Safe Harbor

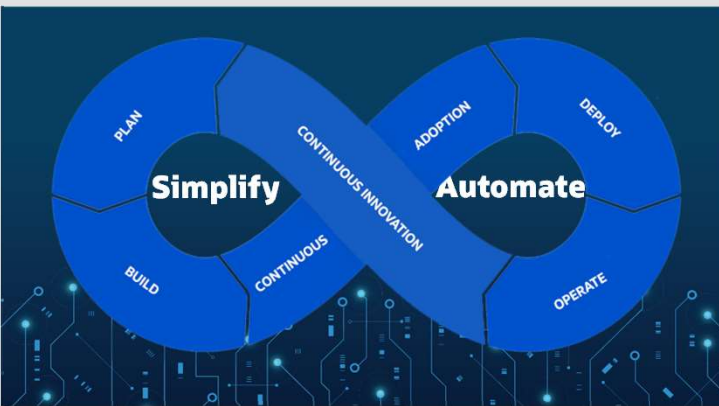

The following is intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described for Oracle's products may change and remains at the sole discretion of Oracle Corporation.

Statements in this presentation relating to Oracle's future plans, expectations, beliefs, intentions and prospects are "forward-looking statements" and are subject to material risks and uncertainties. A detailed discussion of these factors and other risks that affect our business is contained in Oracle's Securities and Exchange Commission (SEC) filings, including our most recent reports on Form 10-K and Form 10-Q under the heading "Risk Factors." These filings are available on the SEC's website or on Oracle's website at <http://www.oracle.com/investor>. All information in this presentation is current as of September 2019 and Oracle undertakes no duty to update any statement in light of new information or future events.

The JD Edwards Product Strategy

Simplify, Optimize and Transform your JD Edwards ERP

Simplify Automation

- Efficient Run and Maintain
- Enterprise Class Infrastructure
- Continuous Innovation and Deployment

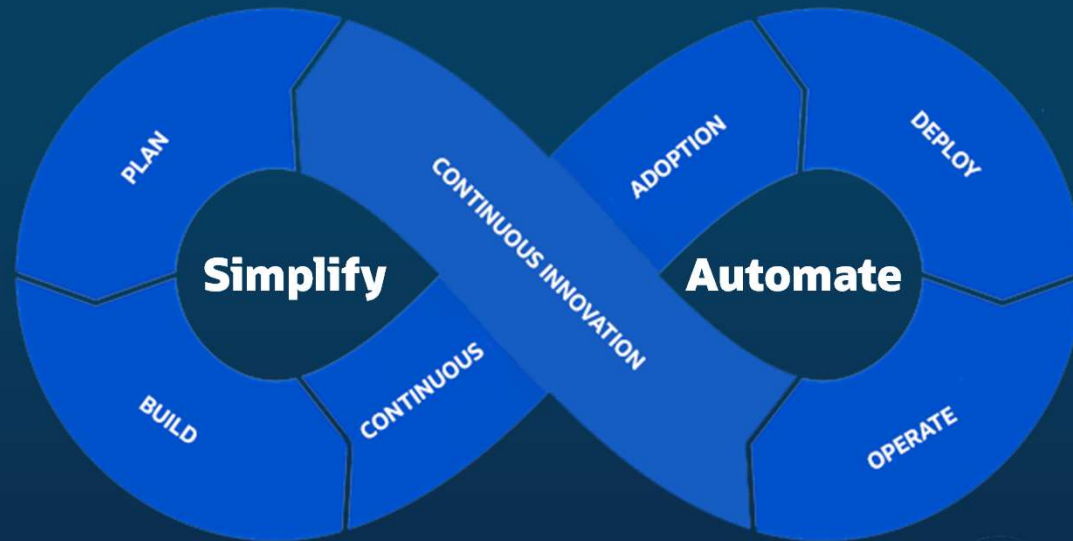

ERP Optimization

- Customer Driven Productivity
- Extend Existing Business Processes
- Regulatory compliance

Digital Transformation

- Process Automation
- Low/No code UI
- Integrations and Extensibility

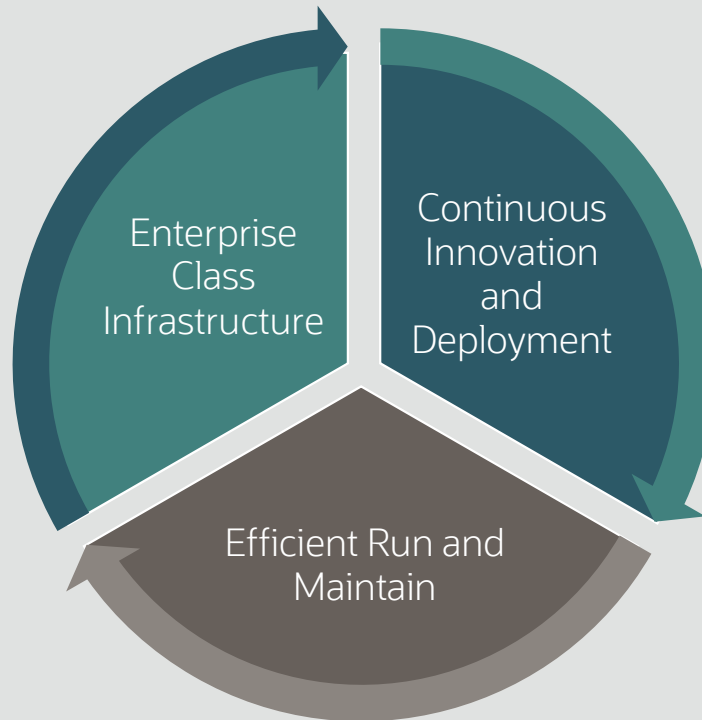

JD Edwards Strategy – Simplify and Automate

Increased Innovation at a Lower TCO

Global, Enterprise Class infrastructure at a lower cost than On-premises

Leverage new capabilities to transform business processes

Automate common IT activities to deliver the highest quality of service

Efficient Run and Maintain

Run and Maintain Challenges

- Time consuming manual system administration activities
- IT resources are focused on supporting systems instead of innovation
- System maintenance interrupts business processes and activities

System Admin

Simplified System Admin
Automation of repetitive system upkeep requirements, Reimagined Server Manager

Troubleshooting

Automated Problem Detection
System self-monitoring, Dev-ops technologies for simplified troubleshooting

Patching

Lower System Admin Costs
Automation and simplified tools for package build and deployment of JDE

Efficient Run and Maintain

Continuous Stream of Enhancements

New!

2015 -
2016

2017

2018

2019

2020

- **Management of User Defined Objects (Unified Life Cycle Management)**
- **Remove the 10 character restriction for User Id & Password**
- Customization Workbench
- Server Manager As Service Provider
- Replace OC4J with Oracle WLS
- Objects in Database
- Universal Cache Browser
- **Track Object Usage**
- Track Object Usage – BSFN
- Server Manager - Foundation and REST API
- Store Media Objects in Database or File System
- Deploying UDOs using Change Assistant
- **Server Manager support for One Click Provisioning**
- UDO Management Usability
- AIS Server REST APIs: New and updated media object services
- **Collect and Generate Diagnostics**
- Reduce Roundtrip Network Traffic
- Orchestration for System Administration
- Color Coding Environments
- Support of File Path Encryption for Downloads
- Enhanced Security with Complex DB Password Support*
- *Simplification of Development Client **
- *Automated Troubleshooting support for Kernel failures**
- *Web Enable OMW**

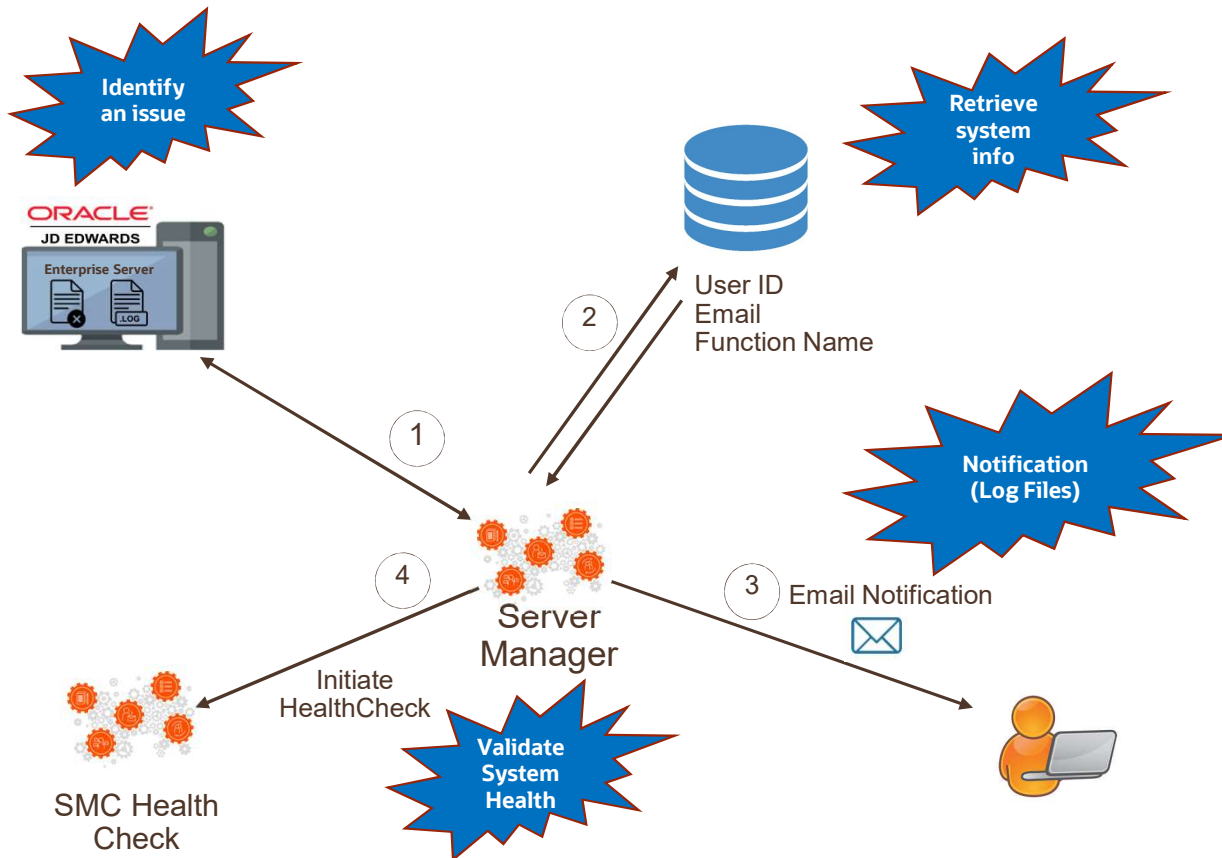

• * Planned

Simplification of Development Client

- Thin development client with a centralized database
- Reduce Dev Client footprint
- Developers can develop anywhere, anytime – access to changes from any client
- Eliminates mandatory check in and backup
- **Significant Reduction in client package build time!**

Automated Troubleshooting for Kernel Failures

- Reduce time and effort to triage customizations
- Streamlines interaction with Oracle Support
- Improves overall system stability

Tech SIQ Requests – Simplified Administration

- **Color Code Environments – 9.2.4**
- **Web Based OMW – Planned**
- **Schedule Server Package Deployments - Planned**
- **Security Audit History Environment – Planned**
- **Longer Database Proxy Password – Planned**

Quest ID	Enhancement Description	Oracle Number
10744	Web based admin tools	30569194, 30569197, 30569201, 30569209
10790	Simplify installation of local data base on development client (32 bit ?)	30424807
10827	Security Audit History should include environment	30329088
11469	move job on hold to a different Q - general Q management	11053296
11471	Parallel batch Q's	11053296
11490	Deploying packages & perform package build via command line	30412394
11550	zombie maintenance	30412230
11711	Mobile: Need to be able to deploy a package from mobile device/app	30412433
11808	OMW change of status on mobile/web	30425171
11901	ALLOW FOR MANAGING OTHER OBJECTS WITH OMW WEB P98220W	22072521
11999	Server Manager monitor notifications with details when failures/events	30412057
12002	Schedule server package deployments	30424773
12008	Resubmit a job from WSJ with same process options and data selection	30397282
12146	Database proxy cannot be greater than 10 characters	26373197
12158	In composed page the Configured Tile, Tile Type = Batch version.	23594790
12333	Zombie Tracking Tool.	30412325
12352	Report for Ochestration that pulls all the elements together	30506219

Enterprise Class Infrastructure

Innovative Solutions to Real World Challenges

Infrastructure Challenges

- Dated system architecture practices
- Need to size for peak workloads
- Disruptive and costly to refresh system
- Difficult to implement HA/DR
- Running an outdated or unsupported platform that requires proprietary skills

Automation

Elasticity

Cloud Infrastructure

Proven system architecture
Automates best practices architecture and migration from On-premises to Cloud

Pay for what you use
Workload and policy driven scalability at all layers of the architecture

Next gen infrastructure
Cutting edge, High performance, majority platform, with managed infrastructure at a low TCO

Enterprise Class Infrastructure

Continuous Stream of Enhancements

New!

2015 -
2016

2017

2018

2019

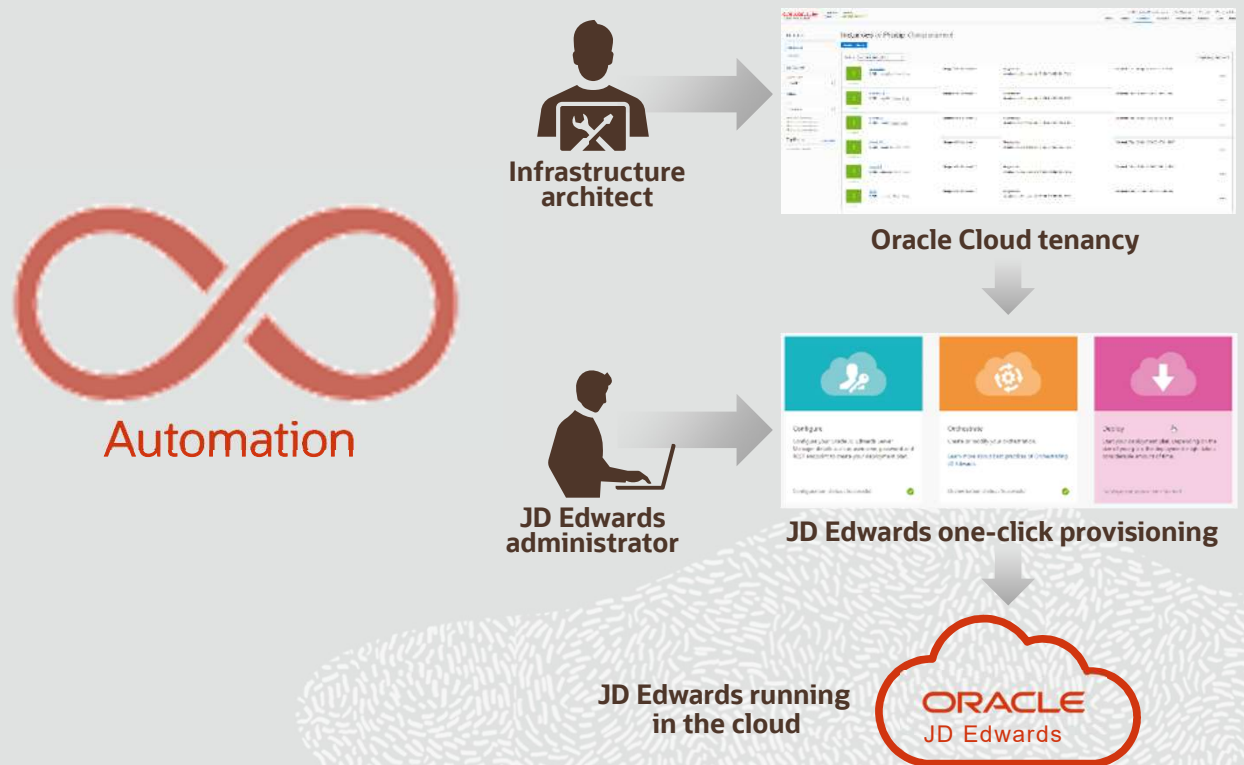

2020

- JDE Automation for OCI-C
- JDE Trial Edition Image for OCI-C
- JDE Payload for OCI-C
- **Files to the Database**
- Java Cloud Service for JDE
- SM Automation for OCI-C
- **One Click Provisioning**
- Object Tracking
- One Click Provisioning WLS and DB for JDE on OCI-C
- White Paper – HA & DR Scenarios for JDE on OCI-C
- White Paper – JDE on Baremetal Infrastructure OCI
- One Click Refresh
- Simplified Upgrade to One Click Target OCI
- Improved Migration Utilities
- Automated Provisioning – Windows and iSeries
- **JDE Reference Architecture** Definition for OCI
- One Click Automation to Provision Reference Architecture OCI
- One Click Refresh
- One Click Support for Multiple DB Provisioning
- **Trial Edition for OCI**
- One Click Adoption of DBCS
- Marketplace Images
- Terraform Infrastructure Automation
- Whitepaper – Scalable Elastic Deployment
- One Click and Trial Edition Refresh
- **White Paper – Simplify and Automate JDE**
- Server Manager Support - Elasticity OCI
- One Click and Trial Edition Refresh
- *Certification of ADB**
- *Server Manager Scalability & Performance**
- *Scalable Elastic Deployment of JDE**

* *Planned*

Automation - Anatomy of a JD Edwards Migration to OCI

- Utilize the **Terraform Infrastructure Automation** scripts from OCI Marketplace
- **Reference Architecture Automation** creates subnets and security lists, provisions storage, compute and database, and installs software
- **One-click Provisioning** tool consumes a base configuration of JD Edwards from Terraform Infrastructure Automation
- **Utilize Migration Utilities** to move data and configuration details
- **Let the JD Edwards Automated Provisioning work its magic!**

Elasticity - Elastic Infrastructure for JD Edwards

Elasticity is your system's ability to balance your ever changing processing requirements against the system resources needed to manage your workloads.

Elasticity

JDE on OCI Elasticity

- Pay for what you use!
- Workload Driven
 - OCI Auto-scaling
- Autonomous DB
- JDE Server Elasticity
 - Docker Containers for Quick Spin up/down

- Standardized OCI Market Place Image
- Market Place Image Significantly Speeds the JDE Infrastructure Provisioning Process
- Alignment to JDE Reference Architecture for Infrastructure Provisioning

64-bit - Future Proof Architecture Deployment Server Support

- No need to manage both 32-bit and 64-bit artifacts, saving time and resources on activities such as package build
- Able to future proof as database, operating systems and 3rd party vendors stop supporting 32-bit solutions
- Once converted, delivering ability to purge all 32-bit artifacts from database and file system

Oracle Autonomous Database for JD Edwards

Let the Database do the Work

Self-Driving

Save on Human Labor

Automates database and infrastructure management, monitoring, tuning

Self-Securing

Prevent Human Error

Protects from both external attacks and malicious internal users

Self-Repairing

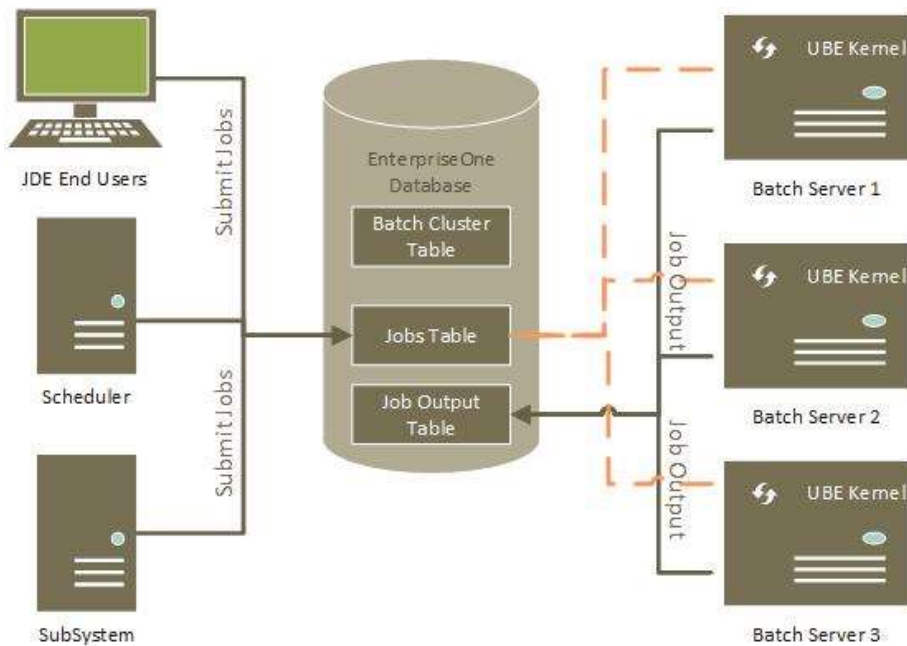

No Human Intervention

Protects from all downtime including planned maintenance

- No downtime for planned maintenance with customizable extended database drain time
- No impact on business momentum with zero downtime
- Transaction continuity with extended drain time improves data integrity
- Eliminate human intervention for planned maintenance activities

Virtual Batch Queues

Enhanced Report Management for EnterpriseOne 9.2

Key Drivers:

- Efficient use of server resources based upon batch processing volume
- Provide High Availability and Failover of batch processing
- Support fluctuating business demands

Value Solution:

- Load Balance batch processing based upon workloads
- Enable Batch Queue Properties Across Multiple Servers
- Supports All Batch Job Submission Methods
- Output Centralized to Repository for Anytime/Anywhere Access

Continuous Innovation and Adoption

Continuous Adoption Challenges

- High Effort to Upgrade
- Time and Effort to Retrofit Customizations
- Ongoing Cost to Validate
- Impact to Business Processes

Upgrade

Extensibility

Validation

Simplified Upgrade

Reduces time and effort required to get code current and retrofit customizations

Retire Customizations

Business analyst tailor user experiences and process on the glass

Continuous Testing

Focus testing on only impacted business processes

Continuous Innovation and Deployment

Continuous Stream of Enhancements

New!

2015 -
2016

2017

2018

2019

2020

- Simplified Upgrade
- Page Composer
- Images
- Form Personalization
 - Move Fields
 - Hide Fields
 - Resize Fields
 - Change form name
- List view grid format
- Spring board
- Watchlist Pane
- External Forms
- Access User Language from E1 Pages
- Keyword Search
- Framework for UX One - Landing Page/Spring Board

- Form Personalization
 - Change Tab Sequence
 - Make Fields Required
 - Rename Fields
- Enterprise Search
- Task Search
- Track Object Usage
- Enhancements to simplify staying current

- Form Extensibility
 - Add Business view columns Query Forms
 - Add Business view columns (Edit Forms)
- Form Personalization
 - Personalize Exits
- Rename Grid headers
- Simplified Upgrade on One-Click Provisioned Target Oracle and Windows

- Form Extensibility
 - Add Fields from Table to Business View
 - Orchestrator Support
 - Add Button
- Form Personalization
 - Default Form Security
 - Customer Requested
- Decustomizer Report
- Merge Tools for UBE, BSVW, and Table

- Form Extensibility
 - Show/Hide
 - Create For/Row Exits*
 - Move between Tabs*
- Page Composer
 - User Defined Favorites
 - Task Folders
 - Specify UDO options

* Planned

Upgrade Simplification

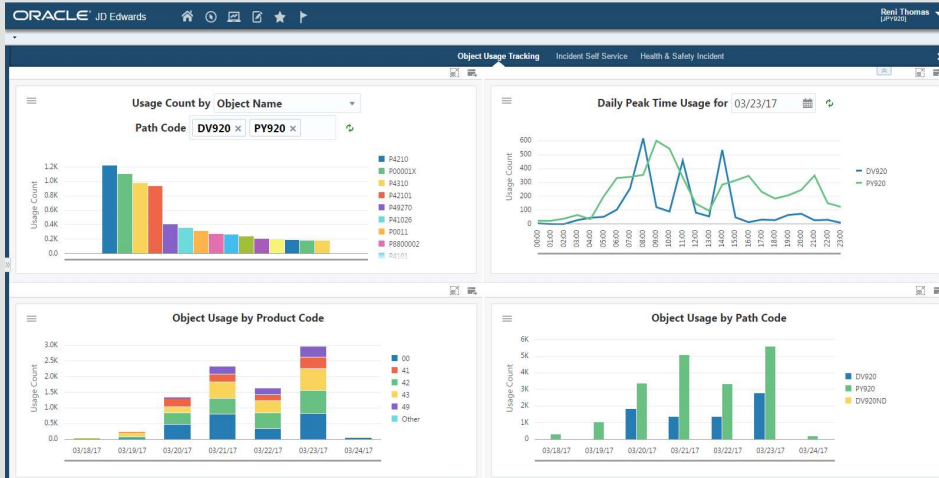

Removing Time and Effort

SIG Request

- ✓ Simplify Provisioning 9.2 environment
- ✓ Code Current Target (Apps and Tools)
- ✓ Reduce Retrofitting
- ✓ Move to OCI & Upgrade in single process

Simplifying Process of Staying Current

- Object Usage Tracker & Impact Analysis - 9.2.2
- Customization Object Analyzer (Decustomizer) – 9.2.3.4
- New Merge Tools 9.2.4

UX One Frameworks

Query Manager	One View	CafeOne	Watchlists	Composed Pages	Form Personalization	List View	Enterprise Search	Orchestrator Studio	Form Extension	Notifications
TR 9.1	TR 9.1	TR 9.2.0.2	TR 9.2.0.3	TR 9.2.0.2	TR 9.2.1	TR 9.2.0.5	TR 9.2.1.2	TR 9.2.0.2	TR 9.2.2.4	TR 9.2.2

UX One Framework Improvements

Continuous Innovation

Tools 9.2.4
& 9.2.4.3
SIG Request

- **Form Personalization - Base Form Security**
 - Standard layout without customizations
- **Form Extensibility - Associating Orchestrator with Grid Records**
 - Simplifies & avoids many redundant manual tasks while manipulating Grid records.
- **Simplify access to common used pages to increase productivity**
 - User define favorite E1 Pages to display
- **Enforce Business process with tailored E1 Pages for specific Business Units or Roles**
 - Specify a Query and Personal Form to be run executed in Menu Designer
- **Streamline Navigation in the iPad Container**
 - New capability to add Task Folders to E1 Pages provides same experience as browsers

UX One Framework vs Customizations

Extensibility Approach

- UX One Framework
- Available to end users

Available to the End Users in 13 Mins

Customization Approach

Week 1

- Business Analyst Defines requirement
- Waiting time for Developer Availability

Week 3

- Package Build becomes available
- Business Analyst on Vacation

Week 5

- Revalidation
- Available to End users

Week 2

- Development Work
- Wait for Package Build
- Package Build time

Week 4

- Business Analyst Change Review
- New Package Build

Available to the End Users in 22 Days

Reasons to Leverage UX One Framework

Drastic reduction in time to delivery

Reduction in the Resource time

New Approach

Business Analyst

Less dependency on IT

Reduction in the Skillset required

Reduction in the Maintenance cost

Eases the continuous adoption

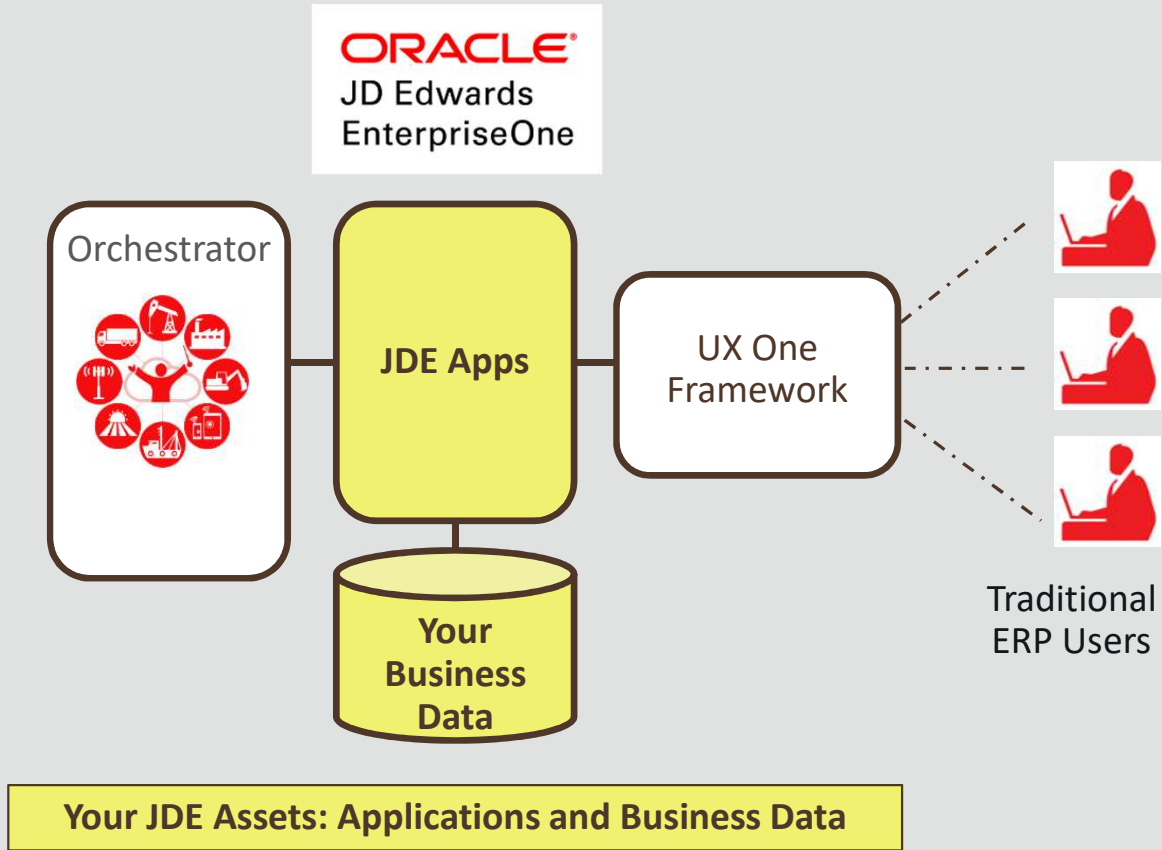

Digital Transformation

JD Edwards Digital Platform

Transform Your Processes with Digital Technologies

Realize the value of your enterprise data

- Mobile User interface
- Low / No Code User Interface
- Digital Assistants / Chatbots
- Enterprise Process Automation (RPA)
- JD Edwards Process Automation
- Business logic extensibility
- Machine to machine integration (IoT)
- Cloud Integration (SaaS, PaaS)
- Third Party Integrations
- Emerging technologies

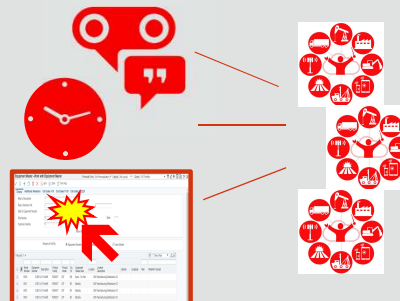

Orchestrated Process Automation

Simplify or eliminate tedious tasks

Challenges

- Repetitive transactions are a burden to human users
- Humans make mistakes
- ERP data is missing, erroneous, or late

Use the Tools You Have

Use orchestrations as automated transactions.

Simplify and Eliminate

A single orchestration can encompass many manual steps.

Initiate from Anywhere

Invoke orchestrations from RPA tools, schedulers, chatbots, and JDE forms.

JD Edwards Integration and Extensibility

Extending JD Edwards Challenges

- Time to Delivery Solutions
- Unique Skill Sets Required
- Changing Technology
- High Cost to Maintain

On the Glass

Industry Tools

Standards Based

Personalization

Empower the business analysts to simplify the end user experience to increase productivity

Remove Proprietary Tools

Common tools reduces the cost of development and enable future technology trends

REST Services

Future proof integrations by leveraging industry standards

JD Edwards Low/No Code

Fit for purpose UI using tool of your choice

Choose Your Low/No Code Development Tool

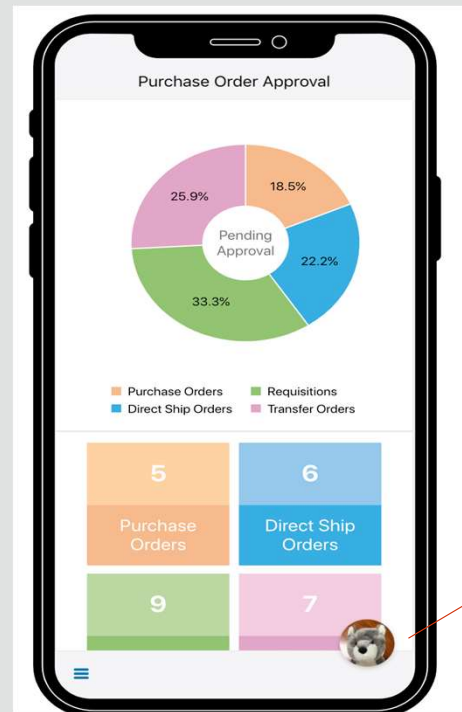

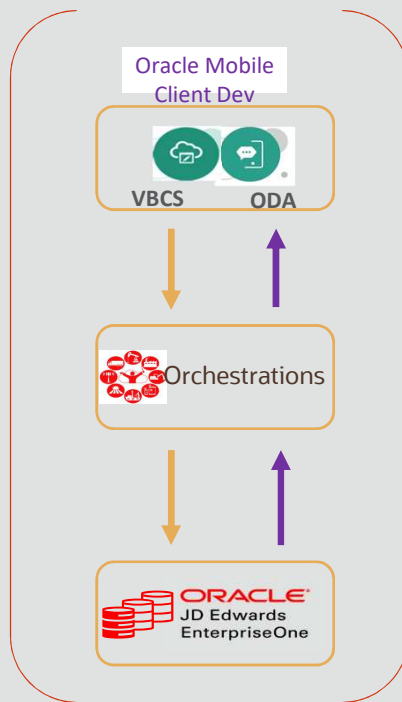

Orchestrations to Connect to JD Edwards

Rapid Application Development to enable Mobile Access, Chatbots, IoT, Collaboration...

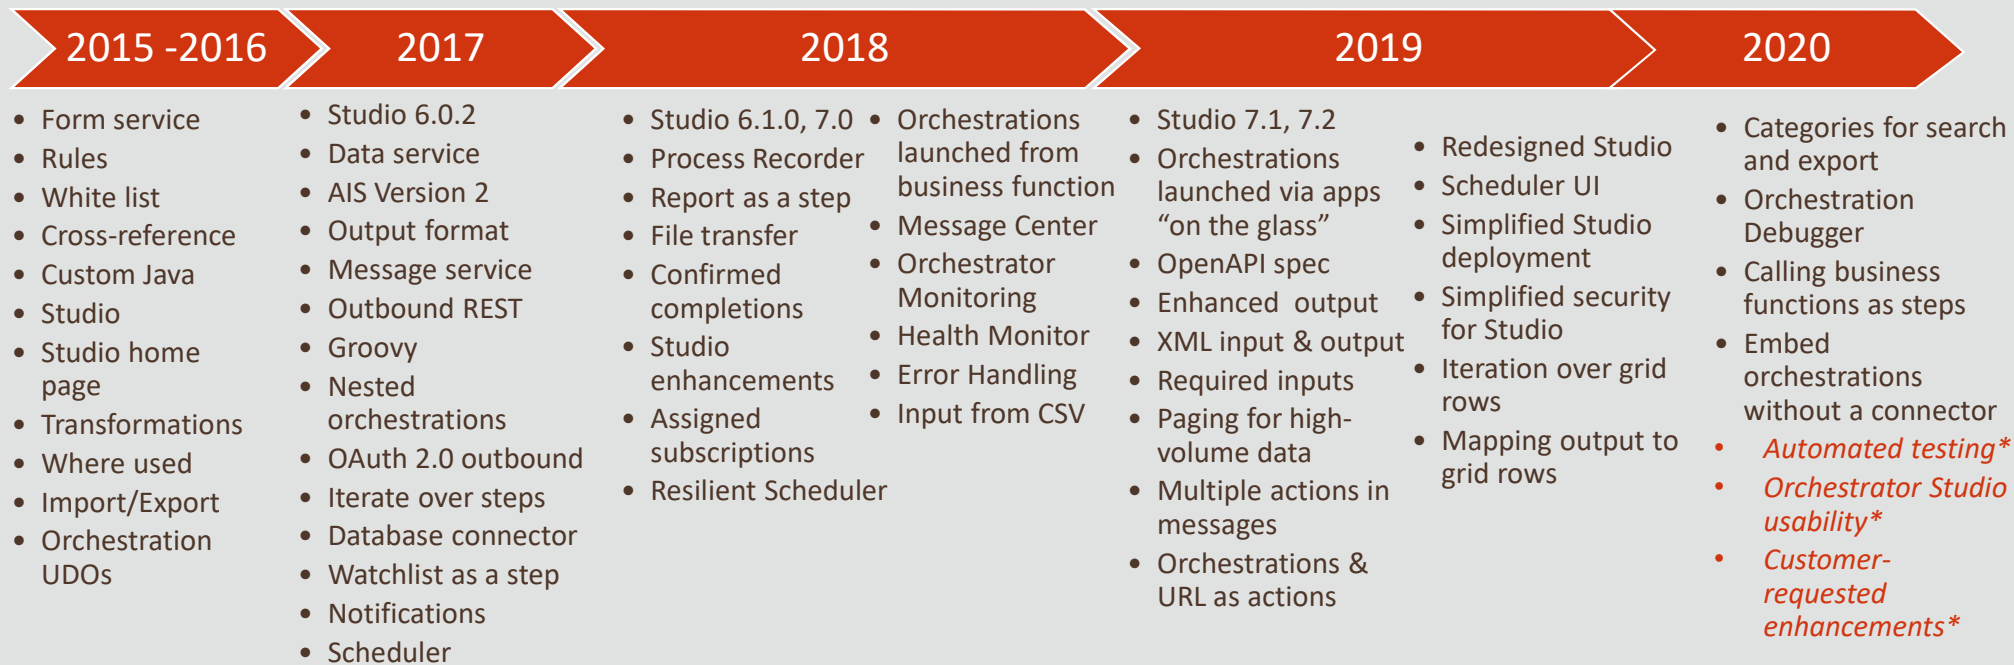

VBCS Mobile application integrated with Oracle Digital Assistant

JD Edwards EnterpriseOne Orchestrator and Notifications

Continuous Stream of Enhancements

Orchestrator Enhancements on LearnJDE:

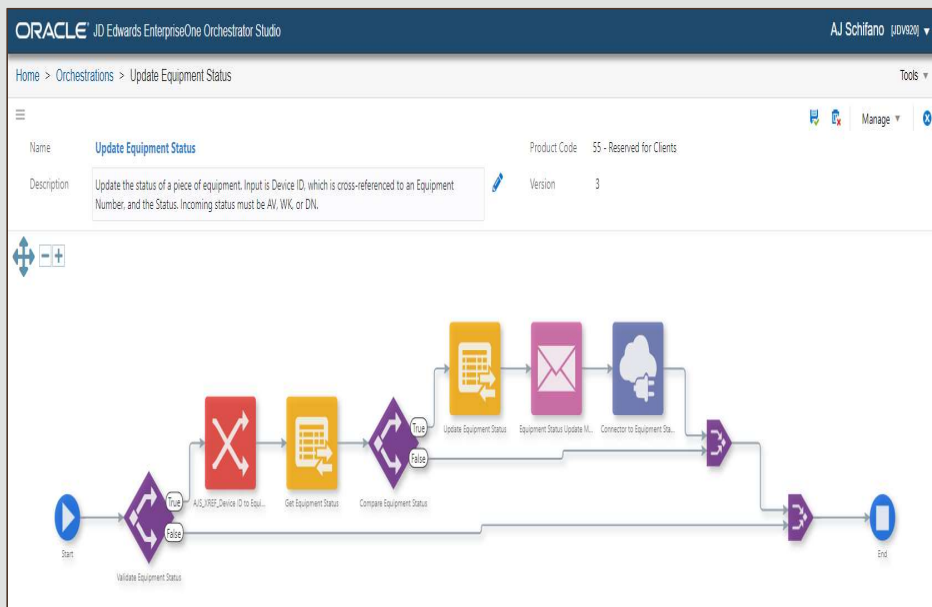

https://docs.oracle.com/cd/E84502_01/learnjde/orchestrator_enhancements.html

* Planned

Redesigned EnterpriseOne Orchestrator Studio

Simple, Graphical and Intuitive

- Improved UX for technical and nontechnical users
- Graphical flow allows easier visibility to steps
- Top-level access to all orchestration components
- Add, move, or delete steps with ease
- Run orchestrations for testing within the same interface
- Improved Orchestration Management
- Simplified management via AIS server
 - ADF server no longer required

Call a Business Function as an Orchestration Step

What: Orchestrator enables you to invoke a business function as a step in an orchestration.

Value: Provides another option to invoke efficient, direct access to JD Edwards logic or custom business logic.

How:

- In addition to “Groovy” and “Java” you can now to select “Business Function” as the type for a Custom request
- Pass inputs into the business function and receive outputs back, depending on how the BSFN was written
- Run synchronously or asynchronously (“Fire and Forget”)
- Faster, more direct logic than using a form request or data request

ORACLE JD Edwards EnterpriseOne Orchestrator Studio

Home > Custom Requests > Calc Price

Name: Calc Price | Description: Calc Price | Product Code: 55 - Reserved for Clients | Category: [Dropdown] | Share

Function Object Name: B4201500 | Function Name: Calculate Sales Prices And Costs | Fire and Forget: [Toggle]

ID	Name	Description	Required	Input	Output	Input Variable	Default Value	Return	Output Variable
10	mnAddressNo	Address Number (ANB)		<input checked="" type="checkbox"/>	<input type="checkbox"/>	mnAddressNo	4242	<input type="checkbox"/>	
11	mnShipToNo	Address Number - Ship To (SHAN)		<input checked="" type="checkbox"/>	<input type="checkbox"/>	mnShipToNo	4242	<input type="checkbox"/>	
12	mnShortItemNo	Item Number - Short (ITM)		<input checked="" type="checkbox"/>	<input type="checkbox"/>	mnShortItemNo	60011	<input type="checkbox"/>	
13	szBaseCurrencyCode	Currency Code - To (CRDC)		<input type="checkbox"/>	<input type="checkbox"/>		USD	<input type="checkbox"/>	
14	szCustomerCurrencyCode	Currency Code - From (CRCD)		<input type="checkbox"/>	<input type="checkbox"/>		USD	<input type="checkbox"/>	
15	mnExchangeRate	Currency Conversion Rate - Spot Ra		<input type="checkbox"/>	<input type="checkbox"/>			<input type="checkbox"/>	
16	mnTriangulationRateFrom	Triangulation Rate - From Currency		<input type="checkbox"/>	<input type="checkbox"/>			<input type="checkbox"/>	
17	mnTriangulationRateTo	Triangulation Rate - To Currency (TF		<input type="checkbox"/>	<input type="checkbox"/>			<input type="checkbox"/>	
18	cCurrencyConversionMethod	Currency Conversion Y/Z (CRCM)		<input type="checkbox"/>	<input type="checkbox"/>		Z	<input type="checkbox"/>	
19	cPriceOverride	Price Override Code (PROV)		<input type="checkbox"/>	<input type="checkbox"/>			<input type="checkbox"/>	
20	mnUnitPrice	Amount - Price per Unit (UPRC)		<input type="checkbox"/>	<input checked="" type="checkbox"/>			<input checked="" type="checkbox"/>	mnUnitPrice
21	mnExtendedPrice	Amount - Extended Price (AEXP)		<input type="checkbox"/>	<input checked="" type="checkbox"/>			<input checked="" type="checkbox"/>	mnExtendedPrice
22	mnForeignUnitPrice	Amount - Foreign Price per Unit (FL		<input type="checkbox"/>	<input type="checkbox"/>			<input type="checkbox"/>	

Pass inputs

Return outputs

Orchestration Debugger

What: View the step-by-step execution of an orchestration.

Value: Quickly find why an orchestration ends in error or produces unexpected output.

How:

- New “Debug” button on the Run Orchestrations page
- Follow the path through rules
- Inspect and manually change the values of variables at each step
- Set break points or click step-by-step
- See the final output built at each step

The screenshot displays the Oracle Cloud Orchestration Debugger interface. The main window shows a workflow diagram for "Add Employee" with steps like "Get ID Card", "Generate Token", and "Add Employee". A red circle highlights the "Add Employee" step. A "Debug Orchestration" panel on the right shows a JSON output with an error message: "App Stack Form Exception: { \"Expecting Form\": \"P0001EMP_M0001EMPD\", \"Resulting Form\": \"P01012_M01012A_2JDE0002\" }". The error details show a "TITLE" of "Error: Alpha Name Cannot Be Blank" and an "ERRORCONTROL" of "28".

Assertion Framework for Orchestrations

Using orchestrations as test cases

Challenges

- End-to-end validation of a business process can be complex
- Business needs assurance that critical processes are functioning and producing correct data

Use the Tools You Have

Use orchestrations as test cases to validate business processes

Ensure that Data is Valid

Define the expected values (“assertions”) for test cases and investigate deviations

1-2-3

Simplified Capture of Tests

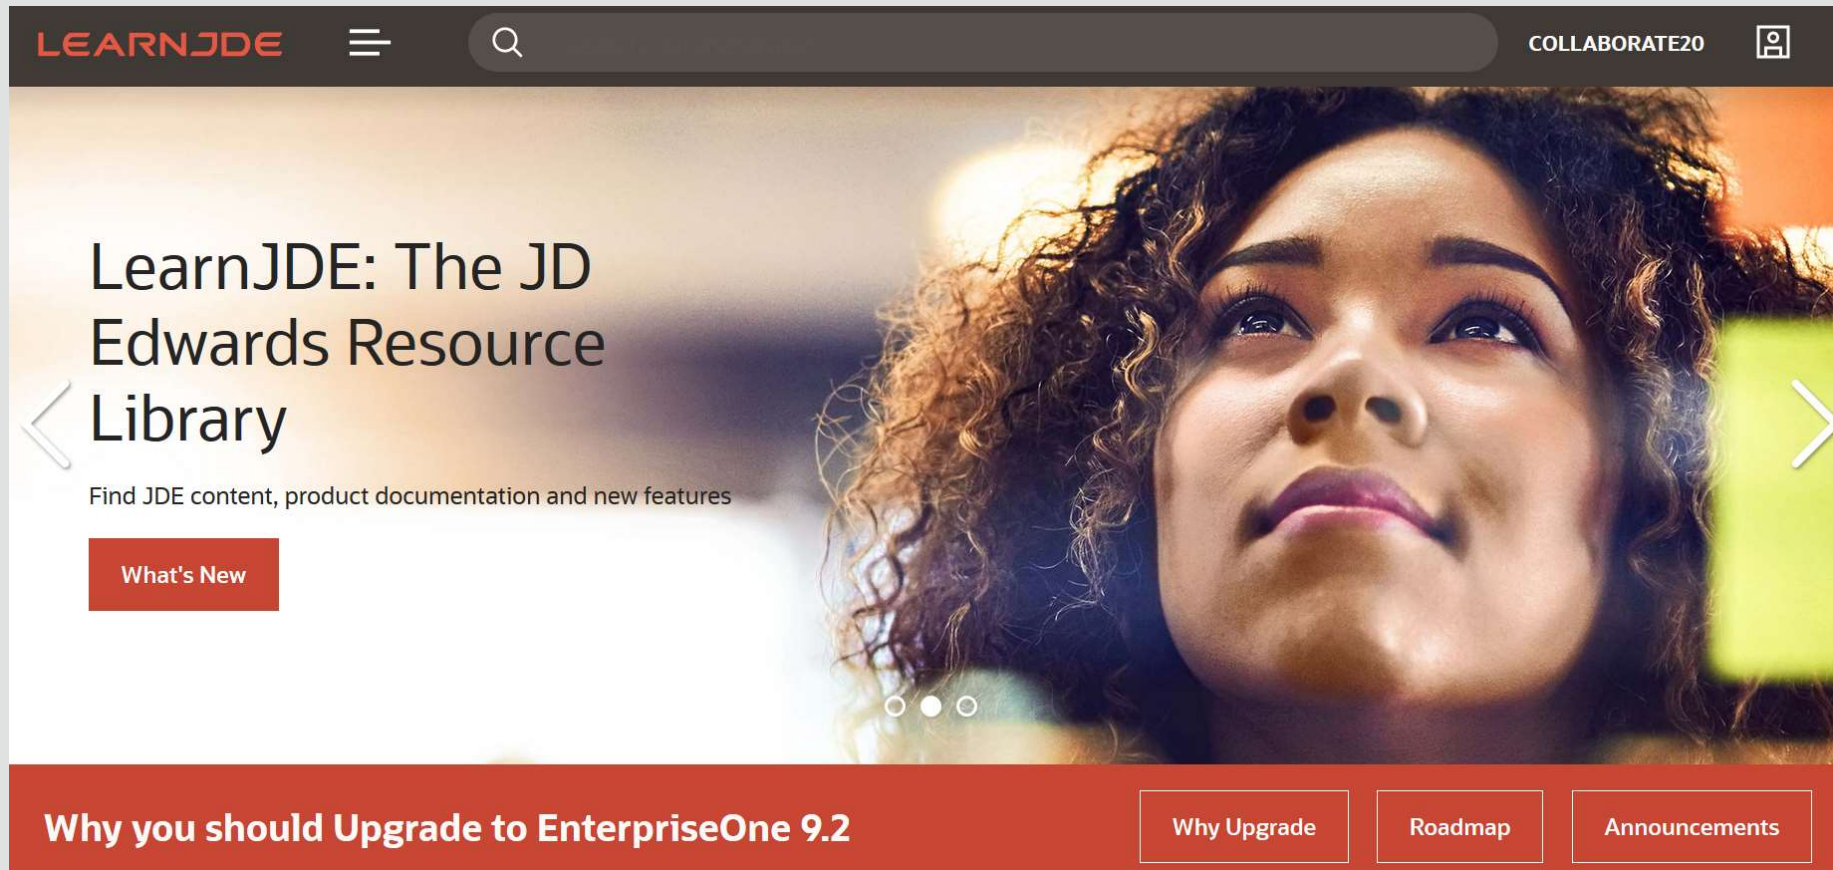

Use the Orchestrator “Record a Process” feature to create tests and expected values

Summary and Call to Action

Learn More from LearnJDE.com

The screenshot shows the top navigation bar of the LearnJDE.com website. On the left, the 'LEARNJDE' logo is displayed in red and white, followed by a hamburger menu icon. A search bar with a magnifying glass icon is positioned in the center. On the right, the text 'COLLABORATE20' and a user profile icon are visible. Below the navigation bar is a large hero image of a woman with curly hair looking upwards. Overlaid on the left side of the hero image is the text 'LearnJDE: The JD Edwards Resource Library' in a large, dark font. Below this text is a smaller line: 'Find JDE content, product documentation and new features'. A red button labeled 'What's New' is positioned below the text. At the bottom of the hero image, there are three small white circles, with the middle one being filled. Below the hero image is a red banner with the text 'Why you should Upgrade to EnterpriseOne 9.2' on the left. On the right side of the banner are three white buttons: 'Why Upgrade', 'Roadmap', and 'Announcements'.
