This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Preamble

Oracle Corporation acquired MICROS and all further references to MICROS should be considered as Oracle Corporation.

Oracle Hospitality Guest Access is the new brand name of MICROS myvisitors. The Version 4.2 (this version) is the last version using MICROS myvisitors name and logo.

Login

To access the myvisitors web application you first need to sign in at the login screen. To do that you have to enter your username and your personal password, choose your preferred language and click on the **OK** button. The **Reset** button is used to reset all input fields.

Please note: The preselected language is the language set in your browser.

Illustration 1: Login screen

Button functions

Click on **OK** to sign in

Reset all input fields

User interface & Home page

The user interface of myvisitors is divided into two parts, navigation and content.

The former houses a **selection of menus**, which are used to access **specific functions of the application**, the name of the currently signed in user, the **Logout** button, which is used to sign yourself out, and the **?** button to display **specific information about the installed version of the software and the support options**.

Illustration 2: myvisitors navigation bar

After you sign yourself in the **content part** will display the home page which can always be accessed through the **home** symbol located at the left side of the navigation bar. The home page gives you access to the global search application **for the myvisitors database- and whenever activated to other databases (e.g. Suite8)** or the **RFID input option** (further explained at chapters “Member” and “RFID card”). As soon as you choose another function the home page will be replaced accordingly.

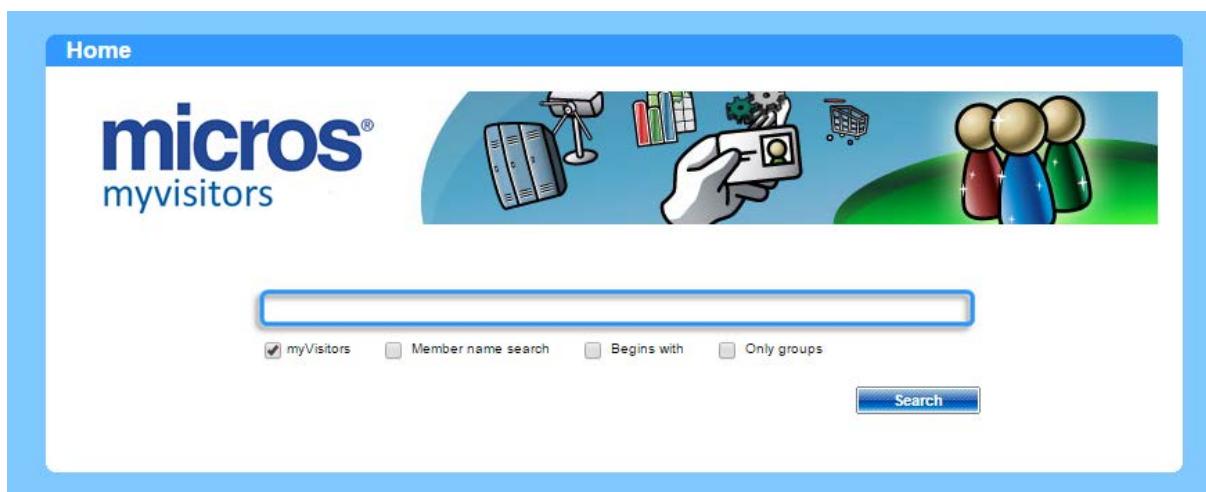

Illustration 3: Home page

Important notice

Please only use the myvisitors menus to navigate the application because if you use the arrow keys of your browser you have to sign in again.

Member

This menu option contains two basic components, the **creation of a group** to which individual members can be added and the **search for existing members** whose details can be shown and altered. New members can only be created inside an existing group.

Important notice

The term group means one or more members which share an invoice recipient (e.g. families or companies). It is necessary to create multiple groups if there is more than one invoice recipient.

Create group

If you click on the submenu item “Create group” you can create a new group. To do this, fill out the following form and click on the **Create** button. Input fields marked with * are mandatory.

Member	RFID	Snapshot	Statistics	Admin
Create group				
Search

Add

Illustration 5: Add a new member to the group

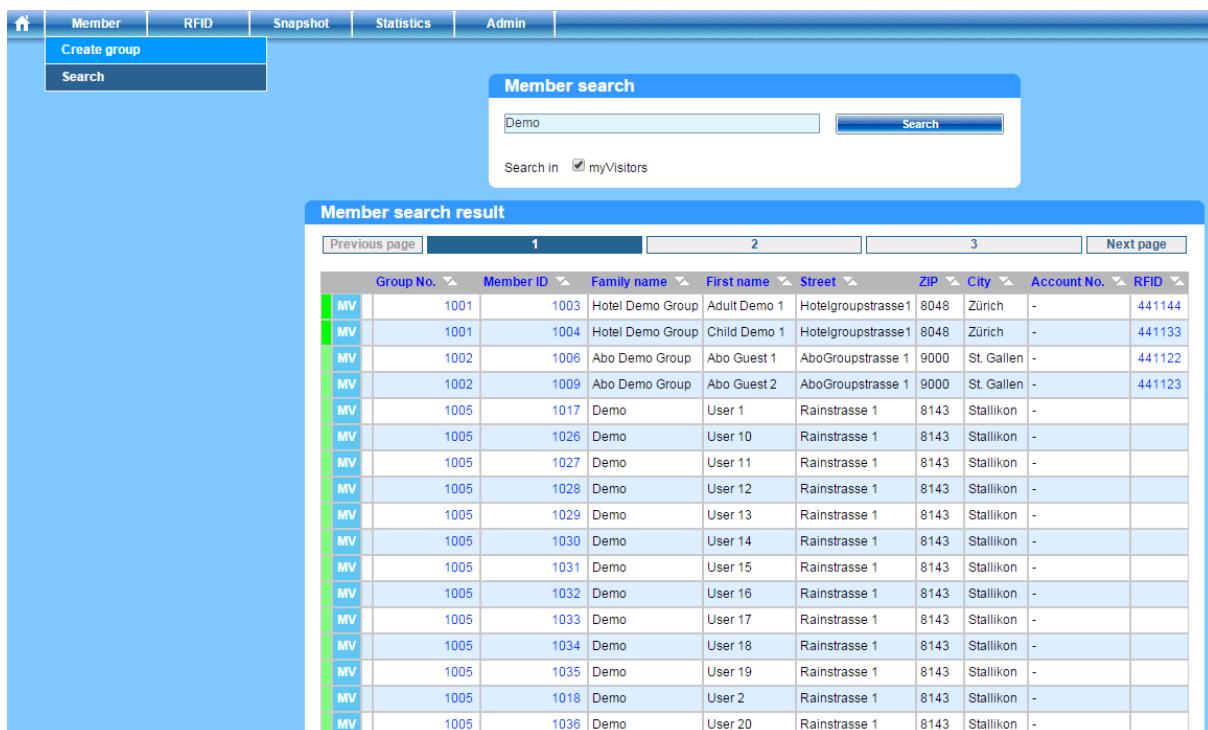

Already added members are shown on the left side of the window. You can click on the symbol to open a detailed view of the current member or the parent group. The symbol is used to delete a member.

Member search

The member search function can be accessed either through the home page or the “Member” menu. It not only allows searching for the name of the member but also for his member number, the group number or –name or the identification number. You don't have to use the full name or number, a partial entry is enough.

You can also use the checkboxes to choose if you only want to search in the myvisitors database or whenever activated also include other database like Suite8. To start a new search click on the **Search** button.

The screenshot shows the 'Member search' interface. At the top, there is a navigation bar with links for Home, Member, RFID, Snapshot, Statistics, and Admin. Below this is a sub-navigation bar with 'Create group' and 'Search' buttons. The main area is titled 'Member search' and contains a search form with a text input 'Demo' and a 'Search' button. Below the search form is a checkbox 'Search in' with the option 'myVisitors' checked. The results are displayed in a table titled 'Member search result' with 20 rows. The table has columns for Group No., Member ID, Family name, First name, Street, ZIP, City, Account No., and RFID. Each row contains a blue 'MV' token in the first column and a blue group/member number in the second column. The rest of the columns show the member's details.

Illustration 6: Member search

As soon as the search is completed an alphabetical list of all the found members is shown. To access the detail view of a member or a group, please click on the blue group- or member number of the respective entry.

The token in front of the row shows if a member is already known in myvisitors (MV) and/or Suite8 (S8). You can click on the  symbol to automatically create a new group and import a Suite8 member into myvisitors. The  symbol on the other hand imports the entry into an existing myvisitors group.

Button functions

Search

Start a new search for the name or the number of a member or group or his identification number

Group- / member detail view

The detailed view gives you all the information about a group and the corresponding members. You can alter the existing entries and also create new ones. To save your changes please click on the **Save** button.

In the group view you can delete the current group with a click on the **Delete** button, add new members with the **Add** button and delete existing ones with a click on the  button. Additionally you can open the detailed view of a member if you click on the  symbol.

Illustration 7: Group detail view

Important notice

It is not permitted to use any of the input fields for sensitive data such as credit card numbers because they are stored in the database without any encryption or other special security measures.

Button functions

Delete the current group

Save your changes

Add a new member

Show the member details

Delete the corresponding member

Minimize the maximized window

Maximize the minimized window

The member view shows information about the current member, a photo of the person, contact data and additional details as well as a list of all of his RFID cards. These can be removed by clicking on the  symbol. A detailed view of the transponder can be opened by clicking on the  symbol right next to the card number.

If you want to add a new RFID card to the member you can click on the  button, then enter the correct transponder number in the following input field or use a card reader to get it automatically from the card and click on the  button to confirm (more on this in the "RFID card" chapter). You can also see if a card is blocked or not.

To delete a member permanently from the system please use the  button.

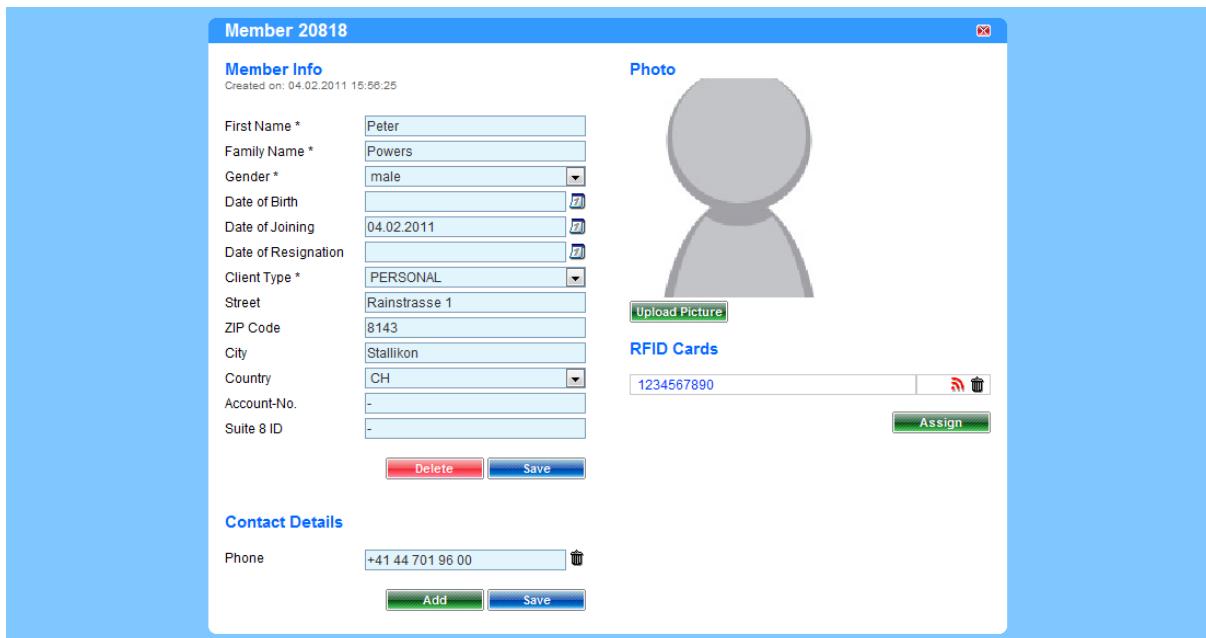

Illustration 8: Detailed member view

Important notice

If you click on the  symbol next to the card number you only delete its allocation with the current member. The card itself remains unchanged in the system.

Button functions

Save **Save your changes** in the respective section

Add **Add a new contact or additional detail**

Delete **Delete the current member**

Assign **Add a RFID card to the current member**

Show the RFID card details

Delete **Delete the corresponding contact, additional detail or RFID card**

Close **Close the window**

Open **Open the calendar to change the date**

RFID card

Under this menu option contains all functions regarding the RFID transponder. You can view all the products which are loaded onto the card and a history of all transactions made with it. Additionally it is possible to reset the card or to transfer its content to another transponder.

To work with an RFID card you first have to enter its unique number which you can do manually using a keyboard or automatically with a card reader. The respective window to input the id is shown regardless of the function you choose from the menu. Just enter the number and click on **OK** to confirm. Alternatively you can use the RFID search function located on the myvisitors home page.

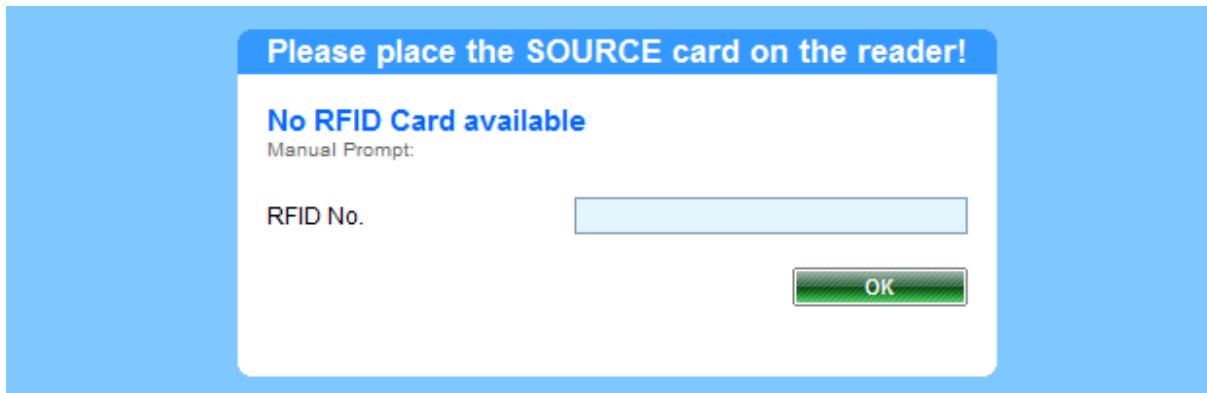

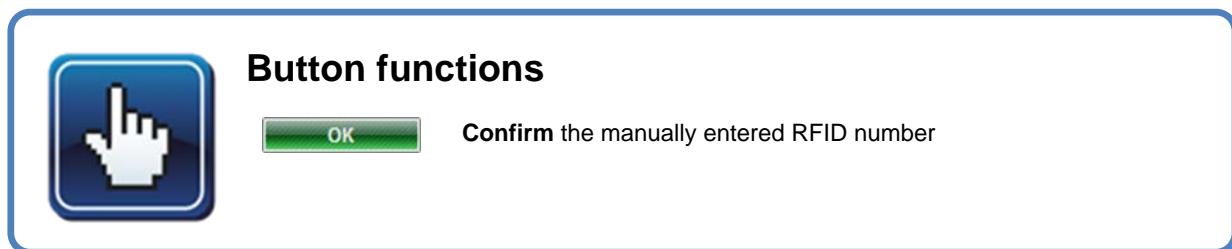

Illustration 9: Input field for the RFID card number

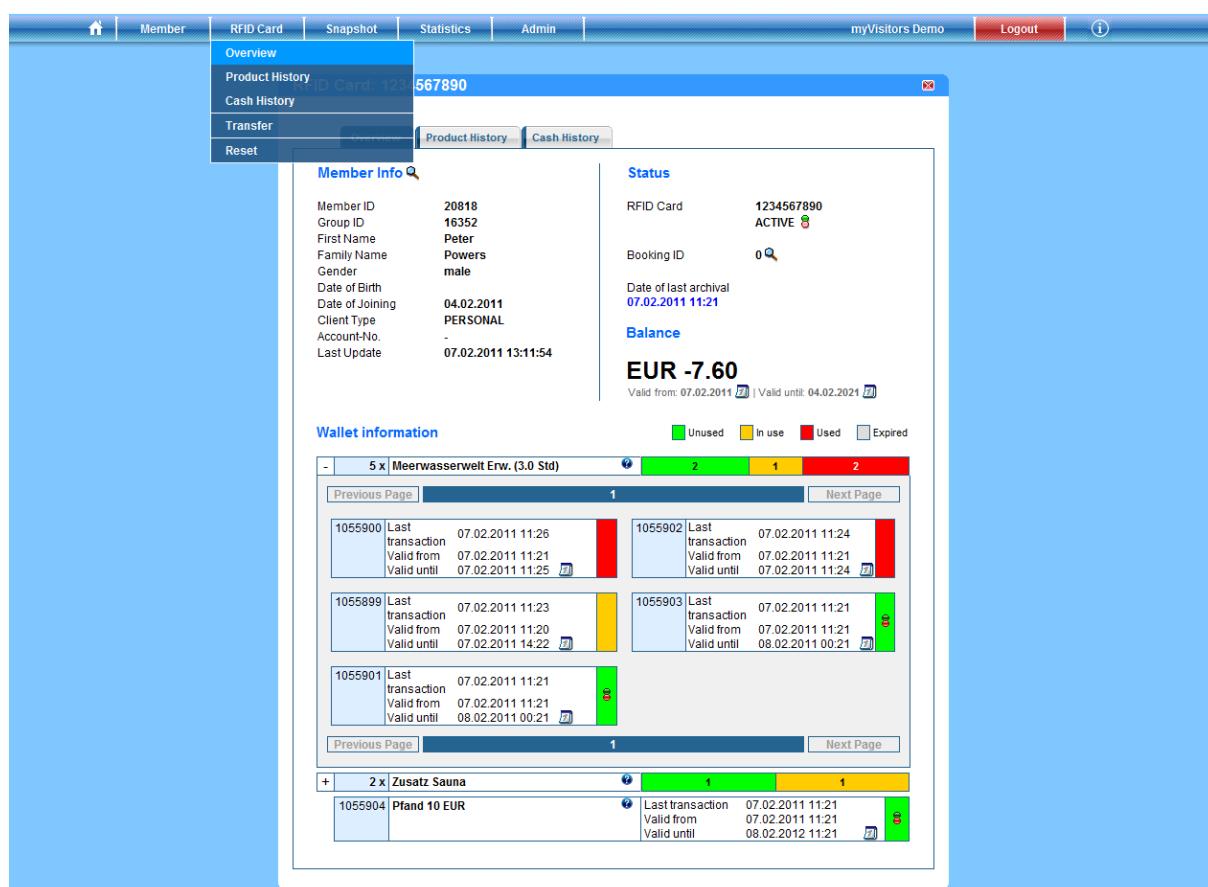

Overview

On the overview page you can find details regarding the owner of the card, the Fidelio booking id (if available), the current cash balance, the validity of the card and a list of all the products loaded onto the transponder. Additionally you can see if the card is active (ACTIVE) or blocked (BLOCKED), which can be changed by clicking on the  symbol. If a card is blocked it can't be used for any transactions or entries.

The Wallet information section contains all the information about the loaded products and shows with the aid of colored bars how many products are unused, in use, used or expired. To get a more detailed view of each product category you can click on the + on the left side which exposes an additional view with every single product. This gives you extensive information about the validity of each product (which can be changed by clicking on the  symbol) and when it was last used. The  symbol allows you to change a product manually from unused to in use. You should however be careful to not forget to set the validity accordingly if you want to change it to used. If you like to get more information about a product, you can click on the  to open a popup window.

With the » symbol next to the quantity of a product you can open a menu to transfer one of the products to another transponder.

If the current RFID number was already reset before (see "Reset" chapter) the respective date of the archiving is also displayed. You can click on the date to get another version of the overview which shows all the details about the card before it was reset.

The screenshot shows the RFID overview page with the following sections:

- Member Info:** Displays member details: Member ID (20818), Group ID (16352), First Name (Peter), Family Name (Powers), Gender (male), Date of Birth (04.02.2011), Date of Joining (04.02.2011), Client Type (PERSONAL), Account-No. (-), and Last Update (07.02.2011 13:11:54).
- Status:** Shows the RFID Card (1234567890) as ACTIVE  and Booking ID (0 ).
- Balance:** EUR -7.60 (Valid from: 07.02.2011  | Valid until: 04.02.2021 ).
- Wallet information:** A table showing product details and their validity status (Unused, In use, Used, Expired). The table includes columns for Product ID, Last transaction, Valid from, and Valid until. The table is paginated with Previous Page, Next Page, and a total of 1 page.

Illustration 10: RFID overview

Product history

The product history lists every action made by the current card except cash transactions since the last reset. For example you can find the purchase of a product, an entry into a specific area, information regarding the blocking of the card or the transfer of the card content to another transponder.

Illustration 11: Product history

Button functions

Show product information

Be clever

Just type the ENTER key on your keyboard and you jump directly to the screen for entering a new RFID transponder (Illustration 9)

Cash history

The cash history lists all pure cash transactions like cash debits or deposits.

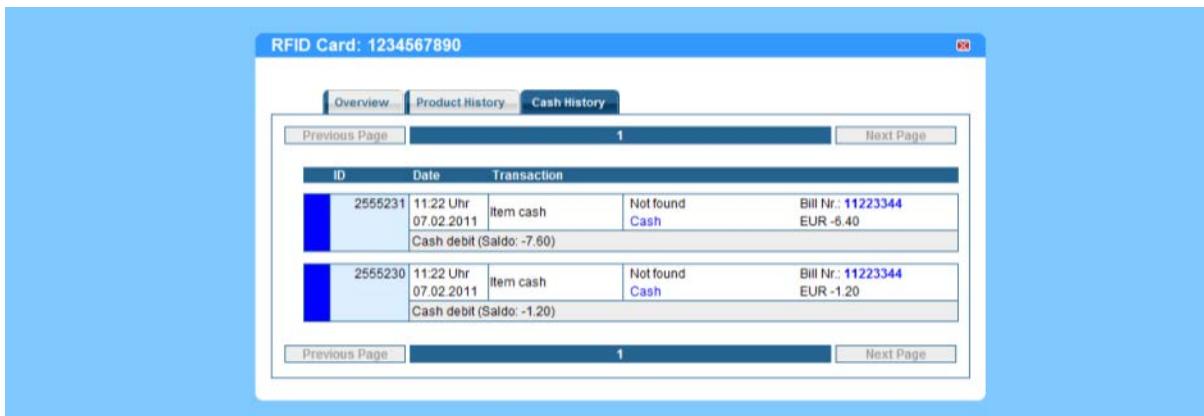

Illustration 12: Cash history

Button functions

Show product information

Transfer

If a card is lost or has to be blocked for other reasons it could be necessary to transfer its content to another transponder. To do this, please choose the "Assign" option in the RFID Card menu and enter the number of the original card manually or through a card reader. Afterwards you have to enter the number of a new card and confirm the transfer two times with the **OK** button. The content (product- and cash history as well as the balance and the loaded products) of the original cards gets completely transferred to the new card and only a product history entry regarding the transfer remains.

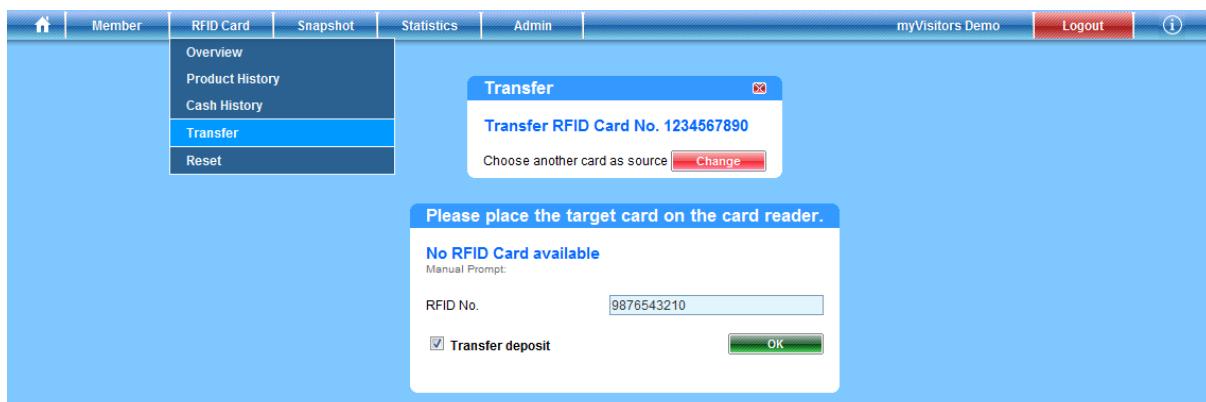

Illustration 13: Transfer the content of a RFID card to another

Important notice

With the „Transfer deposit“ checkbox, which is normally set, you can choose if potential deposit products and their transactions should be transferred too.

Button functions

Change the current RFID card

OK Confirm the manually entered RFID number

Reset

Transponders with single entries are automatically being reset by myvisitors if a device collects them at the exit. A transponder which wasn't reset automatically should be reset manually (the current data will be transferred to an archive and isn't visible in the active system anymore) prior to loading a new product on it. Otherwise it could be possible that the customer has access to areas of the facility for which he didn't pay.

The transponder can only be reset when there is no cash left on it and if no products with multiple entries are active anymore. To ensure that a transponder is inactive or used, the products on it have to be used which means that the customer has to enter and exit as many times as the transponder allows it.

Illustration 14: Reset RFID card

Important notice

An administrator can circumvent the restrictions by setting the "Deactivate conditions" checkbox.

Button functions

Confirm the manually entered RFID number

Snapshot

The snapshot shows an overview of the daily entries and exits and offers, depending on the desired configuration, different diagrams and tables to better visualize the visitor figures.

Illustration 15: Snapshot

Statistics

Reports

The reporting function of myvisitors is a flexible tool to provide reports of different kinds which can use information from a myvisitors- or Micros database. The result is shown in table form and can be exported to Excel or csv. Another option is the integration of reports created in Crystal Reports.

The screenshot shows a two-panel interface. The top panel is titled 'Reports' and contains a dropdown menu 'Select Report' set to 'Visitors Bath/Sauna', and date fields 'From 01.02.2010' and 'To 07.02.2011'. It has 'Export' and 'Search' buttons. The bottom panel is titled 'Report' and shows a table of visitor data. The table has columns: Date, Bath Extern, Bath Hotel, Bath Total, Sauna Extern, Sauna Strand, and Sauna Total. The data is as follows:

Date	Bath Extern	Bath Hotel	Bath Total	Sauna Extern	Sauna Strand	Sauna Total
11.08.2010	1	0	1	0	0	0
05.10.2010	1	0	1	1	0	1
13.10.2010	1	0	1	1	0	1
14.10.2010	5	0	5	4	0	4

Admin

ePos

With ePos products can be loaded directly onto the card as long as a card reader is connected to the pc or the transponder number is known (for manual entry with a keyboard). It is also possible to load multiple products onto one card.

To do that you first have to choose between guest (e.g. member or hotel guest) and day ticket, select the appropriate products and their quantity and afterwards click on the **Load** button. As always you now have to enter the respective card number either manually or through a card reader and click on the **OK** button to confirm the transaction.

Guest cards will always be returned to the customer when he leaves the facility but day tickets will be withdrawn and recycled.

The screenshot shows the ePos software interface with a blue header bar. The main area is titled 'ePos' and contains the following elements:

- A section labeled 'Load cart onto RFID card' with a 'Load' button.
- An 'Amount' field set to '0.00'.
- A list of products with quantity input fields and increment/decrement buttons:
 - Staff unlimited: Quantity 0, buttons - (red) and + (green).
 - Hotel Adult: Quantity 0, buttons - (red) and + (green).
 - Hotel Child: Quantity 0, buttons - (red) and + (green).
 - Abo Adult: Quantity 0, buttons - (red) and + (green).
 - Abo Adult Sauna: Quantity 0, buttons - (red) and + (green).
 - Abo Adult Fitness: Quantity 0, buttons - (red) and + (green).
 - Day Ticket Adult: Quantity 0, buttons - (red) and + (green).

Illustration 20: ePos

Product management

To associate the myvisitors products with their Micros counterparts you have to use the product management. You can choose the myvisitors or the Micros POS product category and select one of their products. Then link it to the respective product or multiple products of the other category by using the arrow keys.

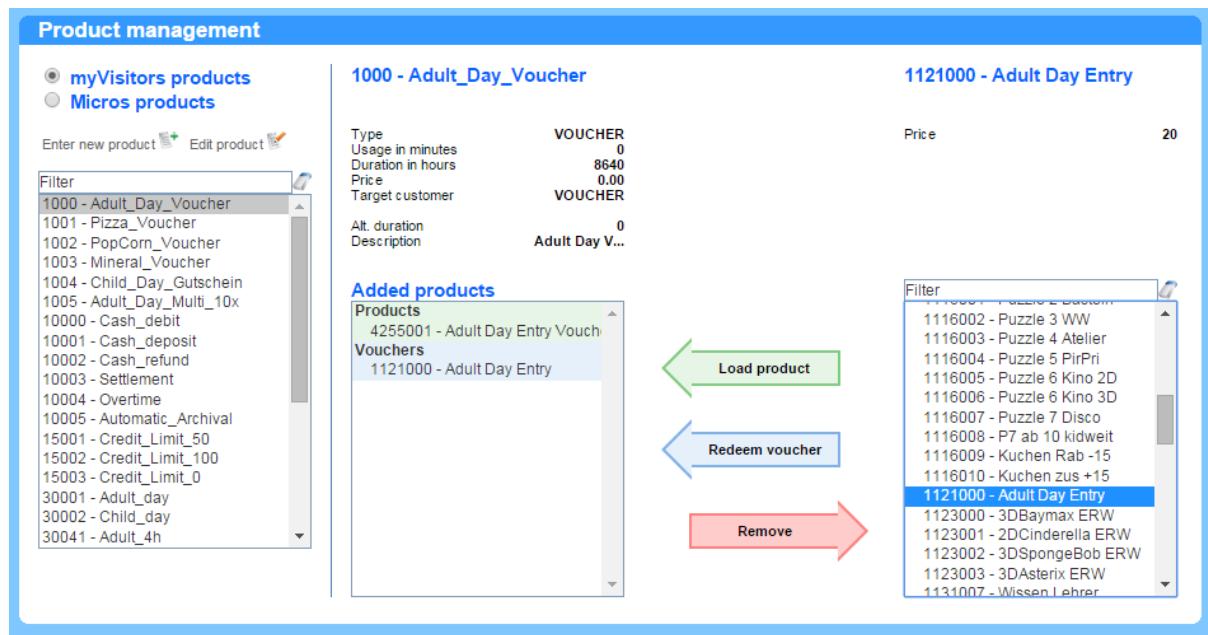

Illustration 21: Product management

If you like to edit an existing myvisitors product, you have to click on the symbol. To create a completely new product, you can use the symbol instead. Regardless of what you chose you will get to a form which lets you define several details about the product.

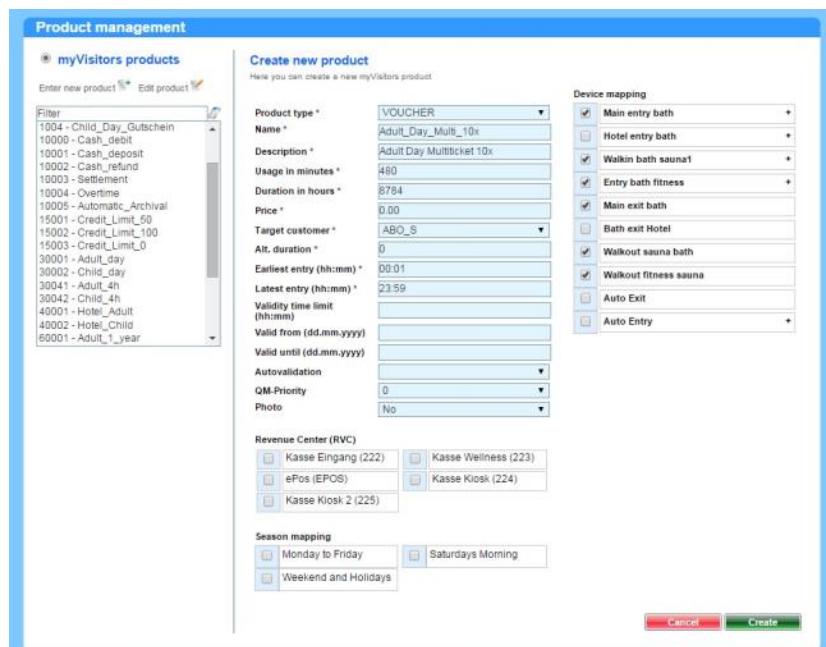

Illustration 22: Add / edit a product

Important notice

Changes in the product details and especially the device mapping can have severe consequences for the functionality of the system. Because of this every change in this section are logged in the database.

What every field in the form means, shall be explained below:

Product type	WRONG & INCOMPLETE: Missing Type 6, etc... Defines the type of the product. The most important product types are "Cash variable price" for use with consumables like beverages and edibles which are sold inside the facility, "Voucher" for an access product which allows only one entry, "Voucher Timebalance", which allows a time-limited access but with possible interruptions, "Voucher type 3" with multiple Entries and Exits and Deposit to create deposit products. This field can only be edited when a new product is being created, it can't be changed afterwards.
Name	Give the product a distinct name which is used internally.
Description	The description will also appear in the card details of the customer and should therefore be chosen carefully.
Usage in minutes	Determines how long a product is valid after the customer entered the facility (changes from „in use“ to „used“).
Duration in hours	Determines the duration until an unused product expires.
Price	The Price of the product. Normally this won't be used because the price is decided by Micros.
Target customer	Defines the target group of customers who use the product. Is foremost used to determine the tariff of overtime fees, credit limit, lighting system for access, time equipment usage, access check validation, handling of TEAM, identification of vouchers and for statistical purposes.
Alt. duration	Alternative validity duration of a product in minutes. Should normally be identical to the entry for "Usage in minutes". This is relevant when the POS allows different duration time with the same product depending of the day of the week or of the time of the day. Weekday: full day access for the price of a 3 hours access. This is triggered by the LEVEL in RES3700.
Earliest / Latest entry	These two values define when a customer can enter the facility at the earliest and at the latest respectively.
Validity time limit	Maximum validity of a product.
Valid from / until	These values define from and until which date a product is valid.
Autovalidation	The product will automatically be validated when it is loaded onto a transponder and set to active or used.
QM-Priority	This value determines the priority of a guest when he is getting enqueued by the queue management. The higher the value, the higher the priority.
Photo	Defines if a photo should be taken when the customer enters the facility.

Furthermore you can define through the device mapping on which entries and exits the current product should be valid. If there is no physical device present, "Autovalidate" has to be set to validate the product automatically when it gets loaded onto a card.

Revenue Center (RVC)

One or more specific RVC(s) like a bar, restaurant, or shop can be assigned to the voucher. If a voucher assigned to one or more RVC(s), this voucher can be redeemed only at this/these RVC(s). For all other products the RVC mapping will be ignored!

Season mapping

Select one or more seasons to the product that will be used only pending the time period of each selected season.

Voucher mapping (Product management)

A voucher in myvisitors is a single use product (product type 3) whose target customer is VOUCHER (must).

When a voucher is configured for being sold at a POS, then myvisitors keeps the voucher product and at redemption, myvisitors sends to the POS the corresponding item product.

For this, it is necessary to have 2 mappings between the POS and myvisitors:

Mapping 1 at sale: POS voucher product <-> myvisitors product (type VOUCHER)

Mapping 2 at redemption: myvisitors product (type VOUCHER) <-> POS item product(s)

Example (related on the illustration 23):

At a POS a voucher will be sold

in our example: 4255001 - Adult Day Entry Voucher.

The POS voucher 4155001 will be linked to the myvisitors product 1000 – Adult_Day_Voucher. The product 1000 is of Target Customer VOUCHER.

At redemption: the POS will inquire myvisitors for any voucher(s) for the POS-RVC. In the example, myvisitors will return to the POS the POS product being linked to the myvisitors product VOUCHER 1000: 1121000 – Adult Day Entry.

How does the voucher mapping work from the perspective of myvisitors?

1. Select the myvisitors voucher you want to map with the POS article
2. Choose and select from the POS article list (right select box) from the voucher subgroup the voucher you will load to the selected myvisitors voucher ("Added products" select box).
3. Link the selected POS voucher to the myvisitors voucher on pressing the "Load product" arrow
4. Choose and select from the POS product list from the product subgroup the product you will redeem when the voucher will be validate
5. Press the "Redeem voucher" arrow to link the selected POS article to the subgroup voucher on the myvisitors selected voucher

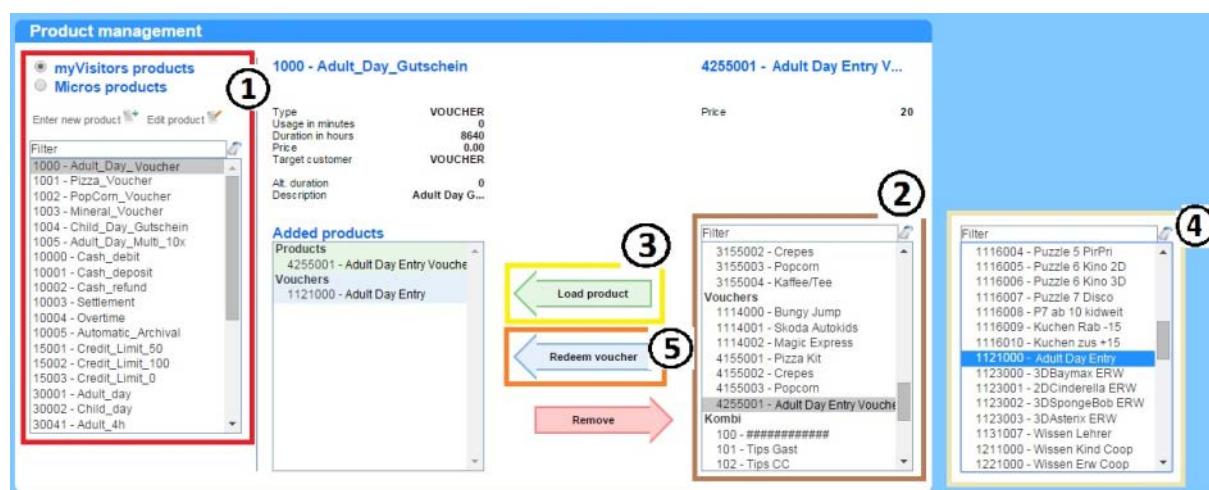

Illustration 23: Voucher mapping

Post payment configuration

With the help of the post payment configurator a user with the needed access rights can add / edit or remove post payment prices for access products according to their Target Customer.

This allows to set the prices to be paid depending on the number of minutes exceeding the allowed time.

The global tolerance applies for exits where the guest can leave without payment. When the exceeded time is higher than the allowed time including the tolerance, then the overtime calculation applies from the allowed time (not from the allowed time plus tolerance).

After the overtime fees have been calculated, the allowed time of the product is automatically prolonged from the corresponding time and is the new allowed time.

Target Customer	Post payment fees	Affected products
ABO		1006_Adult Weekend and Holiday Fun
ABO_F		1007_Adult Sauna Saturday Morning
ABO_K		30001_Adult day
ABO_S		30041_Adult 4 hours
ADD_ADULT		
ADULT	Until minutes: 30, Price: 7.00, Options: +	
CHILD		
HOTEL_C		
HOTEL_E		

Illustration 24: Post payment configuration

What every field in the form means, shall be explained below:

**Normal / Abo /
Timebalance / Transfer**

Defines the tolerance time of the products linked with these target customers after the expiration of the validity time

Until minutes

Defines the overtime steps in minutes. Depending on the amount of overtime (including tolerance time) the guest accumulates, the price (see below) for the next higher step will be charged.

Price

Defines the price that will be booked by entering into the defined overtime limit

Options

Action buttons for add / lock / unlock / accept and delete post payment fee for the selected target customer

Button functions

Add a new post payment fee to the current target customer

Save the tolerance times into the database

Lock / unlock / accept and delete post payment fee for the current target customer

Season management

In the season management the supervisor and user with administrator rights can create and edit seasons. A season determine a time period for validating affected products.

It is very important that the day rules are defined for each season. The day rules include the days on which the season (time period) will be active for the affected products.

The screenshot shows the 'Season management' interface. On the left, a sidebar lists seasons: '01.12.2015 - 04.01.2016 | Weekend and H' (with a dropdown arrow), '15.10.2015 - 30.10.2015 | Saturdays Morn' (highlighted in blue), and '01.09.2015 - 30.09.2015 | Monday to Frida'. Below this is a 'Create season' button with a plus sign and an 'Edit season' button with a pencil. The main area is divided into three sections: 'Dayrules' (a table showing rules for Monday and Saturday), 'Affected products' (listing '1007 Adult Sauna Saturday Morning'), and a 'Holiday calendar' (a table for 2015 with a single entry for 01.01). A vertical scrollbar is visible on the left side of the main content area.

Illustration 25: Season management (overview)

Describe the meaning of the Weekday & inclusive, specially HC.

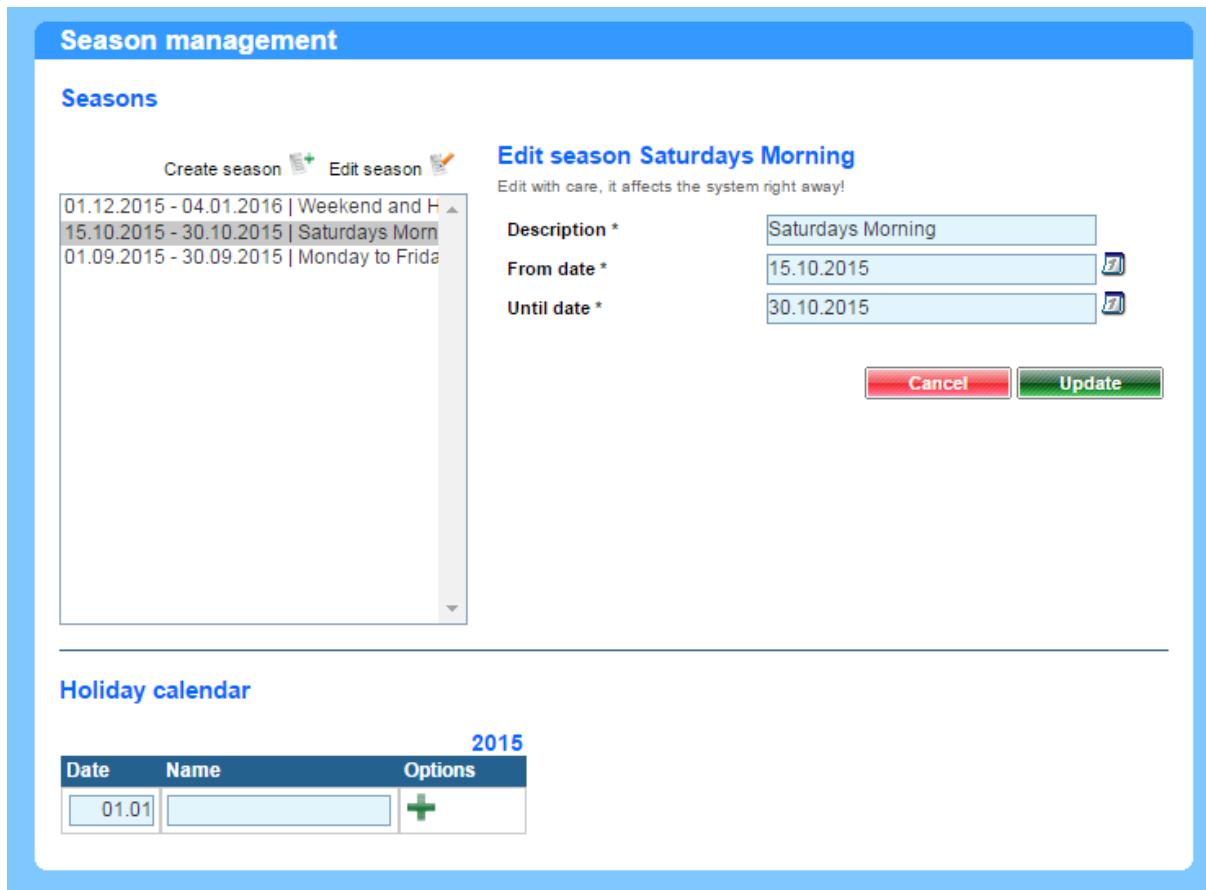

Button functions

Add a new season to the season management

Lock / unlock / accept and delete the current season

The diagram shows a large blue button with a white hand cursor icon pointing at a green plus sign. To the right of the button, there are four smaller icons: a lock, an unlock, a checkmark, and a trash can. The text 'Add a new season to the season management' is associated with the plus sign, and the text 'Lock / unlock / accept and delete the current season' is associated with the other three icons.

If you like to edit an existing myvisitors season, you have to click on the  symbol. To create a completely new season, you can use the  symbol instead. Regardless of what you chose you will get to a form which lets you define several details about the season.

The screenshot shows the 'Season management' interface. On the left, there's a list of existing seasons:

- 01.12.2015 - 04.01.2016 | Weekend and H
- 15.10.2015 - 30.10.2015 | Saturdays Morn
- 01.09.2015 - 30.09.2015 | Monday to Frida

On the right, a modal dialog is open for editing a season:

Edit season Saturdays Morning
Edit with care, it affects the system right away!

Description *: Saturdays Morning

From date *: 15.10.2015

Until date *: 30.10.2015

Buttons: **Cancel** (red) and **Update** (green)

Below the list and dialog, there's a 'Holiday calendar' section for the year 2015:

Date	Name	Options
01.01		

Illustration 26: Season management (create / update view)

Description The description will also appear in the card details of the customer and should therefore be chosen carefully.

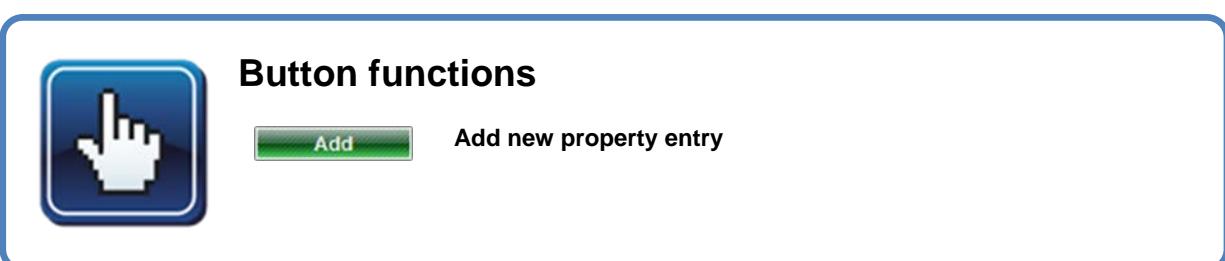

Valid from / until These values define the time period the season is valid

Properties

With the help of the property editor a user with administrator rights can make changes to the „MV_PROPERTY“ table in the database directly from within the myvisitors web application. However this function should only be used by experienced users.

Property Editor

User management

The user management allows administrators to edit or delete existing mvWeb users or create new ones. Important is the allocation of the rights level which restricts the rights of the current user according to his role. The lower the level is set the higher are the rights the user gets.

The screenshot shows a 'User Management' interface with a sidebar on the left containing 'Create' and 'Delete' buttons. The main area is titled 'Edit User' with the sub-instruction 'Here you can edit a user'. It displays a list item 'myVisitors (myVisitors Demo)'. The form fields are as follows:

- Username *: myVisitors
- First Name *: myVisitors
- Family Name *: Demo
- Password *: (redacted)
- Description *: Management
- Level *: 100

At the bottom are 'Cancel' and 'Update' buttons.

Illustration 28: User management

Important notice

An administrator can only create other users with the same or a lower level than his own.

Button functions

Add a new user

Edit an existing user

Cancel the editing of the user

Confirm your changes
