# 1. About this Manual

## 1.1 Introduction

This manual is designed to help you to quickly get familiar with the Cross border Payments module of Oracle FLEXCUBE Payments. It takes you through the various stages in processing of a Cross border SWIFT Payment transaction and the associated maintenances.

You can further obtain information specific to a particular field by placing the cursor on the relevant field and striking <F1> on the keyboard.

## 1.2 Audience

This manual is intended for the following User/User Roles:

Role	Function
Back Office Clerks	Payments Transaction Input and Maintenance functions except Authorization.
Back Office Officers	Authorization of Payments Transactions, maintenance of static data specific to the BC module
Payments Product Managers	Payments Product definition functions excluding authorization. PM Query functions

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

## 1.3 Organization

This manual is organized into the following chapters.:

Chapter	Description
Chapter 1	<i>About this Manual</i> gives information on the intended audience. It also lists the various chapters covered in this User Manual.
Chapter 2	<i>Cross Border Processing</i> provides details on the maintenance activities required for Cross border Payments.
Chapter 3	<i>FLEXCUBE Payment Transactions</i> provide transaction initiation of outward and STP processing of various Cross-border payments.
Chapter 4	<i>Function ID Glossary</i> has alphabetical listing of Function/Screen ID's used in the module with page references for quick navigation.

## 1.4 Glossary of Icons

This User Manual may refer to all or some of the following icons:

Icons	Function
	Exit
	Add row
	Delete row
	Option List

---

## 2. Cross Border Processing

The Cross-border (SWIFT) Payments module (product processor) of Oracle FLEXCUBE Payments is a standalone product processor. Payments module provides out of the box support for processing incoming and outgoing SWIFT Payments. This module helps you process funds transfer transactions between financial institutions based anywhere across the globe. Following fund transfers are supported:

- Incoming Cross Border Payment
- Outgoing Cross Border Payment

The Cross-border product processor processes a SWIFT payment transaction initiated by an Operations user from the in-built user interface or by customers in the bank's Customer Channels like Internet banking or Mobile banking. The payment instructions initiated from the bank Channels are received by Oracle Payments through ReST or SOAP based interfaces.

- System supports SWIFT gpi payments
- SWIFT gpi payments is enabled for incoming and outgoing customer transfer (MT103)
- System supports Block 3 –Tags 111 & 121 population for outgoing customer transfer
- System support generation & population of UETR - Unique End to End Transaction Reference based on IETF's RFC 4122 Version 4 of generation algorithm
- System supports STP of incoming MT103 message received with gpi header
- System supports incoming and outgoing MT199 gpi confirmation messages
- System supports upload of gpi directory

### **Key Features of Cross Border Product Processor**

- Supports incoming, outgoing and pass-through outgoing Cross border SWIFT payments.
- Straight through processing of incoming and outgoing messages is supported.
- Outward Cross border payments can be initiated in one of the following ways:
  - UI
  - ReST services
  - SOAP services
  - Bulk File upload
- Support for exceptions processing. Any exception encountered during processing will move the transaction to the relevant dedicated exception queue.
- Cross-border transaction life-cycle processing will be supported

This chapter contains details of the following maintenances specific to Cross-border payments:

- Currency Correspondent
- Global Correspondent
- BIC Cutoff
- PSD Preferences
- Sender Receiver Agreement
- Special Instructions
- Cover Suppression Maintenance
- Message Enrichment Rules
- D to A Converter

- Cover Queue Rule Maintenance
- Supports SWIFT 2017 Rule book

## 2.1 Currency Correspondent

### Usage of this screen

You can specify currency correspondent account details in this screen. Currency correspondent Maintenance function is Host specific.

### 2.1.1 Maintaining Currency Correspondent

You can invoke the 'Currency Correspondent Maintenance' screen by typing 'PMDCYCOR' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

You can specify the following fields:

#### **Host Code**

The system displays the Host Code of the selected branch of the logged in user.

#### **Currency**

Specify the currency. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

#### **Account Type**

Select the account type. The list displays the following values:

- Our- Account maintained with the correspondent input in the Bank Code field.
- Their- Account maintained by the correspondent input in the Bank Code field with the Processing bank (Vostro account)

#### **Account Number**

Specify the account number associated with the correspondent input in the Bank Code field in the specified currency

Alternatively, you can select the parent account number from the option list. The list displays all Nostro accounts for Account type OUR and valid normal accounts for account type THEIR. The account currency displayed in the list should be same as the currency specified.

### Account Name

The system displays the account name of the account number.

### Primary Correspondent

Check this box if this correspondent is the primary currency correspondent. This option is applicable only for Account type 'OUR'. There can be only one primary currency correspondent for the combination of Account type, Currency. This option will be defaulted as yes for the first currency correspondent maintained.

### Max Claim Amount

Specifies the maximum amount that can be claimed by the correspondent in MT191 message.

### Charge Claim GL

Specifies the GL code that is used to debit the charges as part of processing of the outgoing Bank transfer Transaction for the charge claim.

## 2.1.2 Viewing Currency Correspondent Summary

You can invoke "Currency Correspondent Summary" screen by typing 'PMSCYCOR' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'Currency Correspondent Summary' application window. At the top, there is a search bar with buttons for 'Search', 'Advanced Search', 'Reset', and 'Clear All'. Below this is a 'Case Sensitive' checkbox. The main search area contains several input fields: 'Authorization Status' (a dropdown), 'Record Status' (a dropdown), 'Account Type' (a text field with a magnifying glass icon), 'Bank Code' (a text field with a magnifying glass icon), 'Account Number' (a text field with a magnifying glass icon), 'Primary Correspondent' (a text field with a magnifying glass icon), 'Currency' (a text field with a magnifying glass icon), and 'Host Code' (a text field with a magnifying glass icon). Below the search fields is a control bar with 'Records per page' set to 15, a 'Go' button, and 'Lock Columns' set to 0. The main area is a table with the following columns: 'Authorization Status', 'Record Status', 'Account Type', 'Bank Code', 'Account Number', 'Primary Correspondent', 'Currency', and 'Max. Claim Amount'. The table is currently empty. At the bottom right of the window is an 'Exit' button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Account Type
- Bank Code
- Account Number
- Primary Correspondent
- Currency
- Max Claim Amount
- Charge Claim GL
- Host Code

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria for the following

- Authorization Status
- Record Status
- Branch
- Account Type
- Bank Code
- Account Number
- Primary correspondent
- Branch
- Primary Account
- Currency
- Max Claim Amount

## 2.2 **Global Correspondent**

### **Usage of this screen**

You can maintain the correspondent relationship between any two banks in a specific currency in the Global correspondent screen.

### 2.2.1 **Maintaining Global Correspondent**

You can invoke the 'Global correspondent Maintenance' screen by typing 'PMDGLCOR' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows the 'Global Correspondent' application window. At the top, there's a title bar with the text 'Global Correspondent' and standard window controls. Below the title bar is a toolbar with 'New' and 'Enter Query' buttons. The main content area has four input fields with red asterisks indicating they are required: 'Host Code \*', 'Bank Code \*', 'Currency \*', and 'Correspondent(Bank)'. At the bottom, there's a light blue status bar containing labels for 'Maker', 'Checker', 'Date Time:', 'Mod No', 'Record Status', 'Authorization Status', and an 'Exit' button.

You can specify the following fields:

#### **Host Code**

The system displays the Host Code of the selected branch of the logged in user.

#### **Bank Code**

Specify the BIC code of the bank for which you need to maintain a Correspondent. Alternatively, you can select the BIC code from the option list. The list displays all valid BIC codes maintained in the system.

#### **Currency**

Specify the currency. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

**Correspondent Bank**

The system displays the name of the correspondent Bank based on the specified BIC code.

### 2.2.2 Viewing Global Correspondent Summary

You can invoke “Global Correspondent Summary” screen by typing ‘PMSGLCOR’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

[illegible]

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Host Code
- Currency
- Bank Code

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

- Authorization Status
- Record Status
- Host Code
- Bank Code
- Currency

## 2.3 BIC Cutoff

## Usage of this screen

- You can capture Currency cutoff days and time for each currency in this screen, and additionally a BIC of sender/receiver bank.
- For a currency specific or All BICs, Cut-off time is maintained.
- Cut off time maintained in BIC Cutoff Maintenance (PXDCYCOF) is used for Network cut-off check for cross-border payments.

## 2.3.1 Outgoing BIC Cutoff

You can invoke “Outgoing BIC Cutoff” screen by typing ‘PXDCYCOF’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button

### 2.3.3 Incoming BIC Cutoff

You can invoke “Incoming BIC Cutoff” screen by typing ‘PXDINCOF’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button

The screenshot shows the 'Incoming BIC Cutoff' application window. It features a title bar, a menu bar with 'New' and 'Enter Query', and three input fields for 'Host Code \*', 'BIC Code \*', and 'Currency Code \*'. Below these fields is a table with columns: 'Limit Amount', 'Cutoff Days', 'Cut Off Time (Hr)', and 'Cut Off Time (Min)'. The table is currently empty. At the bottom of the window is a status bar with fields for 'Maker', 'Checker', 'Date Time:', 'Mod No', 'Record Status', 'Authorization Status', and an 'Exit' button.

You can specify the following details:

#### Host Code

Displays the Host Code of the selected branch of the logged in user.

#### BIC Code

Specify the BIC Code. Alternatively, you can select the BIC Code from the option list. The list displays all valid BIC Codes maintained in the system.

#### Currency Code

Specify the currency code. Alternatively, you can select the currency code from the option list.

The list displays all valid currency codes maintained in the system for the selected country.

#### Limit Amount

Specify the limit amount for the transaction amount.

#### Cutoff Hour

Specify the hours for the transaction cut-off time.

#### Cutoff Minute

Specify the minutes for the transaction cut-off time.

#### Settlement Days

Specify the number of days in advance of the current day on which the settlement is applicable that the payment request needs to be received or the transaction booked from screen.

## 2.3.4 Viewing Incoming BIC Cutoff Summary

You can invoke “Incoming BIC Cutoff Summary” screen by typing 'PXSINCOF' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'Incoming BIC Cutoff Summary' application window. It features a search interface with a title bar, search buttons, and a 'Case Sensitive' section containing filters for Authorization Status, Record Status, Host Code, Currency Code, and BIC Code. Below the filters is a table with the same column headers. The table is currently empty, and the interface includes pagination controls (Records per page: 15, Go, Lock Columns: 0) and an Export button at the bottom right.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Host Code
- Currency Code
- BIC Code

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

- Authorization Status
- Record Status
- Currency Code
- BIC Code
- Host Code

## 2.4 PSD Preferences

### Usage of this screen

- You can define the preferences related to Payment Services Directive (PSD) for outgoing payments in this screen.
- On processing an outgoing cross-border transaction for a combination of sender and receiver and currencies involved, the system verifies whether a record is available in PSD preferences.
- If PSD preference is maintained, Charge type is updated as SHA in place of BEN or OUR for an outgoing transaction.
- Incoming Cross Border payment will not consider currency cutoff, if it is a PSD payment. Thus PSD incoming will be honored on the same day.
- New maintenance is provided to capture PSD preference for Incoming Payment
- A PSD incoming PX contract should be honored on the same day, even if it is received after the currency cutoff.

- Hence, PSD check to be introduced for Incoming Cross Border Payments before currency cut off check
- Currency Cut off check for Incoming Cross Border Payments should be skipped, if payment is identified as 'PSD'
- Charge bearer option change currently supported for Outgoing payment will continue. And, this is not supported for Incoming payments.
- This is applicable for both Customer & Bank transfer messages.

### 2.4.1 Maintaining PSD Preferences

You can invoke “PSD Preferences maintenance” screen by typing 'PXDPSPDPF' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following details

#### Host Code

Displays the Host code for which PSD preferences are to be maintained.

#### Originator

Specify the originator country code. Alternatively, you can select the originator country code from the option list. The list displays all valid country codes maintained in the system.

#### Receiver

Specify the receiver country code. Alternatively, you can select the receiver country code from the option list. The list displays all valid country codes maintained in the system.

#### Debit Currency

Specify the debit currency of the transaction. Alternatively, you can select the debit currency from the option list. The list displays all valid currencies maintained in the system.

#### Transfer Currency

Specify the transfer currency of the transaction. Alternatively, you can select the transfer currency from the option list. The list displays all valid currencies maintained in the system.

### OUR to SHA

Check this Charge Whom option to indicate that the charges pertaining to the payment are shared between the originator and receiver, instead of being borne by the ordering customer.

### BEN to SHA

Check this Charge Whom option box to indicate that the charges for the payment are shared between the originator and the receiver, instead of being borne by the beneficiary.

## 2.4.2 Viewing PSD Preferences Summary

You can invoke “PSD Preferences Summary” screen by typing ‘PXSPSDPF’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

## 2.5 Sender Receiver Agreement

### 2.5.1 Maintaining Sender Receiver Agreement

You can maintain Sender Receiver Agreement in this screen. This is used for capturing Bi-lateral agreement for exchanging MT102/MT102+messages with a particular bank.

You can invoke “Sender Receiver Agreement” screen by typing ‘PXDSRAGM’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

#### **Transaction Currency**

Specify the transaction currency.

#### **Bank Name**

Specify the name of the bank.

#### **SWIFT Message Type**

Specify the SWIFT Message Type. You can select MT102 for Console or MT 103 for GPI transactions.

#### **Transactions per message**

Specifies the maximum number of transactions in one Multi-credit Customer Transfer MT102 message.

#### **Receiver Charge Amount**

If you select the option for settlement of the Receiver Charges as “Included in Settlement amount, then you must specify the charge amount.

**Transactions per message**

Specify the number of transactions allowed for a single MT102 message.

**Console Limit Amount**

Specify the limit for console transactions.

**Console Debit Accounting Code**

Specify the Debit Accounting Code.

**Console Credit Accounting Code**

Specify the Credit Accounting Code.

**Console Cutoff (Hours)**

Specify the hours for Console Cutoff.

**Console Cutoff (Minutes)**

Specify the minutes for Console Cutoff.

**GPI Details****GPI Allowed**

Check this box to indicate that the receiver of the MT103 message can accept gpi payment from our bank.

**GPI Receiver Charge**

The receiver charge to be populated for outgoing payment when the charge bearer option is OUR.

**GPI IN Cutoff Days**

No of days to be considered for gpi cut off for incoming gpi payment.

**GPI OUT Cutoff Days**

No of days to be considered for gpi cut off for outgoing gpi payment.

**GPI IN Cutoff (Hours)**

Specify the hours to be considered for gpi cut off for incoming gpi payment.

**GPI IN Cutoff (Minutes)**

Specify the minutes to be considered for gpi cut off for incoming gpi payment.

**GPI OUT Cutoff (Hours)**

Specify the hours to be considered for gpi cut off for outgoing gpi payment.

**GPI OUT Cutoff (Minutes)**

Specify the minutes to be considered for gpi cut off for outgoing gpi payment.

## 2.5.2 Viewing Sender-Receiver Agreement Summary

You can invoke “Sender-Receiver Agreement Summary” screen by typing ‘PXSSRAGM’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Sender-Receiver Agreement Summary

----------------------	---------------	-------------------	-----------	--------------------	---------------------	-------------	----------

Exit

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Counterparty Bank
- SWIFT Message Type

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria for the following

- Authorization Status
- Record Status
- Counterparty Bank
- Bank Name
- SWIFT Message Type
- Transaction per Msg
- Charge Whom
- Receiver Charge Option

## 2.6 Special Instructions

### Usage of this screen

- You can specify the special instructions for any given account - Customer or Nostro account in the Special Instructions screen. If any special instructions are maintained for the account, the transactions are moved to the business override queue. The instruction can be free format text.
- The authorized special instruction of an account is considered during transaction processing. The record is re-opened to maintain any new special instructions.

- Once the special instruction for the account has been processed, the same can be closed in the maintenance. The same record can be re-opened to maintain any new special instructions.

## 2.6.1 Maintaining Special Instructions

You can invoke the 'Special Instructions Maintenance' screen by typing 'PXDSIMNT' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

You can specify the following fields:

### Host Code

The system displays the Host Code by default when you select **New** or **Enter Query**.

### Branch

The system displays the selected branch of the logged in user.

### Account Number

Specify the account number for which the special instruction needs to be maintained. Alternatively, you can select the account number from the option list. The list displays all valid account numbers maintained in the system.

### Currency

The system displays the currency of the selected account number.

### Special Instructions

Specify the special instruction in free format text.

## 2.6.2 Viewing Special Instructions Summary

You can invoke “Special Instructions Summary” screen by typing ‘PXSSIMNT’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Special Instructions Summary

Search Advanced Search Reset Clear All

Exit

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Branch
- Account number

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

- Authorization Status
- Record Status
- Branch
- Account Number
- Currency
- Special Instructions
- Host Code

## 2.7 Cover Suppression Maintenance

### Usage of this screen

- You can define rules in this screen for the system to derive if the cover message needs to be suppressed for an outgoing customer payment message. This is branch specific function.
- All the transaction fields would be available as elements and rules can be defined to suppress the cover message for the transaction.

### 2.7.1 Invoking Cover Suppression Maintenance Screen

You can invoke the 'Cover Suppression Maintenance' screen by typing PMDCSPRL in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows the 'Cover Suppression Maintenance' application window. At the top, there's a title bar and a toolbar with a 'New' button and an 'Enter Query' field. Below the toolbar is a 'Host Code \*' field. A table with two columns, 'Rule Number' and 'Rule Expression', is displayed. Below the table is an 'Expression Details' section, which contains another table with columns: 'Expression Section', 'Scope', 'LOP Type', 'LOP Data Type', 'LOP Operand', and 'Operator'. At the bottom of the window, there are several status fields: 'Maker', 'Checker', 'Date Time', 'Mod No', 'Record Status', 'Authorization Status', and an 'Exit' button.

You can specify the following fields:

#### Host Code

The system displays the host code of the selected branch of logged in user.

#### Rule Number

Specify the Rule Number.

#### Rule Exception

Specify the Rule Exception.

#### Condition

Specify the rule condition using a combination of Elements, Operators, Functions and Logical Operators.

#### Element

Specify the attributes that can be used for condition builder. Alternatively, you can select the attributes from the option list. The list displays all valid attributes maintained in the system.

#### Operators

Select the standard operators to define conditions from the drop-down list. Following are the options available in the drop-down list:

- =
- <>
- >

- $\geq$
- $<$
- $\leq$
- $+$
- $-$
- $/$
- $*$

### Functions

Select standard functions to define conditions from the drop-down list. Following are the options available in the drop-down list:

- ABS
- Round
- Floor
- Cell
- Greatest
- Least
- Power
- Mod
- Truncate

### Logical Operators

Select the standard logical operators to define conditions from the drop-down list. Following are the options available in the drop-down list:

- AND
- OR
- NOT

### Cover

Check this box to indicate whether cover message is suppressed or not.

## 2.7.2 Viewing Cover Suppression Summary

You can invoke “Cover Suppression Summary” screen by typing ‘PMSCSPRL’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web application window titled "Cover Suppression Summary". At the top, there are buttons for "Search", "Advanced Search", "Reset", and "Clear All". Below these, there is a section labeled "Case Sensitive" with two dropdown menus: "Authorization Status" and "Record Status". A "Host Code" input field is also present. Below the search filters, there is a table with columns "Authorization Status", "Record Status", and "Host Code". The table is currently empty. At the bottom right of the window, there is an "Exit" button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Host Code

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

- Authorization Status
- Record Status
- Host Code

## 2.8 Message Enrich Rules

You can enrich an incoming SWIFT message according to the rules specified for a message type in this screen before the processing of incoming message is initiated.

## 2.8.1 Maintaining Message Enrich Rules

You can invoke “Message Enrich Rules Maintenance” screen by typing ‘PXDRLECH’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following details

### Message Type

#### Message Type

Specify the type of the message, say, MT103. Alternatively, you can select the message type from the option list. The list displays all valid message types maintained in the system.

### Field Rules

#### Message Tag

Specify the tag or field of the selected message type.

#### Sequence

Displays the sequence of this tag in the message.

#### Status

Displays the condition of the tag.

#### Priority

Specify the priority of the enrichment condition.

**Condition**

Specify the enrichment condition for the message by using a combination of String function, Logical Operator and Operator.

**String Functions**

Select the string function for constructing condition from the drop down list.

**Logical Operators**

Select the standard logical operators to define conditions from the drop-down list. Following are the options available in the drop-down list:

- AND
- OR
- NOT

**Operators**

Select the standard operators to define conditions from the drop-down list. Following are the options available in the drop-down list:

- =
- <>
- >
- >=
- <
- <=
- +
- -
- /
- \*

**Action Elements**

Select one of the available enrichment functions for enriching the value in the selected message tag of the message type.

**Parameter 1**

Specify the parameter 1 value if expected by the selected enrichment function.

**Parameter 2**

Specify the parameter 2 value if expected by the selected enrichment function.

## **Exclusion Button**

Click on the 'Exclusion' button to invoke the following screen.

The screenshot shows a web application window titled 'Exclusion' with a close button (X) in the top right corner. The interface includes a 'Message Type' label followed by a text input field. Below this is a table with a single row containing two columns: 'Sender BIC' and 'Currency'. The table has a header bar with navigation icons (back, forward, search) and a 'Go' button. At the bottom right of the window are 'Ok' and 'Cancel' buttons.

Specify the following details

### **Message Type**

Displays the message type.

### **Sender BIC**

Specify the sender BIC. Alternatively you can select the sender BIC from the option list. The list displays all valid BICs maintained in the system.

### **Currency**

Specify the currency. Alternatively you can select the currency from the option list. The list displays all valid currencies maintained in the system.

## 2.8.2 Viewing Message Enrich Rules Summary

You can invoke “Message Enrich Rules Summary” screen by typing ‘PXSRLCH’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows a web application window titled "Message Enrich Rules Summary". At the top, there is a search bar with buttons for "Search", "Advanced Search", "Reset", and "Clear All". Below this, there is a section labeled "Case Sensitive" with two dropdown menus: "Authorization Status" and "Record Status". A "Message Type" input field with a magnifying glass icon is also present. Below the search filters, there is a table with columns: "Authorization Status", "Record Status", "Message Type", and "Host Code". The table is currently empty. At the bottom right of the table, there is an "Exit" button. The window also features a pagination bar with "Records per page" set to 15, "1 Of 1" pages, and a "Go" button. A "Lock Columns" dropdown is set to 0.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Message Type
- Host Code

## 2.8.3 Invoking D to A Converter

You can enable translation of information of the parties involved in the payment from 'D' option (names and addresses) to appropriate 'A' option (BIC codes).

This information is used during the STP of an incoming message to convert the names and address information to the appropriate BIC code of the parties mentioned in the message.

You can invoke the 'D to A Maintenance' screen by typing 'PMDDAMNT' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows the 'D to A Converter' application window. The title bar is 'D to A Converter' with standard window controls. Below the title bar is a toolbar with 'New' and 'Enter Query' buttons. The main area contains several input fields: 'Host Code \*', 'BIC Code \*', 'BIC Code Description', 'Address Line 1 \*', 'Address Line 2', 'Address Line 3', and 'Address Line 4'. At the bottom, there is a status bar with fields for 'Maker', 'Date Time:', 'Mod No', 'Record Status', 'Checker', 'Date Time:', 'Authorization Status', and an 'Exit' button.

You can specify the following fields:

#### **Host Code**

The system displays the host code of the selected branch of logged in user.

#### **BIC Code**

Specify the BIC codes. Alternatively, you can select the BIC code from the option list. The list displays all valid BIC codes maintained in the system.

#### **BIC Code Description**

The system displays the description (name of the entity) of the BIC codes.

#### **Address Line1 through to Address Line4**

Specify the address line 1 to 4 maintained for the BIC code Address Details mentioned in all of the input lines is compared with name and address received in the message to resolve the BIC Code. The details in these lines should match for successful conversion.

## 2.8.4 Viewing D to A Converter Summary

You can invoke “D to A Converter Summary” screen by typing ‘PXSDAMNT’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

## 2.9 Cover Queue Rule Maintenance

### Usage of this screen

- This rule maintenance screen is used for is available for segregating the incoming message to a designated Queue.
- This maintenance screen is also used to set up rules for moving ‘Cover matching required’ messages to a separate queue so that auto straight through processing does not happen for such messages before cover matching.
- The message type of the rule, in the rule maintenance must be specified. For example, 103 and so on. This is a host level maintenance.

- In the rule maintenance, after specifying the conditions, the message is mapped to a valid queue name. The queue specified here is maintained with auto STP required as 'No' in the relevant Queue maintenance.
- If a message is identified as cover required and auto STP is maintained as 'No', then further upload of message into cross border payment tables does not happen. The message will be put on hold till the cover matching is done for the message. Messages without cover required, are processed as usual.

### 2.9.1 Invoking Cover Suppression Maintenance Screen

You can invoke the 'Cover Suppression Maintenance' screen by typing 'PXDRSTP' in the in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can specify the following fields:

#### Host Code

The system displays the host code when you click **New** or **Enter Query**.

#### Message Type

Specify the Message type from the list of values.

#### Field Name

Specify the name of the field.

#### Field Type

Select the required field type. Choose between the following:

- Text
- Number
- Date

#### Field Logic

Specify the field logic.

#### Error

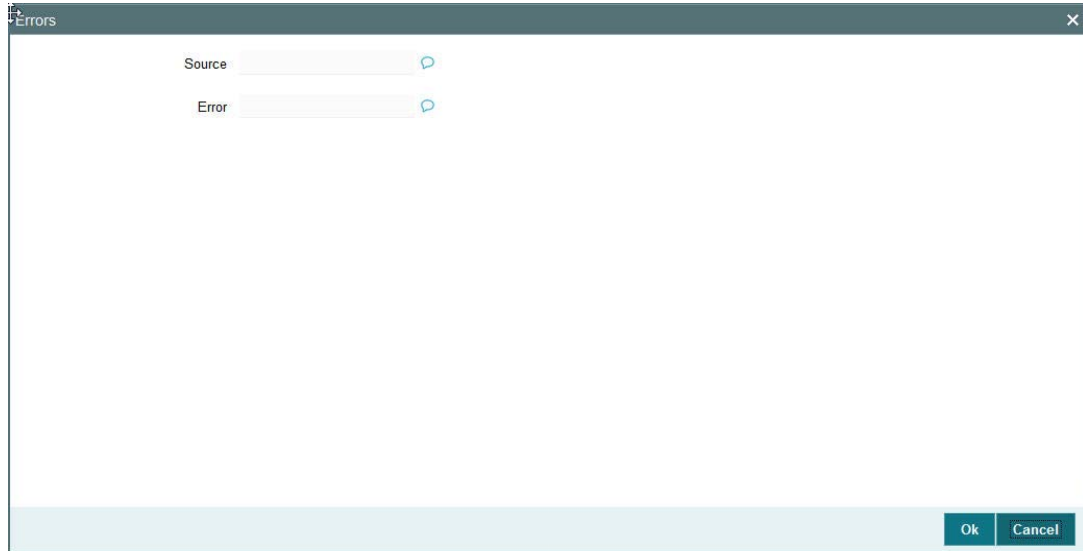

Click the Error link to specify any error messages.

## Show Rule

Click the Show Rule link to specify or modify the Rule Maintenance parameters.

### 2.9.2 Invoking Error Screen

From the Cover Queue Rule Maintenance screen, click the Error link.

The 'Errors' dialog box has a title bar with a close button. It contains two input fields: 'Source' and 'Error', each with a small blue speech bubble icon to its right. At the bottom right, there are 'Ok' and 'Cancel' buttons.

You can specify the following fields:

#### Source

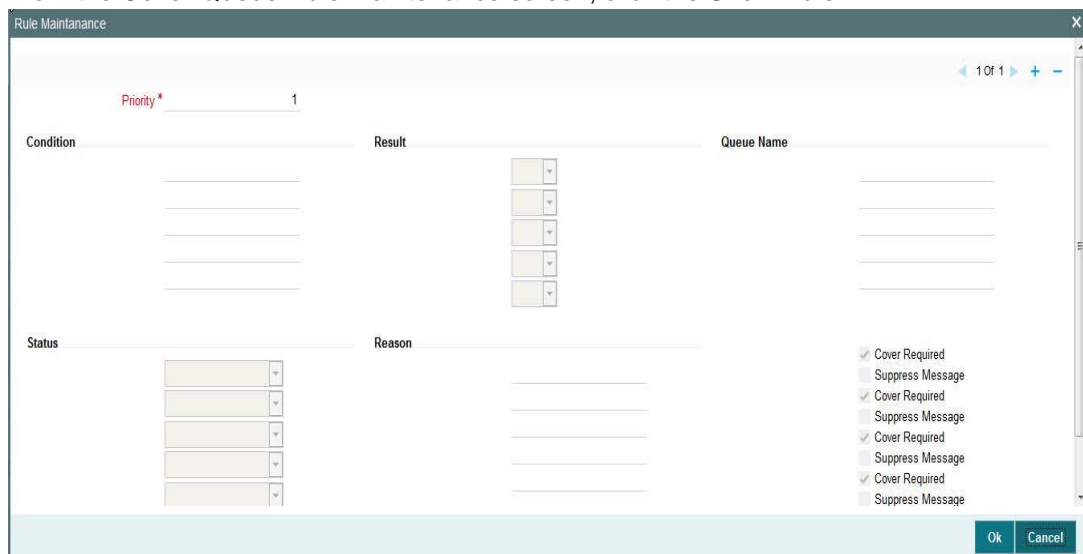

Specify the source of error.

#### Error

Specify the error details.

### 2.9.3 Invoking Rule Maintenance

From the Cover Queue Rule Maintenance screen, click the Show Rule link.

The 'Rule Maintenance' dialog box has a title bar with a close button. It features a 'Priority\*' field with a value of '1' and a '1 of 1' indicator. Below this is a table with three columns: 'Condition', 'Result', and 'Queue Name'. The 'Condition' column has four rows of input fields. The 'Result' column has four rows of dropdown menus. The 'Queue Name' column has four rows of input fields. Below the table is a 'Status' field with a dropdown menu and a 'Reason' field with four rows of input fields. On the right side, there is a list of checkboxes: 'Cover Required' (checked), 'Suppress Message' (unchecked), 'Cover Required' (checked), 'Suppress Message' (unchecked), 'Cover Required' (checked), 'Suppress Message' (unchecked), 'Cover Required' (checked), and 'Suppress Message' (unchecked). At the bottom right, there are 'Ok' and 'Cancel' buttons.

You can specify the following fields:

#### Priority

The system specifies the priority by default.

**Condition**

Specify the Rule Condition.

**Result**

Select the required result. Choose among the following:

- True
- False

**Queue Name**

Specify the required Queue Name from the list of values.

**Status**

Specify the status of the message that should be set for the rule condition. Choose among the following:

- Repair
- Pending Cover Match
- Suppressed
- Unprocessed

**Reason**

Specify the reason code from the list of values for each rule condition, if applicable.

**Cover Required**

Check this box if cover is required for a particular rule condition.

**Suppress Message**

Check this box if message must be suppressed for a particular rule condition.

## 2.9.4 Viewing Cover Queue Rule Summary

You can invoke “Cover Queue Rule Summary” screen by typing ‘PXSRLSTP’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'Cover Queue Rule Summary' application window. It features a search bar at the top with buttons for 'Search', 'Advanced Search', 'Reset', and 'Clear All'. Below the search bar, there are sections for 'Case Sensitive', 'Authorization Status', 'Record Status', 'Message Type', and 'Host Code'. The 'Authorization Status' and 'Record Status' sections have dropdown menus. Below these sections is a table with columns for 'Authorization Status', 'Record Status', 'Message Type', and 'Host Code'. The table is currently empty. At the bottom right of the window is an 'Exit' button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Message Type

- Host Code

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria for the following

- Authorization Status
- Record Status
- Message Type
- Host Code

## 2.10 Clearing Code Messaging Preferences

### 2.10.1 Maintaining Clearing Code Messaging Preferences

You can invoke the 'Clearing Code Messaging Preferences' screen by typing 'PXDCTMNT' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Specify the following details

#### **Clearing Code Details**

##### **Host Code**

The system indicates the logged in host code of the user.

##### **Country**

Select the country from the list of values.

##### **Network Code**

Specify the network code.

##### **Description**

The system displays the description.

##### **Member ID/Clearing Code**

Specify the member identification or the clearing code.

##### **Description**

Specify the description of the clearing code.

**Bank Name**

Specify the name of the bank.

**Address 1 - 4**

Specify the address of the bank in the lines specified.

**Own Member ID/Clearing Code**

Specify the Own Member Id/Clearing Code from the LOV.

**Clearing Code Indicator**

Select the required Indicator for Clearing Code.

**Bank ID code**

Specify the Bank Id code from the list of values.

**BIC Code Description**

The description of the bank appears by default after you specify the Bank Id code.

**Customer**

Specify the Customer Details from the list of values.

**Customer Description**

The description of the bank appears by default after you specify the customer details.

## 2.10.2 Viewing Clearing Code Messaging Preferences Summary

## 2.13.3 ASI-Instructing Agent Agreement

ASI – Instructing Party Agreement maintenance capture relationship between an Instructing party BIC (non-FI BIC), one or more Sender bank, Customer number and one or more Account numbers of the Customer available in the system.

You can invoke the “ASI-Instructing Agent Agreement” screen by typing ‘PXDINAGM’ in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Specify the following fields:

### Host Code

This is auto-generated by the system once you click on **New**. The system indicates the host code of the logged in user.

### Instructing Party

Specify or search and select the Instructing party from the list of values.

### Ordering Customer

Specify or search and select the Ordering Customer from the list of available customers maintained in the system.

### Amount Limit

Specify the Amount Limit per transaction in the incoming MT101 received from the Instructing party on behalf of the Ordering customer.

### Transaction Currency

Specify the currency to be used for transaction in the incoming MT101.

### Instructing Party Name

System displays the name of the Instructing party once the Instructing Party code is specified.

### Cutoff Hour

Specify the cut off hour for the transaction in the specified currency present in the incoming MT101.

### Cutoff Minute

Specify the cut off minute for the transaction in the specified currency present in the incoming MT101.

### Charge Whom

Select the Charge bearer of the transaction. Possible values are O (OUR), S (SHA), B (BEN).

## **Account Number**

### **Allowed**

Click this button to indicate that the account number(s) added to the account number grid are allowed for the transaction.

### **Disallowed**

Click this button to indicate that the account number(s) added to the account number grid are disallowed for the transaction.

### **Account number**

Click the add row icon in the grid to Specify or search and select a customer account number available in the system.

## **Allowed Senders**

### **Sender**

Click the add row icon in the grid to specify or search and select a Sender bank identifier from the LOV. The value to be input or selected is a 6 digit bank identifier which is actually the first 6 digits of a BIC code.

## **2.13.4 Viewing MT101-Instructing Agent Agreement Summary**

You can invoke “MT101-Instructing Agent Agreement Summary” screen by typing ‘PXSINAGM’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Host Code
- Ordering Customer
- Instructing Party
- Transaction Currency

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria with the following details:

- Authorization Status

- Record Status
- Host Code
- Ordering Customer
- Instructing Party
- Instructing Party Name
- Transaction Currency
- Amount Limit
- Cutoff Hour
- Cutoff Minute
- Charge Whom

### 2.13.5 **ASI-Ordering Customer Agreement**

ASI – Ordering Customer Agreement maintenance captures relationship between a Customer Number and one or more Sender bank.

You can invoke the “ASI-Ordering Customer Agreement” screen by typing ‘PXDORAGM’ in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Specify the following fields:

#### **Host Code**

This is auto-generated by the system once you click on **New**. The system indicates the host code of the logged in user.

#### **Transaction Currency**

Specify or search and select the currency used for transaction in the incoming/outgoing MT101 message, from the list of values.

#### **Ordering Customer**

Specify or search and select the Ordering Customer from the list of available customers maintained in the system.

#### **Ordering Customer Name**

This is automatically displayed once you select the Ordering Customer.

**Amount Limit**

Specify the Amount Limit for each transaction in the incoming/outgoing MT101 message.

**Cutoff Hour**

Specify the cut off hour for the transaction in the incoming/outgoing MT101 message.

**Cutoff Minute**

Specify the cut off minute for the transaction in the incoming/outgoing MT101 message MT101.

**Charge Whom**

Specify the Charge bearer of the transaction. Possible values are O (OUR), S (SHA), B (BEN).

**Allow Only Outgoing MT101**

Check this box if only Outgoing MT101 message is allowed for the ordering customer.

**Allowed Senders**

This grid captures the allowed Sender BICs for receiving MT101 on behalf of the ordering customer. This could be the BIC of the ordering customer or any other bank including Forwarding agent.

**Bank Code**

Click the add row icon in the grid to specify or search and select a Sender BIC from the list of available BICs.

**2.13.6 Viewing MT101-Ordering Customer Agreement Summary**

You can invoke “MT101-Ordering Customer Agreement Summary” screen by typing ‘PXSORAGM’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Host Code
- Ordering Customer
- Transaction Currency

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria with the following details.

- Authorization Status
- Record Status
- Host Code
- Ordering Customer
- Ordering Customer Name
- Transaction Currency
- Amount Limit
- Cutoff Hour
- Cutoff Minute
- Charge Whom

### 2.13.7 Forwarding Agent-ASI Agreement

Forwarding Agent – ASI Agreement maintenance captures this bank's relationship with an Account Servicing Institution (ASI) (any other bank) and one or more account numbers (optional) maintained at the ASI.

You can invoke the 'Forwarding Agent-ASI Agreement' screen by typing 'PXDFWAGM' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows the 'Forwarding Agent-ASI Agreement' application window. The interface includes a top toolbar with a 'New' button and an 'Enter Query' field. The main form area contains the following fields: 'Host Code \*', 'Transaction Currency \*', 'Account Servicing Institution Bank \*', 'Amount Limit', 'Account Number', 'Allowed' (radio button), and 'Disallowed' (radio button). Below these fields is a table with a header 'Account Number' and a search bar. At the bottom, there is a status bar with fields for 'Maker', 'Checker', 'Date Time', 'Mod No', 'Record Status', and 'Authorization Status', along with an 'Exit' button.

Specify the following fields:

#### Host Code

This is auto-generated by the system once you click on **New**. The system indicates the host code of the logged in user.

#### Account Servicing Institution Bank

Specify or search and select the Account Servicing Institution Bank from the list of values. The value to be input or selected is a 6 digit bank identifier which is actually the first 6 digits of a BIC code. This bank identifier would refer to all of the ASI bank's branches (BICs) in a country.

#### Amount Limit

Specify the Amount Limit of each transaction in the outgoing MT101 message.

### Transaction Currency

Specify the currency used for transaction in the outgoing MT101.

### Account Servicing Institution Bank Name

Specify the name of the Account Servicing Institution.

### Cutoff Hour

Specify the cut off hour for the transaction in the specified currency included in the outgoing MT101.

### Cutoff Minute

Specify the cut off minute for the transaction in the specified currency included in the outgoing MT101.

### Account Number

These are accounts of the ordering customers at the ASI for which MT101 can be processed by the ASI. This is an optional set of fields.

#### Allowed

Click this button to indicate that the account number (s) added to the Account number grid are allowed for the transaction.

#### Disallowed

Click this button to indicate that the account number(s) added to the Account number grid are disallowed for the transaction.

#### Account Number

Click the add row icon in the grid to specify the account number.

## 2.13.8 Viewing MT101-Forwarding Agent-ASI Agreement Summary

You can invoke “MT101-Forwarding Agent-ASI Agreement Summary” screen by typing ‘PXSFWAGM’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

## 3. Transactions Input

You can perform below mentioned activities in the Oracle FLEXCUBE Payments.

### 3.1 Outgoing Transaction Input

#### 3.1.1 Capturing Transaction Details

You can book an outgoing SWIFT payment by providing input for the payment transaction in this screen. Input can be provided for a new transaction using the already saved template. Some Transaction fields are applicable only to the specific transfer type (Customer / Bank Bank transfer - Own Account).

You can invoke the 'Cross Border Outgoing Transaction Input' screen by typing 'PXDOTONL' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot displays the 'Cross Border Outgoing Transaction Input' application window. The interface is organized into a grid-like layout with various input fields and sections. Key sections include 'Payment Details' on the left, which contains fields for dates, currencies, amounts, and references. The middle and right sections are divided into numbered blocks (50, 52, 56, 57, 58, 59) representing different parties and institutions involved in the transaction, each with fields for identifiers, addresses, and BIC codes. A 'Receiver Details' section is also present. At the bottom, there are tabs for 'Additional Details', 'MIS', 'Fields', and 'Payment Chain'. The 'Additional Details' tab is currently selected, showing fields for 'Maker ID', 'Maker Date Stamp', 'Checker ID', 'Checker Date Stamp', 'Authorization Status', and an 'Exit' button.

Specify the following details.

#### **Branch Code**

Displays the branch of the transaction.

#### **Host Code**

Displays the host code of the logged in user.

#### **Source Code**

The system displays the source code as MANL by default.

#### **Transaction Reference Number**

System displays auto-generated Transaction reference number. For more details on the format, refer the Payments Maintenance User Guide.

#### **Unique Reference Number**

The system displays the auto-generated unique reference number.

## Related Reference Number

After specifying Source code and clicking the Process (P) button, system generates and displays 10 digit reference numbers. The system generated value can be changed to any reference number desired by the user.

## Transfer Type

Select the transfer type of the transaction. Options available are as follows:

- Customer Transfer
- Bank Transfer
- Cover Transfer
- Bank Transfer Own A/c

## gpi Preferred

Check this box to indicate that this transaction is SWIFT GPI compliant.

## Multi-Credit Transfer

Select this check box to indicate that this transaction is part of a multi-credit transfer batch.

## Multi Credit Reference Number

Specify the Multi Credit Reference Number of an open multi-credit transfer batch of customer/ bank transfers in which this transaction should included.

## 3.1.2 Main Tab

Click the Main tab in the 'Cross Border Outgoing Transaction Input' screen..

The screenshot displays the 'Cross Border Outgoing Transaction Input' screen with the 'Main' tab selected. The interface is divided into several sections for data entry:

- Header:** Includes 'New', 'Enter Query', and a 'Transaction Reference \*' field.
- Form Fields:** Includes 'Branch Code', 'Host Code', 'Source Code \* MANL', 'Network', 'User Reference', 'Related Reference', 'Transfer Type \*' (dropdown), 'gpi Preferred' (checkbox), and 'Multi Credit Reference'.
- Payment Details:** A section on the left containing fields for 'Booking Date', 'Instruction Date', 'Activation Date', 'Transfer Currency', 'Transaction Amount', 'Instructed Currency', 'Instructed Amount', 'Exchange Rate', 'FX Reference', 'Debit Account', 'Debit Account Currency', 'Credit Account', 'Credit Account Currency', 'Credit Value Date', 'Debit Value Date', 'Debit Amount', 'Message Date', 'Remarks', 'Bank Operation Code', 'Banking Priority' (dropdown), and 'Charge Whom' (dropdown).
- Ordering Customer (50):** Fields for 'Party Identifier', 'BIC / Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Ordering Institution (52):** Fields for 'Party Identifier', 'BIC / Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Intermediary Bank (56):** Fields for 'Party Identifier', 'BIC', 'Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Account With Institution (57):** Fields for 'Party Identifier', 'BIC', 'Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Beneficiary Institution (58):** Fields for 'Party Identifier', 'BIC / Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Ultimate Beneficiary (59):** Fields for 'Account', 'BIC / Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Receiver Details:** Fields for 'Receiver' and 'Receiver Of Cover'.
- Footer:** Includes 'Additional Details | MIS | Fields | Payment Chain', 'Maker ID', 'Maker Date Stamp', 'Checker ID', 'Checker Date Stamp', 'Authorization Status', and an 'Exit' button.

Specify the following details.

## Payment Details

### Booking Date

Select the booking date of transaction from the adjoining calendar.

**Instruction Date**

Select the customer advised Value Date of the transaction using the adjoining calender widget.

---

**Note**

- Future dated Cross Border transaction will be processed on the booking date if booking date is within the currency settlement days
- System will calculate the processing date of the transaction based on activation date which is a maximum of (instruction date – settlement days, booking date)

**Activation Date**

Specify the activation date of the transaction.

---

**Note**

- If activation date is equal to booking date, the transaction will be processed today
  - If activation date is greater than booking date then the instruction would be processed on the derived processing date
- 

**Transfer Currency**

Specify the currency in which the payment needs to be made. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

**Transaction Amount**

Transaction Amount is calculated by the system based on the 'Same As Transfer Currency' flag and Currency conversion if applicable.

**Instructed Currency**

Specify the currency of the amount instructed by the customer. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

**Exchange Rate**

The exchange rate is applicable for cross-currency transactions. The transaction is considered as cross-currency transaction if for an outgoing payment the debit account currency is different from the transfer currency.

**FX Reference**

Specify the foreign exchange reference.

**Debit Account**

Specify the debit account of the transaction. Alternatively, you can select the debit account from the option list. The list displays all valid accounts maintained in the system.

**Debit Account Currency**

The system displays the debit account currency based on the debit account selected.

**Credit Account**

Specify the credit account of the transaction. Alternatively, you can select the debit account from the option list. The list displays all valid accounts maintained in the system.

**Credit Account Currency**

The system displays the credit account currency based on the credit account selected.

**Credit Value Date**

Specify the Credit Value Date.

**Debit Value Date**

Specify the Debit Value Date.

**Message Date**

For outgoing transactions, the system computes the message date based on the credit value date and displays it here along with the cut-off time.

**Remarks**

Specify any Operations remark or additional info pertaining to this transaction.

**Bank Operation Code**

Select the bank operation code from the option list. Options available are as follows:

- CRED – Credit Transfer with No SWIFT Service Level
- CRTS – Credit Transfer for Test Purposes
- SPAY – Credit Transfer for SWIFT Pay Service Level
- SPRI – Credit Transfer for Priority Service Level
- SSTD – Credit Transfer for Standard Service Level

If no value is selected then system defaults this field value to “CRED”.

---

**Note**

This is applicable only for customer transfers.

---

**Banking Priority**

Specify the priority of banking. Choose between Normal, Urgent and High.

**Charge Whom**

Specify the charge bearer for the transaction. The list displays the following values:

- OUR
- BEN
- SHA

**50:Ordering Customer**

The system displays the name and address of the customer ordering the transaction, based on the debit account selected.

This is applicable only for ‘Customer Transfer’ type of transaction. The ordering customer details including name and address are defaulted based on the debit account selected. However you can modify these details.

**52:Ordering Institution**

Specify the details of the financial institution that has ordered for the payment to be initiated.

**56: Intermediary Bank**

Specify the details of intermediary bank which is the correspondent bank of Account with institution.

You can capture below mentioned details of the intermediary bank here.

- Specify the correspondent account number in the first line starting with “/”.
- Specify the bank identifier and bank code in the second and third lines. If the bank identifier is BIC then you can select the appropriate BIC code from the adjoining option list that displays all valid BICs maintained in the system.

You can also specify the Name and Address of the Intermediary bank instead of the BIC Code, in lines 4 to 7.

#### **57: Account with Institution**

Specify the financial institution at which the beneficiary maintains their account. The beneficiary can be a retail/corporate in Customer Transfers or a Bank in case of Bank Transfers. Input is mandatory for 'Customer Transfer' type of transactions.

- Specify the correspondent account number in the first line starting with "/".
- Specify the bank identifier and bank code in the second and third lines. If the bank identifier is BIC then you can select the appropriate BIC code from the adjoining option list that displays all valid BICs maintained in the system.
- You can also specify the Name and Address of the Intermediary bank instead of the BIC Code, in lines 4 to 7.
- IBAN validations is conditional mandatory for Cross Border Outgoing Payments
- IBAN validation for ultimate beneficiary account is done by the system when BIC is present in tag 57(AWI) and IBAN check is set as required for AWI BIC's country. System fetches the ISO country code from BIC code (5<sup>th</sup> & 6<sup>th</sup> char).
- IBAN validation is done based on the data maintained in the existing IBAN Information Maintenance (ISDESBAN)
- If BIC code is not present in tag 57, system fetches the ISO country code from the receiver of the payment. If IBAN check is required for the receiver country then system validates IBAN for ultimate beneficiary account.
- These validations are applied on Customer & Bank Transfer transactions, both on Origination from the system & for pass through cases.

#### **58: Beneficiary Institution**

Specify the financial institution which is the ultimate recipient of the funds being transferred.

This is applicable only to Bank Transfers.

You can capture below mentioned details of the Beneficiary Institution here.

- Specify the account number in the first line starting with "/"
- Specify the BIC code in the second line. You can also select the appropriate BIC code from the adjoining option list that displays all valid BICs maintained in the system..
- You can also specify the Name and Address of the Beneficiary Institution instead of the BIC Code, in lines 3 to 5.

#### **59: Ultimate Beneficiary**

Specify the details of the Ultimate Beneficiary of the payment. This field is available only for 'Customer Transfer' type of transactions.

You can capture below mentioned details of the Beneficiary here.

- In Line 1, specify the customer beneficiary account number to which the transaction amount should be credited. You can specify the IBAN of the account. Alternatively, you may search and select the account number using LOV if the beneficiary account is maintained with the bank, which is the case in Incoming payments. This field is available only for 'Customer Transfer' type of transactions.
- Specify the Name and Address of the Beneficiary in lines 2 to 5.
- Instead of the Name and Address, you can also specify the BIC code of the Beneficiary in line 2.

## Receiver

System derives the Receiver (bank) of the outgoing payment message as part of Payment chain building activity and populates the BIC code of this bank in this field.

This field is also populated on clicking Enrich button.

You may choose to override the system derived Receiver with a different BIC code and input the same over here. On save, system validates if a SWIFT message can be sent to the user specified Receiver BIC code.

## Receiver of Cover

System derives the Receiver of Cover (bank) of the outgoing payment message as part of Payment chain building activity if a Cover message is required to be sent in addition to the payment messages. The BIC code of this bank is populated in this field.

This field is also populated on clicking Enrich button.

- You may choose to override the system derived Receiver of Cover with a different BIC code and input the same over here. On save, system validates if the user specified Receiver of Cover is a currency correspondent and a SWIFT message can be sent to this BIC code.

### 3.1.3 Additional Details Button

You can capture additional information and view field values set by the system for the transaction.

You can invoke the 'Additional Details' sub-screen in Transaction Input by clicking the "Additional Details" link present at the bottom of the screen.

The screenshot displays the 'Additional Details' sub-screen, which is organized into three main columns of input fields. The first column contains fields for '53: Sender Correspondent' (Party Identifier, BIC / Name and Address 1, Address Line 2, Address Line 3, Address Line 4), '13C: Time Indication Details' (CLS Time, Receive Time, Send Time), '23E: Instruction Codes' (Instruction Code 1 through 6), and '71G: Receiver Charges' (Currency, Amount, Amount Collected). The second column contains fields for '54a: Receiver Correspondent' (Party Identifier, BIC / Name and Address 1, Address Line 2, Address Line 3, Address Line 4), '70: Remittance Information' (Remittance Information 1 through 4), '71F: Sender Charges' (Sender Charge Ccy 1 through 6, Sender Charge Amount 1 through 6), and '77E: Envelope Contents Details' (Envelope Contents 1 through 5). The third column contains fields for '55: Third Reimbursement Institution' (Party Identifier, BIC / Name and Address 1, Address Line 2, Address Line 3, Address Line 4), '72: Sender To Receiver Info' (Sender To Receiver Information 1 through 6), '77B: Regulatory Reporting Details' (Regulatory Report 1 through 3), and '77E: Envelope Contents Details' (Envelope Contents 1 through 5). The screen has a title bar 'Additional Details' and a bottom bar with 'Ok' and 'Exit' buttons.

Specify the following details.

### 53: Sender Correspondent

The system displays the Party Identifier, BIC code or details like Name and Address of the sender's correspondent through which the payment transaction should be routed. This value is populated after deriving the Payment chain as part of the processing. This BIC would be present in the Currency Correspondent maintenance for the Transfer currency.

---

**Note**

- If an account is present in 53B of the incoming customer transfer & bank transfer then system will debit account present in 53B and not from the currency correspondent maintenance.
  - The account must be a vostro account and not a nostro account
  - If system doesn't find a valid vostro account the incoming transaction will go to repair queue
- 

**54a: Receiver Correspondent**

The system displays the Party Identifier, BIC code or details like Name and Address of the branch of the receiver or another financial institution in which the funds are made available to the receiver. This value is populated after deriving the Payment chain as part of the processing. This BIC would be present in the Global Correspondent maintenance for the Transfer currency.

**23E: Instruction Codes****Instruction Code 1 through to Instruction Code 6**

Specify a standard Instruction code in each field and then input additional information. Alternatively you can select the standard Instruction code type from the option list. The list displays all valid instruction codes maintained in the system.

**Transaction Type Code**

The system displays the applicable transaction type code for the transaction.

**55: Third Reimbursement Institution**

The system displays the BIC code or details like Name and Address of the receiver's branch, when the funds are made available to this branch through a financial institution other than that indicated in Field 53. This value is populated after deriving the Payment chain as part of the processing. This BIC would be present in the Global Correspondent maintenance for the Transfer currency.

**71G: Receiver charges**

If Charge Whom field in the Preferences section of the Main tab has a value of "OUR" then you can specify the Receiver's charges in case of 'Customer Transfer' if they are required to be included in the Settlement amount.

**Currency**

Specify the charge currency.

**Amount**

Specify the charge amount due to the receiver.

**Amount Collected**

The system populates this field based on the Receiver charges specified.

**77B: Regulatory Reporting Details**

Specify the statutory and/or regulatory information required by the authorities in the country of receiver or sender. You should specify this information by specifying a regulatory code (placed between '/') followed by 2 character country code and followed by regulatory details. This information should be specified in up to 3 lines each containing 35 characters.

### **13C: Time Indication Details**

Specify the standard time indication related to the processing of the payment instruction. You should input the standard Time indication code (placed between '/') followed by Time, a sign (+ or -) and the Offset from UTC. Alternatively, you can select the time indication code from the option list. The list displays all valid time indications maintained in the system, which are CLSTIME, RNCTIME and SNDTIME.

### **70: Remittance Information**

Specify the Remittance Information details from fields 1 to 4.

### **71F: Sender Charges**

#### **Sender Charge Ccy 1 through to Sender Charge Ccy 6**

The system displays the charge currency of Sender's charges that are deducted from the Transfer amount by this bank (Sender) or by any of the previous banks in the payment chain. These charges are applicable in case of Customer Transfers and the Charge Whom field value selected is SHA or BEN.

#### **Sender charge Amount 1 through to Sender Charge Amount 6**

The system displays the amount of Sender's charges.

In case of an incoming Customer transfer message, each of the previous banks in the payment chain would have deducted charges from the Transfer amount and details of the same would be present in the message. The Charge currency and Charge amount of each of these charges would be populated in up to 6 sets of these fields in addition to the charges deducted by this bank

#### **Sender to Receiver Information**

Displays the details of Sender to Receiver information comprising BIC or Name and Address.

### **77T: Envelope Contents Details**

Specify the contents of the Envelope in the lines from 1 to 5.

## **3.1.4 Pricing Tab**

You can view the charge amount computed by the system for each of the Pricing components of the Pricing code linked to the network code of the transaction. Click the "Pricing" tab.

The screenshot shows a web application interface for the 'Pricing' tab. At the top, there are two tabs: 'Main' and 'Pricing', with 'Pricing' being the active tab. Below the tabs is a table with the following columns: 'Pricing Component', 'Pricing Currency', 'Pricing Amount', 'Waived', 'Debit Currency', and 'Debit Amount'. The table is currently empty. Above the table, there is a navigation bar with a 'Go' button and a '1 Of 1' indicator. Below the table, there is a footer section with links for 'Additional Details', 'MIS', 'Fields', and 'Payment Chain'. At the bottom of the page, there are fields for 'Maker ID', 'Checker ID', 'Authorization Status', 'Maker Date Stamp', and 'Checker Date Stamp', along with a 'Cancel' button.

Specify the following details:

### Pricing Component

The system displays each Pricing component of the Pricing code from the Pricing Code maintenance.

### Pricing Currency

The system displays the Pricing currency of each Pricing component of the Pricing code.

### Pricing Amount

The system displays the calculated Charge amount for each Pricing component of the Pricing code.

### Waived

The system displays if charges for any Pricing component are waived in the Pricing maintenance.

### Debit Currency

The system displays the currency of the Charge account to be debited for the charges.

### Debit Amount

The system displays the Charge amount for each Pricing component debited to the charge account in Debit currency. If the Pricing currency is different from the Debit currency the calculated charges are converted to the Debit currency and populated in this field.

## 3.1.5 MIS section

You can maintain the MIS information for the Transaction. If the MIS details are not entered for the Transaction the same is defaulted from the product maintenance. Click the 'MIS' link to invoke the 'MIS' sub-screen

The screenshot shows a web-based form titled 'MIS' in the top left corner. The form contains several input fields and a 'Default' button. At the top, there is a 'Transaction Reference \*' field and an 'MIS Group' field with a 'Default' button next to it. Below these, there are two columns of fields. The left column is labeled 'Transaction MIS' and contains a 'MIS Group' field followed by five empty input fields. The right column is labeled 'Composite MIS' and also contains a 'MIS Group' field followed by five empty input fields. At the bottom right of the form, there are 'Ok' and 'Exit' buttons.

Specify the following details

### Transaction Reference

The system displays the transaction reference number of the transaction.

### MIS Group

Specify the MIS group code. Alternatively, you can select the MIS group code from the option list. The list MIS group displays all valid MIS groups maintained in the system for different

sources in the Source maintenance. By default, the MIS group linked to the 'Manual' source is populated while booking a transaction from this screen.

#### **Default button**

Click this button after selecting a MIS group different from the default MIS Group (which was populated) so that any default MIS values can be populated from to link to the Transaction MIS and Composite MIS classes.

### **Transaction MIS**

The default MIS values for Transaction MIS classes are populated for the MIS group. You can change one or more default MIS values or specify more MIS values. Alternatively, you can select MIS values from the option list.

### **Composite MIS**

The default MIS values for Composite MIS classes are populated for the MIS group. You can change one or more default MIS values or specify more MIS values. Alternatively, you can select MIS values from the option list.

## **3.1.6 Fields Section**

Click the 'Fields' Section in the Transaction Input screen to invoke the 'Fields' sub screen.

This sub-screen defaults values of UDF fields that are part of the UDF group specified for the 'Manual' source.

The screenshot shows a web-based application window titled "Fields". Inside the window, there is a table with two columns: "Field Label" and "Value". The table is currently empty. Above the table, there is a navigation bar with "1 Of 1" and a "Go" button. At the bottom right of the window, there are "Ok" and "Cancel" buttons.

Specify the following details.

### **Fields**

#### **Field Label**

The system displays all fields that are part of the associated UDF group.

#### **Value**

The system displays the default value, where exists for the UDF fields. You can change the default value or specify value for other fields (where default value does not exist).

### 3.1.7 Payment Chain

You can view the Payment Chain details for the transaction in this screen. Click the “Payment Chain” link in the Transaction Input screen to invoke this sub-screen

The screenshot shows a web application interface for viewing payment chain details. At the top, there are two input fields: 'Transaction Reference Number' and 'Version Number'. Below these is a table with the following columns: 'Chain Order', 'Bank Code', 'SWIFT Key Arrangement', 'Account Number', and 'Field Number'. The table is currently empty. At the bottom right of the interface are two buttons: 'Ok' and 'Cancel'.

Displays the following details.

#### **Transaction Reference Number**

Displays the transaction reference number.

#### **Version Number**

Displays the version number.

#### **Chain Order**

Specifies the order of banks/institutions in the payment chain

#### **Bank Code**

The system displays the BIC code of the bank/institution.

#### **SWIFT Key Arrangement**

The system displays if Sending bank has SWIFT Key Arrangement with the particular bank in the payment chain.

#### **Account Number**

The system displays the Nostro (mirror) /Vostro account number associated with the particular bank.

#### **Field Number**

The system displays the field number used internally to identify the position of the party in the outgoing SWIFT message. E.g “53” corresponds to field 53 in SWIFT message whereas “02” is used to identify the Receiver of the message.

### 3.1.8 Viewing Cross Border Outgoing Transaction Summary

You can view all the outgoing SWIFT transactions created in the Host of the selected branch of the logged in user. You can also view transactions that are present in various Operations (Exception) queues. However, you cannot perform any operations.

You can invoke “Cross Border Outgoing Transaction Summary” screen by typing PXSOTONL in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

You can search using one or more of the following parameters.

- Source Code
- Transaction Reference Number
- Related Reference Number
- External Reference Number
- Authorization Status
- Contract Status
- Transfer Type
- Queue
- Instruction Date
- Booking Date
- Activation Date

Once you have specified the search parameters. Click ‘Search’ button. The system displays the records that match the search criteria containing the following details.

- Source Code
- Branch Code
- Transaction Reference Number
- Related Reference Number
- External Reference Number
- Authorization Status
- Contract Status
- Network
- Transfer Type
- Queue
- Instruction Date
- Transfer Currency

- Debit Account Number
- Credit Account Number
- Debit Account Currency
- Credit Account Currency
- Debit Value Date
- Credit Value Date
- Booking Date
- File Reference Number
- Rate Status
- SNCK Status
- ECA Status
- Cut Off Status
- Exchange Rate
- Transaction Amount
- Host Code
- Activation Date
- Maker Id
- Checker Id

### 3.1.9 Cross Border Outgoing Transaction View Screen

You can invoke “Cross Border Outgoing Transaction View” screen by typing ‘PXDOVIEW’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

The screenshot displays the 'Cross Border Outgoing Transaction View' application window. The interface includes a top toolbar with a search field and an 'Exit' button. The main area is organized into several sections:

- Payment Details:** Contains fields for Booking Date, Instruction Date, Activation Date, Transfer Currency, Transaction Amount, Instructed Currency, Sender Bank, Exchange Rate, Debit Account, Debit Account Currency, Debit Amount, Credit Account, Currency, Amount, Debit Value Date, Credit Value Date, Message Date, Debit Entry Date, Credit Entry Date, Bank Operation Code, Banking Priority, Charge Whom, Charge Currency, and Total Charge.
- 50: Ordering Customer:** Includes Party Identifier, BIC / Name and Address 1, Address Line 2, Address Line 3, and Address Line 4.
- 52: Ordering Institution:** Includes Party Identifier, BIC / Name and Address 1, Address Line 2, Address Line 3, and Address Line 4.
- 56: Intermediary Bank:** Includes Party Identifier, BIC, Name and Address 1, Address Line 2, Address Line 3, and Address Line 4.
- 57: Account With Institution:** Includes Party Identifier, BIC, Name and Address 1, Address Line 2, Address Line 3, and Address Line 4.
- 58: Beneficiary Institution:** Includes Party Identifier, BIC / Name and Address 1, Address Line 2, Address Line 3, and Address Line 4.
- 59: Ultimate Beneficiary:** Includes Account, BIC / Name and Address 1, Address Line 2, Address Line 3, and Address Line 4.
- External System Status:** Includes Sanction Check Status, Sanction Check Reference, External Credit Approval Status, External Credit Approval Reference, External Exchange Rate Status, and External Rate Reference.
- Transaction Status:** Includes Transaction Status, DRLQ Status, CRLQ Status, and Prefunded Payments.
- Pending Queue Details:** Includes Queue Code.
- Sanction Seizure:** Includes Sanction Seizure.

The bottom status bar contains the following fields: 'Maker ID', 'Checker ID', 'Authorization Status', and an 'Exit' button.

- From this screen, click Enter Query. The Transaction Reference field gets enabled which opens an LOV screen.
- Click the Fetch button and select the required value.
- Click Execute Query to populate the details of the transaction in the Cross Border Outgoing Transaction View screen.

### 3.1.10 **MIS section**

You can maintain the MIS information for the Transaction. If the MIS details are not entered for the Transaction the same is defaulted from the product maintenance. Click the 'MIS' link to invoke the 'MIS' sub-screen

Specify the following details

#### **Transaction Reference**

The system displays the transaction reference number of the transaction.

#### **MIS Group**

Specify the MIS group code. Alternatively, you can select the MIS group code from the option list. The list MIS group displays all valid MIS groups maintained in the system for different sources in the Source maintenance. By default, the MIS group linked to the 'Manual' source is populated while booking a transaction from this screen.

#### **Default button**

Click this button after selecting a MIS group different from the default MIS Group (which was populated) so that any default MIS values can be populated from to link to the Transaction MIS and Composite MIS classes.

#### **Transaction MIS**

The default MIS values for Transaction MIS classes are populated for the MIS group. You can change one or more default MIS values or specify more MIS values. Alternatively, you can select MIS values from the option list.

#### **Composite MIS**

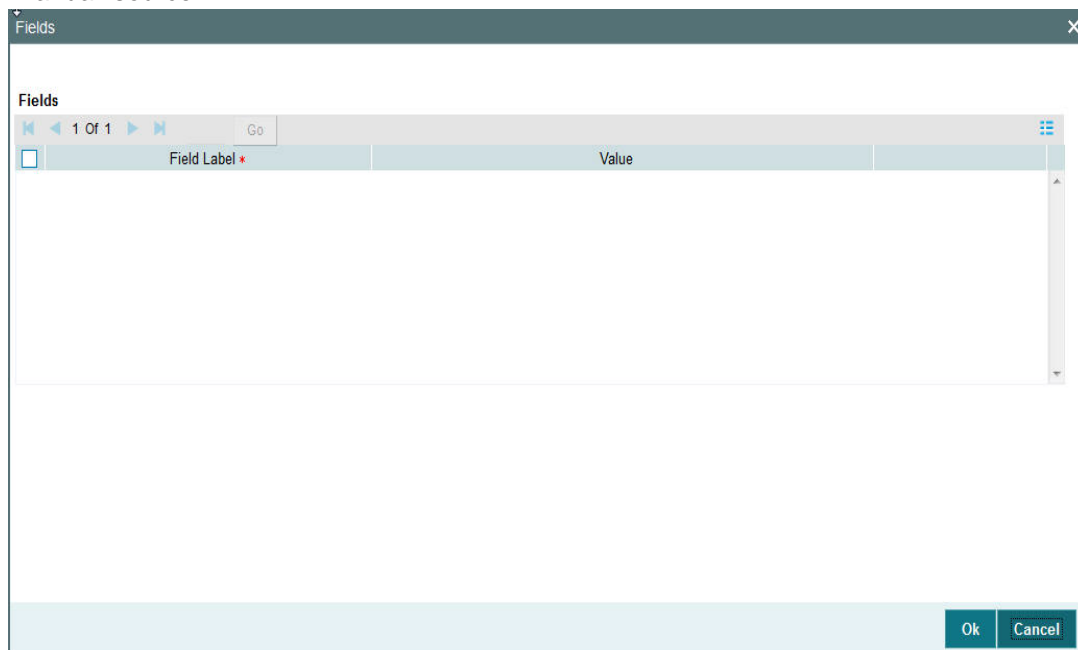

The default MIS values for Composite MIS classes are populated for the MIS group. You can change one or more default MIS values or specify more MIS values. Alternatively, you can select MIS values from the option list.

### 3.1.11 **Fields Section**

Click the 'Fields' Section in the Transaction Input screen to invoke the 'Fields' sub screen.

This sub-screen defaults values of UDF fields that are part of the UDF group specified for the 'Manual' source.

The screenshot shows a web-based application window titled "Fields". Inside the window, there is a sub-header "Fields" and a table with two columns: "Field Label" and "Value". The table is currently empty. At the bottom right of the window, there are two buttons: "Ok" and "Cancel".

Specify the following details.

#### **Fields**

##### **Field Label**

The system displays all fields that are part of the associated UDF group.

##### **Value**

The system displays the default value, where exists for the UDF fields. You can change the default value or specify value for other fields (where default value does not exist).

### 3.1.12 Payment Chain

You can view the Payment Chain details for the transaction in this screen. Click the “Payment Chain” link in the Transaction Input screen to invoke this sub-screen

The screenshot shows a web application interface for viewing payment chain details. At the top, there are two input fields: 'Transaction Reference Number' and 'Version Number'. Below these is a table with a header row containing the following columns: 'Chain Order', 'Bank Code', 'SWIFT Key Arrangement', 'Account Number', and 'Field Number'. The table body shows '1 Of 1' records. At the bottom right of the interface are two buttons: 'Ok' and 'Cancel'.

Displays the following details.

#### **Transaction Reference Number**

Displays the transaction reference number.

#### **Version Number**

Displays the version number.

#### **Chain Order**

Specifies the order of banks/institutions in the payment chain

#### **Bank Code**

The system displays the BIC code of the bank/institution.

#### **SWIFT Key Arrangement**

The system displays if Sending bank has SWIFT Key Arrangement with the particular bank in the payment chain.

#### **Account Number**

The system displays the Nostro (mirror) /Vostro account number associated with the particular bank.

#### **Field Number**

The system displays the field number used internally to identify the position of the party in the outgoing SWIFT message. E.g “53” corresponds to field 53 in SWIFT message whereas “02” is used to identify the Receiver of the message.

### 3.1.13 All Messages

Click the “All Messages” link in the transaction input screen to invoke this sub-screen.

The screenshot shows a web application window titled "All Messages". It features a search section with a label "Execute Query" and a text input field for "Contract Reference". Below the search section is a table with the following columns: "DCN", "Message Type", "SWIFT Message Type", "Direction", "Value Date", "Message Status", and "Test Status". The table is currently empty. At the bottom right of the window is a "Cancel" button. A "Message" button is located below the table.

The system displays the following details in a grid form containing one or multiple rows

#### **Contract Reference**

Displays the contract (transaction) reference number.

#### **DCN**

Displays the unique DCN number assigned by the system to each generated message.

#### **Message Type**

Displays the system defined message type e.g. Cust\_Transfer, Cover etc.

#### **SWIFT Message Type**

Specify the SWIFT message type of the generated message e.g. MT103, MT202COV etc.

#### **Direction**

Displays if the message is outgoing or incoming.

#### **Media**

Displays the message generation date.

#### **Message Status**

The system displays the message status. e.g. Hand-off, Repair etc.

#### **Test Status**

The system displays the Test status of the message, which would generally be “Not Applicable”.

#### **Authorization Status**

The system displays the authorization status. i.e. Authorized or Unauthorized. For incoming messages which fall into Repair or a user defined queue, this status may be “Unauthorized” if the message has been manually repaired and awaiting authorization.

**Acknowledgment Status**

The system displays whether Acknowledgement from SWIFT (ACK/NAK) is required or not for the outgoing SWIFT message. This value is displayed based on the message level configuration.

**Media**

The system displays the media of the message which is "SWIFT".

**Receiver/Sender**

Displays the Customer ID of the Receiver of an outgoing SWIFT message or of the Sender of an incoming SWIFT message.

**Receiver Name**

Displays the name of the receiver or sender.

**PDE Flag**

Displays if PDE trailer is included in the incoming or outgoing message.

**3.1.13.1 Message Details**

You can select a particular message in the All Messages summary sub-screen (explained above) and view the message details in this screen.

Displays the following details for the selected message.

**Reference Number**

Specify the transaction reference number.

**DCN**

The system displays DCN of the message.

**ESN/Version Number**

The system displays the version number of the message.

**Receiver/Sender**

The system displays receiver/sender of the message.

**Message Type**

The system displays system defined message type.

**SWIFT Message Type**

The system displays SWIFT message type.

**Message**

The system displays details of the actual message including BIC and Name and Address details of the Sender and Receiver as well as the fields and values populated in the message body.

**Remarks**

Specify a comments or remarks for the message.

**Reject Reason**

The system displays the reject reason code.

**Message Trailers**

The system displays the message trailers.

### 3.1.14 Saving a Transaction

You can save the transaction after specifying at least all of the mandatory fields.

On Save, system performs Transaction Validations. If any of the validations fails then system shows an error message on the screen detailing the error. You can then correct the error and click on Save button again. If all the validations are successful then the transaction is saved and a confirmation message is shown. At the bottom of the transaction screen, the Authorization Status is shown as 'Unauthorized', Transaction Status as 'Active' and the Maker ID and Maker Date stamp is displayed. The transaction is now pending authorization by a different user after which the transaction processing will begin.

### 3.1.15 Performing operation

Below mentioned operations are allowed in the Transaction input screen:

Operation	Description
New	You can input a new Transaction using this option.
Delete	<p>You can delete unauthorized transactions from the system using this option.</p> <p>The count of the transaction is decremented against the image reference number if the transaction to be deleted is an Image transaction.</p> <p>Deletion of the transaction is not allowed if a transaction was authorized at least once.</p>
Unlock	You can unlock an unauthorized transaction and change some of transaction details using this option. Amendment of an unauthorized transaction will not result in an increase of the version number. The latest version alone is modified. The party fields like 57, 56, 59 etc. can be modified. A new Transaction version is created if an authorized Transaction is amended.
Enter Query	<p>This is a Query option for querying an unauthorized or authorized transaction in any Transaction status and viewing its details. Transaction can be queried by entering the Transaction Reference number.</p> <p>After the transaction details are loaded in the screen, any other applicable operation mentioned in this table can be performed.</p>
Copy	<p>You can create a Transaction using a template or copy details from a transaction using this option.</p> <p>The transaction or the template to be copied can be selected in the transaction summary screen or loaded in the Transaction Input screen. The copy option in the Transaction online copies user input transaction details/template details.</p>

The transactions are sorted in the ascending order based on the following field:

- Message Date Time
- Instruction Date
- Amount

The following operations are available in the transaction summary screen

Operation	Functions
Save	Helps you to save the search criteria for future use.
Refresh	Helps you to refresh the screen with the latest transaction details.
Reset	Clears the search results retaining the search criteria
Clear All	Clears the search results as well as the search criteria
Details	Selecting a particular transaction from the search results and clicking this menu displays the details of the transaction in the Transaction input screen.
Advanced Search	Helps to create advanced or complex search query using the search fields, logical operators and sort option of search results.

### 3.1.16 Transaction Authorization/Verification (Outgoing)

From the Transaction Input screen, you can also query for a particular transaction using Enter Query option and then authorize the transaction by clicking the Authorize button..

Cross Border Outgoing Authorization

Enter Query

Transaction Reference Number: 1711613294440000

Transaction Amount: 345.07

Instruction Date: 2017-04-25

On clicking the Authorize button, the above screen is launched displaying some of the key transaction details (listed below) as seen in the above screen shot.

- Transaction Reference Number
- Transaction Amount
- Instruction Date
- Transaction Currency
- Creditor Account Number
- Maker ID
- Release Time

#### Rekey Details

##### Transaction Reference Number

The system displays the transaction reference number.

### Rekey fields

The system displays the transaction fields that needs to be re-keyed. These fields are configured in the Source Network Preferences maintenance for the 'Manual' source and the Network code of the transaction.

### Field Description

The system displays the description of the field.

### Field Type

The system displays the type of field.

### Rekey Values

You need to input the value for each of the re-key fields. After keying in the fields, the system validates the details input. For multiple lines input, the data is defaulted if the first line is input correctly.

### Overrides Details

#### Override Text

The system displays override text if applicable.

#### Authorized By

The system displays the authorizer id of the user who authorized the override message.

#### Authorize Date Stamp

The system displays the authorization date stamp.

### Authorization actions

#### Authorize button

You can click this button is you would like to authorize the transaction.

## 3.1.17 Transaction Authorization/Verification (Incoming)

From the Transaction Input screen, you can also query for a particular transaction using Enter Query option and then authorize the transaction by clicking the Authorize button..

Cross Border Incoming Authorization

On clicking the Authorize button, the above screen is launched displaying some of the key transaction details (listed below) as seen in the above screen shot.

- Transaction Reference Number
- Transaction Amount
- Transaction Currency

- Creditor Account Number
- Maker ID
- Release Time

### **Rekey Details**

#### **Transaction Reference Number**

The system displays the transaction reference number.

#### **Rekey fields**

The system displays the transaction fields that needs to be re-keyed. These fields are configured in the Source Network Preferences maintenance for the 'Manual' source and the Network code of the transaction.

#### **Field Description**

The system displays the description of the field.

#### **Field Type**

The system displays the type of field.

#### **Rekey Values**

You need to input the value for each of the re-key fields. After keying in the fields, the system validates the details input. For multiple lines input, the data is defaulted if the first line is input correctly.

### **Overrides Details**

#### **Override Text**

The system displays override text if applicable.

#### **Authorized By**

The system displays the authorizer id of the user who authorized the override message.

#### **Authorize Date Stamp**

The system displays the authorization date stamp.

### **Authorization actions**

#### **Authorize button**

You can click this button is you would like to authorize the transaction.

### **3.1.17.1 Enriching Manual Transaction before Save**

Before Saving a manually booked transaction, user has an option to manually trigger some of the processing steps mentioned in the table above, and thereby enrich the transaction. On saving the transaction followed by Authorization, the outgoing transaction is processed through the remaining processing Activities as mentioned above.

On clicking the Enrich button in the main tab of the Transaction input screen, the activities till Charge computation are performed. The Enrich option is especially useful when you would like to view the Payment chain determined by the system and change any of the parties including the Receiver and Currency Correspondent, if required, based on specific customer instructions for routing the payment.

### 3.1.17.2 Payment Instructions received through Channels

For outgoing payment instructions received through Channels through ReST/SOAP services, system automatically creates a transaction and a Transaction Reference number. The transaction is auto-authorized. It is then processed through the activities as mentioned in the above table.

## 3.2 MT101 Processing

The system supports processing of incoming MT101 and initiation of outgoing MT101 message.

### 3.2.1 Outgoing Transaction Input - MT101

You can invoke the 'Swift MT101 Transaction' screen by typing 'PXDMT101' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Swift MT101 Outgoing Transaction

Maker Date Time: Mod No Record Status  
Checker Date Time: Authorization Status

Specify the following fields:

#### **Reference Number**

This is auto-generated by the system once you click on **New**.

#### **Host Code**

The system displays the host code of the logged in user.

#### **Requested Execution Date**

The date on which the transaction is required to be executed by the bank.

#### **Customer Number**

Specify the Customer Number of the customer for which batch of MT101 transactions need to be created. Search and select from the list of available customers.

#### **Customer Name**

The system displays the customer name once you specify the customer number.

**Customer Specified Reference**

Specify the customer specified reference details.

**Receiver**

Specify the required Receiver bank of outgoing MT 101, which would also be the Account Servicing financial institution of the customer account from where payments are required to be made as per the MT101 requests. Search and select from the list of available banks.

**Receiver Name**

The system indicates the name of the Receiver bank once you specify the receiver BIC Code.

**Authorization**

Specify details of additional security provisions, for example, a digital signature, between the ordering customer/instructing party and the Receiver.

**Message Index/Total**

This field chains different MT101 messages by specifying the sequence number of a particular message in the total number of messages being sent to the Receiver. Specify a numeric value in the sub-field 1 of this field to indicate the sequence of this MT101 batch (message) and a value in sub-field 2 to indicate the total number of MT101 batches that are planned to be booked. However, if only one MT101 batch and hence only one MT101 message is required to be sent to the Receiver for the specified customer then specify "1" in both sub-fields.

**50: Instructing Party**

If the Instructing Party is applicable and is the same for all individual transactions in this MT101 batch then details of the same can be specified in these fields. Else, the Instructing party details will need to be specified for individual transactions where applicable.

**Tag Option**

Select the required tag option. The available options are C and L.

**BIC**

Specify or search and select the required BIC of the Instructing party from the list of values if the Tag option selected is 'C'.

**Party Identifier**

Specify the non-BIC identifier details of the Instructing party if the Tag option selected is 'L'.

**52: Account Servicing Institution**

If the Account Servicing Institution (ASI) is different than the Receiver of MT101 and is the same for all individual transactions in this MT101 batch then details of the same can be specified in these fields. Else, the ASI details could be specified for individual transactions where it is different from the Receiver of MT101.

**Tag Option**

Select the required tag option. The available options are A and C.

**Clearing Code**

Specify or search and select the clearing code identifier of the Account Servicing Institution (ASI) from the list of values.

**Party Identifier**

Specify the Clearing code of the ASI.

**BIC**

If tag option is selected as 'A', then specify or search and select the required BIC of the ASI from the list of values.

**50: Ordering Customer**

If the Ordering Customer is the same for all individual transactions in this MT101 batch then details of the same can be specified in these fields. Else, the Ordering Customer details will need to be specified for each individual transaction.

**Tag Option**

Select the required tag option. The options are F, G and H.

**Account Number**

If tag option is selected as 'G' or 'H' then specify the account number of the ordering customer's account at the ASI.

**BIC**

If tag option is selected as 'G' then specify the BIC of the ordering customer from the list of values.

**Code**

If tag option is selected as 'F' and Party Identifier needs to be specified using an Identifier code and Country code then specify or search and select the required Identifier code from the list of values.

**Country Code**

If tag option is selected as 'F' and Party Identifier needs to be specified using an Identifier code and Country code then specify or search and select the required country code from the list of values.

**Identifier**

Specify the party identifier as per the selected Identifier code.

**Address**

If tag option is selected as 'F' or 'H' then specify the name and address of the ordering customer in 4 lines of up to 35 characters each. If tag option 'F' is selected, you can specify name, address lines, and/or any of the following allowed details - date of birth, place of birth, country and town, customer identification number, national identity number and additional information to complete details given in one of the preceding 3 lines.

Given below are two of the different possible combinations of details that can be input in 4 lines of this Address field when tag option 'F' is selected.

Example1:

1/SMITH JOHN  
2/299, PARK AVENUE  
3/US/NEW YORK, NY 10017

Example 2:

1/PHILIPS MARK  
4/19720830  
5/BE/BRUSSELS

Given below are details of the fields of the individual transactions in the MT101 batch. Click on the plus sign at the top of the individual transactions grid to add a record for a transaction in the grid.

### Transaction Reference

Specify a reference for the individual transaction.

### F/X Deal Reference

Specify the FX Deal Reference of the Fx contract between the ordering customer and the ASI if Fx conversion was done to arrive at the transaction amount.

### Transaction Currency

Specify the currency of the transaction amount

### Transaction Amount

Enter the amount of the transaction that needs to be transferred to the beneficiary.

### Exchange Rate

Specify the exchange rate that was used to perform Fx conversion to arrive at the transaction amount.

### Other Details

Click the Other Details button for the transaction to specify other details like Instruction Codes, Charge Account Details, Beneficiary details and so on.

#### 3.2.1.1 Other Details

On clicking the Other Details button in the transaction record, the Other details screen is launched..

The screenshot displays the 'Other Details' screen with the following sections and fields:

- 23E: Instruction Codes**
  - Instruction Code 1
  - Instruction Code 2
  - Instruction Code 3
  - Instruction Code 4
- Charge Account Details**
  - Details Of Charge (dropdown)
  - Charge Account
  - Ordered Currency
  - Ordered Amount
- 50: Instructing Party**

  - BIC
  - Code
  - Country Code
  - Identifier
  - Address
- 52: Account Servicing Institution**
  - Tag Option (dropdown)
  - Clearing Code
  - Party Identifier
- 56: Intermediary Bank**
  - Tag Option (dropdown)
  - Clearing Code
  - Party Identifier
  - BIC
  - Address
- 57: Account With Institution**
  - Tag Option (dropdown)
  - Clearing Code
  - Party Identifier
  - BIC
  - Address
- 70: Remittance Information**
  - LBL\_LINE\_1
  - LBL\_LINE\_2
  - LBL\_LINE\_3
  - LBL\_LINE\_4
- 59: Ultimate Beneficiary**
  - Tag Option (dropdown)
  - Account Number
  - BIC
  - Address
- 77B: Regulatory Reporting Details**
  - Code
  - Country
  - LBL\_LINE\_1
  - LBL\_LINE\_2

You can specify the following fields for the transaction in this screen:

#### 23E: Instruction Codes

##### Instruction Code fields 1 - 4

Specify a standard Instruction code in each field and then input additional information preceded by “/”.

## **Charge Account Details**

### **Details of Charge**

Select any of the following Charge Whom types:

- OUR
- BEN
- SHA

### **Charge Account**

Specify the charge account number if it is required to be different from the Debit account.

### **Ordered Currency**

Specify the currency of the original ordered amount from the list of values.

### **Ordered Amount**

Specify the original Ordered Amount.

## **50: Instructing Party**

### **Tag Option**

Select the required tag option. The options are C and L.

### **BIC**

If tag option is selected as 'G' then specify the BIC of the ordering customer from the list of values.

### **Party Identifier**

Specify the Clearing code of the ASI.

## **50: Ordering Customer**

Specify Ordering Customer details for each transaction if the same are not specified in the header section of the screen.

### **Tag Option**

Select the required tag option. The options are F,G and H.

### **BIC**

If tag option is selected as 'G' then specify the BIC of the ordering customer from the list of values.

### **Code**

If tag option is selected as 'F' and Party Identifier needs to be specified using an Identifier code and Country code then specify or search and select the required Identifier code from the list of values.

### **Country Code**

If tag option is selected as 'F' and Party Identifier needs to be specified using an Identifier code and Country code then specify or search and select the required country code from the list of values.

### **Identifier**

Specify the party identifier as per the selected Identifier code.

### **Address**

If tag option is selected as 'F' or 'H' then specify the name and address of the ordering customer in 4 lines of up to 35 characters each. If tag option 'F' is selected, you can specify

name, address lines, and/or any of the following allowed details - date of birth, place of birth, country and town, customer identification number, national identity number and additional information to complete details given in one of the preceding 3 lines.

Given below are two of the different possible combinations of details that can be input in 4 lines of this Address field when tag option 'F' is selected.

Example1:

1/SMITH JOHN  
2/299, PARK AVENUE  
3/US/NEW YORK, NY 10017

Example 2:

1/PHILIPS MARK  
4/19720830  
5/BE/BRUSSELS

## **52: Account Service Institution**

Specify details of the Account Servicing Institution (ASI) for any transaction only if it is different from the Receiver and the same is not specified in the header section of the screen.

### **Tag Option**

Select the required tag option. The options are A and C.

### **Clearing Code**

Specify or search and select the clearing code identifier of the Account Servicing Institution (ASI) from the list of values.

### **Party Identifier**

Specify the Clearing code of the ASI.

### **BIC**

If tag option is selected as 'C' then specify the BIC of the ordering customer from the list of values.

## **56: Intermediary Bank**

### **Tag Option**

Select the required tag options. The options are A, C and D.

### **Clearing Code**

Specify or search and select the clearing code identifier from the list of values.

### **Party Identifier**

Specify the Clearing code of the Intermediary bank.

### **BIC**

If the tag option is selected as 'A' then specify or search and select the BIC of the Intermediary bank from the list of values.

### **Address**

If the tag option is selected as 'D' then specify the name and address of the Intermediary Bank.

## **57: Account With Institution**

### **Tag Option**

Select the required tag options. The options are A, C and D.

**Clearing Code**

Specify or search and select the clearing code identifier from the list of values.

**Party Identifier**

Specify the Clearing code of the Intermediary bank.

**BIC**

If the tag option is selected as 'A' then specify or search and select the BIC of the Intermediary bank from the list of values.

**Address**

If the tag option is selected as 'D' then specify the name and address of the Intermediary Bank.

**70: Remittance Information****Line 1 -4**

Specify the remittance details provided by the customer and specific to the transaction in the 4 lines up to 35 characters per line.

**59: Ultimate Beneficiary****Tag Option**

Select the required tag option. The available options are A and F as well as 'No Letter Option'.

**Account Number**

Specify the account number of the Beneficiary.

**BIC**

If the tag option is selected as 'A' then specify the BIC of the Beneficiary from the list of values.

**Address**

Specify the name and address of the Beneficiary in the 4 lines provided up to 35 characters per line.

If tag option 'F' is selected, you can specify name, address lines, and/or country and town, of the Beneficiary in the 4 lines of this Address field. Given below are two of the different possible combinations of details that can be input in these 4 lines when tag option 'F' is selected.

Example1:

1/SMITH JOHN  
2/299, PARK AVENUE  
3/US/NEW YORK, NY 10017

Example 2:

1/DEPT OF PROMOTION OF SPICY FISH  
1/CENTER FOR INTERNATIONALISATION  
1/OF COMMERCE AND BUSINESS  
3/CN

**77B: Regulatory Reporting Details**

Specify the statutory and/or regulatory information required by the authorities in the country of receiver or sender /originating customer.

**Code**

When the residence of either the ordering customer or the beneficiary customer is to be identified, one of the following codes should be input or selected from the list of values.

- BENEFRES
- ORDERRES

### Country

In addition to the Code, specify or search and select the Country code of the ordering customer or the beneficiary customer from the list of values.

### Line 1 - 3

Specify the required details of the regulatory information specific to the transaction in 3 lines with up to 35 characters in each line. This information can also be input without specifying the Code and Country.

## 3.2.2 Viewing Swift MT101 Outgoing Transaction Summary

You can invoke “Swift MT101 Outgoing Maintenance Summary” screen by typing ‘PXSM101’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Reference Number
- Host Code
- Customer Number
- Receiver
- Customer Specified Reference
- Message Index/Total

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria with the following details:

- Authorization Status
- Record Status
- Reference Number
- Host Code

- Customer Number
- Receiver
- Customer Specified Reference
- Requested Execution Date
- Message Index/Total

## 3.3 Incoming Transaction Input

### 3.3.1 Capturing Transaction Details

You can book an incoming SWIFT payment by providing input for the payment transaction in this screen. Input can be provided for a new transaction using the already saved template. Some Transaction fields are applicable only to the specific transfer type (Customer / Bank Bank transfer - Own Account).

You can invoke the 'Cross Border Incoming Transaction Input' screen by typing 'PXDITONL' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Specify the following details.

#### Branch Code

Displays the branch of the transaction.

#### Host Code

Displays the host code of the logged in user.

#### Source Code

This is defaulted to MANL by the system.

#### Transaction Reference Number

System displays auto-generated Transaction reference number. For more details on the format, refer the Payments Maintenance User Guide.

#### Unique Reference Number

The system displays the auto-generated unique reference number.

## Related Reference Number

After specifying Source code and clicking the Process (P) button, system generates and displays 10 digit reference numbers. The system generated value can be changed to any reference number desired by the user.

## Transfer Type

Select the transfer type of the transaction. Options available are as follows:

- Customer Transfer
- Bank Transfer
- Cover Transfer
- Bank Transfer Own A/c

## gpi Preferred

Check this box to indicate that this transaction is SWIFT GPI compliant.

## 3.3.2 Main Tab

Click the Main tab in the 'Cross Border Incoming Transaction Input' screen..

The screenshot shows the 'Cross Border Incoming Transaction Input' screen with the 'Main' tab selected. The interface is divided into several sections:

- Top Section:** Includes fields for 'Branch Code', 'Host Code', 'Source Code \* MANL', and 'Network'. To the right are 'Transaction Reference \*', 'User Reference', 'Source Reference', and 'Transfer Type \*' (a dropdown menu). There are also checkboxes for 'Incoming gpi' and 'gpi UETR'.
- Payment Details Section:** Contains fields for 'Booking Date', 'Instruction Date \*', 'Transfer Currency \*', 'Transaction Amount \*', 'Instructed Currency', 'Instructed Amount', 'Credit Account', 'Credit Account Currency', 'Credit Amount', 'Exchange Rate', and 'Sender Bank'. Below these are 'Debit Account', 'Debit Account Currency', 'Bank Operation Code' (set to 'CRED'), 'Banking Priority' (set to 'Normal'), and 'Charge Whom' (set to 'SHA').
- Ordering Customer Section (50):** Includes 'Party Identifier', 'BIC / Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Ordering Institution Section (52):** Includes 'Party Identifier', 'BIC / Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Beneficiary Institution Section (58):** Includes 'Party Identifier', 'BIC / Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Ultimate Beneficiary Section (59):** Includes 'Account', 'BIC / Name and Address 1', 'Address Line 2', 'Address Line 3', and 'Address Line 4'.
- Additional Details Section:** Includes 'Debit Value Date', 'Credit Value Date', and 'Message Date' (all with date pickers), and 'Debit Entry Date' and 'Credit Entry Date' (with date pickers).
- Bottom Section:** Includes 'Maker ID', 'Maker Date Stamp', 'Checker ID', 'Checker Date Stamp', 'Authorization Status', and an 'Exit' button.

Specify the following details.

## Payment Details

### Booking Date

Select the booking date of transaction from the adjoining calendar.

### Instruction Date

Select the customer advised Value Date of the transaction using the adjoining calendar widget.

### Activation Date

Specify the activation date of the transaction.

### Transfer Currency

Specify the currency in which the payment needs to be made. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

**Transaction Amount**

Transaction Amount is calculated by the system based on the 'Same As Transfer Currency' flag and Currency conversion if applicable.

**Instructed Currency**

Specify the currency of the amount instructed by the customer. Alternatively, you can select the currency from the option list. The list displays all valid currencies maintained in the system.

**Exchange Rate**

The exchange rate is applicable for cross-currency transactions. The transaction is considered as cross-currency transaction if for an incoming payment the debit account currency is different from the transfer currency.

**FX Reference**

Specify the foreign exchange reference.

**Debit Account**

Specify the debit account of the transaction. Alternatively, you can select the debit account from the option list. The list displays all valid accounts maintained in the system.

**Debit Account Currency**

The system displays the debit account currency based on the debit account selected.

**Credit Account**

Specify the credit account of the transaction. Alternatively, you can select the debit account from the option list. The list displays all valid accounts maintained in the system.

**Credit Account Currency**

The system displays the credit account currency based on the credit account selected.

**Credit Value Date**

Specify the Credit Value Date.

**Debit Value Date**

Specify the Debit Value Date.

**Message Date**

For outgoing transactions, the system computes the message date based on the credit value date and displays it here along with the cut-off time.

**Remarks**

Specify any Operations remark or additional info pertaining to this transaction.

**Bank Operation Code**

Select the bank operation code from the option list. Options available are as follows:

- CRED – Credit Transfer with No SWIFT Service Level
- CRTS – Credit Transfer for Test Purposes
- SPAY – Credit Transfer for SWIFT Pay Service Level
- SPRI – Credit Transfer for Priority Service Level
- SSTD – Credit Transfer for Standard Service Level

If no value is selected then system defaults this field value to "CRED".

---

**Note**

This is applicable only for customer transfers.

---

**Banking Priority**

Specify the priority of banking. Choose between Normal, Urgent and High.

**Charge Whom**

Specify the charge bearer for the transaction. The list displays the following values:

- OUR
- BEN
- SHA

**50:Ordering Customer**

The system displays the name and address of the customer ordering the transaction, based on the debit account selected.

This is applicable only for 'Customer Transfer' type of transaction. The ordering customer details including name and address are defaulted based on the debit account selected. However you can modify these details.

**52:Ordering Institution**

Specify the details of the financial institution that has ordered for the payment to be initiated.

**56: Intermediary Bank**

Specify the details of intermediary bank which is the correspondent bank of Account with institution.

You can capture below mentioned details of the intermediary bank here.

- Specify the correspondent account number in the first line starting with "/".
- Specify the bank identifier and bank code in the second and third lines. If the bank identifier is BIC then you can select the appropriate BIC code from the adjoining option list that displays all valid BICs maintained in the system.

You can also specify the Name and Address of the Intermediary bank instead of the BIC Code, in lines 4 to 7.

**57: Account with Institution**

Specify the financial institution at which the beneficiary maintains their account. The beneficiary can be a retail/corporate in Customer Transfers or a Bank in case of Bank Transfers. Input is mandatory for 'Customer Transfer' type of transactions.

- Specify the correspondent account number in the first line starting with "/".
- Specify the bank identifier and bank code in the second and third lines. If the bank identifier is BIC then you can select the appropriate BIC code from the adjoining option list that displays all valid BICs maintained in the system.
- You can also specify the Name and Address of the Intermediary bank instead of the BIC Code, in lines 4 to 7.

**58: Beneficiary Institution**

Specify the financial institution which is the ultimate recipient of the funds being transferred.

This is applicable only to Bank Transfers.

You can capture below mentioned details of the Beneficiary Institution here.

- Specify the account number in the first line starting with “/”
- Specify the BIC code in the second line. You can also select the appropriate BIC code from the adjoining option list that displays all valid BICs maintained in the system..
- You can also specify the Name and Address of the Beneficiary Institution instead of the BIC Code, in lines 3 to 5.

### **59: Ultimate Beneficiary**

Specify the details of the Ultimate Beneficiary of the payment. This field is available only for ‘Customer Transfer’ type of transactions.

You can capture below mentioned details of the Beneficiary here.

- In Line 1, specify the customer beneficiary account number to which the transaction amount should be credited. You can specify the IBAN of the account. Alternatively, you may search and select the account number using LOV if the beneficiary account is maintained with the bank, which is the case in Incoming payments. This field is available only for ‘Customer Transfer’ type of transactions.
- Specify the Name and Address of the Beneficiary in lines 2 to 5.
- Instead of the Name and Address, you can also specify the BIC code of the Beneficiary in line 2.

### **Receiver**

System derives the Receiver (bank) of the outgoing payment message as part of Payment chain building activity and populates the BIC code of this bank in this field.

This field is also populated on clicking Enrich button.

You may choose to override the system derived Receiver with a different BIC code and input the same over here. On save, system validates if a SWIFT message can be sent to the user specified Receiver BIC code.

### **Receiver of Cover**

System derives the Receiver of Cover (bank) of the incoming payment message as part of Payment chain building activity if a Cover message is required to be sent in addition to the payment messages. The BIC code of this bank is populated in this field.

This field is also populated on clicking Enrich button.

- You may choose to override the system derived Receiver of Cover with a different BIC code and input the same over here. On save, system validates if the user specified Receiver of Cover is a currency correspondent and a SWIFT message can be sent to this BIC code.

## **3.3.3 Additional Details Button**

You can capture additional information and view field values set by the system for the transaction.

You can invoke the 'Additional Details' sub-screen in Transaction Input by clicking the "Additional Details" link present at the bottom of the screen.

Specify the following details.

### **53: Sender Correspondent**

The system displays the Party Identifier, BIC code or details like Name and Address of the sender's correspondent through which the payment transaction should be routed. This value is populated after deriving the Payment chain as part of the processing. This BIC would be present in the Currency Correspondent maintenance for the Transfer currency.

### **54a: Receiver Correspondent**

The system displays the Party Identifier, BIC code or details like Name and Address of the branch of the receiver or another financial institution in which the funds are made available to the receiver. This value is populated after deriving the Payment chain as part of the processing. This BIC would be present in the Global Correspondent maintenance for the Transfer currency.

### **23E: Instruction Codes**

#### **Instruction Code 1 through to Instruction Code 6**

Specify a standard Instruction code in each field and then input additional information. Alternatively you can select the standard Instruction code type from the option list. The list displays all valid instruction codes maintained in the system.

#### **Transaction Type Code**

The system displays the applicable transaction type code for the transaction.

### **55: Third Reimbursement Institution**

The system displays the BIC code or details like Name and Address of the receiver's branch, when the funds are made available to this branch through a financial institution other than that indicated in Field 53. This value is populated after deriving the Payment chain as part of the processing. This BIC would be present in the Global Correspondent maintenance for the Transfer currency.

### **71G: Receiver charges**

If Charge Whom field in the Preferences section of the Main tab has a value of "OUR" then you can specify the Receiver's charges in case of 'Customer Transfer' if they are required to be included in the Settlement amount.

#### **Currency**

Specify the charge currency.

#### **Amount**

Specify the charge amount due to the receiver.

#### **Amount Collected**

The system populates this field based on the Receiver charges specified.

### **77B: Regulatory Reporting Details**

Specify the statutory and/or regulatory information required by the authorities in the country of receiver or sender. You should specify this information by specifying a regulatory code (placed between '/') followed by 2 character country code and followed by regulatory details. This information should be specified in up to 3 lines each containing 35 characters.

### **13C: Time Indication Details**

Specify the standard time indication related to the processing of the payment instruction. You should input the standard Time indication code (placed between '/') followed by Time, a sign (+ or -) and the Offset from UTC. Alternatively, you can select the time indication code from the option list. The list displays all valid time indications maintained in the system, which are CLSTIME, RNCTIME and SNDTIME.

### **70: Remittance Information**

Specify the Remittance Information details from fields 1 to 4.

### **71F: Sender Charges**

#### **Sender Charge Ccy 1 through to Sender Charge Ccy 6**

The system displays the charge currency of Sender's charges that are deducted from the Transfer amount by this bank (Sender) or by any of the previous banks in the payment chain. These charges are applicable in case of Customer Transfers and the Charge Whom field value selected is SHA or BEN.

#### **Sender charge Amount 1 through to Sender Charge Amount 6**

The system displays the amount of Sender's charges.

In case of an incoming Customer transfer message, each of the previous banks in the payment chain would have deducted charges from the Transfer amount and details of the same would be present in the message. The Charge currency and Charge amount of each of these charges would be populated in up to 6 sets of these fields in addition to the charges deducted by this bank

#### **Sender to Receiver Information**

Displays the details of Sender to Receiver information comprising BIC or Name and Address.

### **77T: Envelope Contents Details**

Specify the contents of the Envelope in the lines from 1 to 5.

### 3.3.4 Pricing Tab

You can view the charge amount computed by the system for each of the Pricing components of the Pricing code linked to the network code of the transaction. Click the 'Pricing' tab.

The screenshot shows a web application interface for the 'Pricing' tab. At the top, there is a navigation bar with 'Main' and 'Pricing' tabs. Below this is a table with the following columns: Pricing Component, Pricing Currency, Pricing Amount, Waived, Debit Currency, and Debit Amount. The table is currently empty. Below the table, there is a section titled 'Additional Details' which contains fields for Maker ID, Checker ID, Authorization Status, Maker Date Stamp, and Checker Date Stamp. An 'Exit' button is located in the bottom right corner of the 'Additional Details' section.

Specify the following details:

#### **Pricing Component**

The system displays each Pricing component of the Pricing code from the Pricing Code maintenance.

#### **Pricing Currency**

The system displays the Pricing currency of each Pricing component of the Pricing code.

#### **Pricing Amount**

The system displays the calculated Charge amount for each Pricing component of the Pricing code.

#### **Waived**

The system displays if charges for any Pricing component are waived in the Pricing maintenance.

#### **Debit Currency**

The system displays the currency of the Charge account to be debited for the charges.

#### **Debit Amount**

The system displays the Charge amount for each Pricing component debited to the charge account in Debit currency. If the Pricing currency is different from the Debit currency the calculated charges are converted to the Debit currency and populated in this field.

### 3.3.5 Viewing Cross Border Incoming Transaction Summary

You can view all the incoming SWIFT transactions created in the Host of the selected branch of the logged in user. You can also view transactions that are present in various Operations (Exception) queues. However, you cannot perform any operations.

You can invoke “Cross Border Incoming Transaction Summary” screen by typing “” in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

You can search using one or more of the following parameters.

- Source Code
- Transaction Reference Number
- Related Reference Number
- External Reference Number
- Authorization Status
- Contract Status
- Transfer Type
- Queue
- Instruction Date
- Booking Date
- Activation Date

Once you have specified the search parameters. Click ‘Search’ button. The system displays the records that match the search criteria containing the following details.

- Source Code
- Branch Code
- Transaction Reference Number
- Related Reference Number
- External Reference Number
- Authorization Status
- Contract Status
- Network
- Transfer Type
- Queue
- Instruction Date
- Transfer Currency

- From this screen, click Enter Query. The Transaction Reference field gets enabled which opens an LOV screen.
- Click the Fetch button and select the required value.
- Click Execute Query to populate the details of the transaction in the Cross Border Incoming Transaction View screen.

### 3.3.6.1 All Messages

Click the “All Messages” link in the transaction input screen to invoke this sub-screen.

The screenshot shows a web application window titled "All Messages". Inside the window, there is a header bar with "Execute Query" and a "Contract Reference" input field. Below this is a table with the following columns: DCN (marked with a red asterisk), Message Type, SWIFT Message Type, Direction, Value Date, Message Status, and Test Status. The table is currently empty. At the bottom right of the window is a "Cancel" button.

The system displays the following details in a grid form containing one or multiple rows

#### **Contract Reference**

Displays the contract (transaction) reference number.

#### **DCN**

Displays the unique DCN number assigned by the system to each generated message.

#### **Message Type**

Displays the system defined message type e.g. Cust Transfer, Cover etc.

#### **SWIFT Message Type**

Specify the SWIFT message type of the generated message e.g. MT103, MT202COV etc.

#### **Direction**

Displays if the message is outgoing or incoming.

#### **Media**

Displays the message generation date.

#### **Message Status**

The system displays the message status. e.g. Hand-off, Repair etc.

**Test Status**

The system displays the Test status of the message, which would generally be “Not Applicable”.

**Authorization Status**

The system displays the authorization status. i.e. Authorized or Unauthorized. For incoming messages which fall into Repair or a user defined queue, this status may be “Unauthorized” if the message has been manually repaired and awaiting authorization.

**Acknowledgment Status**

The system displays whether Acknowledgement from SWIFT (ACK/NAK) is required or not for the outgoing SWIFT message. This value is displayed based on the message level configuration.

**Media**

The system displays the media of the message which is “SWIFT”.

**Receiver/Sender**

Displays the Customer ID of the Receiver of an outgoing SWIFT message or of the Sender of an incoming SWIFT message.

**Receiver Name**

Displays the name of the receiver or sender.

**PDE Flag**

Displays if PDE trailer is included in the incoming or outgoing message.

**3.3.6.2 Message Details**

You can select a particular message in the All Messages summary sub-screen (explained above) and view the message details in this screen.

Displays the following details for the selected message.

**Reference Number**

Specify the transaction reference number.

**DCN**

The system displays DCN of the message.

**ESN/Version Number**

The system displays the version number of the message.

**Receiver/Sender**

The system displays receiver/sender of the message.

**Message Type**

The system displays system defined message type.

**SWIFT Message Type**

The system displays SWIFT message type.

**Message**

The system displays details of the actual message including BIC and Name and Address details of the Sender and Receiver as well as the fields and values populated in the message body.

### Remarks

Specify a comments or remarks for the message.

### Reject Reason

The system displays the reject reason code.

### Message Trailers

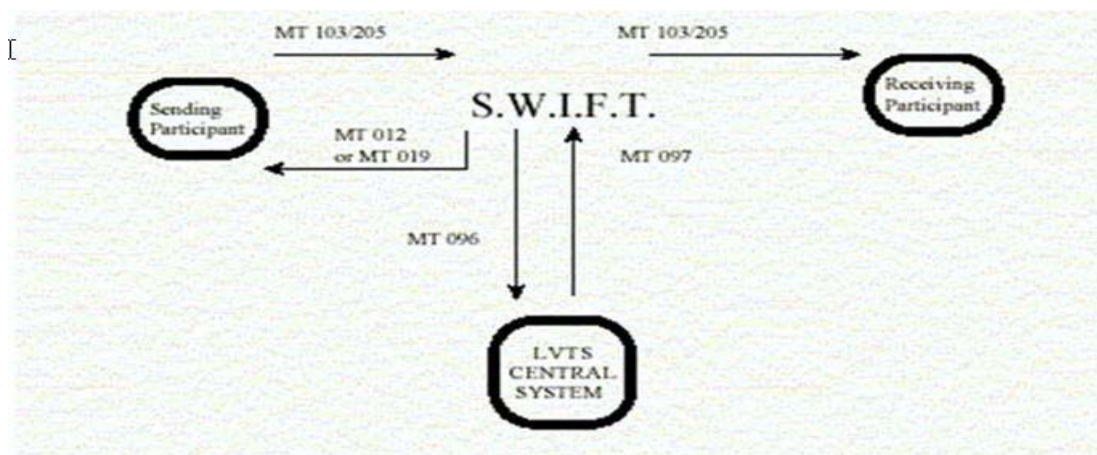

The system displays the message trailers.

## 3.4 Facility to Generate MT103 and MT205 in LVTS Format

- For all Canadian dollar payment messages with the value date as today's date should be sent as a LVTS message. LVTS is a Canadian payment system used for large value settlements. LVTS accepts MT103 and MT205. The LVTS messages need to have a user header in the message header. Following is the format of the user header:

**{3 :{ 103: CAD} {108 :< Tranche No>}}**

- In MT103 & 205 messages field 103 should always contain CAD and field 108 should have the tranche number used for the payment. LVTS payments can be in Tranche 1 or 2 or R. Tranche 2 is by default. If Tranche needs to be changed for a payment message, then it will be changed manually before releasing the payment message in SWIFT alliance.
- The presence of the user header in the message enables Y-copy supported by SWIFT. The following diagram illustrates the flow of payment messages between two LVTS members:

- MT103 – Customer Payment Message
- MT205 – Inter-Bank Payment Message
- MT096 – Partial message sent to LVTS by SWIFT
- MT097 – Message from LVTS to SWIFT containing the payment
- MT012 – Acceptance notice sent to sender
- MT019 – Reject notice sent to sender

## 3.5 Manual Liquidation of Consolidated Transaction Batch

A consolidated batch of transactions can be manually liquidated at any time before the Cut-off time by a user of the branch where the transaction was created. This would be enabled through a separate screen called Outgoing Consolidated Queue.

---

**Note**

This screen is applicable to MT102, MT201 and MT203 consolidated batches that are pending liquidation.

---

### 3.5.1 Transaction Consol Summary

This Summary screen displays all the batches with different statuses like Closed, Open, Reversed etc. From this screen ,you can query for the desired batch and view a a summary of the batch including details of the individual (child) transactions in the consolidated batch.

You can invoke “Transaction Consol Summary” screen by typing ‘PXSCONSL’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

Accounting Entries	You can view the generated consol Accounting Entries for the selected consolidated batch whose Consol Status is Closed.

## 3.6 STP of Incoming Messages

This section contains the following topics:

- [Section 3.6.1, "STP of Incoming Messages"](#)
- [Section 3.6.2, "Processing of MT200 message"](#)
- [Section 3.6.3, "Processing Of MT203 message"](#)
- [Section 3.6.4, "Processing of MT205 message"](#)
- [Section 3.6.5, "Cover Matching"](#)
- [Section 3.6.6, "Charge Claim Processing"](#)

### 3.6.1 STP of Incoming Messages

Incoming SWIFT payment and non-payment messages are received by the EMS message sub-system of Oracle FLEXCUBE Payments and stored in the incoming directory. The STP function then reads and processes the messages.

The system first resolves the source code of the transaction and routes it to a particular system (e.g. SWIF, COVR) or user defined queue based on the Cover Queue Rule maintenance. For messages routed to SWIF queue, the STP function then creates transactions of the following types for the payment messages:

- Incoming Customer Transfer
- Incoming Bank transfer
- Incoming Bank Transfer for Own Accounts
- Outgoing Customer Transfer (in case of Incoming pass-through payment)
- Outgoing Customer Transfer with cover (in case of Incoming pass-through payment)
- Outgoing Bank Transfer (in case of Incoming pass-through payment)

In case of any exceptions during the STP of an incoming message, the transaction's Repair Type is marked as 'Yes'.

The Transaction is auto-authorized.

### **3.6.2 Processing of MT200 message**

On receipt of an incoming MT200 message, a Transaction is booked with Transfer type as 'Bank Transfer'. An outgoing bank transfer message (i.e. MT202) is generated as part of the message generation activity of this Transaction.

### **3.6.3 Processing Of MT203 message**

STP job splits incoming MT203 message into multiple MT202 messages. Then these MT202 messages are again picked up by another STP job for processing. MT202 messages are processed as normal bank transfer as per the existing functionality.

STP job performs the below mentioned validations before splitting an MT203 message:-

- The amount in field 19 must be equal to the sum of the amounts in all occurrences of field 32B.
- The currency code in the amount field 32B should be the same for all occurrences of this field in the message.
- The repetitive sequence must appear at least twice but not more than ten times.
- If field 56a is present in a transaction, then, field 57a should also be present.

### **3.6.4 Processing of MT205 message**

STP process for Payments module supports upload of incoming MT205 message.

For an incoming MT205, a Transaction is booked in PX with Transfer type as 'Bank Transfer' and processed similar to an incoming MT202 message.

### **3.6.5 Cover Matching**

Cover Matching is supported for MT103 with Cover messages of MT202COV, MT205COV or MT910. Similarly, Cover matching is supported for MT202 with another MT202 as Cover message.

Based on the rule condition mentioned in the Cover Queue Rule maintenance, an incoming payment message (MT103/MT202) is routed to a 'COVR' queue. All payment messages in this queue await Cover matching. Incoming Cover messages are also routed to this queue based on the Cover queue rule condition.

A job tries to match the payment messages with the cover messages based on the following criteria for cover matching is

- Field 20 of MT103 = Field 21 of MT202COV or MT910
- Amount and Currency
- Value date

After Cover matching is done the payment message gets picked up for STP

### **3.6.6 Charge Claim Processing**

When an incoming MT103 payment is received having Charge Whom field value as "OUR" and no charges are included in the Settlement amount (i.e. 71G is not present), after the payment is processed (transaction is Liquidated), system automatically generates a MT191 Charge Claim message and sends it to the Sender of the MT103.

Similarly, when an outgoing MT103 with Charge Whom specified as "OUR" with no 71G is sent then a MT191 Charge Claim may be received later from the Receiver of MT103. The

incoming MT191 is processed to send an outgoing MT202 Charge payment. This is achieved in one of the two ways mentioned below.

Auto-STP of incoming MT191 to generate and send MT202

Manual approval of Charge Claim leading to STP of Bank Transfer and generation of MT202

### 3.6.7 Viewing Charge Claim Summary

You can invoke the 'Charge Claim' screen by typing 'PXSCHGCM' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

#### Charge Claim Details

The system displays the following fields based in the MT191 message.

##### Reference No

Displays the reference number (field 20) of the MT 191 message.

##### Message Date

Displays the date on which the MT 191 message was sent.

##### Related Reference Number

Displays the field 20 reference of the MT103 (Transaction Reference number) sent earlier.

##### Claim Currency

Indicates the currency of claim amount.

##### DCN

Displays the unique DCN number assigned by the system to the incoming MT191.

##### Claim Amount

Displays the amount claimed in the MT191.

##### Branch Code

Displays the branch code of the identified processing branch of the MT191.

##### Sender

Displays the BIC of Sender of MT191 message.

##### 52: Ordering Institution

Displays the Ordering Institution details if mentioned in the MT191 message.

##### 57: Account With Institution

Displays the Account with Institution details if mentioned in the message.

### **71B: Charge Details**

Displays the Charge Details from the MT191 message.

### **72: Sender To Receiver Info**

Indicates the sender to receiver details.

## **Bank Transfer Details**

### **Instruction Date**

Defaults the message date of the MT191 as the instruction date. This is editable and you can specify the current date or a future date.

### **Transaction currency**

Defaults the currency of the Claimed amount in MT191. This is editable and you can specify any other currency if required.

### **Debit Account**

Defaults the GL code (if maintained) from the Currency Correspondent maintenance for the Sender of MT191. This is editable and you can specify any GL code using the LOV.

### **Transaction Amount**

Defaults the claimed amount in the MT191 message. This is editable and you can specify a different amount.

### **Charge Payment Sent**

Indicates whether the Charge Payment was sent or not.

### **Generated Reference Number**

Displays the generated reference number of the outgoing Charge payment transaction after it is auto created on approval of this Charge Claim record.

The following operations are available in this screen

<b>Operation</b>	<b>Functions</b>
Unlock	Helps you to input or modify the values of editable fields of Charge Claim detail record and then save the record.
Authorize	You can authorize the modified or un-edited Charge Claim record so that system can auto-create the Bank Transfer transaction and process it.  Authorization should be done by a user different from the one who modified the Charge Claim record.
Enter Query	When you directly launch this details screen from the menu or using the Function Id then you can click this link to input a Charge Claim Reference number and view its details.'

## **3.7 Common Group Messages**

### **Usage of this screen**

The Common Group Messages screen is used to manually initiate outward Common Group Messages. The following Common Group Messages like can be manually initiated from this screen:

- MT190, MT290– Advice of charges

- MT191, MT291 – Request for charges
- MT192, MT292 – Request for cancellation
- MT195, MT295 – Queries
- MT196, MT296 – Answers
- MT198, MT298 – Proprietary Message
- MT199, MT299 – Free Format Message

This message types are exchanged between banks for investigations regarding payment messages and initiating non-value requests like cancellation.

### 3.7.1 **Advice of Charges**

You can invoke “Advice of Charges” screen by typing ‘PXDCMN90’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following details.

#### **Branch Code**

Displays the selected branch of the logged-in user.

#### **Reference Number**

Displays the Reference Number by default.

#### **Receiver**

Specify the Receiver from the list of values.

#### **Receiver Name**

The system displays the name of the Receiver upon the selection of Receiver.

#### **SWIFT Message Type**

Specify the SWIFT Message Type from the list of values.

#### **Related Reference**

Specify the Related Reference Number from the list of values.

#### **Account Identification(25)**

Specify the account from the list of values.

**Value Date**

Specify the Value Date.

**Currency**

Specify the Currency from the list of values.

**Amount**

Specify the Amount.

**Ordering Institution(52)**

Specify the Ordering Institution details.

**Details of Charges(71B)**

Specify the Details of Charges(71B) details.

**Sender to Receiver Information(72)**

Specify the Sender to Receiver Information(72) details.

### 3.7.2 Viewing Advice of Charges Summary

You can invoke “Advice of Charges Summary” screen by typing ‘PXSCMN90’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

#### Branch Code

Displays the selected branch of the logged-in user.

#### Host Code

Displays the host code of the selected branch of the logged-in user.

#### Reference No

Displays the reference number of the generated Common Group message when viewed in the Query mode.

#### Receiver

Specify or search and select the BIC code of the bank which is desired to be the Receiver of the generated Common Group message.

#### Name of the Receiver

Displays the name of the bank corresponding to the selected BIC.

#### SWIFT Message Type

Select the required Common Group message type. The available values for selection include the following:

- 192
- 292
- 392
- 492
- 592
- 692
- 792
- 892
- 992

Specify or search and select the transaction (contract) reference number of the associated customer or bank transfer transaction.

Specify the following details of the original (referenced) outward/inward message.

- Drop-down – Select either 'S' or 'R' depending on whether original message being referred was sent or received.
- 1st text-box – MT Number – Specify the MT number of the original message e.g. 103, 202, 102 etc.
- 2nd text-box – Date – Specify or select date (from calendar LOV) of original message
- 3rd text-box – Session Number – Specify Session number (1st 4 digits from the last 10 digits in Block1 of ACK received) of original message
- 4th text-box – ISIN (Input Sequence Number) – Specify ISIN (last 6 digits from the last 10 characters in Block1 of ACK received) of original message.

Specify narrative text for describing the original message, or all transactions in the original multi-credit Customer/Bank transfer message that is being referenced by this Common Group message. Alternatively, this field can also be used for specifying free format text in case of MT199/MT299. This field can contain up to a 1750 characters.

Specify at least the mandatory fields of the original message that is being referenced by this Common Group message. This field can be input instead of 'Narrative 79' field but never both.

You can invoke “Request for Cancellation Summary” screen by typing ‘PXSCMN92’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

### 3.7.11 Queries

You can invoke "Queries" screen by typing 'PXDCMN95' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following details.

#### Branch Code

Displays the selected branch of the logged-in user.

#### Host Code

Displays the host code of the selected branch of the logged-in user.

#### Receiver

Specify or search and select the BIC code of the bank which is desired to be the Receiver of the generated Common Group message.

#### SWIFT Message Type

Select the required Common Group message type. The available values for selection include the following:

- 195
- 295

- 395
- 495
- 595
- 695
- 795
- 895
- 995

#### **Related Ref(21)**

Specify or search and select the transaction (contract) reference number of the associated customer or bank transfer transaction.

#### **Related Message**

Specify the related SWIFT message.

#### **MT and Date of the Original Message**

Specify the following details of the original (referenced) outward/inward message.

- Drop-down – Select either “11S” or “11R” depending on whether original message being referred was sent or received.
- 1st text-box – MT Number – Specify the MT number of the original message e.g. 103, 202, 102 etc.
- 2nd text-box – Date – Specify or select date (from calendar LOV) of original message
- 3rd text-box – Session Number – Specify Session number (1st 4 digits from the last 10 digits in Block1 of ACK received) of original message
- 4th text-box – ISIN (Input Sequence Number) – Specify ISIN (last 6 digits from the last 10 characters in Block1 of ACK received) of original message.

#### **Queries**

Specify or search and select (using LOV) a standard Query code. You can then input additional text or query following the selected Query code, You may specify upto 6 different queries in each of the 6 text boxes.

#### **Narrative (77A)**

Specify additional details about the Queries or Answers input in one of the above mentioned fields. The Narrative text can contain up to 700 characters.

#### **Narrative (79)**

Specify narrative text for describing the original message, or all transactions in the original multi-credit Customer/Bank transfer message that is being referenced by this Common Group message. Alternatively, this field can also be used for specifying free format text in case of MT199/MT299. This field can contain up to a 1750 characters.

#### **Copy of at least the Mandatory Fields of the Original Message**

Specify at least the mandatory fields of the original message that is being referenced by this Common Group message. This field can be input instead of 'Narrative 79' field but never both.

### 3.7.12 Viewing Queries Summary

You can invoke “Queries Summary” screen by typing ‘PXSCMN95’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

### 3.7.13 Answers

You can invoke 'Answers' screen by typing 'PXDCMN96' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'Answers' screen with the following fields and controls:

- Branch Code**: Input field with **Reference No \*** below it.
- Host Code**: Input field with **Receiver \*** below it.
- Receiver Name**: Input field.
- SWIFT Message Type \***: Input field.
- Related Ref(21) \***: Input field with an **Enrich** button.
- MT and Original Message(11a)**: Input field with a dropdown menu and **dd-MMM-yyyy** text.
- Answers(76) \***: Four empty lines for text entry.
- Narrative(77A)**: Input field.
- Narrative(79)**: Input field.
- Copy of at least the Mandatory Fields of the Original Message**: Input field.
- Status Bar**: Contains **Maker**, **Date Time:**, **Mod No**, **Record Status**, and an **Exit** button.

Specify the following details.

#### **Branch Code**

Displays the selected branch of the logged-in user.

#### **Host Code**

Displays the host code of the selected branch of the logged-in user.

#### **Receiver**

Specify or search and select the BIC code of the bank which is desired to be the Receiver of the generated Common Group message.

#### **SWIFT Message Type**

Select the required Common Group message type. The available values for selection include the following:

- 196
- 296
- 396
- 496
- 596
- 696
- 796
- 896
- 996

#### **Related Ref(21)**

Specify or search and select the transaction (contract) reference number of the associated customer or bank transfer transaction.

#### **Related Message**

Specify the related SWIFT message.

#### **MT and Date of the Original Message**

Specify the following details of the original (referenced) outward/inward message.

- Drop-down – Select either “11S” or “11R” depending on whether original message being referred was sent or received.
- 1st text-box – MT Number – Specify the MT number of the original message e.g. 103, 202, 102 etc.
- 2nd text-box – Date – Specify or select date (from calendar LOV) of original message
- 3rd text-box – Session Number – Specify Session number (1st 4 digits from the last 10 digits in Block1 of ACK received) of original message
- 4th text-box – ISIN (Input Sequence Number) – Specify ISIN (last 6 digits from the last 10 characters in Block1 of ACK received) of original message.

### Queries

Specify or search and select (using LOV) a standard Query code. You can then input additional text or query following the selected Query code, You may specify upto 6 different queries in each of the 6 text boxes.

### Narrative (77A)

Specify additional details about the Queries or Answers input in one of the above mentioned fields. The Narrative text can contain up to 700 characters.

### Narrative (79)

Specify narrative text for describing the original message, or all transactions in the original multi-credit Customer/Bank transfer message that is being referenced by this Common Group message. Alternatively, this field can also be used for specifying free format text in case of MT199/MT299. This field can contain up to a 1750 characters.

### Copy of at least the Mandatory Fields of the Original Message

Specify at least the mandatory fields of the original message that is being referenced by this Common Group message. This field can be input instead of ‘Narrative 79’ field but never both.

## 3.7.14 Viewing Answers Summary

You can invoke “Answers Summary” screen by typing ‘PXSCMN96’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Branch Code
- Host Code

- Receiver
- SWIFT Message Type
- Reference Number
- Related Ref(21)

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria for the following:

- Authorization Status
- Record Status
- Branch Code
- Host Code
- Receiver
- SWIFT Message Type
- Reference Number
- Related Ref(21)

### **3.7.15 Free Format Message – MT99x**

Screen PXDCMN99 supports booking of the following common group messages:

- MT991
- MT992
- MT995
- MT996
- MT998
- MT999

System will allow user to input the Tag 21-Related Reference. On save & authorize system will generate the message and handoff to EMS for sending to SWIFT network.

User will be able to view the outgoing message in the outgoing message browser (PMSOUTBR)

System will also support processing of incoming MT9xx messages

You can view the Free Format Messages generated using the screen PXSCMN99.

## **3.8 103 Remit message processing**

### **3.8.1 Support Outgoing MT103 Remit**

System supports generation of outgoing MT103 Remit message. MT103 Remit message would be generated if the below mentioned conditions are satisfied:

- Tag 77T details are present
- 'Remit Member' flag must be checked for both sender and receiver BIC
- Tag 70 details are not present

The system will throw error and the transaction will not be saved in the below situations:

- If tag 77T details & tag 70 details both are present
- If tag 77T details are present but 'Remit Member' flag is unchecked for sender and/or receiver.

- If tag 77T details are present and 'Remit Member' flag is checked for sender and/or receiver BIC but tag 70 details is also present

You can view outgoing MT103 Remit message details on the Outgoing Message Browser screen and on the Messages sub-screen of the Cross Border Outgoing Payment Transaction view screen.

### 3.8.2 **Support Incoming MT103 Remit**

System will support processing of incoming MT103 Remit message. MT103 Remit message would be generated if the below mentioned conditions are satisfied:

- 'Remit Member' flag must be checked for both sender and receiver BIC

Processing of MT103 Remit message will be same as MT103 message. You can view the contents of an incoming MT103 Remit message details on the Incoming Message Browser screen and on the Messages sub-screen of the Cross Border Incoming Payment Transaction view screen

A consolidated batch of transactions can be manually liquidated at any time before the Cut-off time by a user of the branch where the transaction was created. This is enabled through a separate screen called Outgoing Consolidated Queue.

A new queue called "Multi Credit Consolidation Queue" will be available in the system that would maintain all consolidated pool of transactions. The same can be queried, viewed and auctioned from the above mentioned screen.

The purpose of the global payments innovation (gpi) initiative is to improve the customer experience in cross-border payments by increasing the speed, transparency, and end-to-end tracking of cross-border payments. SWIFT is implementing a new service level agreement (SLA) tying the gpi participants to a set of standards promoting transparency of fees, improved settlement timing, and data flow.

## 3.9 **SWIFT GPI**

- SWIFT gpi changes done for cross-border payments enables the following:
  - Maintenance for bilateral gpi agreement with correspondent banks for currency-wise cut-off time specifications
  - Maintenance for correspondent bank charges
  - Marking of gpi enables transactions as part of processing based on maintenances and directory details
  - Pricing requirements
- Incoming/outgoing MT 103 handling between gpi enabled banks
  - Outgoing message -Block 3 –Tags 111& 121 population
  - Generation & population of UETR Unique End to End Transaction Reference based on IETF's RFC 4122 Version 4 of generation algorithm
  - Straight through processing of incoming MT 103 messages received with gpi header
- Handling of incoming/outgoing MT 199 confirmation messages with
  - gpi related status code and reject reason code population
- Upload of gpi Directory (in SWIFTRef Reach Plus directory format)

### 3.9.1 **Outgoing gpi payment Processing**

- During processing of an outgoing non-RTGS SWIFT payment, if gpi Preferred flag is checked at transaction level, then system validates:
  - Processing branch BIC and currency is a gpi member.
  - Receiver BIC and transaction currency is a gpi member and can act as correspondent or intermediary based on gpi directory information
  - Sender to Receiver agreement is present and *gpi enabled* flag is checked at the agreement level

If the above conditions are satisfied, the transaction is stamped as 'gpi Enabled' and processed accordingly.

- In pass through case, if the inward message is gpi Enabled, pass through outgoing message generation will be tried considering gpi Preferred as Y. If the gpi validations, as specified in outgoing message generation, are succeeded, then pass through outgoing message is also stamped as outward gpi Enabled.
- For the gpi outgoing transaction (originating from us) if the charge bearer is OUR, then system will populate 71G from *gpi Receiver Charge* field maintained in Sender to Receiver agreement screen for the receiver BIC and the transaction currency. Population of 71G is done during processing of transaction charges (during enrichment or during transaction processing). User can modify the receiver charges from the input screen
- For outgoing gpi Customer Transfer, MT103 message will be generated with block 3 header with tag 111 & 121
  - Value of Tag 111 is populated as '001'
  - Value of Tag 121 is populated with UETR generated for the transaction. For pass through transaction, the UETR received in the incoming message is carried forward.

### 3.9.2 **Incoming gpi payment Processing**

- For inward gpi message, the transaction is processed as an Incoming gpi transaction if the receiver BIC is a gpi member and if the message has gpi tags in Block 3. Else it is processed as a normal incoming swift payment.

### 3.9.3 **Charge Processing**

- For Incoming and outgoing gpi SWIFT transactions system will calculate the charges based on the gpi Price Code maintained in the network currency preferences

### 3.9.4 **MT199 Messages**

- Processing of pass through outgoing payment and incoming payment generates outgoing MT199 message
- MT199 is dispatched to the Tracker BIC TRCKCHZZ if the transaction is successful.
- Incoming MT199 is uploaded to daily Message In data store is linked to the original MT103 gpi contract

### 3.9.5 GPI Directory Maintenance

You can invoke the 'GPI Directory' screen by typing 'PMDGPIDR' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. You can query the records uploaded..

SWIFT gpi Directory Maintenance

Enter Query

Participant ID \* Participant Name

ID Type Cutoff Day

Platform Local Time Zone

Service Identification Act As Intermediary

Service Name Reachable Through \*

Country Code Channel Type \*

Currency Code \* Start Date

Cutoff Time Stop Date

Maker Date Time: Mod No Record Status

Checker Date Time: Authorization Status

Exit

You can specify the following fields:

#### Participant ID

Participant's routing ID, reachable for receiving GPI payments is captured in this field.

#### PARTICIPANT\_NAME

Participant's Institution's name is displayed in this field.

#### ID Type

Specify the type of identifier used for Participant Id.

#### Cutoff Day

Cutoff Day is used for "illiquid" currencies, where the participant cannot obtain settlement of the payment on the same day or next day because there is no spot market for buying this currency.

#### Platform

The platform that distinguishes the gpi directory from other directories in the SWIFTRef Reach Plus distribution.

#### Local Time Zone

The time zone of the participant.

#### Service Identification

Specify the Service type identifier (for example, the value of field 111 in block 3 of the gpi MT 103).

#### Act As Intermediary

Y" (Yes) or "N" (No) flag specifying whether the participant acts as the gpi Intermediary Agent for gpi payments in a given currency and over a given REACHABLE THROUGH channel.

“Y” indicates that the participant will forward incoming MT 103s payments coming from a gpi participant through this channel and in this currency to an upcoming gpi participant, per the gpi business rules.

### Service Name

Specify the name of the service.

### Reachable Through

Specify the channel through which the participant is reachable for gpi payment instructions for one of its gpi currencies.

### Country Code

Specify the participant's two-character ISO country code.

### Channel Type

The type of the REACHABLE THROUGH channel.

### Participant ID

Specify the Participant's routing ID, reachable for receiving gpi payments.

### Currency Code

The three-character ISO currency, accepted in field 32A of incoming gpi MT 103 payments by the PARTICIPANT ID, or by the gpi intermediary (if any) where the participant can be reached for this currency.

### Start Date

Specify the future date when the record will become valid.

### Cutoff Time

Specify the Participant's public gpi cut-off time for gpi payments in this currency.

### Stop Date

Specify the future date until the record is valid.

## 3.9.6 Viewing GPI Directory Summary

You can invoke “GPI Directory Summary” screen by typing ‘PMSGPIDR’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'SWIFT gpi Directory Summary' application window. At the top, there is a search bar with 'Search', 'Advanced Search', 'Reset', and 'Clear All' buttons. Below the search bar, there is a 'Case Sensitive' checkbox. The main area contains several input fields: 'Authorization Status' (a dropdown menu), 'Participant ID' (a text field with a magnifying glass icon), 'Channel Type' (a text field with a magnifying glass icon), 'Record Status' (a dropdown menu), 'Currency Code' (a text field with a magnifying glass icon), and 'Reachable Through' (a text field with a magnifying glass icon). Below these fields, there is a 'Records per page' dropdown set to '15', a 'Go' button, and a 'Lock Columns' dropdown set to '0'. The table below has columns: 'Authorization Status', 'Record Status', 'Participant ID', 'Participant Name', 'ID Type', 'Platform', 'Service Identification', 'Service Name', and 'Country'. The table is currently empty. At the bottom right, there is an 'Exit' button.

You can search using one or more of the following parameters:

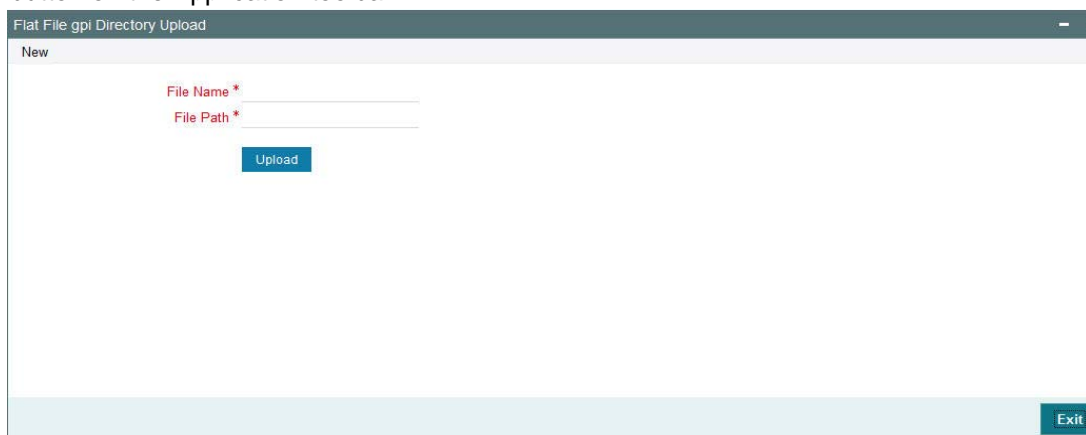

- Authorization Status
- Record Status
- Participant ID
- Currency Code
- Channel Type
- Reachable Through

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

- Authorization Status
- Record Status
- Participant ID
- Participant Name
- ID Type
- Platform
- Service Identification
- Service Name

### 3.9.7 **GPI Directory Upload**

You can invoke the 'GPI Directory Upload' screen by typing 'PMDGPIUP' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

You can specify the following fields:

#### **File Name**

Specify the name of the file.

#### **File Path**

Specify the path in the server where the file is uploaded.

## 3.10 **Sanctions check processing changes for Incoming payments**

Sanctions check is done before after Payment type resolution and before Accounts and Dates resolution.

### **3.11 Processing an Incoming Payment by debiting the specified account in field 53B**

- Field 53B indicates the Sender's account number, serviced by the Receiver, which is be used for reimbursement in the transfer.
- If an account is present in 53B of the incoming customer transfer & bank transfer then system debits account present in 53B and not from the currency correspondent maintenance.
- The account must be a vostro account and not a nostro account
- If system does not find a valid vostro account the incoming transaction goes to repair queue.

---
