Oracle® Communications EAGLE

Software Upgrade Guide

Releases 45.x and 46.x

E54340 Revision 3

June 2016

ORACLE®

Oracle Communications EAGLE Software Upgrade Guide, Releases 45.x and 46.x

CAUTION: Use only the guide downloaded from the Oracle Technology Network (OTN) (http://www.oracle.com/technetwork/indexes/documentation/oracle-comms-tekelec-2136003.html). Before upgrading your system, access the My Oracle Support web portal (https://support.oracle.com) and review any Knowledge Alerts that may be related to the System Health Check or the Upgrade.

Before beginning this procedure, contact My Oracle Support and inform them of your upgrade plans.
Refer to Appendix F for instructions on accessing My Oracle Support.

List of Procedures

1. INTRODUCTION

1.1   Purpose and Scope

This document describes methods utilized and procedures executed to perform a software upgrade on any in-service EAGLE-based STP to EAGLE Software Release 45.0, 45.1, 46.0, 46.1, 46.2, or 46.3 as well as any future maintenance releases. The audience for this document includes Oracle customers as well as these Oracle Communications EAGLE groups: Software Development, Product Verification, Technical Communications, and Customer Service including the Upgrade Center and New Product Engineering. This document provides step-by-step instructions to execute any upgrade to Release 45.0 and beyond.

See appropriate upgrade kit instructions/references for the software upgrade of peripheral equipment.

1.2   References

1.2.1 External

[1] *EAGLE5 ISS 45.0 and above Health Check Procedure*, E54339, latest revision, Tekelec

[2] *EAGLE 5 45.0 Maintenance Manual*, 910-6666-001, latest revision, Tekelec

[3] *EAGLE 5 45.0 Database Administration – System Management*, 910-6665-001, latest revision, Tekelec

1.2.2 Internal

The following are references internal to Oracle. They are provided here to capture the source material used to create this document. Internal references are only available to Oracle personnel.

[4] EAGLE Hardware Field Baseline, 820-2410-01, latest revision, Tekelec.
[5] *TEKELEC Acronym Guide*, MS005077.doc, current revision
[6] Tekelec Eagle - Eng Release Mapping web page, http://devtools.nc.tekelec.com/cgi-bin/eng_eag.cgi, Tekelec.
[7] Tekelec CSR-PR Reports By Build, http://devtools.nc.tekelec.com/cgi-bin/release_desc.cgi
[8] Tekelec Tekpedia web page, http://tekpedia.ssz.tekelec.com/tekpedia/index.php/Methods_to_correct_distributed_network_database_(DDB)_inconsistencies, Tekelec.
[9] EAGLE 45.0 Product Functional Specification PF005994, latest version, GSS Product Management.
[10] EAGLE 45.1 Product Functional Specification PF006147, latest version, GSS Product Management.
[11] EAGLE 46.0 Product Functional Specification PF006165, latest version, GSS Product Management.

1.3   Software Release Numbering

To determine the correct GPL version numbers for the EAGLE® applications, refer to the appropriate internal release-mapping web tool or to the *Release Notice* located on **My Oracle Support** web portal. Appendix F describes how to access **My Oracle Support** web portal. For FOA releases or Engineering prototype releases, refer to internal references [6] in section 1.2.2.

Note: verifying the correct GPL versions, ensures that the system is being upgraded to the correct target software release.

1.4   Database Version Number

To determine the correct database version numbers for the EAGLE® release, refer to the appropriate internal release-mapping web tool. Appendix F describes how to access **My Oracle Support** web portal. For FOA releases or Engineering prototype releases, refer to internal references [6] in section 1.2.2.

1.5   Acronyms

Table 1. Acronyms

AWA	Alternate Work Area
DDB	Dynamic Database
DDL	Dynamic Data Load
E5-MDAL	EAGLE Maintenance Disk and Alarm Card
E5-OAM	EAGLE Operation, Admission, & Maintenance.
FAK	Feature Access Key
FOA	First Office Application
GA	General Availability
GLS	Generic Loading Service
GPL	Generic Program Load
GPSM	Legacy General Purpose Service Module
IMT	Interprocessor Message Transport
IS-NR	In Service - Normal
IS-ANR	In Service - Abnormal
KSR	Keyboard Send & Receive
LA	Limited Availability
LIM	Link Interface Module
LNP	Local Number Portability
LSMS	Local Service Management System
MCPM	Measurement Collection and Polling Module
MPS	Multi Purpose Server
MSD	Media Software Delivery
OAM	Operations Administration and Maintenance
OAP	Operations, Administration and Maintenance Applications Processor
OOS-MT	Out Of Service - Maintenance
RMD	Removable Media Drive/Disk such as USB
SAK	Software Access Key
SATA	Serial ATA
SEAS	Signaling Engineering and Administration System
SSD	Server Software Delivery
STP	Signal Transfer Point
TDM	Terminal Disk Module
TPS	Transactions Per Second (feature)
UHC	Upgrade Health Check

For additional Acronyms; refer to internal references [5] in section 1.2.2.

Terminology

Table 2. Terminology

Backout (abort)	The process to take a system back to a Source Release prior to completion of upgrade and commitment to Target release. Includes restoration of source databases and system configuration.
DDay	Date of the start of the maintenance window of the upgrade execution.
E5-OAM system	An EAGLE running with E5-MCAP & E5-MDAL cards for front-end hardware.
Fixed disk based upgrade	An upgrade that uses the inactive partitions of the fixed disks as the workspaces to covert the data. With 9Gb and bigger hard drives, this is the expected method.
HHour	Hour at which the system enters upgrade phase 0 during upgrade execution.
Incremental upgrade	**EAGLE:** Upgrade to a maintenance release (external customers) or upgrade to a new build (internal test labs).
Intra-release upgrade	Any upgrade within a release; this includes incremental as well as full function upgrades where only the minor database version changes. Note: Intra-release upgrades are not covered by this document.
Intrusive Operation	Operation that impacts the redundancy of the system by isolation of the duplicate component.
Legacy system	An EAGLE running with GPSMII, TDM, & MDAL cards for front-end hardware. This hardware is obsolete beginning in Release 45.0.
Non-intrusive Operation	Operation that collects data and does not impact the redundancy of the system.
Non-preserving upgrade	"Upgrade" that does not adhere to the standard goals of software upgrade methodology. The outcome of the execution is that the system is running on the Target Release; however the Source Release database was **not** preserved.
Rollback	The process to take a system from a Target Release back to a Source Release including preservation of databases and system configuration.
Session 0	This is a new set of tasks required in the Upgrade Health Check #2 timeframe. The work needs to be accomplished successfully prior to the execution of the upgrade.
Source release	Software release from which the system is upgraded.
Target release	Software release to which the system is upgraded.
Upgrade Media	The USB thumb drives for E5-MCAP systems

Table 3. Generic VS. E5-OAM Terminology

Generic Term	E5-OAM Term
Drive Slot	Thumb Drive on the E5-MCAP
Fixed Disk	Sata Drive
MASP	E5-MCAP
Removable media	Removable media
RMD	USB Thumb Drive
Upgrade media	USB Thumb Drive

1.6 Recommendations

1. It is recommended that command input and command-line/scroll-area output be captured during the execution of an upgrade. The preferred method is the use of two serial terminals; one used to enter commands and to echo to the second, which is set to capture all output except for traffic-related unsolicited messages. These terminals should be configured as KSR type. Another acceptable method is the use of one serial terminal, which has a terminal-emulation application that supports input/output capture. This terminal should be set to the KSR type. It is unacceptable to use a telnet terminal since it does not support the echo capability. Serial terminals are designated ports 1 – 16 and telnet terminal are designed ports 17 and above.

2. It is recommended that measurement collection be retrieved prior to upgrade execution because, if the MCPM or Intergrated Measurements features are not enabled, the data collected will not be persistent across the upgrade. Inhibiting measurements does NOT stop collection that is already in progress. OAM-based measurements are inhibited on the next cycle. It is recommended that time should be given to allow the current cycle to complete. Those procedures that inhibit measurements manually contain steps to ensure that current collection is complete.

3. It is recommended that the OAP terminals be turned down for SEAS-enabled systems and others with high OAP traffic. If OAP terminals are not inhibited, any database updates successfully entered during the period between the last database backup and Upgrade Phase 0 are lost if it becomes necessary to fall back to the source release using the spare E5-MASP.

4. It is recommended that the Measurements Platform NOT be shut down and the Measurement Collection and Polling Module (MCPM) cards NOT be inhibited.

5. It is recommended to issue the command in Procedure 8, Step 1 with the threshold type assigned to SET (Card Set network conversion method.) In addition, it is recommended that the card sets be created with the number of service card sets assigned to 2 and the number of link card sets to 4. The following command is issued in Procedure 8, Step 1:

   ACT-UPGRADE:ACTION=CONVERTSTP:SRC=FIXED

   Based on a system's configuration and customer objectives, the SRVSETS and LIMSETS parameters of the CHG-UPGRADE-CONFIG comand may be adjusted. Refer to Appendix B.2for the procedure to configure the Card Set network conversion method. If the network conversion phase of the upgrade is pushing the execution of the upgrade outside the maintenance window the configuration can be altered to reduce the execution time. Please go to Appendix F to contact support to determine the recommended course of action.

6. Although an IP telnet terminal may be configured, the terminal is not recommended for use in the upgrade process because it does not support echo and capture mode. Any application connected via a Telnet session through an IPSM card, should be configured for interruption during the upgrade. That application's configuration procedure needs to be provided by the application's manufacturer.

7. The following commands obtain the current system status. It is recommended that the following commands be run in order to obtain the current system status in the following situations: 1) prior to executing the upgrade, 2) the upgrade terminates prior to successful completion and 3) before re-starting the upgrade. The commands should be issued in addition to the diagnosis of the any terminating condition. This status is not complete and inclusive, additional commands, which are deemed relevant, can be run at that time.

   ```
   REPT-STAT-SYS
   REPT-STAT-GPL:DISPLAY=ALL
   REPT-STAT-CARD
   REPT-STAT-SLK
   REPT-STAT-TRBL
   RTRV-TRBL:NUM=25:LOC=<1113|1115>
   RTRV-STP
   ACT-UPGRADE:ACTION=DBSTATUS
   ```

2. GENERAL DESCRIPTION

This document defines the step-by-step actions performed to execute a software upgrade of an in-service EAGLE® STP from the source release to the target release.

Figure 1 - Upgrade Process shows the general steps for all processes of performing a software upgrade, from hardware inventory to final upgrade health check.

Figure 1 - Upgrade Process
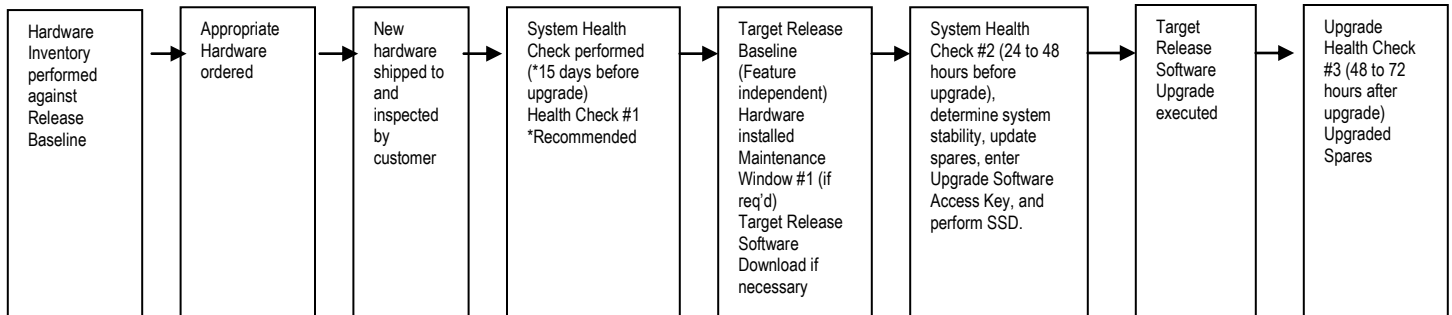

Table 4 contains a checklist of the steps required to successfully complete the upgrade process.

Upgrade Process Task	Date completed	Reference
Hardware Inventory		
Hardware Ordered		
New Hardware received		
System Health Check #1 performed.		[1]
System Health Check #1 output verified		
Target Release Baseline Hardware installed		
Target Software Release download (via Electronic Software Distribution or Upgrade Media).		[Appendix B.1.]
System Health Check #2 performed.		[1]
Enter Upgrade Software Access Key		[Appendix C]
Configure Network Conversion Method.		[Appendix B.2]
System Health Check #2 verified		
Software Upgrade Session 1 completed		
Health Check #3 performed.		[1]
Software Upgrade Session 2 completed		

Table 4. Upgrade Tasks to be completed

During the software upgrade execution, phase flags are displayed in the output messages to indicate upgrade progress. The output messages shown in this document are for example purposes only and do not display upgrade phase values unless a specific request to verify the phase is given, i.e., Procedure 6, step 15. The goal in doing this is to make this document describe the generic upgrade procedure.

Table 5. Phases of Upgrade Execution shows the phase flags displayed during the upgrade process. These flags are used to indicate the progress made by the upgrade function. The internal upgrade processing, which is initiated by the activate-upgrade command, controls these flags.

Table 5. Phases of Upgrade Execution

Release Displayed	Phase Indicator[1]	Conversion	Software Running	Database Configuration
Source			Source	Source
Source	Phase 0	Database	Target	Source
Target	Phase 2	Database	Target	Target
Target	Phase 3	Network	Target	Target
Target			Target	Target

[1] Over the evolution of the upgrade process, Phase 1 is considered an error state.

3. UPGRADE OVERVIEW

This section provides a brief overview of the recommended method for upgrading the source release software that is installed and running on an EAGLE® STP to the Target Release software. The basic upgrade process and approximate time frame is outlined in Table 6. Upgrade Readiness Activities, Table 7. Pre-Upgrade Execution Activities, Table 8. Upgrade Execution Overview and Table 9. Post Upgrade Overview with the backout procedure shown in Table 10. Backout Procedure Overview.

It is assumed that upgrade of peripheral(s) is coordinated with and executed in parallel with the EAGLE upgrade to ensure that all work is performed within the maintenance window. Note that several variables affect the upgrade times shown in the tables – the timing values shown are estimates only.

The EAGLE has no known restriction that would prevent the upgrading of any peripheral in parallel with it.

3.1   Required Materials

1. One (1) source release system removable media.

2. One (1) target-release upgrade media for MSD or FTP server for remote download.

3. A valid EAGLE login ID and password with all user privileges enabled.

4. One (1) spare fixed disk at the source release: required in the event of recovery.

5. Capability to capture data via a printer, PC, or modem to allow remote access for **My Oracle Support** personnel.

6. List of GPLs from section 1.3 should be kept on hand for reference throughout the upgrade or refer to Appendix F to locate the Release Notice on **My Oracle Support** web portal.

7. The Software Access Key (SAK) must be available and entered (this activity should be done during the same maintenance window as the upgrade health check #2.)

3.2   Upgrade Preparation Overview

The activities listed in Table 6 need to be accomplished successfully prior to the maintenance window in which the upgrade is to be executed in. A day is equivalent to the period of time between scheduled maintenance windows.

Session / Phase	Time Frame	Activity	Impact
UHC #1	Dday – 7	Upgrade Health Check # 1	Non-intrusive
Session 0	Dday – 2	Target Release Software Download	Intrusive (format-disk, OAM boot)
UHC #2	Dday – 2	Upgrade Health Check # 2	Intrusive (H/W swap, IMT bus)
Session 0	Dday – 2	Configure Card-Set Network Conversion Method	Non-intrusive
Session 0	Dday – 2	Entering Upgrade Software Access Key	Non-intrusive

Table 6. Upgrade Readiness Activities

3.3   Pre-Upgrade Overview

The pre-upgrade procedures, shown in Table 7, may be optionally executed prior to entering the maintenance window. All of these activities are completed during Session 1.

Session / Phase	Time Frame	Activity	Impact
Pre-Phase 0	Hhour – 2	Verify Pre-Upgrade Requirements and Capturing Upgrade Data	Non-intrusive
Pre-Phase 0	Hhour – 2	Retrieve System's Node-Level Processing Option Indicators	Non-intrusive
Pre-Phase 0	Hhour – 2	Backing Up the Database	Non-intrusive
Pre-Phase 0	Hhour – 1	Updating the Source Release Spare E5-MASP	Non-intrusive
Pre-Phase 0	Hhour – 1	Verifying All Database	Non-intrusive
Pre-Phase 0	Hhour	Inserting Target Release System Removable Media.	Non-intrusive

Table 7. Pre-Upgrade Execution Activities

3.4   Upgrade Execution Overview

The procedures, shown in Table 8, are executed in the maintenance window.

Session / Phase	Time Frame	Activity	Impact
Pre-Phase 0	Hhour	Retrieve measurements data reports	Non-intrusive
Phase 0	Hhour	Initializing Front-End to Run in the Target Release.	Intrusive
Phase 0	Hhour	Verifying all Databases	Non-intrusive
Phase 0 & 2	Hhour	OAM Conversion	Intrusive
Phase 3	Hhour	Network Conversion	Intrusive

Table 8. Upgrade Execution Overview

The procedures, shown in Table 9. Post Upgrade Overview

, are executed in the maintenance window.

Session / Phase	Time Frame	Activity	Impact
Phase 3	Hhour + 3	Completing Upgrade/Return to Full Function Mode.	Non-intrusive
Post-upgrade	Hhour + 3	Backing Up Converted Database	Non-intrusive
Session 2	Dday + 2	Upgrading Removable Media	Non-intrusive
Session 2	Dday + 2	Backing Up Fixed Disk	Non-intrusive
Session 2	Dday + 2	Upgrade Spare Fixed Disk.	Intrusive
Session 2	Dday + 2	Verifying All Databases.	Non-intrusive

Table 9. Post Upgrade Overview

3.5   Backout Procedure Overview

The procedures, shown in Table 10. Backout Procedure Overview, are executed in the maintenance window.

Session / Phase	Time Frame	Activity	Impact
Phase 0 - 3	Hhour	Load and Run Source OAM	Non-intrusive
Phase 0 - 3	Hhour	Full fallback using Fixed Disk as OAM conversion workspace – Case 1 Or Full fallback using Fixed Disk as OAM conversion workspace – Case 2 Or Full fallback using Fixed Disk as OAM conversion workspace – Case 3	Intrusive
Phase 0 - 3	Hhour	Network Conversion to Source Release	Intrusive

Table 10. Backout Procedure Overview

4. UPGRADE PREPARATION

- Perform hardware inventory to identify any hardware not supported by the target release baseline.

- Bring all non-supported hardware up to baseline (to be coordinated with **My Oracle Support** personnel).

- Perform pre-upgrade system health checks to establish that the system is fit to upgrade.

- Download target release software if necessary (E5-MASP) or capability available.

- Configure network conversion to use Card-Set method.

- Enter upgrade Software Access Key (SAK).

4.1   Hardware Upgrade Preparation

Before the upgrade execution, the customer site should have three source-release fixed drives (E5-TDMs \ Sata fixed drives) and at least one source-release removable media (two if using SSD). If MSD, a target-release upgrade media drive (USB drives for E5-MASP systems) must be created as outlined in appendix B1 before the upgrade. Before the target release installation, the spare equipment inventory should be as shown in Table 11 and Table 12.

Table 11. Equipment Inventory before Upgrade if media software delivery (MSD)

Equipment	In-service	Spare	Upgrade	Totals:
Source-release fixed drives	2	1	0	3
Source-release removable media	1	0	0	1
Target-release fixed drives	0	0	0	0
Target-release upgrade media	0	0	1	1

Table 12. Equipment Inventory before Upgrade if server software delivery (SSD)

Equipment	In-service	Spare	Upgrade	Totals:
Source-release fixed drives	2	1	0	3
Source-release removable media	2	0	0	2
Target-release fixed drives	0	0	0	0
Target-release upgrade media	0	0	0	0

During the procedure, both the active and standby in-service source-release E5-TDMs are converted to the target release and the spare is reserved in case a fallback to the source release is required. Upon completion of the procedure, the spare equipment should be as shown in Table 13 and Table 14. **NOTE:** the spare E5-TDM and source-release RMDs are upgraded to the target release in the second session. This allows a soak period for the target release and the possibility to fallback to the source release.

Table 13. Spare Equipment after Upgrade if media software delivery (MSD)

Equipment	In-service	Spare	Upgrade	Totals:
Source-release fixed drives	0	0	1	1
Source-release removable media	0	0	1	1
Target-release fixed drives	2	0	0	2
Target-release upgrade media	1	0	0	1

Table 14. Spare Equipment after Upgrade if server software delivery (SSD)

Equipment	In-service	Spare	Upgrade	Totals:
Source-release fixed drives	0	0	1	1
Source-release removable media	0	0	1	1
Target-release fixed drives	2	0	0	2
Target-release upgrade media	1	0	0	1

4.2   Software Upgrade Preparation

In releases 45.x and 46.0, it is necessary for the customer to obtain a Software access Key (SAK) from Oracle to perform the upgrade; the SAK should be entered during System Health Check #2 (see Appendix C). The SAK is used in the validation of the target release software. In release 46.1 and higher, it is not neccessay for the customer to obtain a SAK. Also, the target release software needs to be loaded onto the inactive partition of the E5-TDMs (see Appendix B). The release can either be downloaded from the E5-MASP upgrade media (USB drive) or via an FTP server. In order to utilize this software download capability via an FTP server, the EAGLE must have an IPSM Card installed in the system. See General Description section for general steps and timeline associated with the upgrade process.

5. SOFTWARE UPGRADE PROCEDURE

Call the Oracle support hotlines [see Appendix F] prior to executing this upgrade to ensure that the proper media are available for use.

Before upgrade, users must perform the EAGLE system health check [1]. This check ensures that the system to be upgraded is in an upgrade-ready state. Performing the system health check determines which alarms are present in the system and if upgrade can proceed with these alarms.

**** WARNING *****

If there are cards in the system, which are not in IS-NR state, these cards should be brought to the IS-NR before the upgrade process is started. If it is not possible to bring the cards IS-NR, contact My Oracle Support [see Appendix F]. If any card cannot be brought in-service, the card should be inhibited after entering Phase 2 (during procedure 8). If any GLS card is in OOS-MT or IS-ANR state, none of the SCCP or LIM cards will load. If any LIM card is in OOS-MT state, this will prohibit the STPLAN cards from loading. The sequence of upgrade is such that cards providing support services to other cards will be upgraded first.

**** WARNING *****

Do not start the upgrade process without the required spare equipment; without spare equipment, recovery procedures cannot be executed!

Please read the following notes on upgrade procedures:

1. Procedure completion times shown here are estimates. Times may vary due to differences in database size, user experience, and user preparation.
2. Command steps that require user entry are indicated with white-on-black step numbers.
3. The shaded area within response steps must be verified in order to successfully complete that step.
4. Where possible, EXACT command response outputs are shown. EXCEPTIONS are as follows:
   - Banner information is displayed in a format form only.
   - System-specific configuration information such as **card location**, **terminal port # assignments,** and **system features.**
   - ANY information marked with "XXXX" or "YYYY." Where appropriate, instructions are provided to determine what output should be expected in place of "XXXX or YYYY"
5. After completing each step and at each point where data is recorded from the screen, a check box should be provided.
6. Captured data is required for future support reference.
7. Each procedural step is numbered chronologically within each procedure.

5.1 Software Upgrade Execution – Session 1

Procedure 1: Verifying Pre-Upgrade Requirements and Capturing Upgrade Data

S T E P #	This procedure verifies that all pre-upgrade requirements have been met.
	Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.
	Should THIS PROCEDURE FAIL, Contact the Oracle support hotlines [see Appendix F] AND **ASK FOR UPGRADE ASSISTANCE.**

Procedure 1: Verifying Pre-Upgrade Requirements and Capturing Upgrade Data

1 ☐	Complete pre-upgrade tasks	`All tasks in Table 15 must be completed before continuing.`

Table 15. Pre-Upgrade Requirements

√	Tasks to be completed prior to upgrade execution
	Perform hardware inventory.
	Verify that all target-release baseline hardware has been installed. And any obsolete hardware has been replaced.
	Verify that a full complement of EAGLE® spares is available, including a source-release fixed disk. **Note**: This fixed disk's database should have been repaired in Upgrade Health Check [1].
	Verify that you have at least one source-release RMD with an up-to-date database. **Note**: This drive's database should have been backed up in Upgrade Health Check [1].
	Verify that you have one target-release upgrade media drives provided by Oracle for upgrade **Or** Target-Release software has been downloaded to the inactive disk partitions (see section 4.2)
	Verify that you have a copy of the Target Release's System Release Notes (see section 1.3.)
	Verify that an EAGLE system health check has been performed and the output capture file has been validated by My Oracle Support.
	Perform upgrade time calculations to ensure that the upgrade can be completed within the window.
	Collect all measurement reports.
	Verify that all required documentation is included in the upgrade kit. [See section 4.2]

Procedure 1: Verifying Pre-Upgrade Requirements and Capturing Upgrade Data

2 ☐	Issue the command to display terminal status.	`rtrv-trm`
3 ☐	Response to retrieve terminal command is displayed. Record the terminals in the TRM column that have TYPE of PRINTER[2]. Also record the terminal being used to enter commands (the user terminal)[3] Or terminals used by external applications that issue commands to the EAGLE. In this example, terminal 12 is a printer, terminal 10 is the user terminal, and terminal 2 is KSR. Capture _____ [2] _____ USER _____ [3] Ext. Application: _____ [4] **See recommendation #1 & #6 in section 1.6** If **not** echoing to the printer or KSR, go to step 8. Record the initial output group configurations for the user's and capture terminals. Also, record the user's TMOUT value.	<pre> eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y
    rtrv-trm
    Command entered at terminal #10.

;</pre> |

---

[2] Terminals with type equal to KSR as well as type equal to printer, which are configured, need to be recorded. Terminal being used to capture cannot be a Telnet terminal, see recommendation #6 in section 1.6

[3] The user terminal cannot be a Telnet terminal, see recommendation #6 in section 1.6.

[4] If an external application is connected via a Telnet terminal on an IPSM card, see recommendation #6 in section 1.7.

[5] If the system displays continuous UAMs and the source of the UAMs are known issues, turn off the associated output groups to limit the information sent to printer\KSR terminal port.

Procedure 1: Verifying Pre-Upgrade Requirements and Capturing Upgrade Data

8 ☐	If the output group and timeout on the user terminal are not set correctly, issue the command to change terminal timeout and display groups.	`chg-trm:trm=USER:all=no:sa=yes:sys=yes:db=yes:tmout=0` (Where the value of *USER* is the user terminal number shown in Step3)
9 ☐	Response to change terminal command is displayed.	```eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y chg-trm:trm=USER:sa=yes:sys=yes:db=yes:tmout=0 Command entered at terminal #10. ;```
10 ☐	Issue the command to display the system features	`rtrv-feat`
11 ☐	Response to retrieve features command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y EAGLE FEATURE LIST GTT = on GWS = on NRT = off X25G = off LAN = on CRMD = off SEAS = off LFS = off MTPRS = off FAN = on DSTN5000 = off WNP = off CNCF = off TLNP = off SCCPCNV = off TCAPCNV = off IPISUP = off X252000 = off PLNP = off NCR = off ITUMTPRS = on SLSOCB = off EGTT = on VGTT = on MPC = on ITUDUPPC = on MEASPLAT = on TSCSYNC = off E5IS = off ;```
12 ☐	Issue the command to display the FAK features.	`rtrv-ctrl-feat`
13 ☐	Response to retrieve command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y The following features have been permanently enabled: Feature Name Partnum Status Quantity The following features have been permanently enabled: Feature Name Partnum Status Quantity FEATURE_A XXXXXXXX on ---- FEATURE_B XXXXXXXX on nn The following features have been temporarily enabled: Feature Name Partnum Status Quantity Trial Period Left Zero entries found. The following features have expired temporary keys: Feature Name Partnum Zero entries found.```
14 ☐	Issue the command to display the system serial number.	`rtrv-serial-num`
15 ☐ ☐ ☐	Response to retrieve command is displayed. Record the system serial number as shown: SN: _____ Additionally, record in Appendix E. Verify the serial number is locked.	``` rtrv-serial-num Command entered at terminal #4. ; eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y System serial number = nt00009999 System serial number is locked.```
16 ☐	Issue the command to retrieve records from the event log.	`rtrv-log:dir=bkwd:edate=YYMMDD:etime=HHMMSS:snum=XXXX:enum=YYYY:num=NNN` (Where *YYMMDD* is today's date and *HHMMSS* is one hour ago.) (Where *XXXX*, *YYYY*, and *NNN* are the values listed in Table 16.)

    REPAIR: MASP A - Repair from fixed disk complete.
;
``` |

| 10 ☐ | Place original standby E5-MASP in system. | ☐ Slide the MASP H/S switch (SW3) on the standby MASP up to the unlocked position (Wait for all drive LEDs to transition to a steady blue).

☐ Remove the standby E5-MASP card determined in step 2.

☐ Insert the original standby E5-MASP card.

☐ Slide the MASP H/S switch (SW3) on the original standby MASP down to the locked position (Wait for the MASP H/S LED to transition from blinking blue to off and the MASP to come up in standby mode).

Note: UAMs are generated during this step. An audible alarm is generated.
Wait for the original standby E5-MASP to come up in standby mode and system returns to duplex mode. |

Procedure 4: Verifying All Databases

S T E P #	This procedure verifies that all databases are coherent and at the same level, which includes current and backup partitions on both fixed disks. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT <u>My Oracle Support</u> AND **ASK FOR <u>UPGRADE ASSISTANCE</u>.**

1 ☐	Issue the command to display database information.	```rept-stat-db:display=all```

| 2 ☐<br><br>☐<br><br>☐<br><br>☐<br><br>☐<br><br>☐ | Response to the command is displayed.<br><br>Look in the columns labeled 'C,' 'T', and 'LEVEL' output by this command.<br><br>Verify entries in column 'C' show 'Y', which indicates coherence.<br><br>Verify entries in column 'T' show 'N' (backup and RMD may show a dash), which indicates that the database is not in transition.<br><br>Verify all entries in the database LEVEL column are the same. LEVEL is a value, which varies depending on the system.<br><br>If the STDBY databases are not coherent or at the correct level, repeat Procedure 3, step 8.<br><br>Verify that the MPS databases are coherent. | ```

Procedure 5: Initializing MASPs to Run on Target-Release GPLs

S T E P #	This procedure loads the target-release GPL to both MASPs. This procedure requires that both MASPs be rebooted (one at a time) and verified as running the target-release GPLs. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR UPGRADE ASSISTANCE.**
1 ☐	Remove the USB flash drives from E5-MASPs.	`Note: the target-release is assumed to have been downloaded to the inactive partition prior to the execution of this procedure (see section 4.2.)`
2 ■	Inhibit the standby MASP	`INH-CARD:LOC=XXXX` (Where *XXXX* is the location of the standby MASP slot recorded in Procedure 3, Step 2)

3 ☐ ☐	Response to the inhibit command is displayed
	
	Verify UAM 514 is displayed.
		`    eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y`
		`    Card is inhibited.`
		`;`
		
		`    eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y Upg Phase x`
		`**  5045.0514 ** CARD XXXX OAMHC         Standby MASP is inhibited`
		`;`
		
		Note: Wait for the card to boot and return to the IMT bus.

4 ■	Download target-release flash to the standby MASP.	`INIT-FLASH:LOC=XXXX:CODE=TRIAL` (Where *XXXX* is the location used in the previous command)

5 ☐ ☐	Response to flash initialization is shown.
	
	Verify UAM 0004 is displayed.
		`    eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y`
		`     FLASH Memory Download for card xxxx started.`
		`;`
		`    eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y`
		`    FLASH Memory Download for card xxxx completed.`
		`;`
		`    eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y`
		`*   8003.0004  * GPL SYSTEM BLMCAP       Card is running non-activated GPL`
		`;`
		
		Note: Wait for card to boot and return to the IMT bus.

6 ■	Retrieve the GPLs running on the card location.	`REPT-STAT-GPL:LOC=XXXX` (Where *XXXX* is the location used in the previous command)

7 ☐	Response to the card status command is displayed.
	
	The card should be running the trial version of the GPL. If the approved and trial versions are the same no ALM will be present.
		`    eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y`
		`    GPL        CARD      RUNNING            APPROVED      TRIAL`
		`    OAMHC      1113      -----------        -----------   -----------`
		`               BLMCAP    YYY-YYY-YYY ALM+   XXX-XXX-XXX   YYY-YYY-YYY`
		
		`    Command Completed.`
		`;`

8 ☐	Run the target-release GPL on the standby MASP	`ALW-CARD:LOC=XXXX:CODE=INACTIVEPRTN` (target release on the inactive partition) (Where *XXXX* is the location of the standby MASP used in the previous command)

9 ☐	Response to allow-card command is shown.	`    eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y`
		`    Card has been allowed.`
		`;`

10 ■	Retrieve status of the MASPs	`REPT-STAT-GPL:GPL=OAMHC`

Procedure 5: Initializing MASPs to Run on Target-Release GPLs

| **11** ☐ | Verify standby MASP running target release GPL. The standby MASP will display ALM to indicate that the card is not running the approved version GPL. | ```
eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y
GPL Auditing  ON

GPL       CARD     RUNNING            APPROVED       TRIAL

5.3   Completion of Session 1

Procedure 9: Completing Upgrade/Return to Full-Function Mode

S T E P #	This procedure completes the upgrade and returns the system to full-function mode. Verification of the GPL distribution is also performed. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR UPGRADE ASSISTANCE.**
1 ☐	Issue the command to initialize both MASPs.	`INIT-CARD:APPL=OAM`
2 ☐	Response to the init command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y Upgrade Phase x init-card:appl=oam Command entered at terminal #10. ; ```
☐	Verify the banner display full-function mode after the MASPs boot.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y 0002.0009 CARD 1113 OAMHC MASP became active ; ```
3 ☐	Issue the command to log back in to the system.	`LOGIN:UID=XXXXXX` (Where *XXXXXX* is a valid login ID)
4 ☐	Response to login command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y User logged in on terminal 10. ; ```
5 ☐	Issue the command to reactivate printer capture.	`ACT-ECHO:TRM=P` (Where *P* is the terminal port number specified in Procedure 1, Step 4)
6 ☐	Response to printer capture command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y act-echo:trm=X Command entered at terminal #10. ; ```
7 ☐	Issue the command to display card status.	`REPT-STAT-GPL:DISPLAY=ALL`
8 ☐ ☐	Response to GPL status command is displayed. Verify that no "ALM" indicator is displayed. If GPL versions are not displayed, wait for the MASPs to return to service and re-issue the command.	``` eaglestp YY-MM-DD hh:mm:ss TTTT EAGLE5 XX.x.x-YY.yy.y GPL Auditing ON GPL CARD RUNNING APPROVED TRIAL OAMHC 1113 XXX-XXX-XXX ALM XXX-XXX-XXX XXX-XXX-XXX * BLMCAP XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX OAMHC 1115 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX * BLMCAP XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX ATMHC 1206 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX BLIXP XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 1209 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 1210 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR 1109 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR 1110 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX SS7HC 1201 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX BLIXP XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX SS7HC 1202 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX BLIXP XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX GLSHC 1213 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX BLIXP XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX GLSHC 1214 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX BLIXP XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX SCCPHC 1107 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX BLIXP XXX-XXX-XXX ALM XXX-XXX-XXX XXX-XXX-XXX SCCPHC 1111 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX BLIXP XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX Command Completed. ; ```
9 ☐	Establish system status	See recommendation # 7 in Section 1.6

Procedure 10: Backing up Converted Database

S T E P #	This procedure backs up the converted Target-Release database to the fixed disk and to either the removable media or the DB FTP server if provisioned. Verification of the converted database is also done. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR UPGRADE ASSISTANCE.**
1 ☐	If the target release was on the RMD, insert the target-release RMD. Then go to step 10 If a source-release RMD is available and the target release was on the inactive partition, insert the RMD[11], and continue Otherwise go to step 21.	Once inserted, allow time for the RMD to be detected by the system. RMD is inserted in the latched USB port on the active E5-MASP.
2 ☐	Issue the command to retrieve measurement status.	`rtrv-meas-sched`
3 ☐	Response to retrieve command is displayed. Record if collection is on or off: _____ Record if system configuration requires measurements to be on or off: _____ If COLLECT=ON, continue to next step. Otherwise, go to Step 6.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y COLLECT = off SYSTOT-STP = (off) SYSTOT-TT = (off) SYSTOT-STPLAN = (off) COMP-LNKSET = (off) COMP-LINK = (off) MTCD-STP = (on) MTCD-LINK = (on) MTCD-STPLAN = (on) MTCD-LNKSET = (on) ; ```
4 ☐	Issue the command to turn off measurement collection.	`chg-meas:collect=off`
5 ☐	Response to the change command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss zzzz PPP XX.x.x-YY.y.y chg-meas:collect=off Command entered at terminal #XX. ; eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y CHG-MEAS: MASP A – COMPLTD ; ```
6 ☐	Issue the command to format the RMD.	`FORMAT-DISK:TYPE=SYSTEM:FORCE=YES`
7 ☐ ☐	Response to format command is displayed. **If the format fails, first repeat the previous step, and then contact My Oracle Support.**	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y Format-disk of system removable cartridge started. Extended processing required, please wait. ; eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y Format-disk of system removable cartridge completed. ; ```
8 ☐	Issue the command to copy the GPLs to the RMD.	`COPY-GPL`

---

[11] DO NOT use the source release RMD created in Procedure 2.

→   This concludes SESSION ONE   ←

5.4   Upgrade Session 2

Procedure 11. Verifying Upgrade Session 2 Requirements

S T E P #	This procedure verifies that all upgrade session 2 requirements have been met. This procedure assumes an acceptable amount of soak time has occurred since the end of session #1. The expected norm for soak time is 48 hours. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR UPGRADE ASSISTANCE.**	
1 ☐	Complete pre-upgrade session 2 tasks	All tasks in Table 19 must be completed before continuing.

Table 19. Upgrade Session 2 Requirements

√	Tasks to be completed prior to upgrade session 2 execution
	Verify that an EAGLE system health check 3 has been performed.

Procedure 12: Upgrading Removable medias

S T E P #	This procedure describes how to update source-release removable media to the target release. See recommendation #2 in section 1.6. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR UPGRADE ASSISTANCE.**
1 ☐	Echo command input to capture terminal. See recommendation #1 & #6 in section 1.6	`act-echo:trm=P` (Where the value for *P* is one of the printer/KSR terminal port numbers recorded in Procedure 1, Step 3)
2 ☐	Response to activate command is displayed.	```eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y` ` act-echo:trm=P` ` Command entered at terminal #XX.` `;```
3 ☐	If capture terminal's output groups are not all set to YES, issue the change terminal command.	`chg-trm:trm=P:all=yes` (*P* is the terminal port that is specified in step 1)
4 ☐	Response to change terminal command is displayed.	```eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y` ` chg-trm:trm=P:all=yes` ` Command entered at terminal #XX.` `;```
5 ☐	If the measurements platform is enabled[12] go to step 9. Otherwise, issue the command to retrieve measurement status.	`rtrv-meas-sched`
6 ☐	Response to retrieve command is displayed. Record if collection is on or off: _____ Record if system configuration requires measurements to be on or off: _____ If COLLECT=ON, continue to next step. Otherwise, go to Step 9.	```eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y` ` COLLECT = off` ` SYSTOT-STP = (off)` ` SYSTOT-TT = (off)` ` SYSTOT-STPLAN = (off)` ` COMP-LNKSET = (off)` ` COMP-LINK = (off)` ` MTCD-STP = (on)` ` MTCD-LINK = (on)` ` MTCD-STPLAN = (on)` ` MTCD-LNKSET = (on)` `;```
7 ☐	Issue the command to turn off measurement collection.	`chg-meas:collect=off`
8 ☐	Response to the change command is displayed.	```eaglestp YY-MM-DD hh:mm:ss zzzz PPP XX.x.x-YY.y.y` ` chg-meas:collect=off` ` Command entered at terminal #XX.` `;`  ` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y` ` CHG-MEAS: MASP A – COMPLTD` `;```

---

[12] If enabled, the measurements platform feature is displayed in Procedure 1, Step 11.

Procedure 12: Upgrading Removable medias

9 ☐	Issue measurement report command.	`rept-meas:type=systot:enttype=stp`

10 ☐ ☐	Response to the command is displayed.
	
	If command fails, reattempt in five minutes until it completes, See Table 20.

Procedure 15: Upgrading Spare MUX cards

#	Instruction	Command / Response
11 ☐	Response to the command is displayed. Record the CARD locations for all MUX cards in the system not running the APPROVED version of the GPL.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y GPL Auditing ON APPL CARD RUNNING APPROVED TRIAL HIPR2 XX09 XXX-XXX-XXX ALM XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX10 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX09 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX10 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX BPHMUX XX09 XXX-XXX-XXX ALM XXX-XXX-XXX XXX-XXX-XXX BPHMUX XX10 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR XX09 XXX-XXX-XXX ALM XXX-XXX-XXX XXX-XXX-XXX HIPR XX10 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX Command Completed. ; ```
12 ☐	Enter the command to initialize the FLASH on a MUX card on the A-bus that is not running the APPROVED version of the GPL.	**init-flash:loc=*XX*09:code=appr** (Where *XX* = is a shelf number.)
13 ☐	Response to the flash initialization is shown.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y init-flash:loc=XX09:code=appr Command entered at terminal #10. ; eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y FLASH Memory Download for card XX09 Started. ; eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y FLASH Memory Download for card XX09 Completed. ; ```
14 ☐	Repeat steps 12-13 for each card recorded in step 11.	
15 ☐	Enter the command to initialize the current bus.	**init-mux:bus=a**
16 ☐	Response to the initialization command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y 5080.0014 CARD XX09 BPHMUX Card is present ; eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y 5081.0014 CARD YY09 BPHMUX Card is present ; eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y * 5082.0004 * GPL SYSTEM BPHMUX Card is running non-activated GPL ```
17 ☐	Issue the command to activate the flash on a MUX card flashed in step 12.	**act-flash:loc=*XX*09** (Where *XX* = is a shelf number.)
18 ☐	Response to the activate command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y FLASH Memory Activation for card 1209 Started. ; eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y FLASH Activation for card 1209 Completed. ; ```
19 ☐	Repeat steps 17-18 for each MUX card recorded in step 11.	
20 ☐	Issue the command to display the MUX card GPL status.	**rept-stat-gpl:gpl==*XXXX*** (Where *XXXX* = is bphmux for HMUX cards, hipr for HIPR cards, or hipr2 for HIPR2 cards.)
21 ☐	Verify that all MUX cards are running the approved GPL.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y GPL Auditing ON APPL CARD RUNNING APPROVED TRIAL HIPR2 XX09 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX10 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX09 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX10 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX09 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX10 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX09 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX HIPR2 XX10 XXX-XXX-XXX XXX-XXX-XXX XXX-XXX-XXX Command Completed. ; ```

Procedure 15: Upgrading Spare MUX cards

22 ☐	Repeat steps 10-21 for all MUX card types.	
23 ☐	Repeat steps 3-22 until all spare MUX cards have been flashed.	

Procedure 16: Verifying All Databases

S T E P #	This procedure verifies the databases on the fixed disk and the removable media. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT <u>My Oracle Support</u> AND **ASK FOR <u>UPGRADE ASSISTANCE</u>.**
1 ☐	Issue the command to display database information.	<pre>rept-stat-db:display=all</pre>

| **2** ☐ ☐ ☐ ☐ ☐ ☐ | Response to the command is displayed.

Look in the columns labeled 'C,' 'T', and 'LEVEL' output by this command.

Verify entries in column 'C' show 'Y', which indicates coherence.

Verify entries in column 'T' show 'N' (except the E5-MDAL), which indicates that the database is not in transition.

Verify all entries in the database LEVEL column are the same.
LEVEL is a value, which varies depending on the system.

If the STDBY databases are not coherent or at the correct level, repeat Procedure 3, step 8.

Verify that the MPS databases are coherent. | |

6. RECOVERY PROCEDURES

Before executing any of these procedures, contact My Oracle Support at Oracle Support Contacts Global Directory [see Appendix F.] In the event that other platforms are being upgraded in parallel, a determination whether recovery action is required on those platforms is required. Persons performing the upgrade should be familiar with these upgrade documents.

6.1 Backout Setup Procedures

Execute this section only if there is a problem and it is desired to revert back to the pre-upgrade version of the software.

<div style="border:1px solid black">

Warning
Do not attempt to perform these backout procedures without first contacting the
My Oracle Support at
Oracle Support Contacts Global Directory

</div>

6.2 Recovery Procedure A

Procedure 18: Load and Run Source OAM

S T E P #	Perform this Recovery Procedure in order to copy the BLMCAP GPLs from the source after performing procedures 19, 20, 21, or 22 when upgrading with the fixed workspace.
	Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.
	SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR UPGRADE ASSISTANCE.**
	When directed to by My Oracle Support, execute this procedure: After the completion of Procedure 19, 20, 21, and 22 (but not 23).
1 ☐	If a USB drive is present in the system, remove it.	
2 ☐	If recovering from release 46.3 or later back to a release of 46.2 or earlier, goto to step 16, else continue to next step.	
3 ☐	Insert source release media into the active MASP.	Once inserted, allow time for the source-release RMD to be detected by the system.
4 ☐	Issue the command to retrieve BLMCAP application data.	`rtrv-gpl:gpl=blmcap`
5 ☐	Response to rtrv-gpl command is displayed. Record the "REMOVE TRIAL" version: _____	``` eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y GPL Auditing ON GPL CARD RELEASE APPROVED TRIAL REMOVE TRIAL BLMCAP 1114 xxx-xxx-xxx xxx-xxx-xxx yyy-yyy-yyy ----------- BLMCAP 1116 xxx-xxx-xxx xxx-xxx-xxx yyy-yyy-yyy xxx-xxx-xxx ; ```
6 ☐	Issue the command to change the gpl.	`chg-gpl:gpl=blmcap:ver=xxx-xxx-xxx` *(Where xxx-xxx-xxx is the GPL version recorded in the previous step)*
7 ☐	Response to chg-gpl command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y BLMCAP upload to 1116 completed BLMCAP upload to 1114 completed System Release ID table upload to 1116 completed System Release ID table upload to 1114 completed ; ```

Procedure 18: Load and Run Source OAM

8 ☐	Issue the report card status command.	```rept-stat-card:appl=oam```

9 ☐ ☐	Response to the card status command is displayed.
	
	Record which MASP is Active and Standby.
	
	Record the card locations of the MASPs:
	
	Act MASP _____
	
	Stby MASP _____ [13]
		```eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y```
		```CARD VERSION TYPE GPL PST SST AST```
		```1113 XXX-XXX-XXX E5MCAP OAMHC IS-NR Active -----```
		```1115 XXX-XXX-XXX E5MCAP OAMHC IS-NR Standby -----```
		```Command Completed.```
		```;```

10 ☐	Remove the source-release RMD from the drive slot.	Store RMD in a safe place.
11 ☐	Repeat step 8 until the standby location is IS-NR in step 9	
12 ☐	Force a switchover by issuing initialize-card command.	```init-card:loc=YYYY``` **Where *YYYY* is the active MASP location recorded in step 16.**
13 ☐	Issue the command to log in to the system.	```login:uid=XXXXXX``` (Where *XXXXXX* is a valid login ID)
15 ☐	Response to login command is displayed.	```eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y``` ```User logged in on terminal X```
16 ☐	Issue the command to initialize both MASP cards.	```init-card:appl=oam```

17 ☐ ☐	Response to initialize command is displayed.
	
	Ensure that the release shown in the banner is the source release after the MASP becomes active again.
		``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y```
		```* 0261.0013 * CARD 111X OAMHC Card is isolated from the system```
		``` ASSY SN: xxxxxxxx```
		```;```
		
		``` eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y```
		``` 5001.0009 CARD 111X OAMHC MASP became active```
		```;```
		``` eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y```
		``` 5038.0014 CARD XXXX OAMHC Card is present```
		``` ASSY SN: xxxxxxxx```
		```;```

18 ☐	Continue to procedure C if directed by the My Oracle Support. Otherwise verify the system with the EAGLE health check [1]. [14]	

---

[13] The Standby MASP may report IS-ANR (and the Standby TDM may report OOS-MT|Isolated.) If so, check LEDs on the card. If LEDs are green, it is OK to proceed. This condition will clear after step 21.

[14] Command REPT-STAT-GPL:DISPLAY=ALL can be used to verify this step.

6.3   Recovery Procedure B

Procedure 19: Full Fallback using Spare E5-MASP

Procedure 19: Full Fallback using Spare E5-MASP

18 ☐	Issue the command to turn off measurement collection.[15]	`chg-meas:collect=off`

19 ☐	Response to the change command is displayed.	```eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y
		    chg-meas:collect=off
		    Command entered at terminal #10.
		;
		    eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y
		    CHG-MEAS: MASP A – COMPLTD
		;```

20 ☐	Inhibit the standby MASP.	`inh-card:loc=`*XXXX* (Where *XXXX* is location of standby MASP)

21 ☐	Response to the command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    Card has been inhibited.
		;
		    eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    Command Completed.
		;```

22 ☐	Bring the standby E5-MASP system back on the bus.	☐ Slide the E5-MASP H/S switch (SW3) on the standby MASP down to the locked position (Wait for E5MASP H/S LED to transition from blinking blue to a steady blue and the card to return to the IMT bus.)
23 ☐	Issue the command to initialize the flash memory.	`init-flash:code=appr:loc=`*XXXX* Where *XXXX* is the location for the Standby MASP.

24 ☐	Response to the init flash command is displayed.
	
	Wait for the downloading to complete.
		`` eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y
		    FLASH Memory Download for card xxxx started.
		;
		    eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y
		    FLASH Memory Download for card xxxx completed.
		;```

25 ☐	Issue the command to activate the flash on the standby MASP.	`act-flash:loc=`*XXXX* (**Where *XXXX* is the location for the Standby MASP.**)

26 ☐	Response to the activate command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    act-flash:loc=XXXX
		    Command entered at terminal #10.
		;
		    eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    FLASH Memory Activation for card XXXX Started.
		;
		    eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    FLASH Activation for card XXXX Completed.
		;```

27 ☐	Issue the command to allow card.	`alw-card:loc=`*XXXX* `Where `*XXXX*` is the location for the Standby MASP.`

28 ☐	Response to the command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    Card has been allowed.
		;
		    eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    Command Completed.
		;```

29 ☐	Issue the report card status command.	`rept-stat-card:appl=oam`

---

[15] If executed, this step causes the database level to increment.

Procedure 19: Full Fallback using Spare E5-MASP

30 ☐ ☐	Response from the retrieve command is displayed. Verify that the standby MASP is running the upgrade source release GPL.	``` eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y CARD VERSION TYPE APPL PST SST AST 1113 XXX-XXX-XXX E5MCAP OAMHC IS-NR Active ----- 1115 XXX-XXX-XXX E5MCAP OAMHC IS-NR Standby ----- Command Completed. ; ```
31 ☐	Issue the command to display security log status.	`rept-stat-seculog`

32 ☐ ☐	Response to the command is displayed.
	
	If the ENTRIES column displays any value other than 0 for the Standby ROLE, proceed to the next step.
	
	Otherwise, go to step 40
		``
		eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y

46 ☐	Replace the standby E5-MASP with the E5-MASP removed in step 5.	☐ Slide the MASP H/S switch (SW3) on the standby MASP up to the unlocked position (Wait for all drive LEDs to transition to a steady blue). ☐ Remove the standby E5-MASP card. ☐ Insert the spare E5-MASP card. ☐ Slide the MASP H/S switch (SW3) on the new standby MASP down to the locked position (Wait for the MASP H/S LED to transition from blinking blue to off and the MASP to come up in standby mode). Note: UAMs are generated during this step. An audible alarm is generated. Wait for the new standby E5-MASP to come up in standby mode and system returns to duplex mode.
47 ☐	Insert the source-release media into the system.	Insert an USB drive in the standby E5-MCAPs. Once inserted, allow time for the source-release RMD to be detected by the system
48 ☐	Repeat steps 23 - 41.	After completing Step 41 the second time, continue to Step 49.

Procedure 19: Full Fallback using Spare E5-MASP

49 ☐	If steps 18 & 19 were executed, issue the command to turn the measurements collection on.	`chg-meas:collect=on`
50 ☐	Response to change measurement command is displayed.	```eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y chg-meas:collect=on Command entered at terminal #10. ; eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y CHG-MEAS: MASP A - COMPLTD ;```
51 ☐	Execute Procedure 18.	
52 ☐	If this completes the recovery as directed by My Oracle Support, verify the system with the EAGLE health check [1]. Otherwise continue with Recovery Procedure C	**If failure occurred prior to entering Phase 3, recovery is complete.**

Procedure 20: Full Fallback using Fixed Disk as OAM conversion workspace – Case 1

S T E P #	Perform the recovery procedure if directed to do so by <u>My Oracle Support</u> when failure occurs in Procedure 6 through Procedure 8, Step 1. Note, this procedure is done in lieu of Procedure 18 for the case where a removable disk was NOT used as the workspace for the OAM conversion. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT <u>My Oracle Support</u> AND **ASK FOR <u>UPGRADE ASSISTANCE</u>.**
	When directed to by <u>My Oracle Support</u>, execute this procedure: If failure occurred between Procedure 6 and Procedure 8, Step 1, Table 18, Item E.

1 ☐	Only perform this procedure if directed by <u>My Oracle Support</u>.	
2 ☐	If present, remove the target-release media from the system.	
3 ☐	Issue the command to initialize both MASP cards.	`init-card:appl=oam`

4 ☐
 	
☐
	Response to initialize command is displayed.
	
	Ensure that the release shown in the banner is the source release after the MASP becomes active again.

Procedure 21: Full Fallback using Fixed Disk as OAM conversion workspace – Case 2

35 ☐	Determine the status of the GPLs running on the card location.	`rept-stat-gpl:loc=`*XXXX* (**Where** *XXXX* **is the location for the Standby MASP**.)
36 ☐ ☐	Response from the status command is displayed. Verify that the standby MASP is running the upgrade source release GPLs. Verify that no "ALM" indicator is displayed.	```eaglestp YY-MM-DD hh:mm:ss TTTT PPP XX.x.x-YY.y.y GPL Auditing ON GPL CARD RUNNING APPROVED TRIAL OAMHC 1115 134-074-000 ----------- ----------- BLMCAP 134-070-000 134-070-000 134-070-000 Command Completed. ;```
37 ☐	Execute Procedure 18.	**Proceed to Recovery Procedure A to complete the recovery.**

Procedure 22: Full Fallback using Fixed Disk as OAM conversion workspace – Case 3

S T E P #	Perform this recovery procedure if directed to do so by My Oracle Support when failure occurs at Procedure 8, Step 1 or completion of the session. This procedure makes the partition with the source GPLs active on both TDMs. NOTE: If the database level in the target release is different from the last database level of the source release, this procedure CANNOT BE USED; contact My Oracle Support. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR <u>UPGRADE ASSISTANCE</u>.**
	When directed to by My Oracle Support, execute this procedure: If failure occurred between Procedure 8, Step 1, Table 18, Item J and Procedure 10 [End of Session 1].

1 ☐	*** ATTENTION *** **If this is an incremental upgrade (i.e. the SOURCE release equals the TARGET release, go to Procedure 4, Step 1**. ********************	Complete all steps from Procedure 4 to the end of Session 1 (Procedure 10). Note: When executing Procedure 4 through Procedure 10 in the recovery scenario, the terminology of source and target are reversed. Target release becomes the software load that is being recovered to (45.0.0) and the source release becomes the software load that was upgraded to (45.0.1).
2 ☐	Remove USB drive from system if present.	
3 ☐	Issue the command to display active/inactive disk partitions.	`send-msg:ds=1:da=h'5d:f=h'47:loc=YYYY` **(Where *YYYY* is location of active MASP)**
| 4 ☐ | Response to command.<br><br>Note: Look for the command response on a terminal with all output display groups set to yes (printer\ksr terminal port specified in Procedure 1, Step 6) | ```

Procedure 24: Restoring Flash-Based Service Cards

S T E P #	This procedure restores Service Cards that are flash based. This group includes IPS, MCP, EROUTE, VSCCP, SCCPHC, IPSHC ERTHC, and SIPHC cards. This procedure updates each card with the source release GPLs.	
1 ☐	Issue the command to display the GPL status.	`rept-stat-gpl:gpl=YYYY` (Where *YYYY* is one of the Flash-Based service card types listed above.)

2 ☐	Response to the command is displayed.
	
	Record the CARD locations for all cards that have alarms:
		```eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y``` `rept-stat-gpl:gpl=YYYY` `Command entered at terminal #10.` `;` `eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y` `GPL Auditing  ON`
		
		`APPL      CARD      RUNNING          APPROVED      TRIAL`
		`YYYYY     1101      XXX-XXX-XXX ALM  XXX-XXX-XXX   XXX-XXX-XXX`
		`YYYYY     1103      XXX-XXX-XXX ALM  XXX-XXX-XXX   XXX-XXX-XXX`
		`Command Completed.`
		`;`

3 ☐	Issue the command to inhibit the card if the card is provisioned.	`inh-card:loc=XXXX` (Where *XXXX* is the card location of the cards determined in Step 2)

4 ☐	Response to the inhibit command is displayed.
	
	Wait for the "Command completed" response before proceeding.
		`eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y`
		`Card has been inhibited.`
		`;`
		
		`eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y`
		`Command Completed.`
		`;`

5 ☐	Issue the command to initialize the flash memory.	`flash-card:code=appr:force=yes:loc=XXXX` NOTE: this command causes the card to boot.

6 ☐ ☐	Response to the flash card command is displayed.
	
	Wait for command complete to indicate that the card is finished loading before proceeding.
		`eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y`
		`flash-card:code=appr:force=yes:loc=XXXX`
		`Command entered at terminal #10.`
		`;`
		
		`eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y`
		`Command Completed.`
		`;`

7 ☐	Issue the command to allow the card[17] if the card is provisioned.	`alw-card:loc=XXXX`
		(Where *XXXX* is the card location of the cards determined in Step2)
		
		OR
		
		`alw-card:loc=XXXX:data=persist`
		(Where *XXXX* is the location of an SCCP card determined in Step2)

8 ☐	Response to the allow command is displayed.[18]
	
	Wait for the card to finish loading before proceeding (approximately 30 seconds).
		`eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y`
		`alw-card:loc=1201`
		`Command entered at terminal #10.`
		`;`
		`eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y`
		`Card has been allowed.`
		`;`
		`eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y`
		`Command Completed.`
		`;`

---

[17] Specifying the DATA=PERSIST parameter for SCCP application cards allows for warm restart if possible.

Procedure 24: Restoring Flash-Based Service Cards

9 ☐	Repeat Steps 3 – 8 for each card in the current group that has an alarm.	
10 ☐	Repeat steps 1-9 for each group of cards (VSCCP, ISP, MCP, EROUTE, SCCPHC, IPSHC, ERTHC, and SIPHC)	
11 ☐	Issue the command to display the card status.	`rept-stat-card`
12 ☐ ☐ ☐	Response to the command is displayed. Verify that all Flash-Based Service cards are IS-NR and are running the Source-Release GPL versions, as per your reference list of GPLs For any such card that is not IS-NR or running the correct GPL, repeat Steps 3-4.	``` eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y rept-stat-card Command entered at terminal #10. ; eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y CARD VERSION TYPE GPL PST SST AST 1101 XXX-XXX-XXX DSM VSCCP IS-NR Active ----- 1102 XXX-XXX-XXX DSM VSCCP IS-NR Active ----- 1103 XXX-XXX-XXX TSM GLSHC IS-NR Active ----- 1104 XXX-XXX-XXX TSM GLSHC IS-NR Active ----- 1105 XXX-XXX-XXX LIMDS0 SS7ML IS-NR Active ----- 1109 XXX-XXX-XXX HIPR HIPR IS-NR Active ----- 1110 XXX-XXX-XXX HIPR HIPR IS-NR Active ----- 1111 XXX-XXX-XXX LIMT1 SS7HC IS-NR Active ----- 1113 XXX-XXX-XXX E5MCAP OAMHC IS-NR Active ----- 1114 ----------- E5TDM ------- IS-NR Active ----- 1115 XXX-XXX-XXX E5MCAP OAMHC IS-NR Standby ----- 1116 ----------- E5TDM ------- IS-NR Active ----- 1117 ----------- E5MDAL ------- IS-NR Active ----- 1201 XXX-XXX-XXX LIMDS0 SS7ML IS-NR Active ----- 1202 XXX-XXX-XXX LIMDS0 SS7ML IS-NR Active ----- 1203 XXX-XXX-XXX LIMDS0 SS7ML IS-NR Active ----- 1204 XXX-XXX-XXX LIMDS0 SS7ML IS-NR Active ----- Command Completed. ; ```

---

[18] If card is MCPM, it may boot with an Obit for Module EMM_MCP.C Class 0001. This is expected behavior and is not service affecting.

8 ☐	Issue the command to activate the flash on the next MUX card on the current bus.	`act-flash:loc=XXZZ` (Where *XX* = is a shelf number and, *ZZ* depends on which bus is being flashed. 09 is bus A; 10 is bus B.)

9 ☐	Response to the activate command is displayed.	```
		    eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    act-flash:loc=XXZZ
		    Command entered at terminal #10.
		;
		    eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    FLASH Memory Activation for card XXZZ Started.
		;
		    eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    FLASH Activation for card XXZZ Completed.
		;
		``

---

[19] Warning: Do not use the FORCE= parameter. Use of this parameter may result in network outage. Analysis of the alternate bus is required.

Procedure 26: Restoring Mux Cards

10 ☐	Repeat steps 8-9 for each MUX card on the current bus (A or B.)	
11 ☐	Repeat steps 3-10 for the second bus (A or B.)	
12 ☐	Issue the command to display the MUX card GPL status.	`rept-stat-gpl:gpl=`*YYYY* (Where *YYYY* is bphmux for HMUX cards, hipr for HIPR cards, or hipr2 for HIPR2 cards.)

13 ☐	Verify that all MUX card types are running the approved GPL.	<pre> eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y
		    rept-stat-gpl:gpl=YYYY
		    Command entered at terminal #10.
		;
		
		    eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y

[20] E2144 Cmd Rej: Location invalid for hardware configuration

Procedure 27: Flashing Inactive Cards

9 ☐	If steps 5 & 6 were executed, issue the command to allow card.	`alw-card:loc=`*xxxx*

10 ☐	Response to the command is displayed.	```eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y```
		``` Card has been allowed.```
		`;`
		
		```eaglestp YY-MM-DD hh:mm:ss EST PPP XX.x.x-YY.y.y```
		``` Command Completed.```
		`;`

11 ☐	Repeat Steps 3 – 10 for all cards recorded in step 2.	
12 ☐	Repeat Steps 1 – 11 for each group of Flash-Based cards (see section 1.3.)	

Appendix B. Preparations for Upgrade Execution

B.1 Target Release Software Download

The following procedure is a reference for the commands that will download an EAGLE software release to the inactive partition group of the TDM from either a remote FTP server or from the thumb drive containing the upgrade target release for the E5-MASP.

The following items are required before the release can be downloaded to the EAGLE from a FTP server:

- E5-IPSM or E5-ENET-B card running IPS application defined, configured, and IS-NR
- DIST application FTP server provisioned

Procedure 28: Download Target Software Release and Create USB Upgrade Media

S T E P #	This procedure downloads the target software release and creates the USB upgrade media using a Windows PC. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR UPGRADE ASSISTANCE.**	
1 ☐	Using a PC running Windows 7 or later, download the target EAGLE Release from the Oracle Software Delivery Cloud (OSDC) to a local directory.	- Go to http://edelivery.oracle.com - Sign In - Search for the target EAGLE software release - Accept the Oracle Standard Terms and Restrictions - Click on the link to the zip file for the target EAGLE software release - Save the zip file to a local directory, for example C:\Users\Admin\Desktop\uusb_media - Unzip the Vxxxxxx-01.zip file that was downloaded to the same local directory. - This will produce a <eagle target software release number>.exe file.
2 ☐	Open a command window by going to Start and typing cmd.exe in the search box, then Change Directory to the path of the local directory.	`C:\Users\Admin>cd Desktop/uusb_media` C:\Users\Admin\Desktop\uusb_media>
3 ☐	Extract the downloaded release in the local directory by entering the name of the .exe file as seen in step 1 and verify that the directory contains the following files: the target release file 46.xx.xx.xx.xx-6X.yy.yy.tar.gz, uusb.clf, mkdosfs.exe, pvu.exe, uusb.exe.	`C:\Users\Admin\Desktop\uusb_media><eagle target software release number>` 7-Zip SFX 9.20 Copyright (c) 1999-2010 Igor Pavlov 2010-11-18 Processing archive: C:\Users\Admin\Desktop\uusb_media\46.3.0.0.0-68.12.0.e Extracting 46.3.0.0.0-68.12.0.tar.gz Extracting uusb.clf Extracting mkdosfs.exe Extracting pvu.exe Extracting uusb.exe Everything is Ok
4 ☐	If the target release is 46.3.0.0.0 or later and you need to create USB Upgrade Media, continue with the next step; otherwise stop.	

Procedure 28: Download Target Software Release and Create USB Upgrade Media

5 ☐	Insert EAGLE USB media into a PC USB port.	
6 ☐	Goto Start -> Computer and wait for USB drive to be detected. Note its drive letter.	
7 ☐	Enter uusb command with the release filename and drive of the USB media, where 46.xx.xx.xx.xx-68.yy.yy.tar.gz is the name of the release file in the directory from step 3 and E: is the USB media drive letter from above step 6.	`C:\Users\Admin\Desktop\uusb_media>uusb.exe 46.xx.xx.xx.xx-68.yy.yy.tar.gz e:` Copyright (c) 1993, 2014, Oracle and/or its affiliates. 8 ☐	Close the Command window and directory folder, properly eject the USB media and remove it from the PC. The USB media is now ready to use for EAGLE upgrade.	

Procedure 29: Download Target Release to Inactive Partition

S T E P #	This procedure downloads the target release to inactive partition of the TDMs. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR UPGRADE ASSISTANCE.**
1 ☐	Remove the thumb drives from the E5-MASPs.
2 ☐	If downloading the upgrade target release from an FTP server, continue, otherwise go to step 5.
3 ☐	Issue the command to display the status of the IPSM cards.

Step 3:
```
rept-stat-card:appl=ips
```

| 4 ☐ ☐ | Response from the command is displayed.

Verify there is an IPSM card running the IPSHC gpl and that the card is IS-NR. If no such card present in the system this procedure cannot be executed. |

Step 4:
```
eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y
  CARD   VERSION      TYPE    GPL          PST            SST        AST
  1101   XXX-XXX-XXX IPSM    IPSHC        IS-NR          Active     -----
;
```

| 5 ☐ | Issue the command to display database status of both TDM partitions. |

Step 5:
```
act-upgrade:action=dbstatus
```

| 6 ☐ ☐ ☐ | Response to the command is displayed.

Record the card locations of the MASPs:

Act MASP _____

Stby MASP ____

Verify if either of the inactive partitions has not been formatted. Mark below. Example shows that inactive partition of 1116 not formatted.

If a database LEVEL, VERSION or STATUS is displayed the inactive partition has been formatted.

Disk formatted.

1114 _____

1116 _____ |

		`;`

27 ☐	Issue the command to log back in to the system.	`login:uid=XXXXXX` (Where *XXXXXX* is a valid login ID)

28 ☐	Response to login command is displayed.
	
	Ignore any login failure message.
		`eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y`
		`    User logged in on terminal 10.`
		`;`
		
		`? Login failures since last successful LOGIN`
		`Last successful LOGIN was on port ? on ??-??-?? @ ??:??:??`

29 ☐	Repeat step 12 – 24.	

30 ☐	If downloading the upgrade target release from an FTP server, continue,
	
	Otherwise, insert upgrade media into drive slot and go to step 33.
		`Once inserted, allow time for the upgrade media to be detected by the system.`
		
		`For E5-MASP systems, the USB drive is inserted in the flush mounted USB port on the active E5-MASP.`

31 ☐	Issue command to retrieve the FTP servers provisioned on the system.	`rtrv-ftp-serv`

32 ☐	Response to the command is displayed.
	
	Verify that a software distribution, DIST, application server has been provisioned.
	
	If the DIST has not been provisioned, contact My Oracle Support for assistance.
		`eaglestp YY-MM-DD hh:mm:ss TTTT PPP  XX.x.x-YY.y.y`
		
		`APP       IPADDR          LOGIN           PRIO  PATH`
		`--------  --------------- --------------- ----  ----`
		`DIST      XXX.XX.X.XX     aaaaaa          Z     aaaaaaaaaaaaaaaaaaaa`
		
		`No entries found`
		`;`

33 ☐	Issue command to retrieve the EAGLE target release software.	`act-upgrade:action=getrel:release="xx.xx.xx-yy.yy.yy.tar.gz"`
		`:src=server        (downloading from the FTP server)`
		
		or
		
		`act-upgrade:action=getrel:release="xx.xx.xx-yy.yy.yy.tar.gz"`
		`:src=usb           (downloading from upgrade media)`
		
		(Where the xx.xx.xx-yy.yy.yy is the release-build number of the upgrade target load (ex. 45.0.1-64.70.36.tar.gz).

Procedure 29: Download Target Release to Inactive Partition

B.2 Configuring Card-Set Network Conversion Method.

Procedure30: Preparation for Upgrade to use the Card-Set Network Conversion Method.

S T E P #	This procedure provides the steps to configure the system to use the card-set method during the network conversion portion (Phase 3) of the upgrade. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. SHOULD THIS PROCEDURE FAIL, CONTACT My Oracle Support AND **ASK FOR UPGRADE ASSISTANCE.**

1 ☐	The system should be running the target release on MASPs of 46.0 or higher.	This procedure should be run
		    After Procedure 19, Step 40 in E54339
		    OR
		    Before Procedure 8 in this document.

2 ☐	Issue the card status command to verify the target release GPL is running.	`rept-stat-gpl:gpl=oamhc`
3 ☐ ☐	Response from the status command is displayed. Verify that the version of OAMHC GPL running is 46.0 or later.	``` eaglestp YY-MM-DD hh:mm:ss TTTT EAGLE5 XX.x.x-YY.yy.y Upg Phase 0 GPL Auditing ON APPL CARD RUNNING APPROVED TRIAL OAMHC 1113 XXX-XXX-XXX ALM YYY-YYY-YYY ----------- 22 OAMHC 1115 XXX-XXX-XXX ALM YYY-YYY-YYY ----------- Command Completed. ; ```
4 ☐	Issue the command to retrieve the upgrade configuration	`rtrv-upgrade-config`
5 ☐ ☐	Response to the retrieve command is displayed. If the Threshold Type has not already been changed to SET, it will be either GROUP or SYSTEM. If the SAK is not set, perform Appendix C.	``` eaglestp YY-MM-DD hh:mm:ss TTTT EAGLE5 XX.x.x-YY.yy.y Upg Phase x Software Access Key entered on system : vbsevhcea7vy5 Configured Upgrade Threshold Type: GROUP Command Completed. ; ```
6 ☐	Issue the command to change the upgrade configuration	**chg-upgrade-config:threstype=set:srvsets=*X*:limsets=*Y*** **Note:** refer to 1.6, recommendation # 5 for the values of *X* and *Y*.
7 ☐	Response to the command is displayed.	``` eaglestp YY-MM-DD hh:mm:ss TTTT EAGLE5 XX.x.x-YY.yy.y Upg Phase x chg-upgrade-config:threstype=set:srvsets=X:limsets=Y Command entered at terminal #tt. Command Completed. ; ```
8 ☐	Issue the command to retrieve the upgrade configuration	`rtrv-upgrade-config`

9 ☐	Response to the retrieve command is displayed.	```
		eaglestp YY-MM-DD hh:mm:ss TTTT EAGLE5 XX.x.x-YY.yy.y Upg Phase x
		Software Access Key entered on system : vbsevhcea7vy5
		
		Configured Upgrade Threshold Type: SET
		  Number of SERVICE Sets: X
		  Number of LINK Sets: Y
		
		Command Completed.
		;
		``

---

[22] Dashes are displayed until GPL auditing has initialized after the activity has been switched, which may take up to two minutes.

Procedure30: Preparation for Upgrade to use the Card-Set Network Conversion Method.

10 ☐	Issue the command to report the card status.	`rept-stat-card`
11 ☐	Response to the command is displayed.	(see output below)

```

D.2 Determination and Recovery of DDL Hunt during Upgrade

NOTE: The following section should be completed with the assistance of My Oracle Support.

After loading its GPL and database tables, the last step required by an MTP card is to crossload its dynamic database (DDB) from adjacent cards. The DDB contains the status of all routes, linksets, and links provisioned in the system. The Dynamic Data Load (DDL) is the process where a loading MTP card obtains the current view of the network via downloading it from an already IS-NR network card. In order for a network card to download a proper view of the network status, the network must remain quiescent during the download. If an update to the DDB occurs, then the download aborts and restarts. Depending on the size of the network, it may take as long as 4 seconds to complete this process. Please note that the network must remain stable (no changes) during this phase for the download to complete successfully.

The card reports its PST as IS-ANR and its SST as DDL Hunt:

```
Card Failure: Card 1101 did not return to IS-NR.
Status of card 1101:  PST:  IS-ANR         SST:  DDL Hunt   AST:  -----
```

Please note this appendix addresses DDL during Upgrade. Refer to external reference [8] in section 1.2.1 for recovery in full function mode.

A system is considered unstable when provisioned and configured devices are cycling from an alarmed state to a clear state. Bouncing links, link congestion and discard, and DPC|Route transition have the most impact on the DDL Hunt state. Table 21 lists these conditions by UAM number and describes the recovery steps.

The guideline to determine if DDL Hunt is possible when a card boots and tries to reload is based on the number of DDB events, which causes network management messages to be generated. An event is one cycle of alarming and clearing:

```
1237.0236 ** SLK 1201,A1  tklclset    REPT-LKF: not aligned
1240.0200    SLK 1201,A1              RCVRY-LKF: link available
```

One event consists of two transactions, which generates two network management messages. Eight events in one minute causes sixteen messages which averages to a stability period of less than four seconds. This can range from eight events per one device to one event per eight devices.

Table 21. Recovery from DDL Hunt by UAM.

UAM	Device	Condition	Recovery
0236|0200	SLK	Bouncing Link	A) Issue DDB checksum SEND-MSG per internal Ref. [8] B) Issue CANC-SLK to deactivate the affected link
0264 – 0269	SLK	Link Congestion	A) Issue DDB checksum SEND-MSG per internal Ref. [8] B) Investigate the far-end and fix the far-end C) Issue CANC-SLK to deactivate the affected link
0270 – 0275	SLK	Link Discard	A) Issue DDB checksum SEND-MSG per internal Ref. [8] B) Investigate the far-end and fix the far-end C) Issue CANC-SLK to deactivate the affected link
0311 – 0313	Route	DPC Transition	A) Issue DDB checksum SEND-MSG per internal Ref. [8] B) Investigate the far-end and fix the far-end C) Issue CANC-SLK to deactivate the affected link
0314 – 0316	Route	Route Transition	A) Issue DDB checksum SEND-MSG per internal Ref. [8] B) Investigate the far-end and fix the far-end C) Issue CANC-SLK to deactivate the affected link

Note: If the front-end switches activity, device may return to previous state.
