If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

**CAUTION: Use only the Upgrade procedure included in the Upgrade Kit. Before upgrading any system, please access My Oracle Support (MOS) (<https://support.oracle.com>) and review any Technical Service Bulletins (TSBs) that relate to this upgrade.**

My Oracle Support (MOS) (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>.

See more information on MOS in the Appendix section.

PROCEDURE 13. CONFIGURE THE SOAM SERVER GROUP.....	40
PROCEDURE 14. ACTIVATE PCA (PCA ONLY) .....	42
PROCEDURE 15. CONFIGURE THE MP VIRTUAL MACHINES.....	43
PROCEDURE 16. CONFIGURE PLACES AND ASSIGN MP SERVERS TO PLACES (PCA ONLY).....	51
PROCEDURE 17. CONFIGURE THE MP SERVER GROUP(S) AND PROFILES .....	52

PROCEDURE 18. CONFIGURE THE SIGNALING NETWORK ROUTES .....58

PROCEDURE 19. CONFIGURE DSCP VALUES FOR OUTGOING TRAFFIC (OPTIONAL)...61

PROCEDURE 20. ADD VIP FOR SIGNALING NETWORKS (ACTIVE/STANDBY CONFIGURATIONS ONLY) .....64

PROCEDURE 21. IP FRONT END (IPFE) CONFIGURATION .....65

PROCEDURE 22. CONFIGURE SNMP TRAP RECEIVER(S) (OPTIONAL).....67

PROCEDURE 23. (VMWARE ONLY) CREATE IDIH ORACLE, MEDIATION AND APPLICATION VMS (OPTIONAL) .....70

PROCEDURE 24. (KVM/OPENSTACK ONLY ) CREATE IDIH ORACLE, MEDIATION AND APPLICATION VMS (OPTIONAL).....71

PROCEDURE 25. CONFIGURE IDIH VM NETWORKS (OPTIONAL).....74

PROCEDURE 26. RUN POST INSTALLATION SCRIPTS ON IDIH VMS (OPTIONAL) .....76

PROCEDURE 29. INTEGRATE IDIH INTO DSR (OPTIONAL) .....78

PROCEDURE 30. IDIH APPLICATION FINAL CONFIGURATION (OPTIONAL) .....81

PROCEDURE 31. CONFIGURE COMAGENT CONNECTIONS .....82

PROCEDURE 32. COMPLETE PCA CONFIGURATION (OPTIONAL).....83

PROCEDURE 33. BACKUPS AND DISASTER PREVENTION .....83

PROCEDURE 34. (KVM/OPENSTACK ONLY) CONFIGURE IPFE TARGET SET ADDRESSES (TSA) .....84

## 1.0 INTRODUCTION

### 1.1 Purpose and Scope

This document describes the application-related installation procedures for Diameter Signaling Router Cloud systems.

This document assumes that platform-related configuration has already been done.

The audience for this document includes Oracle customers as well as these groups: Software System, Product Verification, Documentation, and Customer Service including Software Operations and First Office Application.

### 1.3 Acronyms

An alphabetized list of acronyms used in the document

**Table 1. Acronyms**

Acronym	Definition
BIOS	Basic Input Output System
CD	Compact Disk
DA-MP	Diameter Agent Message Processor
DSR	Diameter Signaling Router
ESXi	Elastic Sky X Integrated
FABR	Full Address Based Resolution
iDIH	Integrated Diameter Intelligence Hub
IPFE	IP Front End
IPM	Initial Product Manufacture – the process of installing TPD
IWF	Inter Working Function
KVM	Kernel-based Virtual Machine
MP	Message Processor
NAPD	Network Architecture Planning Diagram
NE	Network Element
NOAM	Network Operation Administration and Maintenance
OS	Operating System (e.g. TPD)
OVA	Open Virtualization Archive
PDRA	Policy Diameter Routing Agent
PCA	Policy and Charging Application
RBAR	Range Based Address Resolution
SAN	Storage Area Network
SFTP	Secure File Transfer Protocol
SNMP	Simple Network Management Protocol
SOAM	Software Operation Administration and Maintenance
TPD	Tekelec Platform Distribution
TSA	Target Set Address
VIP	Virtual IP
VM	Virtual Machine

### 1.4 Terminology

Multiple server types may be involved with the procedures in this manual. Therefore, most steps in the written procedures begin with the name or type of server to which the step applies.

<b>Site</b>	<p>Applicable for various applications, a Site is type of “Place”. A Place is configured object that allows servers to be associated with a physical location.</p> <p>A Site place allows servers to be associated with a physical site. For example, Sites may be configured for Atlanta, Charlotte, and Chicago. Every server is associated with exactly one Site when the server is configured.</p> <p>For the Policy &amp; Charging DRA application, when configuring a Site only put DA-MPs and SBR MP servers in the site. Do not add NOAM, SOAM or IPFE MPs to a Site</p>
-------------	--

<p><b>Place Association</b></p>	<p>Applicable for various applications, a “Place Association” is a configured object that allows Places to be grouped together. A Place can be a member of more than one Place Association.</p> <p>The Policy &amp; Charging DRA application defines two Place Association Types: Policy Binding Region and Policy &amp; Charging Mated Sites.</p>
<p><b>Two Site Redundancy</b></p>	<p>Two Site Redundancy is a data durability configuration in which Policy and Charging data is unaffected by the loss of one site in a Policy &amp; Charging Mated Sites Place Association containing two sites.</p> <p>Two Site Redundancy is a feature provided by Server Group configuration. This feature provides geographic redundancy. Some Server Groups can be configured with servers located in two geographically separate Sites(locations). This feature will ensure that there is always a functioning Active server in a Server Group even if all the servers in a single site fail.</p>
<p><b>Server Group Primary Site</b></p>	<p>A Server Group Primary Site is a term used to represent the principle location within a SOAM or SBR Server Group. SOAM and SBR Server groups are intended to span several Sites(Places). For the Policy &amp; Charging DRA application, these Sites(Places) are all configured within a single “Policy and Charging Mated Sites” Place Association.</p> <p>The Primary Site may be in a different Site(Place) for each configured SOAM or SBR Server Group .</p> <p>A Primary Site is described as the location in which the Active and Standby servers to reside, however there cannot be any Preferred Spare servers within this location. All SOAM and SBR Server Groups will have a Primary Site.</p>
<p><b>Server Group Secondary Site</b></p>	<p>A Server Group Secondary Site is a term used to represent location in addition to the Primary Site within a SOAM or SBR Server Group. SOAM and SBR Server groups are intended to span several Sites(Places). For the Policy &amp; Charging DRA application, these Sites(Places) are all configured within a single “Policy and Charging Mated Sites” Place Association.</p> <p>The Secondary Site may be in a different Site(Place) for each configured SOAM or SBR Server Group .</p> <p>A Secondary Site is described as the location in which only Preferred Spare servers reside. The Active and Standby servers cannot reside within this location. If Two Site Redundancy is wanted, a Secondary Site is required for all SOAM and SBR Server Groups.</p>

## **2.0 GENERAL DESCRIPTION**

This document defines the steps to execute the initial installation of the Diameter Signaling Router (DSR) 7.2/7.3 application on a supported Cloud platform.

### 3.0 INSTALL OVERVIEW

This section provides a brief overview of the recommended method for installing the source release software that is installed and running on a Cloud to the Target Release software. The basic install process and approximate time required is outlined in Table 2.

#### 3.1 Required Materials

1. One target release DSR OVA Media
2. Three (3) iDIH Mediation OVA (Optional iDIH)
  - a. iDIH Application OVA
  - b. iDIH Oracle OVA
  - c. iDIH Mediation OVA

#### 3.2 Installation Overview

This section describes the overall strategy to be employed for a single or multi-site DSR 7.2/7.3 and iDIH 7.2 installation. It also lists the procedures required for installation with estimated times. Section 3.2.1 discusses the overall install strategy and includes an installation flow chart that can be used to determine exactly which procedures should be run for an installation. Section 3.2.3 lists the steps required to install a DSR 7.2/7.3 system. These latter sections expand on the information from the matrix and provide a general timeline for the installation. Additionally, basic firewall port information is included in Appendix G Firewall Ports. It should also be noted that some procedures are cloud platform dependent and that not all procedures will be performed on all cloud platforms.

##### 3.2.1 Installation Strategy

A successful installation of DSR requires careful planning and assessment of all configuration materials and installation variables.

Figure 1. DSR Single Site Installation Procedure Map Illustrates the overall process that each DSR installation will involve. In summary:

1. An overall installation requirement is decided upon. Among the data that should be collected:
  - The total number of sites
  - The number of virtual machines at each site and their role(s)
  - What timezone should be used across the entire collection of DSR sites?
  - Will SNMP traps be viewed at the NOAM, or will an external NMS be used? (Or both?)
2. A site survey (NAPD) is conducted with the customer to determine exact networking and site details. NOTE: XMI and IMI addresses are difficult to change once configured. It is **very important that these addresses are well planned and not expected to change after a site is installed.**

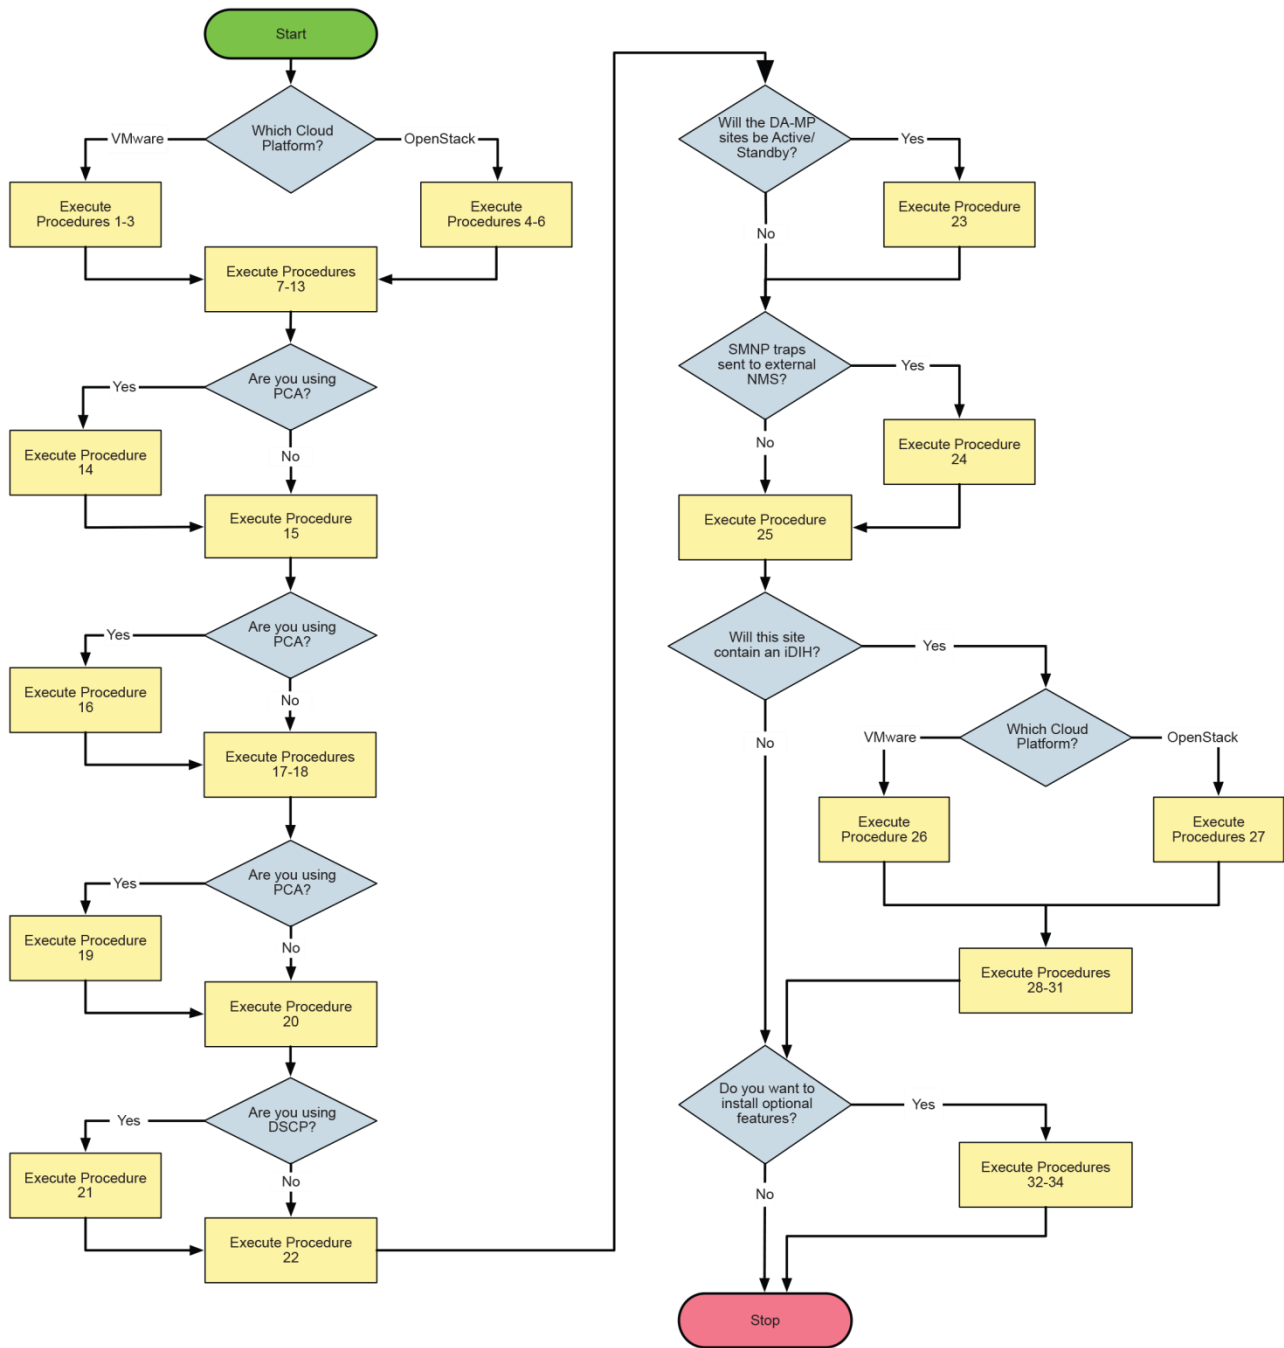

Figure 1. DSR Single Site Installation Procedure Map

### 3.2.2 SNMP Configuration

The network-wide plan for SNMP configuration should be decided upon before DSR installation proceeds. This section provides some recommendations for these decisions.

SNMP traps can originate from the following entities in a DSR installation:

- DSR Application Servers (NOAM, SOAM, MPs of all types)

DSR application servers can be configured to:

1. Send all their SNMP traps to the NOAM via merging from their local SOAM. All traps will terminate at the NOAM and be viewable from the NOAM GUI (entire network) and the SOAM GUI (site specific). Traps are displayed on the GUI both as alarms and logged in trap history. **This is the default configuration option and no changes are required for this to take effect.**
2. Send all their SNMP traps to an external Network Management Station (NMS). The traps will be seen at the SOAM AND/OR NOAM as alarms **AND** they will be viewable at the configured NMS(s) as traps.

Application server SNMP configuration is done from the NOAM GUI, near the end of DSR installation. See the procedure list for details.

DSR auxillary components must have their SNMP trap destinations set explicitly. Trap destinations can be the NOAM VIP, the SOAM VIP, or an external (customer) NMS.

Should have their SNMP trap destinations set to:

1. The local SOAM VIP
2. The customer NMS, if available

### 3.2.3 Installation Procedures

The following table illustrates the progression of the installation process by procedure with estimated times. The estimated times and the phases that must be completed may vary due to differences in typing ability and system configuration. The phases outlined in are to be executed in the order they are listed.

**Table 2. Installation Overview**

Procedure	Phase	Elapsed Time (Minutes)	
		This Step	Cum.
<b>Procedure 1 or 4</b>	Import DSR OVA	5	5
<b>Procedure 2 or 5</b>	Configure DSR NOAM guest role based on resource profile	10	15
<b>Procedure 3 or 6</b>	Configure DSR Remaining guests role based on resource profile	40	55
<b>Procedure 7</b>	Configure the First NOAM NE and Server	25	80
<b>Procedure 8</b>	Configure the NOAM Server Group	15	95
<b>Procedure 9</b>	Configure the Second NOAM Server	15	110
<b>Procedure 10</b>	Complete Configuring the NOAM Server Group	10	120
<b>Procedure 11</b>	Configure the SOAM NE	15	135
<b>Procedure 12</b>	Configure the SOAM Servers	10	145
<b>Procedure 13</b>	Configure the SOAM Server Group	10	155
<b>Procedure 14 (Optional)</b>	Activate PCA (PCA Only)	10	165
<b>Procedure 15</b>	Configure the MP Virtual Machines	5	170
<b>Procedure 16 (Optional)</b>	Configure Places and Assign MP Servers to Places (PCA Only)	10	180
<b>Procedure 17</b>	Configure the MP Server Group(s) and Profiles	10	190
<b>Procedure 18</b>	Configure the Signaling Networks	5	195
<b>Procedure 19 (Optional)</b>	Additional Servers to Network Mapping (PCA Only)	10	205
<b>Procedure 20</b>	Configure the Signaling Devices	10	215
<b>Procedure 21 (Optional)</b>	Configure DSCP Values for Outgoing Traffic	10	225
<b>Procedure 22</b>	Configure the Signaling Network Routes	15	240
<b>Procedure 23 (Optional)</b>	Add VIP for Signaling Networks	5	245
<b>Procedure 24 (Optional)</b>	Configure SNMP for Trap Receiver(s)	5	250
<b>Procedure 25</b>	IP Front End (IPFE) Configuration	15	265
<b>Procedure 26 or 27 (Optional)</b>	Create iDIH Oracle, Mediation and Application VM's	45	310
<b>Procedure 28 (Optional)</b>	Configure iDIH VM Networks	15	325

Table 2. Installation Overview

Procedure	Phase	Elapsed Time (Minutes)	
		This Step	Cum.
<b>Procedure 29 (Optional)</b>	Run Post Installation Scripts on iDIH VM's	60	385
<b>Procedure 30 (Optional)</b>	Integrate iDIH into DSR	30	415
<b>Procedure 31 (Optional)</b>	iDIH Application Final Configuration	10	425
<b>Procedure 32 (Optional)</b>	Activate Optional Features	15	440
<b>Procedure 33 (Optional)</b>	Configure ComAgent Connections	15	455
<b>Procedure 34 (Optional)</b>	Complete PCA configuration	30	485
<b>Procedure 35</b>	Backups and Disaster Prevention	30	515

### 3.3 Optional Features

When DSR installation is complete, further configuration and/or installation steps will need to be taken for optional features that may be present in this deployment. Please refer to these documents for the post-DSR install configuration steps needed for their components.

Feature	Document
<b>Diameter Mediation</b>	DSR Meta Administration Feature Activation Procedure, E58661-01
<b>Full Address Based Resolution (FABR)</b>	DSR FABR Feature Activation Procedure, E58664-01
<b>Range Based Address Resolution (RBAR)</b>	DSR RBAR Feature Activation, Procedure, E58664-01
<b>MAP-Diameter Interworking (MAP-IWF)</b>	DSR MAP-Diameter IWF Feature Activation, E58666-01
<b>Policy and Charging Application (PCA)</b>	PCA Configuration, E63560-1

## 4.0 SOFTWARE INSTALLATION PROCEDURE

As mentioned earlier, the host configuration and virtual networks should be done before executing the procedures in this document. It is assumed that at this point, the user has access to:

- consoles of all guests and hosts at all sites
- ssh access to the guests at all sites
- GUI access to hosts at all sites
- A configuration station with a web browser , ssh client, and scp client.
- VM Manager Privilages to add OVA's to catalog (VMware only)
- KVM/OpenStack admin and tenant privileges.

### SUDO

As a non-root user (*admusr*), many commands (*when run as admusr*) now require the use of '*sudo*'.

### VIP/TSA (OpenStack Only)

OpenStack release Kilo or later is required to configure VIP and Target Set addresses. Kilo release 2015.1.2 or later is preferred.

## 4.1 Create DSR Guests (VMware)

### Procedure 1 (VMware). Import DSR OVA

<b>S T E P #</b>	This procedure adds the DSR OVA to the VMware catalog or repository.	
	<i>Check off (✓) each step as it is completed. Steps with shaded boxes require user input.</i>	
	If this procedure fails, contact My Oracle Support (MOS)	
1 <input type="checkbox"/>	<b>Add DSR OVA image.</b>	<ol style="list-style-type: none"> <li>1. Launch the VMware client of your choice.</li> <li>2. Add the DSR OVA image to the VMware catalog or repository. Follow the instructions provided by the Cloud solutions manufacturer.</li> </ol>

**Procedure 2 (VMware only). Configure NOAM guests role based on resource profile**

<b>S T E P #</b>	<p>This procedure will configure networking on Virtual Machines.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
1 <input type="checkbox"/>	<b>Create the NO1 VM, from the OVA image.</b>	<ol style="list-style-type: none"> <li>1. Browse the library or repository that you placed the <b>OVA</b> image.</li> <li>2. Deploy the <b>OVA Image</b> using <b>vSphere Client</b> or the vSphere Web Client.</li> <li>3. Name the <b>NO1 VM</b> and select the datastore.</li> </ol>
2 <input type="checkbox"/>	<b>Configure resources for the NO1 VM.</b>	<ol style="list-style-type: none"> <li>1. Configure the <b>NO1</b> per the Resource Profile in <b>Appendix D</b> for the DSR NOAM using the vSphere Client or the vSphere Web Client.</li> </ol>
3 <input type="checkbox"/>	<b>Power on NO1.</b>	<ol style="list-style-type: none"> <li>1. Use the <b>vSphere client</b> or <b>vSphere web client</b> to Power on the <b>NO1 VM</b>.</li> </ol>
4 <input type="checkbox"/>	<b>Configure NO1.</b>	<ol style="list-style-type: none"> <li>1. Access the <b>NO1 VM console</b> via the <b>vSphere client</b> or <b>vSphere web client</b>.</li> <li>2. Login as <b>admusr</b>.</li> <li>3. Set the &lt;ethX&gt; device:  Note: Where ethX is the interface associated with the XMI network   <pre>\$ sudo netAdm add --device=&lt;ethX&gt; --address=&lt;IP Address in External management Network&gt; --netmask=&lt;Netmask&gt; --onboot=yes --bootproto=none</pre> </li> <li>4. Add the default route for ethX:   <pre>\$ sudo netAdm add --route=default --gateway=&lt;gateway address for the External management network&gt; --device=&lt;ethX&gt;</pre> </li> </ol>
5 <input type="checkbox"/>	<b>Configure NO2 (Optional for small lab deployment)</b>	<ol style="list-style-type: none"> <li>1. Repeat steps 1 through 4 for the NO2 VM.</li> </ol>

**Procedure 3. (VMware only) Configure remaining DSR guests based on resource profile**

<b>S T E P</b>	<p>This procedure adds network addresses for all Virtual Machines.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>
----------------------------	---

**Procedure 3. (VMware only) Configure remaining DSR guests based on resource profile**

<p>1 <input type="checkbox"/></p>	<p><b>Create the SO1 VM from the OVA image.</b></p>	<ol style="list-style-type: none"> <li>1. Browse the library or repository that you placed the <b>OVA</b> image.</li> <li>2. Deploy the <b>OVA</b> image using <b>vSphere Client</b> or the <b>vSphere Web Client</b>.</li> <li>3. Name the <b>SO1 VM</b> and select the datastore.</li> </ol>
<p>2 <input type="checkbox"/></p>	<p><b>Configure resources for the SO1 VM.</b></p>	<ol style="list-style-type: none"> <li>1. Configure the <b>SO1 VM</b> per the Resource Profile in <b>Appendix D</b> for the <b>DSR SO</b> using the vSphere Client or the vSphere Web Client. Interfaces must be added per the network interface table at the bottom of the 91Resource Profile.</li> </ol>
<p>3 <input type="checkbox"/></p>	<p><b>Power on SO1 VM.</b></p>	<ol style="list-style-type: none"> <li>1. Power on the <b>DSR SO1 VM</b> with the <b>vSphere client</b> or <b>vSphere web client</b>.</li> <li>2. Monitor the vApps screen’s Virtual Machines tab until the DSR VM reports “<b>Powered On</b>” in the Status column.</li> </ol>
<p>4 <input type="checkbox"/></p>	<p><b>Configure XMI interface...</b></p>	<ol style="list-style-type: none"> <li>1. Access the <b>VM console</b> via the <b>vSphere client</b> or <b>vSphere web client</b>.</li> <li>2. Login as <b>admusr</b>.</li> <li>3. Set the ethX device:  Note: Where ethX is the interface associated with the XMI network   <pre>\$ sudo netAdm add --device=&lt;ethX&gt; --address=&lt;IP Address in External Management Network&gt; --netmask=&lt;Netmask&gt; --onboot=yes --bootproto=none</pre> </li> <li>4. Add the default route for ethX:   <pre>\$ sudo netAdm add --route=default --gateway=&lt;gateway address for the External management network&gt; --device=&lt;ethX&gt;</pre> </li> </ol>
<p>5 <input type="checkbox"/></p>	<p><b>Verify Network connectivity.</b></p>	<ol style="list-style-type: none"> <li>1. Access the <b>SO1 VM console</b> via the vSphere client or vSphere web client.</li> <li>2. Login as <b>admusr</b>.</li> <li>3. Ping the NO1.   <pre>\$ ping -c3 &lt;IP Address in External Management Network&gt;</pre> </li> </ol>
<p>6 <input type="checkbox"/></p>	<p><b>Procedure overview.</b></p>	<ol style="list-style-type: none"> <li>1. Repeat Steps 1 through 5 for the following VMs. Use Unique labels for the VM Names:   <ul style="list-style-type: none"> <li>MP(s)</li> <li>MP(s) SS7 (optional components )</li> <li>IPFE(s)</li> <li>NOAM(s)</li> <li>SOAM(s)</li> <li>SBR s, SBR b (Optional Components )</li> </ul> </li> </ol>

## 4.2 Create DSR Guests (KVM/OpenStack)

### Procedure 4. Import DSR OVA (KVM/OpenStack only).

<b>S T E P #</b>	<p>This procedure adds the DSR image to the glance image catalog.</p> <p><i>Check off (✓) each step as it is completed. Steps with shaded boxes require user input.</i></p> <p>If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.</p>	
1 <input type="checkbox"/>	<b>Preparation.</b>	<ol style="list-style-type: none"> <li>1. Create instance flavors.               <ol style="list-style-type: none"> <li>a. If not yet done, use the Resource Profile values to create flavors for each type of VM. Flavors can be created with the Horizon GUI in the “Admin” section, or with the “nova flavor-create” command line tool. Make the flavor names as informative as possible. As flavors describe resource sizing, a common convention is to use a name like “0406060” where the first two figures (04) represent the number of virtual CPUs, the next two figures (06) might represent the RAM allocation in GB and the final three figures (060) might represent the disk space in GB.</li> </ol> </li> <li>2. If using an Intel 10 Gigabit Ethernet ixgbe driver on the host nodes, please note that the default LRO (Large Receive Offload) option must be disabled on the host command line. Please see the Intel release notes for more details. This action can be performed with the following command.               <ol style="list-style-type: none"> <li>a. <code>\$ sudo ethtool -K &lt;ETH_DEV&gt; lro off</code></li> </ol> </li> <li>3. If using IPFE Target Set addresses (TSA).               <ol style="list-style-type: none"> <li>a. Read and understand Disable Port Security in Appendix I-6, including the warning note.</li> <li>b. Enable the Neutron port security extension.</li> </ol> </li> </ol>

<p>2</p> <p><input type="checkbox"/></p>	<p><b>Add DSR OVA image.</b></p>	<ol style="list-style-type: none"> <li>1. Copy the OVA file to the OpenStack control node.             <ol style="list-style-type: none"> <li>i. <code>\$ scp DSR-7.3.x.x.x.ova admusr@node:~</code></li> </ol> </li> <li>2. Login to the OpenStack control node.             <ol style="list-style-type: none"> <li>i. <code>\$ ssh admusr@node</code></li> </ol> </li> <li>3. In an empty directory unpack the OVA file using “tar”             <ol style="list-style-type: none"> <li>i. <code>\$ tar xvf DSR-7.3.x.x.x.ova</code></li> </ol> </li> <li>4. One of the unpacked files will have a “.vmdk” suffix. This is the VM image file that must be imported.             <ol style="list-style-type: none"> <li>i. DSR-7.3.x.x.x-disk1.vmdk</li> </ol> </li> <li>5. Source the OpenStack “admin” user credentials.             <ol style="list-style-type: none"> <li>i. <code>\$ . keystonerc_admin</code></li> </ol> </li> <li>6. Select an informative name for the new image.             <ol style="list-style-type: none"> <li>i. “dsr-7.3.x.x.x-original”</li> </ol> </li> <li>7. Import the image using the “glance” utility from the command line.             <ol style="list-style-type: none"> <li>i. <code>\$ glance image-create --name dsr-7.3.x.x.x-original --is-public true --is-protected false --progress --container-format bare --disk-format vmdk --file DSR-7.3.x.x.x-disk1.vmdk</code></li> <li>ii. This process will take about 5 minutes, depending on the underlying infrastructure.</li> </ol> </li> </ol>
--	----------------------------------	---

**Procedure 5. (KVM/OpenStack only) Configure NOAM guests role based on resource profile**

<p><b>S T E P #</b></p>	<p>This procedure will configure networking on Virtual Machines.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
<p>1</p> <p><input type="checkbox"/></p>	<p><b>Name the new VM instance.</b></p>	<p>Create an informative name for the new instance: “NO1”.</p> <p>Examine the network interface recommendations at the bottom of the Resource Profile in Appendix D.</p>

**Procedure 5. (KVM/OpenStack only) Configure NOAM guests role based on resource profile**

<p>2</p> <p><input type="checkbox"/></p>	<p><b>Create and boot the NO VM instance from the glance image.</b></p>	<ol style="list-style-type: none"> <li>1. Get the following configuration values. <ol style="list-style-type: none"> <li>a. The image ID. <ol style="list-style-type: none"> <li>i. <code>\$ glance image-list</code></li> </ol> </li> <li>b. The flavor ID. <ol style="list-style-type: none"> <li>i. <code>\$ nova flavor-list</code></li> </ol> </li> <li>c. The network ID(s) <ol style="list-style-type: none"> <li>i. <code>\$ neutron net-list</code></li> </ol> </li> <li>d. An informative name for the instance. <ol style="list-style-type: none"> <li>i. "NO1"</li> <li>ii. "NO2"</li> </ol> </li> </ol> </li> <li>2. Create and boot the VM instance. <ol style="list-style-type: none"> <li>a. The instance must be owned by the DSR tenant user, not the admin user. Source the credentials of the DSR tenant user and issue the following command. Use one "--nic" argument for each IP/interface. Note that IPv6 addresses should use the "v6-fixed-ip" argument instead of "v4-fixed-ip".</li> <li>b. <code>\$ nova boot --image &lt;image ID&gt; --flavor &lt;flavor id&gt; --nic net-id=&lt;first network id&gt;,v4-fixed-ip=&lt;first ip address&gt; --nic net-id=&lt;second network id&gt;,v4-fixed-ip=&lt;second ip address&gt; &lt;instance name&gt;</code></li> <li>c. View the newly created instance using the nova tool. <ol style="list-style-type: none"> <li>i. <code>\$ nova list --all-tenants</code></li> </ol> </li> </ol> <p>The VM will take approximately 5 minutes to boot and may be accessed through both network interfaces and the Horizon console tool.</p> </li> </ol>
<p>3</p> <p><input type="checkbox"/></p>	<p><b>Configure VIP (optional).</b></p>	<ol style="list-style-type: none"> <li>1. If more than one NOAM is used, a NOAM VIP is needed. Execute the following commands.</li> <li>2. Find the port id associated with the NOAM instance XMI interface. <ol style="list-style-type: none"> <li>a. <code>\$ neutron port-list</code></li> </ol> </li> <li>3. Add the VIP IP address to the address pairs list of the NOAM instance XMI interface port. <ol style="list-style-type: none"> <li>a. <code>\$ neutron port-update &lt;Port ID&gt; --allowed_address_pairs list=true type=dict ip_address=&lt;VIP address to be added&gt;</code></li> </ol> </li> <li>4. If necessary, see Allowed Address Pairs in Appendix I for more information.</li> </ol>

**Procedure 5. (KVM/OpenStack only) Configure NOAM guests role based on resource profile**

<p>4 □</p>	<p><b>Configure instance networking.</b></p>	<ol style="list-style-type: none"> <li>1. Log in to the “Horizon” GUI as the DSR tenant user.</li> <li>2. Go to the Compute/Instances section.</li> <li>3. Click on the “Name” field of the newly created instance.</li> <li>4. Select the “Console” tab.</li> <li>5. Login as the admusr.</li> <li>6. Configure the network interfaces, conforming with the interface-to-network mappings described at the bottom of the Resource Profile in Appendix D.             <ol style="list-style-type: none"> <li>a. <code>\$ sudo netAdm add --onboot=yes --device=eth0 --address=&lt;xmi ip&gt; --netmask=&lt;xmi net mask&gt;</code></li> <li>b. <code>\$ sudo netAdm add --onboot=yes --device=eth1 --address=&lt;imi ip&gt; --netmask=&lt;imi net mask&gt;</code></li> <li>c. <code>\$ sudo netAdm add --route=default --device=eth0 --gateway=&lt;xmi gateway ip&gt;</code></li> <li>d. Under some circumstances, it may be necessary to configure as many as 6 or more interfaces.</li> <li>e. If netAdm fails to create the new interface (ethX) because it already exists in a partially configured state, perform the following actions.                 <ol style="list-style-type: none"> <li>i. <code>\$ cd /etc/sysconfig/network-scripts</code></li> <li>ii. <code>\$ sudo mv ifcfg-ethX /tmp</code> <ol style="list-style-type: none"> <li>1. Keep ifcfg-ethX in /tmp until ethX is working correctly, then delete it.</li> </ol> </li> <li>iii. Re-run the netAdm command. It will create and configure the interface in one action.</li> </ol> </li> </ol> </li> <li>7. Reboot the VM. It will take approximately 5 minutes for the VM to complete rebooting.             <ol style="list-style-type: none"> <li>a. <code>\$ sudo init 6</code></li> </ol> </li> </ol> <p>The new VM should now be accessible via both network and Horizon console.</p>
<p>5 □</p>	<p><b>Configure NO2 (Optional for small lab deployment)</b></p>	<p>Repeat steps 1 through 3 for NO2.</p>

**Procedure 6. (KVM/OpenStack only) Configure remaining DSR guests based on resource profile**

<p><b>S</b> <b>T</b> <b>E</b> <b>P</b></p>	<p>This procedure adds network addresses for all Virtual Machines.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
<p>1 <input type="checkbox"/></p>	<p><b>Name the new VM instance</b></p>	<p>Create an informative name for the new instance: “SO1”.</p> <p>Examine the network interface recommendations at the bottom of the Resource Profile in Appendix D.</p>
<p>2 <input type="checkbox"/></p>	<p><b>Create and boot the SO VM instance from the glance image.</b></p>	<ol style="list-style-type: none"> <li>3. ## Procedure 7. Configure the First NOAM NE and Server

5 <input type="checkbox"/>	<b>Export the Initial Configuration</b>	<p>Navigate to <b>Main Menu -&gt; Configuration -&gt; Servers</b>.</p> <p>From the GUI screen, select the NOAM server and then select <b>Export</b> action button to generate the initial configuration data for that server. Go to the Info tab to confirm the file has been created.</p>
6 <input type="checkbox"/>	<b>Copy Configuration File to 1<sup>st</sup> NOAM Server</b>	<p>Obtain a terminal window to the 1<sup>st</sup> NOAM server, logging in as the <b>admusr</b> user.</p> <p>Copy the configuration file created in the previous step from the <code>/var/TKLC/db/filemgmt</code> directory on the 1<sup>st</sup> NOAM to the <code>/var/tmp</code> directory. The configuration file will have a filename like <code>TKLCConfigData.&lt;hostname&gt;.sh</code>. The following is an example:</p> <pre>\$ sudo cp /var/TKLC/db/filemgmt/TKLCConfigData.&lt;hostname&gt;.sh /var/tmp/TKLCConfigData.sh</pre>
7 <input type="checkbox"/>	<b>Wait for Configuration to Complete</b>	<p>The automatic configuration daemon will look for the file named <b>“TKLCConfigData.sh”</b> in the <code>/var/tmp</code> directory, implement the configuration in the file, and then prompt the user to reboot the server.</p> <p>If you are on the console wait to be prompted to reboot the server, but <b>DO NOT</b> reboot the server, it will be rebooted later on in this procedure.</p> <p>Verify script completed successfully by checking the following file.</p> <pre>\$ sudo cat /var/TKLC/appw/logs/Process/install.log</pre> <p><b>Note:</b> Ignore the warning about removing the USB key, since no USB key is present. No response will occur until the reboot prompt is issued.</p>
8 <input type="checkbox"/>	<b>Set the time zone (optional) and reboot the Server</b>	<p>To change the system time zone, from the command line prompt, execute <code>set_ini_tz.pl</code>. The following command example uses the <code>America/New_York</code> time zone.</p> <p>Replace as appropriate with the time zone you have selected for this installation. For a full list of valid time zones, see Appendix B.</p> <pre>\$ sudo /usr/TKLC/appworks/bin/set_ini_tz.pl "America/New_York" &gt;/dev/null 2&gt;&amp;1</pre> <pre>\$ sudo init 6</pre> <p>Wait for server to reboot.</p>

**Procedure 7. Configure the First NOAM NE and Server**

9 <input type="checkbox"/>	<b>1<sup>st</sup> NO Server:</b> Verify Server Health	<p>Login into the NO1 as admusr.</p> <p>Execute the following command as admusr on the 1<sup>st</sup> NO server and make sure that no errors are returned:</p> <pre>\$ sudo syscheck Running modules in class hardware... OK Running modules in class disk... OK Running modules in class net... OK Running modules in class system... OK Running modules in class proc... OK LOG LOCATION: /var/TKLC/log/syscheck/fail_log</pre>
-------------------------------	--	---

**Procedure 8. Configure the NOAM Server Group**

S T E P	<p>This procedure will provide the steps to configure the NOAM server group.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
1 <input type="checkbox"/>	<b>NOAM GUI: Login</b>	<p>Establish a GUI session on the first NOAM server by using the XMI IP address of the first NOAM server. Open the web browser and enter a URL of: <a href="http://&lt;NO1_XMI_IP_Address&gt;">http://&lt;NO1_XMI_IP_Address&gt;</a></p> <p>Login as the <i>guiadmin</i> user. If prompted by a security warning, select <b>Continue to this Website</b> to proceed.</p>
2 <input type="checkbox"/>	<b>Enter NOAM Server Group Data</b>	<p>Using the GUI session on the first NOAM server, go to the GUI <b>Main Menu -&gt; Configuration -&gt; Server Groups</b>, select <b>Insert</b> and fill the following fields:</p> <ul style="list-style-type: none"> <li>• <b>Server Group Name:</b> [ Enter Server Group Name]</li> <li>• <b>Level:</b> A</li> <li>• <b>Parent:</b> None</li> <li>• <b>Function:</b> DSR (Active/Standby Pair)</li> <li>• <b>WAN Replication Connection Count:</b> Use Default Value</li> </ul> <p>Select <b>OK</b> when all fields are filled in.</p>

**Procedure 8. Configure the NOAM Server Group**

<p>3</p> <p><input type="checkbox"/></p>	<p><b>Edit the NOAM Server Group</b></p>	<p>From the GUI <b>Main Menu</b> -&gt; <b>Configuration</b> -&gt; <b>Server Groups</b>, select the new server group, and then select <b>Edit</b>                  Select the Network Element that represents the NOAM.</p> <table border="1" data-bbox="521 342 1318 478"> <thead> <tr> <th colspan="3">NO_900060103</th> </tr> <tr> <th>Server</th> <th>SG Inclusion</th> <th>Preferred HA Role</th> </tr> </thead> <tbody> <tr> <td>HPC6NO</td> <td><input checked="" type="checkbox"/> Include in SG</td> <td><input type="checkbox"/> Preferred Spare</td> </tr> </tbody> </table> <p>In the portion of the screen that lists the servers for the server group, find the NOAM server being configured. Click the <b>Include in SG</b> checkbox.</p> <p>Leave other boxes blank.</p> <p>Press <b>OK</b></p>	NO_900060103			Server	SG Inclusion	Preferred HA Role	HPC6NO	<input checked="" type="checkbox"/> Include in SG	<input type="checkbox"/> Preferred Spare
NO_900060103											
Server	SG Inclusion	Preferred HA Role									
HPC6NO	<input checked="" type="checkbox"/> Include in SG	<input type="checkbox"/> Preferred Spare									
<p>4</p> <p><input type="checkbox"/></p>	<p><b>Verify NOAM virtual machine role</b></p>	<p>From console window of the first NOAM virtual machine, execute the <b>ha.mystate</b> command to verify that the <b>“DbReplication”</b> and <b>“VIP”</b> item under the <b>resourceId</b> column has a value of <b>“Active”</b> under the <b>“role”</b> column.</p> <p>You might have to wait a few minutes for it to be in that state.</p> <p>Press <b>Ctrl+C</b> to exit</p> <p>Example:</p>  <pre> root@labFe2b2dsrnoa:~# ha.mystate resourceId  role      node      subResources  lastUpdate ----- DbReplication Active    A0878.188  0 1110:055822 VIP Active    A0878.188  0 1110:055822 pSbrBBaseRepl OOS      A0878.188  0 1110:055815 pSbrBindingRes OOS      A0878.188  0 1110:055815 pSbrSBaseRepl OOS      A0878.188  0 1110:055815 pSbrSessionRes OOS      A0878.188  0 1110:055815 CacdProcessRes Active    A0878.188  0 1110:055822 DA_MP_Leader OOS      A0878.188  0 1110:055815 DSR_SLDB OOS      A0878.188  0-63 1110:055815 VIP_DA_MP OOS      A0878.188  0-63 1110:055815 EXGSTACK_Process OOS      A0878.188  0-63 1110:055815 DSR_Process OOS      A0878.188  0-63 1110:055815 CAPM_HELP_Proc OOS      A0878.188  0 1110:055815 DSROAM_RL_Proc OOS      A0878.188  0 1110:055815 DSROAM_PN_Proc OOS      A0878.188  0 1110:055815 DSROAM_IC_Proc OOS      A0878.188  0 1110:055815 DSROAM_TC_Proc OOS      A0878.188  0 1110:055815 DSROAM_CA_Proc Active    A0878.188  0 1110:055822                 </pre>									
<p>5</p> <p><input type="checkbox"/></p>	<p><b>Restart 1<sup>st</sup> NOAM virtual machine</b></p>	<p>From the NOAM GUI, select the <b>Main menu</b> -&gt; <b>Status &amp; Manage</b> -&gt; <b>Server</b> menu.</p> <p>Select the first NOAM server. Select the <b>Restart</b> button. Answer <b>OK</b> to the confirmation popup. Wait for restart to complete.</p>									

**Procedure 9. Configure the Second NOAM Server**

<p><b>S T E P</b></p>	<p>This procedure will provide the steps to configure the Second NOAM server. Optional for small lab deployment.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
<p>1 <input type="checkbox"/></p>	<p><b>NOAM GUI:</b> Login</p>	<p>If not already done, establish a GUI session on the first NOAM server by using the XMI IP address of the first NOAM server. Open the web browser and enter a URL of: <a href="http://&lt;NO1_XMI_IP_Address&gt;">http://&lt;NO1_XMI_IP_Address&gt;</a></p> <p>Login as the <i>guiadmin</i> user.</p>

**Procedure 9. Configure the Second NOAM Server**

2	<p><b>Insert the 2nd NOAM VM</b></p>	<p>Navigate to <b>Main Menu -&gt; Configuration -&gt; Servers.</b></p> <p>Select the <b>Insert</b> button to insert the new NOAM server into servers table (<i>the first or server</i>).</p> <div style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;"> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 20%;">Hostname</td> <td><input style="width: 80%;" type="text" value="NO2"/></td> </tr> <tr> <td>Role</td> <td><input type="text" value="NETWORK OAM&amp;P"/></td> </tr> <tr> <td>System ID</td> <td><input style="width: 80%;" type="text"/></td> </tr> <tr> <td>Hardware Profile</td> <td><input type="text" value="DSR ESXI Guest"/></td> </tr> <tr> <td>Network Element Name</td> <td><input type="text" value="VM_INSTALLDOC_TEST"/></td> </tr> <tr> <td>Location</td> <td><input style="width: 80%;" type="text"/></td> </tr> </table> </div> <p>Fill in the fields as follows:</p> <p><b>Hostname:</b>                    &lt;Hostname&gt;</p> <p><b>Role:</b>                                NETWORK OAM&amp;P</p> <p><b>System ID:</b>                    &lt;Site System ID&gt;</p> <p><b>Hardware Profile:</b>            DSR ESXI Guest (VMware)</p> <p style="text-align: center;"><b>or</b></p> <p><b>Hardware Profile:</b>            DSR Guest (KVM/OpenStack)</p> <p><b>Network Element Name:</b> [Choose NE from Drop Down Box]</p> <p>The network interface fields will now become available with selection choices based on the chosen hardware profile and network element</p> <div style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;"> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="3" style="text-align: left; padding: 2px;">Interfaces:</th> </tr> <tr> <th style="text-align: left; padding: 2px;">Network</th> <th style="text-align: left; padding: 2px;">IP Address</th> <th style="text-align: left; padding: 2px;">Interface</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px;">XMI (10.240.20.0/22)</td> <td style="padding: 2px;"><input type="text" value="10.240.21.147"/></td> <td style="padding: 2px;">eth0 <input type="checkbox"/> VLAN (3)</td> </tr> <tr> <td style="padding: 2px;">IMI (169.254.2.0/24)</td> <td style="padding: 2px;"><input type="text" value="169.254.2.2"/></td> <td style="padding: 2px;">eth1 <input type="checkbox"/> VLAN (4)</td> </tr> </tbody> </table> <p style="text-align: center; margin-top: 5px;"> <input type="button" value="Ok"/> <input type="button" value="Apply"/> <input type="button" value="Cancel"/> </p> </div> <p>Fill in the server IP addresses for the XMI network. <p>9</p> <p><input type="checkbox"/></p>	<p><b>Export the initial configuration</b></p>	<p>From the GUI screen, select the server that was just inserted and then select <b>Export</b> action button to generate the initial configuration data for that server. Go to the Info tab to confirm the file has been created.</p>																										

## Procedure 15. Configure the MP Virtual machines

10 <input type="checkbox"/>	<b>Log onto the MP</b>	Obtain a terminal window connection on the MP or IPFE server.
11 <input type="checkbox"/>	<b>Copy Configuration File to MP or IPFE server</b>	<p>From the active NO console login as <i>admusr</i>.</p> <pre>\$ sudo scp /var/TKLC/db/filemgmt/TKLCConfigData.&lt;hostname&gt;.sh admusr@&lt;ipaddr&gt;:/var/tmp/TKLCConfigData.sh</pre> <p><b>Note:</b> ipaddr is the XMI IP address of the MP or IPFE.</p>
12 <input type="checkbox"/>	<b>Wait for Configuration to Complete</b>	<p>Obtain a terminal session on the <b>MP or IPFE</b> as the <i>admusr</i> user.</p> <p>The automatic configuration daemon will look for the file named <i>“TKLCConfigData.sh”</i> in the /var/tmp directory, implement the configuration in the file, and then prompt the user to reboot the server.</p> <p>If you are on the console wait to be prompted to reboot the server, but <b>DO NOT</b> reboot the server, it will be rebooted later on in this procedure.</p> <p>Verify script completed successfully by checking the following file.</p> <pre>\$ sudo cat /var/TKLC/appw/logs/Process/install.log</pre> <p><b>Note:</b> Ignore the warning about removing the USB key, since no USB key is present.</p>
13 <input type="checkbox"/>	<b>Set the time zone (optional) and reboot the Server</b>	<p>To change the system time zone, from the command line prompt, execute <i>set_ini_tz.pl</i>. The following command example uses the America/New_York time zone.</p> <p>Replace as appropriate with the time zone you have selected for this installation. For a full list of valid time zones, see Appendix B.</p> <pre>\$ sudo /usr/TKLC/appworks/bin/set_ini_tz.pl "America/New_York" &gt;/dev/null 2&gt;&amp;1</pre> <pre>\$ sudo init 6</pre> <p>Wait for server to reboot.</p>
14 <input type="checkbox"/>	<b>MP or IPFE Server: Verify Server Health</b>	<p>After the reboot, login as <i>admusr</i>.</p> <p>Execute the following command as super-user on the server and make sure that no errors are returned:</p> <pre>\$ sudo syscheck Running modules in class hardware...   OK Running modules in class disk...   OK Running modules in class net...   OK Running modules in class system...   OK Running modules in class proc...   OK LOG LOCATION: /var/TKLC/log/syscheck/fail_log</pre>

## Procedure 15. Configure the MP Virtual machines

15 <input type="checkbox"/>	<p><b>(OPTIONAL)</b> <b>Delete Auto-Configured Default Route on MP and Replace it with a Network Route via the XMI Network</b></p>	<p><b>Note:</b> THIS STEP IS <b>OPTIONAL</b> AND SHOULD ONLY BE EXECUTED IF YOU PLAN TO CONFIGURE A <b>DEFAULT ROUTE</b> ON YOUR MP THAT USES A SIGNALING (XSI) NETWORK INSTEAD OF THE XMI NETWORK. (Not executing this step will mean that a default route will not be configurable on this MP and you will have to create separate network routes for each signaling network destination.)</p> <p><b>Log into the MP</b> as the <i>admusr</i> user. (Alternatively, you can log into virtual machines console.)</p> <p>Determine &lt;XMI_Gateway_IP&gt; from your SO site network element info.</p> <p>Gather the following items:</p> <ul style="list-style-type: none"> <li>• &lt;NO_XMI_Network_Address&gt;</li> <li>• &lt;NO_XMI_Network_Netmask&gt;</li> </ul> <p><b>Note:</b> You can either consult the XML files you imported earlier, or go to the NO GUI and view these values from the <b>Main Menu -&gt; Configuration -&gt; Network Elements</b> screen.</p> <p><b>[MP console] Create network routes to the NO's XMI(OAM) network:</b></p> <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add --route=net --address=&lt;NO_Site_Network_ID&gt; --netmask=&lt;NO_Site_Network_Netmask&gt; --gateway=&lt;MP_XMI_Gateway_IP_Address&gt; --device=&lt;MP_XMI_Interface&gt; Route to &lt;MP_XMI_Interface&gt; added.</pre> <p><b>(Optional) [MP console] If Sending SNMP traps from individual servers, create host routes to customer SNMP trap destinations on the XMI network:</b></p> <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add --route=host --address=&lt;Customer_NMS_IP&gt; --gateway=&lt;MP_XMI_Gateway_IP_Address&gt; --device=&lt;MP_XMI_Interface&gt; Route to &lt;MP_XMI_Interface&gt; added.</pre> <p>(Repeat for any existing cusomter NMS stations)</p> <p><b>Delete the existing default route:</b></p> <pre>\$ sudo /usr/TKLC/plat/bin/netAdm delete --route=default -- gateway=&lt;MP_XMI_Gateway_IP&gt; --device=&lt;MP_XMI_Interface&gt; Route to &lt;MP_XMI_Interface&gt; removed.</pre>
--------------------------------	--	---

Procedure 15. Configure the MP Virtual machines

<p>16</p> <p><input type="checkbox"/></p>	<p><b>(OPTIONAL, Continued from Previous Step)</b>  <b>Delete Auto-Configured Default Route on MP and Replace it with a Network Route via the XMI Network</b></p>	<p><b>[MP Console] Ping active NO XMI IP address to verify connectivity:</b></p> <pre>\$ ping &lt;ACTIVE_NO_XMI_IP_Address&gt;</pre> <pre>PING 10.240.108.6 (10.240.108.6) 56(84) bytes of data. 64 bytes from 10.240.108.6: icmp_seq=1 ttl=64 time=0.342 ms 64 bytes from 10.240.108.6: icmp_seq=2 ttl=64 time=0.247 ms</pre> <p><b>(Optional) [MP Console] Ping Customer NMS Station(s):</b></p> <pre>\$ ping &lt;Customer_NMS_IP&gt;</pre> <pre>PING 172.4.116.8 (172.4.118.8) 56(84) bytes of data. 64 bytes from 172.4.116.8: icmp_seq=1 ttl=64 time=0.342 ms 64 bytes from 172.4.116.8: icmp_seq=2 ttl=64 time=0.247 ms</pre> <p>If you do not get a response, then verify your network configuration. If you continue to get failures then halt the installation and contact Oracle customer support.</p>
<p>17</p> <p><input type="checkbox"/></p>	<p><b>Add the signaling interfaces to the MP's and IPFE's</b></p>	<p><b>Use the netAdm command to add XSI interfaces. Repeat this step for each signaling interface. Note that KVM/OpenStack users must have added network addresses during the boot invocation (“nova boot”) that correspond to the relevant network interfaces.</b></p> <pre>\$ sudo netAdm add --device=ethX --address=&lt;XSI_IP_ADDRESS&gt; \ --netmask=&lt;XSI_NETMASK&gt; --onboot=yes --bootproto=none</pre> <p><b>Note:</b> ethX is the defined signaling device. I.E.  XMI:eth0/IMI:eth1/XSI1:eth2/XSI2:eth3</p> <p><b>Note:</b> When reconfiguring virtual NICs under VMware, the proper procedure is to remove the UDEV rules file (/etc/udev/rules.d/70-persistent-net.rules), shut down the guest and remove the interfaces. Power on the VM, then add the interfaces one by one, in the desired order of enumeration, each time clicking « OK » to get VMware to instantiate the device.</p>
<p>18</p> <p><input type="checkbox"/></p>	<p><b>Repeat for remaining MP's and IPFE's</b></p>	<p><b>Repeat this entire procedure for all remaining MP's and IPFE's.</b></p>

**Procedure 16. Configure Places and Assign MP Servers to Places (PCA ONLY)**

<p><b>S T E P #</b></p>	<p>This procedure will provide the steps/reference to add “Places” in the PCA Network.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.</p>	
<p>1 <input type="checkbox"/></p>	<p><b>(PCA Only) Configure Places</b></p>	<p>Establish a GUI session on the NOAM by using the XMI VIP address. Login as user <b>guiadmin</b>.</p> <p>Navigate to <b>Main Menu -&gt; Configuration -&gt; Places</b></p>  <p>Select the <b>Insert</b> button</p>   <p><b>Place Name: &lt;Site Name&gt;</b>  <b>Parent: NONE</b>  <b>Place Type: Site</b></p> <p>Repeat this step for each of the <i>PCA Places (Sites)</i> in the network.</p> <p>See the <b>Terminology</b> section for more information on <i>Sites &amp; Places</i>.</p>

**Procedure 16. Configure Places and Assign MP Servers to Places (PCA ONLY)**

2	<input type="checkbox"/> <b>(PCA Only) Configure Place Associations</b>	<p>Select the place configured in step 1, press the edit button.</p> <p style="text-align: center;"> <input type="button" value="Insert"/> <input type="button" value="Edit"/> <input type="button" value="Delete"/> <input type="button" value="Report"/> </p> <p>For each place you have defined, choose the set of MP servers that will be assigned to those places.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #e0e0e0;"> <th colspan="2">Place</th> </tr> <tr style="background-color: #e0e0e0;"> <th>Field</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>Place Name</td> <td><input type="text" value="rtpLabC"/> *</td> </tr> <tr> <td>Parent</td> <td><input type="text" value="NONE"/> ▾ *</td> </tr> <tr> <td>Place Type</td> <td><input type="text" value="Site"/> ▾ *</td> </tr> <tr style="background-color: #e0e0e0;"> <th colspan="2">Servers</th> </tr> <tr> <td>LABCSONE</td> <td><input type="checkbox"/> labCe1b04pdra1</td> </tr> </tbody> </table> <p>Check all the check boxes for <b>PCA DA-MP</b> and <b>SBR</b> servers that will be assigned to this place.</p> <p>Repeat this step for all other DA-MP or SBR servers you wish to assign to places.</p> <p><b>Note:</b> All <b>PCA DA-MPs</b>, <b>SS7MPs</b> and <b>SBR MPs</b> must be added to the <i>Site Place</i> that corresponds to the physical location of the server.</p>	Place		Field	Value	Place Name	<input type="text" value="rtpLabC"/> *	Parent	<input type="text" value="NONE"/> ▾ *	Place Type	<input type="text" value="Site"/> ▾ *	Servers		LABCSONE	<input type="checkbox"/> labCe1b04pdra1

<p>6</p> <p><input type="checkbox"/></p>	<p>Repeat steps 2-5 for all other MP server groups.</p>	<p>The routes entered in this procedure should now be configured on *all* MPs in the server group for the first MP you selected. If you have additional MP server groups, repeat from 2, but this time, select an MP from the next MP server group. Continue until you have covered all MP server groups.</p>																		

### 4.5 Configure DSCP (Optional)

**Procedure 19. Configure DSCP Values for Outgoing Traffic (Optional)**

<p><b>S</b> <b>T</b> <b>E</b> <b>P</b></p>	<p>This procedure will provide the steps to configure the DSCP values for outgoing packets on servers. DSCP values can be applied to an outbound interface as a whole, or to all outbound traffic using a specific TCP or SCTP source port. This step is optional and should only be executed if has been decided that your network will utilize packet DSCP markings for Quality-of-Service purposes.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
<p>1 <input type="checkbox"/></p>	<p><b>Establish GUI Session on the NOAM VIP</b></p>	<p>Establish a GUI session on the NOAM by using the NOAM VIP address. Login as user <i>guiadmin</i>.</p>

Procedure 19. Configure DSCP Values for Outgoing Traffic (Optional)

<p>2</p> <p><input type="checkbox"/></p>	<p><b>NOAM VIP:</b> Option 1: Configure Interface DSCP</p>	<p><b>Note:</b> The values displayed in the screenshots are for demonstration purposes only. The exact DSCP values for your site will vary.</p> <p>Navigate to <b>Main Menu -&gt; Configuration -&gt; DSCP -&gt; Interface DSCP</b></p>  <p>Select the server you wish to configure from the list of servers on the 2<sup>nd</sup> line. (You can view all servers with "<i>Entire Network</i>" selected; or limit yourself to a particular server group by clicking on that server group name's tab).</p> <p>Click <b>Insert</b></p> <p>Main Menu: Configuration -&gt; DSCP -&gt; Interface DSCP</p>  <p>Select the network interface from the drop down box, then enter the <i>DSCP value</i> you wish to have applied to packets leaving this interface.</p> <p>Main Menu: [Insertdscpbyintf]</p>  <p>Click <b>OK</b> if there are no more interfaces on this server to configure, or <b>Apply</b> to finish this interface and continue on with more interfaces by selecting them from the drop down and entering their <i>DSCP values</i>.</p>
--	--	--

**Procedure 19. Configure DSCP Values for Outgoing Traffic (Optional)**

<p>3 <input type="checkbox"/></p>	<p><b>NOAM VIP: Option 2: Configure Port DSCP</b></p>	<p><b>Note:</b> The values displayed in the screenshots are for demonstration purposes only. The exact DSCP values for your site will vary.</p> <p>Navigate to <b>Main Menu -&gt; Configuration -&gt; DSCP -&gt; Port DSCP</b></p>  <p>Select the server you wish to configure from the list of servers on the 2<sup>nd</sup> line. (You can view all servers <i>with "Entire Network" selected</i>; or limit yourself to a particular server group by clicking on that server group name's tab).</p> <p>Click <b>Insert</b></p> <p><b>Main Menu: Configuration -&gt; DSCP -&gt; Port DSCP</b></p>  <p>Enter the source port, <i>DSCP value</i>, and select the transport protocol.</p> <p><b>Main Menu: Configuration -&gt; DSCP -&gt; Port DSCP [Insert]</b></p>  <p>Click <b>OK</b> if there are no more port DSCPs on this server to configure, or <b>Apply</b> to finish this port entry and continue entering more <i>DSCP mappings</i>.</p>
<p>4 <input type="checkbox"/></p>	<p><b>Repeat for additional servers.</b></p>	<p><b>Repeat Step 2-3 for all remaining servers.</b></p>

**Procedure 20. Add VIP for Signaling Networks (Active/Standby Configurations ONLY)**

<p><b>S T E P #</b></p>	<p>This procedure will provide the steps to configure the VIPs for the signaling networks on the MPs.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
<p>1 <input type="checkbox"/></p>	<p><b>Configure VIP (OpenStack only).</b></p>	<ol style="list-style-type: none"> <li>1. <b>If no IPFE TSA is used, execute the following commands. If IPFE TSA addresses were configured in Procedure 6 step 5, the following steps are redundant and should not be performed.</b></li> <li>2. Login to the OpenStack control node as admusr.</li> <li>3. Find the port id associated with the instance XSI interface corresponding to the VIP IP address..             <ol style="list-style-type: none"> <li>a. \$ <code>neutron port-list</code></li> </ol> </li> <li>4. Add the VIP IP address to the address pairs list of the corresponding instance XSI interface port.             <ol style="list-style-type: none"> <li>a. \$ <code>neutron port-update &lt;Port ID&gt; -- allowed_address_pairs list=true type=dict ip_address=&lt;VIP address to be added&gt;</code></li> </ol> </li> </ol> <p>If necessary, see Allowed Address Pairs in Appendix I for more information.</p>
<p>2 <input type="checkbox"/></p>	<p><b>Edit the MP Server Group and add VIPs (ONLY FOR 1+1)</b></p>	<p><b>IF YOUR MPs ARE IN A DSR MULTI-ACTIVE CLUSTER SERVER GROUP CONFIGURATION (N+0), THEN SKIP THIS STEP</b></p> <p>Be sure you have performed Procedure 6, steps 5 and 6 correctly(VIP configuration).</p> <p>From the GUI <b>Main Menu-&gt;Configuration-&gt;Server Groups</b>, select the MP server group, and then select <b>Edit</b></p> <p>Click on <b>Add</b> to add the VIP for XSI1          Enter the VIP of int-XSI-1 and click on <b>Apply</b>          Click on <b>Add</b> again to add the VIP for XSI2          Enter the VIP of int-XSI-2 and click on <b>Apply</b>          If more Signaling networks exists, add their corresponding VIP addresses .          Finally Click on <b>OK</b>.</p> 

### 4.6 Configure IP Front End (Optional)

#### Procedure 21. IP Front End (IPFE) Configuration

<p><b>S</b> <b>T</b> <b>E</b> <b>P</b> <b>#</b></p>	<p>This procedure will provide the steps to configure IP Front End (IPFE), and optimize performance.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.</p>													
<p>1 <input type="checkbox"/></p>	<p><b>SOAM VIP:</b> Configuration of replication IPFE association data.</p>	<p>Login to the <b>SOAM VIP</b> GUI as <i>guiadmin</i> user.</p> <p>Select <b>Main Menu -&gt; IPFE -&gt; Configuration -&gt; Options</b></p> <p>Enter the IP address of the <b>1st IPFE</b> in the <b>IPFE-A1 IP Address</b> field and the IP address of the <b>2nd IPFE</b> in the <b>IPFE-A2 IP Address</b> field</p> <p>If applicable, enter the address of the <b>3rd</b> and <b>4th</b> IPFE servers in <b>IPFE-B1 IP Address</b> and <b>IPFE-B2 IP Address</b> fields.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;">Variable</th> <th style="text-align: left;">Value</th> </tr> </thead> <tbody> <tr> <td colspan="2" style="background-color: #e0e0e0;"><b>Inter-IPFE Synchronization</b></td> </tr> <tr> <td>IPFE-A1 IP Address</td> <td>10.240.79.103 - Viper-IPFE1</td> </tr> <tr> <td>IPFE-A2 IP Address</td> <td>10.240.79.104 - Viper-IPFE2</td> </tr> <tr> <td>IPFE-B1 IP Address</td> <td>&lt;unset&gt;</td> </tr> <tr> <td>IPFE-B2 IP Address</td> <td>&lt;unset&gt;</td> </tr> </tbody> </table> <p><b>Note:</b> It is recommended that the address reside on the <b>IMI (Internal Management Interface)</b> network.</p> <p><b>Note:</b> <b>IPFE-A1</b> and <b>IPFE-A2</b> must have connectivity between each other via these addresses. Variable	Value													
<b>Inter-IPFE Synchronization</b>														
IPFE-A1 IP Address	10.240.79.103 - Viper-IPFE1													
IPFE-A2 IP Address	10.240.79.104 - Viper-IPFE2													
IPFE-B1 IP Address	<unset>													
IPFE-B2 IP Address	<unset>													
<p>2 <input type="checkbox"/></p>	<p><b>SOAM VIP:</b> Configuration of IPFE Target sets.</p>	<p>Login to the <b>SOAM VIP</b> GUI as <i>guiadmin</i> user.</p> <p>Select <b>Main Menu -&gt; IPFE -&gt; Configuration -&gt; Target Sets</b></p> <p>Select either <b>Insert IPv4</b> or <b>Insert IPv6</b> button, depending on the IP version of the target set you plan to use.</p> <p>This screen will display the following configurable settings:</p> <p><b>Protocols:</b> protocols the target set will support.</p> <p><b>Delete Age:</b> Specifies when the IPFE should remove its association data for a connection. Any packets presenting a source IP address/port combination that had been previously stored as association state but have been idle longer than the <b>Delete Age</b> configuration will be treated as a new connection and will not automatically go to the same application server.</p> <p><b>Load Balance Algorithm:</b> <i>Hash</i> or <i>Least Load</i> options</p> <ul style="list-style-type: none"> <li>• <b>Note:</b> In order for the IPFE to provide Least Load distribution, <b>Main Menu -&gt; IPFE -&gt; Configuration -&gt; Options</b>, Monitoring Protocol must be set to <i>Heartbeat</i> so that the application servers can provide the load information the IPFE uses to select the <i>least-loaded</i> server for connections.</li> <li>• <b>Note:</b> The Least Load option is the default setting, and is the recommended option with exception of unique backward compatibility scenarios.</li> </ul>												

## Procedure 21. IP Front End (IPFE) Configuration

		<ul style="list-style-type: none"> <li>• <b>(Optional):</b> If you have selected the <i>Least Load algorithm</i>, you may configure the following fields to adjust the algorithm's behavior: <ul style="list-style-type: none"> <li>○ <b>MPS Factor</b> – Messages per Second (MPS) is one component of the least load algorithm. This field allows you to set it from 0 (not used in load calculations) to 100 (the only component used for load calculations). It is recommended that IPFE connections have Reserved Ingress MPS set to something other than the default, which is 0. To configure <i>Reserved Ingress MPS</i>, go to <b>Main Menu -&gt; Diameter -&gt; Configuration -&gt; Configuration Sets -&gt; Capacity Configuration</b>. If you choose not to use <i>Reserved Ingress MPS</i>, set <i>MPS Factor</i> to 0 and <i>Connection Count Factor</i>, described below, to 100.</li> <li>○ <b>Connection Count Factor</b> – This is the other component of the <i>least load</i> algorithm. This field allows you to set it from 0 (not used in load calculations) to 100 (the only component used for load calculations). Increase this setting if connection storms (the arrival of many connections at a very rapid rate) are a concern.</li> <li>○ <b>Allowed Deviation</b> - Percentage within which two application server's load calculation results are considered to be equal. If very short, intense connection bursts are expected to occur, increase the value to smooth out the distribution.</li> </ul> </li> </ul> <p><b>Primary Public IP Address:</b> IP address for the target set</p> <ul style="list-style-type: none"> <li>• <b>Note:</b> This address must reside on the XSI (External Signaling Interface) network because it will be used by the application clients to reach the application servers. This address <b>MUST NOT</b> be a real interface address (that is, must not be associated with a network interface card).</li> </ul> <p><b>Active IPFE:</b> IPFE to handle the traffic for the target set address.</p> <p><b>Secondary Public IP Address:</b> If this target set supports either <i>multihomed SCTP</i> or Both <i>TCP</i> and <i>SCTP</i>, provide a <b>Secondary IP Address</b>.</p> <ul style="list-style-type: none"> <li>• <b>Note:</b>A secondary address is required to support <i>SCTP multihoming</i>. A secondary address can support <i>TCP</i>, but the <i>TCP</i> connections will not be multihomed.</li> <li>• <b>Note:</b> If <i>SCTP multihoming</i> is to be supported, select the <i>mate</i> IPFE of the Active IPFE for the Active IPFE for <b>secondary address</b> to ensure that SCTP failover functions as designed.</li> </ul> <p><b>Target Set IP List:</b> Select an IP address, a secondary IP address if supporting <i>SCTP multihoming</i>, a description, and a weight for the application server.</p> <ul style="list-style-type: none"> <li>• <b>Note:</b>The IP address must be on the XSI network since they must be on the same network as the target set address. This address must also match the IP version of the target set address (IPv4 or IPv6). If the <i>Secondary Public IP Address</i> is configured, it must reside on the <i>same</i> application server as the first IP address.</li> <li>• <b>Note:</b> If all application servers have an equal <b>weight</b> (e.g., 100, which is the default), they have an equal chance of being selected. Application servers with larger <b>weights</b> have a greater chance of being selected.</li> </ul> <p>Click the <b>Add</b> button to add more application servers (<i>Up to 16</i>)</p> <p>Click the <b>Apply</b> button.</p>
--	--	---

**Procedure 21. IP Front End (IPFE) Configuration**

3	<input type="checkbox"/> <b>SOAM VIP:</b> Repeat for additional Configuration of IPFE Target sets.	Repeat for <b>step 9</b> for each target set (Up to 16). At least one target set must be configured.
---	--	---

**4.7 SNMP Configuration (Optional)**

**Procedure 22. Configure SNMP Trap Receiver(s) (OPTIONAL)**

S T E P #	This procedure will provide the steps to configure forwarding of SNMP.  Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.  If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.
-----------------------	--

**Procedure 22. Configure SNMP Trap Receiver(s) (OPTIONAL)**

<p>1</p> <p><input type="checkbox"/></p>	<p><b>NOAM VIP:</b> Configure System-Wide SNMP Trap Receiver(s)</p>	<p>Using a web browser, log onto the NOAM VIP as <i>guiadmin</i> user. Navigate to <b>Main Menu -&gt; Administration -&gt; SNMP</b></p>  <p>Verify that <b>“Traps Enabled”</b> is checked:</p>  <p>Fill in the <i>IP address</i> or <i>hostname</i> of the Network Management Station (<i>NMS</i>) you wish to forward traps to. This IP should be reachable from the the NOAM’s “XMI” network.</p> <p>Continue to fill in additional secondary manager IPs in the corresponding slots if desired.</p> <table border="1" data-bbox="513 1188 1130 1293"> <thead> <tr> <th>Variable</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>Manager 1</td> <td><input type="text" value="10.10.55.88"/></td> </tr> </tbody> </table> <p>Enter the <b>“SNMP Community Name”</b>:</p> <table border="1" data-bbox="513 1388 1416 1518"> <tr> <td>SNMPv2c Read-Only Community Name</td> <td><input type="text" value="snmppublic"/></td> </tr> <tr> <td>SNMPv2c Read-Write Community Name</td> <td><input type="text" value="snmppublic"/></td> </tr> </table> <p>Leave all other fields at their default values.</p> <p>Press <b>OK</b></p>	Variable	Value	Manager 1	<input type="text" value="10.10.55.88"/>	SNMPv2c Read-Only Community Name	<input type="text" value="snmppublic"/>	SNMPv2c Read-Write Community Name	<input type="text" value="snmppublic"/>

### 4.8 Create iDIH Virtual Machines (VMware)

**Procedure 23. (VMware only) Create iDIH Oracle, Mediation and Application VMs (Optional)**

<p><b>S T E P #</b></p>	<p>This procedure will create the iDIH Oracle, Mediation and Application guest.</p> <p><b>Needed material:</b></p> <ul style="list-style-type: none"> <li>- iDIH Oracle OVA, iDIH Mediation OVA and iDIH Application OVA</li> </ul> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.</p>	
<p>1 <input type="checkbox"/></p>	<p><b>Add the iDIH Oracle OVA to VMware</b></p>	<ol style="list-style-type: none"> <li>1. Launch the VMware client of your choice.</li> <li>2. Add the <b>iDIH Oracle OVA</b> image to the VMware catalog or repository. Follow the instructions provided by the Cloud solutions manufacturer.</li> </ol>
<p>2 <input type="checkbox"/></p>	<p><b>Create the Oracle VM, from the OVA image.</b></p>	<ol style="list-style-type: none"> <li>1. Browse the library or repository that you placed the <b>iDIH Oracle OVA</b> image.</li> <li>2. Deploy the <b>OVA Image</b> using <b>vSphere Client</b> or the <b>vSphere Web Client</b>.</li> <li>3. Name the <b>iDIH Oracle VM</b> and select the datastore.</li> </ol>
<p>3 <input type="checkbox"/></p>	<p><b>Configure resources for the iDIH Oracle VM.</b></p>	<ol style="list-style-type: none"> <li>1. Configure the <b>iDIH Oracle VM</b> per the Resource Profile in <b>Appendix D</b> for the <b>iDIH Oracle VM</b> using the vSphere Client or the vSphere Web Client.</li> <li>2. Record the Ethernet addresses associated with each interface and the virtual network it is associated with.</li> </ol>
<p>4 <input type="checkbox"/></p>	<p><b>Power on the iDIH Oracle VM.</b></p>	<ol style="list-style-type: none"> <li>1. Use the vSphere client or vSphere web client to Power on the <b>iDIH Oracle VM</b>.</li> </ol>
<p>5 <input type="checkbox"/></p>	<p><b>Procedure Overview</b></p>	<ol style="list-style-type: none"> <li>1. Repeat Steps 1 through 4 for the following VMs. Use Unique labels for the VM Names:   <div style="text-align: center;"> <p><b>iDIH Application</b></p> <p><b>iDIH Mediation</b></p> </div> </li> </ol>

### 4.9 Create iDIH Virtual Machines (KVM/OpenStack)

**Procedure 24. (KVM/OpenStack only ) Create iDIH Oracle, Mediation and Application VMs (Optional)**

<p><b>S T E P #</b></p>	<p>This procedure will create the iDIH Oracle, Mediation and Application guest.</p> <p><b>Needed material:</b></p> <ul style="list-style-type: none"> <li>- iDIH Oracle OVA, iDIH Mediation OVA and iDIH Application OVA</li> </ul> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.</p>	
<p>1 <input type="checkbox"/></p>	<p><b>Add the iDIH Oracle OVA to KVM/OpenStack</b></p>	<ol style="list-style-type: none"> <li>1. Copy the OVA file to the OpenStack control node.                     <ul style="list-style-type: none"> <li>iii. <code>\$ scp oracle-7.3.x.x.x.ova admusr@node:~</code></li> </ul> </li> <li>2. Login to the OpenStack control node.                     <ul style="list-style-type: none"> <li>iv. <code>\$ ssh admusr@node</code></li> </ul> </li> <li>3. In an empty directory unpack the OVA file using “tar”                     <ul style="list-style-type: none"> <li>v. <code>\$ tar xvf oracle-7.3.x.x.x.ova</code></li> </ul> </li> <li>4. One of the unpacked files will have a “.vmdk” suffix. This is the VM image file that must be imported.                     <ul style="list-style-type: none"> <li>vi. oracle-7.3.x.x.x-disk1.vmdk</li> </ul> </li> <li>5. Source the OpenStack “admin” user credentials.                     <ul style="list-style-type: none"> <li>vii. <code>\$ . keystone_admin</code></li> </ul> </li> <li>6. Select an informative name for the new image.                     <ul style="list-style-type: none"> <li>viii. “dsr-7.3.x.x.x-original”</li> </ul> </li> <li>7. Import the image using the “glance” utility from the command line.                     <ul style="list-style-type: none"> <li>ix. <code>\$ glance image-create --name oracle-7.3.x.x.x-original --is-public true --is-protected false --progress --container-format bare --disk-format vmdk --file oracle-7.3.x.x.x-disk1.vmdk</code></li> <li>x. This process will take about 5 minutes, depending on the underlying infrastructure.</li> </ul> </li> </ol>
<p>2 <input type="checkbox"/></p>	<p><b>Name the new VM instance.</b></p>	<p>Create an informative name for the new instance: “iDIH-Oracle”.</p> <p>Examine the network interface recommendations at the bottom of the Resource Profile in Appendix D. Network ports must be created for each recommended interface.</p>

**Procedure 24. (KVM/OpenStack only ) Create iDIH Oracle, Mediation and Application VMs (Optional)**

<p>3</p> <p><input type="checkbox"/></p>	<p><b>Create and boot the iDIH VM instance from the glance image.</b></p>	<ol style="list-style-type: none"> <li>1. Get the following configuration values.             <ol style="list-style-type: none"> <li>a. The image ID.                 <ol style="list-style-type: none"> <li>i. <code>\$ glance image-list</code></li> </ol> </li> <li>b. The flavor ID.                 <ol style="list-style-type: none"> <li>i. <code>\$ nova flavor-list</code></li> </ol> </li> <li>c. The network ID(s)                 <ol style="list-style-type: none"> <li>i. <code>\$ neutron net-list</code></li> </ol> </li> <li>d. An informative name for the instance.                 <ol style="list-style-type: none"> <li>i. "iDIH-Oracle"</li> <li>ii. "iDIH-Mediation"</li> <li>iii. "iDIH-Application"</li> </ol> </li> </ol> </li> <li>2. Create and boot the VM instance.             <ol style="list-style-type: none"> <li>a. The instance must be owned by the DSR tenant user, not the admin user. Source the credentials of the DSR tenant user and issue the following command. Note that IPv6 addresses should use the "v6-fixed-ip" argument instead of "v4-fixed-ip".</li> <li>b. <code>\$ nova boot --image &lt;image ID&gt; --flavor &lt;flavor id&gt; --nic net-id=&lt;first network id&gt;,v4-fixed-ip=&lt;first ip address&gt; --nic net-id=&lt;second network id&gt;,v4-fixed-ip=&lt;second ip address&gt; &lt;instance name&gt;</code></li> </ol> </li> <li>3. View the newly created instance using the nova tool.             <ol style="list-style-type: none"> <li>i. <code>\$ nova list --all-tenants</code></li> </ol> <p>The VM will take approximately 5 minutes to boot and may be accessed through both network interfaces and the Horizon console tool.</p> </li> </ol>
--	---	---

**Procedure 24. (KVM/OpenStack only ) Create iDIH Oracle, Mediation and Application VMs (Optional)**

<p>4</p> <p><input type="checkbox"/></p>	<p><b>Configure instance networking.</b></p>	<ol style="list-style-type: none"> <li>1. Log in to the “Horizon” GUI as the DSR tenant user.</li> <li>2. Go to the Compute/Instances section.</li> <li>3. Click on the “Name” field of the newly created instance.</li> <li>4. Select the “Console” tab.</li> <li>5. Login as the admusr.</li> <li>6. Configure the network interfaces, conforming with the interface-to-network mappings described at the bottom of the Resource Profile in Appendix D.             <ol style="list-style-type: none"> <li>a. <code>\$ sudo netAdm add --onboot=yes --device=eth0 --address=&lt;xmi ip&gt; --netmask=&lt;xmi net mask&gt;</code></li> <li>b. <code>\$ sudo netAdm add --onboot=yes --device=eth1 --address=&lt;imi ip&gt; --netmask=&lt;imi net mask&gt;</code></li> <li>c. <code>\$ sudo netAdm add --route=default --device=eth0 --gateway=&lt;xmi gateway ip&gt;</code></li> <li>d. Under some circumstances, it may be necessary to configure as many as 6 or more interfaces.</li> <li>e. If netAdm fails to create the new interface (ethX) because it already exists in a partially configured state, perform the following actions.                 <pre style="margin-left: 40px;">\$ sudo netAdm set --onboot=yes --device=ethX --address=&lt;imi ip&gt; --netmask=&lt;imi net mask&gt;</pre> <ol style="list-style-type: none"> <li>i. .</li> </ol> </li> </ol> </li> <li>7. Reboot the VM. It will take approximately 5 minutes for the VM to complete rebooting.             <ol style="list-style-type: none"> <li>a. <code>\$ sudo init 6</code></li> </ol> <p>The new VM should now be accessible via both network and Horizon console.</p> </li> </ol>
<p>5</p> <p><input type="checkbox"/></p>	<p><b>Procedure Overview</b></p>	<p>Repeat steps 1 through 4 for the following VMs. Use Unique labels for the VM names:</p> <p style="text-align: center;"><b>iDIH-Application</b></p> <p style="text-align: center;"><b>iDIH-Mediation</b></p>

## 4.10 Configure iDIH Virtual Machines

### Procedure 25. Configure iDIH VM Networks (Optional)

S T E P #	<p>This procedure will provide the steps to configure the iDIH guest VM external management networks.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.</p>	
1 <input type="checkbox"/>	<b>Log into the Oracle VM Console.</b>	<ol style="list-style-type: none"> <li>1. Access the <b>iDIH Oracle VM console</b>.</li> <li>2. Login as <b>admusr</b>.</li> </ol>
2 <input type="checkbox"/>	<b>Trigger net rules file creation.</b>	<ol style="list-style-type: none"> <li>1. Run the udevadm command to recreate net rules file.           <pre>\$ sudo udevadm trigger --subsystem-match=net</pre> </li> </ol>
3 <input type="checkbox"/>	<b>Modify the Ethernet interface names in the net rules file.</b>	<ol style="list-style-type: none"> <li>1. Login to the <b>iDIH Oracle VM console</b> as <b>admusr</b>.</li> <li>2. Update the net rules file replace the default interfaces names ethX with xmi and int interfaces names. Be sure to use the MAC addresses recorded in the previous procedure to determine which interfaces should be named xmi and int. The mediation guest will also require the user to rename a third interface ethX as imi.           <pre>\$ sudo vi /etc/udev/rules.d/70-persistent-net.rules</pre>  <pre># PCI device 0x15ad:0x07b0 (vmxnet3) SUBSYSTEM=="net", ACTION=="add", DRIVERS=="?*", ATTR(address)=="00:50:56:b9:2d:b b", ATTR(type)=="1", KERNEL=="eth*", NAME="eth1"  # PCI device 0x15ad:0x07b0 (vmxnet3) SUBSYSTEM=="net", ACTION=="add", DRIVERS=="?*", ATTR(address)=="00:50:56:b9:ea:b 2", ATTR(type)=="1", KERNEL=="eth*", NAME="eth8"  # PCI device 0x15ad:0x07b0 (vmxnet3) SUBSYSTEM=="net", ACTION=="add", DRIVERS=="?*", ATTR(address)=="00:50:56:b9:2d:b b", ATTR(type)=="1", KERNEL=="eth*", NAME="int1"  # PCI device 0x15ad:0x07b0 (vmxnet3) SUBSYSTEM=="net", ACTION=="add", DRIVERS=="?*", ATTR(address)=="00:50:56:b9:ea:b 2", ATTR(type)=="1", KERNEL=="eth*", NAME="xmi"</pre> </li> <li>3. Reboot the guest.           <pre>\$ sudo init 6</pre> </li> </ol>

**Procedure 25. Configure iDIH VM Networks (Optional)**

<p>4 <input type="checkbox"/></p>	<p><b>(VMware only)</b>  As admusr on the Oracle VM configure the xmi and int networks with netAdm.</p>	<ol style="list-style-type: none"> <li>1. Login to the <b>iDIH Oracle VM</b> console as <b>admusr</b>.</li> <li>2. Configure the xmi network ip address and netmask.   <pre>\$ sudo netAdm add --device=xmi --address=&lt;IP Address in External Management Network&gt; --netmask=&lt;Netmask&gt; --onboot=yes --bootproto=none</pre> </li> <li>3. Configure the default gateway.   <pre>\$ sudo netAdm add --route=default --gateway=&lt;gateway address for the External Management Network&gt; --device=xmi</pre> </li> <li>4. Configure the int network ip address and netmask.   <pre>\$ sudo netAdm add --device=int --address=10.254.254.2 --netmask=255.255.255.224 --onboot=yes --bootproto=none</pre> </li> </ol> <p><b>Note:</b> oracle guest internal ip=10.254.254.2, the mediation guest internal ip = 10.254.254.3 and the application internal ip address= 10.254.254.4. The netmasks for all is 255.255.255.224.</p>
<p>4 <input type="checkbox"/></p>	<p><b>(KVM/Openstack only)</b>  As admusr on the Oracle VM configure the int network with netAdm.</p>	<ol style="list-style-type: none"> <li>1. Login to the <b>iDIH Oracle VM</b> console as <b>admusr</b>.</li> <li>2. Configure the int network ip address and netmask.   <pre>\$ sudo netAdm add --device=int --address=10.254.254.2 --netmask=255.255.255.224 --onboot=yes --bootproto=none</pre> </li> <li>3. The xmi network should already exist, but it can be created by the following command.   <pre>\$ sudo netAdm add --device=xmi --address=&lt;IP Address in External Management Network&gt; --netmask=&lt;Netmask&gt; --onboot=yes --bootproto=none</pre> </li> <li>4. The default gateway should already exist but can be created by the following command.   <pre>\$ sudo netAdm add --route=default --gateway=&lt;gateway address for the External Management Network&gt; --device=xmi</pre> </li> </ol> <p><b>Note:</b> oracle guest internal ip=10.254.254.2, the mediation guest internal ip = 10.254.254.3 and the application internal ip address= 10.254.254.4. The netmasks for all is 255.255.255.224.</p>

**Procedure 25. Configure iDIH VM Networks (Optional)**

<p>5</p> <p><input type="checkbox"/></p>	<p><b>As admusr on the Oracle VM configure NTP and the Oracle VM hostname.</b></p>	<ol style="list-style-type: none"> <li>On the Oracle VM console launch the platform configuration menu.  <code>\$ sudo su - platcfg</code></li> <li>From the platform configuration menu configure ntpserver1 with the ip address supplied for NTP  <b>Network Configuration -&gt; NTP -&gt;Edit-&gt;ntpserver1</b>                      Select “Yes” when prompted to restart NTP.</li> <li>Exit the network configuration menu.</li> <li>Configure the Oracle VM hostname.  <b>Server Configuration -&gt; Hostname -&gt;Edit</b>                      Note: typically we select hostname identify the host as iDIH application, iDIH mediation and iDIH oracle.                      Exit the platform configuration menu.</li> </ol>
<p>6</p> <p><input type="checkbox"/></p>	<p><b>Procedure Overview</b></p>	<ol style="list-style-type: none"> <li>Repeat Steps 1 through 5 for the following VMs. Use Unique labels for the VM Names:  <b>iDIH Mediation</b>  <b>iDIH Application</b></li> </ol>

**Procedure 26. Run Post Installation scripts on iDIH VMs (Optional)**

<p><b>S</b></p> <p><b>T</b></p> <p><b>E</b></p> <p><b>P</b></p> <p><b>#</b></p>	<p>This procedure will provide the steps to run post installation scripts on the iDIH VMs.</p> <p><b>Prerequisite:</b> Procedure has been completed.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
<p>1</p> <p><input type="checkbox"/></p>	<p><b>Log into the iDIH Oracle VM Console.</b></p>	<ol style="list-style-type: none"> <li>Access the <b>iDIH Oracle VM console.</b></li> <li>Login as <b>admusr.</b></li> </ol>
<p>2</p> <p><input type="checkbox"/></p>	<p><b>Run the iDIH Oracle post installation script.</b></p>	<p>Wait for the software upgrades to complete on all iDIH Virtual machines.</p> <p>As <b>admusr</b> on the <b>iDIH Oracle VM</b> console run the Oracle post installation script.  <code>\$ sudo /opt/xIH/oracle/configureOracle.sh</code></p> <p><b>Note:</b> The Oracle post installation script will run for an Hour or longer depending on the Oracle version and patch level. Wait for it to complete before the next step is executed.</p>
<p>3</p> <p><input type="checkbox"/></p>	<p><b>Log into the iDIH Mediation VM Console as admusr.</b></p>	<ol style="list-style-type: none"> <li>Access the <b>iDIH Mediation VM console.</b></li> <li>Login as <b>admusr.</b></li> </ol>

**Procedure 26. Run Post Installation scripts on iDIH VMs (Optional)**

<p>4 <input type="checkbox"/></p>	<p><b>Configure the iDIH Mediation VM imi network.</b></p>	<ol style="list-style-type: none"> <li>1. Login to the <b>iDIH Mediation VM</b> console as <b>admusr</b>.</li> <li>2. Configure the Mediation internal management network.   <pre>\$ sudo netAdm add--device=imi --address=&lt;IP Address in Internal Management Network&gt; --netmask=&lt;Netmask&gt; --onboot=yes --bootproto=none</pre> </li> </ol>
<p>5 <input type="checkbox"/></p>	<p><b>Run the iDIH Mediation VM post installation script.</b></p>	<p>The Oracle post installation script must come to completion before the Medation post installation script is run.</p> <p>As <b>admusr</b> on the <b>iDIH Mediation VM</b> console run the Medation post installation script.</p> <pre>\$ sudo /opt/xIH/mediation/install.sh</pre> <p><b>Note:</b> The Mediation post installation script will run for 15 minutes. Wait for it to complete before the next step is executed.</p> <p><b>Note:</b> It is assumed network configuration and functionality is correct prior to installation. If you encounter an issue of the mediation post installation script <b>/opt/xIH/mediation/install.sh</b> hanging at the beginning as shown below, but you are still able to ssh to 10.254.254.2, make sure the internal interface(int) MTU has the correct setting - 1500 MTU. If yes, MTU size adjustment may be needed. For verification, connect to oracle using sqlplus using the following commands:</p> <ol style="list-style-type: none"> <li>1. Logon to mediation server as admusr.</li> <li>2. Execute the command “sudo su - tekelec”.</li> <li>3. Execute the command “sqlplus /@NSP”.</li> </ol> 
<p>6 <input type="checkbox"/></p>	<p><b>Log into the iDIH Application VM Console as admusr.</b></p>	<ol style="list-style-type: none"> <li>1. Access the <b>iDIH Application VM console</b>.</li> <li>2. Login as <b>admusr</b>.</li> </ol>
<p>7 <input type="checkbox"/></p>	<p><b>Run the iDIH Application post installation script.</b></p>	<p>The Mediation post installation script must come to completion before the Application post installation script is run.</p> <p>As <b>admusr</b> on the <b>iDIH Application VM</b> console run the Application post installation script.</p> <pre>\$ sudo /opt/xIH/apps/install.sh</pre> <p><b>Note:</b> The Application post installation script will run for 45 minutes. Wait for it to complete before the next step is executed.</p>

**Procedure 26. Run Post Installation scripts on iDIH VMs (Optional)**

<p>8 <input type="checkbox"/></p>	<p><b>Set Mediation hostname.</b></p>	<p>As <b>tekelec</b> on the <b>iDIH Mediation VM</b> console run the following commands.</p> <pre>\$ sudo su - tekelec \$ med:/usr/TKLC/xIH iset -fnodeName=`hostname` - fhostName=`hostname` NodeInfo where l=1</pre>
<p>9 <input type="checkbox"/></p>	<p><b>Restart each of the iDIH guests from their consoles.</b></p>	<p>The Application post installat script must come to completion before the any of the Virtual Machines are restarted.</p> <p>As <b>admusr</b> on the <b>iDIH Mediation VM</b> run init command to <b>restart</b> the MediationVirtual Machine.</p> <pre>\$ sudo init 6</pre> <p>As <b>admusr</b> on the <b>iDIH Application VM</b> run the init command to <b>restart</b> the Application Virtual Machine.</p> <pre>\$ sudo init 6</pre> <p>As <b>admusr</b> on the <b>iDIH Oracle VM</b> run the init command to <b>restart</b> the Oracle Virtual Machine.</p> <pre>\$ sudo init 6</pre>
<p>10 <input type="checkbox"/></p>	<p><b>Run the iDIH healthcheck script on each of the iDIH virtual machines.</b></p>	<p>Once all of the iDIH Virtual Machines have restarted. Run the healthcheck scripts on each iDIH Virtual Machine.</p> <p>As <b>admusr</b> on the <b>iDIH Oracle VM</b> console run the <b>healthcheck script</b> and verify the results. Ignore the NTP message stating the <b>tvoc-host</b> is <b>not integrated</b>.</p> <pre>\$ sudo /usr/TKLC/xIH/plat/bin/analyze_server.sh -i</pre> <p>As <b>admusr</b> on the <b>iDIH Application VM</b> console run the <b>healthcheck script</b> and verify the results. If an IP address is used in place of a FQDN then IDIH SSO function will be used. [Default=n/a].
Field	Value	Description												
Max bandwidth	25	Maximum amount of bandwidth specified in Mbps that is used for maximum, Node will discard TTRs so that the bandwidth requires the configured maximum. [Default = 25Mbps (26214400 bps); Range = 0-25]												
IDIH Host Name	- Select -	The Host Name of the peer IDIH server used for sending the message. [Default = n/a].												
IDIH Visualization address	100.65.135.179	The IP address or FQDN of the remote IDIH server that visualizes the "Maintenance" screen). If an IP address is used in place of a FQDN then IDIH SSO function will be used. [Default=n/a].												

**Procedure 30. iDIH Application final configuration (Optional)**

<b>S T E P #</b>	<p>This procedure will provide the steps to finalize iDIH Configuration.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.</p>	
1 <input type="checkbox"/>	<p><b>Log into the Application Virtual Machine Console as admusr.</b></p>	<p>1. Access the <b>iDIH Application VM</b> console via the <b>VMware</b> client of your choice.</p> <p>Login as <b>admusr</b>.</p>
2 <input type="checkbox"/>	<p><b>As admusr on the Application VM sudo to the tekelec user. And run trda configuration script.</b></p>	<p>1. Sudo to the the tekelec user.</p> <pre>[admusr@thunderbolt-app ~]\$ sudo su - tekelec /usr/TKLC/xIH/profiles/xih-apps.sh Loading component profile /usr/TKLC/xIH/profiles/xih-apps.sh...</pre> <p>2. As tekelec user execute the trda-config.sh script and supply the xmi vip address for the SOAM when prompted.</p> <pre>thunderbolt-app:/usr/TKLC/xIH ./apps/trda-config.sh  dos2unix: converting file /usr/TKLC/xIH/bea/user_projects/domains/tekelec/nsp/trace-refdata- adapter.properties to UNIX format ...</pre> <p><b>Please enter DSR SOAM server VIP address:</b></p>

### 4.11 Post-Install Activities

**Procedure 31. Configure ComAgent Connections**

<p><b>S</b> <b>T</b> <b>E</b> <b>P</b> <b>#</b></p>	<p>This procedure will provide instruction on how to configure ComAgent connections on DSR for use in the FABR application.</p> <p><b>Prerequisite:</b> FABR application is activated.</p> <p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.</p>	
<p>1 <input type="checkbox"/></p>	<p><b>Configure ComAgent</b></p>	<p>Refer to [14] for the steps required to configure <b>ComAgent</b></p>

**Procedure 32. Complete PCA Configuration (Optional)**

<b>S T E P #</b>	<p>This procedure will provide instruction on how to complete PCA configuration.</p> <p><b>Prerequisite:</b> PCA application is activated.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
1 <input type="checkbox"/>	<b>Complete PCA Configuration</b>	<p>Refer to Section “PCA Configuration” of [2] for the steps required to complete PCA configuration.</p>

**Procedure 33. Backups and Disaster Prevention**

<b>S T E P #</b>	<p>This procedure will provide instruction on backups and disaster prevention.</p> <p><b>Prerequisite:</b> DSR and optional sub-systems are installed configured.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
1 <input type="checkbox"/>	<b>Backups</b>	<p>The preferred method of backing up cloud system VM instances is by snapshotting. Once the DSR and optional sub-systems are installed and configured, but before adding traffic , use the appropriate cloud tool such as the VMware Manager or the OpenStack Horizon GUI, to take snapshots of critical VM instances. It is particularly important to snapshot the control instances, such as the NOAM and SOAM.</p>

**Procedure 34. (KVM/OpenStack Only) Configure IPFE Target Set Addresses (TSA)**

<p><b>S T E P #</b></p>	<p>This procedure will provide instruction on how to configure Target Set addresses on IPFE and MP instances.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS)</p>	
<p>1 <input type="checkbox"/></p>	<p><b>IPFE with TSA only. Remove port security on TSA XMI network interfaces on IPFE and MP instances.</b></p>	<p>If using IPFE with Target Set addresses.</p> <ol style="list-style-type: none"> <li>1. Determine the TSA IP address as used in Procedure 25, step 2.</li> <li>2. Determine the corresponding XSI interface IP address as used in Procedure 25, step 2.</li> <li>3. Log in to the OpenStack control node as the admusr.</li> <li>4. Source the tenant user credentials.</li> <li>5. Determine security groups associated with the IPFE instance.             <ol style="list-style-type: none"> <li>a. <code>\$ nova list-secgroup &lt;VM instance name&gt;</code></li> </ol> </li> <li>6. Save the ID and names of the listed security groups for later use.</li> <li>7. Remove all listed security groups.             <ol style="list-style-type: none"> <li>a. <code>\$ nova remove-secgroup &lt;VM instance name&gt; &lt;Security group name&gt;</code></li> </ol> </li> <li>8. Determine the port ID of the XSI interface IP address from step 2.             <ol style="list-style-type: none"> <li>a. <code>\$ neutron port-list   grep &lt;instance IP&gt;</code></li> </ol> </li> <li>9. Disable port security for the port found in step 7.             <ol style="list-style-type: none"> <li>a. <code>\$ neutron port-update &lt;Port ID&gt; -- port-security-enabled=false</code></li> </ol> </li> <li>10. Re-enable port security for all the interfaces not on the TSA/XSI port used in step 9, including XMI, IMI and others.             <ol style="list-style-type: none"> <li>a. Determine the port IDs of the instance IP addresses not associated with the TSA/XSI network.                 <ol style="list-style-type: none"> <li>i. <code>\$ neutron port-list</code></li> </ol> </li> <li>b. For each of the non TSA/XSI instance ports perform the following command for each of the security groups from step 6.                 <ol style="list-style-type: none"> <li>i. <code>\$ neutron port-update &lt;Port ID&gt; -- security-group &lt;secgroup ID&gt;</code></li> </ol> </li> </ol> </li> </ol> <p>More information can be found in Disable Port Security Appendix I-6.</p>

## Appendix A. SAMPLE NETWORK ELEMENT AND HARDWARE PROFILES

In order to enter all the network information for a network element into an Appworks-based system, a specially formatted XML file needs to be filled out with the required network information. The network information is needed to configure both the NOAM and any SOAM Network Elements.

It is expected that the maintainer/creator of this file has networking knowledge of this product and the customer site at which it is being installed. The following is an example of a Network Element XML file.

The SOAM Network Element XML file needs to have same network names for the networks as the NOAM Network Element XML file has. It is easy to accidentally create different network names for NOAM and SOAM Network Element, and then the mapping of services to networks will not be possible.

### Example Network Element XML file:

```
<?xml version="1.0"?>
<networkelement>
  <name>NE</name>
  <networks>
    <network>
      <name>XMI</name>
      <vlanId>3</vlanId>
      <ip>10.2.0.0</ip>
      <mask>255.255.255.0</mask>
      <gateway>10.2.0.1</gateway>
      <isDefault>true</isDefault>
    </network>
    <network>
      <name>IMI</name>
      <vlanId>4</vlanId>
      <ip>10.3.0.0</ip>
      <mask>255.255.255.0</mask>
      <nonRoutable>true</nonRoutable>
    </network>
  </networks>
</networkelement>
```

## DSR 7.2/7.3 Cloud Installation

The server hardware information is needed to configure the Ethernet interfaces on the servers. This server hardware profile data XML file is used for Appworks deployments. It is supplied to the NOAM server so that the information can be pulled in by Appworks and presented to the user in the GUI during server configuration. The following is an example of a Server Hardware Profile XML file.

### Example Server Hardware Profile XML file – Virtual Guest on KVM/OpenStack:

```
<profile>
  <serverType>DSR ESXI Guest</serverType>
  <available>
    <device>eth0</device>
    <device>eth1</device>
    <device>eth2</device>
    <device>eth3</device>
    <device>eth4</device>
  </available>
  <devices>
    <device>
      <name>eth0</name>
      <type>ETHERNET</type>
    </device>
    <device>
      <name>eth1</name>
      <type>ETHERNET</type>
    </device>
    <device>
      <name>eth2</name>
      <type>ETHERNET</type>
    </device>
    <device>
      <name>eth3</name>
      <type>ETHERNET</type>
    </device>
    <device>
      <name>eth4</name>
      <type>ETHERNET</type>
    </device>
  </devices>
</profile>
```

## Appendix B. LIST OF FREQUENTLY USED TIME ZONES

This table lists several valid timezone strings that can be used for the time zone setting in a CSV file, or as the time zone parameter when manually setting a DSR timezone.

**Table 3. List of Selected Time Zone Values**

<b>Time Zone Value</b>	<b>Description</b>	<b>Universal Time Code (UTC) Offset</b>
<i>America/New_York</i>	Eastern Time	UTC-05
<i>America/Chicago</i>	Central Time	UTC-06
<i>America/Denver</i>	Mountain Time	UTC-07
<i>America/Phoenix</i>	Mountain Standard Time - Arizona	UTC-07
<i>America/Los_Angeles</i>	Pacific Time	UTC-08
<i>America/Anchorage</i>	Alaska Time	UTC-09
<i>Pacific/Honolulu</i>	Hawaii	UTC-10
<i>Africa/Johannesburg</i>		UTC+02
<i>America/Mexico_City</i>	Central Time - most locations	UTC-06
<i>Africa/Monrovia</i>		UTC+00
<i>Asia/Tokyo</i>		UTC+09
<i>America/Jamaica</i>		UTC-05
<i>Europe/Rome</i>		UTC+01

**DSR 7.2/7.3 Cloud Installation**

<i>Asia/Hong_Kong</i>		UTC+08
<i>Pacific/Guam</i>		UTC+10
<i>Europe/Athens</i>		UTC+02
<i>Europe/London</i>		UTC+00
<i>Europe/Paris</i>		UTC+01
<i>Europe/Madrid</i>	mainland	UTC+01
<i>Africa/Cairo</i>		UTC+02
<i>Europe/Copenhagen</i>		UTC+01
<i>Europe/Berlin</i>		UTC+01
<i>Europe/Prague</i>		UTC+01
<i>America/Vancouver</i>	Pacific Time - west British Columbia	UTC-08
<i>America/Edmonton</i>	Mountain Time - Alberta, east British Columbia & westSaskatchewan	UTC-07
<i>America/Toronto</i>	Eastern Time - Ontario - most locations	UTC-05
<i>America/Montreal</i>	Eastern Time - Quebec - most locations	UTC-05
<i>America/Sao_Paulo</i>	South & Southeast Brazil	UTC-03
<i>Europe/Brussels</i>		UTC+01
<i>Australia/Perth</i>	Western Australia - most locations	UTC+08

**DSR 7.2/7.3 Cloud Installation**

<i>Australia/Sydney</i>	New South Wales - most locations	UTC+10
<i>Asia/Seoul</i>		UTC+09
<i>Africa/Lagos</i>		UTC+01
<i>Europe/Warsaw</i>		UTC+01
<i>America/Puerto_Rico</i>		UTC-04
<i>Europe/Moscow</i>	Moscow+00 - west Russia	UTC+04
<i>Asia/Manila</i>		UTC+08
<i>Atlantic/Reykjavik</i>		UTC+00
<i>Asia/Jerusalem</i>		UTC+02

## Appendix C. MULTI-SITE FEATURE ACTIVATION

### Procedure C.1 Multi-Site Feature Activation

S T E P #	<p>This procedure will activate optional features in multi-site configurations for Spare SOAM servers.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.</p>	
1 <input type="checkbox"/>	<p><b>ACTIVE SOAM:</b> Prepare SOAM for optional feature activation</p>	<p>Establish an SSH session to the Active SOAM, login as <i>admusr</i>. Execute the following command:</p> <pre>\$ irem DsrApplication where "name in ('RBAR','FABR','PCA','MD-IWF','DM-IWF','CPA','GLA')"</pre> <p><b>Note:</b> Before running the irem command, collect information on which DSR applications are already activated.</p>
2 <input type="checkbox"/>	<p><b>ACTIVE SOAM:</b> Verify preparation</p>	<p>Execute the following command to verify preparation of optional feature activation:</p> <pre>\$ iqt -z -h -p -fname DsrApplication where "name in ('RBAR','FABR','PCA','MD-IWF','DM-IWF','CPA','GLA')"</pre> <p><b>Note:</b> There should be no output of this command, if there is, verify the correct entry of the command in <b>step 1</b>.</p>
3 <input type="checkbox"/>	<p><b>ACTIVE NOAM:</b> Activate Optional Features</p>	<p>Establish an SSH session to the Active NOAM, login as <i>admusr</i>. Execute the following command:</p> <p>Follow references [2], [3], [4], [5] and [7] to activate any features that were previously activated.</p>

**Appendix D. RESOURCE PROFILE**

VM Name	VM Purpose	vCPUs Lab	RAM (GB) Lab	vCPUs Production	RAM (GB) Production	Storage (GB) Lab and Production	Notes
DSR NOAM	Network Operation, Administration, and Maintenance	2	4	4	6	60	
DSR SOAM	Site Operation, Administration and Maintenance	2	4	4	6	60	
DA MP	Diameter Agent Message Processor	2	9 (24 for IWF)	8	16 (24 for IWF)	60	The 24 GB RAM requirement is a minimum if the DA-MP VM will be used with the IWF.
IPFE	IP Front End			4	16	60	
SS7 MP	SS7 Message Processor for MAP Diameter			8	24	60	The 24 GB RAM requirement is a hard minimum for SS7
SBR(s)	Subscriber Binding Repository (session) for Policy DRA			12	16	60	To support 5M sessions
SBR(b)	Subscriber Binding Repository (binding) for Policy DRA			12	16	60	
iDIH Application	Integrated Diameter Intelligence Hub web server			4	8	64	
iDIH Mediation	Integrated Diameter Intelligence Hub mediation server			4	8	64	
iDIH DB	Integrated Diameter Intelligence Hub DB server			4	8	120(system) + 100 (DB)	Storage for DB Disk may be increased

**DSR 7.2/7.3 Cloud Installation**

VM Name	OAM (XMI)	Local (IMI)	Signaling A (XSI1)	Signaling B (XSI2)	Signaling C (XSI3)	Signaling D (XSI4)	Replication (SBR Rep)	DIH Internal
DSR NOAM	eth0	eth1						
DSR SOAM	eth0	eth1						
DA-MP	eth0	eth1	eth2	eth3	eth4	eth5	eth6	
IPFE	eth0	eth1	eth2	eth3	eth4	eth5		
SS7 MP	eth0	eth1	eth2	eth3	eth4	eth5	eth6	
SBRB	eth0	eth1					eth2	
SBRS	eth0	eth1					eth2	
iDIH App	xmi							int
iDIH Med	xmi	imi						int
iDIH DB	xmi							int

Note: The Ethernet interfaces define in the table are there as a guideline. Interfaces can be ordered as preferred. I.E. eth1 or eth2 could be associated with XMI if desired.

## Appendix E. COMMON KVM/OPENSTACK TASKS

### E-1 Create A Network Port

<p>1</p> <p><input type="checkbox"/></p>	<p><b>Create the network ports for the NO network interfaces.</b></p>	<ol style="list-style-type: none"> <li>1. Each network interface on an instance must have an associated network port.             <ol style="list-style-type: none"> <li>a. An instance will usually have at least eth0 and eth1 for a public and private network respectively.</li> <li>b. Some configurations will require 6 or more interfaces and corresponding network ports.</li> </ol> </li> <li>2. Determine the IP address for the interface.             <ol style="list-style-type: none"> <li>a. For eth0, the IP might be 10.x.x.157.</li> <li>b. For eth1, the IP might be 192.168.x.157</li> </ol> </li> <li>3. Identify the neutron network ID associated with each IP/interface using the “neutron” command line tool.             <ol style="list-style-type: none"> <li>a. <code>\$ neutron net-list</code></li> </ol> </li> <li>4. Identify the neutron subnet ID associated with each IP/interface using the “neutron” command line tool.             <ol style="list-style-type: none"> <li>a. <code>\$ neutron subnet-list</code></li> </ol> </li> <li>5. Create the network port using the “neutron” command line tool, being sure to choose an informative name. Note the use of the subnet ID and the network ID (final argument).             <ol style="list-style-type: none"> <li>a. Port names are usually a combination of instance name and network name.                 <ol style="list-style-type: none"> <li>i. “NO1-xmi”</li> <li>ii. “SO2-imi”</li> <li>iii. “MP5-xsi2”</li> </ol> </li> <li>b. The ports must be owned by the DSR tenant user, not the admin user. Either source the credentials of the DSR tenant user or use the DSR tenant user ID as the value for the “—tenant-id” argument.                 <ol style="list-style-type: none"> <li>i. <code>\$ . keystone_rc_dsr_user</code></li> <li>ii. <code>\$ keystone user-list</code></li> </ol> </li> <li>c. <code>\$ neutron port-create --name=NO1-xmi --tenant-id &lt;tenant id&gt; --fixed-ip subnet_id=&lt;subnet id&gt;,ip_address=10.x.x.157 &lt;network id&gt;</code></li> <li>d. <code>\$ neutron port-create --name=NO1-imi --tenant-id &lt;tenant id&gt; --fixed-ip subnet_id=&lt;subnet id&gt;,ip_address=192.168.x.157 &lt;network id&gt;</code></li> <li>e. View your newly created ports using the neutron tool.                 <ol style="list-style-type: none"> <li>i. <code>\$ neutron port-list</code></li> </ol> </li> </ol> </li> </ol>
--	---	--

## E-2 Create and Boot OpenStack Instance

1 <input type="checkbox"/>	<b>Create a VM instance from a glance image.</b>	<ol style="list-style-type: none"> <li>4. Get the following configuration values.             <ol style="list-style-type: none"> <li>a. The image ID.                 <ol style="list-style-type: none"> <li>i. <code>\$ glance image-list</code></li> </ol> </li> <li>b. The flavor ID.                 <ol style="list-style-type: none"> <li>i. <code>\$ nova flavor-list</code></li> </ol> </li> <li>c. The network ID(s)                 <ol style="list-style-type: none"> <li>i. <code>\$ neutron net-list</code></li> </ol> </li> <li>d. An informative name for the instance.                 <ol style="list-style-type: none"> <li>i. "NO1"</li> <li>ii. "SO2"</li> <li>iii. "MP5"</li> </ol> </li> </ol> </li> <li>5. Create and boot the VM instance.             <ol style="list-style-type: none"> <li>a. The instance must be owned by the DSR tenant user, not the admin user. Source the credentials of the DSR tenant user and issue the following command. Note that IPv6 addresses should use the "v6-fixed-ip" argument instead of "v4-fixed-ip".</li> <li>b. <code>\$ nova boot --image &lt;image ID&gt; --flavor &lt;flavor id&gt; --nic net-id=&lt;first network id&gt;,v4-fixed-ip=&lt;first ip address&gt; --nic net-id=&lt;second network id&gt;,v4-fixed-ip=&lt;second ip address&gt; InstanceName</code></li> <li>c. view the newly created instance using the nova tool.                 <ol style="list-style-type: none"> <li>i. <code>\$ nova list --all-tenants</code></li> </ol> </li> </ol> <p>The VM will take approximately 5 minutes to boot. At this point, the VM has no configured network interfaces, and can only be accessed by the "Horizon" console tool.</p> </li> </ol>
-------------------------------	--	---

## E-3 Configure Networking for OpenStack Instance

1 <input type="checkbox"/>	<b>Configure the network interfaces and hostname.</b>	<ol style="list-style-type: none"> <li>8. Log in to the "Horizon" GUI as the DSR tenant user.</li> <li>9. Go to the Compute/Instances section.</li> <li>10. Click on the "Name" field of the newly created instance.</li> <li>11. Select the "Console" tab.</li> <li>12. Login as the admusr.</li> <li>13. Select an informative hostname for the new VM instance.             <ol style="list-style-type: none"> <li>a. "NO1".</li> <li>b. "SO2".</li> <li>c. "MP5".</li> </ol> </li> <li>14. Configure the network interfaces, conforming with the interface-to-network mappings described at the bottom of the Resource Profile in Appendix D.             <ol style="list-style-type: none"> <li>a. <code>\$ sudo netAdm add --onboot=yes --device=eth0 --</code></li> </ol> </li> </ol>
-------------------------------	---	--

		<pre>address=&lt;xmi ip&gt; --netmask=&lt;xmi net mask&gt;</pre> <ul style="list-style-type: none"><li>b. <code>\$ sudo netAdm add --onboot=yes --device=eth1 --address=&lt;imi ip&gt; --netmask=&lt;imi net mask&gt;</code></li><li>c. <code>\$ sudo netAdm add --route=default --device=eth0 --gateway=&lt;xmi gateway ip&gt;</code></li><li>d. Under some circumstances, it may be necessary to configure as many as 6 or more interfaces.</li><li>e. If netAdm fails to create the new interface (ethX) because it already exists in a partially configured state, perform the following actions.<ul style="list-style-type: none"><li>i. <code>\$ cd /etc/sysconfig/network-scripts</code></li><li>ii. <code>\$ sudo mv ifcfg-ethX /tmp</code><ul style="list-style-type: none"><li>1. Keep ifcfg-ethX in /tmp until ethX is working correctly, then delete it.</li></ul></li><li>iii. Re-run the netAdm command. It will create and configure the interface in one action.</li></ul></li></ul> <p>15. Reboot the VM. It will take approximately 5 minutes for the VM to complete rebooting.</p> <ul style="list-style-type: none"><li>a. <code>\$ sudo init 6</code></li></ul> <p>The new VM should now be accessible via both network and Horizon console.</p>

### Appendix G. DISABLE/ENABLE DTLS

Oracle's SCTP Datagram Transport Layer Security (DTLS) has SCTP AUTH extensions by default. SCTP AUTH extensions are required for SCTP DTLS. However, there are known impacts with SCTP AUTH extensions as covered by the CVEs referenced below. It is highly recommended that customers installing DSR 7.1/7.1.1/7.2/7.3 should prepare clients before the DSR connections are established after installation. This will ensure the DSR to Client SCTP connection will establish with SCTP AUTH extensions enabled. See RFC 6083. If customers DO NOT prepare clients to accommodate the DTLS changes, then the SCTP connections to client devices WILL NOT establish after the DSR is installed.

<https://access.redhat.com/security/cve/CVE-2015-1421>

<https://access.redhat.com/security/cve/CVE-2014-5077>

Execute the following procedure to Disable DTLS:

#### Appendix H.1 Disable DTLS

<b>S T E P #</b>	This procedure will Disable DTLS.	
	Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.	
	If this procedure fails, contact My Oracle Support (MOS)	
1 <input type="checkbox"/>	<b>MP Server:</b> Login	Establish an SSH session to the MP server. Login as <i>admusr</i> .
2 <input type="checkbox"/>	<b>MP Server:</b> Disable SCTP Auth Flag	Execute the following command to disable the SCTP Auth Flag:  <b>Note:</b> It is recommended to copy and paste directly as listed below to avoid errors  <pre style="border: 1px solid black; padding: 5px;">\$ sudo sysctl -w net.sctp.auth_enable=0</pre>
3 <input type="checkbox"/>	<b>MP Server:</b> Verify SCTP Auth Flag is Disabled	Execute the following command to verify the SCTP Auth Flag is disabled:  <b>Note:</b> It is recommended to copy and paste directly as listed below to avoid errors  <pre style="border: 1px solid black; padding: 5px;">\$ sudo sysctl -a   grep net.sctp.auth_enable</pre> The following output is expected:  <pre style="border: 1px solid black; padding: 5px;">net.sctp.auth_enable = 0</pre>
4 <input type="checkbox"/>	<b>MP Server:</b> Make SCTP Auth Flag changes Persistent	Execute the following command to make the SCTP Auth Flag changes persistent:  <b>Note:</b> It is recommended to copy and paste directly as listed below to avoid errors  <pre style="border: 1px solid black; padding: 5px;">\$ sudo sed -i 's/sysctl -w net.sctp.auth_enable=1/sysctl -w net.sctp.auth_enable=0/g' /etc/dpi_init</pre>

Appendix H.1 Disable DTLS

5 <input type="checkbox"/>	<b>MP Server:</b> Verify Auth Flag is Disabled	Execute the following command to verify the SCTP Auth Flag has been disabled: <b>Note:</b> It is recommended to copy and paste directly as listed below to avoid errors <pre>\$ sudo grep net.sctp.auth_enable /etc/dpi_init</pre> The following output should be displayed: <pre>sysctl -w net.sctp.auth_enable=0</pre>
6 <input type="checkbox"/>	<b>Additional MP Servers:</b> Repeat	Repeat for all remaining MP servers.

## DSR 7.2/7.3 Cloud Installation

If DTLS connections are to be configured AFTER DTLS has been disabled as performed in **Procedure S.1**, then the procedure below for Enabling DTLS needs to be followed before DTLS connections are configured.

### Appendix H.2 Enable DTLS

<b>S T E P #</b>	This procedure will Enable DTLS.  Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.  If this procedure fails, contact My Oracle Support (MOS), and ask for assistance.	
1 <input type="checkbox"/>	<b>MP Server:</b> Login	Establish an SSH session to the MP server. Login as <i>admusr</i> .
2 <input type="checkbox"/>	<b>MP Server:</b> Enable Sctp Auth Flag	Execute the following command to Enable the Sctp Auth Flag:  <b>Note:</b> It is recommended to copy and paste directly as listed below to avoid errors  <pre>\$ sudo sysctl -w net.sctp.auth_enable=1</pre>

4 <input type="checkbox"/>	<b>MP Server:</b> Make Sctp Auth Flag Changes persistent	Execute the following command to make the Sctp Auth Flag changes persistent:  <b>Note:</b> It is recommended to copy and paste directly as listed below to avoid errors  <pre>\$ sudo sed -i 's/sysctl -w net.sctp.auth_enable=0/sysctl -w net.sctp.auth_enable=1/g' /etc/dpi_init</pre>
5 <input type="checkbox"/>	<b>MP Server:</b> Verify Auth Flag changes	Execute the following command to verify the Sctp Auth Flag has been disabled:  <b>Note:</b> It is recommended to copy and paste directly as listed below to avoid errors  <pre>\$ sudo grep net.sctp.auth_enable /etc/dpi_init</pre> The following output should be displayed:  <pre>sysctl -w net.sctp.auth_enable=1</pre>
6 <input type="checkbox"/>	<b>Additional MP Servers:</b> Repeat	Repeat for all remaining MP servers.

## Appendix H. APPLICATION VIP FAILOVER OPTIONS (OPENSTACK)

### H-1 Application VIP Failover Options

Within an OpenStack cloud environment there are several options for allowing applications to manage their own virtual IP (VIP) addresses as is traditionally done in telecommunications applications. This document describes two of those options:

- Allowed address pairs
- Disable port security

Each of these options is covered in the major sub-sections that follow. The last major sub-section discusses how to utilize application managed virtual IP addresses within an OpenStack VM instance.

Both of these options effectively work around the default OpenStack Networking (Neutron) service anti-spoofing rules that ensure that a VM instance cannot send packets out a network interface with a source IP address different from the IP address Neutron has associated with the interface. In the Neutron data model, the logical notion of networks, sub-networks and network interfaces are realized as networks, subnets, and ports as shown in the following figure:

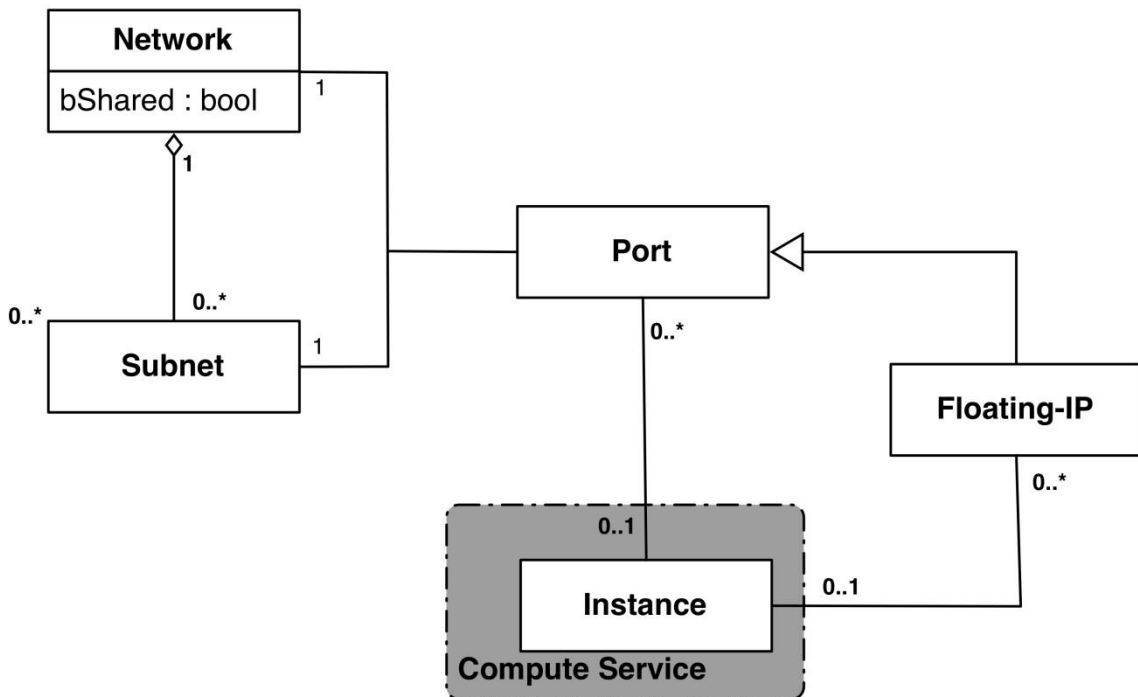

Figure 2 - Neutron High-Level Data Model

Note how a port in the Neutron data model maps to at most one VM instance where internal to the VM instance, the port will be represented as an available network device such as eth0. VM instances can have multiple network interfaces in which case there will be multiple Neutron ports associated with the VM instance, each with different MAC and IP addresses.

Each Neutron port by default has one MAC Address and one IPv4 or IPv6 address associated with it. The IP address associated with a port can be assigned in two ways:

- Automatically by Neutron when creating a port to fulfill an OpenStack Compute (Nova) service request to associate a network interface with a VM instance to be instantiated OR
- Manually by a cloud administrator when creating or updating a Neutron port

The anti-spoofing rules are enforced at the Neutron port level by ensuring that the source IP address of outgoing packets matches the IP address Neutron has associated with the corresponding port assigned to the VM instance. By default if

## DSR 7.2/7.3 Cloud Installation

the source IP address in the outgoing packet does not match the IP address associated with the corresponding Neutron port then the packet is dropped.

These anti-spoofing rules clearly create a complication for the use of application managed virtual IP addresses since Neutron is not going to know about the VIPs being applied by the application to VM instance network interfaces without some interaction between the application (or a higher level management element) and Neutron. Which is why the two options in this document either fully disable the port security measures within Neutron, including the anti-spoofing rules, or expand the set of allowable source IP addresses to include the VIPs that may be used by the application running within a VM instance.

Note that for both of the options described in the following sub-sections, there is a particular Neutron service extension or feature that must be enabled for the option to work. For one option (allowed address pairs) the required Neutron extension is enabled in most default deployments whereas for the other option (allow port security to be disabled) it is not.

Within this document when describing how to utilize either of these two options there will be example command line operations that interact with the OpenStack Neutron service via its command line utility, simply named `neutron`. However, be aware that all of the operations performed using the `neutron` command line utility can also be performed through the Neutron REST APIs, see the [Networking v2.0 API documentation](#) for more information.

## H-2 Allowed Address Pairs

This section describes an option that extends the set of source IP addresses that can be used in packets being sent out a VM instance's network interface (which maps to a Neutron port). This option utilizes a Neutron capability, called the allowed-address-pairs extension, which allows an entity (cloud administrator, management element, etc.) to define additional IP addresses to be associated with a Neutron port. In this way if an application within the VM instance sends an outgoing packet with one of those additional IP addresses, the Neutron anti-spoofing rules enforcement logic will not drop those packets. The Neutron allowed-address-pairs extension is available starting with the OpenStack Havana release.

The three sub-sections that follow describe the OpenStack configuration requirements for this option, how to utilize this option after a VM instance has already booted, and how to utilize this option before a VM instance has booted.

## H-3 OpenStack Configuration Requirements

The Neutron allowed-address-pairs extension needs to be enabled for this option to work. For most OpenStack cloud deployments this extension should be enabled by default but to check, run the following command (after sourcing the appropriate user credentials file):

```
# neutron ext-list
+-----+-----+
| alias          | name          |
+-----+-----+
| security-group | security-group |
| l3_agent_scheduler | L3 Agent Scheduler |
| net-mtu        | Network MTU    |
| ext-gw-mode    | Neutron L3 Configurable external gateway mode |
| binding       | Port Binding   |
| provider      | Provider Network |
| agent        | agent         |
| quotas       | Quota management support |
| subnet_allocation | Subnet Allocation |
| dhcp_agent_scheduler | DHCP Agent Scheduler |
| l3-ha        | HA Router extension |
| multi-provider | Multi Provider Network |
| external-net  | Neutron external network |
| router       | Neutron L3 Router |
| allowed-address-pairs | Allowed Address Pairs |
| extraroute   | Neutron Extra Route |
```

## DSR 7.2/7.3 Cloud Installation

extra_dhcp_opt	Neutron Extra DHCP opts	
dvr	Distributed Virtual Router	
+-----+	+-----+	+-----+

The allowed-address-pairs extension should appear in the list of extensions as shown in the bold line above.

### H-4 After a VM instance has been booted: Allowed Address Pairs

If a VM instance has already been booted, i.e. instantiated, and you need to associate one or more additional IP addresses with the Neutron port assigned to the VM instance then you need to execute a command of the following form:

```
# neutron port-update <Port ID> --allowed_address_pairs list=true type=dict
ip_address=<VIP address to be added>
```

where the bolded items have the following meaning:

- <Port ID>

Identifies the ID of the port within Neutron which can be determined by listing the ports, `neutron port-list`, or if the port is named then the port ID can be obtained directly in the above command with a sequence like “`$(neutron port-show -f value -F id <Port Name>)`” to replace the <Port ID> placeholder.

- <VIP address to be added>

Identifies the IP address, a virtual IP address in this case, that should additionally be associated with the port where this can be a single IP address, e.g. 10.133.97.135/32, or a range of IP addresses as indicated by a value such as 10.133.97.128/30.

So for example if you wanted to indicate to Neutron that the allowed addresses for a port should include the range of addresses between 10.133.97.136 to 10.133.97.139 and the port had an ID of 8a440d3f-4e5c-4ba2-9e5e-7fc942111277 then you would enter the following command:

```
# neutron port-update 8a440d3f-4e5c-4ba2-9e5e-7fc942111277 --allowed_address_pairs
list=true type=dict ip_address=10.133.97.136/30
```

### H-5 Before a VM instance has been booted: Allowed Address Pairs

If you want to associate additional allowed IP addresses with a port before it is associated with a VM instance then you will need to first create the port and then associate one or more ports with a VM instance when it is booted. The command to create a new port with defined allowed address pairs is of the following form:

```
# neutron port-create --name <Port Name> --fixed-ip subnet-id=$(neutron subnet-show -f
value -F id <Subnet name>),ip_address=<Target IP address> $(neutron net-show -f value -F
id <Network name>) --allowed_address_pairs list=true type=dict ip_address=<VIP address to
be added>
```

where the bolded items have the following meaning:

- <Port Name>

This is effectively a string alias for the port that is useful when trying to locate the ID for the port but the “`--name <Port Name>`” portion of the command is completely optional.

- <Subnet name>

## DSR 7.2/7.3 Cloud Installation

The name of the subnet to which the port should be added.

- <Target IP address>

The unique IP address to be associated with the port.

- <Network Name>

The name of the network with which the port should be associated.

- <VIP address to be added>

This parameter value has the same meaning as described in the previous section.

So for example if you wanted to indicate to Neutron that a new port should have an IP address of 10.133.97.133 on the 'ext-subnet' subnet with a single allowed address pair, 10.133.97.134, then you would enter a command similar to the following:

```
# neutron port-create -name foo --fixed-ip subnet-id=$(neutron subnet-show -f value -F id ext-subnet),ip_address=10.133.97.133 $(neutron net-show -f value -F id ext-net) --allowed_address_pairs list=true type=dict ip_address=10.133.97.134/32
```

Once the port or ports with the additional allowed addresses have been created, when you boot the VM instance use a nova boot command similar to the following:

```
# nova boot --flavor m1.xlarge --image testVMimage --nic port-id=$(neutron port-show -f value -F id <Port Name>) testvm3
```

where the flavor, image, and VM instance name values will need to be replaced by values appropriate for your VM. If the port to be associated with the VM instance is not named then you will need to obtain the port's ID using the neutron port-list command and replace the "\$ (neutron port-show -f value -F id <Port Name>)" sequence in the above command with the port's ID value.

### H-6 Disable Port Security

This section describes an option that rather than extending the set of source IP addresses that are associated with a Neutron port, as is done with the allowed-address-pairs extension, simply disables the Neutron anti-spoofing filter rules for a given port. This option allows all IP packets originating from the VM instance to be propagated no matter whether the source IP address in the packet matches the IP address associated with the Neutron port or not. This option relies upon the Neutron port\_security extension that is available starting with the OpenStack Kilo release.

The three sub-sections that follow describe the OpenStack configuration requirements for this option, how to utilize this option after a VM instance has already booted, and how to utilize this option before a VM instance has booted.

#### OpenStack Configuration Requirements

The Neutron port\_security extension needs to be enabled for this method to work. For the procedure to enable the port\_security extension see:

[ML2 Port Security Extension Wiki page](#)

**NOTE:** Enabling the port\_security extension when there are already existing networks within the OpenStack cloud will cause all network related requests into Neutron to fail due to a [known bug in Neutron](#). There is a fix identified for this bug that will be part of the Liberty release and is scheduled to be backported to the Kilo 2015.1.2 release. In the mean time, **this option is only non-disruptive when working with a new cloud deployment where the cloud administrator can enable this feature before any networks and VM instances that use those networks are created**. The port\_security extension can be enabled in an already deployed OpenStack cloud but all existing networks, subnets, ports, etc. will need to be deleted before enabling the port\_security extension. This typically means that all VM instances will also need to be deleted as well but a knowledgeable cloud administrator **may** be able to do the following to limit the disruption of enabling the port\_security extension:

- Record the current IP address assignments for all VM instances,
- Remove the network interfaces from any existing VM instances,
- Delete the Neutron resources,
- Enable the port\_security extension,
- Re-create the previously defined Neutron resources (networks, subnets, ports, etc.), and then
- Re-add the appropriate network interfaces to the VMs.

Depending on the number of VM instances running in the cloud, this procedure may or may not be practical.

### H-7 After a VM instance has been booted: Port Security

If you need to disable port security for a port after it has already been associated with a VM instance then you will need to execute one or both of the following commands to utilize the port\_security option. First if the VM instance with which the existing port is associated has any associated security groups (run `nova list-secgroup <VM instance name>` to check) then you will first need to run a command of the following form for each of the security group(s) associated with the VM instance:

```
# nova remove-secgroup <VM instance name> <Security group name>
```

where the bolded item has the following meaning:

- **<VM instance name>**  
Identifies the name of the VM instance for which the identified security group name should be deleted.
- **<Security group name>**  
Identifies the name of the security group that should be removed from the VM instance.

## DSR 7.2/7.3 Cloud Installation

So for example if you wanted to remove the default security group from a VM instance named ‘testvm4’ then you would enter a command similar to the following:

```
# nova remove-secgroup testvm4 default
```

Once any security groups associated with VM instance to which the Neutron port is assigned have been removed then the Neutron port(s) associated with the target VM instance will need to be updated to disable port security on those ports. The command to disable port security for a specific Neutron port is of the form:

```
# neutron port-update <Port ID> -- port-security-enabled=false
```

where the bolded item has the following meaning:

- **<Port ID>**

Identifies the ID of the port within Neutron which can be determined by listing the ports, `neutron port-list`, or if the port is named then the port ID can be obtained directly in the above command with a sequence such as “\$(neutron port-show -f value -F id <Port Name>)”.

So for example if you wanted to indicate to Neutron that port security should be disabled for a port with an ID of 6d48b5f2-d185-4768-b5a4-c0d1d8075e41 then you would enter the following command:

```
# neutron port-update 6d48b5f2-d185-4768-b5a4-c0d1d8075e41 --port-security-enabled=false
```

If the port-update command succeeds, within the VM instance with which the 6d48b5f2-d185-4768-b5a4-c0d1d8075e41 port is associated, application managed VIPs can now be added to the network interface within the VM instance associated with the port and network traffic using that VIP address should now propagate.

## H-8 Before a VM instance has been booted: Port Security

If you want to disable port security for a port before it is associated with a VM instance then you will need to first create the port at which time you can specify that port security should be disabled. The command to create a new port with port security disabled is of the following form:

```
# neutron port-create --name <Port Name> --port-security-enabled=false --fixed-ip subnet-id=$(neutron subnet-show -f value -F id <Subnet name>),ip_address=<Target IP address> $(neutron net-show -f value -F id <Network name>)
```

where the bolded items have the following meaning:

- **<Port Name>**

This is effectively a string alias for the port that is useful when trying to locate the ID for the port but the “--name **<Port Name>**” portion of the command is completely optional.

- **<Subnet name>**

The name of the subnet to which the port should be added.

- **<Target IP address>**

The unique IP address to be associated with the port.

- **<Network Name>**

## DSR 7.2/7.3 Cloud Installation

The name of the network with which the port should be associated.

So for example if you wanted to indicate to Neutron that a new port should have port security disabled and an IP address of 10.133.97.133 on the 'ext-subnet' subnet then you would enter a command similar to the following:

```
# neutron port-create -name foo --port-security-enabled=false --fixed-ip subnet-id=$(neutron subnet-show -f value -F id ext-subnet),ip_address=10.133.97.133 $(neutron net-show -f value -F id ext-net)
```

Once the port or ports with port security disabled have been created, when you boot the VM instance you will need to execute a command similar to the following:

```
# nova boot --flavor m1.xlarge --image testVMimage --nic port-id=$(neutron port-show -f value -F id <Port Name>) testvm3
```

where the flavor, image, and VM instance name values will need to be replaced by values appropriate for your VM. If the port to be associated with the VM instance is not named then you will need to obtain the port's ID using the neutron port-list command and replace the “\$(neutron port-show -f value -F id <Port Name>)” sequence in the above command with the port's ID value.

## H-9 Managing Application Virtual IP Addresses within VM instances

Once either of the previously described options is in place to enable applications to manage their own virtual IP addresses, there should be no modifications required to how the application already manages its VIPs in a non-virtualized configuration. There are many ways that an application can add or remove virtual IP addresses but as a reference point, here are some example command line operations to add a virtual IP address of 10.133.97.136 to the eth0 network interface within a VM and then send four gratuitous ARP packets to refresh the ARP caches of any neighboring nodes:

```
# ip address add 10.133.97.136/23 broadcast 10.133.97.255 dev eth0 scope global
# arping -c 4 -U -I eth0 10.133.97.136
```

As the creation of virtual IP addresses typically coincides with when an application is assigned an active role, the above operations would be performed both when an application instance first receives an initial active HA role or when an application instance transitions from a standby HA role to the active HA role.

## **Appendix I. MY ORACLE SUPPORT (MOS)**

MOS (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at **1-800-223-1711** (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>.

When calling, there are multiple layers of menu selections. Make the selections in the sequence shown below on the Support telephone menu:

- 1) For the first set of menu options, select 2, “New Service Request”. You will hear another set of menu options.
- 2) In this set of menu options, select 3, “Hardware, Networking and Solaris Operating System Support”. A third set of menu options begins.
- 3) In the third set of options, select 2, “ Non-technical issue”. Then you will be connected to a live agent who can assist you with MOS registration and provide Support. Identifiers. Simply mention you are a Tekelec Customer new to MOS.
