# **1** Preface

This document describes the Tracking Changes available in Oracle FLEXCUBE Development Workbench for Universal Banking and guides the developers on how to use this feature

## 1.1 Audience

This document is intended for FLEXCUBE Application developers/users that use Development Workbench to develop various FLEXCUBE components.

To Use this manual, you need conceptual and working knowledge of the below:

Proficiency	Resources
FLEXCUBE Functional Architecture	Training programs from Oracle Financial Software Services.
FLEXCUBE Technical Architecture	Training programs from Oracle Financial Software Services.
FLEXCUBE Object Naming conventions	Development Overview Guide
Working knowledge of Web based applications	Self Acquired
Working knowledge of Oracle Database	Oracle Documentations
Working knowledge of PLSQL developer	Respective vendor documents
Working knowledge of PLSQL & SQL Language	Self Acquired
Working knowledge of XML files	Self Acquired

# 2 Introduction

## 2.1 How to use this Guide

The information in this document includes:

- <u>Chapter 2 , "Introduction"</u>
- <u>Chapter 3 , "View Changes "</u>
- <u>Chapter 4 , "Change Report"</u>

# 3 View Changes

View Changes allows the developer to see what exact change has been done in the radxml as part of the various nodes in the Workbench across different releases.

Track changes will show various changes done in each node in the radxml. It will highlight the nodes through the color. It shows the modified Data Sources, Data Source Fields, LOVs, Data Blocks, Block Fields, Call forms etc in Blue Color. And it shows the newly added Data Sources, Data Source Fields, LOVs, Data Blocks, Block Fields, Call forms etc in Green Color.

The main page of View changes looks like function generation page. Here in this page user is allowed to load a radxml. Then Workbench will show the all the changes done in the radxml across the release and release type accordingly with two different colors.

Blue indicates modified Green indicates new.

So using View changes in Development Workbench, user can easily identify the changes done in the radxmls across releases Across the release and release type.

## 3.1 Process Steps

The starting page of the View changes will have only load button enabled and all the other buttons will be disabled at the beginning.

Fig 4.0 Development Workbench - View Changes link.

Fig 4.2 Development Workbench - View Changes page.

This page will allow user to load the radxml to view the changes in the radxml across releases and release types.

Workbench allows viewing the changes done as part of Child or Cluster or Custom Release. Upon loading the Cluster or Custom or Child RAD xml, it shows the Modifications done as part Of Cluster or Custom or Child.

#### To load the radxml.

Fig 4.3 View Changes - loading radxml.

After loading the radxml one small window will pop up and will notify the details of the function id Like Function Type, Release Type.

Figure notifies that changes done in the radxml as part of Cluster Release will be highlighted

Fig 4.4 View Changes – Notifying the release type in which changes done

This will give brief details of what are the changes shown according to the release type. After loading the function id , Workbench will show the screen in the below format with blue and green accordingly.

View Changes				_ ×
				🔚 🗶 🔳 🖓 🇐 🔿
Action Load  Function Id FTDREAS Save XML Path FTDREAS_RA	Function Type Parent Parent Function BROWSE Parent Xml		Function Category Header Template Footer Template	None -
Search	Block Field Properties			- 🛛 🟹 🗐 🤺
Preferences DataSource DataSource DataSource DataSource Devent_DATE DataBlocks DataBloc	Field Name * MODULE Field Label LBL_MODULE DataSource CSTBS_CONTRACT_EVEN Column Name * MODULE Data Type * Varchar2 ~ Display Type Parent Field Related Block Related Field LOV Name Fieldset Name FST_REASSIGN Custom Attributes Events Related Field	XSD Tag XSD Annotation Field Size Maximum Length Minimum Value Maximum Decimals TextArea Rows TextArea Columns Default Value Preview Value Mask Id		Required         Visible         Read Only         Calender Text         Popup Edit Required         Uppercase Only         LOV validation         Required         Input by LOV Only         Not Required In Xsd         Report Parameter
	Attribute Name	Attribute Value	Active	Position

This will show the changes in the colors blue and green. Blue indicates modified and green indicates new, so in this function id.

One data source is modified (in blue color) while one block is newly added (in green color) as part of cluster release

# 4 Change Report

Change Report allows us to view the changes in the provided base and source list of radxml's, helps to get the changes done in the two radxml's across releases and release types.

View Changes Report allows the developer to see what exact change has been done in the radxml's as part of the various nodes in the Development Workbench across two different releases or release types.

It is generates reports based on two formats **Comparison Types:** 

- 1. Function specific: Compares Radxml's Based on the function name
- 2. Parent child: Compares Radxml's Based on the parent child Relation

These are the nodes which are compared and report is generated based on the differences found in these below nodes of the two radxml's given in the list Radxml's.

PREFERENCES, MENU\_DETAILS, DATASOURCES, COLUMNS, LOVS LOV\_DETAILS, DATA\_BLOCKS, BLOCK\_FIELDS, DATASOURCES\_ATTACHED, CUSTOM\_ATTRIBUTES, LOV\_RETURN\_FIELDS, LOV\_BIND\_VARS, FIELD\_EVENTS, LOV\_OFF\_LINE\_BIND\_VARS, LOV\_OFF\_LINE\_RETURN\_FIELDS, SCREENS, SCREEN\_ARGUMENTS, TABS, SECTIONS, PARTITIONS, FIELDSETS, FIELDSET\_FIELDS, SUMMARY, SUMMARY\_DETAILS, LAUNCHFORMS, CALLFORMS, ACTIONS, WEB\_SERVICES.

## 4.1 Process Steps

View Changes Report process is explained taking STDCUSAC as example From FCUBS\_11.3.0 and FCUBS\_11.4.0 Releases. Click on View Change Report Node from Development Workbench landing page.

Fig 4.1.1: Development Workbench Landing Page

The following window will be launched

Vi	ew Changes Excel				_ ×

					~
				Genera	ate Close

Fig 4.1.2: Development Workbench View Changes Report Screen

**Source File List:** Browse and select the text file containing source file list.

Administration     Function Generation     Screen Customizer     Tracking Changes     View Changes     Change Report     Notification Triggers     Notifications     Bulk Generation     Excel Template Generation     Refresh	View Changes Excel Source Ede Ltd Upload Upload File	BiROWSE Base File List Fieldsett Order Ch Order Ch Order Ch Order Ch Order Ch	Changes des Changes
<ul> <li>Web Sevices</li> <li>Trax</li> <li>Bick Detail Upload</li> <li>Test Case Definition</li> <li>Runchat Definition</li> <li>Test Case Data Upload</li> <li>Create Request</li> <li>Test Case Data Bulk Upload</li> <li>Test Case Data Bulk Upload</li> <li>Execution Report</li> <li>Generic Interface Formats</li> <li>Sql Editor</li> <li>Purge Generation</li> </ul>		Computer System (C) Desktop	<ul> <li>4y Search 113</li> <li>BE • I •</li> <li>Date modified Type</li> <li>9/6/2013 11:17 AM TXT File</li> <li>2/11/2011 3:47 PM XML File</li> <li>All Files (*.*)</li> <li>Open Cancel</li> </ul>

Fig 4.1.3: Selecting source file list text file for View Changes Report

Source File list is a text file which contains the absolute path of all the radxml's to be compared.

The figure above shows the content of the source.txt file .Here STDCUSAC is the source radxml which has to be compared.

If View Changes Report of more than one function\_id is required, absolute path of each radxml has to be specified; each in a new line

Base File List: Browse and select the text file containing base file list

Fig 4.1.5: Selecting base file list text file for View Changes Report

Base File list is a text file which contains the absolute path of all the base radxml's to be Compared (here STDCUSAC is the base radxml)

If View Changes Report of more than one function\_id is required, absolute path of each base radxml has to be specified; each in a new line

	€					P	

Fig 4.1.6: Content of base.txt file

**File Location:** Choose file location as client if the path provided is in the client machine. **Comparison Type:** Choose Comparison type as Function Specific.

**Select Changes:** Check if required to compare the selected nodes also.

Click on Generate button on lower left portion of the screen and wait for the system to do the process.

Process time will vary depending on the number of files provided, size of each files etc

Fig 4.1.7: File Status after View Changes Report

After Completion of the process, status will be shown in the screen. File status will be generated successfully if comparison is successful.

#### **Generated Files:**

1) **Excel Report of Changes:** A war file named RAD will be created and will be shown after successful process of comparing, which will contain Excel files for the particular source radxml's.

PANDETIP\_FRONTEND\_LOG.txt

- 2) Log Files : Following log files will be generated
  - i) View Comparison Log: This contains the status of all the files Compared.
  - ii) View Comparison Report: This file can be used for troubleshooting.

All the nodes will be compared and will be painted in the excel sheet based upon the values of base and source list of radxml's, the values will be having 3 statuses

#### NEW, MODIIFED, DELETED.

Based on this status old and new values will be shown in the view changes report.

## 4.2 Functionality Demonstration

In the above View Changes Report process, **STDCUSAC** is compared with the latest **STDCUSAC**. The figure below shows the comparison of STDCUSAC (**FCUBS\_11.3.0**) and STDCUSAC (**FCUBS\_11.4.0**).

Fig 4.2.3: STDCUSAC screen Preferences changes from previous release screen

The change report will compare the two function ids and will paint the excel sheet in the format above represented for the preferences node of the radxml's compared. Preferences will show the difference in the both versions of the releases. The nodes representing here are

### (PREFERENCES, MENU\_DETAILS)

## **Description**:

change Report will compare two radxml's and will form one Dom which will have the nodes which will have the diff between two radxml's which has old value and new value.

Here in preferences, the status is the nodes are modified and the node modified is preferences the property of that node modified is Txn block name Old value is block\_cust\_account no and new value is null ,STDCUSAC (FCUBS\_11.3.0) radxml has no value and STDCUSAC (FCUBS\_11.4.0) has block\_cust\_account as Txn block

Similarly for the other screens also the values will be painted as below fig.
