NOTE (Doc ID 1904280.1): As part of the new Release of SOA 12c, you need to get WebLogic 12c through the Oracle Fusion Middleware Infrastructure installation, which contains all required components for SOA. The standard WebLogic 12.2.1.0.0 Installer i.e. fmw_12.2.1.0.0_wls.jar, does not have the required JRF templates.

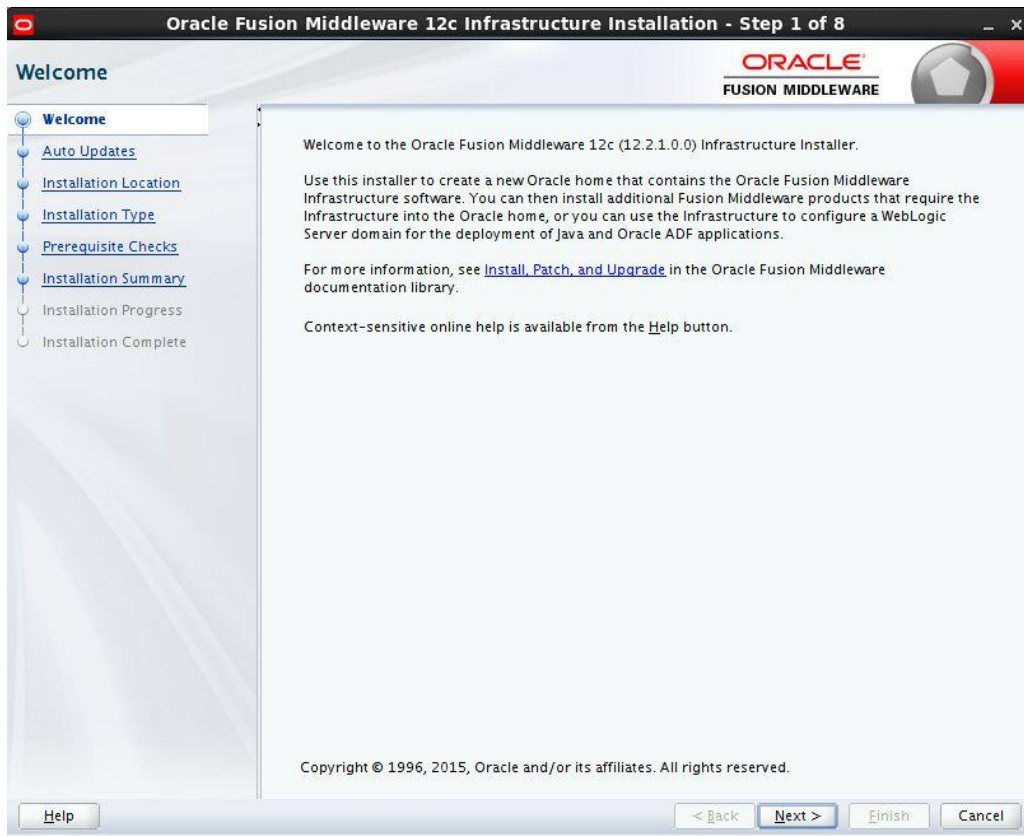

2.3 Install JDK.

Login to WebLogic server host upload and install JDK package. Refer to the release certificate for the version of java JDK.

2.4 Installing WebLogic Server software

```
[oracle@wls12c-node1 ~]$ cd /scratch/app/fmwTemp1221/
[oracle@wls12c-node1 fmwTemp1221]$ unzip V78156-01.zip
Archive:  V78156-01.zip
inflating: fmw 12.2.1 infrastructure.jar
[oracle@wls12c-node1 fmwTemp1221]$ java -jar fmw_12.2.1_infrastructure.jar
```

Step 1:

Step 2 :

Option need to be selected based on the requirement :

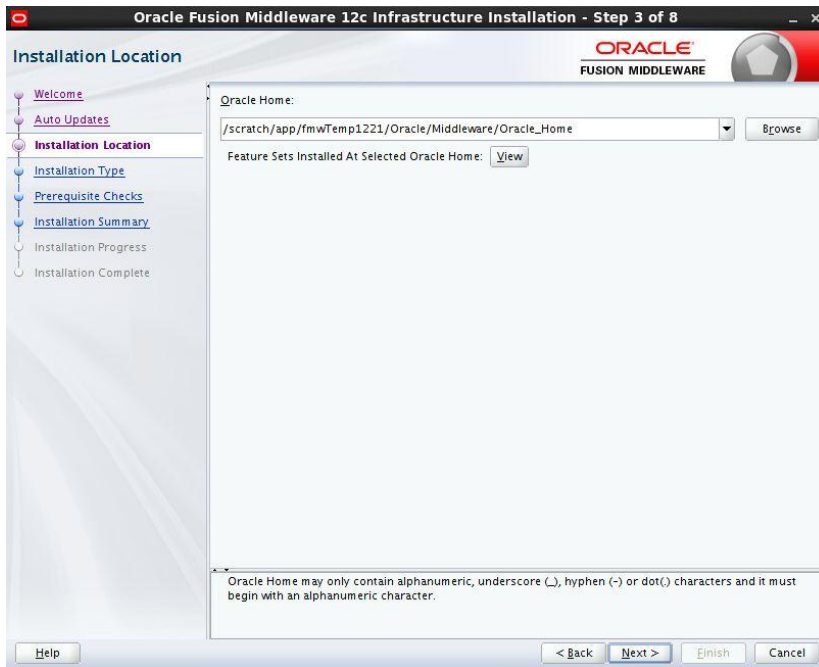

If you don't want the auto updates, select the first option.

If you are applying patches , select the second option.

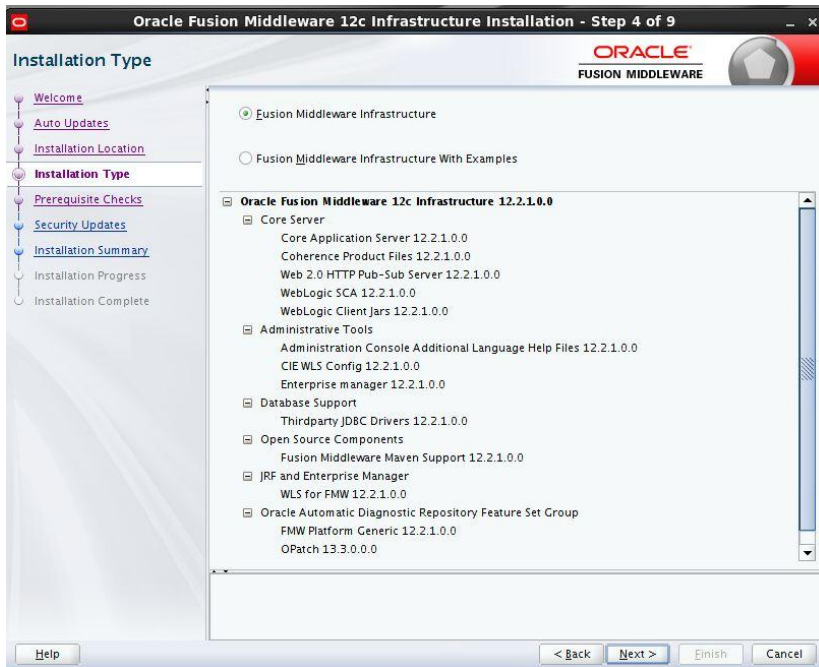

Please select the option based on the requirement :

The screenshot shows the 'Auto Updates' configuration window in the Oracle Fusion Middleware 12c Infrastructure Installation wizard. The window title is 'Oracle Fusion Middleware 12c Infrastructure Installation - Step 2 of 8'. The Oracle logo and 'FUSION MIDDLEWARE' text are visible in the top right corner. On the left, a navigation pane lists the installation steps: Welcome, Auto Updates (selected), Installation Location, Installation Type, Prerequisite Checks, Installation Summary, Installation Progress, and Installation Complete. The main area contains three radio button options: 'Skip Auto Updates' (selected), 'Select patches from directory', and 'Search My Oracle Support for Updates'. The 'Select patches from directory' option includes a 'Location:' text box and a 'Browse' button. The 'Search My Oracle Support for Updates' option includes 'Username:' and 'Password:' text boxes, 'Proxy Settings' and 'Test Connection' buttons, and a 'Search' button. A large empty text area is located below the search button. At the bottom of the window, there are buttons for 'Help', '< Back', 'Next >', 'Finish', and 'Cancel'.

2.6 Creating product schemas in Oracle database

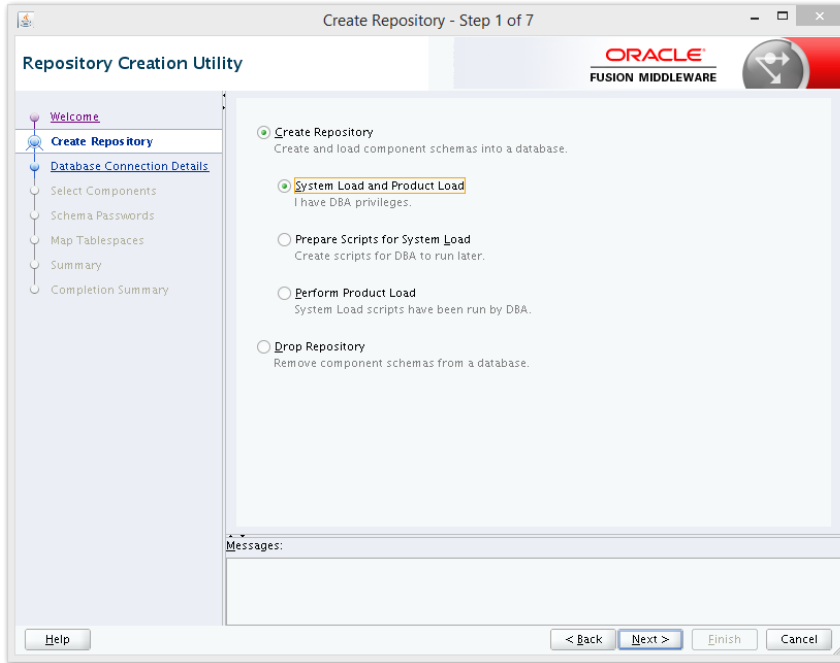

The Repository Creation Utility (RCU) is the tool used to create schemas in a database. This tool is available once we've installed the Oracle Fusion Middleware Infrastructure software (Point 2).

Refer to [Oracle Fusion Middleware Creating Schemas with the Repository Creation Utility](#) for more information about the Repository Creation Utility.

- [oracle@wls12c-node1 fmwTemp1221]\$ cd /scratch/app/fmwTemp1221/Oracle/Middleware/Oracle_Home/bin/
- [oracle@wls12c-node1 bin]\$./rcu

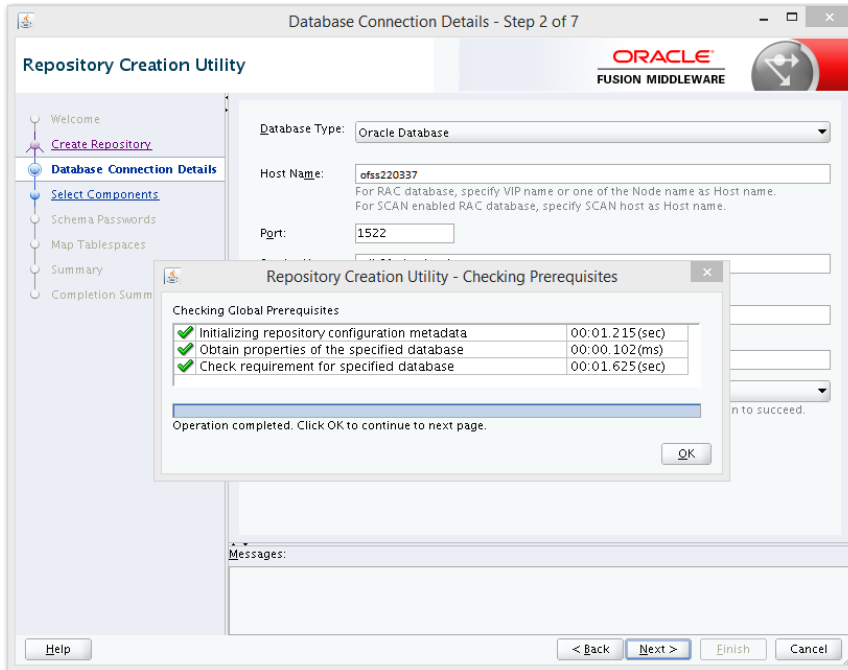

Step 1:

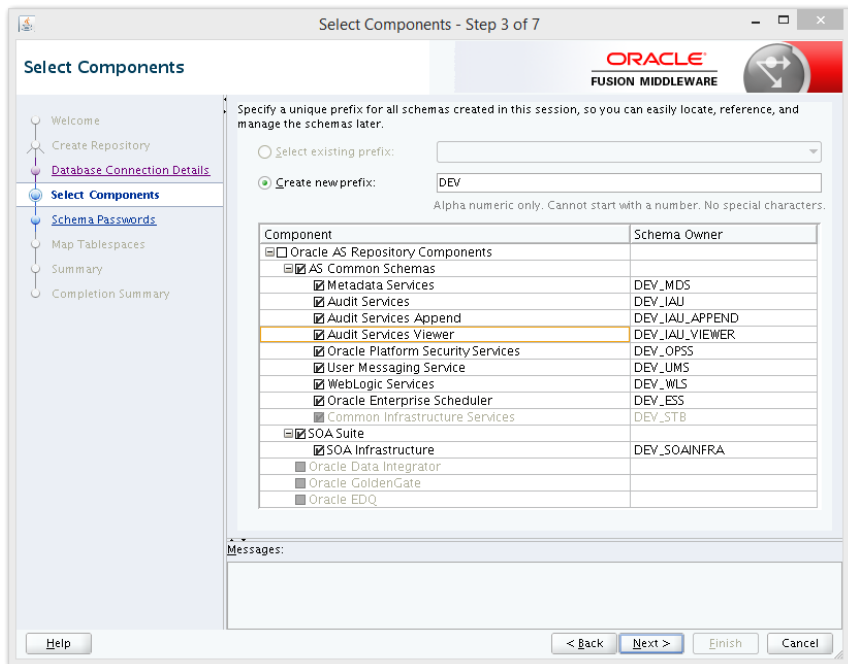

Step 2: Define the host name port username and password for creating the RCU schemas in the database. The sys user required to create the rcu schemas.

Step 3: Define the prefix to be used for the schemas

Step 4: Define the password for the schemas.

Step 15:

2.8 Remote Setup Configuration:

Remote setup means SOA is installed in different machine and EAR is running in different machine.

Configuring Flexcube Application to point to remote BPEL instances.

1. Following Jars has to be copied to `<Weblogic_home>\<domain>\lib`

Jar to be copied	Path where the jar is available in SOA Middleware
bpm-services.jar	%Middleware Home%/soa/soa/modules/oracle.soa.workflow_11.1.1
fabric-runtime.jar	%Middleware Home%/soa/soa/modules/oracle.soa.fabric_11.1.1

oracle.bpm.casemgmt.interface.jar	%Middleware Home%/soa/soa/modules/oracle.bpm.runtime_11.1.1

3. The jars copied have to be from same soa-suite version where BPEL processflows deployed. Ie, We cannot have jars from soa12.1.3.0.0 and BPEL deployed in soa12.2.1.0.0 It should be consistent.

4. The properties file **fcubs.properties** should read as below

```

WORKFLOW_CLIENT_TYPE =REMOTE
java.naming.provider.url      =t3://10.184.74.143:8001/?partitionName=DOMAIN (Remote soa server provider url)

domain.pwd                    =RF2MRTP/MG8TB1T5QG6lnQ==
(Remote soa server password)

```

5. Configure domain password same as for both fcj ear domain and remote BPEL domain and DowngradeUntrusted Principals has to be checked

The screenshot shows the WLS Console configuration page for 'Security Interoperability Mode'. The page is titled 'Advanced' and contains several configuration options:

- Security Interoperability Mode:** default (dropdown menu)

- Clear Text Credential Access Enabled**

The 'System Status' sidebar on the left shows the health of running servers:

- Failed (0)
- Critical (0)
- Overloaded (0)
- Warning (0)
- OK (2)

The search bar at the bottom shows the search term 's.lang.SecurityException'.
