1. Creating Property File for Standalone scheduler

1.1 Introduction

This chapter explains the steps to create property file for Standalone Scheduler.

1.2 Creating Property File

To create the property file for Oracle FLEXCUBE, follow the steps given below:

1. Launch Oracle FLEXCUBE Universal Installer.

2. Click 'Next' and the following screen is displayed.

3. Select ‘Scheduler’.
4. Click ‘Next’ and the following screen is displayed.

Select ‘Property File’.

5. Specify the following details:

**Operating System**

Specify the operating system in which you are creating the property file. Select the appropriate one from the adjoining drop-down list.

**Application Server**

Specify the application server in which you are creating the property file. Select the appropriate one from the adjoining drop-down list.
6. Once you have specified the details, click ‘Next’ to continue and following screen is displayed:

![Oracle FLEXCUBE Investor Servicing Screen](image)

7. Specify the following details:

The property file needs to be built before the EAR file. If you are creating a new property file, leave the field blank. If you wish to modify an existing property file, you can manually specify the location of the property file.
1.2.1 Setting Common Properties

This section describes the process of setting common properties of Standalone Installer.

1. The installer displays the 'Common Properties' screen.

![Common Properties Screen](image)

2. Specify the following details:

**Debug Logs Required**

If you require debug option, select 'Yes' from the drop-down list. If you do not require debug option, select 'No'.

**Work Area**

Specify the work area.

For example: D:\BrnDbgs\n
**Signature Path**

Specify the location at which the signature images are placed.

**Excel Path**

Specify the location at which the excel files are generated.

**Data Source**

Specify the JNDI location. The standard format is 'jdbc/fcjdevDS'.

**Request Time Out**

Specify the database request timeout value in milli seconds. This is the maximum number of seconds the database waits for a query to return the result.
Connection Time Out

Specify the database connection timeout value in seconds. This is the maximum number of seconds the application waits for a connection to the database to open.

Session Time Out

Enter the session time out value in seconds. This is the maximum number of seconds during which the application gets active without any user intervention. If there is no user intervention continuously for the duration specified here, the user session gets expire.

LOV Fetch Required

If you check this box, the option lists in Oracle FLEXCUBE displays the matching values based on the first characters that you enter in a field. If you specify the first three characters of a value to be entered in an option list and tab out, the system displays the complete list of values that are matching the first three characters.

If you do not check this, option lists does not show the matching values based on the first few characters. You need to specify the complete value against the field.

Max Image size

Specify the maximum image size in bytes.

Click ‘Next’ and the following screen is displayed:

1.2.2 Configuring Scheduler

This section describes the method to configure scheduler data source.

1. System displays the following screen:

   ![Screen Shot]

   2. Specify the following details:

      Scheduler Datasource

      Specify the scheduler datasource which Oracle FLEXCUBE will access.
Scheduler Log Rotation Interval

Specify the scheduler log rotation interval.

Scheduler Log Rotation Interval

Select the interval between each rotation of scheduler log.

3. Click 'Next' and the following screen is displayed:

4. Specify the following details:

Notify Destination

Specify the notify destination. Select one of the following options:

- QUEUE
- TOPIC

Queue Name

Set ‘NOTIFY_DEST_QUEUE’ as the destination queue name.

Queue Connection Factory

Set ‘NotifyDestQCF’ as the queue connection factory.
Secure

Check this box to indicate that it is a secured queue connection factory. If you check this box, you will be prompted to specify the caller ID and caller password as shown in the following screen.

![Screenshot of Oracle FLEXCUBE Investor Servicing](image)

**Caller ID**

Specify the caller ID for the secured queue connection factory.

**Caller Password**

Specify the password for the caller ID to access the secured queue connection factory.

**Notify Queue Location**

Specify the notify queue location. Select one of the following options:

- Internal
- External

For Oracle WebLogic application server, the notify queue location should be selected as ‘Internal’. If you choose ‘Internal’ as the ‘Notify Queue Location’, the screen provided in the following step does not get displayed. You will be navigated to next step where you can specify the notified deferred queue name and connection factory.
5. If you choose ‘External’, system displays the following screen:

6. Specify the following details of the external queue.

**Provider URL**

Specify the provide URL (iiop://localhost:1010).

1010 is the default IIOP port.

**Security Principal**

Specify the login ID to access the application server.

**Security Credentials**

Specify the password to access the application server.
7. Click 'Next' to proceed with scheduler configuration.

If you choose 'Internal' as the 'Notify Queue Location', you will be directly navigated to the following screen. In that case, the installer will not show the screen explained in the previous step.

8. Specify the following details:

**Notify Deferred Queue Name**

Set 'DEFFERED_DEST_QUEUE' as the notified deferred queue name.

**Deferred Queue Connection Factory**

Set 'DeferredDestQCF' as the deferred queue connection factory.
Secure

Check this box to indicate that it is a secured deferred queue connection factory. If you check this box, you will be prompted to enter the caller ID and caller password as shown in the following screen.

9. Specify the caller ID and caller password for the secured deferred queue connection factory.

10. Click ‘Next’ and the following screen is displayed:
11. Specify the following details:

**Notify Queue Name**

Set ‘NOTIFY_QUEUE’ as the notify queue name.

**Dead Letter Queue Name**

Set ‘NOTIFY_QUEUE_DLQ’ as the dead letter queue name.

**Notify Queue Connection Factory**

Set ‘NOTIFY_MDB_QCF’ as the notify queue connection factory.

**Secure**

Check this box to indicate that it is a secured queue connection factory. If you check this box, you will be prompted to enter the caller ID and caller password as shown in the following screen.

12. Specify the caller ID and caller password for the secured notify queue connection factory.

13. Click ‘Next’ and the following screen is displayed:
1.2.3 Setting EMS Properties

Specify the following details:

**Incoming Dead Letter Queue Name**
Set ‘EMS_QUEUE_DLQ’ as the incoming dead letter queue name.

**Incoming Backup Queue Name**
Specify the name of the incoming backup queue for which EMS is configured.
Set ‘EMS_QUEUE_BACK’ as the incoming backup queue name.

**Incoming Queue Connection Factory**

Specify the name of the incoming connection factory to which EMS listens. You need to create this connection factory at the application server.

For details on connection factory creation, follow the steps described for creation of notify connection factories.

Set ‘EmsQcf’ as the incoming queue connection factory.

**Secure Incoming Queue Connection**

Check this box to indicate that it is a secured queue connection.

**Incoming Queue Caller ID**

Specify the caller ID for the secured queue connection.

**Incoming Queue Caller Password**

Specify the caller password for the secured queue connection.

**Outgoing Dead Letter Queue Name**

Set ‘EMS_QUEUE_DLQ’ as outgoing dead letter queue name.

**Outgoing Queue Connection Factory**

Specify the name of the outgoing connection factory to which EMS listens. You need to create this connection factory at the application server.

For details on connection factory creation, follow the steps described for creation of notify connection factories.

Set ‘EmsQcf’ as the outgoing queue connection factory.

**Secure Outgoing Queue Connection**

Check this box to indicate that it is a secured outgoing queue connection.

**Outgoing Queue Caller ID**

Specify the caller ID for the secured queue connection.

**Outgoing Queue Caller Password**

Specify the caller Password for the secured queue connection.

**Outgoing Queue Provider URL**

In case EMS OUT MDB is to be configured to queue, you need to specify the URL for outgoing provider based on the application server. By default, the Installer displays the outgoing queue provider URL for Oracle WebLogic.

This value is application server dependent.
The details of Outgoing Queue Provider URL to be used for different application servers are given below:

<table>
<thead>
<tr>
<th>Application Server</th>
<th>EMS Out Initial Context Factory</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle WebLogic</td>
<td>t3://&lt;ip_address&gt;:port</td>
</tr>
<tr>
<td></td>
<td>E.g.: t3://10.10.10.10:1010</td>
</tr>
<tr>
<td></td>
<td>Here, 10.10.10.10 represents the local host and 1010 to the target server default port (AdminServer/ManagedServer).</td>
</tr>
<tr>
<td>IBM WebSphere</td>
<td>iiop://&lt;ip_address&gt;:port</td>
</tr>
<tr>
<td></td>
<td>E.g.: iiop://10.10.10.10:1010</td>
</tr>
<tr>
<td></td>
<td>Here, 1010 represents the default iiop port</td>
</tr>
</tbody>
</table>

**Queue Principal**

If EMS OUT MDB has to be configured to queue, you need to specify the EMS out queue principal. This is the user name for the application server in which the queue is configured.

**Queue Credential**

If EMS OUT MDB has to be configured to queue, you need to specify the EMS out queue credential. This is the password for the above user name created for application server in which the queue configured.

**Incoming Queue Name**

Specify the name of the incoming queue for which EMS is configured. By default, this is set as ‘EMS QUEUE_DLQ’. Outgoing Queue Name

Specify the name of the outgoing queue for which EMS is configured. By default, this is set as ‘EMS QUEUE_DLQ’. SFMS Incoming Queue

Specify the name of the SFMS Incoming Queue. By default, This is set as ‘SFMS_INQUEUE’.

**RTGS Incoming Queue**

Specify the name of the RTGS incoming Queue. By default, this is set as ‘RTGS_INQUEUE’.
Once you have specified the above details, click ‘Next’ and system displays the next screen.

14. Specify the following details:

**File Transfer Mode FTPS**

Specify the mode of transferring files to EMS. Select one of the following:
- FTPS
- SFTP
- HTTP

**Server**

Specify the server IP address for the selected file transfer mode.

**User ID**

Specify the user ID to access the server of the file transfer mode.

**Password**

Specify the password to for the above user ID.

**File Type**

Specify the type of file that is transferred. By default, the Installer sets it as `.txt`.

**SWIFT Message Delimiter**

Specify the character which is used as the message delimiter.

**SWIFT Message Terminator**

Specify the character which is used as the message terminator.
15. Once you have specified the above details, click ‘Next’. and the following screen is displayed:

![Image of Oracle FLEXCUBE Investor Servicing interface]

16. Specify the following details:

**Signature Block**

Check this box to enable signature block.

**Keystore File Name**

Specify the keystore file name.

**Keystore Alias Name**

Specify the keystore alias name.

**Keystore Password**

Specify the keystore password.

17. Once you have specified the above details, click ‘Next’ and system displays the next screen.
1.2.4 Setting BIP and BIP Advice Report

This screen describes how to create the property file. Here, you need to set the BIP and BIP Advice report details.

1. System displays the following screen:

![Image of Oracle FLEXCUBEInvestor Servicing](image)

2. Specify the following details to set the EMS properties:

**BIP Queue Name**
Specify the BIP queue name as ‘INTERNAL_BIPREPORT_QUEUE’.

**BIP DeadLetter Queue Name**
Specify the BIP deadletter queue name as ‘INTERNAL_BIP_QUEUE_DLQ’.

**BIPAdvice Queue Name**
Specify the BIP advice queue name as ‘INTERNAL_BIPADVREPORT_QUEUE’.

**BIPAdvice DeadLetter Queue Name**
Specify the BIP advice dead letter queue name as ‘INTERNAL_BIP_ADVICE_QUEUE_DLQ’.

**Queue Connection Factory**
Specify the queue connection factory as ‘BIPQCF’.
Secure

Check this box to indicate that it is a secured deferred queue connection factory. If you check this box, you will be prompted to enter the caller ID and caller password as shown in the following screen:

3. Specify the caller ID and caller password for the secured queue connection factory.

4. Once you have specified the above details, click 'Next' and system displays the next screen.

1.2.5 Setting GI Upload Properties

This screen describes how to specify the GI upload property details. Here you need to set the GI Upload properties.

1. System displays the following screen:
2. Specify the following details:

**Queue Name**

Specify the queue name as ‘INTERNAL_GI_UPLOAD_QUEUE’.

**Dead Letter Queue Name**

Specify the dead letter queue name as ‘INTERNAL_GI UPLOAD_DLQ’.

**Queue Connection Factory**

Specify the queue connection factory as ‘GI UPLOAD_QCF’.

**Secure**

Check this box to indicate that it is a secured deferred queue connection factory. If you check this box, you will be prompted to enter the caller ID and caller password as shown in the following screen:

3. Specify the caller ID and caller password for the secured queue connection factory.

4. Once you have specified the above details, click ‘Next’ and system displays the next screen.
1.2.6 Setting Report Properties

This section describes the methods to set report properties.

System displays the following screen:

5. Specify the following details:

**Server End Point**

Specify the BIP end point.

'http://10.10.10.1010/xmlpserver/services/PublicReportService_v11'. However, you need to change the IP and port where BIP Application is installed. WSDL URL gets modified based on “BIP Server Version” on selecting the required version from the dropdown.

**Name Space**

Specify the BIP name space.

By default, the installer displays 'http://xmlns.oracle.com/oxp/service/PublicReportService'.

**User Name**

Specify the BIP user name. By default, the Installer displays 'Administrator'.

**Password**

Specify the password for the above user name. By default, the Installer sets it as 'Administrator'.

**Reports Spool Path**

Specify the reports spool path
Advice Type

Specify the advice type. You can choose one of the following:

- NATIVE – This advice type is used for generating advices in text format
- BIP – This advice type is used for generating advices in PDF format.

BIP Server Version

Specify the qualified BIP server version. You can select the appropriate one from the adjoining drop-down list.

BIP Time Zone

Specify the time zone of the BIP server.

6. Once you have specified the above details, click ‘Next’ and the system displays the next screen.

7. Once you have specified the above details, click ‘Next’ and the next screen is displayed:

1.2.7 Saving Property File

After completing all the required settings explained above, you need to save the property file.

1. Save the property file.
2. You can view the status of property file creation in the above screen. Once the file is saved, the installer displays the following message:

![Property File saved successfully](image)

3. If you do not use the ‘Save’ or Save As’ buttons, the installer will save the properties file in ‘C:\Users\<username>’ folder. In that case, you will see the message below.

![Property File will be saved in C:Users\gloganat\temp20160928__1449 Folder...](image)

This completes the properties file creation.
