FLEXCUBE UBS Inbound
Application Adapter Installation
Document
Version 12.2.0.0.0
FLEXCUBE KERNEL
[May] [2016]

ORACLE®
FINANCIAL SERVICES

ORACLE®

Contents

Installation Steps

1.1 Prerequisite

✓ Ensure that the basic MDB Gateway Environment Setup is done.
   [Please refer GW_MDB Installation.doc.]

✓ Ensure that the basic Adapter Environment Setup is done.
   [Please refer SSIAD_Installation_FCUBSV.UM8.0.0.0.0.0.0Lot1.doc.]

1.2 Steps

A. Configure FLEXCUBE UBS EJB Adapter Properties

Edit *<KERNEL_INSTALL_DIR>/SSIAD_EJB/config/SSIAD_EJB_Prop.xml* file to give appropriate values for the properties as described below,

1. XSD_PATH: This property specifies the path where the IsExchangeFileRequest.XSD is stored.

   e.g. XSD_PATH=<KERNEL_INSTALL_DIR>/SSIAD_EJB/XSD/

   [NOTE: Give XSD file path with forward slash (/) as file separator and remember to give a slash at the end.]

2. SSIAD_EJB_ENVELOPE_XSD: This property specifies the name of the XSD against which SSIAD Envelope validation is done against the incoming messages.

   e.g. SSIAD_EJB_ENVELOPE_XSD = "IsExchangeFileRequest.XSD".

3. IS_XSD_VAL_REQD: This property specifies whether XSD validation should be done or not. To enable XSD validation specify "Y" and to disable specify "N".

4. IB_EJB_SERVER_URL: This property specifies protocol, server url and the port on which OC4J server is running in **protocol://server url:port/application name** format

   e.g. IB_EJB_SERVER_URL = "ormi://10.80.44.103:23791/SSIAD_EJB_Bean"

5. IB_EJB_CTX_FACTORY: This property define context factory for Oc4J server used by Oracle Application Server applications to perform JNDI operations

   e.g. IB_EJB_CTX_FACTORY ="com.evermind.server.rmi.RMIInitialContextFactory"

ORACLE®

6. IB_EJB_SECURITY_PRINCIPAL: specifying the identity of the principal for authenticating the caller to the service if required otherwise can be left blank.

7. IB_EJB_SECURITY_CREDENTIALS: specifies the credentials of the principal for authenticating the caller to the service if required otherwise can be left blank.

8. IB_EJB_CALL_TYPE: This property specifies the call type of EJB that must always be REMOTE.

9. IB_EJB_LOCAL_CALL: This property must always be LOCAL.

10. IB_EJB_REMOTE_CALL: This property must always be REMOTE.

11. FCUBS_DB_SERVER_IP: This property defines FCUBS Database server IP address.

12. FCUBS_DB_SERVER_UID: This property defines user id for FCUBS Database server.

13. FCUBS_DB_SERVER_PWD: This property defines password for FCUBS Database server.

14. FCUBS_DB_PAYLOAD_PATH: This property defines payload file path on FCUBS Database server.

15. FCUBS_DB_DEAD_LETTER_PATH: This property defines dead letter file path on FCUBS Database server.

   [NOTE: Give XSD file path with forward slash (/) as file separator and remember to give a slash at the end.]

16. SSIAD_EJB_JMS_ICF: This property defines InitialContextFactory that is responsible for getting and instance of the initial context. It is also responsible for looking up JMS topics and queues.

17. SSIAD_EJB_JMS_PROVIDER_URL: This property is used for external JNDI lookups. eg. provider URL in <host>[:<port>] format.
Specify whole path of the binding file that has been created for Gateway MDB installation.

18. SSIAD_EJB_JMS_SECURITY_ PRINCIPAL: This property defines the name of the entity (user) that is authenticated when the connection to the JMS provider is established. The Security Principal and the Security Credentials are included in the naming context when the connection factory is looked up from the naming.

19. SSIAD_EJB_JMS_SECURITY_CREDENTIALS: This property defines the credentials (typically a password) that authenticate the security principal to the JMS provider.

20. SSIAD_EJB_JMS_QCF: This property specifies the Queue Connection Factory of the Queue Manager to which the Gateway MDB is associated. A queue connection factory is used to create connections to the associated JMS provider of JMS queue destinations, for point-to-point messaging.
eg. SSIAD_EJB_JMS_QCF =MDBQCF

21. SSIAD_EJB_JMS_QUEUE_NAME: This property specifies the Queue on which the

ORACLE®

Gateway MDB is listening.

SSIAD_EJB_JMS_QUEUE_NAME =MDB_QUEUE

22. SSIAD_EJB_JMS_Q_ACKNOWLEDGE: This property specifies the mode of acknowledgement to be given to the MOM by the application. The possible values are CLIENT_ACKNOWLEDGE, DUPS_OK_ACKNOWLEDGE and AUTO_ACKNOWLEDGE.

23. SSIAD_EJB_JMS_Q_TRANSACTION: This property specifies whether the message sent/received has to be transacted or not. The value is false.

24. SSIAD_EJB_JMS_Q_DELIVERY_OPT: The message delivery option represents whether the message will be delivered with the Delivery mode as PERSISTENT or NON-PERSISTENT. Possible values are 1 and 2. 1 represents delivery mode to be NON-PRESISTENT while 2 represents the delivery mode to be PRESISTENT.

25. SSIAD_EJB_JMS_Q_TIME_TO_LIVE: This is the maximum time in milliseconds for which the outgoing/reply message will remain in the queue before expiring, if not already picked up by the external system application. Value 0 ensures that message will NEVER expire.

26. SSIAD_EJB_JMS_Q_PRIORITY: This is the priority of the outgoing/reply message. Priority value can be ranging from 0 to 9, 9 being highest priority and 0 being lowest priority. Priorities 0-4 are gradations of normal priority and priorities 5-9 are gradations of expedited priority.

27. SSIAD_EJB_MH_IP: This property defines SSI MH server IP address.

28. SSIAD_EJB_MH_USERID: This property defines user id for SSI MH server.

29. SSIAD_EJB_MH_PASSWORD: This property defines password for SSI MH server.

30. SSIAD_EJB_MH_ENVELOPE: This property defines envelope file path on SSI MH server.

31. SSIAD_MH_PAYLOAD_PATH: This property defines payload file path on SSI MH server.

32. XSL_PATH: This property specifies the path where the SSI_ADAPTER.XSL is stored.

eg.. XSL_PATH =<KERNEL_INSTALL_DIR>/SSIAD_EJB/XSL/

[NOTE: Give XSD file path with forward slash (/) as file separator and remember to give a slash at the end.]

33. SSIAD_EJB_XSL: This property specifies the XSL file name.

eg.. SSIAD_ADAPTER_XSL = SSIAD_EJB_XSL.xsl

34. EJB_OBJ_PATH: Defines path to store EJB reference.

[NOTE: Give XSD file path with forward slash (/) as file separator and remember to give a slash at the end.]

35. MSG_REPOLL_SLEEP_TIME: This property specifies interval of polling in milliseconds

36. LOGGER_PATH: This property specifies the path of the logger property file. This file can be found

at <KERNEL_INSTALL_DIR>/SSIAD_EJB/config.

> *[NOTE: Give the logger path with forward slash (/).]*

The SSIAD_EJB_Prop.xml will look similar as follows,

```xml
<add key="XSD_PATH" value="D:/KERNEL_SSIAD_OC4J/SSIAD_EJB/XSD/"/>
<add key="SSIAD_EJB_XSD" value="IsExchangeFileRequest.XSD"/>
<add key="IS_XSD_VAL_REQD" value="Y"/>
<!-- Kernel 8.0 Lot 1 ITR1 SFR#01 <Start> -->
<!--
    <add key="MAX_CLOB_LEN" value="32512"/>
    <add key="DB_TIMEOUT" value="20"/>
    <add key="FCUBS_MSG_SCHEMA_CON_POOLNAME" value="KERNELDEV.WORLD"/>
    <add key="FCIS_MSG_SCHEMA_CON_POOLNAME" value="FCIS_MSG_SCHEMA"/>
-->
<!-- Kernel 8.0 Lot 1 ITR1 SFR#01 <End> -->
<add key="IB_EJB_JNDI_NAME" value="SSIAD_EJB_Bean"/>
<add key="IB_EJB_SERVER_URL" value="ormi://10.80.161.40:23791"/>
<add key="IB_EJB_CTX_FACTORY" value="com.evermind.server.rmi.RMIInitialContextFactory"/>
<add key="IB_EJB_SECURITY_PRINCIPAL" value="oc4jadmin"/>
<add key="IB_EJB_SECURITY_CREDENTIALS" value="oc4jadmin"/>
<add key="IB_EJB_CALL_TYPE" value="REMOTE"/>
<add key="IB_EJB_LOCAL_CALL" value="LOCAL"/>
<add key="IB_EJB_REMOTE_CALL" value="REMOTE"/>

<add key="SSIAD_EJB_MH_ENVELOPE" value="Inbound/InEnvelop/"/>
<add key="SSIAD_MH_PAYLOAD_PATH" value="Inbound/InPayload/"/>
                <!-- XSL -->
<add key="XSL_PATH" value="D:/KERNEL_SSIAD_OC4J/SSIAD_EJB/XSL/"/>
<!-- Kernel 8.0 Lot 1 ITR1 SFR#01 <Start> -->
<add key="SSIAD_EJB_XSL" value="SSIAD_EJB_XSL.xsl"/>
<!-- Kernel 8.0 Lot 1 ITR1 SFR#01 <End> -->
                <!-- Client -->
<add key="EJB_OBJ_PATH" value="C:/Documents and Settings/Default User/ejb/obj"/>
                    <!-- MISCELLANEOUS PROPERTIES -->
<add key="LOGGER_PATH"
                value="D:/KERNEL_SSIAD_OC4J/SSIAD_EJB/config/ssiad_ejb_logger.xml"/>
<!-- Kernel 8.0 Lot 1 ITR1 SFR#01 <Start> -->
<add key="MSG_REPOLL_SLEEP_TIME" value="1000"/>
<!-- Kernel 8.0 Lot 1 ITR1 SFR#01 <End> -->
```

B. Configure logger parameters

- Edit <KERNEL_INSTALL_DIR>/SSIAD_EJB/config/ssiad_ejb_logger.xml file to change the value of the property "SSIAD.LOGGER.FPATH" to <KERNEL_INSTALL_DIR>/SSIAD_EJB/log/.

    eg. If the value of your <KERNEL_INSTALL_DIR> is D:/Kernel8.0, then the entry for this property will be,

<add key="SSIAD.LOGGER.FPATH" value="D:/Kernel8.0/SSIAD_EJB/log/"/>

 [NOTE: Give SSIAD.LOGGER.FPATH with forward slash (/) as file separator and remember to give a slash (/) at the end.]

C. Run the build file

- ✓ For WINDOWS
    - Go to the folder <KERNEL_INSTALL_DIR>\setup in the command prompt, type **"set_env"** and press enter.
    - Change directory to <KERNEL_INSTALL_DIR>\SSIAD_EJB\setup\OC4J in the command prompt, type **"ant"** and press enter.
- ✓ For UNIX
    - Go to the folder <KERNEL_INSTALL_DIR>/setup in the shell prompt, type **"set_env.sh"** and press enter.
    - Change directory to <KERNEL_INSTALL_DIR>/SSIAD_EJB/setup/OC4J in the shell prompt, type **"ant"** and press enter.

[NOTE: Please make sure that you get a message BUILD SUCCESSFUL after compilation.]

D. Deploy the EJB in Oracle 10g Application Server

1. Stop the application server.

- ✓ For WINDOWS
    - Set JAVA_HOME and ORACLE_HOME with the paths in your machine

        e.g.

        set ORACLE_HOME=D:\Oracle10gAS
        set JAVA_HOME=%ORACLE_HOME%\jdk

    - Go to the <APP_SERVER_HOME>/bin directory in the command prompt

        e.g. cd %APP_SERVER_HOME%\bin

    - Type oc4j –start

        This will start the server. Ensure that you get no error during start up. If the server start up is proper we shall get the following screen.

- ✓ For UNIX
  - – Set JAVA_HOME and ORACLE_HOME with the paths in your machine

    e.g.

    export ORACLE_HOME=/home/Oracle10gAS

    export JAVA_HOME=${ORACLE_HOME}/jdk

  - – Go to the <APP_SERVER_HOME>/bin directory in the command prompt

    e.g. cd ${APP_SERVER_HOME]/bin

  - – Type **oc4j –shutdown –port 23791 –password <admin_password>**

    e.g. oc4j –shutdown –port 23791 –password oc4jadmin

    This will stop the server.

2. **Start the application server.**

- ✓ For WINDOWS
  - - Set JAVA_HOME and ORACLE_HOME with the paths in your machine.

    e.g.

    set ORACLE_HOME=D:\Oracle10gAS
    set JAVA_HOME=%ORACLE_HOME%\jdk

  - – Go to the <APP_SERVER_HOME>/bin directory in the command prompt

    E.g. cd %APP_SERVER_HOME%\bin

  - - Type **oc4j –start**

    This will start the server. Ensure that you get no error during start up. If the server start up is proper, the following be displayed on the command prompt.

- ✓ For UNIX
  - – Set JAVA_HOME and ORACLE_HOME with the paths in your machine.

    e.g.

    export ORACLE_HOME=/home/Oracle10gAS

    export JAVA_HOME=${ORACLE_HOME}/jdk

  - – Go to the <APP_SERVER_HOME>/bin directory in the command prompt

    E.g. cd ${APP_SERVER_HOME}/bin

  - – Type **oc4j –start**

    This will start the server. Ensure that you get no error during start up.

ORACLE®

3. Open the Administrative Console of Oracle Enterprise Manager

✓ Open an internet browser and type the OC4J Admin Console URL Address of the server.

e.g. http://10.80.4.116:8888/em

where, 10.80.4.116 is the machine IP Address on which OC4J is running.
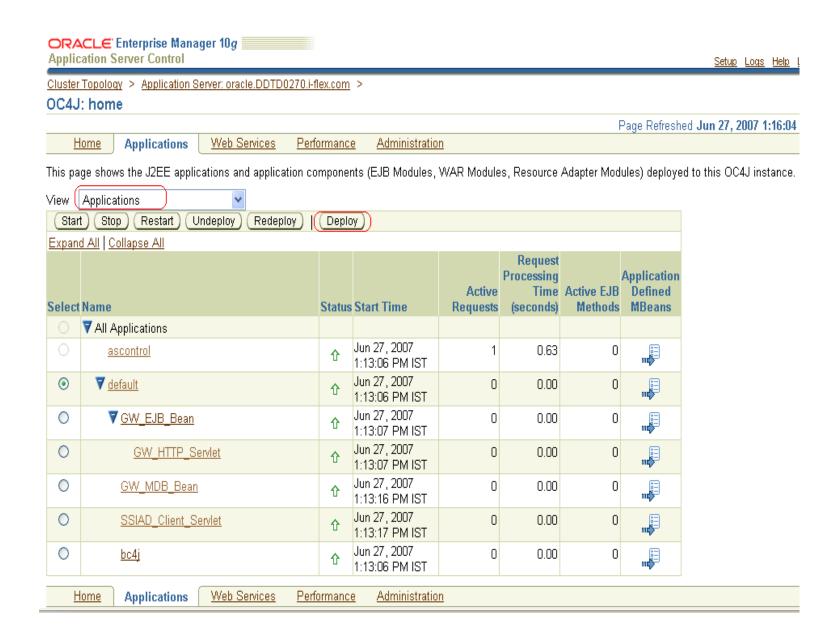

✓ Login to Administrative Console

Enter OC4J administrator username/password and press **Login**.

4. Deploying SSIAD_EJB_Bean.ear

✓ Click on Applications -> Deploy.

Archive

The following types of archives can be deployed: J2EE application (EAR files), Web Modules (WAR files), EJB Modules (EJB JAR files) and Resource Adapter Modules (RAR files).

⦿ Archive is present on local host. Upload the archive to the server where Application Server Control is running.

   Archive Location   D:\KERNEL_SSIAD_OC4J\SSIAD_EJB\build\SSIAD_EJB_Bean.ear   Browse...

○ Archive is already present on the server where Application Server Control is running.

   Location on Server   [   ]

   The location on server must be the absolute path or the relative path from j2ee/home

Deployment Plan

The deployment plan is an XML file that contains the deployment settings for an application. If you do not have a deployment plan, one will be created automatically during the deployment process. Later in the deployment process, you can optionally edit the deployment plan and save it for a future deployment of this application.

⦿ Automatically create a new deployment plan.

   The deployment plan settings will be based on OC4J defaults and information contained in the archive

○ Deployment plan is present on local host. Upload the deployment plan to the server where Application Server Control is running.

   Plan Location   [   ]   Browse...

E. Notifying the SSIAD_EJB_Bean to start polling on Folder

✓ For Windows

1. Open a Command prompt
2. Go to <KERNEL_INSTALL_DIR>\setup
3. Type **set_env** and press Enter.
4. Go to <KERNEL_INSTALL_DIR>\SSIAD_EJB\client\OC4J
5. Type **runEJBClient START** and press enter

✓ For Unix

1. Go to <KERNEL_INSTALL_DIR>/setup
2. Type **chmod +x set_env.sh** and press Enter.
3. Type **set_env.sh** and Press Enter.
4. Go to <KERNEL_INSTALL_DIR>/ SSIAD_EJB /client/OC4J
5. Type **chmod +x runEJBClient.sh**
6. Type **runEJBClient.sh START** and press Enter

F. Canceling the SSIAD_EJB_Bean so as to stop polling on Folder

✓ For Windows

1. Open a Command prompt
2. Go to <KERNEL_INSTALL_DIR>/setup
3. Type **set_env** and press Enter.
4. Go to <KERNEL_INSTALL_DIR>/ SSIAD_EJB /client/OC4J
5. Type **runEJBClient STOP** and press enter

✓ For Unix

1. Go to <KERNEL_INSTALL_DIR>/setup
2. Type **chmod +x set_env.sh** and press Enter.
3. Type **set_env.sh** and Press Enter.
4. Go to <KERNEL_INSTALL_DIR>/ SSIAD_EJB /client/OC4J
5. Type **chmod +x runEJBClient.sh**
6. Type **runEJBClient.sh STOP** and press Enter
