeric, 30] Type the table name from which the column is to be selected.

Column Name	Description
KEYWORD	<p>[Mandatory, Drop-Down]</p> <p>Select the condition of the where clause from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • WHERE • AND • OR
(<p>[Mandatory, Alphanumeric, One]</p> <p>This field allows the where clause to have open braces. The user can enter the open bracket for the clause.</p>
COLUMN	<p>[Conditional, Alphanumeric, 100]</p> <p>Type the column name, on which the query is to be executed.</p>
Condition	<p>[Mandatory, Drop-Down]</p> <p>Select the operators used to match a condition from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • is less than • is less than or Equal to • is greater than • is greater than or Equal to • is equal to • is not equal to
Value	<p>[Conditional, Alphanumeric, 16]</p> <p>Type the value which is to be compared as a criterion.</p>
)	<p>[Mandatory, Alphanumeric, One]</p> <p>This field allows the where clause to have close braces. The user can enter the close bracket for the clause.</p>
Del?	<p>[Toggle]</p> <p>Click the toggle status to Y to delete the query.</p> <p>The default value is N.</p>
Query	<p>[Display]</p> <p>This field displays the query that is executed.</p> <p>The query is displayed once the Show Query button is clicked.</p>

Column Name	Description
Errors	[Display] This field displays the errors, if any, on execution of the query.

Domain List

Field Description

Column Name	Description
Key	[Display] This field displays the key of the domain list.
Value	[Mandatory, Alphanumeric, 16] Type the value assigned to the key.
Del?	[Toggle] Click the toggle status to Y to delete the key. The default value is N .

Column Name	Description
Query	[Display] This field displays the query that is executed. The query is displayed once the Show Query button is clicked.
Errors	[Display] This field displays the errors, if any, on execution of the query.

9. Click the **Ok** button.
10. The system displays the message "Record Added... Authorization Pending.. Click Ok to Continue". Click the **OK** button.
11. The UDE master details are added once the record is authorized.

Example 01: Database Function

Assume a database function is available to calculate customer balance, with two parameters i.e. Customer ID and Balance type. The balance type indicates the accounts whose balance has to be considered like Deposits balance, Total balance, Customer Group balance etc. This single function can, therefore, be mapped to create different UDEs. Once the stored function is selected for creating UDE, system will display a grid containing two rows, which will be mapped to a UDE or a constant value as follows:

Input Parameters	Mapped UDE or Constant
pi_cod_cust_id	Input Customer ID
pi_bal_type	Customer Group Balance

In this case, system will create a UDE that calculates the Customer Group balance for the given customer.

Example 02: Expressions

An expression can be setup to get the following: (Sum of Credits - Sum of Debits) * 2

In this UDE following things are used:

1. Existing UDEs i.e. Sum of Credits and Sum of Debits.
2. A constant value i.e. 2
3. Brackets
4. Mathematical operators i.e. +, *

RL002 - Rule Definition Master Maintenance

Using this option you can create rules. Using these rules, bank can create any kind of conditional offering to their customers. Multiple conditions can be set in a single rule ID. The rules created, can be used at appropriate places in the system to calculate interest rates, service charges, etc.

Definition Prerequisites

- RL001 - UDE Master Maintenance

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add a rule

1. Type the fast path **RL002** and click **Go** or navigate through the menus to **Global Definitions > Rules > Rule Definition Master Maintenance**.
2. The system displays the **Rule Definition Master Maintenance** screen.

Rule Definition Master Maintenance

The screenshot shows the 'Rule Definition Master Maintenance' window. At the top, there are input fields for 'Rule Code' (with a browse button), 'Version No' (with a browse button), and 'Rule Name' (with a browse button). Below these are fields for 'RuleContext' (with a browse button) and 'RuleReturnType' (with a browse button). There are three tabs at the bottom: 'Rule Inquiry' (selected), 'Rule Condition Definition', and 'Rule Document'. The main area contains a table with columns 'Condition#' (highlighted in yellow), 'Condition', and 'Del?'. At the bottom of the window, there is a section for 'Record Details' with fields for 'Input By', 'Authorized By', 'Last Mnt. Date', 'Last Mnt. Action', and 'Authorized' (with a checkbox). Below this is a toolbar with buttons for 'Add', 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', 'Inquiry', 'Ok', 'Close', and 'Clear'.

Field Description

Field Name	Description
Rule Code	[Mandatory, Alphanumeric, 20] Type the unique identification code of the rule created.
Version No	[Display] This field displays the version number of the rule. A new version is created whenever the rule is modified. The latest version is always the one in use, although older versions can be queried upon.
Rule Name	[Mandatory, Alphanumeric, 80] Type the description of the rule.
RuleContext	[Mandatory, Pick List] Select the rule context from the pick list. Rule context defines the purpose for which rule is being set up. For e.g. a context SCTXN states that, this rule is used to compute service charge for Transactions in FLEXCUBE . The values for this will be set up through Day 0 setup.
RuleReturnType	[Mandatory, Pick List] Select the rule return type from the pick list. This value determines the return value of the rule. This value depends on the rule context selected. For e.g. for context SCTXN, a rule can return Transaction amount (on which SC will be calculated based on SC code parameters) or SC amount.

3. Click the **Add** button.
4. Enter the rule code and press the **<Tab>** key.
5. Enter the rule name.
6. Select the rulecontext and rulereturntype from the pick list.

Rule Definition Master Maintenance

The screenshot shows the 'Rule Definition Master Maintenance' window. At the top, there are fields for 'Rule Code' (12), 'Version No' (1), and 'Rule Name' (Define). Below these are 'RuleContext' (CASAINTDEV) and 'RuleReturnType' (InterestAmount). A tab bar at the bottom of the header includes 'Rule Inquiry' (selected), 'Rule Condition Definition', and 'Rule Document'. The main area contains a table with columns 'Condition #' and 'Condition' (with a 'Del?' column header), and a 'Record Details' section with fields for 'Input By', 'Authorized By', 'Last Mnt. Date', 'Last Mnt. Action', and 'Authorized'. At the bottom are buttons for 'Add', 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', 'Inquiry', 'Ok', 'Close', and 'Clear'.

7. Enter the required information in the various tab screens.

Rule Inquiry

The **Rule Inquiry** tab displays the complete rule from where the conditions can be added or deleted or selected for modification.

Condition#	Condition	Del?
1	IF (CASA_ACCT_STAT is equal to CASA_COD_PROD) Then Interest Amount is TDINTDEV_COD_PROD With Reason as a	N

Field Description

Column Name	Description
Condition#	[Display] This column displays the serial number assigned to the condition. The number is auto-generated by the system. Double-click the column to enable the Rule Condition Definition tab.
Condition	[Display] This column displays the condition for the query defined in the Rule Condition Definition tab.
Del?	[Toggle] Click the toggle status to Y to delete the record. The default value for the toggle status is N .

Rule Condition Definition

Field Description

Field Name	Description
Condition No	<p>[Display]</p> <p>This field displays the serial number assigned to the condition.</p> <p>This field is auto-generated by the system.</p>
Column Name	Description
KEYWORD	<p>[Mandatory, Drop-Down]</p> <p>Select the condition of the where clause from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • IF • AND • OR

Column Name	Description
(<p>[Mandatory, Alphanumeric, 10]</p> <p>This field allows the where clause to have open braces for grouping certain conditions. The user can enter up to 10 open brackets for the clause.</p>
UDE	<p>[Mandatory, Pick List]</p> <p>Select the UDE from the pick list.</p> <p>Various UDE values are available for selection to the user. These UDE values will also be provided as factory shipped data for the bank.</p>
Comparison	<p>[Mandatory, Drop-Down]</p> <p>Select the operators used to match a condition in a rule from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Less than • Less than or Equal to • Greater than • Greater than or Equal to • Equal to • Not equal to
Compare UDE	<p>[Mandatory, Pick List]</p> <p>Select the UDE to be compared with the previously selected UDE from the pick list.</p>
Compare Value	<p>[Optional, Numeric, 120]</p> <p>Type the value which is to be compared with the UDE defined on Left Hand Side of comparison operator.</p> <p>The pick list will be active only if a domain is defined for the UDE entered on Left hand side of the comparison operator.</p>
)	<p>[Mandatory, Alphanumeric, 10]</p> <p>This field allows the where clause to have close braces. The user can enter up to 10 close brackets for the clause.</p>
Del?	<p>[Toggle]</p> <p>Click the toggle status to Y to delete the field.</p> <p>The default value is N.</p>

Note: The user can enter the values for either **Compare UDE** or **Compare Value** for defining the query.

Field Name	Description
THEN	[Display] This field displays the action that is to be performed if the query is satisfied. The rule return type is displayed in the corresponding field.
Constant Value	[Mandatory, Numeric, 16] Type the value assigned to the rule return type.
Or Return Value Of	[Optional, Pick List] Select the value of the rule return type from the pick list.
With Reason as	[Mandatory, Alphanumeric, 255] Type the reason to be returned to the user, which can be displayed online or in reports, whenever a rule is applied.
Preview	[Display] This field displays the query is displayed when the Preview button is clicked.

Note: The user can enter the **Constant Value** or select the UDE for **Return Value Of**.

Rule Document

The **Rule Document** tab allows the user to enter the comments or notes for the rule.

The screenshot shows the 'Rule Definition Master Maintenance' application window. At the top, there are fields for 'Rule Code' (12), 'Version No' (1), and 'Rule Name' (Define). Below these are fields for 'RuleContext' (CASAINTDEV) and 'RuleReturnType' (InterestAmount). A navigation bar at the top right includes 'Rule Inquiry', 'Rule Condition Definition', and 'Rule Document' (which is highlighted in red). The main area is titled 'Rule Definitions' and contains a large empty text box with scroll bars. At the bottom, there is a 'Record Details' section with fields for 'Input By', 'Authorized By', 'Last Mnt. Date', 'Last Mnt. Action', and 'Authorized'. Below this are buttons for 'Add' (radioed), 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', and 'Inquiry'. On the far right of this row are 'Ok', 'Close', and 'Clear' buttons.

8. Click the **Ok** button.
9. The system displays the message "Record Added... Authorization Pending.. Click Ok to Continue". Click the **Ok** button.
10. The rule definition details are added once the record is authorized.

RL010 - Rule Debug Maintenance

Using this option you can evaluate values of UDEs used in the evaluation of rules which needs to be logged, so as to enable debugging for a rule. This option does not require authorization.

Definition Prerequisites

- RL002 - Rule Definition Master Maintenance

Modes Available

Modify, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To modify the rule debug details

1. Type the fast path **RL010** and click **Go** or navigate through the menus to **Global Definitions > Rules > Rule Debug Maintenance**.
2. The system displays the **Rule Debug Maintenance** screen.

Rule Debug Maintenance

RP004 - Interest Variance Package Maintenance

The interest rates for options like CASA and TD are maintained at the product level respectively. Using this option preferential interest rate plans for can be maintained or a certain set of customers.

Separate packages will be created for defining variances for CASA and TD. Once a module is selected for maintaining interest variance, the interest types falling under the same will be displayed. The user will be able to maintain interest variance for all the interest types falling under each module.

- RL002 - Rule Definition Master Maintenance

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the interest variance package details

1. Type the fast path **RP004** and click **Go** or navigate through the menus to **Global Definitions > Relationship Pricing > Interest Variance Package Maintenance**.
2. The system displays the **Interest Variance Package Maintenance** screen.

Interest Variance Package Maintenance

Field Description

Field Name	Description
Package Code	[Mandatory, Alphanumeric, 16] Type the identification assigned to the package defined.
Package Name	[Mandatory, Alphanumeric, 80] Type the interest package name.
Package Type	[Mandatory, Drop-Down] Select the package type from the drop-down list. This denotes the module for which the interest package is being defined. The options are: <ul style="list-style-type: none"> • CASA Interest • Loans Interest - (not supported in current release) • TD Interest
Deviation Rule	[Optional, Pick List] Select the deviation rule from the pick list. The deviation rules is a set of various rules that a bank can have as a deviation from the interest package as a whole. They can be defined to be applicable to a particular type of interest or to all types of interest. They also can be defined to be applied at the time of computation or accrual or capitalization of interest. This rule will be created in the Rules Maintenance and selected under deviation rules.

3. Click the **Add** button.
4. Enter the package code and press the **<Tab>** key.
5. Enter the package name.
6. Select the package type form the drop-down list and deviation rule from the pick list.

Note 1: User will be able to set up either variance rate or a variance rule.

Note 2: Loans interest variance Package is for future use. Current version does not support Relationship pricing for Loans products.

8. Click the **Ok** button.
9. The system displays the message "Record Added...Authorization Pending...Click Ok to Continue". Click the **Ok** button.
10. The interest variance package details are added once the record is authorized.

RP003 - Benefit Plan Maintenance

Using this option you can link various products to the interest variance packages and SC packages created for **Relationship Pricing**.

Once a scheme is linked to the customer, his/her accounts belonging under the products defined in benefit plan will get the benefits defined in the interest variance package or SC package. The benefit plan consists of various interest rate variance and service charge packages.

For the **Relationship Pricing** functionality, the different package types defined on **FLEXCUBE** are:

- Service Charges Package
- CASA Interest Package
- TD Interest Package

Unique benefit plans are defined on the system for each package type, there by linking existing products to the respective package.

Definition Prerequisites

- RL002 - Rule Definition Master Maintenance
- RP004 - Interest Variance Package Maintenance
- SCM01 - SC Package Definition
- CHM01 - CASA Product Master Maintenance
- TDM01 - TD Product Master
- LNM11 - Product Master Maintenances

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the benefit plan details

1. Type the fast path **RP003** and click **Go** or navigate through the menus to **Global Definitions > Relationship Pricing > Benefit Plan Maintenance**.
2. The system displays the **Benefit Plan Maintenance** screen.

Benefit Plan Maintenance

Field Description

Field Name	Description
Plan Code	[Mandatory, Alphanumeric, 20] Type the identification code of the benefit plan.
Plan Name	[Mandatory, Alphanumeric, 60] Type the name of the benefit plan in the scheme.
Plan Type Code	[Mandatory, Pick List] Select the plan type code from the pick list. The plan type code identifies whether the benefit plan is being made for interest variance or service charges. The options are: <ul style="list-style-type: none"> • CSINT - For CASA interest variance plan • SC - For SC plan • LNINT - For loans interest variance plan - not supported in current release • TDINT - For TD interest variance plan

Field Name	Description
Plan Type Name	[Display] This field displays the type of the benefit plan corresponding to the plan type code selected.
Deviation Rule	[Optional, Pick List] Select the deviation rule from the pick list. It is the deviation rule linked at the plan level which is to be applied to all accounts of the customer getting the benefits. The deviation rule will be applicable only for the selected component.
Column Name	Description
Product Code	[Mandatory, Pick List] Select the product code from the pick list. The pick list displays the list of products based on the plan type selected.
Product Name	[Display] This field displays the name of the selected product.
Package Code	[Mandatory, Pick List] Select the package code from the pick list. The pick list displays all the packages available based on the plan type selected.
Package Name	[Display] This field displays the name of packages selected.

3. Click the **Add** button.
4. Enter the plan code and press the **<Tab>** key.
5. Enter the plan name.
6. Select the plan type code, and deviation rule from the pick list.
7. Click the **+** button and add the relevant information in the various columns.
8. Click the **-** button to delete the record.

Benefit Plan Maintenance

The screenshot shows the 'Benefit Plan Maintenance' window. At the top, there are input fields for 'Plan Code' (BRO1), 'Plan Name' (Benefit plan), 'Plan Type Code' (TDINT), 'Plan Type Name' (TD Interest), and 'Deviation Rule'. Below these is a table with one row:

Product Code	Product Name	Package Code	Package Name
578	Testing Product	11	FIRSTPACKAGE

At the bottom, there is a 'Record Details' section with fields for 'Input By', 'Authorized By', 'Last Mnt. Date', 'Last Mnt. Action', and 'Authorized'. Below this are buttons for 'Add', 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', 'Inquiry', 'Ok', 'Close', and 'Clear'.

9. Click the **Ok** button.
10. The system displays the message "Record Added... Authorization Pending.. Click Ok to Continue". Click the **OK** button.
11. The benefit plan details are added once the record is authorized.

RP001 - Scheme Definition Maintenance

A scheme is a group of benefit plan that has been defined for various components (i.e. interest variance, service charge). It would include details on the benefits being offered to the customer i.e. relevant benefit plans, start date and end date for the scheme.

Schemes will be created containing details of all types of benefits (interest, SC) for all the products or only one type of benefit component can be passed on to the customer.

Using this option schemes created can be applied automatically to a customer without waiting for his consent or after taking customers consent and apply the relationship package. A scheme will be set up with a start date and end date. Using this tool, banks can run various business development schemes and campaigns.

Definition Prerequisites

- RP003 - Benefit Plan Maintenance

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add a scheme

1. Type the fast path **RP001** and click **Go** or navigate through the menus to **Global Definitions > Relationship Pricing > Scheme Definition Maintenance**.
2. The system displays the **Scheme Definition Maintenance** screen.

Scheme Definition Maintenance

Field Description

Field Name	Description
Scheme ID	[Mandatory, Alphanumeric, 20] Type the scheme identification code. Schemes will be identified uniquely by a single ID which will be an alphanumeric code denoting various schemes.
Scheme Name	[Mandatory, Alphanumeric, 60] Type the name of the scheme defined. For e.g. Bank can set up schemes like: <ul style="list-style-type: none"> • High Net worth Scheme • Senior Citizens Scheme • Ordinary Relationship Package

3. Click the **Add** button.
4. Enter the scheme ID and press the **<Tab>** key.
5. Enter the scheme name and press the **<Tab>** key.

Scheme Definition Maintenance

The screenshot shows the 'Scheme Definition Maintenance' window. At the top, there are tabs for 'Scheme Parameters' and 'Benefit Components', with 'Scheme Parameters' currently selected. Below the tabs are two main sections: 'Validity' and 'Applicability'. The 'Validity' section contains fields for 'Start Date' (01/01/1800), 'End Date' (01/01/1800), 'Benefit Valid For' (a dropdown menu), and 'Validity Type' (a dropdown menu). The 'Applicability' section contains fields for 'Apply For' (a dropdown menu) and 'Automatic/Manual' (a dropdown menu). At the bottom of the window is a 'Record Details' section with fields for 'Input By', 'Authorized By', 'Last Mnt. Date', 'Last Mnt. Action', and an 'Authorized' checkbox. Below this section is a toolbar with buttons for 'Add' (radio button selected), 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', 'Inquiry', 'Ok', 'Close', and 'Clear'.

6. Enter the required information in the various tabs.

Scheme Parameters

The screenshot shows the 'Scheme Definition Maintenance' window with the following details:

- Scheme ID:** SCH01
- Scheme Name:** Scheme1
- Validity:**
 - Start Date: 01/01/2000
 - End Date: 01/01/2010
 - Benefit Valid For: 12 Days
 - Validity Type: Renewable
- Applicability:**
 - Apply For: Existing Accounts
 - Automatic/Manual: Automatic
- Record Details:**
 - Input By: [empty]
 - Authorized By: [empty]
 - Last Mnt. Date: [empty]
 - Last Mnt. Action: [empty]
 - Authorized:
- Buttons:** Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry, Ok, Close, Clear.

Field Description

Column Name	Description
Validity	
Start Date	<p>[Mandatory, Pick List, dd/mm/yyyy]</p> <p>Select the start date of the relationship package from the pick list.</p> <p>A scheme cannot be applied to any customer before the start date.</p>
End Date	<p>[Mandatory, Pick List, dd/mm/yyyy]</p> <p>Select the end date of the relationship package from the pick list.</p> <p>In case bank wants to have a forever running pricing policy, the end date will be required to be set up to a high value.</p> <p>A scheme cannot be applied to any customer after the end date.</p>

Column Name	Description
Benefit Valid For	<p>[Mandatory, Numeric, Two, Drop-Down]</p> <p>Type the period for which benefits will be applicable from the date of applying.</p> <p>This period can be even after the scheme has expired. In this case no new customers can get the scheme, but customers already enjoying the benefits of the scheme will continue to do so, till this period.</p> <p>E.g. If an account is opened during Christmas period, all SCs will be reduced to half for one year. Here Christmas period is Start-End Date. And 1 year is the duration.</p> <p>In case, the scheme benefits are also applicable for the same period as the scheme duration, then either set it to same as Scheme days or set it to 0.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Days • Months • Years
Validity Type	<p>[Mandatory, Drop-Down]</p> <p>Select the validity type from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Perpetual - Once applied to the customer, the benefits will be available to the customer, even if he falls out of eligibility later. • Renewable - These schemes will always check the eligibility and if a customer falls out of eligibility, the benefits will be expired. The benefits will be given again, if the customer becomes eligible again. • One Time - These schemes will apply to the customer only till the time he is eligible as per the eligibility criteria. If he falls out of eligibility, the benefits will be expired and he will not get the benefits of the scheme again. <p>All the rules pertaining to validity type are applicable, if the scheme is linked via eligibility criteria and not directly to the customer. In case of direct linking of scheme to the customer, the scheme will behave as perpetual.</p>
Applicability	

Column Name	Description
Apply For	<p>[Mandatory, Drop-Down]</p> <p>Select the appropriate option for applicability of scheme from the drop-down list.</p> <p>This will enable the bank to determine for a given set of customers “what are the set of accounts” on which the benefits specified in the benefit plan has to be applied to.</p> <p>The options are:</p> <ul style="list-style-type: none"> • New Accounts • All Accounts • Existing Accounts
Automatic/Manual	<p>[Mandatory, Drop-Down]</p> <p>Select the type of applicability from the drop-down list.</p> <p>This actually denotes whether the scheme is to be applied automatically to the customer or requires manual intervention of the branch.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Manual • Automatic

Field Description

Column Name	Description
Benefit Plan Type	[Display] This column displays whether the benefit plan is being made for interest variance or for service charges.
Benefit Plan Code	[Mandatory, Pick List] Select the identification code that is assigned to a benefit plan from the pick list. A benefit plan can be defined as a group of benefits that can be assigned to a customer base. This code is a summation of benefits that are packaged under one head.

Column Name	Description
Benefit Plan Name	<p>[Display]</p> <p>This column displays the description of the benefit plan offered by the bank.</p> <p>For e.g. Bank may set up one benefit plan each with the following description:</p> <ul style="list-style-type: none">• Normal Customer Benefit Plan• Senior Citizen Customers Plan

7. Click the **Ok** button.
8. The system displays the message "Record Added...Authorization Pending...Click Ok to Continue". Click the **OK** button.
9. The scheme definition details are added once the record is authorized.

RP002 - Eligibility Criteria Maintenance

Using this option you can define different eligibility criteria for a set of benefits under a scheme. This plan determines the set of customers who will get the benefits defined under the scheme. This definition helps identify the target customers for a scheme.

The customers who are excluded from the benefit defined under the scheme will also be set up in this maintenance, as an exclusion plan. Exclusion Plan contains the criteria, which if matched by the customer, will make him ineligible for the scheme. In other words, all the facilities or benefits provided to the customer will cease, and he / she will be tagged the normal customer status. Exclusion plan set up is provided to facilitate exclusion of a common set of customers, who needs to be excluded from most of the schemes.

Definition Prerequisites

- RL002 - Rule Definition Master Maintenance

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add eligibility criteria details

1. Type the fast path **RP002** and click **Go** or navigate through the menus to **Global Definitions > Relationship Pricing > Eligibility Criteria Maintenance**.
2. The system displays the **Eligibility Criteria Maintenance** screen.

Eligibility Criteria Maintenance

Field Description

Field Name	Description
Plan Code	[Mandatory, Alphanumeric, 20] Type the plan code used to identify a plan.
Plan Name	[Mandatory, Alphanumeric, 80] Type the description of the eligibility plan.
Plan Type	[Mandatory, Drop-Down] Select the type of the plan from the drop-down list. The options are: <ul style="list-style-type: none"> • Eligibility Plan • Exclusion Plan
Version	[Display] This field displays the version of the eligibility plan. A version is assigned to all the eligibility plans defined. Only the latest version is used for running eligibility criteria. The older versions are available only for querying.

Field Name	Description
Revision Frequency	<p>[Conditional, Drop-Down] Select the revision frequency from the drop-down list. The value of various customer and account attributes attached to the eligibility plan can change over a period of time. This requires the eligibility to be calculated at periodic intervals in order to upgrade or downgrade customers. Revision frequency is the duration at which eligibility is to be re-calculated. This field is enabled only if the Plan Type selected is Eligibility Plan. The options are:</p> <ul style="list-style-type: none"> • None • Daily • Weekly • Fortnightly • Monthly • Bi-Monthly • Quarterly • Half-Yearly • Yearly
Frequency Type	<p>[Conditional, Drop-Down] Select the type of frequency from the drop-down list The options are:</p> <ul style="list-style-type: none"> • None • Anniversary - Revision will happen on a date defined by the user • Calendar - Revision will happen at the end of the month <p>This field is enabled only if the Plan Type selected is Eligibility Plan.</p>
Anniversary Day	<p>[Conditional, Drop-Down] Select the day on which the scheme should be revised, during the anniversary period from the drop-down list. This field is enabled only if the Frequency Type selected is Anniversary.</p>

Field Name	Description
Anniversary Month	[Conditional, Drop-Down] Select the month within the anniversary period, when the revision will be done from the drop-down list. This field is enabled only if the Frequency Type selected is Anniversary .
Last Evaluation Date	[Display] This field displays the last date when the eligibility was evaluated.
Next Evaluation Date	[Display] This field displays the next date when the eligibility will be evaluated. This will be derived on the frequency parameters.
Exclusion Plan Code	[Conditional, Pick List] Select the exclusion plan code from the pick list. The exclusion plan can be linked here. This exclusion list will eliminate the set of customers who had become eligible by virtue of the eligibility criteria and the bank specifically wants to exclude the customers coming out of this plan. The Exclusion Plan Code field is enabled if the plan type selected is Eligibility Plan .
Preview	[Display] This field displays the query created, once the Preview button is clicked.
Column Name	Description
KEYWORD	[Mandatory, Drop-Down] Select the keyword from the drop-down list. The keyword indicates the condition of where clause in the query. The options are: <ul style="list-style-type: none"> • IF • AND • OR
([Mandatory, Alphanumeric, 10] This field allows the where clause to have open braces. The user can enter up to 10 open brackets for the clause.

Column Name	Description
UDE	[Mandatory, Pick List] Select the UDE from the pick list. Various UDE values are available for selection to the user. These UDE values will also be provided as factory shipped data for the bank.
Comparison	[Mandatory, Drop-Down] Select the condition for the query from the drop-down list. The options are: <ul style="list-style-type: none"> • > - Greater Than • < - Less Than. • != - Not Equal To. • = - Equal To. • >= - Greater than Equal To. • <= - Less Than Equal To.
Compare UDE	[Optional, Pick List] Select the UDE to be compared with the previously selected UDE, from the pick list.
Compare Value	[Optional, Alphanumeric, 100] Type the value which is to be compared as a criterion.
)	[Mandatory, Alphanumeric, Five] This field allows the where clause to have close braces. The user can enter the close bracket for the clause.
Del?	[Toggle] Click the toggle status of the field to Y , if the query can be deleted. The default value of this field is N .
Validate	[Command Button] This validates the query and displays an error message if the query is incorrect.
<ol style="list-style-type: none"> 3. Click the Add button. 4. Enter the plan code and press the <Tab> key. 5. Enter the plan name. 6. Select the plan type, revision frequency, and frequency type from the drop-down list. 7. Click the + button and enter the required information in the various fields to add a query. 8. Click the Validate button to validate the query. 9. Click the Preview button to preview the query created. 	

Eligibility Criteria Maintenance

KEYWORD	UDE	Comparison	Compare UDE	Compare Value	...	Del?

 Below the table, there is a page navigation bar showing '1 / 1'. At the bottom of the window, there is a 'Record Details' section with fields for 'Input By', 'Authorized By', 'Last Mnt. Date', 'Last Mnt. Action', and 'Authorized'. Below this is a toolbar with buttons for 'Add By Copy', 'Add', 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', 'Inquiry', 'UDF', 'Ok', 'Close', and 'Clear'."/>

5. Click the **Ok** button. The system displays the message "Authorization Required. Do you want to continue".
6. Click the **OK** button. The system displays the **Authorization Reason** screen.
7. Enter the required information and click the **Grant** button.
8. The system displays the message "Records successfully updated ". Click the **OK** button.

RP010 - Eligibility Scheme Linkage

Using this option, once a scheme is defined on the system, and an eligibility plan is in place, you can link the scheme to the eligibility plan. The set of eligible customer will receive the benefits under the scheme, from the next working day once the scheme is linked.

The **Customer Scheme Linkage** (Fast Path: RP011) option allows the bank to apply the scheme and relationship package after taking customer's consent.

Definition Prerequisites

- RP001 - Scheme Definition Maintenance
- RP002 - Eligibility Criteria Maintenance

Modes Available

Modify, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To modify the eligibility scheme linkage details

1. Type the fast path **RP010** and click **Go** or navigate through the menus to **Global Definitions > Relationship Pricing > Eligibility Scheme Linkage**.
2. The system displays the **Eligibility Scheme Linkage** screen.

Eligibility Scheme Linkage

Sr No.	Scheme Code	Scheme Name	Linkage Start Date	Linkage End Date	Linkage Status

Field Description

Field Name	Description
Eligibility Plan ID	[Mandatory, Pick List] Select the unique identification code assigned to the eligibility plan from the pick list.
Eligibility Plan Name	[Display] This field displays the name of the eligibility plan corresponding to the eligibility plan ID selected.

3. Click the **Modify** button.
4. Select the eligibility plan id from the pick list.

Eligibility Scheme Linkage

11. The system displays the **Authorization Reason** screen.
12. Enter the relevant information and click the **OK** button.
13. The system displays the message "Record modified". Click the **OK** button.

RP011 - Customer Scheme Linkage

Banks can define various schemes and based on certain eligibility criteria, benefits defined in the scheme can be given to customers who meet those criteria's. The benefits defined in the scheme can also be given to customer based on bank's discretion without going through the eligibility criteria.

Schemes created can be applied automatically to a customer without waiting for his consent or can be configured to be applied only after customer has provided his consent.

Using this option you can apply the scheme and relationship package after taking customer's consent. It also allows linking a scheme manually to the customer based on bank's discretion. It also provides complete history of the schemes that were linked to the customer in past or are running at present.

Definition Prerequisites

- RP010 - Eligibility Scheme Linkage
- RP001 - Scheme Definition Maintenance
- 8053 - Customer Addition

Modes Available

Modify, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To modify the customer scheme linkage details

1. Type the fast path **RP011** and click **Go** or navigate through the menus to **Global Definitions > Relationship Pricing > Customer Scheme Linkage**.
2. The system displays the **Customer Scheme Linkage** screen.

Customer Scheme Linkage

Field Description

Column Name	Description
Benefit Plan Name	[Display] This column displays the name of the benefit plan applicable to the account.
Package Name	[Display] This column displays the name of the respective package (interest/SC) applied to the account.
Account Number	[Display] This column displays the account number of the customer receiving the benefit under this scheme.

8. The system displays the list of the accounts affected by the scheme. Click the **Ok** button.
9. The system displays the message "Record Modified...Authorization pending...Click Ok to Continue". Click the **OK** button.
10. The customer scheme linkage details are modified once the record is authorized.

CIM50 - Relationship Value Tag Definition

RVT is a code associated to a customer categorizing his relationship with the bank. RVT codes will be linked to a customer through the **Customer Master Maintenance** (Fast Path: CIM09) option and **GEFU** upload. It is possible to define any number of RVT types and associate any number of values, which that particular type can have. For e.g. a RVT Type can be Customer Loyalty Code and can have a possible values as Platinum, Gold, Silver and Blue.

Definition Prerequisites

Not Applicable

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the RVT details

1. Type the fast path **CIM50** and click **Go** or navigate through the menus to **Global Definitions > Customer > Relationship Value Tag Definition**.
2. The system displays the **Relationship Value Tag Definition** screen.

Relationship Value Tag Definition

Field Description

CIM51 - Customer Group Definition Maintenance

Using this option you can maintain the definition of a customer group in **FLEXCUBE**. It uses customer to customer relationship in **FLEXCUBE** as basis. This maintenance will be used to identify if a customer belongs to a group based on his/her relationships with other customers in the bank. This information can be used to provide benefits to a customer based on the behavior of a group to which he / she belongs to. This maintenance also captures customer to account relationships to identify the accounts of other customers to be considered for deriving the behavior of the group.

Using this maintenance, bank can define:

- A customer group code and name
- All the customer to customer relationships, which form the part of the customer group
- All customer to account relationships which will be considered to pick up accounts while considering the behavior of the group

This maintenance just defines relationships between any two customers that will make them form a group. The **Customer Group definition** maintained will be linked to eligibility in the form of a UDE. This UDE definition will take customer group name as input.

Definition Prerequisites

- CIM07 - Relation Master Maintenance

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the customer group details

1. Type the fast path **CIM51** and click **Go** or navigate through the menus to **Global Definitions > Customer > Customer Group Definition Maintenance**.
2. The system displays the **Customer Group Definition Maintenance** screen.

Allowed Customer to Account Relations

The screenshot shows the 'Customer Group Definition Maintenance' application. The main title bar says 'Customer Group Definition Maintenance'. The window has a toolbar with icons for file operations. The main area is divided into sections: 'Customer Group Code' (Cust1) and 'Customer Group Name' (RA). Below these are two tabs: 'Allowed Customer to Customer Relations' (selected) and 'Allowed Customer to Account Relations'. The 'Allowed Customer to Customer Relations' tab shows a table with columns 'Relationship Code' (14, 28, 13) and 'Relationship Name' (BROTHER IN, FATHER, MOTHER I). There are 'Add' and 'Delete' buttons above the table. The 'Allowed Customer to Account Relations' tab is visible but empty. At the bottom, there is a 'Record Details' section with fields for 'Input By' and 'Authorized By', and a 'Last Mnt. Date' field. Below this is a toolbar with buttons for 'Add', 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', 'Inquiry', 'Ok', 'Close', and 'Clear'. The 'Add' button is selected.

Field Description

Field Name	Description
Customer To Account Relation	<p>[Mandatory, Drop-Down] Select the appropriate relationship from the drop-down list. The options are:</p> <ul style="list-style-type: none"> • AUS • BOR • DEV • GUA • JAF, etc. <p>Once a relationship name is chosen from the drop-down list and the user clicks on + button, a row gets added to the grid showing the chosen relationship.</p>

Column Name	Description
Allowed Customer To Account Relations	[Display] This column displays the customer to account relation selected in the Customer To Account Relation field.
Delete	[Toggle] Click the toggle status to Y to delete the record. The default value for the toggle status is N .

8. Click the **Ok** button.
9. The system displays the message "Record Added...Authorization Pending...Click Ok to Continue". Click the **OK** button.
10. The customer group details are added once the record is authorized.

CIM52 - Customer Group Inquiry (Applicable Customer Groups)

Using this option you can inquire as to which group a customer belongs to and which other related customers and their accounts are present as part of the group. The information about which group does a customer belong to is derived from the customer group.

Definition Prerequisites

- CIM51 - Customer Group Definition Maintenance

Modes Available

Not Applicable

To view the customer group details

1. Type the fast path **CIM52** and click **Go** or navigate through the menus to **Transaction Processing > Customer Transactions > Customer Group Inquiry (Applicable Customer Groups)**.
2. The system displays the **Customer Group Inquiry (Applicable Customer Groups)** screen.

Customer Group Inquiry (Applicable Customer Groups)

Field Description

Field Name	Description
Search Criteria	<p>[Mandatory, Drop-Down]</p> <p>Select the search criteria, to search for the customer, from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Customer Short Name - The short name of the customer. • Customer IC - The identification criteria (IC) arrived at by the bank during customer addition. • Customer ID - The unique identification given by the bank.
Search String	<p>[Mandatory, Alphanumeric, 20]</p> <p>Type the search string, to search for a customer, corresponding to the search criteria selected in the Search Criteria field.</p> <p>If the search criterion is specified as customers' short name or IC then any letter of the short name or IC can be entered. Examples for Relationship Pricing

Processing for different examples of Relationship Pricing

Scenario I

The CRR/Collectability of the account or customer can be a parameter for defining rules. According to the account CRR or customer CRR, the customer can be either selected or excluded for RP benefits.

Scheme Details:

Customer has an account in Product X (Loan Product) in FCR.

Average balance of the loan account during the month is to be greater than 100 mio.

The CRR of the customer is to be equal to 10 and the LOB code of the customer is "SMEC".

In this case the benefit to be given is that the OD account in product Z in FCR will get interest variance of -0.50%.

	Bal in Million		OD in Product Z	CRR of the customer
	Loan in Product X	Loan in Product Y		
Customer A	50	100	0	10
Customer B	150	0	100	20
Customer C	150	200	100	10

Approach

Step I – UDE Maintenance

A UDE will be defined to capture average monthly balance of CASA, OD and loan account in FCR. A UDE will also be defined to store the value of CRR of the customer. UDE will also be defined to store the value of LOB code of the customer.

Step II – Rules Maintenance

In the Rules Definition Maintenance (Fast Path: RL002) option and using the above defined UDE, define a rule for CASA OD interest.

Select rule return type as Interest variance.

Rule will be defined in the following manner:

IF Average Balance is > 100 mio and LOB = "SMEC" and CRR is =10 then add interest -0.50% to base interest rate.

Step III – Interest Variance Package

Interest variance package will be defined for CASA OD account in the Interest Variance Package Maintenance (Fast Path: RP004) option. Interest Variance package will be created for CASA module.

The Benefit plan maintenance consists of different packages which are context specific (For CASA/TD or SC). At one time only one Plan Type (i.e. CASA / TD / SC) can be selected. Under the benefit plan maintenance the user can select as to for which product the benefits are to be given (would be very useful for product promotion).

In RP004 the user can define Interest Packages for CASA for Credit Interest, TOD and OL. Then in the Benefit Plan Maintenance, when the user selects CASA as the context he can attach the previously defined Interest Packages to one or more CASA Products. This will form a CASA benefit plan.

Step IV

Benefit plan defined in step III has to be linked to a scheme through the Scheme Definition Master Maintenance (Fast Path: RP001). Scheme will have a start and end date. In the Customer Scheme Linkage (Fast Path: RP011) option the user can see the eligible Customers and the Accounts. The scheme can be stamped manually for the eligible customers. Alternatively the benefits can be awarded automatically.

Step V

In the Eligibility Criteria Maintenance (RP002) the customers to whom the scheme is to be offered can be identified.

The Exclusion Plan determines who will be excluded for the benefits defined. E.g. Staff A/c's.

After the Scheme is defined in RP001 and the Eligibility Plan in RP002, the Scheme and the particular eligibility has to be linked which would state that the customers eligible through a particular Eligibility would get a particular scheme.

After the linkage the set of eligible customers would start receiving the benefits from next day.

Thus in the example given Customer C will get the benefits.

Scenario II

Example for Relationship pricing which should be able to calculate the monthly average balance of the CIF (average total credit balance and average total debit balance of all accounts of a customer) and should allow setting up rules based on the average total balances (Debit/Credit/Net) of the customer. Bank should be able to exclude certain accounts (for example, savings account) of the customer from calculating average balances. Same way, at the time of applying benefits, bank should be able to exclude some accounts from applying benefit.

For the above purpose a scheme can be created as follows:

If total credit balance of the customer is > 15000, then Interest rate for CASA product 601 - +0.25%

If total credit balance of the customer is > 20000, then Interest rate for CASA product 601 - +0.25%, and Int rate for TD - +0.10%.

If total Debit balance of the customer is > 10000, then interest rate for OD is -0.25%

If total Debit balance of the customer is > 20000, then interest rate for OD is -0.50% and free 1 cheque book

Same way, the benefits will be given to only those accounts whose CRR ≥ 10

Rule should also exclude the Savings balance (i.e. product 602)

Customer	CASA 601	Savings 602	TD	OD	CRR
A	5000	6000	10000	-7000	10
B	10000	0	0	-15000	20
C	2000		20000	-10000	10

Customer A = Total credit balance 21000 - 6000 = 15000

Customer A = Total debit balance = -7000

Customer A will get interest rate for CASA as +0.25%

Customer A will not get interest benefit for OD account

Customer B = Total Credit Balance = 10000

Customer B will not get any interest benefit

Customer B = Total Debit balance = 0 (since CRR = 20)

Customer C = Total credit balance = 22000. Hence he will get interest benefit for CASA interest variance of +0.25% and for TD as interest variance of +0.10%

Customer C = Total Debit balance = -10,000, hence he will get interest benefit for OD as -0.25%

Approach

Step I – UDE Maintenance

A UDE will be defined to capture the total credit balance of the customer. Another UDE will be defined to capture total debit balance of the customer.

A UDE A1 will be defined to store the SC amount for issuance of 1 cheque book.

A UDE UC will be defined to store the CRR of the customer.

Step II – Rules Maintenance

Using the Rules Definition Maintenance (Fast Path: RL002) option and the above defined UDE, define a rule. The user will define rule for Interest for CASA and TD.

Select rule return type as Interest variance.

Rule will be defined in the following manner:

If total credit balance of the customer is > 15000, then Interest rate for CASA product 601 = +0.25%.

If total credit balance of the customer is > 20000, then Interest rate for CASA product 601 = +0.25%, and Int rate for TD = +0.10%.

If total Debit balance of the customer is > 10000, then interest rate for OD is -0.25%.

If total Debit balance of the customer is > 20000, then interest rate for OD is -0.50%.

If total Debit balance of the customer is > 20000 then SC amount to be charged (REFUNDED) is equal to UDE A1.

Step III – Interest Variance Package

Interest variance package will be defined for CASA account and TD account in the Interest Variance Package Maintenance (Fast Path: RP004) option. Separate packages will be created for variances for CASA and TD module.

Step IV

Benefit plan defined in step III will be linked to a scheme through the Scheme Definition Master Maintenance (Fast Path: RP001) option. Scheme will have a start and end date. In the Customer Scheme Linkage (Fast Path: RP011) option the user can see the eligible Customers and the Accounts. The scheme can be stamped manually for the eligible customers. Alternatively the benefits can be awarded automatically.

Step V

In the Eligibility Criteria Maintenance (RP002) option the customers to whom the scheme is to be offered can be identified. Example: Rule should select customers who have CRR ≥ 10

The Eligibility Plan determines “Which set of customers will get the benefits under a scheme”.

Eligibility Criteria defined for any benefit could be based on various attributes (Customer / A/c).

All these attributes will be available via UDE's.

The Exclusion Plan determines who will be excluded for the benefits defined.

After the Scheme is defined in RP001 and the Eligibility Plan in RP002, the Scheme and the particular eligibility has to be linked which would state that the customers eligible through a particular Eligibility would get a particular scheme.

After the linkage the set of eligible customers would start receiving the benefits from next day.

Scenario III

Based on the average balance in FCC + FCR loan & OD accounts, Cash back / Service charge discount can be given to the customer on the transactions & monthly periodic fees. LOB code, Product code and CRR of the customer will also be considered for cash back / waiver facility.

Customer will be having account in FCC and FCR. If customer is having LOB as ‘Corporate’ and if total average balance of FCC+FCR is > 100 bio, then customer will get interest benefit of - 0.25% to the OD as well as FCC accounts.

Approach

Step I

FCC will be sending a file which will contain customer ID, product code, account number and Principal outstanding balance of the customer.

Step II

A UDE will be defined to capture the total average balance (FCC +FCR accounts).

Step III

Using the Rules Definition Master Maintenance (Fast Path: RL002) option, rules will be defined in the following manner:

If the total average balance of FCC+FCR is > 100 Bio and LOB is "Corporate" then give the interest benefit as -0.25% to the OD account.

Step III

Interest variance package will be defined for CASA account in the Interest Variance Package Maintenance (Fast Path: RP004) option.

Step IV

Benefit plan defined in step III will be linked to a scheme through the Scheme Definition Master Maintenance (Fast Path: RP001) option. Scheme will have a start and end date. In the Customer Scheme Linkage (Fast Path: RP011) option the user can see the eligible Customers and the Accounts. The scheme can be stamped manually for the eligible customers. Alternatively the benefits can be awarded automatically.

Step V

In the Eligibility Criteria Maintenance (Fast Path: RP002) the customers to whom the scheme is to be offered can be identified.

Example: Rule should exclude customers whose CRR is > 1. The Eligibility Plan determines "Which set of customers will get the benefits under a scheme".

Eligibility Criteria defined for any benefit could be based on various attributes (Customer / A/c).

All these attributes will be available via UDE's.

The Exclusion Plan determines who will be excluded for the benefits defined. E.g. Customers whose CRR is > 1.

After the Scheme is defined in RP001 and the Eligibility Plan in RP002, the Scheme and the particular eligibility has to be linked which would state that the customers eligible through a particular Eligibility would get a particular scheme.

After the linkage the set of eligible customers would start receiving the benefits from next day.
