## 1.0 Introduction

This document summarises changes made in all the 5.26 update release. Please refer to the original 5.26 release notes for additional information. Note that bug fixes in previous update versions are also included in the current update version.

*Support Database* - In most cases, the description below includes the Task and Reference numbers.

*Note:* This document contains details of all patches created by MICROS for the BE product. It should be noted though that some of these patches are created for customer specific issues and hence may have only been QA tested using their specific environment and within certain boundaries. Where this is the case these patches will not necessarily be made available for general release within the 'PATCHES' directory of the FTP site. Should you identify a requirement for one of these patches, please contact your account manager, or one of the Development Management team to arrange a schedule for the QA testing of this patch using your specific environment. Please note that depending on the nature of the patch there may be a cost associated with this activity. Other more generic patches which have been QA tested on a generic platform will generally be made available within the 'PATCHES' folder of the FTP site by default."
