Purpose of Documentation

This document has been created to provide guidelines for the installation and upgrade to BellaVita version 2.7.0.4 and explain the new functionality and improvements compared to previous versions.

Upgrade to 2.7.0.4

In addition to the standard upgrade procedure, rt.zip has to be downloaded from:
http://bellavita.microsdc.com/distr/Components/bellavita/
to dnload folder. It will be unpacked by the upgrade process.
If upgrading from version lower than 2.7.0.2, also check the upgrade section of the release notes of 2.7.0.2.

Sites with FIAS connection

FIAS Gateway has to be upgraded (can be upgraded without BV upgrade). This upgrade is suggested to any site having issues with the connection between FIAS and FGW service.
Download fgwservice.zip from the distribution server.
http://bellavita.microsdc.com/distr/Components/bellavita/
to the dnload folder.
Unzip it to overwrite the fgw-service directory.

> if you're running a multi-site, rename the appropriate tpl file in <cid>\fgw-service\conf
> - wrapper-multisite.conf.tpl --> wrapper.conf.tpl (if it's a multi-site)
> - wrapper-singlesite.conf.tpl --> wrapper.conf.tpl (if it's not a multi-site which is already set as
> default)

Stop the Fias gateway service, then run from deployment:
Setenv
Ant fgw.service.update
        check the logfiles in <cid>\fgwservice\log.
There should be FiasGateway.log + FiasGatewayServer.log.
This can be done before or after the BellaVita upgrade.

Sites with HTNG connection

When upgrading a site with HTNG connection – and package payment method is not set to export – there may be still a need to set a PMS itemizer on Package Profit/Loss.

Resolved issues

[BEV-3615] Clarify:13432166-1
ORA-00001 Unique Constraint BellaVita.PK_TEMP_RT appeared upon printing the occupation report. Cause of error duplicate records. Issue resolved and prevented.

[BEV-3610]
Print of guest check and confirmation after ugprade to 2.7.0.2 does not print with error: ch.cid.reporting.e.impl.ReportPrepareException: guest check prepare error
ORA-00904: "FACILITY_SPA_ID": invalid identifier
Workaround:
CMD > deployment
```
setenv
ant db.drop.temp_guestcheck
ant db.drop.temp_bookingresource
```
Restart Bellavita
Fixed for 2.7.0.3.

[BEV-3630]
Info Invoice error 0 lenght text
Workaround:
Change InvoiceReport.xml (as attached to the BEV-3630) in:
<cid>\deployment\distr\resources\report\DocumentReport
Delete InvoiceReport.jasper from the same folder
CMD > deployment
```
setenv
ant reports
```

[BEV-3608]
Multi offer bookings start time did not match the time of the scheduled multi offer. It has been corrected.

[BEV-3649] Clarify subcase: 13528635-1; 13518374-3; 13476012-1
Commission list error: quantity and items displayed incorrectly. Queries corrected.

[BEV-3633]
Nullpointer exception thrown when clicking on „incomplete" tickbox under welldesk/packages
Intended functionality restored.

[BEV-3537]
Booking confirmation and guest check for group bookings had shown the repeated employee and facility
Report has been corrected.

[BEV-3656]
Reporting administration: parameter synchronisation did not automatically happen when upgrading to 2.7.0.2. It is fixed when upgrading to 2.7.0.4.

[BEV-3598]
Turnover, journal, cash closure reports were showing different amounts – reports have been corrected

[BEV-3686]
Error: ArrayIndexOutOfBoundsException in DocumentStateListPanel has been resolved

[BEV-3715] Subscription posting with HTNG failed due to the lack of configurable and default VAT. Now Subscriptions pick up 0% VAT upon posting – the category of the charge type has to have a 0% VAT category assigned to it.

[BEV-3671]
Resources were possible to get set inactive even having future bookings, therefore not shown on schedules anymore.

[BEV-3685]
Guest check for group offer – repeated resources were on print template. Corrected.

[BEV-2984]
Booking error "- stackTrace(): Exception=ch.corix.persistency.PersistencyRuntimeException: Condition is not unique: ?ForeignId = '429948'" has been eliminated.

[BEV-3628, 3470]
FIAS configuration was changed: Protocol changed for better compliancy, Posting sequence number added to every posting / inquiry, Improved initialization (failover). FGW upgrade as in Upgrade section has to be implemented for any site where connection problems with FIAS and FiasGateWay persist.

Improvement

[BEV-3459]
Extending the barcode reader handling with the support of USB plugged readers
After installing the Voyager 1202 the reader functions via a virtual COM port. So the existing barcode handling code is triggered properly. BV works without any code modification and with proper configuration of the reader with native USB barcode readers supporting virtual COM port emulation.
No code change is required in BellaVita. The barcode reader has to be configured in serial (COM) port emulation mode.

[BEV-2693]
Oracle 11 support: enhancements were made for the installation process
Case sensitive usernames and passwords have to be used.
The training database should be installed after the installation is complete (Clarify solution 86131)

[BEV-3583]
Journal reports and Employee commission report are now working with Oracle 11g.

[BEV-3493]
Cancellation report extension now displaying: cancellation reason, date/time, user.

[BEV-3622]
To enhance Suite8 package import, new system parameter has been introduced to allow the import of suite8 packages with price = 0.

com.softwareag.ch.w4y.server.crontab.UpdateCustomizedPackages.ImportZeroPricedPackage (default = false)

[BEV-3655]
Performance improvement: added index to LoggingEntry table and removed unnecessary indices
Also removed indices with only ID column

[BEV-3623]
Quick search functionality improved on welldesk panels.

[BEV-3687] Searching by reservation reference number and reference number in Welldesk/Bookings have been introduced. The reference number is the number displayed in the top line of booking window. Reservation reference is used in medical module only. Leave field with tab to see the results.

[BEV-3605]
External management flag is not showing information if it cannot be activated due to missing Materials Control license.
