

Oracle E-Business Suite with Oracle Autonomous Database on Dedicated Exadata Infrastructure

Oracle Autonomous Database on Dedicated Exadata Infrastructure is certified for use with Oracle E-Business Suite (EBS) Release 12.2. Customers who use Oracle Autonomous Database can expect to benefit from increased system availability as well as automation of tasks such as provisioning, patching, and tuning.

This initial limited availability certification includes procedures for several key tasks, starting with migration of an existing EBS environment to Oracle Cloud Infrastructure (OCI) and Oracle Autonomous Database. Further procedures are provided for subsequent backup and restore, cloning, and patching of the migrated EBS environment.

If you would like to learn more about the limited availability program for Oracle E-Business Suite with Oracle Autonomous Database, contact the EBS on Autonomous Database Program Office at ebs-adb-info_ww@oracle.com.
