Skanska USA Takes JDE’s Advance Job Cost Forecast Module to the Next Level

Join us as we take a look at how Skanska USA, with the help of RST Solutions, implemented and leveraged reporting and applications for the Advance Job Cost module. Benefits include:
• Faster and more efficient creation and editing of forecast
• Ability to update Actual to date quantity and Forecast quantity directly from the Edit Job Forecast screen, therefore, eliminating the need to refresh balances.
• Ability to see the summary totals for the forecast on the Edit Job Forecast header screen, along with the ability to see a real-time change in summary totals as the forecast data is updated. This feature gives the Cost Engineers ability to keep track of the impact of their changes to the forecast on Total Job Revenue, Cost and Margin.
• Ability to Refresh Balances directly from the Edit Forecast screen.
• Ability to update Forecast quantity at LOD 7 with direct impact to forecast at LOD 8.

Brian Gallagher, Skanska USA Inc
Rajan Kaistha, RST Solutions
Mike Schaaf, Skanska USA Inc

Partner Sponsored Workshops

Workshop: Move From World to EnterpriseOne Like a Pro

This is a pre-register workshop and must be purchased through the Quest. This three-hour workshop will focus on why and how World users are moving to EnterpriseOne. Workshop attendees will hear live case studies from organizations who have migrated to E1, what the process entailed and how they were successful. The workshop will cover how World users can evaluate next steps, build the business case and gain internal support. We will also demo the latest tools that organizations are taking advantage of as they move to EnterpriseOne (UX One, Orchestrator). Finally, our team will walk workshop attendees through the world to EnterpriseOne migration process - what to expect as well as how to prepare.

Jason Batte, Terillium, Inc.

Sunday, April 19, 09:00 a.m. – 12:00 a.m. | Lagoon 1

Add to Your Schedule

Workshop: Working with User Defined Web Objects (UDOs) in EnterpriseOne

This is a pre-register workshop and must be purchased through the Quest. EnterpriseOne has never been easier for the end user due to the new tools available with User Defined Web Objects (UDOs) and even UX1. Before your users can take advantage of this new functionality, you will need to know how to administer it! UDOs are web objects that streamline your interface with E1 information and applications. We will cover what you need to know in working with them, how you go about creating and sharing them. Our deep-dive will include currently defined best practices and the permissions needed to put UDOs in the hands of the appropriate users. Join us to walk through the available options and the knowledge needed to implement them successfully. This interactive workshop targets beginner and intermediate levels of UDO experience and includes hands-on exercises.

Bring a laptop with connectivity to your JDE environment if you would like to follow along with our demonstrations.

Tanya Johnson, ALLOut Security
Sherri Conrardy, ALLOut Security

Sunday, April 19, 09:00 a.m. – 12:00 a.m. | Lagoon L

Hands-on-Lab: Getting Hands On with Creating Your Own ChatBot and Digital Assistant

This is a pre-register workshop and must be purchased through the Quest. As chatbots have evolved in enterprise use, so has the emergence of digital assistants that are multiskilled, proactive, AI-driven, and engaging. In this hands-on lab, you will get your hands dirty by creating skills and digital assistants rapidly and efficiently, with minimum coding. You will train your skills with user intents and entities and will design conversations, using the new conversation designer. You will then create your own digital assistant and add existing skills to enrich its functionality. Finally you will publish the digital assistant to a messaging application. All in under two hours!

Joe Huang, Product Manager, Digital Assistant Cloud

Sunday, April 19, 12:30 p.m. – 02:30 p.m. | Surf C

Add to Your Schedule

Workshop: Using Analytics to Drive Better Management Decisions

This is a pre-register workshop and must be purchased through the Quest. There’s a goldmine of data inside your JD Edwards system. But data is just a series of ones and zeroes without the tools to turn it into information. How do you mine your data to obtain actionable insights in a timely manner? How do you make data available across your organization in a safe, governed way? And finally, how do you incorporate machine learning and predictive analytics to take your reporting and analysis to the next level? In this hands-on training workshop, participants will:

- Use JD Edwards ERP data to create compelling, interactive reports and management dashboards.
- Walk through how business users can access data that is maintained and governed by IT.
- Learn best practices on how organizations can standardize and modernize existing enterprise reporting.
- See how business users can leverage machine learning over JDE systems to get more insights from data and create an analytics experience.

Lisa Vieira, Plus Two Marketing

Sunday, April 19, 01:00 p.m. – 04:00 p.m. | Surf B

Add to Your Schedule
Workshop: (Back by Demand) Tutorial Based Hands-on Session with the Latest Orchestrator

This is a pre-register workshop and must be purchased through the Quest. Bring your own laptop and follow the detailed steps of the Tutorial to create citizen developer solutions using the completely renewed Orchestrator, under the guidance of experts. Next time you find yourself wanting to have a custom UBE or custom Program created by a Developer, you may be able to solve the issue yourself!

Attendee Requirements: The students are required to bring their own laptop. There is no software required. All servers and systems required are made available by Steltix beforehand.

Thomad Van Den Heuvel, Steltix

Benefits of upgrading JDE to 9.2 for companies using different platforms

My company is using different software for different business process. JDE is used mainly for financial and is considered hard to customize and not user friendly so people buy different software for their departments and not everything connected to each other. We reviewed the new JDE 9.2 and started to build a small healthcare module in JDE using the standard RDA. We use this customize module as a place for supplemental data exchange. The forms are designed to use as Excel. Users can treat this as their own excel to update claim information and print out claim forms. RDA is a nice design tool that can help us to complete the health care module in a short period of time of six weeks. With this customization we’re able to reduce the labor cost and eliminate a lot of manual work. We’re able to convince upper management to upgrade JDE to the new version so we can connect this data center to different system using orchestrator so users can have the vision of all systems in one place.

Flexible Sales Order Processing – Leveraging Advanced Preferences

Advanced Preferences are your key to making a rule set for individual sales order lines based on who you're selling to, what you're selling, how you're selling it, and where you're selling it from. They provide some of the most flexible sales order controls, and yet are under-utilized in most Sales Order Management solutions. This session will take a look at the basics of setup, and showcase some simple and innovative ways to apply Advanced Preferences to real world business scenarios, including:
- generating export documents
- allocating inventory based on customer lot date requirements
- supporting promotional payment terms and pricing
- improving inquiry in P4210 / P42101

Oracle Speaks: Conversational AI for Oracle Applications with a Chatbot Assistant

Conversation is the most natural form of communication for humans since the dawn of time. However, interacting with computer systems such as enterprise applications and data required special user interfaces that evolved from text to graphical UI to touch. While interactions have become progressively easier, none of these mechanisms matches the simplicity of a conversational user interface. In this session see how conversational AI and speech recognition has finally matured to support effortless interaction with enterprise systems and data as it evolves to understand context and complex speech patterns. Instead of simple chatbots, digital assistants are taking over, and this session looks into the future of this space.

Ex-seedingly Fast: Integrating Osborne Seeds Ecommerce Site to JD Edwards

After Gowan Company acquired Osborne Seeds, a small business, they began the process of transitioning the company to JD Edwards EnterpriseOne. Osborne Seeds’ business process was highly reliant on a webstore that processed over one-third of total orders. However, a unique challenge emerged with replacing the Navision & eShop with a JD Edwards integrated webstore and leading CMS platform. The go-live of Osborne Seeds with JD Edwards needed to be combined with the Go-Live of the integrated ecommerce site in less than 90 days. The accelerated implementation approach of the selected vendor was able to support the go-live with a more intuitive approach and complete JD Edwards integration in the timeframe. Learn how JD Edwards companies can launch an ecommerce site that fully supports all JD Edwards pricing, inventory rules, address book records, and inventory stocking types in a real-time integrated fashion.

9.2 to 9.2 Upgrades – Code Current & Tools

You made it to 9.2, and you took a deep sigh of relief that you don’t have to go through that again. But is that true? This presentation will look at what it takes to live in a continuous delivery support model where Updates, ESU’s and Tools releases are regularly being released putting your system out of date. The fact is that JD Edwards is continuing to expand and new functionality is being added through Continuous Adoption and Delivery. The 9.2 that came out of the box is quite different than the 9.2 of today. Staying Current is a momentous task, but this presentation will discuss how to layout a manageable plan to be “near” current by using a mini upgrade approach.

Top Design Tips for Implementing Great Digital Assistants and Chatbots for Oracle Applications

Anyone can build a chatbot but it takes experience and expertise to build a GOOD chatbot. Simply knowing the building blocks for building a chatbot and how to piece them together doesn’t guarantee that what you build will be fit for purpose or add value to the business. You need to know the life lessons, tips, tricks, and pitfalls that can only be discovered through real-world implementations. In this theater session learn the top design tips for building digital assistants and chatbots, all learned from many live implementations.

“Pursuit of Perfect Sound” – How Sennheiser Turned Its JD Edwards Sales Portal for North America

For more than 65 years, Sennheiser’s “Pursuit of Perfect Sound” has resulted in top-quality products, true sound and tailor-made solutions for recording, transmission and reproduction of sound. To deliver perfect sound across its global network of dealers, Sennheiser deployed a Dealer/Rep Portal in over a dozen countries with real-time integration to its global single instance of JDE EnterpriseOne. The portal provides dynamic/personalized product catalogs, supports ordering, quoting, availability checking, order/invoice/payment inquiry and account profile administration. Also, sales rep use this portal to serve their customers seamlessly integrated with the company’s CRM solution. The most recent roll out in North America has been received with enthusiasm with the business. Among the key challenges addressed on the project were multi-language, currency, company, catalog, JDE regional settings, CRM integration and optimizing the technical architecture to deliver high availability.

Potent Reports for Global Exportation Audits

With 13 different business units that serve individual agricultural markets, CTB Inc. is a worldwide designer and manufacturer of agricultural systems and solutions. Inherent to serving a global network of distributors and dealers come demanding processes at every step of exportation. Among the challenges in exporting goods to many countries are the variable requirements for taxation, invoicing, documentation, and audits. As it became clear to CTB that an Excel spreadsheet approach to its JDE data was far too labor-intensive, the company sought a solution to accelerate the documentation process. CTB applied automations and autofills that instantly draw JDE data for exportation credentials. Today, its exportation and auditing processes are enhanced to be accurate and swift, ultimately requiring less effort.
Join CTB’s Jen Leatherman, Director of Business Systems, to learn how to automate swift, efficient, and complaint global exportation documentation.

Managing Security across Environments

We often think of an ERP system being everything that your organization needs. The reality is that more times than not our ERP systems are integrated with various solutions across our environments. When getting our arms around managing this access and the associated controls, we really need to look further than just our ERP system. Come learn from this panel of experts as we review the areas to consider in managing access across environments. Walk away with a checklist of ideas to take back and benefit from today.

Operational Excellence – Fast, Efficient and Secure Security Processes for E1

Federated Coop went live on a brand-new instance of 9.2 in summer 2019. One important part of the project was designing security roles to meet business requirements. An equally important part of the project was designing operational processes to support the business with timely responses while keeping the security model intact.

Join us to learn how FCL successfully implemented processes for E1 Role Access Requests, Security Access and Role Reviews, and table level monitoring for potential fraud or error activity.

Why Freight Estimating and Quoting are Critical to Customer Service and Profitability at XSE Group

XSE Group is committed to growing a profitable, technologically advanced, customer-driven global sales and distribution company. To support its company mission in a highly competitive, low margin environment, XSE needs to tightly manage all costs and freight represents a critical cost component that needs to be considered on every order to achieve profit margin goals while meeting customer expectations. With its JDE E1 and SmarterCommerce Call Center and Freight Management solutions, XSE is able to estimate, quote and charge all freight and handling costs upfront at order capture and profitably source its products from any of its three regional warehouses. In addition, XSE’s system manages customer and customer group freight charge overrides to provide special negotiated freight terms to valued customers. The end result of better upfront freight management is having freight contribute to the company’s profitability while responding effectively to customer service needs.

Utilizing UDOs and Mobile Applications to Process Work Orders

This presentation will primarily focus on the functionality of the Service Management module, and how Turner Industries Group has leveraged that functionality to streamline processes for a particular division of our business. Just last year, our users were utilizing handwritten, paper JRRs (Job Record Reports) to submit their service orders. Since then, we have implemented not only an electronic method of capturing this data, but also mobile capabilities with some orchestrations. This new process will help to better track our service orders as well as identify outliers that might have gone unnoticed prior to the addition of the JDE EnterpriseOne Service Management program.

Increasing Financial Intelligence: How to Create Time for Strategic Analysis

Finance often spends too much time on reporting instead of analysis. While the office of the CFO is looked to for strategic insights, teams are bogged down with manual reporting using stale data. Automating reporting tasks can improve productivity and financial intelligence, leaving more time for strategic analysis.

· Easily create accurate, refreshable reports with real-time data for better analysis
· Reduce the risk of report inaccuracies or errors
· Make recurring tasks faster and easier
· Gain flexible drill-downs to the transaction-level data

View Homes goes Live on JDE EnterpriseOne 9.2 and Oracle Cloud Infrastructure

View Homes is a top 100 home builder and one of the country’s fastest-growing. After acquiring another builder already on JD Edwards, they quickly realized they could take advantage of this great ERP but they needed to upgrade and scale to support the whole of the organization.

Working with KS2 Technologies, they determined that Oracle Cloud Infrastructure was a great option for them - it would save them money in the long run and allow them to immediately scale.

By leveraging the JDE Reference Architecture, they also knew they’d have the configuration right the first time. They upgraded to 9.2, Oracle Cloud and Oracle Database in one single step migration.

This session will be an overview of the migration process, best practices and lessons learned. We’ll provide an overview of OCI and the JDE Reference Architecture. We’ll talk about Oracle Monitoring Tools for OCI, network configuration, VPN tunnels, and Active Directory migration.

Trent Bowman, View Homes
Ronnie Gilbert, KS2 Technologies, Inc.

You are Not Alone; Simple UDOs are here to Help!

Are you feeling overwhelmed by all the new functionality available? – Perhaps having nightmares about falling behind the curve and not taking advantage of any of it? – Do not worry, you are not alone; the concept of Citizen Development is moving on in the fast lane while many of us are still driving thru a school zone. The terms of Orchestrator, UXOne and Continuous Adoption, keep popping up, forcing us to think and strategize about what we can do with them, even though we are not 100% familiar with the concept, just yet. Let’s go back to the basics, shall we? – Let’s work with what we have, even if this means we are not on one of the latest Tool Releases. During this hands-on session, we will use simple components to create very productive one-stop screens and dashboards using real business case scenarios. These final products will combine the features you are most familiar with: Watchlist, Query, Grid Formats, Form Extensions, Personal Forms and CafeOne.

JD Edwards Security Audit in the Cloud – Be Prepared for the Auditors!

CTB Inc., a leading global designer, manufacturer and marketer of agricultural systems and solutions is now prepared for the dreaded IT Audit on JD Edwards Security. IT security audits have always been dreaded, at best. We ask ourselves which SoD will be the target this time? Did we miss a level of risk even the auditors didn't think of? Did we audit and review frequently enough? This presentation is a look at CTB's journey to overcoming a lack of resources, a lack of knowledge related to true security risks and taking advantage of a cloud based solution that solved all of these problems. This presentation will share their accomplishments in a few short months. Share how CTB was able to reduce JDE security setup and maintenance time by implementing and monitoring the 'rules'.

Sales Agent Portal: A Digital Platform Blending BPM & Online Technology with JDE Integration

CANTEX is a leading producer of PVC electrical conduit and fittings serving the global power, utility, building construction and communications markets. Our facilities utilize state-of-art production equipment and process technology. CANTEX has 35 agencies with 252 users. Our agents needed an advanced ordering, inquiry & logistics portal with robust JDE integration. They order against CANTEX distribution centers and on-site agent warehouses / branch plants and additionally manage consigned stock using ST/OT functionality. On one page we have consolidated ordering with an excel like intelligent grid, shipping & order information vs. a multi-page cart method. We utilize the SOLR search product catalog for both agents and our base website. Agents no longer use JDE, the portal is very user friendly and with JDE integration offers tremendous productivity gains. It has also eliminated support calls back into our internal IT group. Future plans: move agent portal to a customer portal.
