6. Repayment

A customer might, at some point in time, come across additional funds and would wish to take advantage of this sudden cash inflow to pay back the loan either partly or fully.

The loan repayment feature of application enables the customer to make adhoc repayments through self-service channel. Customers can only make payments from current or savings accounts that are linked to the customer.

Through this feature, customers can make a partial or full settlement of the loan account. In partial settlement, the customer can make payment of any amount that is less than the outstanding loan amount. In this case, if there are any arrears in the loan account, they will be settled first followed by the principal balance of the loan.

In case of full settlement, the final settlement amount is calculated by applying penalties or charges as applicable by the host system. This amount is displayed to the customer, who in turn is required to transfer the final settlement amount in order to make a full repayment.

Any payment made by the customer, either partially or fully, will be immediately reflected in the loan account.
