REST API Services Deployment in WebLogic
Oracle FLEXCUBE Investor Servicing
Release 12.4.0.8.5
[January] [2019]
# Table of Contents

1. ORACLE FLEXCUBE INVEStOR SERVICING SOLUTIONS .................................................. 1-1  
   1.1 INTRODUCTION ........................................................................................................... 1-1  
   1.2 PREREQUISITE ........................................................................................................... 1-1  
   1.3 REST EJB SERVICES FULL DEPLOYMENT ............................................................... 1-1  
   1.4 REST WEB SERVICES FULL DEPLOYMENT ............................................................... 1-6  
   1.5 ENABLING LOGS FOR REST APPLICATION ......................................................... 1-12
1. Oracle FLEXCUBE Investor Servicing Solutions

1.1 Introduction

This document describes step to install REST Services into WebLogic application server in full.

1.2 Prerequisite

Before deploying the EAR, please create a Datasource jdbc/FCJDevDSSMS that will be referring to the API DB. More details of creating the data source can be found in the Resource Creation document.

1.3 REST EJB Services Full Deployment

1. Launch WebLogic console, the following screen is displayed

![WebLogic Console](image)

Username: Enter WebLogic user name

Password: Enter password for WebLogic
2. Click on ‘Login’ and the following screen is displayed:

![WebLogic Server Admin Console Screenshot](image)

3. Following screen will be displayed once Deployments is selected from ‘Domain Structure’.

![WebLogic Server Admin Console Screenshot](image)
4. Click ‘Install’ from the Deployments following screen will be displayed.

Path

Enter the complete path of the EAR

5. Click on ‘Next’ and the following screen is displayed:
6. Click on ‘Next’ and the following screen is displayed:
Click on ‘Next’ and the following screen is displayed:

**Path**

Enter the complete path of the EAR
5. Click on ‘Next’ and the following screen is displayed:

![Next screen with deployment options]

6. Click on ‘Next’ and the following screen is displayed:

![Next screen with deployment options]
7. Click on ‘Next’ and the following screen is displayed

8. Click on ‘Next’ and the following screen is displayed
9. Click on ‘Next’ and the following screen is displayed. Select correct Server where the EAR to be deployed.

10. Click on ‘Next’ and the following screen is displayed

11. Click on ‘Next’ and the following screen is displayed
12. Click on ‘Finish’ and the following screen is displayed

Click on ‘Save’ and the following screen is displayed on top it says “All changes have been activated. No restarts are necessary. Settings updated successfully.”

To get wadl Link. Click Testing tab page
Click Service and click on '/application. wadl'

1.5 Enabling Logs for REST Application

To enable logging following properties needs to be set in the logging.xml as mentioned below. Once the parameters are set all the logs are stored in the file ofss-rest-api.log.

- Provide the below entry in the file
  
  `(domain.home)\config\fmwconfig\servers\{server.name\}\logging.xml
  <log_handler name='ofss-handler' class='oracle.core.jdli.logging.ODLHandlerFactory'
  level='TRACE:1'>
    <property name='path'
    value='${domain.home}/servers/${weblogic.Name}/logs/ofss-rest-api.log' />
    <property name='maxFileSize' value='10485760' />
    <property name='maxLogFile' value='104857600' />
    <property name='encoding' value='UTF-8' />
    <property name='useThreadName' value='true' />
    <property name='supplementalAttributes'
    value='DSID,J2EE_APP.name,J2EE_MODULE.name,WEBSERVICE.name,WEBSERVICE_PORT,
    name,oracle.soatracking.FlowlD,oracle.soatracking.InstanceId,oracle.soatracking.SCAEntityId,oracle
    .soatracking.FaultId,oracle.soatracking.RetTryCount,composite_name'/>
  </log_handler>
  <logger name='com.ofss' level='TRACE:1' useParentHandlers='false'>
    <handler name='ofss-handler' />
  </logger>`
