

## Quick Reference

### About this Quick Reference

This Quick Reference shows SQL\*Plus command syntax. For detailed information on each command, refer to the *SQL\*Plus User's Guide and Reference*.

This Quick Reference has the following topics:

- [Alphabetic List of SQL\\*Plus Commands](#)
- [Starting and Leaving SQL\\*Plus](#)
- [Starting Up and Shutting Down a Database](#)
- [Entering and Executing Commands](#)
- [Manipulating SQL, SQL\\*Plus and PL/SQL Commands](#)
- [Formatting Query Results](#)
- [Accessing Databases](#)
- [Miscellaneous](#)

### Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

### Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

# Alphabetic List of SQL\*Plus Commands

 | *:BindVariable*] [COMMIT | ROLLBACK] | CONTINUE [COMMIT | ROLLBACK |  
NONE]}  
 XQUERY *xquery\_statement*

## Starting and Leaving SQL\*Plus

Use the following commands to log in to and out of SQL\*Plus.

```
SQLPLUS [[option] [logon | / NOLOG] [start]]
```

where *option* has the following syntax:

```
-H[ELP] | -V[ERSION] | [ [-C[OMPATIBILITY] x.y.z]] [-F[ast]] [-M[ARKUP]
markup_option] [-L[OGON]] [-NOLOGINTIME] [-R[ESTRICT] {1 | 2 | 3}] [-S[ILENT]] [-
AC]]
```

where *markup\_option* consists of:

- *csv\_option*
- *html\_option*

*csv\_option* has the following syntax:

```
CSV {ON|OFF} [DELIMI[TER] character] [QUOTE {ON|OFF}]
```

*html\_option* has the following syntax:

```
HTML {ON|OFF} [HEAD text] [BODY text] [TABLE text] [ENTMAP {ON|OFF}] [SPOOL {ON|
OFF}] [PRE[FORMAT] {ON|OFF}]
```

where *logon* has the following syntax:

```
{username[/password] [@connect_identifier] | /} [AS {SYSASM |SYSBACKUP |
SYSDBA |SYSDG |SYSOPER |SYSRAC |SYSKM}] [edition=value]
```

and where *start* has the following syntax:

```
@{url | file_name.ext} {arg ...}
```

```
{EXIT | QUIT} [SUCCESS | FAILURE | WARNING | n | variable | :BindVariable]
[COMMIT | ROLLBACK]
```

Commits or rolls back all pending changes, logs out of Oracle, terminates SQL\*Plus and returns control to the operating system.

## Starting Up and Shutting Down a Database

Starting up and shutting down a database requires DBA privileges.

```
STARTUP db_options | cdb_options | upgrade_options
```

where *db\_options* has the following syntax:

```
[FORCE] [RESTRICT] [PFILE=filename] [QUIET] [ MOUNT [dbname] ] | [ OPEN
[open_db_options] [dbname] ] | NOMOUNT ]
```

where *open\_db\_options* has the following syntax:

READ {ONLY | WRITE [RECOVER]} | RECOVER

where *cdb\_options* has the following syntax:

*root\_connection\_options* | *pdb\_connection\_options*

where *root\_connection\_options* has the following syntax:

PLUGGABLE DATABASE *pdbrname* [FORCE] | [RESTRICT] [ OPEN  
{*open\_pdb\_options*}]

where *pdb\_connection\_options* has the following syntax:

[FORCE] | [RESTRICT] [ OPEN {*open\_pdb\_options*}]

where *open\_pdb\_options* has the following syntax:

READ WRITE | READ ONLY

and where *upgrade\_options* has the following syntax:

[PFILE=filename] {UPGRADE | DOWNGRADE} [QUIET]

Starts an Oracle Database instance with several options, including mounting and opening a database.

SHUTDOWN [ABORT | IMMEDIATE | NORMAL | TRANSACTIONAL [LOCAL]]

Shuts down a currently running Oracle instance, optionally closing and dismounting a database.

## Entering and Executing Commands

Use the following commands to execute and collect timing statistics on SQL commands and PL/SQL blocks.

/ (slash)

Executes the most recently executed SQL command or PL/SQL block which is stored in the SQL buffer. Does not list the command. Use slash (/) at the command prompt or line number prompt in SQL\*Plus command line.

EXEC[UTE] *statement*

Executes a single PL/SQL statement or runs a stored procedure.

R[UN]

Lists and executes the most recently executed SQL command or PL/SQL block which is stored in the SQL buffer.

TIMI[NG] [START *text* | SHOW | STOP]

Records timing data for an elapsed period of time, lists the current timer's name and timing data, or lists the number of active timers.

Use the following command to access the help system.

HELP | ? [*topic*]

Accesses the command-line help system. Enter HELP INDEX or ? INDEX for a list of topics. You can view the Oracle Database Library at <http://www.oracle.com/technology/documentation>.

Use the following command to execute operating system commands.

HO[ST] [*command*]

Executes an operating system command without leaving SQL\*Plus. Enter HOST without command to display an operating system prompt. You can then enter multiple operating system commands.

With some operating systems, you can use another character instead of HOST such as "!" (UNIX) and "\$" (Windows). See the Oracle installation and user's manuals provided for your operating system for details.

## Manipulating SQL, SQL\*Plus and PL/SQL Commands

Use the following commands to edit SQL commands and PL/SQL blocks.

A[PPEND] *text*

Adds specified text to the end of the current line in the SQL buffer. To separate *text* from the preceding characters with a space, enter two spaces. To append *text* that ends with a semicolon, end the command with two semicolons (a single semicolon is interpreted as a command terminator).

C[HANGE] *sepchar old [sepchar [new [sepchar]]]*

Changes first occurrence of *old* on the current line of the SQL buffer. You can use any non-alphanumeric character such as "/" or "!" as a *sepchar*. You can omit the space between CHANGE and the first *sepchar*.

DEL [*n | n m | n \* | n LAST | \* | \* n | \* LAST | LAST*]

Deletes one or more lines of the SQL buffer ("\*" indicates the current line). You can omit the space between DEL and *n* or *\**, but not between DEL and LAST. Enter DEL with no clauses to delete the current line of the buffer.

I[NPUT] [*text*]

Adds one or more new lines of text after the current line in the SQL buffer.

L[IST] [*n | n m | n \* | n LAST | \* | \* n | \* LAST | LAST*]

Lists one or more lines of the most recently executed SQL command or PL/SQL block which is stored in the SQL buffer. Asterisk (\*) indicates the current line. You can omit the space between LIST and *n* or \*, but not between LIST and LAST. Enter LIST with no clauses to list all lines.

## Use the following commands to run scripts.

@ { *url* | *file\_name* [.ext] } [*arg* ...]

Runs the SQL\*Plus statements in the specified script. The script can be called from the local file system or a web server. You can pass values to script variables in the usual way.

@@ { *url* | *file\_name* [.ext] } [*arg* ...]

Runs the SQL\*Plus statements in the specified script. This command is almost identical to the @ command. It is useful for running nested scripts because it has the additional functionality of looking for the specified script in the same path or *url* as the calling script.

STA[RT] { *url* | *file\_name* [.ext] } [*arg* ...]

Runs the SQL\*Plus statements in the specified script. The script can be called from the local file system or a web server. You can pass values to script variables in the usual way.

## Use the following commands to create and modify scripts.

ED[IT] [*file\_name* [.ext]]

Invokes an operating system text editor on the contents of the specified file or on the contents of the SQL buffer. To edit the buffer contents, omit the file name.

GET *file\_name* [.ext] [LIST | NOLIST]

Loads a SQL statement or PL/SQL block from a file into the SQL buffer.

REM[ARK]

Begins a comment in a script. The REMARK command must appear at the beginning of a line, and the comment ends at the end of the line (a line cannot contain both a comment and a command). SQL\*Plus does not interpret the comment as a command.

SAV[E] *file\_name* [.ext] [CRE[ATE] | REP[LACE] | APP[END]]

Saves the contents of the SQL buffer in a file.

STORE {SET} *file\_name* [.ext] [CRE[ATE] | REP[LACE] | APP[END]]

Saves attributes of the current SQL\*Plus environment in a file.

WHENEVER OSERROR {EXIT [SUCCESS | FAILURE | *n* | *variable* | :*BindVariable*] [COMMIT | ROLLBACK] | CONTINUE [COMMIT | ROLLBACK | NONE]}

Performs the specified action (exits SQL\*Plus by default) if an operating system error occurs (such as a file writing error).

WHENEVER SQLERROR {EXIT [SUCCESS | FAILURE | WARNING | *n* | *variable* | *:BindVariable*] [COMMIT | ROLLBACK] | CONTINUE [COMMIT | ROLLBACK | NONE]}

Performs the specified action (exits SQL\*Plus by default) if a SQL command or PL/SQL block generates an error.

## Use the following commands to write interactive commands.

ACC[EPT] *variable* [NUM[BER] | CHAR | DATE | BINARY\_FLOAT | BINARY\_DOUBLE] [FOR[MAT] *format*] [DEF[AULT] *default*] [PROMPT *text* | NOPR[OMPT]] [HIDE]

Reads a line of input and stores it in a given substitution variable.

DEF[INE] [*variable*] | [*variable* = *text*]

Specifies a substitution variable and assigns a CHAR value to it, or lists the value and variable type of a single variable or all variables.

PAU[SE] [*text*]

Displays the specified text then waits for the user to press RETURN.

PRO[MPT] [*text*]

Sends the specified message or a blank line to the user's screen.

UNDEF[INE] *variable* ...

Deletes one or more substitution variables that you defined either explicitly (with the DEFINE command) or implicitly (with a START command argument).

## Use the following commands to create and display bind variables.

PRINT [*variable* ...]

Displays the current values of bind variables, or lists all bind variables.

VAR[IABLE] [*variable* [*type*][=*value*]]

Declares a bind variable that can be referenced in PL/SQL, or lists the current display characteristics for a single variable or all variables.

*type* represents one of the following:

- NUMBER
- CHAR
- CHAR (*n* [CHAR | BYTE])
- NCHAR
- NCHAR (*n*)

VARCHAR2 (*n* [CHAR | BYTE])  
NVARCHAR2 (*n*)  
CLOB  
NCLOB  
REFCURSOR  
BINARY\_FLOAT  
BINARY\_DOUBLE

*value* allows you to assign a value to a variable for input binding.

Use the following symbols to create substitution variables and parameters for use in scripts.

*&n*

Specifies a parameter in a script you run using the START command. START substitutes values you list after the script name as follows: the first for &1, the second for &2, and so on.

*&user\_variable, &&user\_variable*

Indicates a substitution variable in a SQL or SQL\*Plus command. SQL\*Plus substitutes the value of the specified substitution variable for each substitution variable it encounters. If the substitution variable is undefined, SQL\*Plus prompts you for a value *each* time an "&" variable is found, and the *first* time an "&&" variable is found.

*.* (period)

Terminates a substitution variable followed by a character that would otherwise be part of the variable name.

## Formatting Query Results

Use the following commands to format, store and print your query results.

ATTRIBUTE [*type\_name.attribute\_name* [*option...*]]

Specifies display characteristics for a given attribute of an Object Type column, such as the format of NUMBER data. Columns and attributes should not have the same names as they share a common namespace. Lists the current display characteristics for a single attribute or for all attributes.

Where *option* represents one of the following clauses:

ALI[AS] *alias*  
CLE[AR]  
FOR[MAT] *format*  
LIKE {*type\_name.attribute\_name*|*alias*}  
ON|OFF

BRE[AK] [ON *report\_element* [*action* [*action*]]] ...

Specifies where changes occur in a report and the formatting action to perform, such as:

- suppressing the display of duplicate values for a given column
- skipping a line each time a given column value changes
- printing computed figures each time a given column value changes or at the end of the report

Enter BREAK with no clauses to list the current BREAK definition.

Where *report\_element* has the following syntax:

{*column* | *expr* | ROW | REPORT}

and where *action* has the following syntax:

[SKI[P] *n* | [SKI[P]] PAGE] [NODUP[LICATES] | DUP[LICATES]]

BTIT[LE] [*printspectext* | *variable*] ... | [ON | OFF]

Places and formats a title at the bottom of each report page, or lists the current BTITLE definition. Use one of the following clauses in place of *printspectext*:

BOLD  
CE[NTER]  
COL *n*  
FORMAT *text*  
LE[FT]  
R[IGHT]  
S[KIP] [*n*]  
TAB *n*  
CL[EAR] *option* ...

Resets or erases the current value or setting for the specified option.

Where *option* represents one of the following clauses:

BRE[AKS]  
BUFF[ER]  
COL[UMNS]  
COMP[UTES]  
SCR[EEN]  
SQL  
TIMI[NG]  
COL[UMN] [{*column* | *expr*} [*option* ...]]

Specifies display attributes for a given column, such as:

- text for the column heading
- alignment for the column heading
- format for NUMBER data

- wrapping of column data

Also lists the current display attributes for a single column or all columns.

Where *option* represents one of the following clauses:

```

ALI[AS] alias
CLE[AR]
ENTMAP {ON | OFF}
FOLD_A[FTER]
FOLD_B[EFORE]
FOR[MAT] format
HEA[DING] text
JUS[TIFY] {L[EFT] | C[ENTER] | R[IGHT]}
LIKE {expr | alias}
NEWL[INE]
NEW_V[ALUE] variable
NOPRI[NT] | PRI[NT]
NUL[L] text
OLD_V[ALUE] variable ON | OFF
WRA[PPED] | WOR[D_WAPPED] | TRU[NCATED]

```

Enter COLUMN [{*column* | *expr*} FORMAT *format*] where the *format* element specifies the display format for the column.

To change the display format of a NUMBER column, use FORMAT followed by one of the elements in the following table:

Element	Examples	Description	
,	(comma)	9,999	Displays a comma in the specified position.
.	(period)	99.99	Displays a period (decimal point) to separate the integral and fractional parts of a number.
\$		\$9999	Displays a leading dollar sign.
0		0999 9990	Displays leading zeros Displays trailing zeros.
9		9999	Displays a value with the number of digits specified by the number of 9s. Value has a leading space if positive, a leading minus sign if negative. Blanks are displayed for leading zeroes. A zero (0) is displayed for a value of zero.
B		B9999	Displays blanks for the integer part of a fixed-point number when the integer part is zero, regardless of zeros in the format model.
C		C999	Displays the ISO currency symbol in the specified position.
D		99D99	Displays the decimal character to separate the integral and fractional parts of a number.

Element	Examples	Description
EEEE	9.999EEEE	Displays value in scientific notation (format must contain exactly four "E"s).
G	9G999	Displays the group separator in the specified positions in the integral part of a number.
L	L999	Displays the local currency symbol in the specified position.
MI	9999MI	Displays a trailing minus sign after a negative value. Display a trailing space after a positive value.
PR	9999PR	Displays a negative value in <angle brackets>. Displays a positive value with a leading and trailing space.
RN rn	RN rn	Displays uppercase Roman numerals. Displays lowercase Roman numerals. Value can be an integer between 1 and 3999.
S	S9999 9999S	Displays a leading minus or plus sign. Displays a trailing minus or plus sign.
TM	TM	Displays the smallest number of decimal characters possible. The default is TM9. Fixed notation is used for output up to 64 characters, scientific notation for more than 64 characters. Cannot precede TM with any other element. TM can only be followed by a single 9 or E
U	U9999	Displays the dual currency symbol in the specified position.

COMP[UTE] [*function* [LAB[EL] *text*] ... OF {*expr* | *column* | *alias*} ...ON {*expr* | *column* | *alias* | REPORT | ROW} ...]

In combination with the BREAK command, calculates and prints summary lines using various standard computations. It also lists all COMPUTE definitions. The following table lists valid functions. All functions except NUMBER apply to non-null values only. COMPUTE functions are always executed in the following sequence AVG, COUNT, MINIMUM, MAXIMUM, NUMBER, SUM, STD, VARIANCE.

Function	Computes	Applies to Datatypes
AVG	Average of non-null values	NUMBER
COU[NT]	Count of non-null values	All types
MIN[IMUM]	Minimum value	NUMBER, CHAR, NCHAR, VARCHAR2 (VARCHAR), NVARCHAR2 (NCHAR VARYING)
MAX[IMUM]	Maximum value	NUMBER, CHAR, NCHAR, VARCHAR2 (VARCHAR), NVARCHAR2 (NCHAR VARYING)
NUM[BER]	Count of rows	All types
SUM	Sum of non-null values	NUMBER

Function	Computes	Applies to Datatypes
STD	Standard deviation of non-null values	NUMBER
VAR[ IANCE ]	Variance of non-null values	NUMBER

REPFOOTER [PAGE] [*printspec* [*text* | *variable*] ...] | [ON | OFF]

Places and formats a footer at the bottom of a report, or lists the current REPFOOTER definition.

Where *printspec* represents one or more of the following clauses:

BOLD  
 CE[NTER]  
 COL *n*  
 FORMAT *text*  
 LE[FT]  
 R[IGHT]  
 S[KIP] [*n*]  
 TAB *n*  
 REPHEADER [PAGE] [*printspec* [*text* | *variable*] ...] | [ON | OFF]

Places and formats a header at the top of a report, or lists the current REPHEADER definition.

Where *printspec* represents one or more of the clauses shown for REPFOOTER.

SPOOL [filename.ext] [CREATE] | REPLACE | APP[END]] | OFF | OUT

Stores query results in a file, or optionally sends the file to a printer. OFF stops spooling. OUT stops spooling and sends the file to your computer's default printer. Enter SPOOL with no clauses to list the current spooling status. If no file extension is given, the default extension, *.lst* or *.lis*, is used.

TTITLE [*printspec* [*text* | *variable*] ...] | [ON | OFF]

Places and formats a specified title at the top of each report page, or lists the current TTITLE definition. The old form of TTITLE is used if only a single word or a string in quotes follows the TTITLE command.

Where *printspec* represents one or more of the following clauses:

BOLD  
 CE[NTER]  
 COL *n*  
 FORMAT *text*  
 LE[FT]  
 R[IGHT]  
 S[KIP] [*n*]  
 TAB *n*

## Accessing Databases

Use the following commands to access and copy data between tables on different databases.

```
CONN[ECT] [{logon | / | proxy}] [AS {SYSASM | SYSBACKUP | SYSDBA | SYSDBG |  
SYSOPER | SYSRAC | SYSKM}] [edition=value ]
```

where *logon* requires the following syntax:

```
username[/password] [@connect_identifier]
```

where *proxy* requires the following syntax:

```
proxyuser[username] [/password] [@connect_identifier]
```

### Note:

The brackets around *username* in *proxy* are required syntax.

Connects a given username to the Oracle Database. If you omit *connect\_identifier*, SQL\*Plus connects you to the default database. If you omit *username* and/or *password*, SQL\*Plus prompts you for them. CONNECT followed by a slash (/) connects you using a default (OPS\$) logon.

When you run a CONNECT command, the site profile, glogin.sql, and the user profile, login.sql, are processed in that order. CONNECT does not reprompt for username or password if the initial connection does not succeed.

DISC[ONNECT]

Commits pending changes to the database and logs the current user out of Oracle, but does not exit SQL\*Plus. In SQL\*Plus command line, use EXIT or QUIT to log out of Oracle and return control to your computer's operating system.

```
COPY {FROM database | TO database | FROM database TO database} {APPEND |  
CREATE | INSERT | REPLACE} destination_table[(column, column, column, ...)]  
USING query
```

where *database* has the following syntax:

```
username[/password]@connect_identifier
```

Copies data from a query to a table in the same or another database. APPEND, CREATE, INSERT or REPLACE specifies how COPY treats the existing copy of the destination table (if it exists). USING *query* identifies the source table and determines which rows and columns COPY copies from it. COPY supports CHAR, DATE, LONG, NUMBER and VARCHAR2 datatypes.

PASSW[ORD] [*username*]

Allows you to change a password without displaying it on an input device.

XQUERY *xquery\_statement*

Allows you to run an XQuery from SQL\*Plus.

## Miscellaneous

### ARCHIVE LOG LIST

Displays information about redo log files.

```
DESC[RIBE] {[schema.]object[@connect_Identifier]}
```

Lists the column definitions for a table, view or synonym, or the specifications for a function or procedure.

```
RECOVER {general | managed | BEGIN BACKUP | END BACKUP}
```

where the *general* clause has the following syntax:

```
[AUTOMATIC] [FROM location] { {full_database_recovery | partial_database_recovery  
| LOGFILE filename} [ {TEST | ALLOW integer CORRUPTION | parallel_clause }  
[TEST |ALLOW integer CORRUPTION | parallel_clause ]...]|CONTINUE [DEFAULT] |  
CANCEL}
```

where the *full\_database\_recovery* clause has the following syntax:

```
[STANDBY] DATABASE [ {UNTIL {CANCEL | TIME date | CHANGE integer} | USING  
BACKUP CONTROLFILE} [UNTIL {CANCEL | TIME date | CHANGE integer} | USING  
BACKUP CONTROLFILE | SNAPSHOT TIME date]...]
```

where the *partial\_database\_recovery* clause has the following syntax:

```
{TABLESPACE tablespace [, tablespace]... | DATAFILE {filename | filenumber} [,  
filename | filenumber]... | STANDBY {TABLESPACE tablespace [, tablespace]... |  
DATAFILE {filename | filenumber} [, filename | filenumber]...} UNTIL [CONSISTENT  
WITH] CONTROLFILE }
```

where the *parallel* clause has the following syntax:

```
{ NOPARALLEL | PARALLEL [ integer ] }
```

where the *managed* clause has the following syntax:

```
MANAGED STANDBY DATABASE recover_clause | cancel_clause | finish_clause
```

where the *recover\_clause* has the following syntax:

```
{ { DISCONNECT [ FROM SESSION ] | { TIMEOUT integer | NOTIMEOUT } } |  
{ NODELAY | DEFAULT DELAY | DELAY integer } | NEXT integer | { EXPIRE integer |  
NO EXPIRE } | parallel_clause | USING CURRENT LOGFILE | UNTIL CHANGE  
integer | THROUGH { [ THREAD integer ] SEQUENCE integer | ALL ARCHIVELOG |  
{ ALL | LAST | NEXT } SWITCHOVER } } [ DISCONNECT [ FROM SESSION ] |  
{ TIMEOUT integer | NOTIMEOUT } | { NODELAY | DEFAULT DELAY | DELAY  
integer } | NEXT integer | { EXPIRE integer | NO EXPIRE } | parallel_clause | USING
```

CURRENT LOGFILE | UNTIL CHANGE *integer* | THROUGH { [ THREAD *integer* ]  
SEQUENCE *integer* | ALL ARCHIVELOG | { ALL | LAST | NEXT } SWITCHOVER} ]...

where the *cancel\_clause* has the following syntax:

CANCEL [IMMEDIATE] [WAIT | NOWAIT]

where the *finish\_clause* has the following syntax:

[ DISCONNECT [ FROM SESSION ] ] [ *parallel\_clause* ] FINISH [ SKIP [ STANDBY  
LOGFILE ] ] [ WAIT | NOWAIT ]

where the *parallel\_clause* has the following syntax:

{ NOPARALLEL | PARALLEL [ *integer* ] }

Performs media recovery on one or more tablespaces, one or more datafiles, or the entire database.

SET *system\_variable value*

Sets a system variable to alter the SQL\*Plus environment settings for your current session. For example, to:

- set the display width for data
- customize HTML formatting
- enable or disable printing of column headings
- set the number of lines per page

Enter a system variable followed by a value as shown below. The default value for a system variable is underlined.

```
SET APPENDONLY{ON | OFF | text}
SET ARRAY[SIZE] {15 | n}
SET AUTO[COMMIT] {ON | OFF | IMM[EDIATE] | n}
SET AUTOP[RINT] {ON | OFF}
SET AUTORECOVERY {ON | OFF}
SET AUTOT[RACE] {ON | OFF | TRACE[ONLY]} [EXP[LAIN]] [STAT[ISTICS]]
SET BLO[CKTERMINATOR] {. | c | ON | OFF}
SET CMDS[EP] {. | c | ON | OFF}
SET COLINVI[SIBLE] {ON | OFF}
SET COLSEP {. | text}
SET CON[CAT] {. | c | ON | OFF}
SET COPYC[OMMIT] {0 | n}
SET COPYTYPECHECK {ON | OFF}
SET DEF[INE] {& | c | ON | OFF}
SET DESCRIBE [DEPTH {1 | n | ALL}] [LINENUM {ON | OFF}] [INDENT {ON |  
OFF}]
SET ECHO {ON | OFF}
SET EDITF[ILE] file_name [.ext]
SET EMB[EDDED] {ON | OFF}
```

```

SET ERRORL[OGGING] {ON | OFF} [TABLE [schema.]tablename] [TRUNCATE]
[IDENTIFIER identifier]
SET ESC[APE] { \ | c | ON | OFF}
SET ESCCHAR {@ | ? | % | $ | OFF}
SET EXITC[OMMIT] {ON | OFF}
SET FEED[BACK] {6 | n | ON | OFF | ONLY}

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.
