

# Oracle® Retail Invoice Matching

Release Notes

Release 13.0.2.4

March 2009

---

This document highlights the major changes for Oracle Retail Invoice Matching (ReIM) Release 13.0.2.4. ReIM 13.0.2.4 includes enhancements, defect fixes, and updated documentation.

Oracle is making this hot fix patch available because some retailers do not wish to wait for the quarterly patch to apply and test individual defect fixes. Because this release falls outside of the regular patchset cycle, code fixes may be released, but separate documentation and translation files may be delayed.

Oracle Customer Support investigates submitted issues assuming that all released updates have been applied. It is the customer's decision when to apply a new release; however, delays in applying updates can complicate the support process.

## Applying Source Code

The Oracle Retail Invoice Matching Release 13.0.2.4 hot fix contains files that were modified since ReIM 13.0.2.3. For detailed information on the software fixes in this patch release, refer to the ReIM 13.0.2.4 patch set documentation located in the doc folder.

Before applying the patch source files over your code:

- Be sure that the latest Oracle Retail Merchandising (RMS) 13.0 patch set is installed. ReIM 13.0 users should be current with the latest RMS 13.0 patch set.

---

---

**Note:** Oracle Retail Invoice Matching 13.0 releases are tested only with the most recent RMS versions. You are free to run ReIM 13.0.2.4 with versions of RMS that are not the most recent, but be aware that Oracle Customer Support only addresses issues that can be re-created on the latest version of ReIM 13.0 running with the latest RMS 13.0 version.

---

---

- Note whether any modules have been customized. If so, the customizations must be reapplied to the new version of the module, or the fix may need to be applied to the custom version of the code.
- Copy the original files to a different directory before you copy over them, in case you need to refer to them at a later date.

## Running Scripts

Back up data before running any script, because the scripts provided *do not* preserve data. See defect reports for details.

Check with your database administrator to determine whether your database should be analyzed after a script is run. In many cases, analysis of the database is necessary to take advantage of new or modified indexes intended to improve performance of the application.

## Deploying the reim.ear File

If you have made no customizations to the initial release and you want to accept all modifications included in the Oracle Retail Invoice Matching Release 13.0.2 patch set, you can save time and effort by extracting the reim.ear file. The reim.ear file contains all the source code you need to run ReIM. You will still need to run scripts manually.

Most application servers will extract the .ear file automatically. See your server documentation for guidance about how to extract the .ear file. You may have to modify server configuration files.

After you extract reim.ear, you must modify the reim.properties file. You must then restart the server for your changes to take effect.

## Noteworthy Defect Fixes

The following defect fixes and enhancements are included in the ReIM 13.0.2.4 hot fix.

Defect Number	Summary
7590964	There is no provision to enter the supplier site in ReIM 13.
8265849	For item ID, long type needs to be changed to string type in ASHIPMENTBEAN and ISHIPMENTBEAN Java files.
8337722	When document type is selected in the Group Entry screen, an invalid error is displayed.

## EDI Load for Supplier Sites

With this release, if the vendor column in the EDI file is a supplier site instead of a parent supplier, the program will look up the parent supplier ID for that supplier site and use it on the invoice as the vendor\_id. The supplier site from the file is retained in a new column on the invoice called Supplier\_site.

## User Interface Modifications

As part of the fix to bug 7590964, changes have been made to several user interface windows. The following text summarizes the functional specifications for these user interface changes. Updates to the *Oracle Retail Invoice Matching User Guide* and *Oracle Retail Invoice Matching Online Help* are deferred until a later ReIM release.

## **Group Entry and Single Invoice Entry Windows**

The following changes have been made to the Group Entry and Single Invoice Entry windows.

### **Group Entry Window**

If supplier site functionality is on, the Supplier Site field is added on the Group Entry window. It is added as a default option as well as on the data entry section.

The following are logic changes for the Group Entry window.

#### **Defaults Section**

If the parent supplier is entered as the vendor, Supplier Site in the Defaults section and in the data entry section is left blank and grayed out. The supplier site cannot be entered as the Vendor in the data entry section.

When the Apply Defaults button is clicked, both the Parent Supplier and the Supplier Site fields in the data entry section of the screen are populated with values from the Defaults section and grayed out.

When Supplier Site is entered, default terms are based on the supplier site.

#### **Data Entry Section**

If default values were entered for Supplier Site, then Supplier Site is displayed and grayed out.

If the parent supplier was specified in the Defaults section, but not the supplier site, Supplier Site is not shown and is grayed out.

If default values were not entered for parent supplier or supplier site, the user can enter either the parent supplier or the supplier site.

If the supplier site is entered, the parent supplier information is populated. Default terms are based on the supplier site.

### **Single Invoice Entry Window**

If supplier site functionality is on, the Supplier Site field is added to the Single Invoice Entry window.

If the parent supplier is entered as the vendor, Supplier Site is grayed out. The supplier site cannot be entered in the Vendor field.

If the supplier site is entered, the supplier site name is displayed. The parent supplier information is displayed as the vendor name and number. Default terms are based on the supplier site.

### **Invoice Summary Match Find Window**

If supplier site functionality is on, the Supplier Site field is added to the Invoice Summary Match Find window.

If the supplier site is entered, the supplier site name is displayed. The parent supplier information is displayed as the vendor name and number. When a search is performed, only invoices and receipts associated with the supplier site are returned.

## Invoice Summary List Window

If supplier site functionality is on, and the supplier site is specified as a filter criterion on the Invoice Summary Match Find window, the supplier site ID and name are displayed in the header section of the window.

## Are Patches Cumulative or Incremental?

The Oracle Retail Invoice Matching Release 13.0.2.4 patch set contains the complete 13.0 Java JSP source, which can be applied directly. For database scripts, releases are incremental from patch to patch.

Each reim.ear file contains the most recent project code. This means that the most recent reim.ear file contains all of the compiled code you need to run the application. If you are installing Oracle Retail Invoice Matching for the first time in an environment, you only need to deploy the most recent reim.ear file.

All scripts that add, remove, or modify database objects are incremental, however. This means that a new install requires all scripts to be run in order, starting with those offered in the initial release and including all those in all subsequent patches.

If you generate your own Java binaries (.class files) from the source code (.java files), you also need to incrementally apply patches to the code shipped in the initial release. This includes manually removing any .java files that have been removed from the product. (See individual defect reports for information about the source code to remove). The compilation command only needs to be executed once after the most recent code is in place.

## Managing Fixes Received Between Quarterly Patch Sets

Because of the tight coupling of code in Oracle Retail Invoice Matching 13.0.x, you must make sure that you have the most recent patch when you apply a fix to a defect that you report.

When you receive a fix for an issue that you log between scheduled patch set releases, the fix typically is provided as a patch in the form of a .ZIP file that contains the documentation, source code, .ear file, and any required database scripts. The source code must be applied, and the application must be recompiled, and the application server must be restarted. Contact Oracle Customer Support for more information.

## Updated Documentation

The following documents have been updated and are included in the Oracle Retail Invoice Matching Release 13.0.2.4 hot fix release:

- *Oracle Retail Invoice Matching Data Model*
- *Oracle Retail Invoice Matching Operations Guide*
- *Oracle Retail Merchandising Batch Schedule*

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

#### **Value-Added Reseller (VAR) Language**

##### **Oracle Retail VAR Applications**

The following restrictions and provisions only apply to the programs referred to in this section and licensed to you. You acknowledge that the programs may contain third party software (VAR applications) licensed to Oracle. Depending upon your product and its version number, the VAR applications may include:

(i) the software component known as **ACUMATE** developed and licensed by Lucent Technologies Inc. of Murray Hill, New Jersey, to Oracle and imbedded in the Oracle Retail Predictive Application Server - Enterprise Engine, Oracle Retail Category Management, Oracle Retail Item Planning, Oracle Retail Merchandise Financial Planning, Oracle Retail Advanced Inventory Planning, Oracle Retail Demand Forecasting, Oracle Retail Regular Price Optimization, Oracle Retail Size Profile Optimization, Oracle Retail Replenishment Optimization applications.

(ii) the **MicroStrategy** Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.

(iii) the **SeeBeyond** component developed and licensed by Sun Microsystems, Inc. (Sun) of Santa Clara, California, to Oracle and imbedded in the Oracle Retail Integration Bus application.

(iv) the **Wavelink** component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Mobile Store Inventory Management.

(v) the software component known as **Crystal Enterprise Professional and/or Crystal Reports Professional** licensed by SAP and imbedded in Oracle Retail Store Inventory Management.

(vi) the software component known as **Access Via™** licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.

(vii) the software component known as **Adobe Flex™** licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.

(viii) the software component known as **Style Report™** developed and licensed by InetSoft Technology Corp. of Piscataway, New Jersey, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.

(ix) the software component known as **DataBeacon™** developed and licensed by Cognos Incorporated of Ottawa, Ontario, Canada, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.

You acknowledge and confirm that Oracle grants you use of only the object code of the VAR Applications. Oracle will not deliver source code to the VAR Applications to you. Notwithstanding any other term or condition of the agreement and this ordering document, you shall not cause or permit alteration of any VAR Applications. For purposes of this section, "alteration" refers to all alterations, translations, upgrades, enhancements, customizations or modifications of all or any portion of the VAR Applications including all reconfigurations, reassembly or reverse assembly, re-engineering or reverse engineering and recompilations or reverse compilations of the VAR Applications or any derivatives of the VAR Applications. You acknowledge that it shall be a breach of the agreement to utilize the relationship, and/or confidential information of the VAR Applications for purposes of competitive discovery.

The VAR Applications contain trade secrets of Oracle and Oracle's licensors and Customer shall not attempt, cause, or permit the alteration, decompilation, reverse engineering, disassembly or other reduction of the VAR Applications to a human perceivable form. Oracle reserves the right to replace, with functional equivalent software, any of the VAR Applications in future releases of the applicable program.
