This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

CAUTION: Use only the Upgrade procedure included in the Upgrade Kit.

Before upgrading any system, please access My Oracle Support (MOS) (<https://support.oracle.com>) and review any Technical Service Bulletins (TSBs) that relate to this upgrade.

My Oracle Support (MOS) (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>.

See more information on My Oracle Support (MOS).

1. Introduction

1.1 Purpose and Scope

This document defines the procedure that is executed to activate the MAP-Diameter feature on a DSR network element (NE). This procedure may be run either 1) as part of a new DSR installation, after the standard DSR installation is complete but before the NE is in service, or 2) on an in-service DSR NE, where the MAP-Diameter feature is activated during a planned maintenance window to minimize the impact to network traffic.

This document also provides a procedure to deactivate MAP-Diameter IWF after it has been activated. Please see Section 6 for a discussion of deactivation.

No additional software installation is required before executing this procedure. The standard DSR installation procedure has loaded all of the required software, even if the MAP-Diameter feature is activated later.

1.2 Acronyms and Terms

An alphabetized list of acronyms used in the document.

Table 1. Acronyms

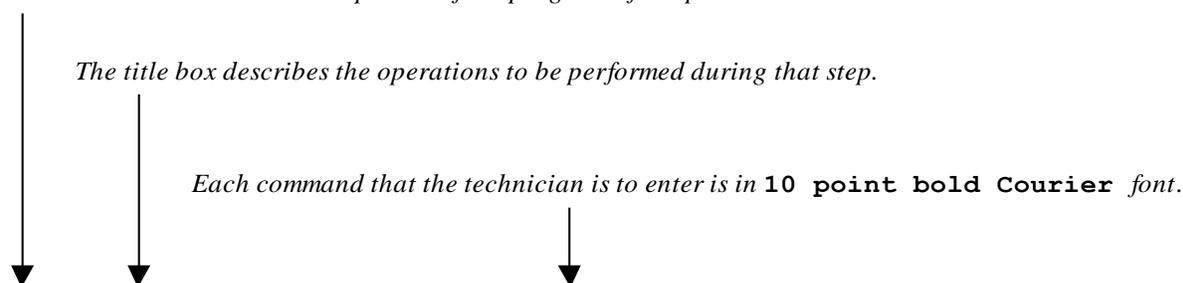

Acronym	Definition
DA-MP	Diameter Agent Message Processor
DB	Database
DIH	Diameter Intelligent Hub
DM-IWF	Diameter Interworking Function. The DSR Application, which resides on a DA-MP, which manages Diameter transactions between the local DRL instance and the MD-IWFs on the SS7-MPs.
DSR	Diameter Signaling Router
FOA	First Office Application
GUI	Graphical User Interface
HA	High Availability
IMI	Internal Management Interface
IDIH	Integrated DIH
IP	Internet Protocol
IWF	InterWorking Function
MAP	Mobile Application Part
MD-IWF	MAP Interworking Function. The TCAP application, which resides on a SS7-MP, which performs (1) the interworking of Diameter transactions received from DA-MPs to SS7-MAP transactions initiated towards SS7 network nodes and (2) the interworking of SS7-MAP transactions received from SS7 network nodes to Diameter transactions initiated towards Diameter Nodes via DM-IWFs on DA-MPs.
MP	Message Processing or Message Processor
NE	Network Element
NOAM	Network OAM

Acronym	Definition
OAM	Operations, Administration and Maintenance
RMS	Rack Mounted Server
SOAM	System OAM
SSH	Secure Shell
UI	User Interface
VIP	Virtual IP
VPN	Virtual Private Network
XMI	External Management Interface

1.3 General Procedure Step Format

Where it is necessary to explicitly identify the server on which a particular step is to be taken, the server name is given in the title box for the step (e.g., “ServerX” in Figure 1: Example of a Procedure Step).

Each step has a checkbox for every command within the step that the technician should check to keep track of the progress of the procedure.

1	<input type="checkbox"/> ServerX: Connect to the console of the server	Establish a connection to the server using cu on the terminal server/console. <div style="border: 1px solid black; padding: 2px; display: inline-block;"> \$ cu -l /dev/ttyS7 </div>
---	---	---

Figure 1: Example of a Procedure Step

2. Feature Activation Overview

Table 5 and Table 9 provide a high-level overview of the actual activation and deactivation process on DSR. The reader is also invited to review the sample screens and the corresponding OAM topology to get a feel for how MAP-Diameter IWF is deployed in terms of OAM hierarchy.

This section lists the required materials and information needed to execute the feature activation. In addition, Table 4 through Table 9 provide estimates of the time required to execute the procedure. These tables can be used to estimate the total time necessary to complete the feature activation. The timing values shown are estimates only – use these tables to plan the timing of the activation, **not** to execute the procedure. The detailed procedure steps to be executed begin in Section 3.

2.1 Definition of Activation for the Map-Diameter Feature

This section briefly defines what activation means with respect to the MAP-Diameter IWF feature. In general, activation of a feature refers to the initialization of the feature on DSR making it possible to further configure and provision the feature on DSR.

MAP-Diameter IWF feature consists of two (co-operating) DSR Applications:

- DM-IWF - the DSR Application that runs on DA-MPs; and
- MD-IWF – the DSR Application that runs on SS7-MPs

All software required to run MAP-Diameter IWF is available by default as part of a DSR release installation or upgrade. The process of activating the feature simply makes proper use of software elements and file system files that are already present, to change the behavior of the DSR NE.

Prior to MAP-Diameter IWF feature activation, there are no MAP-Diameter IWF related menu items visible on the SOAM GUI or NOAM GUI, and there is no MAP-Diameter IWF related processing taking place on the DA-MPs or SS7-MPs.

After feature activation, all selectable MAP-Diameter IWF related menu items are present on the SOAM and NOAM GUI, allowing full MAP-Diameter IWF configuration and provisioning. Specifically, for MAP-Diameter IWF, the top-level MAP-Diameter IWF folder is visible on the Main Menu on the NOAM, under which, the “Configuration” folder with MD-IWF Options, Diameter Realm, Diameter Identity, GTA Range to PC and MAP Exception screens shall be visible.

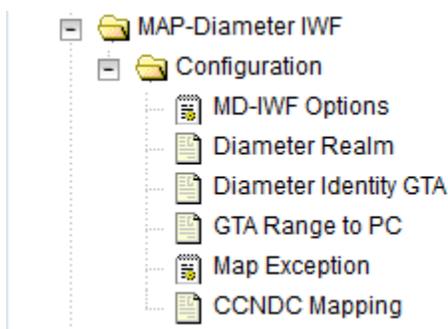

Figure 2: Example of MAP Interworking Folder on NOAM

On the SOAM, the MAP-Diameter IWF folder shall be visible, which shall have a Configuration folder with DM-IWF Options and Diameter Exception screens. In addition, the SS7/Sigtran and Transport Manager folders are visible.

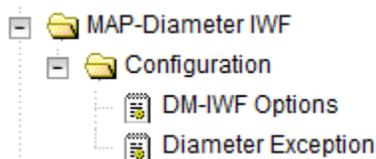

Figure 3: Example of MAP Interworking Folder on SOAM

Figure 4: Example of SS7/Sigtran Folder on SOAM

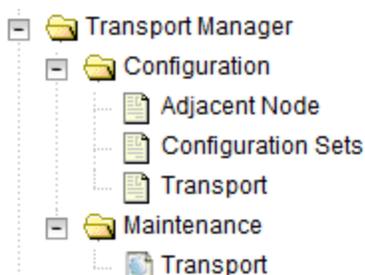

Figure 5: Example of Transport Manager Folder on SOAM

On SOAM, new entries are added to the **Diameter -> Maintenance -> Applications** screen, showing the state of the two DSR Application components (DM-IWF and MD-IWF) that make up the MAP-Diameter IWF feature.

Table Description: Applications Table

Application Name	MP Server Hostname	Admin State	Operational Status	Operational Reason	Congestion Level	Time of Last Update
DM-IWF	ZombieDAMP1	Disabled	Unavailable	Shut Down	Normal	2016-Nov-09 13:19:37 EST
DM-IWF	ZombieDAMP2	Disabled	Unavailable	Shut Down	Normal	2016-Nov-09 13:19:37 EST
MD-IWF	ZombieSS7MP1	Disabled	Unavailable	Shutdown	Normal	2016-Nov-09 13:19:37 EST

Figure 6: Example of DSR Application Maintenance Screen

Important: Once the MAP-Diameter IWF feature is activated, it is not automatically enabled. Activation simply means the mechanism for provisioning MAP-Diameter IWF behavior is in place. The DA-MP(s) and SS7-MP(s) will act on provisioning information and begin providing service only after the DM-IWF and MD-IWF DSR applications have been enabled (via the **Diameter -> Maintenance -> Applications** screen).

The SS7-MP(s) will act on provisioning information and begin providing service only after the MD-IWF DSR application has been enabled (via the **Diameter -> Maintenance -> Applications** screen).

The crafts person shall be offered a choice whether to activate the DSR Application for each of the B-level OAMs (SOAMs) subtending from the A-level OAM (NOAM). It is possible to activate the DSR Application on only some of the B-level OAMs (SOAMs).

If the crafts person selects to activate a MAP-Diameter IWF on a given B-level OAM (SOAM), all DA and SS7 MPs under that B-level OAM shall have the DSR Application activated. There is no option to exclude some activation MAP-Diameter IWF for some DA or SS7 MPs under that B-level OAM (SOAM).

If the crafts person selects not to activate MAP-Diameter IWF on a given B-level OAM (SOAM), none of the DA or SS7 MPs under that B-level OAM (SOAM) shall have MAP-Diameter IWF activated. There is no option to activate MAP-Diameter IWF only for some DA or SS7 MPs in under that B-level OAM (SOAM).

Once MAP-Diameter IWF is activated on a given B-level OAM (SOAM) in this fashion, it is possible to deactivate MAP-Diameter IWF on that specific B-level OAM (SOAM) or on all SOAMs at a later time.

2.2 Feature Activation Overview

2.2.1 Pre-Feature Activation Overview

The pre-activation procedures shown in the following table may be executed outside a maintenance window if desired. Procedure completion times shown here are estimates. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Table 2. Pre-Feature Activation Overview

Procedure	Elapsed Time (Hours: Minutes)		Activity Feature Activation Preparation	Impact
	This Step	Cum.		
System Topology Check (Procedure 1)	0:20	0:20	<ul style="list-style-type: none"> Verify Network Element Configuration data. Verify System Group Configuration data. Analyze and plan DA-MP restart sequence. 	None
Perform Health Check (Procedure 2)	0:05	0:25	<ul style="list-style-type: none"> Verify DSR release. Verify server status. Log all current alarms. 	None

2.2.2 Feature Activation Execution Overview

The procedures shown in the following table are executed inside a single maintenance window. Procedure completion times shown here are estimates. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Table 3. Feature Activation Execution Overview

Procedure	Elapsed Time (Hours: Minutes)		Activity Feature Activation Execution	Impact
	This Step	Cum.		
Perform Health Check (Procedure 2)	0:05	0:05	<ul style="list-style-type: none"> Verify DSR release. Verify proper feature state for MAP-Diameter IWF. Verify server status. Log all current alarms. 	None

Procedure	Elapsed Time (Hours: Minutes)		Activity Feature Activation Execution	Impact
	This Step	Cum.		
Feature Activation (Procedure 4)	0:20	0:25	<ul style="list-style-type: none"> Log out of NOAM/SOAM GUI. SSH to active NOAM. Login as admusr. Change directory to /usr/TKLC/dsr/prod/maint/loaders/ Execute the feature activation script. Log into SOAM GUI Verify GUI folders relevant to MAP-Diameter IWF. Verify Maintenance screens. Log into NOAM GUI Verify GUI folders relevant to MAP-Diameter IWF Restart each active DA-MP and SS7-MP server. Verify Maintenance screen. 	MAP-Diameter IWF is activated

2.2.3 Post-Feature Activation Overview

The procedures shown in the following table are executed inside a maintenance window. Procedure completion times shown here are estimates. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Table 4. Post-Feature Activation Overview

Procedure	Elapsed Time (Hours: Minutes)		Activity Feature Activation Completion	Impact
	This Step	Cum.		
Perform Health Check (Procedure 5)	0:05	0:05	<ul style="list-style-type: none"> Verify server status. Log all current alarms. 	Map-Diameter has been activated on DSR

3. Feature Deactivation Overview

3.1 Pre-Feature Deactivation Overview

The procedures shown in the following table are executed inside a maintenance window. Deactivation procedure times are only estimates as the reason to execute a deactivation has a direct impact on any additional deactivation preparation that must be done. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Table 5. Pre-Feature Deactivation Overview

Procedure	Elapsed Time (Hours or Minutes)		Activity Deactivation Procedures	Impact
	This Step	Cum.		
Perform Health Check (Procedure 6)	0:05	0:05	<ul style="list-style-type: none"> • Verify DSR release. • Verify proper MAP-Diameter IWF feature state. • Verify server status. • Log current alarms. 	None

3.2 Feature Deactivation Execution Overview

The procedures shown in the following table are executed inside a maintenance window. Deactivation procedure times are only estimates as the reason to execute a deactivation has a direct impact on any additional deactivation preparation that must be done. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Table 6. Feature Deactivation Overview

Procedure	Elapsed Time (Hours or Minutes)		Activity Deactivation Procedures	Impact
	This Step	Cum.		
Deactivation Setup	00:30	0:30	The reason to deactivate has a direct impact on any additional backout preparation that must be done. Since all possible reasons cannot be predicted ahead of time, only estimates are given here. Execution time will vary.	None

Procedure	Elapsed Time (Hours or Minutes)		Activity Deactivation Procedures	Impact
	This Step	Cum.		
Deactivation (Procedure 7)	00:20	0:50	<ul style="list-style-type: none"> • Log out of active NOAM/SOAM GUI. • SSH into active NOAM. • Login as admusr. • Change directory to /usr/TKLC/dsr/prod/maint/loaders/ • Execute the feature deactivation script. • Log into SOAM GUI • Verify the GUI folders for MAP-Interworking. • Log into NOAM GUI • Verify the GUI folders for MAP-Interworking. • Restart each active DA-MP and SS7-MP server. • Verify Maintenance screen. 	MAP-Diameter IWF is deactivated

3.3 Post-Feature Deactivation Overview

The procedures shown in the following table are executed inside a maintenance window. Deactivation procedure times are only estimates as the reason to execute a deactivation has a direct impact on any additional deactivation preparation that must be done. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Table 7. Post-Feature Deactivation Overview

Procedure	Elapsed Time (Hours or Minutes)		Activity Deactivation Procedures	Impact
	This Step	Cum.		
Perform Health Check (Procedure 9)	0:05	0:05	<ul style="list-style-type: none"> • Verify server status. • Log all current alarms. 	None

4. Feature Activation Preparation

This section provides detailed procedures to prepare a system for MAP-Diameter IWF feature activation. These procedures are executed outside a maintenance window.

4.1 Hardware Requirements

4.1.1 DA-MP

DM-IWF, a component of the MAP-Diameter IWF feature, is the DSR application that runs on the DA-MPs. DM-IWF has specific requirements with respect to supported hardware types and minimum memory requirement. If MAP-Diameter IWF feature is activated on a DA-MP, which does not meet these minimum requirements, the “dsr” process shall fail to come up on such DA-MPs. Hence, it is imperative that the crafts person verify that the minimum DM-IWF hardware requirements are met before activating this feature. Detailed information on the procedure to verify hardware requirements shall be provided later.

If the DA-MP hardware or memory does not meet the requirements, contact My Oracle Support (MOS) for assistance on upgrading the hardware and/or memory. It is the responsibility of the crafts person to ensure all DA-MPs under the SOAM(s) on which MAP-Diameter IWF is to be activated comply with the hardware and minimum memory requirements prior to activating MAP-Diameter IWF.

Table 8. DA-MP (DM-IWF) Hardware Requirements

Supported Hardware Types for DA-MP	Minimum Memory Requirement
RMS (Virtualized MP - TVOE guest)	24GB (24576 MB)
G8 (BL460 Gen8 HP C-class (half height) server blade)	64GB (65536 MB)
G9 (BL460 Gen9 HP C-class (half height) server blade) – DSR 7.1+ Only	64GB (65536 MB)

4.1.2 SS7-MP

MD-IWF, a component of the MAP-Diameter IWF feature, is the DSR application that runs on the SS7-MPs. MD-IWF has specific requirements with respect to supported hardware types and minimum memory requirement. If MAP-Diameter IWF feature is activated on an SS7-MP, which does not meet these minimum MD-IWF requirements, the “mapiwf” process shall fail to come up on such SS7-MPs. Hence, it is imperative that the crafts person verify that the minimum DM-IWF hardware requirements are met before activating this feature. The detailed procedure to verify hardware requirements for SS7-MPs shall be presented later.

If the SS7-MP hardware or memory does not meet the requirements, contact My Oracle Support (MOS) for assistance on upgrading the hardware and/or memory. It is the responsibility of the crafts person to ensure that **all** SS7-MPs under the SOAM(s) on which MAP-Diameter IWF is to be activated comply with the minimum hardware requirements **before** activating MAP-Diameter IWF.

Table 9. SS7-MP (MD-IWF) Hardware Requirements

Supported Hardware Types for SS7-MP	Minimum Memory Requirement
RMS (Virtualized MP – TVOE guest)	24GB (24576 MB)
G8 (BL460 Gen8 HP C-class (half height) server blade)	128GB (65536 MB)
G9 (BL460 Gen9 HP C-class (half height) server blade) – DSR 7.1+ Only	128GB (65536 MB)

4.2 System Topology and Hardware Check

This procedure is part of feature activation preparation and is used to verify the system topology of the DSR network and servers and to validate that the MP servers meet the hardware type requirement and minimum memory requirement for MAP-Diameter IWF feature.

Table 10. List of SOAM Server Groups supporting MAP-Diameter IWF

SOAM Server Group Name	SOAM Server Hostnames

Table 11. Checklist for DA-MP information

SOAM Server Group Name	DA-MP Server Group Name	DA-MP Server Hostnames	Hardware Type	Memory (MB)

Duplicate this checklist, once for each SOAM Server Group on which MAP-Diameter IWF is being set up.

Table 12. Checklist for SS7-MP information

SOAM Server Group Name	SS7-MP Server Group Name	SS7-MP Server Hostnames	Hardware Type	Memory (MB)

Duplicate this checklist, once for each SOAM Server Group on which MAP-Diameter IWF is being setup. If there are more than one SS7-MP Server Groups configured under the SOAM Server Group, duplicate this checklist for each SOAM Server Group – SS7-MP Server Group combination.

The following table maps the output of the command `cat /var/TKLC/hardware/hw_id` (executed on DA or SS7 MP servers) to a concise hardware type.

Table 13. Hardware ID to Hardware Type Mapping for MP servers

Hardware ID	Hardware Type
ProLiantBL460cGen8	G8
ProLiantBL460cGen9	G9
KVM	RMS

For the SS7-MP server group, there is currently a limitation of one SS7-MP per server group (this limitation is required due to how the SS7 stack operates). The only SS7-MP server group configuration supported is N+0 (Active/Active) where N=1. This also implies that if more than one SS7-MP needs to be provisioned under an SOAM server group, it shall require multiple SS7-MP server groups to be configured under the SOAM server group. The crafts person should keep this in mind.

Note that the hardware ID referred to here, is the hardware ID obtained by logging on to the MP. In case of RMS setups, this is a virtualized MP (TVOE guest), not the TVOE host machine. To clarify this distinction, please review the following example. The TVOE host machine below has the following information, which is a DL380 based machine with 128GB (131072 MB) of memory.

```
[admusr@hubtones1-TVOE ~]# cat /var/TKLC/hardware/hw_id
```

```
ProLiantDL380pGen8
```

```
[admusr@hubtones1-TVOE ~]# sudo dmidecode --type 17 | grep -e "Size:\ [0-9]" | sed -e "s/.*: //g" -e "s/ .*//g" | paste -sd+ | bc
```

```
131072
```

Here is the output from a virtualized MP hosted on this machine. This is the information of interest to us. This virtualized MP has 24GB (24576MB) of memory:

```
[admusr@HUBTONES-MP1 ~]# cat /var/TKLC/hardware/hw_id
```

```
KVM
```

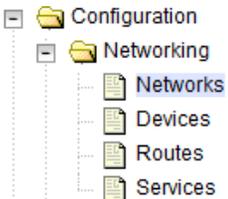

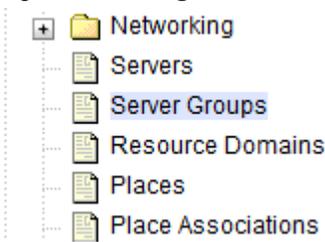

```
[admusr@HUBTONES-MP1 ~]# sudo dmidecode --type 17 | grep -e "Size:\ [0-9]" | sed -e "s/.*: //g" -e "s/ .*//g" | paste -sd+ | bc
```

```
24576
```

Procedure 1: System Topology Check

<p>S T E P #</p>	<p>This procedure verifies system topology. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>	
<p>1 <input type="checkbox"/></p>	<p>NOAM VIP GUI: Login</p>	<p>Establish a GUI session on the NOAM server by using the VIP address of the NOAM server. Save or Print this report to keep copies for future reference.</p> <p>Print Save Back</p>																								

Procedure 1: System Topology Check

<p>4 <input type="checkbox"/></p>	<p>Identify the B-level OAM (SOAM) server groups and hostnames on which MAP-Diameter IWF needs to be activated</p>	<p>There can be multiple B-level OAM (SOAM) server groups under the parent A-level OAM (NOAM) server group. Identify which of these SOAM server groups needs MAP-Diameter IWF activated.</p> <p>Review server configuration information obtained in Step 2 (Verify Server Configuration data).</p> <p>Identify all servers with a Role of System OAM. Record the Server Group name for these servers.</p> <p>Hint: This item can be done using the filter on the Configuration -> Servers screen, filtering for the Role of System OAM, and recording the common Server Group names.</p> <p>For each SOAM Server Group identified in item #2, discuss with System Engineering or Network Planning and identify the SOAM Server Groups on which MAP-Diameter IWF needs to be activated.</p> <p>Update the checklist specified in Table 10. List of SOAM Server Groups supporting MAP-Diameter IWF. For each SOAM Server Group identified , document the SOAM servers in that server group in this checklist. Save the checklist for future reference.</p>
<p>5 <input type="checkbox"/></p>	<p>Verify MP server group configuration</p>	<p>For each OAM Server Group of interest, verify there is an appropriately provisioned DA-MP server group and SS7-MP server group to support MAP-Diameter IWF.</p> <ul style="list-style-type: none"> Review Server Group Configuration information obtained in Step 3 (Verify Server Group Configuration data). Refer to the checklist Table 10. List of SOAM Server Groups supporting MAP-Diameter IWF created in Step 4. These are the OAM Server Groups to review. Enter each OAM Server Group in a separate copy of Table 11. Checklist for DA-MP information and Table 12. Checklist for SS7-MP information in the column SOAM Server Group Name. <p>Hint: You may need multiple copies of these tables, one copy for each SOAM server group on which MAP-Diameter IWF is activated. In this case, obtain multiple blank copies of the two tables in advance.</p> <ul style="list-style-type: none"> For each OAM Server Group identified in item #1 as the OAM parent server group, discuss with System Engineering or Network Planning and identify one Server Group at Level C, Function DSR (multi-active cluster), which has at least one DA-MP server provisioned. This is used as the DA-MP Server Group. Record this (DA-MP) Server Group name and the list of DA-MPs in the DA-MP Server Group in the corresponding copy of Table 11. Checklist for DA-MP information in the column. For each OAM Server Group identified as the OAM parent server group, discuss with System Engineering or Network Planning and identify one Server Group at Level C, Function SS7-IWF, which has at least one SS7-MP server provisioned. This is used as the SS7-MP Server Group. Record this (SS7-MP) Server Group name and the list of SS7-MPs in the SS7-MP Server Group in the corresponding copy of Table 12. Checklist for SS7-MP information in the column. <p>All the DA-MPs and SS7-MPs that will support MAP-Diameter IWF have now been identified.</p>

Procedure 1: System Topology Check

<p>6 □</p>	<p>DA-MP: Verify hardware and memory requirements</p>	<p>After completing this step, if any MP has been identified that does not meet these requirements, DO NOT activate MAP-Diameter IWF. Instead, contact My <i>Oracle</i> Support (MOS) to upgrade the hardware or memory (as need be) to meet the requirements.</p> <ul style="list-style-type: none"> Review your copies of Table 11. Checklist for DA-MP information, which provide an exhaustive list all DA-MP servers that support MAP-Diameter IWF. For each listed DA-MP server, execute the following steps: <ol style="list-style-type: none"> Log into the DA-MP server. A typical login session may look like this; however, the display may differ based on the login procedure and your setup: <pre style="border: 1px solid black; padding: 5px;">\$ ssh <XMI IP Address of DA-MP></pre> Execute the following command to identify the hardware type. Review the output of this command, compare it with the Hardware ID column in Table 13. Hardware ID to Hardware Type Mapping and enter the corresponding hardware type for the DA-MP Hostname in Table 11. Checklist for DA-MP information. If no matching entry is found, enter Unsupported Hardware. <pre style="border: 1px solid black; padding: 5px;">\$ cat /var/TKLC/hardware/hw_id</pre> Execute the following command to determine the amount of memory (in MB) on the DA-MP server. Enter the output of this command in the Memory column against the DA-MP hostname in Table 11. Checklist for DA-MP information. <pre style="border: 1px solid black; padding: 5px;">sudo dmidecode --type 17 grep -e "Size:\ [0-9]" sed -e "s/.*: //g" -e "s/ .*//g" paste -sd+ bc</pre> <p>Example output: 24576 (MB) corresponds to 24GB (24576 / 1024)</p> Compare your completed copies of Table 11. Checklist for DA-MP information against Table 8. DA-MP (DM-IWF) Hardware Requirements. If any DA-MP hardware type is not listed under the supported hardware types, or if the memory on the DA-MP does not meet the minimum memory requirement for that hardware type: <p style="text-align: center;">**** STOP ****</p> <p style="color: red;">Your hardware does not meet minimum hardware and memory requirements for MAP-Diameter IWF. Contact My <i>Oracle</i> Support (MOS) if necessary.</p>
----------------	--	--

Procedure 1: System Topology Check

<p>7 □</p>	<p>SS7-MP: Verify hardware and memory requirements</p>	<p>After completing this step, if any MP has been identified that does not meet these requirements, DO NOT activate MAP-Diameter IWF. Instead, contact My <i>Oracle</i> Support (MOS) to upgrade the hardware or memory (as need be) to meet the requirements.</p> <ul style="list-style-type: none"> Review your copies of Table 12. Checklist for SS7-MP information, which provide an exhaustive list of all SS7-MP servers that support MAP-Diameter IWF. For each listed SS7-MP server, execute the following steps: <ol style="list-style-type: none"> Log into the SS7-MP server. A typical login session may look like this; however, the display may vary based on the login procedure and your setup: <pre style="border: 1px solid black; padding: 5px;">\$ ssh <XMI IP Address of SS7-MP></pre> Execute the following command to identify the hardware type. Review the output of this command, compare it with the Hardware ID column in Table 13. Hardware ID to Hardware Type Mapping and enter the corresponding hardware type for the DA-MP Hostname in Table 11. Checklist for DA-MP information. If no matching entry is found, enter Unsupported Hardware. <pre style="border: 1px solid black; padding: 5px;">\$ cat /var/TKLC/hardware/hw_id</pre> Execute the following command to determine amount of memory (in MB) on the SS7-MP server. Enter the output of this command in the Memory column against the DA-MP hostname in Table 12. Checklist for SS7-MP information. <pre style="border: 1px solid black; padding: 5px;">\$ sudo dmidecode --type 17 grep -e "Size:\ [0-9]" sed -e "s/.*: //g" -e "s/ .*//g" paste -sd+ bc</pre> <p>Example output: 24576 (MB) corresponds to 24GB (24576 / 1024).</p> Compare your completed copies of Table 12. Checklist for SS7-MP information against Table 9. SS7-MP (MD-IWF) Hardware Requirements. If any SS7-MP hardware type is not listed under the supported hardware types, or if the memory on the SS7-MP does not meet the minimum memory requirement for that hardware type: <p style="text-align: center;">**** STOP ****</p> <p style="color: red;">Your hardware does not meet minimum hardware and memory requirements for MAP-Diameter IWF. Contact My <i>Oracle</i> Support (MOS) if necessary.</p>
<p>8 □</p>	<p>Analyze and plan DA-MP restart sequence</p>	<ul style="list-style-type: none"> Analyze system topology and plan for any DA-MPs and SS7-MPs, which will be out-of-service during the feature activation sequence. Analyze system topology gathered in this procedure. Determine the exact sequence which DA-MP and SS7-MPs servers will be restarted (with the expected out-of-service periods).

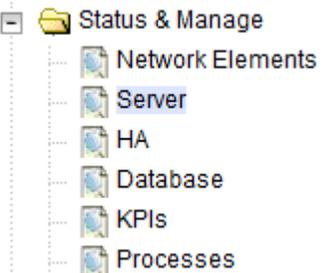

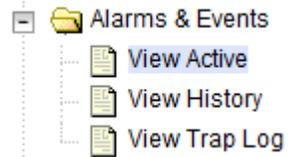

4.3 Perform Health Check

This procedure is part of feature activation preparation and is used to determine the health and status of the DSR release network and servers. This may be executed multiple times but must also be executed at least once within the time frame of 24-36 hours prior to the start of the maintenance window in which the feature activation will take place.

Procedure 2: Perform Health Check (Feature Activation Preparation)

<p>S T E P #</p>	<p>This procedure provides steps to perform needed health checks. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>	
<p>1 <input type="checkbox"/></p>	<p>NOAM VIP GUI: Login</p>	<p>Establish a GUI session on the NOAM server by using the VIP address of the NOAM server. 5. Feature Activation

Before feature activation, perform the system health check in Section 4.3. This check ensures that the system is ready for feature activation. Performing the system health check determines which alarms are present in the system and if feature activation can proceed with alarms.

****** WARNING ******

If there are servers in the system, which are not in Normal state, these servers should be brought to the Normal or the Application Disabled state before the feature activation process is started.

If alarms are present on the server, contact My Oracle Support (MOS) to diagnose those alarms and determine whether they need to be addressed or if it is safe to proceed with the feature activation.

Please read the following notes on feature activation procedures:

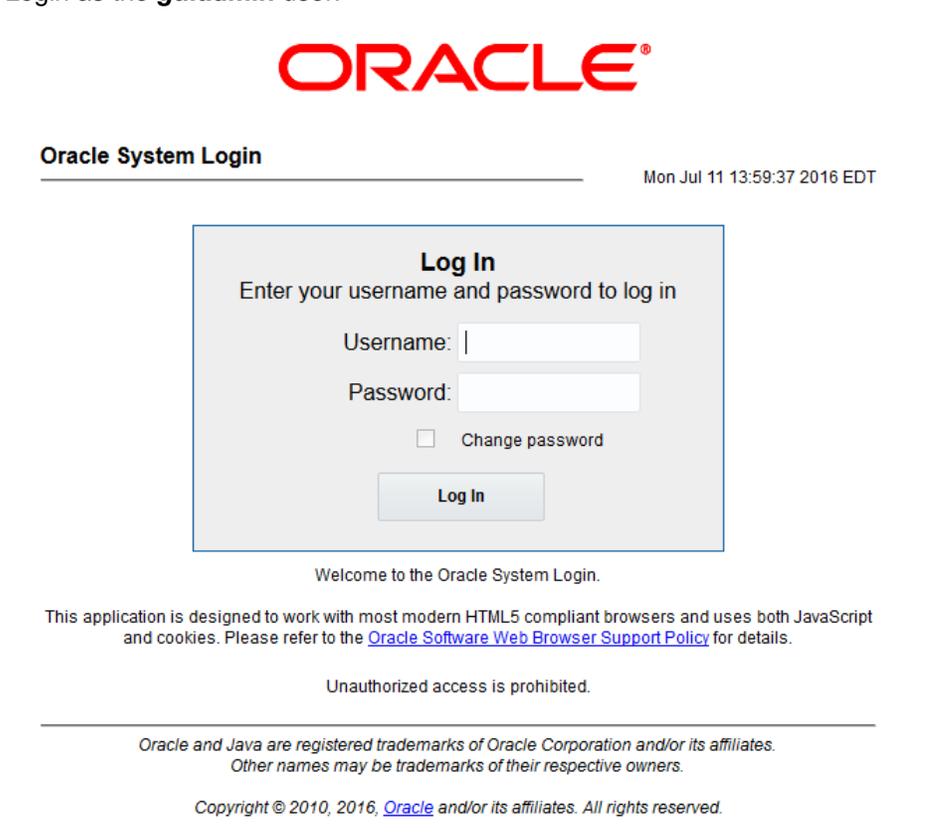

- Where possible, command response outputs are shown as accurately as possible. EXCEPTIONS are as follows:
 - Session banner information such as time and date.
 - System-specific configuration information such as hardware locations, IP addresses, and hostnames.
 - ANY information marked with “XXXX” or “YYYY” where appropriate, instructions are provided to determine what output should be expected in place of “XXXX or YYYY”
 - Aesthetic differences unrelated to functionality such as browser attributes: window size, colors, toolbars and button layouts.
- After completing each step and at each point where data is recorded from the screen, the technician performing the feature activation must initial each step. A check box should be provided. For procedures which are executed multiple times, the check box can be skipped, but the technician must initial each iteration the step is executed. The space on either side of the step number can be used (margin on left side or column on right side).
- Captured data is required for future support reference.

5.1 Pre-Activation Procedures

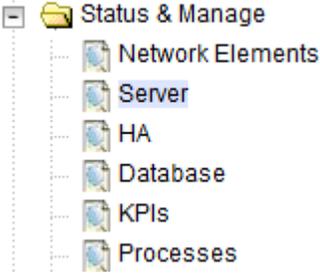

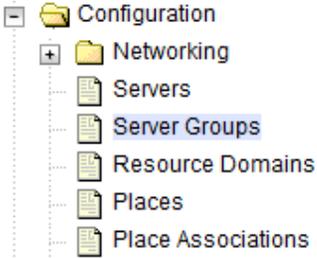

This procedure determines the health and status of the network and servers. It must be executed at the start of every maintenance window.

Note: The Health Check procedure below is the same as the Health Check procedure described in Section 4.3 when preparing for feature activation, but it is repeated here to emphasize that it is being re-executed if Section 4.3 was performed outside the maintenance window.

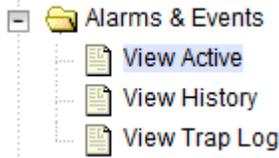

Procedure 3: Perform Health Check (Pre Feature Activation)

<p>S T E P #</p>	<p>This procedure provides steps to perform needed health checks. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>	
<p>1 <input type="checkbox"/></p>	<p>NOAM VIP GUI: Login</p>	<p>Establish a GUI session on the NOAM server by using the VIP address of the NOAM server. Enabled	Norm	Norm	Norm	Norm																							
Enabled	Norm	Norm	Norm	Norm																							
Enabled	Norm	Norm	Norm	Norm																							
<p>3</p> <p><input type="checkbox"/></p>	<p>NOAM VIP GUI: Log current alarms</p>	<p>Navigate to Alarms & Events -> View Active.</p>  <p>Click Report.</p>  <p>Save or Print this report to keep copies for future reference.</p>  <p>Compare this alarm report with those gathered in the pre-activation procedures. Contact My Oracle Support (MOS) if needed.</p>																									

6. Feature Deactivation

Execute this section only if there is a problem and it is desired to revert back to the pre-activation version of the software. In general, as long as there are no Application Routing Rules using the MAP-Diameter IWF application (specifically DM-IWF), it has no impact on the system and does not need to be deactivated.

6.1 Pre-Deactivation Procedures

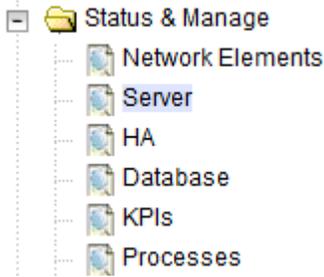

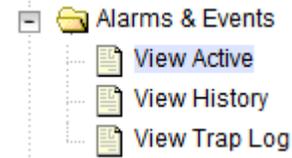

Before beginning the feature deactivation, remove the SS7 configuration before deactivating the MAP-Diameter IWF application. Deactivating the MAP-Diameter IWF application (without removing configuration data or performing DR on the complete site) preserves the MAP-Diameter IWF application configuration data in the database. When re-activating the MAP-Diameter IWF application, all existing MAP-Diameter IWF application configuration data remains intact.

This procedure is used to determine the health and status of the DSR network and servers.

Procedure 6: Perform Health Check (Pre-Feature Deactivation)

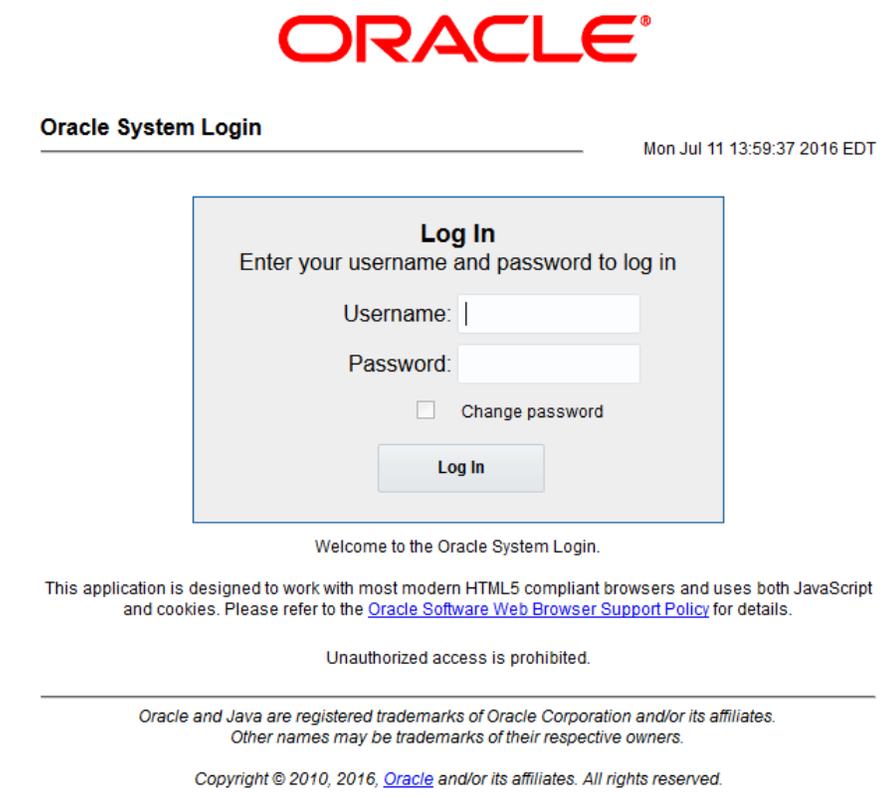

<p>S T E P #</p>	<p>This procedure performs a health check.</p> <p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>	
<p>1 <input type="checkbox"/></p>	<p>NOAM VIP GUI: Login</p>	<p>Establish a GUI session on the NOAM server by using the VIP address of the NOAM server. Do you want to activate/deactivate this feature on another System OAM Server[Y/N] : n
[admusr@NO1 loaders]$
```

Appendix A. My Oracle Support (MOS)

MOS (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at **1-800-223-1711** (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. When calling, make the selections in the sequence shown below on the Support telephone menu:

1. Select 2 for New Service Request.
2. Select 3 for Hardware, Networking and Solaris Operating System Support.
3. Select one of the following options:

For technical issues such as creating a new Service Request (SR), select 1.

For non-technical issues such as registration or assistance with MOS, select 2.

You are connected to a live agent who can assist you with MOS registration and opening a support ticket. MOS is available 24 hours a day, 7 days a week, 365 days a year.
