Oracle HTTP Server 11g R1 Configuration for FLEXCUBE
Oracle FLEXCUBE Universal Banking
Release 12.4.0.0.0
[May] [2017]
# Table of Contents

1. **PURPOSE** .................................................................................................................. 3  

2. **INTRODUCTION TO ORACLE HTTP SERVER (OHS)** .................................................. 3  
   2.1 HTTP LISTENER ........................................................................................................ 3  
   2.2 MODULES (MODS) ...................................................................................................... 3  

3. **INSTALLATION OF OHS 11G** .................................................................................... 4  

4. **CONFIGURE ORACLE HTTP SERVER INFRONT OF WEBLOGIC SERVER** ................. 11  
   4.1 FOR WEBLOGIC IN SINGLE INSTANCE ................................................................... 11  
   4.2 FOR WEBLOGIC INSTANCES IN CLUSTER .............................................................. 12  

5. **ENABLE “WEBLOGIC PLUG-IN ENABLED” FLAG IN WEBLOGIC** ............................... 13  

6. **COMPRESSION RULE SETTING** .................................................................................. 13  
   6.1 LOADING MOD_DEFHATE ............................................................................................ 13  
   6.2 CONFIGURING FILE TYPES ....................................................................................... 14  
   6.3 HTTPD.CONF FILE CHANGES ................................................................................... 14  

7. **CONFIGURING SSL FOR ORACLE HTTP SERVER** ..................................................... 16  
   7.1 SSL CONFIGURATION FOR INBOUND REQUEST TO ORACLE HTTP SERVER .......... 16  
      7.1.1 Create a new Wallet and import Certificate ......................................................... 16  
      7.1.2 Configuring Wallet in ssl.conf file .................................................................... 20  
   7.2 CONFIGURING SSL BETWEEN ORACLE HTTP SERVER AND ORACLE WEBLOGIC SERVER ................................................................. 21  
      7.2.1 Turn off KeepAliveEnabled ............................................................................. 21  
      7.2.2 To enable one-way SSL .................................................................................... 21  
      7.2.3 To enable two-way SSL .................................................................................... 22  

8. **SAMPLE CONFIGURATION FILES** ............................................................................. 23  

9. **STARTING, STOPPING, AND RESTARTING ORACLE HTTP SERVER** ......................... 23  
   9.1 START ......................................................................................................................... 23  
   9.2 STOP ............................................................................................................................. 23  
   9.3 RESTART ..................................................................................................................... 23  

10. **TEST THE APPLICATION** .......................................................................................... 24  

11. **SERVER LOGS LOCATION** .......................................................................................... 24  

12. **REFERENCES** ............................................................................................................ 24
1. **Purpose**

   The objective of this document is to explain the installation and configuration of Oracle HTTP Server 11g R1 (11.1.1.6.0). This includes setting up of server details, configuration of compression rules and enabling SSL.

2. **Introduction to Oracle HTTP Server (OHS)**

   Oracle HTTP Server is the Web server component for Oracle Fusion Middleware. It is based on Apache web server, and includes all base Apache modules and modules developed specifically by Oracle. It provides a HTTP listener for Oracle WebLogic Server and the framework for hosting static pages, dynamic pages, and applications over the Web. Key aspects of Oracle HTTP Server are its technology, its serving of both static and dynamic content and its integration with both Oracle and non-Oracle products.

   Oracle HTTP Server consists of several components that run within the same process. These components provide the extensive list of features that Oracle HTTP Server offers when handling client requests. Following are the major components:

   **2.1 HTTP Listener**

   Oracle HTTP Server is based on an Apache HTTP listener to serve client requests. An HTTP server listener handles incoming requests and routes them to the appropriate processing utility.

   **2.2 Modules (mods)**

   Modules extend the basic functionality of Oracle HTTP Server, and support integration between Oracle HTTP Server and other Oracle Fusion Middleware components. There are modules developed specifically by Oracle for Oracle HTTP Server. Ex: mod_wl_ohs, mod_plsql

   Oracle HTTP Server also includes the base Apache and third-party modules out-of-the-box. These modules are not developed by Oracle. Ex: mod_proxy, mod_perl
3. Installation of OHS 11g

Invoke the setup exe to start the installation

Select Skip Software Updates
Select Install and Configure

Select Installation Type

- **Install and Configure**
  - Installs binaries in an ORACLE HOME and configures working instance in an INSTANCE HOME.

- **Install Software - Do Not Configure**
  - Before these installed components will work, they must be configured by running the configuration wizard.

When installation is complete, you can modify the configured instance using Enterprise Manager or WebLogic Server Administration Console.

Prerequisite Checks

- Checking operating system certification: 100%
- Checking physical memory: 100%
Select only Oracle HTTP Server
Enter the required OHS instance and component names
This completes the installation of Oracle HTTP Server with <Instance> and <component>. Example: Instance is instance1 and component is ohs1.

If you would like to change the port after the installation(OHS Listen Port) edit $ORACLE_INSTANCE/config/OHS/<component_name>/httpd.conf and change the listen port.

NOTE: This port is for http protocol and not for https.
4. **Configure Oracle HTTP Server infront of Weblogic Server**

In Oracle HTTP Server requests from Oracle HTTP Server to Weblogic server are proxied using mod_wl_ohs module. This configuration file needs to be modified to include the Weblogic server and port details.

`mod_wl_ohs.conf` file is located at

```
${ORACLE_INSTANCE}/config/OHS/(COMPONENT_NAME)/mod_wl_ohs.conf
```

Add the below directives to `mod_wl_ohs.conf` file.

4.1 **For WebLogic in single instance**

```
<Location /<<context/url>> >
    SetHandler weblogic-handler
    WebLogicHost <<server name>>
    WeblogicPort <<port>>
</Location>
```

Example:

```
<Location /FCJNeoWeb>
    SetHandler weblogic-handler
    WebLogicHost wserver1
    WeblogicPort 7707
</Location>
```

This will forward `/FCJNeoWeb` from HTTP server to `/FCJNeoWeb` on WebLogic Server wserver1: 7707
4.2 For Weblogic instances in cluster

```xml
<Location /<context/url>>
    SetHandler weblogic-handler
    WebLogicCluster <server1>:<port1>,<server2>:<port2>
</Location>
```

Example

```xml
<Location / FCJNeoWeb >
    SetHandler weblogic-handler
    WebLogicCluster wlserver1:7010, wlserver2:7010
</Location>
```

This will forward /FCJNeoWeb from HTTP server to /FCJNeoWeb on WebLogic Cluster wlserver1:7010 and wlserver2:7010
5. Enable “WebLogic Plug-In Enabled” flag in weblogic

This flag needs to be enabled in weblogic if it is accessed through proxy plugins. When the WebLogic plugin is enabled, a call to getRemoteAddr will return the address of the browser client from the proprietary WL-Proxy-Client-IP header instead of the web server.

   a. Plugin flag at managed server level
      i. Click on ‘Environment’ -> ‘Servers’ -> ‘<ManagedServer>’ -> ‘General’ -> ‘Advanced’
      ii. Check the ‘WebLogic Plug-In Enabled’ box.
      iii. Click ‘Save’
   iv. Restart the Server.

   b. Plugin flag at domain level
      v. Click on <Domain> -> ‘Web Applications’
      vi. Check the ‘WebLogic Plug-In Enabled’ box.
      vii. Click ‘Save’
   viii. Restart the server.

6. Compression rule setting

Content compression in Oracle HTTP Server is done using mod_deflate. This can compress HTML, text or XML files to approx. 20 - 30% of their original sizes, thus saving on server traffic. However, compressing files causes a slightly higher load on the server, but clients’ connection times to server is reduced.

6.1 Loading mod_deflate

mod_deflate is used for compression in OHS and this is installed in Oracle HTTP Server under location

"${ORACLE_HOME}/OHS/modules/mod_deflate.so"

But it might not be loaded.

To load the file add the below directive in mod_wl_ohs.conf file

```bash
LoadModule deflate_module "$(ORACLE_HOME)/OHS/modules/mod_deflate.so"
```

```bash
# This is a template to configure mod_weblogic.
LoadModule weblogic_module "${ORACLE_HOME}/ohs/modules/mod_weblogic.so"
LoadModule deflate_module "$(ORACLE_HOME)/OHS/modules/mod_deflate.so"
```

# This empty block is needed to save mod_wl related configuration from EN to this file when chang
```bash
<tomcat_weblogic_module>
  WeblogicHost <WEBLOGIC_HOST>
  WeblogicPort <WEBLOGIC_PORT>
  Debug ON
  ErrorFile /tmp/weblogic.log
  WatchExpression ".*.jpg"
</tomcat_weblogic_module>
```
6.2 Configuring file types

mod_deflate also requires to specify which type files are going to be compressed.
In the LOCATION section of mod_wl_ohs.conf file add the below entries.

AddOutputFilterByType DEFLATE text/plain
AddOutputFilterByType DEFLATE text/xml
AddOutputFilterByType DEFLATE application/xhtml+xml
AddOutputFilterByType DEFLATE text/css
AddOutputFilterByType DEFLATE application/xml
AddOutputFilterByType DEFLATE application/x-javascript
AddOutputFilterByType DEFLATE text/html
SetOutputFilter DEFLATE

Images are supposed to be in a compressed format, and therefore are bypassed by mod_deflate.

6.3 httpd.conf file changes

This is a server configuration file which typically contains directives that affect how the server runs, such as user and group IDs it should use, and location of other files. Cross check the existence of mod_wl_ohs.conf include in httpd.conf file.

httpd.conf file is present under location

“${ORACLE_INSTANCE}/config/OHS/{COMPONENT_NAME}/httpd.conf”

In this file cross check for the below entry
include "${ORACLE_INSTANCE}/config/OHS/${COMPONENT_NAME}/mod_wl_ohs.conf"

If above include entry is not present, then add the above include section.
# Include the configuration files needed for mod_vtdlogic
include "${ORACLE_INSTANCE}/config/${COMPONENT_TYPE}/${COMPONENT_NAME}/mod_vtd_logic.conf"

# Include the SSL definitions and Virtual Host container
include "${ORACLE_INSTANCE}/config/${COMPONENT_TYPE}/${COMPONENT_NAME}/ssl.conf"

# Include the admin virtual host (Proxy Virtual Host) related configuration
include "${ORACLE_INSTANCE}/config/${COMPONENT_TYPE}/${COMPONENT_NAME}/admin.conf"

include "moduleconf/*.conf"
7. Configuring SSL for Oracle HTTP Server

Secure Sockets Layer (SSL) is required to run any Web site securely. Secure Sockets Layer (SSL) is an encrypted communication protocol that is designed to securely send messages across the Internet.

Reading of “SSL_Configuration on Weblogic” document provided as part of FCUBS installation is recommended before proceeding with further setup.

In Oracle HTTP server, SSL configuration can be done between
1. Browser to Oracle HTTP Server(Mandatory)
2. Oracle HTTP Server to Oracle Weblogic Server(If required)

7.1 SSL configuration for Inbound Request to Oracle HTTP Server

Perform these tasks to enable and configure SSL between browser and Oracle HTTP Server.

1. Obtain a certificate from CA or create a self signed certificate.
2. Create an Oracle Wallet which contains the above SSL Certificate. The default wallet that is automatically installed with Oracle HTTP Server is for testing purposes only. The default wallet is located in "${ORACLE_INSTANCE}/config/OHS/$(COMPONENT_NAME)/keystores/default"
3. Configuring Wallet in ssl.conf file

7.1.1 Create a new Wallet and import Certificate

1. Go to the \Oracle_WT1\bin\launch.exe, this will launch your wallet manager
2. Click on Create new and then click no option.

3. Enter the wallet password and click on OK, this will create a new wallet.
4. Not it will ask for certificate request creation, Click on NO to proceed

5. Right click on trusted certificates and then import trusted certificate.
6. Browse to the folder where certificate is stored and click on Open

7. Click on Save Wallet button on the left side navigation and save the wallet either to default location("${ORACLE_INSTANCE}/config/OHS/${COMPONENT_NAME}/keystores/default") or folder of your choice.

8. Click on Wallet tab and enable Auto Login
7.1.2 Configuring Wallet in ssl.conf file
In ssl.conf file the newly created wallet need to updated. This file is located under folder
"${ORACLE_INSTANCE}/config/OHS/${COMPONENT_NAME}/"

1. Change the SSLWallet directive to point to the location of new wallet created.
   SSLWallet 
   $(ORACLE_INSTANCE)/config/${COMPONENT_TYPE}/${COMPONENT_NAME}/keystores/

2. Change the Listen port number in ssl.conf file to the SSL enabled port, by default the value is 4443

---

```xml
# Oracle HTTP Server mod_oeal configuration file ssl.conf  
# Generated by the oeal-config script

Listen 4443
```

---
7.2 Configuring SSL between Oracle HTTP Server and Oracle Weblogic Server

SSL for outbound requests from Oracle HTTP Server are configured in mod_wl_ohs.

Refer to “SSL_Configuration on Weblogic” document for weblogic server setting mentioned in below section.

7.2.1 Turn off KeepAliveEnabled

The below parameter in mod_wl_ohs should be turned off, by default it is on. Add the below directive under LOCATION section of mod_wl_ohs file

KeepAliveEnabled OFF

7.2.2 To enable one-way SSL

1. Generate a custom keystore identity.jks for Weblogic Server containing a certificate.
2. At Identity section in Keystores tab in weblogic Admin Console for server set
   a. The custom trust store with the identity.jks file location
   b. The keystore type as JKS
   c. The passphrase used to created the keystore
3. Copy the certificate to Oracle HTTP Server and import the new certificate into OHS wallet as a trusted certificate.

4. Add following new directive in mod_wl_ohs.conf to point to the wallet location
   
   \W\SSLWallet \"${ORACLE_INSTANCE}/config/OHS/{COMPONENT_NAME}/keystores/default\"

5. Change the port in mod_wl_ohs file to point to SSL port of Weblogic server.

6. Restart both Weblogic Server and Oracle HTTP Server

7.2.3 To enable two-way SSL

1. Perform one-way SSL configuration steps

2. Generate a new trust store, trust.jks for Weblogic server

3. Keystore created for one-way SSL could be used, but it is recommended to create a separate truststore

4. Export the user certificate from Oracle HTTP Server wallet, and import it into truststore created above

5. At Trust section in Keystores tab in Weblogic Admin Console for the server set
   a. The custom trust store with the trust.jks file location
   b. The keystore type as JKS
   c. The passphrase used to created the keystore
6. Under the SSL tab

Ensure trusted CA is set as from Custom Trust Keystore.

7. Restart Weblogic Server

8. Sample Configuration Files

- httpd.conf
- mod_wl_ohs.conf
- ssl.conf

9. Starting, Stopping, and Restarting Oracle HTTP Server

Navigate to the below location in command prompt $(ORACLE_INSTANCE)/bin/ and run below commands

9.1 Start
opmnctl startproc ias-component={COMPONENT_NAME}
Example: opmnctl startproc ias-component=ohs1

9.2 Stop
opmnctl stopproc ias-component={COMPONENT_NAME}
Example: opmnctl stopproc ias-component=ohs1

9.3 Restart
opmnctl restartproc ias-component={COMPONENT_NAME}
Example: opmnctl restartproc ias-component=ohs1
10. Test the application

Test the application deployed on Weblogic using Oracle HTTP Server after restarting both the oracle http server and weblogic server

https://ohs_servername:ohs_https_port/<<context/url>>
http://ohs_servername:ohs_http_port/<<context/url>>

ohs_servername: server on which OHS is deployed
ohs_https_port: port number mentioned against LISTEN directive in SSL.conf file
ohs_http_port: port number mentioned against LISTEN directive in httpd.conf file

Example:
https://localhost:4443/FCJNeoWeb/welcome.jsp
Or
http://localhost:7777/FCJNeoWeb/welcome.jsp

11. Server Logs Location

Oracle HTTP Server Logs are generated under folder

${ORACLE_INSTANCE}/diagnostics/logs/OHS/\{COMPONENT_NAME}/
