This document highlights the major changes for this release of Oracle Retail Data Extractor.

---

**Note:** The non-sequential version number of this Oracle Retail application is intentional.

---

**Overview**

Oracle Retail Data Extractor (ORDE) provides data extraction capabilities for sourcing data from various Oracle Retail application data sources into a flat file format that facilitates loading into the Oracle Retail Insights family of analytic applications.

The primary characteristics of the Oracle Retail Data Extractor are:

- **Source Integration Solution:** The Retail Data Extractor provides data integration with source applications such as Oracle Retail Merchandising Foundation Cloud Service.

- **Performant ETL Code:** The Retail Data Extractor data processing tool, Oracle Data Integrator (ODI), offers high performance for the database batch processes on an Oracle database.

- **Extensibility:** The Retail Data Extractor ETL code can be customized and extended for client-specific needs.

**Oracle Retail Cloud Services and Business Agility**

Oracle Retail Cloud Service is hosted in the Oracle Cloud with the security features inherent to Oracle technology and a robust data center classification, providing significant uptime. The Oracle Cloud team is responsible for installing, monitoring, patching, and upgrading retail software.

Included in the service is continuous technical support, access to software feature enhancements, hardware upgrades, and disaster recovery. The Cloud Service model helps to free customer IT resources from the need to perform these tasks, giving retailers greater business agility to respond to changing technologies and to perform more value-added tasks focused on business processes and innovation.

Oracle Retail Software Cloud Service is acquired exclusively through a subscription service (SaaS) model. This shifts funding from a capital investment in software to an operational expense. Subscription-based pricing for retail applications offers flexibility and cost effectiveness.
Release 17.0.001

The following information highlights the major changes for Release 17.0.001 of Oracle Retail Data Extractor.

ODI Tech Stack Upgrade

ODI Tech Stack has been upgraded from 12.2.1.2.0 to 12.2.1.3.0 for RDE in this release. Release notes for ODI 12.2.1.3 are available here:

https://docs.oracle.com/middleware/12213/odi/release-notes/ODIRN.pdf

Functional Enhancements

The functional enhancements below are included in this release.

Item Diff Aggregates

Retail Insights now creates an internal level between Item Level 1 and Item Level 2, which aligns with the Oracle Retail Merchandising System (RMS) concept of item diff aggregates. This level is constructed using the combination of differentiators selected as aggregates in RMS. For example, if Item Level 1 represents a Style and the item diff aggregate is Color, then reporting on the Item Diff Aggregate level is equivalent to Style/Color.

To achieve this functionality, the interface in ORDE has been enhanced to extract the Item-Diff relationship from RMS.

Defect Fixes

The following are the noteworthy defect fixes for this release.

<table>
<thead>
<tr>
<th>Defect</th>
<th>Defect Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>RESA2RDE.KSH Should fail if no rdwt/rdwf files are found from RMS</td>
<td>27573141</td>
</tr>
<tr>
<td>Item Diff Aggregation</td>
<td>27458322</td>
</tr>
<tr>
<td>Return Transactions Enhancement For Original Transaction Id</td>
<td>26933589</td>
</tr>
<tr>
<td>J2EE agent related changes for ORDE</td>
<td>27524277</td>
</tr>
<tr>
<td>Add Revision Date Attribute To Purchase Order Dimension</td>
<td>27551852</td>
</tr>
</tbody>
</table>

Release 16.0.106

The following information highlights the major changes for Release 16.0.106 of Oracle Retail Data Extractor.

Defect Fixes

The following are the noteworthy defect fixes for this release.
Release 16.0.105
The following information highlights the major changes for Release 16.0.105 of Oracle Retail Data Extractor.

Defect Fixes
The following are the noteworthy defect fixes for this release.

<table>
<thead>
<tr>
<th>Defect</th>
<th>Defect Number</th>

</thead>
<tbody>
<tr>
<td>Base cost load is able to get data for unapproved items.</td>
<td>27125254</td>
</tr>
<tr>
<td>Inventory transfer fact needs to support currency conversions for from location, reporting on total transfers by location.</td>
<td>27282853</td>
</tr>
</tbody>
</table>

Release 16.0.104
The following information highlights the major changes for Release 16.0.104 of Oracle Retail Data Extractor.

Defect Fixes
The following are the noteworthy defect fixes for this release.

<table>
<thead>
<tr>
<th>Defect</th>
<th>Defect Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Return tender amounts are not captured correctly by RDE</td>
<td>26631807</td>
</tr>
<tr>
<td>Coupon dimension status not captured to C_LOAD_DATES</td>
<td>26694486</td>
</tr>
<tr>
<td>Secondary supplier name was not loaded by RDE</td>
<td>26662108</td>
</tr>
</tbody>
</table>

Release 16.0.103
The following information highlights the major changes for Release 16.0.103 of Oracle Retail Data Extractor.

Functional Enhancements
The functional enhancements below are included in this release.

Item Season Phase Functionality
The interface has been enhanced to extract the Item-Season-Phase relationship from RMS. Previously this was limited to Item-Season relationships.
Configurable End of Record Delimiter for Data Interfaces

RDE has been enhanced to utilize a configurable end-of-record delimiter to indicate the end of the record. This can be configured as one of the application parameters (carriage return is the default value). The job to construct sql*loader source flat files should be able to handle the configurable end-of-record parameter in order to construct correct flat files.

Defect Fixes

The following are the noteworthy defect fixes for this release.

</tbody>
</table>

Release 16.0.102

The following information highlights the major changes for Release 16.0.102 of Oracle Retail Data Extractor.

Functional Enhancements

The functional enhancements below are included in this release.

Unavailable Inventory Integration

- Unavailable inventory refers to inventory held at a location which cannot be sold to customers. This could be due to a variety of reasons, such as damaged goods, pending returns to vendor, or any other code used in RMS. This information is captured at two levels in RMS:
  - Current unavailable inventory by status code is written to INV_STATUS_QTY.QTY
  - Daily rollups of all unavailable inventory are written to ITEM_LOC_SOH_NON_SELLABLE_QTY
- This data will be extracted from RMS via newly added Retail Data Extractor programs.

Defect Fixes

The following are the noteworthy defect fixes for this release.
The following information highlights the major changes for Release 16.0.101 of Oracle Retail Data Extractor.

### Functional Enhancements

**Inventory Receipts**

Inventory receipts can be analyzed by the Tran Code attribute to distinguish between PO receipts and inventory receipts due to Transfers and allocation.

### Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at [http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc](http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc).

### Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

### Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

### Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit [http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info](http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info) or visit [http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs](http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs) if you are a...
