 - 1.1 INTRODUCTION 1-1
 - 1.2 SETTING UP CROSS SCHEMA ENTRIES..... 1-1

1. Cross Schema Scripts Utility

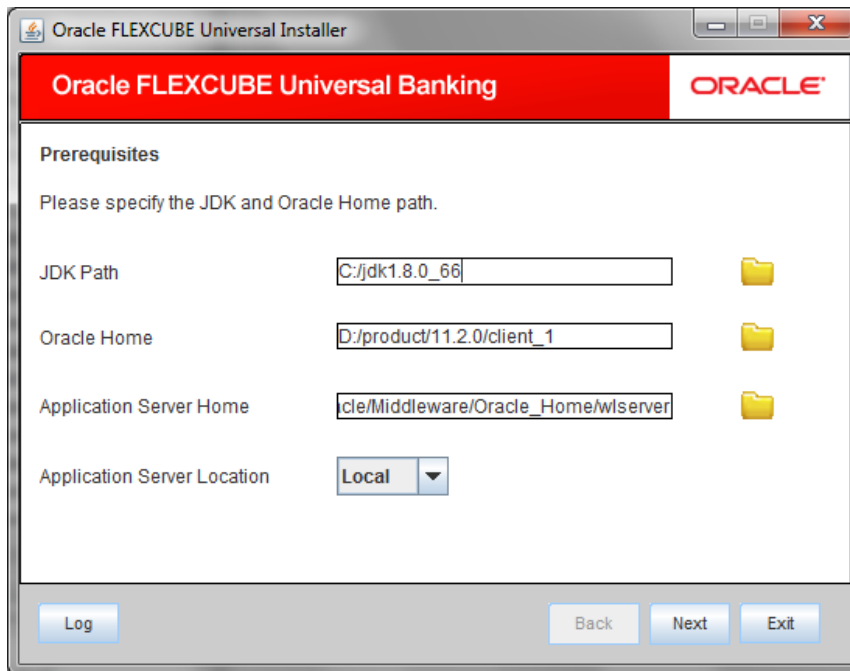

1.1 Introduction

This chapter explains the steps to execute cross schema scripts using Oracle FLEXCUBE Universal Banking Installer.

1.2 Setting up Cross Schema Entries

In order to execute cross schema scripts, follow the steps given below.

Start Oracle FLEXCUBE Universal Banking.

Specify the following details:

JDK Path

Specify the location of the JDK. You can use the directory button to browse to the JDK location.

Oracle Home

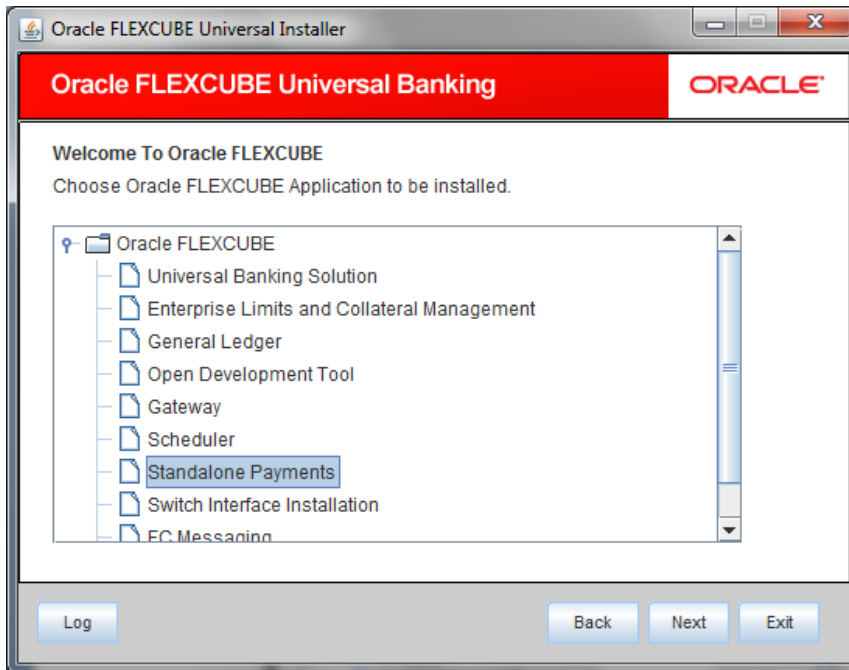

Specify the location of the Oracle Home installation. You can use the directory button to browse to the location.

Application Server Home

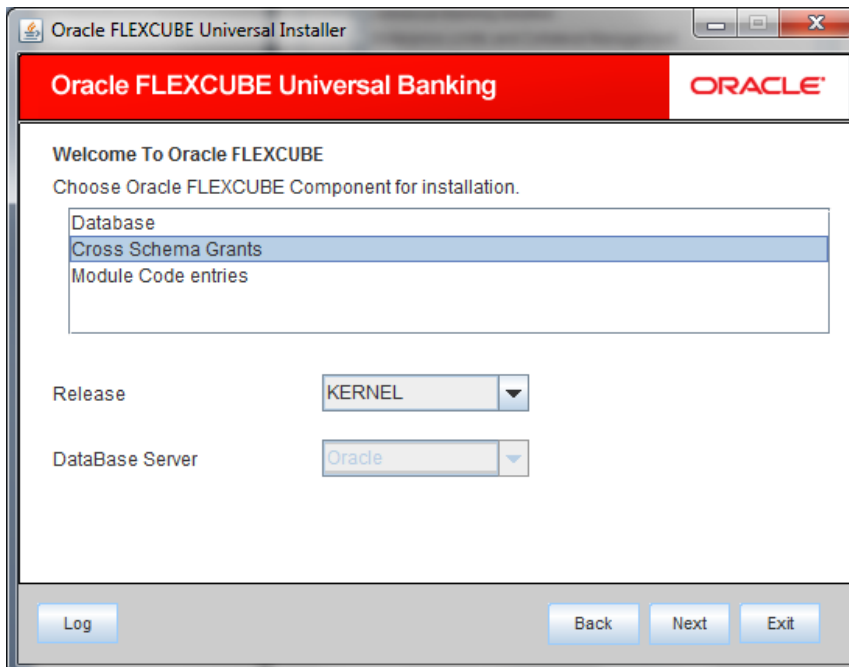

Specify the location of the application server.

Note: In case any of the selected directories is incorrect, the Installer will display an appropriate error message. In that case, you need to correct the directory path and proceed.

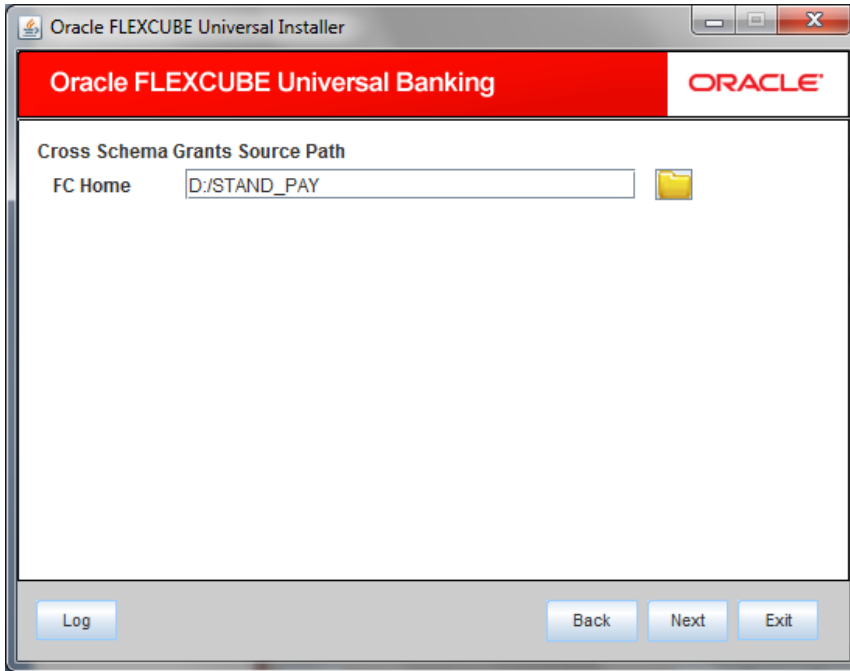

Click 'Next'. The following screen is displayed.

Click 'Next' and then select the component for installation.

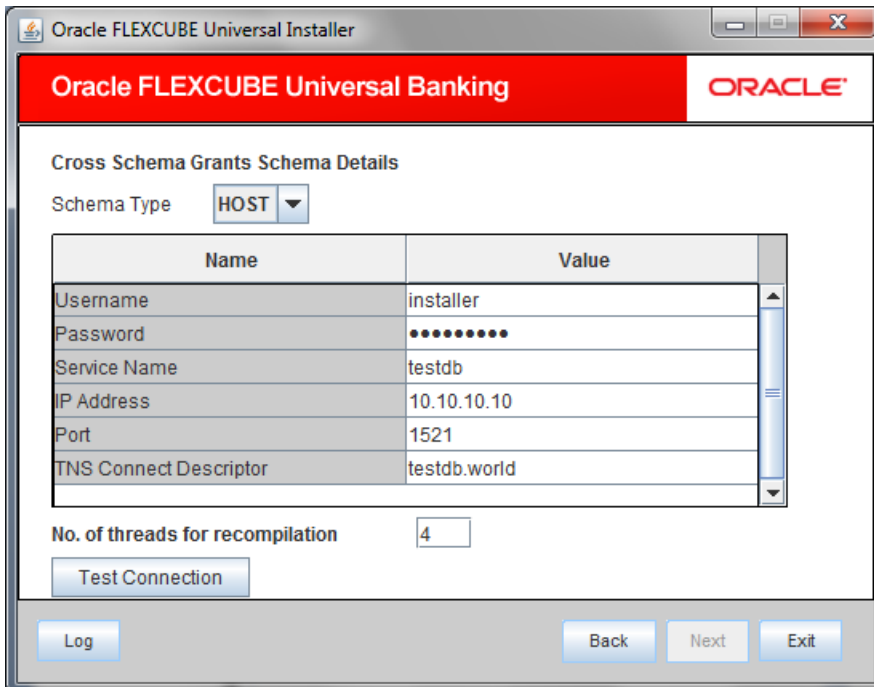

Select 'Cross Schema Grants 'and click 'Next'. The following screen is displayed.

Enter the FCHOME folder path. Click Next.

The following screen is displayed.

Specify the following schema details. This is the Schema on which scripts of other schema are to be executed.

Schema Type

Specify schema type from the drop down. There are 2 options here i.e. HOST and PM.

User Name

Specify the user name to access the schema.

Password

Enter the schema password.

Service Name

Provide service name of Database.

No. of threads for recompilation

Specify the number of processes that would be used to compile the objects. Defaulted to 4, if no value is given.

TNS Connect Descriptor

Specify a valid connect string that contains the details for database connectivity.

IP Address

Specify the IP address of the system where the database schema is installed.

Port

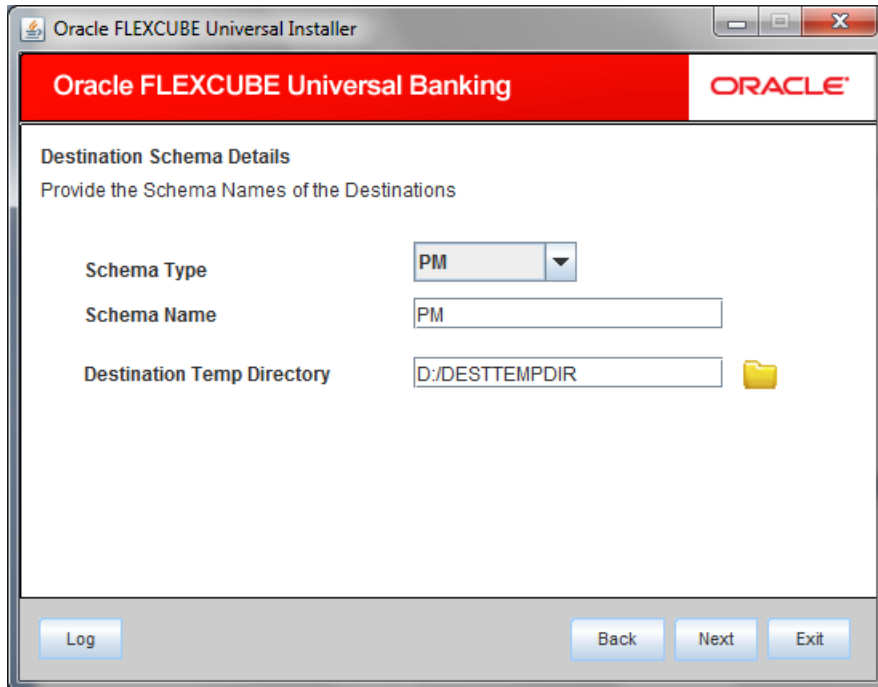

Specify the port number.

Once you have entered the details, you can test the database schema connection using 'Test Connection' button.

Note:

- If the connection is established, the installer displays a message 'Connection Successful'.
- If there is an error in establishing the connection, the system displays the message 'Invalid DB Credentials'.
- If the TNS entry is not proper, the installer displays the message 'TNS entries are not proper'.

After testing the connection successfully, click 'Next'. The following screen is displayed.

Specify the following details:

Schema Type

The target Schema pointing to which scripts are to be executed in the current schema. If Source Schema is chosen as HOST then this value will be PM. If source is PM then this will be HOST.

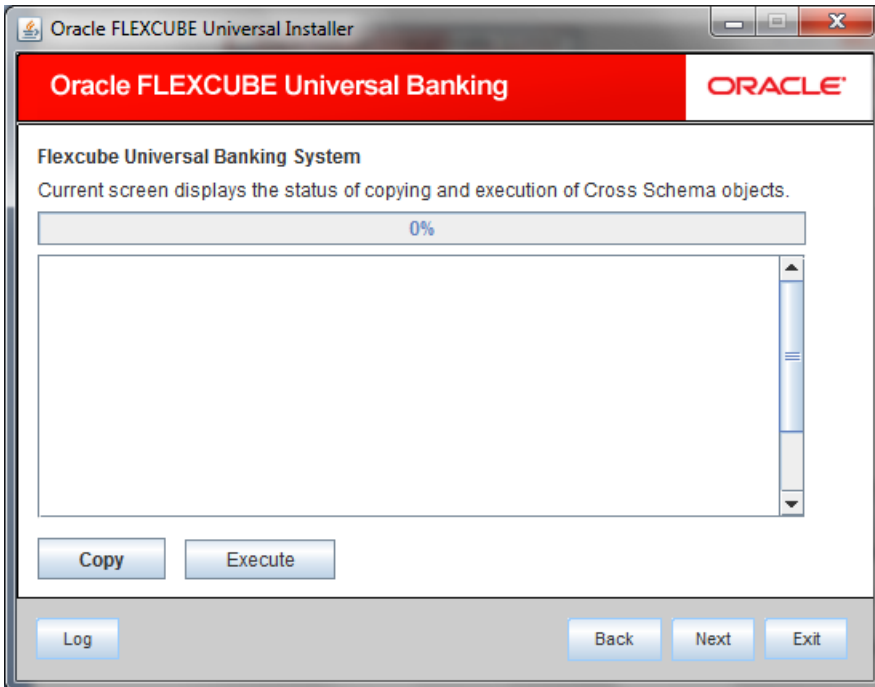

Schema Name

Name of the Destination schema.

Destination Temp Directory

Destination directory. Any valid name can be given.

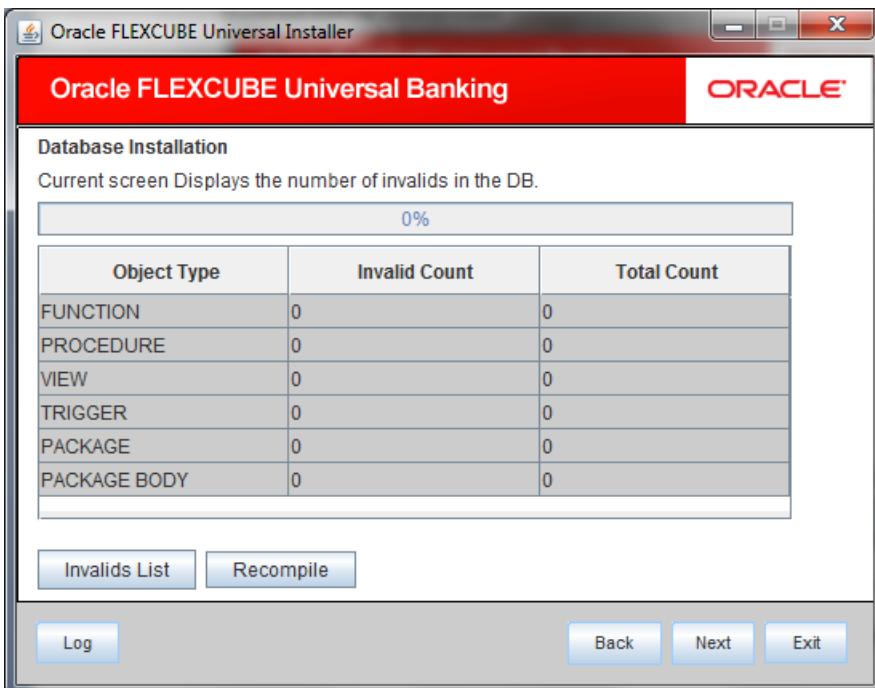

Once done, click next .The following screen is displayed.

Click Copy to copy the cross schema scripts to the Destination folder.

Click Execute to execute the cross schema scripts in the current folder.

Once done, click next .The following screen is displayed.

- Click Invalid List to view the count of invalid objects. The installer creates the file 'InvalidList.txt' in the destination directory under the folder 'DBLogs'.
- Click Recompile to do a cyclic recompilation. This will reduce the invalid objects count. The Installer allows you to use 'Recompile' button multiple times, in order to reduce the invalid objects count.
