Bug

- BEV-3648 Full Install was failing having activated suite8 guest import**
The BellaVita PMS user is no longer verified during the installation, as it might not be existing upon installation start.
- BEV-4153 Speed issues were reported about the Turnover employee Report**
An option has been implemented to set the System Parameter `{{com.softwareag.ch.w4y.report.NoNBItemCount}}` = `{{true}}` to increase speed while not counting the reported figures (nb item Count will be not processed and hidden in this case).
- BEV-3454 Propagate Prices doesn't work as expected**
- When pressing the propagate prices button, a `NullPointerException` is raised
- Propagating offer price change doesn't change the ad hoc customized package price
- if VAT rate changes in master data --> Prices should be adapted in open bookings and customized packages

- Behaviour should be configurable : `ch.corix.w4y.bo.booking.Offer.adaptPrices`,
`ch.corix.w4y.bo.packages.Package.adaptPrices`
- BEV-4148 MC: Credited article sale are exported with positive "saleprice"**
Credited article sale were exported with positive "saleprice". This has now been corrected to export the sales price for a credited article sale as a negative value.
- BEV-4146 Printer configuration does not work for terminal users**
Now BellaVita printer settings can be setup for each Terminal server user.
- BEV-4143 Incorrect price calculation for package depending on context**
The incorrect price calculation for package depending on context (either Welldesk or Schedule) has been corrected.
- BEV-4140 Failed HTNG documents got marked as exported**
This has been corrected (FIAS documents were not affected by this issue).
- BEV-3874 Report Generation (for output Format PDF) did not work properly for polish characters since 2.7.0.5**
Now the special characters should be printed or exported correctly again.
- BEV-4092 When crediting a subscription the discount position is not posted**
When crediting a subscription sale, the discount position is now entered into the Discount document Position. Therefore, when posting occurs, the Discount Position credit amount is posted correctly.
- BEV-4176 Duplicate Offer does not copy every field**
BugFix: Copy all fields when duplicating an Offer
- BEV-4192 Non-Equal column width's for Document.City and Address.City attributes**
Non-Equal column width's for Document.City and Address.City attributes. Archived documents and new documents are fulfilling the same space requirements.

Change Request

BEV-4113 Discount Document Position can be stored without Charge type into the database

Bug: When the user create a document with discount positions then the charge type is always null if not set in the master data for the Price category.

This should be changed in the following way: if the charge type is not set in the Price category, it's inherited from the package itself.

Otherwise it's copied from the Price category charge type into the document Discount Position.

The same is valid for subscriptions. The chargetype is inherited from the subscription template charge type if not set for the Discount / resp. Price Category.

BEV-4158 Generic fiscalisation Invoice requirements

Generic fiscalisation invoice requirements (Croatian Report requirement)

Improvement

BEV-4117 Reporting: Cached Report file and subreport loading and building

Loaded Reports are cached for repeated use which reduces printing time.

BEV-4098 Show Train icon

In case of training system, the train icon is displayed on the dialog and on windows taskbar.

BEV-4137 1. Major performance improvement. 2. Performance doesn't degradate during daily work

After intensive activity, e.g. distributing over 500 package bookings, a degradation in performance has been observed.

After 1000 bookings, that distribution time could increase a factor 3.

This degradation has now been resolved completely.

As a pleasant side effect, the distribution time could by cut by half.

BEV-4173 Speed Problems with Article-Revenue reports

Speed Problems with Article-Revenue reports. Improved performance for article report with indication of number r of sale per article count.

BEV-4120 Memory Heap Limit needs to be configurable

Memory heap Limit can be set according to:

http://bellavitadistr.microsdc.com/wiki/doku.php?id=bev:conf#setting_max._memory_on_client_workstation

Sub-task

BEV-3849 Speed issue was reported about Invoice

Now the main part of the report query is put into a Basic view exposing the main content, therefore the query is reduced, invoice generation is faster.

BEV-3939 Booking without employee can be disabled by system parameter

Booking without employee is a feature, that may not be appreciated by every customer.

A system parameter, ch.corix.w4y.bo.booking.Booking.doAllowBookingWithoutEmployee, default value = true, has been introduced.
