Trademarks

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited. The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and

agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Source Product Type - Target Product Type combinations	98
Attrition Model	98
Technique: Logistic Regression.....	98
Dependent Variable	98

Data Considered.....	98
Independent Variables.....	99
Weblog processing involves processing the weblogs, which is basically data generated through user activity in the bank website. These weblogs are captured once a day using Apache Hadoop. The AAI platform then moves this data to the hive tables. Weblog variables for these models are data elements that enhance the prediction of the models. For more information, refer to the Weblog Processing for RCA section.Product Types	99
Pre Payment Analysis.....	101

Preface

Intended Audience

Welcome to Release 8.0 of the Oracle Financial Services Institutional Performance Analytics User Guide. This user guide is intended for the users of Oracle Financial Services Retail Customer Analytics application. See *Related Information Sources* for more Oracle product information.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at: <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit:

- <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info>
- <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs>, if you are hearing impaired.

Structure

This user guide has been segregated into the following chapters:

- [Chapter 1-Introduction](#)
- [Chapter 2-Overview of Process Flow](#)
- [Chapter 3-Dimension Loading Process](#)
- [Chapter 4-Time Dimension Population](#)
- [Chapter 5-Exchange Rate History Population](#)
- [Chapter 6-Account Summary Population](#)
- [Chapter 7-Customer Summary Population](#)
- [Chapter 8-Fact Data Population](#)
- [Chapter 9-Predictive Modeling](#)
- [Chapter 10-Model Creation and Execution](#)
- [Chapter 11-Overview of OFSRCA Reports](#)
- [Chapter 12-Visibility](#)
- [Appendix A, Name of Chapter](#)
- [Appendix B, Name of Chapter](#)

Related Information Sources

- [Oracle Financial Services Advanced Analytical Applications Infrastructure Installation and Configuration Guide](#)

Overview of Oracle Financial Services Retail Customer Analytics (OFSRCA)

This guide explains the concepts of Oracle Financial Services Retail Customer Analytics, and provides step-by-step instructions for navigating the Retail Customer Analytics user interface. Oracle Financial Services Retail Customer Analytics (OFSRCA) is a complete end-to-end web-based Business Intelligence solution which provides a 360 degree view of the customer relationship for key insights into the customer life-cycle.

OFSRCA provides tools for data integration and includes customizable, pre-built dashboards and reports, a reporting data model, and user friendly functional subject areas for ad-hoc reporting. It also provide you deep insights into customer engagements across target segments and products/Line Of Business (LOB) including lending, credit cards, and so on. It proactively manages the growth through strategic insights into the retail business performance. OFSRCA helps you to monitor customer distribution across credit and delinquency bands and related exposures.

The OFSRCA solution is a part of Profitability Pack and is packaged along with AAI 8.0 and other applications. This OFSRCA is supported for Oracle 11g and 12c.

OFSRCA solution is built using:

- OBIEE 11.1.1.7.1 for Dashboard and Reports activities
- Essbase 11.1.2.3+ for 12c database

This manual deals with essential Oracle Financial Services Analytical Applications Infrastructure (OFSAAI) required for OFSRCA activities, process flow for the data transformation, cube building processes, and functional details about the dash boards and reports. In addition, it includes subject areas which could be used for ad-hoc reporting using OBIEE Answers tool.

This chapter discusses the following topics:

- [Introduction](#)
- [Data Flow](#)
- [Dimension Data Flow](#)
- [Fact Data Flow](#)
- [BI Data Model](#)

Introduction

Oracle Financial Services Retail Customer Analytics (OFSRCA) 8.0 utilizes OBIEE technology to present:

- Performance tracking of current campaigns across key measures like Sales, Asset and Liability balances, Fee-based product subscriptions and sustained performance over time, Credit score distribution of new accounts sourced, and early alerts on any negative skews.
- Predictive analysis to determine cross sell/ up sell scores, product, and channel propensities leveraging transactional/ behavioral data.
- Return On Investment (ROI) of campaigns over time (transaction performance needs to be measured for at least over 12 months for accurate Lifetime Value (LTV) predictions).
- Prospect/ list scoring leveraging any internal/ bureau information, cluster analysis, and projected Net Present Value (NPV).
- Customer Segmentation.
- Wallet Share (spend diversity, activation, and so on) and Attrition analysis.

Following explains the product objectives of OFSRCA:

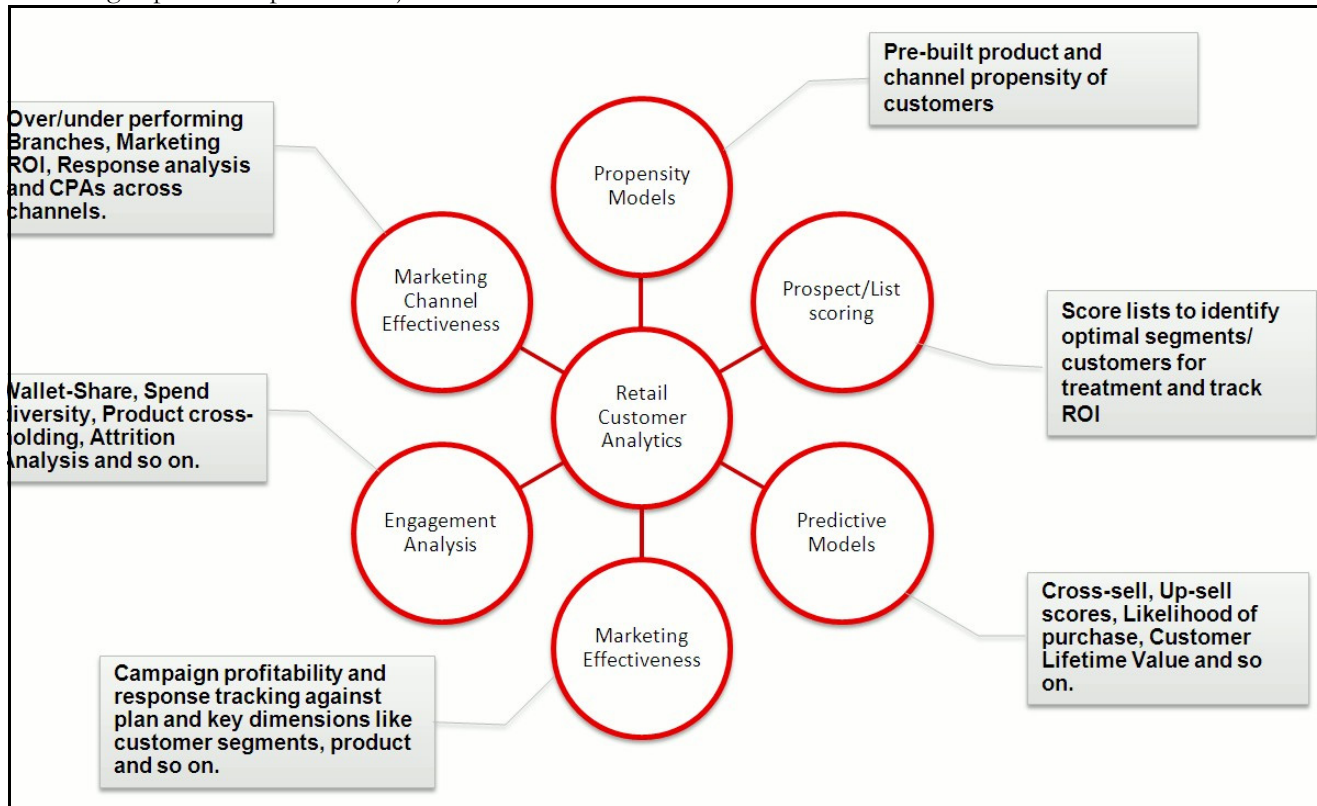

Figure 1. Product Objectives

For details on OFSRCA reports and how OBIEE is being utilized, see *Overview of OFSRCA Reports*.

OFSRCA is designed for OBIEE reading data from relational database. The relational database comprises of various dimensions and facts in the BI data model.

OFSRCA 8.0 can be independently licensed and installed to work on top of the OFSAA 8.0 Infrastructure.

Data Flow

Retail Customer Analytics data model contains the staging tables from which data is loaded in to the dimensions and fact tables. Staging tables include the master staging tables, detail staging tables, staging product processor tables, etc. The user has to populate data into these staging tables.

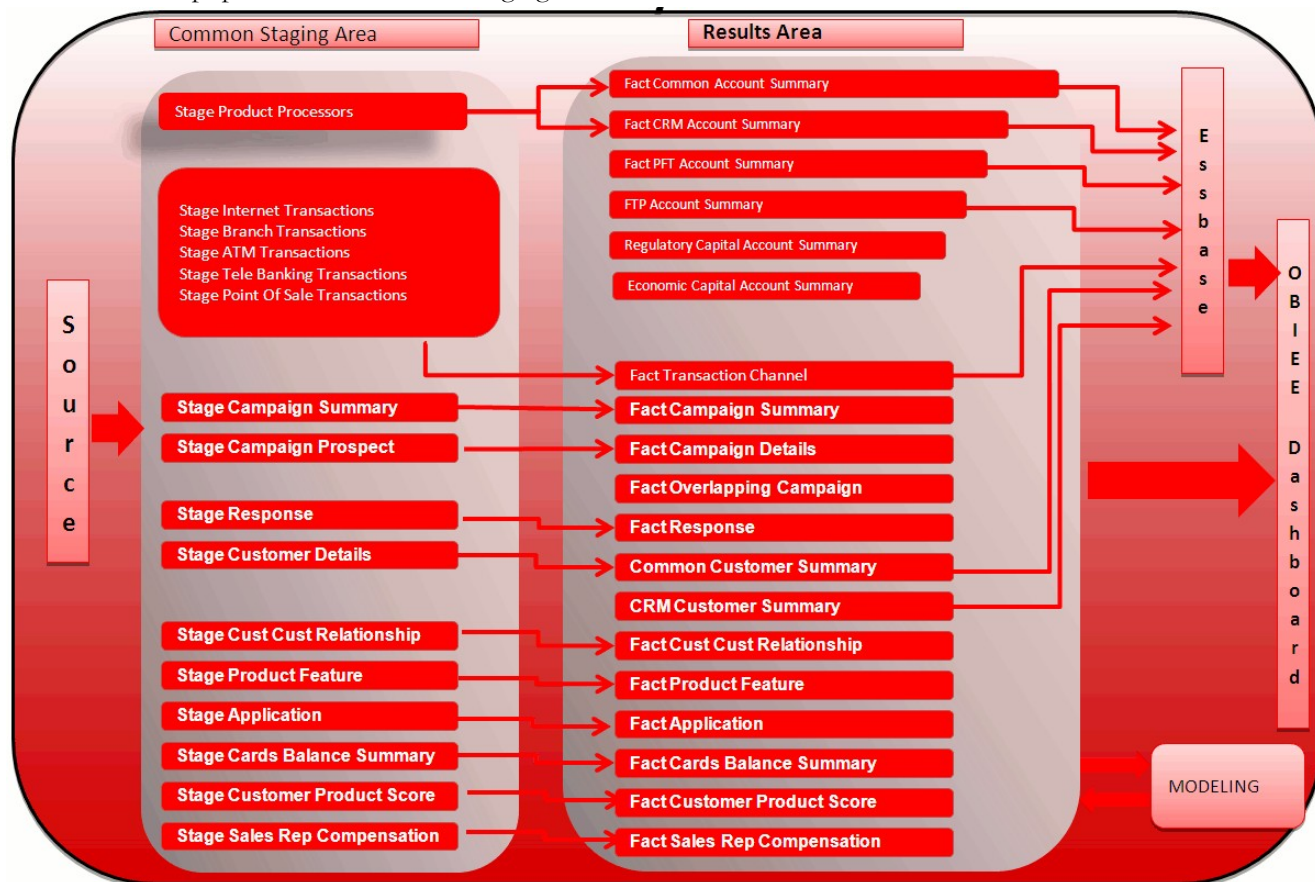

Figure 2. Staging Tables

Dimension Data Flow

Dimension data in OFSRCA application is loaded from staging master tables using the Slowly Changing Dimensions (SCD) process. Data from source systems can be loaded into staging through flat file or source system interfaces. SCD process tracks the changes in the dimensional attributes and loads data into dimension tables. Examples of dimension tables that follow the SCD process are Product, Customer Type, Customer, Campaign, and so on.

Some dimensions are static or maintained internally within the application and are not expected as a download from source system (for example, Reporting Line). These dimensions are maintained through the AMHM (Attribute Member Hierarchy Maintenance) component of OFSAAI or through other framework components like DEFI.

Following are the list of dimensions used in OFSRCA:

Table 1. OFSRCA Dimensions

Dimension Entity Name	Staging Entity Name(s)	Loading/Maintenance method
Account Status Dimension	Stage Account Status Dimension	SCD
Campaign Source Type Dimension	Stage Campaign Source Type Dimension	SCD

Account Dimension	Stage Stage leases contracts	SCD

Table 1. OFSRCA Dimensions

Dimension Entity Name	Staging Entity Name(s)	Loading/Maintenance method
Account Dimension	Stage Stage mm contracts	SCD
Account Dimension	Stage Annuity Contracts	SCD
Account Dimension	Stage Borrowings	SCD
Account Dimension	Stage Card Accounts	SCD
Account Dimension	Stage Investments	SCD

Some of the stage data can also come from master data management interfaces. In such cases, data from interface is loaded into staging interface tables and SCD is run on the interface tables. Mapping of dimensional attributes to staging can be obtained by querying SYS_STG_JOIN_MASTER and SYS_TBL_MASTER tables in the atomic schema.

Fact Data Flow

Most of the Fact tables are mapped to staging counterparts through Table to Table (T2T) mappings. Data from source systems can be loaded into staging through flat file or source system interfaces. T2T process then loads data to fact tables. Examples include Fact Common Account Summary, Fact CRM Account Summary, and so on.

Some of the Fact tables are loaded with processed fact information from other fact tables. Examples include Fact CRM Customer Summary, and so on.

Table 2. FACT Table Flow

This chapter discusses the following topics:

- [Dimension Tables Population](#)
- [Overview of SCD Process](#)
- [Executing the SCD Component](#)

Dimension Tables Population

OFSRCA solution uses the SCD component to handle dimensional data changes.

Overview of SCD Process

SCDs are dimensions that have data that changes slowly, rather than changing on a time-based, regular schedule.

For more information on SCDs, see:

- *Oracle Data Integrator Best Practices for a Data Warehouse* at:
<http://www.oracle.com/technetwork/middleware/data-integrator/overview/odi-bestpractices-datawarehouse-whi-129686.pdf>
- *Oracle® Warehouse Builder Data Modeling, ETL, and Data Quality Guide* at:
http://docs.oracle.com/cd/E14072_01/owb.112/e10935.pdf

Additional online sources include:

- http://en.wikipedia.org/wiki/Slowly_changing_dimension
- http://www.oracle.com/webfolder/technetwork/tutorials/obe/db/10g/r2/owb/owb10gr2_gs/owb/lesson3/slowlychangingdimensions.htm
- <http://www.oraclebidwh.com/2008/11/slowly-changing-dimension-scd/>
- <http://www.informationweek.com/news/software/bi/showArticle.jhtml?articleID=204800027&pgno=1>
- <http://www.informationweek.com/news/software/bi/showArticle.jhtml?articleID=59301280>

An excellent published resource that covers SCD in detail is "*The Data Warehouse Toolkit: The Complete Guide to Dimensional Modeling*" by Ralph Kimball and Margy Ross.

The SCD component of the platform is delivered via a C++ executable. The types of SCD handled by the OFSAAI SCD component for OFSPA solution are Type 1 and Type 2.

Prerequisites

- The SCD executable should be present under <installation home>ficdb/bin. The file name is scd.
- The user executing the SCD component should have execute rights on the file mentioned as prerequisite in point 2.

- The setup tables accessed by SCD component are SYS_TBL_MASTER and SYS_STG_JOIN_MASTER.
 - SYS_TBL_MASTER stores the information like which is the source stage table and the target dimension tables. The source sometimes can be the database views which could be simple or a complex view.
 - SYS_STG_JOIN_MASTER stores the information like which source column is mapped to which column of a target dimension table. It makes use of data base sequence to populate into surrogate key columns of dimension tables.

Tables Used by the SCD Component

The database tables used by the SCD component are:

- **SYS_TBL_MASTER:** The solution installer will populate one row per dimension for the seeded dimensions in this table.

Table 3. SYS_TBL_MASTER Dimensions

Column Name	Data Type	Column Description
MAP_REF_NUM	NUMBER(3) NOT NULL	The Mapping Reference Number for this unique mapping of a Source to a Dimension Table.
TBL_NM	VARCHAR2(30) NOT NULL	Dimension Table Name
STG_TBL_NM	VARCHAR2(30) NOT NULL	Staging Table Name
SRC_PRTY	NUMBER(2) NULL	Priority of the Source when multiple sources are mapped to the same target.
SRC_PROC_SEQ	NUMBER(2) NOT NULL	The sequence in which the various sources for the DIMENSION will be taken up for processing.
SRC_TYP	VARCHAR2(30) NULL	The type of the Source for a Dimension, that is, Transaction Or Master Source.
DT_OFFSET	NUMBER(2) NULL	The offset for calculating the Start Date based on the Functional Requirements Document (FRD).
SRC_KEY	NUMBER(3) NULL	
<i>Sample Data: This is the row put in by the solution installer for the Line of Business dimension.</i>		
MAP_REF_NUM	6	
TBL_NM	DIM_LOB	
STG_TBL_NM	STG_LOB_MASTER	
SRC_PRTY		
SRC_PROC_SEQ	23	
SRC_TYP	MASTER	
DT_OFFSET	0	
SRC_KEY		

Note: For any new dimension added, a row will have to be inserted to this table manually.

- **SYS_STG_JOIN_MASTER**: The solution installer will populate this table for the seeded dimensions.

Table 4. SYS_STG_JOIN_MASTER Dimensions

Column Name	Data Type	Column Description
MAP_REF_NUM	NUMBER(3) NOT NULL	The Mapping Reference Number for this unique mapping of a Source to a Dimension Table.
COL_NM	VARCHAR2(30) NOT NULL	Name of the column in the Dimension Table.
COL_TYP	VARCHAR2(30) NOT NULL	Type of column. The possible values are given in the following section.
STG_COL_NM	VARCHAR2(60) NULL	Name of the column in the Staging Table.
SCD_TYP_ID	NUMBER(3) NULL	SCD type for the column.
PRTY_LOOKUP_REQD_FLG	CHAR(1) NULL	Column to determine whether Lookup is required for Priority of Source against the Source Key Column or not.
COL_DATATYPE	VARCHAR2(15) NULL	The list of possible values are VARCHAR, DATE, NUMBER based on the underlying column datatype.
COL_FORMAT	VARCHAR2(15) NULL	The possible values for column type (the COL_TYPE column) in SYS_STG_JOIN_MASTER are: <ul style="list-style-type: none"> ● PK - Primary Dimension Value (may be multiple for a given "Mapping Reference Number") ● SK - Surrogate Key ● DA - Dimensional Attribute (may be multiple for a given "Mapping Reference Number") ● SD - Start Date ● ED - End Date ● LRI - Latest Record Indicator (Current Flag) ● CSK - Current Surrogate Key ● PSK - Previous Surrogate Key ● SS - Source Key ● LUD - Last Updated Date / Time ● LUB - Last Updated By

6. Enter the Task ID and Description.
7. Select **Run Executable**, from the Component ID list.
8. Click **Parameters**. Select the following from the Dynamic Parameters List and then click **Save**:
 - Datastore Type - Select the appropriate datastore from the list
 - Datastore Name - Select the appropriate name from the list
 - IP address - Select the IP address from the list
 - Executable - scd,<map ref num>

Example

scd, 61 (Refer the following sections for details)

- Wait - When the file is being executed you have the choice to either wait till the execution is complete or proceed with the next task. Click the list box of the field provided for Wait in the Value field to select 'Yes' or 'No'. Clicking **Yes** confirms that you wish to wait for the execution to be complete. Clicking **No** indicates that you wish to proceed.
- Batch Parameter - Clicking **Yes** would mean that the batch parameters are also passed to the executable being started; else the batch parameters will not be passed to the executable.

Important: Always select Y in Batch Parameter.

For the Parameter Executable earlier mentioned, the map ref num values are:

- -1 (if you want to process all the dimensions). The Executable parameter mentioned earlier would be scd,-1
- If you want to process for a single dimension, query the database table SYS_TBL_MASTER and give the number in the map_ref_num column for the dimension you want to process. These are the ones which come seeded with the install.

9. Execute the batch from Batch Execution by choosing the batch created following the steps mentioned in the preceding sections for a date.

Note: Seeded batch <Infodom>_FTP_PFT_Reqd_Dim is provided FTP or PFT application is installed which can be executed for populating FTP/PFT required dimensions.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. You can access this from the Left Hand Side (LHS) menu as follows:

1. From the Home menu, select **Operations**, then select **Batch Monitor**.

Note: For a more comprehensive coverage, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

The status messages in Batch Monitor are :

- N - Not Started
- O - On Going

- F - Failure
- S - Success

The ICC execution log can be accessed on the application server in the following directory:
`$FIC_DB_HOME/log/ficgen`.

The file name will have the batch execution ID.

Sample:

```
/dbfiles/home/oracle/OFSAAI/ficdb/log/ficgen
```

The detailed SCD component log can be accessed on the application server in the directory `$FIC_HOME`, go one folder up from there and then accessing the following path `/ftpshare/<infodom name>/logs`

The file name will have the batch execution ID.

Sample:

```
/dbfiles/home/oracle/ftpshare/OFSADEMO/logs
```

Check the `.profile` file in the installation home if you are not able to find the paths mentioned earlier.

Business data commonly represents information as of a point in time (for example, a balance as of a point in time) or as of a particular span of time (for example, income for the month of March). Time dimension makes it possible to report the balances by Year, Quarter or Month using the rollup functionality of cubes. Cubes makes it possible to rollup the monthly balances to a quarter and then to a year level. For example, the monthly data for January, February and March gets rolled up to Quarter 1 and the Quarter 1, 2, 3 and 4 data get rolled up to, say Year 2011. The rollup of a particular balance depending on their nature could be a simple additive rollup wherein the child member balances are added up to arrive at the parent node balance (for example, Ending Balance) or non additive rollups wherein a node formula is used to specify how to rollup the child member balances (for example, 3 month rolling average).

This chapter covers the following topics:

- [Overview of Time Dimension Population](#)
- [Executing the Time Dimension Population Transformation](#)
- [Checking the Execution Status](#)

Overview of Time Dimension Population

Time dimension population transformation is used to populate the DIM_DATES table with values between two dates specified by the user as a batch parameter.

The database components, used by the transformations are:

- Database function - FN_DIM_DATES
- Database procedure - PROC_DIM_DATES_POPULATION, which is called by the function FN_DIM_DATES.

Prerequisites

- All the post install steps mentioned in the Oracle Financial Services Analytical Applications Infrastructure (OFSAAI) Installation and Configuration guide and the solution installation manual of Oracle Financial Services Retail Customer Analytics have to be completed successfully.
- Application User must be mapped to a role that has seeded batch execution function (BATPRO).
- Before executing a batch check if the following services are running on the application server (For more information on how to check if the services are up and on and how to start the services if you find them not running, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*).
 - Iccserver
 - Router
 - AM Server
 - Messageserver
- Batches will have to be created for executing the function. For more details see, *Executing the Time dimension population transformation*, page XX

Tables Used by the Time Dimension Population Transformation

- DIM_DATES - This table stores the date details to be used for building the cubes.

For more details on viewing the structure of earlier tables, refer to *Oracle Financial Services Analytical Applications Data Model Data Dictionary* or the *Erwin Data Model*.

Executing the Time Dimension Population Transformation

To execute the function from OFSAAI Information Command Center (ICC) frame work, create a batch by performing the following steps:

Note: For a more comprehensive coverage of configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

1. From the Home menu, select **Operations**, then select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container) and enter the Batch Name and description.
3. Click **Save**.
4. Select the Batch you have created in the earlier step by clicking on the checkbox in the Batch Name container.
5. Click **New Task** ('+' symbol in Task Details container).
6. Enter the Task ID and Description.
7. Select **Transform Data**, from the components list.
8. Select the following from the Dynamic Parameters List and then click **Save**:
 - Datastore Type - Select appropriate datastore from the list
 - Datastore Name - Select appropriate name from the list
 - IP address - Select the IP address from the list
 - Rule Name - Select Dim_Dates_Population from the list of all available transformations. (This is a seeded Data Transformation which is installed as part of the OFSRCA solution installer. If you don't see this in the list, contact Oracle support)
 - Parameter List - Start Date, End Date
Explanation for the parameter list is:
 - Start Date - This is the date starting from which the Transformation will populate Dim_Dates table. Date should be specified in the format 'YYYYMMDD'.
 - End Date - This is the date up to which the Transformation will populate Dim_Dates table. Date should be specified in the format 'YYYYMMDD'.
Sample parameter for this task is '20081131','20091231'.
9. You can execute the batch in two ways:
 - Execute the batch from Batch Execution by choosing the batch created following the steps mentioned in the preceding sections for a date.
Note: A seeded batch <INFODOM>_aCRM_CommonTasks - Task2 is provided so that the user can just modify the parameters and execute the batch.

- The function can also be executed directly on the database through SQLPLUS. Details are:
 - Function Name : FN_DIM_DATES
 - Parameters : p_batch_run_id, p_as_of_date, P_ST_DT, P_ED_DT Sample parameter values :
'Batch1','20091231', '20081131','20091231'

Checking the Execution Status

The status of execution can be monitored using the batch monitor screen.

Note: For a more comprehensive coverage of configuration & execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

The status messages in batch monitor are :

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The Event Log window in Batch Monitor provides logs for execution with the top row being the most recent. If there is any error during execution, it will get listed here. Even if you see Successful as the status in Batch Monitor it is advisable to go through the Event Log and re-check if there are any errors. The execution log can be accessed on the application server by going to the following directory \$FIC_DB_HOME/log/date. The file name will have the batch execution ID.

The database level operations log can be accessed by querying the FSI_MESSAGE_LOG table. The batch run ID column can be filtered for identifying the relevant log.

Check the .profile file in the installation home if you are not able to find the paths mentioned earlier.

Exchange Rate History entity stores the exchange rates between the currencies for an effective date from one or multiple sources.

Exchange Rate History population should be executed before any fact table is populated to ensure exchange rates between currencies are available prior. Exchange Rate History entity is loaded by means of Table to Table Transformation process. Following is the seeded Table-to-Table definition that loads data into Exchange Rate History:

Table 5. Table to Table definition

T2T Definition Name	Source Table(s)	Destination Table
T2T_EXCHANGE_RATE_HIST	STG_EXCHANGE_RATE_HIST	FSI_EXCHANGE_RATE_HIST

This chapter discusses the following topics:

- [Exchange Rate History Population](#)
- [Execution of Currency Exchange Rates Population T2T](#)
- [Checking the Execution Status](#)

Exchange Rate History Population

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen), a seeded batch, <INFODOM>_aCRM_CommonTasks - Task4 has to be executed for the required date.

Alternatively, following steps will help to create a new batch task for Loading Historical Exchange Rates:

1. From the Home menu, select **Operations**, then select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the components list.
7. Select the following from the Dynamic Parameters List and then click **Save**.
 - Datastore Type - Select appropriate datastore from the list.
 - Datastore Name - Select appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.

- File Name - Select the table to table transformation
T2T_EXCHANGE_RATE_HIST.
Data file name will be blank for any Table to Table Load mode.
8. Repeat steps 4 to 8 for adding the remaining T2Ts within the same batch definition.
 9. Execute the batch created in the preceding steps. For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.
 10. Check T2T component logs and batch messages to check the status of load.
T2T component can fail because of following cases:
 - Unique constraint error - Target table may already contain the primary keys that are part of the staging tables.
 - NOT NULL constraint error - do not have values for NOT NULL columns in the target table.

Execution of Currency Exchange Rates Population T2T

The batch <INFODOM>_POP_EXCHANGE_RATES needs to be executed to populate fsi_exchange_rates as the entries in setup_master are seeded during installation.

Note: FSI_EXCHANGE_RATES table has to be loaded prior loading any of the other Account Summary tables.

- Metadata Browser
- Common Account Summary

Currency Execution Rates - Batch Execution

A seeded batch, <Infodom>_POP_EXCHANGE_RATES has to be executed for the required MIS Date.

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List:
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select the <T2T Source Name> from the list.
 - File Name - Select the T2T name for the source stage channel table you want to process.

8. Click **Save**.

Data file name will be blank for any Table to Table Load mode. Default value refers to currency calculation. If there is any need for currency conversion in T2T transactions, Default value has to be provided.

9. Execute the batch created in the preceding steps.

Checking the Execution Status

The status of execution can be monitored using the batch monitor screen. The status messages in batch monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the \$FIC_DB_HOME/log/t2t directory: The file name will have the batch execution ID.

<INFODOM>_FN_RATEVALIDATION is invoked for exchange rate history. Once data is loaded into fsi_exchange_rate_hist table, run the batch <INFODOM>_FN_RATEVALIDATION.

Account Summary tables are loaded from the staging product processor tables using the Table to Table (T2T) component of Oracle Financial Services Analytical Applications Infrastructure (OFSAAI) framework.

This chapter covers the following topics:

- [Overview of Account Summary Tables](#)
- [Overview of Account Summary Population](#)
- [Executing the Account Summary Population T2T](#)
- [Checking the Execution Status](#)
- [Account Summary T2Ts](#)

Overview of Account Summary Tables

Customer account level data from the Oracle Financial Services Analytical Applications (OFSA) staging product processor tables must be consolidated into a standardized relational Business Intelligence (BI) data model. This consolidation is done to have all the staging product processor table data in a single Fact table.

The Account Summary table data can be used for building cubes which allow rollup of data for a dimension or a combination of dimensions.

This relational BI model consists of the following vertically partitioned Account Summary tables that are organized by application subject area.

- **FCT_COMMON_ACCOUNT_SUMMARY** - This table is shared by all OFSAA BI applications which contain dimensional values, attributes, and financial measures which are generally applicable to the individual account records. This data is sourced directly from the staging area.
- **FCT_CRM_ACCOUNT_SUMMARY** - This table has the measures used by all the Customer Insight applications. Yet, there are few other Account Summary tables which have been designed to store Enterprise Risk Management (ERM) data:
 - **FCT_PFT_ACCOUNT_SUMMARY** - This table has Profitability Management (PFT) specific measures.
 - **FCT_FTP_ACCOUNT_SUMMARY** - This table has Funds Transfer Pricing (FTP) specific measures.
 - **FCT_REG_CAP_ACCOUNT_SUMMARY** - This table has Regulatory Capital specific measures.
 - **FCT_ECO_CAPITAL_ACCOUNT_SUMMARY** - This table has Economic Capital specific measures.

The above mentioned Account Summary tables are part of data model, but there are no seeded T2T definitions available to populate these tables. T2T processes must be custom configured to populate these tables to use measures defined on these tables for reporting.

Data Flow

The Below diagram depicts the flow of data into account summary tables:

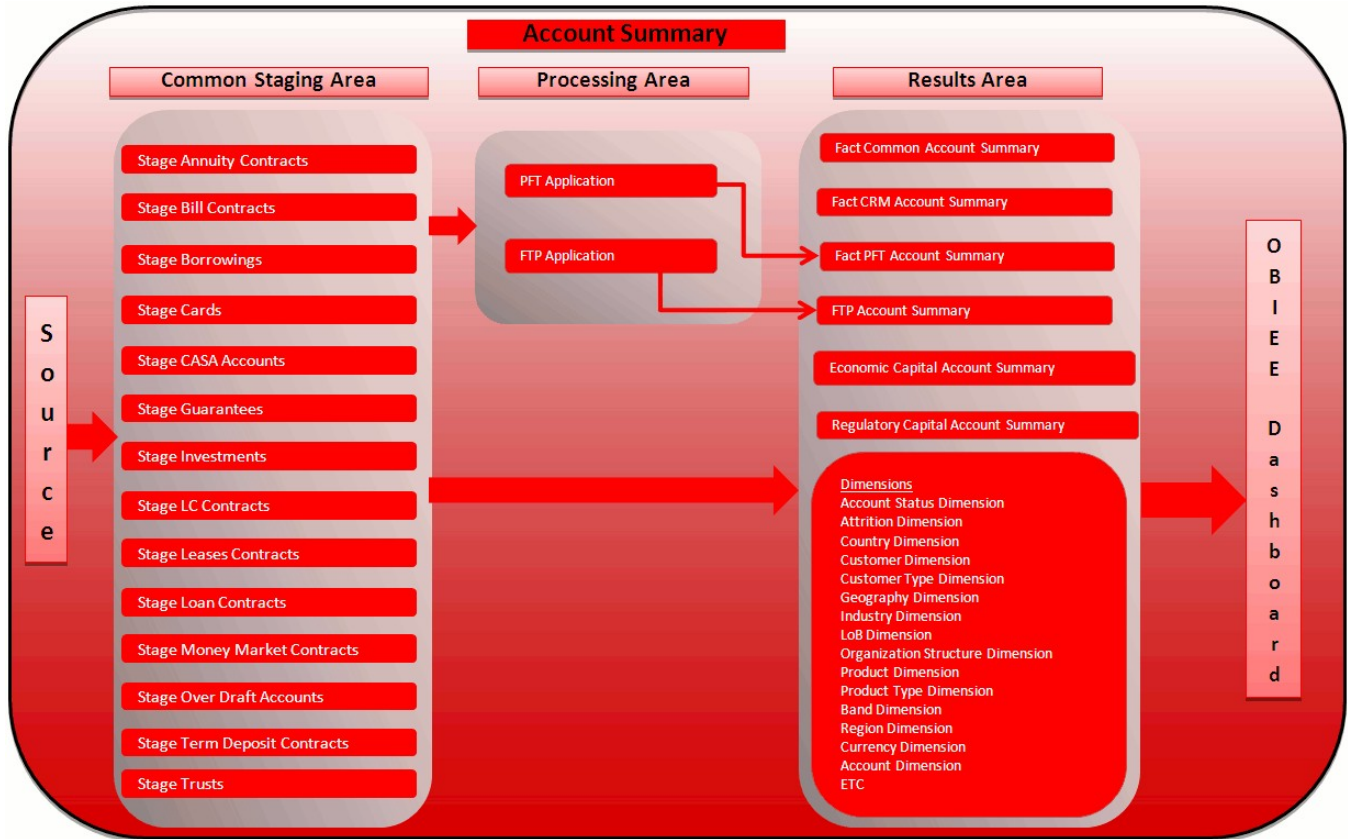

Figure 19. Account Summary Data Flow

Overview of Account Summary Population

Table to Table seeded definitions are provided for loading data into Common Account Summary and CRM Account summary tables.

Following are the lists for the same:

- Common Account Summary

Table 6. Common Account Summary Definitions

SL	Source Table	T2T Definition Name	Destination Table No
1	STG_ANNUIITY_CONTRACTS	T2T_STG_ANNUIITY_CONTRACTS_CAS	FCT_COMMON_ACCOUNT_SUMMARY
2	STG_BILLS_CONTRACTS	T2T_STG_BILLS_CAS	FCT_COMMON_ACCOUNT_SUMMARY
3	STG_BORROWINGS	T2T_STG_BORROWINGS_CAS	FCT_COMMON_ACCOUNT_SUMMARY

Table 6. Common Account Summary Definitions

15	STG_COMMITMENT_CONTRACTS	T2T_STG_CRMAS_COMMITMENTS	FCT_CRM_ACCOUNT_SUMMARY
16	STG_MUTUAL_FUNDS	T2T_STG_CRMAS_MUTUAL_FUNDS	FCT_CRM_ACCOUNT_SUMMARY

Tables FTP Account Summary and PFT Account Summary must be loaded directly if PFT and FTP applications do not already co-exist with Retail Customer Analytics.

Note: Currency Exchange Rate History table has to be populated prior loading the Account Summary tables.

Prerequisites

- All the post install steps mentioned in the *Oracle Financial Services Analytical Applications Infrastructure (OFSAI) Installation and Configuration Guide* and the solution installation manual have to be completed successfully.
- Application User must be mapped to a role that has seeded batch execution function (BATPRO).
- Before executing a batch, check if the following services are running on the application server (For more information on how to check if the services are up and on, and how to start the services if you find them not running, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*).
 - Iccserver
 - Router
 - AM Server
 - Messageserver
- Batches will have to be created for executing. This is explained in *Executing the Account Summary Population T2T* section.

- Dimension Population should have been done before you execute the T2T batch. (See *Dimension Loading Process and Time Dimension Population* chapters)

Fact Common Account Summary

Following are the lists of tables used in the population of Fact Common Account Summary & Fact CRM Account Summary tables.

Below mentioned Dimension tables are required to be loaded prior to executing the T2T:

- DIM_DATES
- DIM_ACCOUNT
- DIM_CUSTOMER
- DIM_PRODUCT
- DIM_CHANNEL
- DIM_BANDS
- DIM_ORG_STRUCTURE and so on.

Fact CRM Account Summary

Fact Common Account Summary entity needs to be populated before executing the Fact CRM Account Summary T2Ts.

Following are the list of tables used in the population of Fact CRM Account Summary and these tables are required to be loaded prior to running the T2T:

- DIM_DATES
- DIM_ACCOUNT
- FCT_COMMON_ACCOUNT_SUMMARY
- DIM_ACCT_STATUS
- DIM_BANDS
- DIM_CAMPAIGN
- DIM_CHANNEL
- DIM_CUSTOMER
- DIM_ORG_STRUCTURE
- DIM_LOB
- DIM_OFFER
- DIM OPPORTUNITY
- DIM_PRODUCT

- DIM_PROSPECT
- DIM_RETENTION_OFFER_TYPE
- DIM_SALES_REPRESENTATIVE
- DIM_TREATMENT
- DIM_VINTAGE

For more information, see *Dimension Tables Population* section under *Dimension Loading Process* chapter for details on populating dimension tables like DIM_CUSTOMER, DIM_BANDS, and so on.

For more information on populating account dimension, see *Account Dimension Population* chapter.

For more information, see *Time Dimension Population* chapter for details on populating DIM_DATES dimension table. See Download Specification for identifying fields required in Stage Customer Master and Stage Customer Details for the purpose of Customer Insight Application(s).

For more information on the dimensions, refer to *ERwin Datamodel*.

Executing the Account Summary Population T2T

Fact Common Account Summary table has to be loaded prior loading any of the other Account Summary tables.

Fact Common Account Summary

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen)a seeded batch, <Infodomain>_aCRM_Comm_Acc_Summ has to be executed for the required MIS Date.

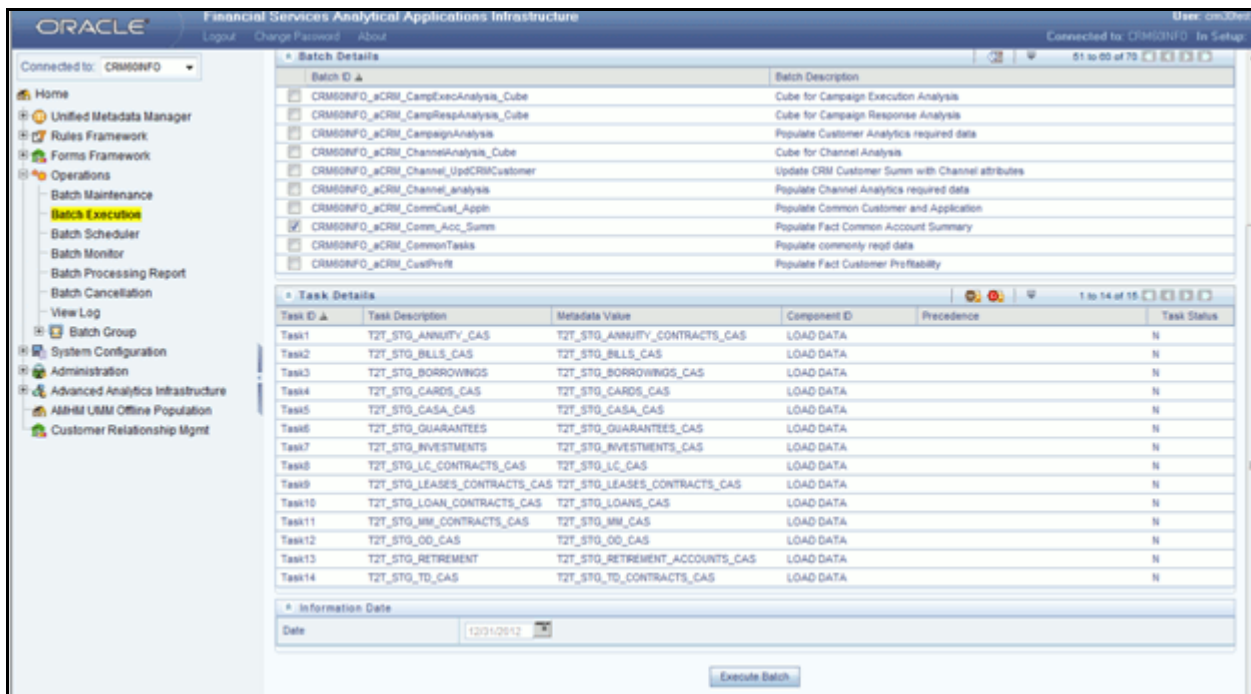

Figure 20. Batch Operations

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <'T2T Source Name'> from the list.
 - File Name - Select the T2T name for the source stage channel table you want to process.
8. Data file name will be blank for any Table to Table Load mode. Default value refers to currency calculation. If there is any need for currency conversion in T2T transactions, Default value has to be provided. For example, default value is [DRCY]='USD' Here 'USD' acts as reporting currency parameter to T2T.

9. Repeat steps 4 to 8 for adding the remaining T2Ts within the same batch definition.
10. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact CRM Account Summary

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen)a seeded batch, <Infodom>_aCRM_CRM_Acc_Summ has to be executed for the required MIS Date.

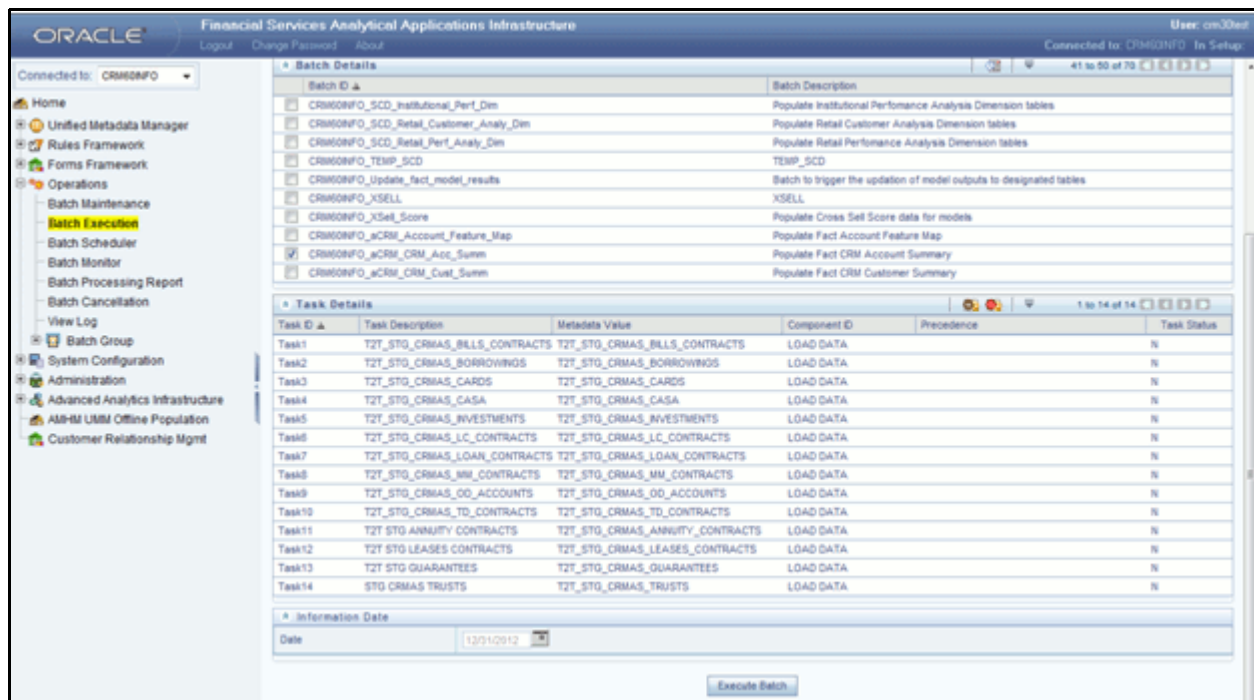

Figure 21. Fact CRM Account Summary

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.

- Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.
 - File Name - Select the T2T name for the source stage product processor table you want to process.
8. Data file name will be blank for any Table to Table Load mode. Default value refers to currency calculation. If there is any need for currency conversion in T2T transactions, Default value has to be provided. For example, default value is [DRCY]='USD' Here 'USD' acts as reporting currency parameter to T2T.
9. Repeat steps 4 to 8 for adding the remaining T2Ts within the same batch definition.
10. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen.

Note: For a more comprehensive coverage of configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

The status messages in Batch Monitor are :

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory : \$FIC_DB_HOME/log/t2t.

The file name will have the batch execution ID. The following tables can be queried for errors:

- FCT_COMMON_ACCOUNT_SUMMARY\$
- FCT_CRM_ACCOUNT_SUMMARY\$

Account Summary T2Ts

T2T definitions can be retrieved as an excel document for reference from the metadata browser of the Unified Metadata Manager (UMM) component of OFSAAI.

This chapter explains the process flow for populating Fact Common Customer Summary table.

This chapter covers the following topics:

- [Overview of Common Customer Summary Tables](#)
- [Executing the Customer Summary Population T2T](#)

Overview of Common Customer Summary Tables

Fact Common Customer Summary table stores attributes pertaining to customer related data on an 'as-is' basis received from the source system. Data is populated into this table using T2T.

Customer balances are derived from account summary. Customer relationship table drives the relationship between accounts and customers. Common customer summary data is populated for all the active customers in customer dimension.

Following data flow diagram explains the process flow for populating Fact Common Customer Summary table:

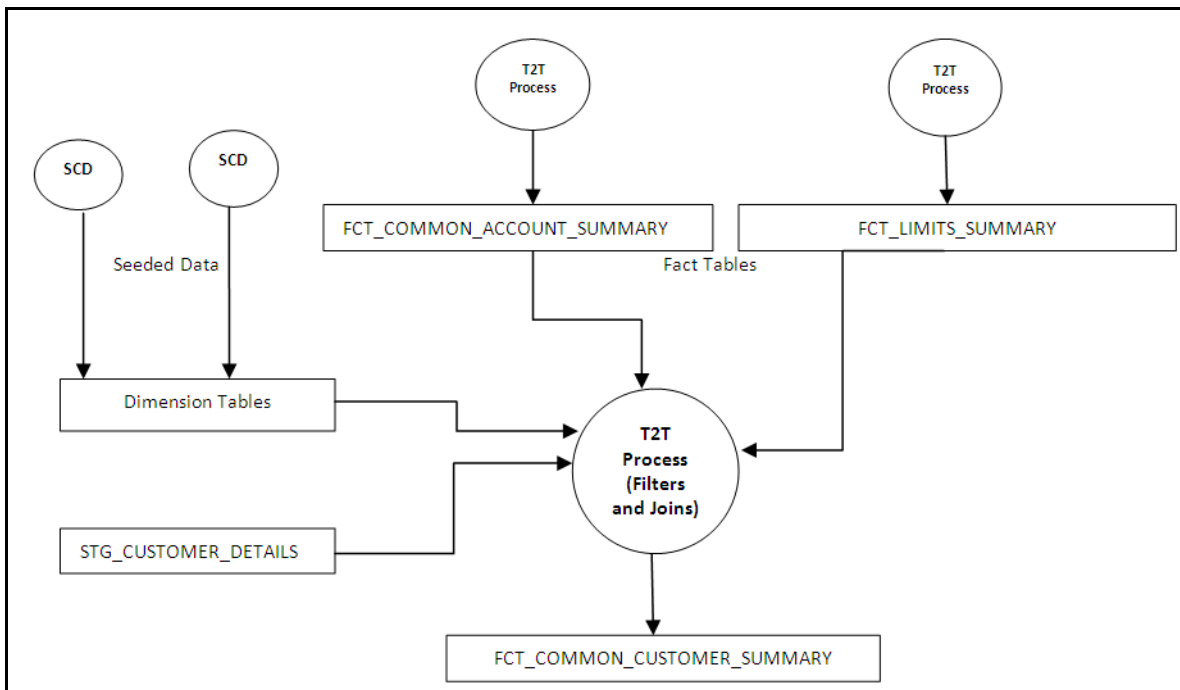

Figure 22. Fact Common Customer Summary data flow

Prerequisites

Following are the lists of tables used in the population of Fact Common Customer Summary and these tables are required to be loaded prior to running the T2T:

- DIM_CUSTOMER
- DIM_BANDS
- DIM_EDUCATION
- DIM_CUSTOMER_TYPE
- DIM_GENDER
- DIM_INDUSTRY
- DIM_CHANNEL
- DIM_GEOGRAPHY
- DIM_MARITAL_STATUS
- DIM_MANAGEMENT
- DIM_PROFESSION
- DIM_CREDIT_RATING
- DIM_VINTAGE
- DIM_MIGRATION_REASONS
- FCT_COMMON_ACCOUNT_SUMMARY
- FCT_LIMITS_SUMMARY
- STG_CUSTOMER_DETAILS
- STG_PARTY_RATING_DETAILS
- STG_PARTY_FINANCIALS

Dimensions tables are loaded through the SCD process. The fact tables such as FCT_COMMON_ACCOUNT_SUMMARY and FCT_LIMITS_SUMMARY are loaded from their respective T2T processes.

For more information on SCDs, refer to *Dimension Loading Process* chapter.

Executing the Customer Summary Population T2T

Fact Common Customer Summary T2T can be executed by executing task present in the seeded batch <INFODOM>_aCRM_CommCust_App1n. Following steps will help you to execute the batch:

1. Go to the Batch Execution screen.
2. Select the seeded batch <INFODOM>_aCRM_CommCust_App1n where INFODOM is the information domain where application is installed.
3. Select the AS_OF_DATE for which source customer information is required to be loaded into the table.
4. Click **Execute Batch**.
5. Monitor the status of the batch using Batch Monitor.

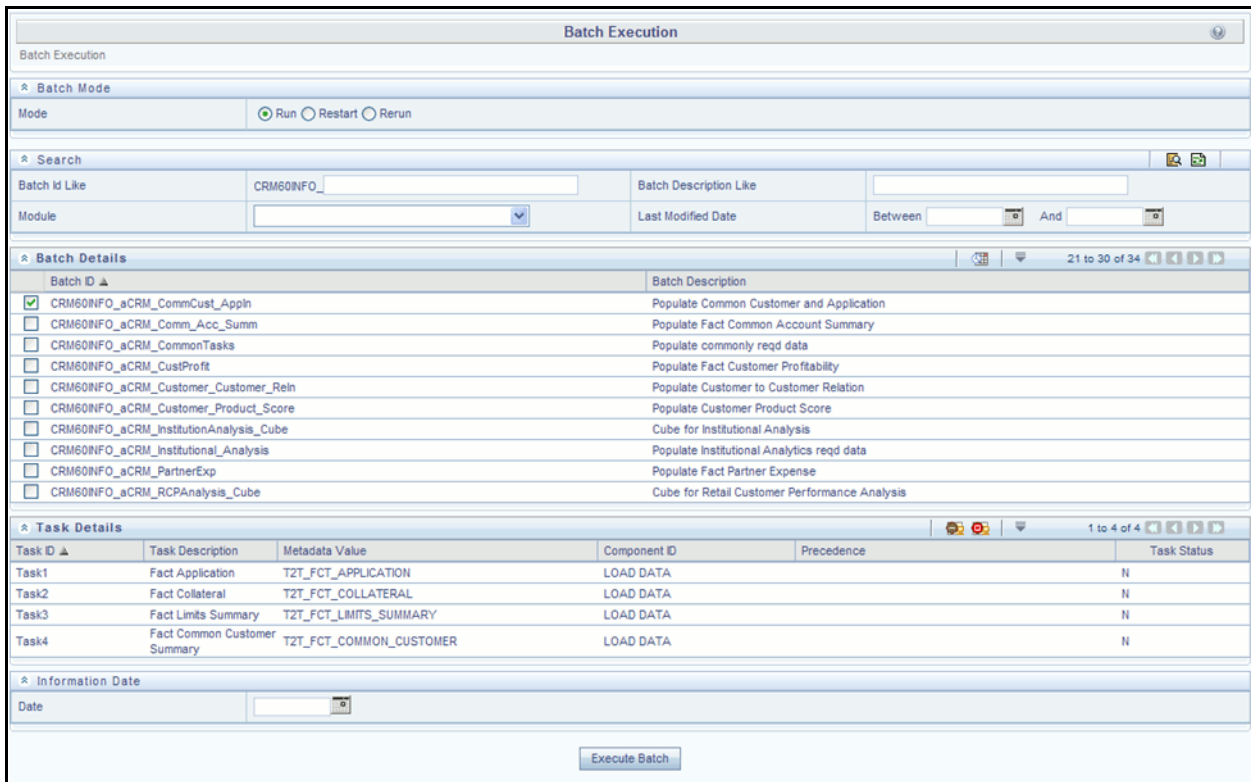

Figure 23. Batch Monitor

Error Messages

Following is the most common error message which will be logged in the T2T log file present in the \$FIC_DB_HOME/logs/t2t folder:

- **Unique Constraint Violation** : This occurs when attempting re-load or loading existing records for the already executed AS_OF_DATE.

This chapter explains all the fact tables which within describe about the seeded T2T Definitions with related Source Table and Destination tables. Prerequisites needed in population of the Fact table and tables required to be loaded prior to running the T2T.

Each fact table contains a section on how to execute the T2T component from OFSAA Infrastructure ICC framework and access the execution log to check the execution status.

This chapter covers the following topics:

- [Fact CRM Customer Summary](#)
- [Fact Account Feature Map](#)
- [Fact Customer to Customer Relationship](#)
- [Fact Transaction Channel](#)
- [Fact Application](#)
- [Fact Campaign Details](#)
- [Fact Campaign Execution Summary](#)
- [Fact Response](#)
- [Fact Overlapping Campaign](#)
- [Fact Cross Sell Score](#)
- [Fact Account Profitability](#)
- [Update Bands in Fact Tables](#)

Fact CRM Customer Summary

Fact CRM Customer Summary entity captures different derived/computed customer attributes pertaining to Customer Insight. Fact Common Customer Summary stores the generic application-agnostic source/raw customer attributes. Fact CRM Customer Summary is a vertical partitioned entity and has relationship to Fact Common Customer Summary.

Load Data into Fact CRM Customer Summary

Customer balances in the Fact CRM Customer Summary entity are derived from account summary. Customer relationship entity drives the relationship between accounts and customers.

Following is the seeded Table-to-Table definitions that loads data related to Fact CRM Customer Summary:

Table 8. Fact CRM Customer Summary Definitions

T2T Definition Name	Source Table(s)	Destination Table
T2T_FCT_CRM_CUSTOMER_SUMMARY	STG_CUSTOMER_MASTER STG_CUSTOMER_DETAILS FCT_COMMON_ACCOUNT_SUMMARY FCT_CRM_ACCOUNT_SUMMARY	FCT_CRM_CUSTOMER_SUMMARY

Refer to *Oracle Financial Services Analytical Applications Data Model Data Dictionary* or the *Erwin Data Model* to view the detailed structure of the tables.

Prerequisites

Fact Common Customer Summary entity needs to be populated before executing the Fact CRM Customer Summary T2T. Refer to Fact Common Account Summary chapter for details related to Fact Common Customer Summary T2T.

Following tables that are used in the population of Fact CRM Customer Summary need to have relevant data prior to executing the T2T:

- STG_CUSTOMER_MASTER - Mandatory
- STG_CUSTOMER_DETAILS - Mandatory
- DIM_DATES - Mandatory
- DIM_CUSTOMER - Mandatory
- FCT_COMMON_ACCOUNT_SUMMARY - Mandatory
- FCT_CRM_ACCOUNT_SUMMARY - Mandatory
- DIM_BANDS - Optional

For more information, see *Dimension Tables Population* section under *Dimension Loading Process* chapter for details on populating dimension tables like DIM_CUSTOMER, DIM_BANDS, and so on.

For more information, see *Time Dimension Population* chapter for details on populating DIM_DATES dimension table. See *Download Specification* for identifying fields required in Stage Customer Master and Stage Customer Details for the purpose of Customer Insight Application(s).

Also, see *Population of Fact CRM Customer Summary* and *Fact CRM Account Summary* sections for details on populating these fact tables.

Executing the Fact CRM Customer Summary Population T2Ts

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the Operations module of OFSAAI), a seeded batch, <Infodom>_aCRM_CRM_Cust_Summ has to be executed for the required MIS Date.

Figure 24. Fact CRM Customer Summary Population

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.
 - File Name - Select the T2T name "T2T_FCT_CRM_CUSTOMER_SUMMARY" you want to process.
8. Data file name will be blank for any Table to Table Load mode.
9. Default value refers to any parameter that has to be passed to T2T. It has to be blank.
10. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are :

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory:

\$FIC_DB_HOME/log/t2t.

The file name will have the batch execution ID. The following tables can be queried for errors:

FCT_CRM_CUSTOMER_SUMMARY

Note: For more information on configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Update Fact CRM Customer Summary with Transaction Attributes

A seeded Data Transformation is provided with the installer which updates the entity Fact CRM Customer Summary with transaction attributes of customer such as ATM usage, Branch usage, net usage, Point of Sale (POS) usage, Number of ATM transactions, transacted amount, and so on.

The following table lists the seeded Post Load Transformation Definition with related Source Table and Destination tables:

Table 9. Post Load Transformation Definition

DT Definition Name	Source Tables	Destination Table
FN_UPD_CRM_CUST_CHNL	FCT_TXN_CHANNEL	FCT_CRM_CUSTOMER_SUMMARY

A seeded batch, <Infodom>_aCRM_Channel_UpdCRMCustomer has to be executed for the required MIS Date.

Figure 25. Execute <Infodom>_aCRM_Channel_UpdCRMCustomer

Alternatively, a new batch can be created if required by following the below mentioned steps:

1. Select the check box adjacent to the newly created Batch Name in the Batch Maintenance screen.
2. Click **Add (+)** button from the Task Details grid. The Task Definition screen is displayed.
3. Enter the Task ID and Description.
4. Select the **TRANSFORM DATA** component from the Components drop down list.
5. In the Dynamic Parameters List, select the appropriate Datastore Type from the drop down list.
6. Select the appropriate Datastore Name from the drop down list. Usually it is the Information Domain name.
7. Select the IP Address from the drop down list.
8. Select the Rule Name **FN_UPD_CRM_CUST_CHNL** from the drop down list.
9. Enter the Parameter List details as mentioned below:
 - Reload Account Profitability table for the given MIS Date flag - can be Y or N within single quotes.
 - Reporting Currency code - This has to be enclosed within single quotes.
For Example, if reporting currency is in US Dollar, then 'USD' has to be specified.

Note: Batch run ID and As Of Date are passed internally by the batch to the Data Transformation task.

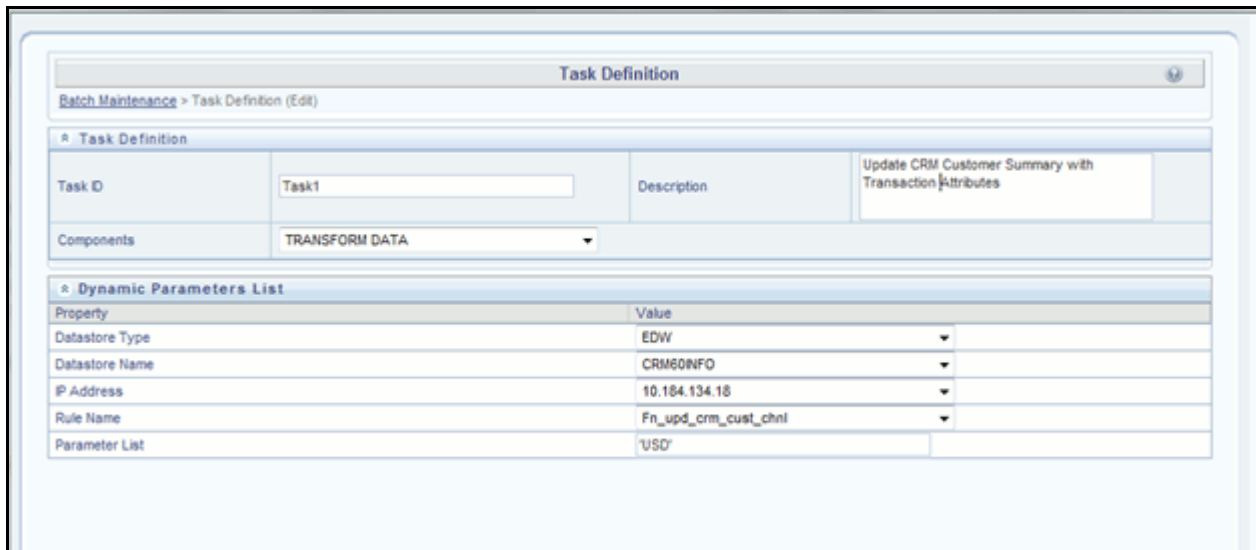

Figure 26. Task Definition

10. Execute the batch for which the Task has been created.

For more information, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen of OFSAAI. The status messages in Batch Monitor are :

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: `$FIC_DB_HOME/log/date`.

The file name will have the batch execution ID.

Note: For more information on configuration and execution of a batch, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Account Feature Map

A product might be facilitated with its own features. Fact Account Feature Map entity stores the mapping between the Account and Product Feature that is the features of the product availed by the customer account. Product processor tables in staging have information related to customer accounts.

Following table lists the seeded T2T Definitions with related Source Table and Destination tables:

Table 10. Fact Account Feature Map T2T Definitions

T2T Definition Name	Source Staging Table	Destination Table
T2T_FCT_ACCOUNT_FEATURE_MAP	STG_ACCT_FEATURE_MAP	FCT_ACCOUNT_FEATURE_MAP

For more information, see *Customer Insight Erwin Data Model* to view the detailed structure of the tables.

Prerequisites

Following are the lists of tables used in the population of Fact Account Feature Map and these tables are required to be loaded prior to executing the T2T:

- DIM_DATES
- DIM_PRODUCT_FEATURE
- DIM_ACCOUNT
- DIM_CUSTOMER
- DIM_PRODUCT
- DIM_VENDOR
- DIM_CAMPAIN
- DIM_CHANNEL
- STG_ACCT_FEATURE_MAP

For more information, see *Dimension Tables Population* section under *Dimension Loading Process* chapter for details on populating dimension tables like DIM_CUSTOMER, DIM_BANDS, and so on.

For more information on populating account dimension, see *Account Dimension Population* chapter.

For more information, see *Time Dimension Population* chapter for details on populating DIM_DATES dimension table. See *Download Specification* for identifying fields required in Stage Customer Master and Stage Customer Details for the purpose of Customer Insight Application(s).

Executing the Fact Account Feature Map Population T2T

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen), a seeded batch, <Infodom>_aCRM_Account_Feature_Map, has to be executed for the required MIS Date.

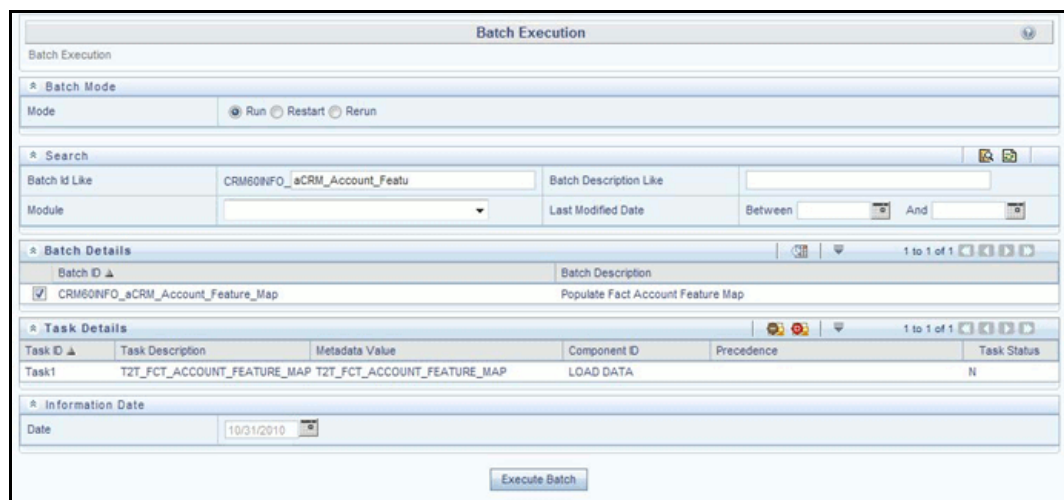

Figure 27. aCRM_Account_Feature_Map

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.
 - File Name - Select the T2T name "T2T_FCT_ACCOUNT_FEATURE_MAP" you want to process.
8. Data file name will be blank for any Table to Table Load mode. Default value refers to any parameter that has to be passed to T2T. This should be blank.
9. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: \$FIC_DB_HOME/log/t2t.

The file name will have the batch execution ID. The following table can be queried for errors:

FCT_ACCOUNT_FEATURE_MAP\$

For more information on configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Customer to Customer Relationship

Fact Customer to Customer Relationship entity stores the relationship between the customers. Example of relationship amongst customers could be Employer, Employee, Children, Parent, Spouse, and so on.

Following table lists the seeded T2T Definitions with related Source Table and Destination tables:

Table 11. Fact Customer to Customer Relationship T2T Definitions

T2T Definition Name	Source Staging Table	Destination Table
T2T_CUST_CUST_RELATION	STG_CUST_CUST_RELATIONSHIP	FCT_CUST_CUST_RELATIONS HIP

For more information, see *Customer Insight Erwin Data Model* to view the detailed structure of the tables.

Prerequisites

Following are the lists of tables used in the population of Fact Customer to Customer Relationship and these tables are required to be loaded prior to running the T2T:

- DIM_DATES
- DIM_CUSTOMER
- STG_CUST_CUST_RELATIONSHIP

For more information, see *Dimension Tables Population* section under *Dimension Loading Process* chapter for details on populating dimension tables like DIM_CUSTOMER, DIM_BANDS, and so on.

For more information, see *Time Dimension Population* chapter for details on populating DIM_DATES dimension table. See *Download Specification* for identifying fields required in Stage Customer Master and Stage Customer Details for the purpose of Customer Insight Application(s).

Executing the Fact Customer to Customer Relationship Population T2T

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen), a seeded batch, <Infodom>_aCRM_Customer_Customer_ReIn - Task1, has to be executed for the required MIS Date.

The screenshot displays the 'Batch Execution' interface. It includes sections for 'Batch Mode' (Run, Restart, Rerun), 'Search' (Batch Id Like, Batch Description Like, Module, Last Modified Date), 'Batch Details' (Batch ID, Batch Description), 'Task Details' (Task ID, Task Description, Metadata Value, Component ID, Precedence, Task Status), and 'Information Date' (Date). The 'Batch Details' section shows a checked box for 'CRM60NFO_aCRM_Customer_Customer_ReIn' with the description 'Populate Customer to Customer Relation'. The 'Task Details' section shows a table with one row: Task ID 'Task1', Task Description 'T2T_CUST_CUST_RELATION', Metadata Value 'T2T_CUST_CUST_RELATION', Component ID 'LOAD DATA', Precedence, and Task Status 'N'. The 'Information Date' section shows the date '10/31/2010'. An 'Execute Batch' button is located at the bottom.

Figure 28. aCRM_Customer_Customer_ReIn - Task1

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select Load Data from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.

- IP address - Select the IP address from the list.
- Load Mode - Select Table to Table from the list.
- Source Name - Select <T2T Source Name> from the list.
- File Name - Select the T2T name "T2T_CUST_CUST_RELATION" you want to process.

8. Data file name will be blank for any Table to Table Load mode. Default value refers to any parameter that has to be passed to T2T. This should be blank.

9. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: \$FIC_DB_HOME/log/t2t.

The file name will have the batch execution ID. The following tables can be queried for errors:

FCT_CUST_CUST_RELATIONSHIP\$

Note: For more information on configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Transaction Channel

Fact Transaction Channel entity stores the details of all transactions (successful and failed) done through any of the transaction channels offered by the Financial Institutions. This fact entity is loaded from multiple source staging tables.

The following table lists the seeded T2T Definitions with related Source Table and Destination tables:

Table 12.

T2T Definition Name	Source Staging Table	Destination Table
T2T_TEL_FCT_TXN_CHANNEL	STG_SRC_TB_TXNS	FCT_TXN_CHANNEL
T2T_POS_FCT_TXN_CHANNEL	STG_SRC_POS_TXNS	
T2T_NET_FCT_TXN_CHANNEL	STG_SRC_NET_TXNS	
T2T_BRA_FCT_TXN_CHANNEL	STG_SRC_BRANCH_TXNS	
T2T_ATM_FCT_TXN_CHANNEL	STG_SRC_ATM_TXNS	

For more information, see *Customer Insight Erwin Data Model* to view the detailed structure of the earlier tables.

Prerequisites

Following are the lists of tables used in the population of Fact Transaction Channel and these tables are required to be loaded prior to running the T2T:

- DIM_DATES
- DIM_TXN_CHANNEL
- DIM_ACCOUNT
- DIM_AUTH_DECISION_REASONS
- DIM_BANDS
- DIM_BROWSER_TYPE
- DIM_CARD_TYPE
- DIM_CURRENCY
- DIM_CUSTOMER
- DIM_CUSTOMER_TYPE
- DIM_GEOGRAPHY
- DIM_MERCHANT
- DIM_MERCHANT_CATEGORY
- DIM_PRODUCT
- DIM_TERMINAL
- DIM_TERMINAL_TYPE
- DIM_TRANSACTION
- DIM_TXN_FAILURE_REASON
- DIM_TXN_STATUS
- STG_SRC_ATM_TXNS
- STG_SRC_BRANCH_TXNS
- STG_SRC_NET_TXNS
- STG_SRC_POS_TXNS
- STG_SRC_TB_TXNS

For more information, see *Dimension Tables Population* section under *Dimension Loading Process* chapter for details on populating dimension tables like DIM_CUSTOMER, DIM_BANDS, and so on.

For more information on populating account dimension, see *Account Dimension Population* chapter.

For more information, see *Time Dimension Population* chapter for details on populating DIM_DATES dimension table. See *Download Specification* for identifying fields required in Channel Transaction tables in staging for the purpose of Customer Insight Application(s).

Executing the Fact Transaction Channel Population T2Ts

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen), a seeded batch, <Infodom>_aCRM_Txn_Channel Task1 to Task5, has to be executed for the required MIS Date.

The screenshot shows the 'Batch Execution' interface. The 'Batch Mode' section has 'Run' selected. The 'Search' section shows 'Batch Id Like' as 'CRM60NFO_aCRM_Channel_analysis'. The 'Batch Details' section shows a table with one entry: 'CRM60NFO_aCRM_Channel_analysis' with description 'Populate Channel Analytics required data'. The 'Task Details' section shows a table with 7 tasks:

Task ID	Task Description	Metadata Value	Component ID	Precedence	Task Status
Task1	T2T_ATM_FCT_TXN_CHANNEL	T2T_ATM_FCT_TXN_CHANNEL	LOAD DATA		N
Task2	T2T_BRA_FCT_TXN_CHANNEL	T2T_BRA_FCT_TXN_CHANNEL	LOAD DATA		N
Task3	T2T_TEL_FCT_TXN_CHANNEL	T2T_TEL_FCT_TXN_CHANNEL	LOAD DATA		N
Task4	T2T_NET_FCT_TXN_CHANNEL	T2T_NET_FCT_TXN_CHANNEL	LOAD DATA		N
Task5	T2T_POS_FCT_TXN_CHANNEL	T2T_POS_FCT_TXN_CHANNEL	LOAD DATA		N
Task6	T2T_FCT_SERVICE	T2T_FCT_SERVICE	LOAD DATA		N
Task7	T2T_SURVEY_RESPONSE	T2T_SURVEY_RESPONSE	LOAD DATA		N

The 'Information Date' section shows 'Date' as '10/31/2010'. An 'Execute Batch' button is at the bottom.

Figure 29. aCRM_Txn_Channel Task1 to Task5

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.
 - File Name - Select the T2T name for the source stage channel table you want to process.

8. Data file name will be blank for any Table to Table Load mode. Default value refers to currency calculation. If there is any need for currency conversion in T2T transactions, Default value has to be provided.
For example, default value is [DRCY] = 'USD' , [DLCY] = 'USD' Here, 'USD' acts as currency parameter to T2T.
9. Steps 4 to 8 must be repeated for adding the remaining 4 T2Ts within the same batch definition.
10. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: \$FIC_DB_HOME/log/t2t.

The file name will have the batch execution ID. The following tables can be queried for errors:

FCT_TXN_CHANNEL\$

Note: For more information on configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Application

Fact Application entity stores the fact data of applications like application details, current stage, status, rejection reason, time-taken in each stage, and so on.

The following table lists the seeded T2T Definitions with related Source Table and Destination tables:

Table 13. Fact Application T2T Definition

T2T Definition Name	Source Staging Table	Destination Table
T2T_FCT_APPLICATION	STG_APPLICATION	FCT_APPLICATION

For more information and to view the detailed structure of the earlier tables, see *Customer Insight Erwin Data Model*.

Prerequisites

Following are the lists of tables used in the population of Fact Application. These tables are required to be loaded prior to running the T2T:

- DIM_DATES
- DIM_APPLICATION_TYPE
- DIM_PRODUCT
- DIM_CREDIT_OFFICER

- DIM_CUSTOMER
- DIM_CHANNEL
- DIM_CREDIT_CENTER
- DIM_DECISION_STATUS
- DIM_GEOGRAPHY
- DIM_INDUSTRY
- DIM_PROFESSION
- DIM_HOME_OWNERSHIP
- DIM_EDUCATION
- DIM_MARITAL_STATUS
- DIM_APPLICATION_REJECT_REASONS
- DIM_DEVIATION_REASONS
- DIM_SALES_REPRESENTATIVE
- DIM_CAMPAIGN
- DIM_ACCOUNT
- DIM_PROSPECT
- DIM_BANDS
- STG_APPLICATION

For details on populating dimension tables like DIM_CUSTOMER, DIM_BANDS, and so on, refer to *Dimension Tables Population*, section under *Dimension Loading Process* chapter.

For details on populating DIM_DATES dimension table, refer to *Time Dimension Population* chapter. For identifying fields required in Channel Transaction tables in staging for the purpose of Customer Insight Application(s), refer to *Download Specification*.

Executing the Fact Application Population T2T

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through Operations module), a seeded batch, <Infodom>_aCRM_CommCust_Appln - Task1 has to be executed for the required MIS Date.

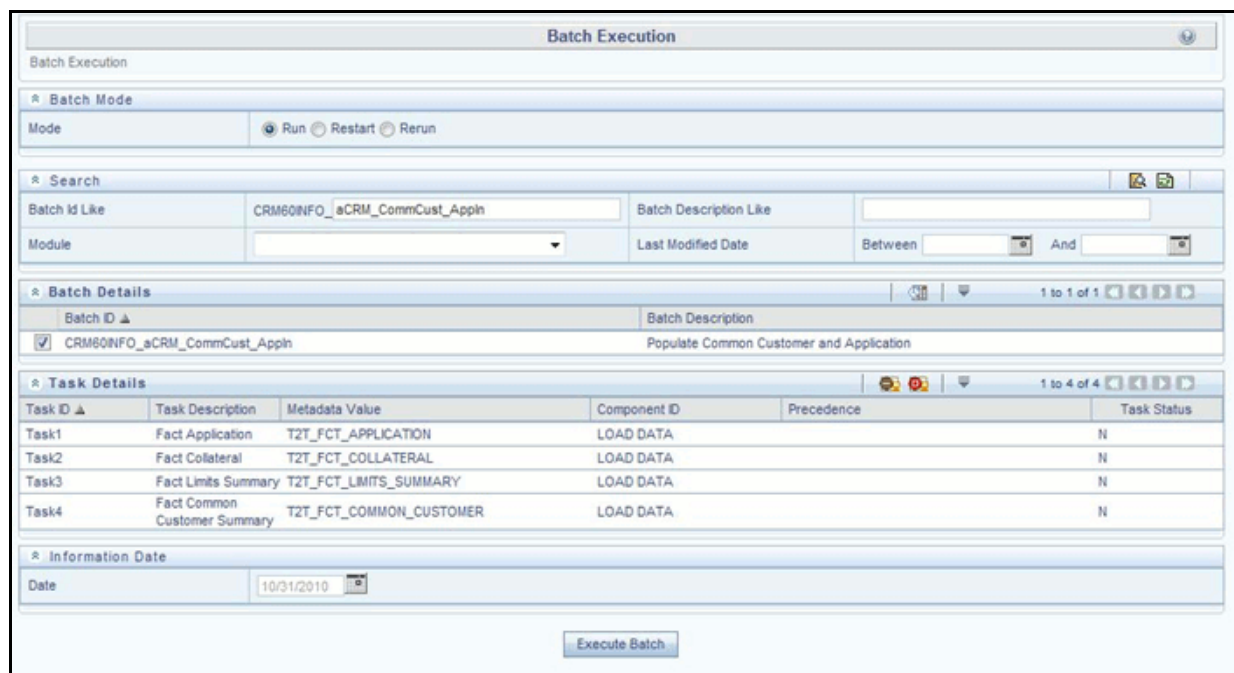

Figure 30. aCRM_CommCust_Appl - Task1

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select 'Table to Table' from the list.
 - Source Name - Select '<T2T Source Name>' from the list.
 - File Name - Select the T2T name 'T2T_FCT_APPLICATION', you want to process.
8. Data file name will be blank for any 'Table to Table' Load mode. Default value refers to any parameter that has to be passed to T2T. If there is any need for currency conversion in T2T transactions, Default value has to be provided.
For example, default value is [DRCY] = 'USD'
Here, 'USD' acts as reporting currency parameter to T2T.
9. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: \$FIC_DB_HOME/log/t2t.

The file name will have the batch executionID. The following tables can be queried for errors:

FCT_APPLICATION\$

Note: For more information on configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Campaign Details

Fact Campaign Details entity stores the information about the details of the campaign like expected 5 year NPV, targeted prospect contact status, days to contact, no of times contacted and so on.

The following table lists the seeded T2T Definitions with related Source Table and Destination tables:

Table 14. Fact Campaign Details T2T Defintions

T2T Definition Name	Source Staging Table	Destination Table
T2T_FCT_CAMPAIGN_DETAILS	STG_CAMPAIGN_DETAILS	FCT_CAMPAIGN_DETAILS

For more information, see *Customer Insight Erwin Data Model* to view the detailed structure of the earlier tables.

Prerequisites

Following are the lists of tables used in the population of Fact Campaign Details and these tables are required to be loaded prior to running the T2T:

- DIM_CAMPAIGN_CHANNEL
- DIM_CAMPAIGN
- DIM_CUSTOMER
- DIM_PROSPECT
- DIM_DATES
- DIM_PRODUCT
- DIM_OFFER
- DIM_TREATMENT
- DIM_WAVE

- DIM_VENDOR
- DIM_CONTACT
- DIM_REGION
- DIM_MKTG_PROGRAM
- STG_CAMPAIGN_DETAILS

For more information, see *Dimension Tables Population* section under *Dimension Loading Process* chapter for details on populating dimension tables like DIM_CUSTOMER, DIM_BANDS, and so on.

For more information, see *Time Dimension Population* chapter for details on populating DIM_DATES dimension table. See *Download Specification* for identifying fields required in Channel Transaction tables in staging for the purpose of Customer Insight Application(s).

Executing the Fact Application Population T2T

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen), a seeded batch, <Infodom>_aCRM_CampaignAnalysis - Task1, has to be executed for the required MIS Date.

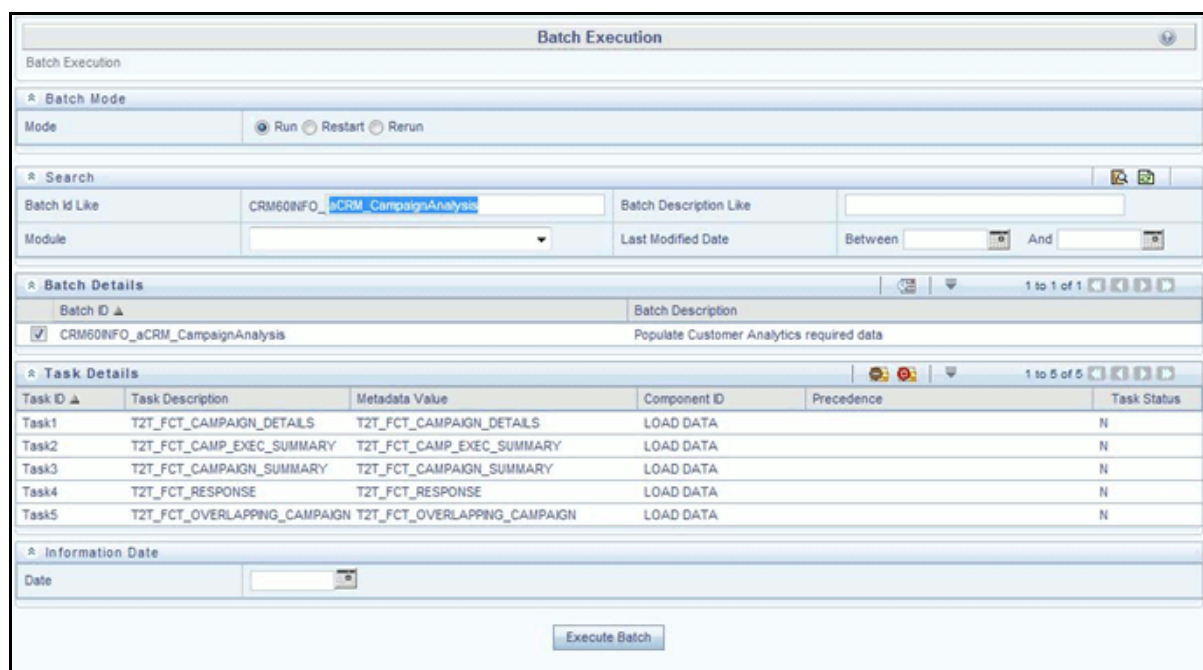

Figure 31. <Infodom>_aCRM_CampaignAnalysis - Task1

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.

6. Select Load Data from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.
 - File Name - Select the T2T name 'T2T_FCT_CAMPAIGN_DETAILS', you want to process.
8. Data file name will be blank for any Table to Table Load mode. Default value refers to any parameter that has to be passed to T2T. If there is any need for currency conversion in T2T transactions, Default value has to be provided.
For example, default value is [DRCY]='USD'
Here, 'USD' acts as reporting currency parameter to T2T.
9. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: `$FIC_DB_HOME/log/t2t`.

The file name will have the batch executionID. The following tables can be queried for errors:

FCT_CAMPAIGN_DETAILS\$

Note: For more information on configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Campaign Execution Summary

Fact Campaign Execution Summary entity is a summary table which stores fact information like mail base, no of campaign prospects contacted, cost incurred, number of opt outs from the campaign, expected 5 year NPV, and so on across dimensions like Campaign Region, Offer, Treatment, Product, Wave, Campaign, Vendor, Offer Channel, and so on.

The following table lists the seeded T2T Definitions with related Source Table and Destination tables:

Table 15. Fact Campaign Execution Summary T2T Definition

T2T Definition Name	Source Staging Table	Destination Table
T2T_FCT_CAMP_EXEC_SUMMARY	FCT_CAMPAIGN_DETAILS	FCT_CAMPAIGN_EXEC_SUMMARY

For more information, see *Erwin Data Model* to view the detailed structure of the earlier tables.

Prerequisites

Fact Campaign Details T2T needs to be executed prior to populating Fact Campaign Execution Summary fact table.

Following are the lists of tables used in the population of Fact Campaign Execution Summary and these tables are required to be loaded prior to running the T2T:

- FCT_CAMPAIGN_DETAILS
- DIM_DATES

For more information, see *Population of Fact Campaign Details* section on populating campaign details.

For more information, see *Time Dimension Population* chapter for details on populating DIM_DATES dimension table.

Executing the Fact Application Population T2T

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen) a seeded batch, <Infodomain>_aCRM_CampaignAnalysis - Task2 has to be executed for the required MIS Date.

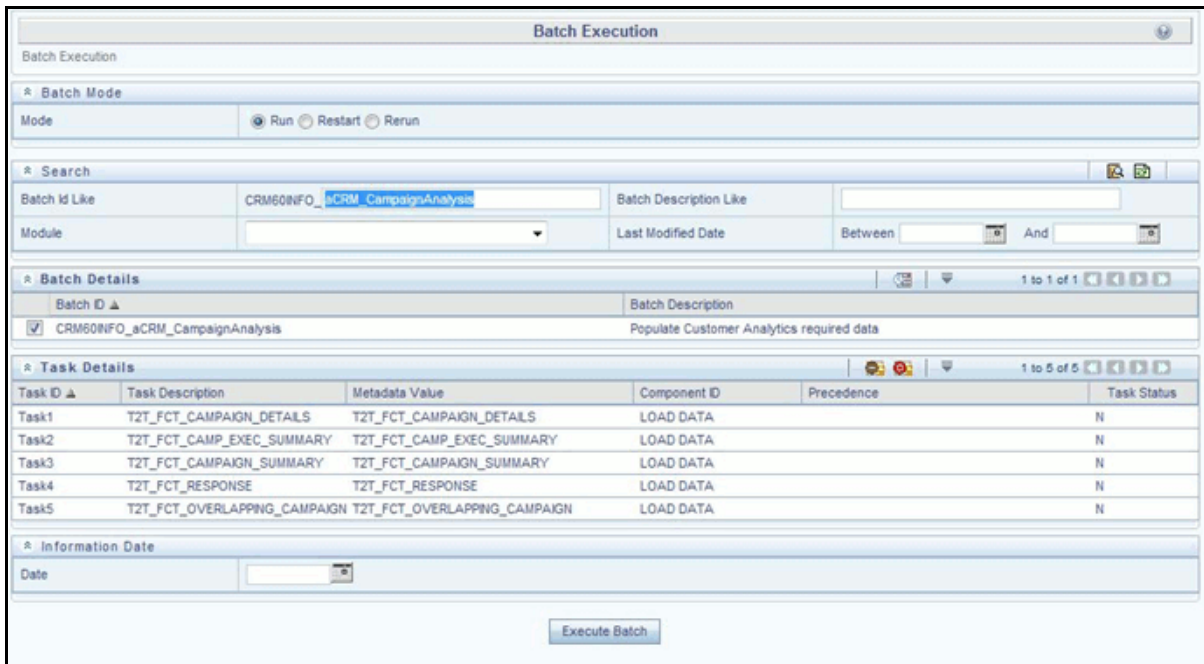

Figure 32. aCRM_CampaignAnalysis - Task2

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.
 - File Name - Select the T2T name 'T2T_FCT_CAMP_EXEC_SUMMARY', you want to process.
8. Data file name will be blank for any Table to Table Load mode. Default value refers to any parameter that has to be passed to T2T. If there is any need for currency conversion in T2T transactions, Default value has to be provided.
For example, default value is [DRCY]='USD'
Here, 'USD' acts as reporting currency parameter to T2T.
9. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: \$FIC_DB_HOME/log/t2t.

The file name will have the batch execution ID. The following tables can be queried for errors:

FCT_CAMPAIGN_EXEC_SUMMARY\$

Note: For more information on configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Response

Fact Response entity stores the all the responses for the campaign that was executed. The fact entity stores information such as response type, status, channel, product, offer channel, wave, offer, treatment, and so on.

The following table lists the seeded T2T Definitions with related Source Table and Destination tables:

Table 16. Fact Response T2T Definitions

T2T Definition Name	Source Staging Table	Destination Table
T2T_FCT_RESPONSE	STG_RESPONSE	FCT_RESPONSE

For more information, see *Erwin Data Model* to view the detailed structure of the earlier tables.

Prerequisites

T2Ts related to Fact Campaign Details, Fact Campaign Summary, Fact Common Customer Summary needs to be executed before loading Fact Response table.

Following are the lists of tables used in the population of Fact Response and these tables are required to be loaded prior to running the T2T:

- FCT_CAMPAIGN_DETAILS
- DIM_CAMPAIGN
- DIM_REGION
- DIM_PRODUCT
- DIM_CAMPAIGN_CHANNEL
- DIM_OFFER
- DIM_TREATMENT
- DIM_WAVE
- DIM_VENDOR
- DIM_DATES
- DIM_MKTG_PROGRAM
- DIM_CONTACT
- DIM_REJECTION_REASON
- DIM_RESPONSE_TYPE
- DIM_CHANNEL
- DIM_MARKET_CELL
- DIM_CUSTOMER
- FCT_COMMON_CUSTOMER_SUMMARY
- DIM_PROSPECT
- DIM_PROFESSION
- DIM_CALL_TYPE

- DIM_CAMPAIGN_SOURCE_TYPE

For more information, see *Population of Fact Campaign Details* section on populating campaign details and see *Population of Fact Campaign Summary* section for details on populating Campaign Summary fact table. See *Population of Fact Common Customer Summary* section for details on populating Common Customer Summary fact table.

For more information, see *Dimension Tables Population* section under *Dimension Loading Process* chapter for details on populating dimension tables like DIM_CUSTOMER, DIM_BANDS, and so on.

For more information, see *Time Dimension Population* chapter for details on populating DIM_DATES dimension table.

Executing the Fact Application Population T2T

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen) a seeded batch, <InFodom>_aCRM_CampaignAnalysis - Task4 has to be executed for the required MIS Date.

Task ID	Task Description	Metadata Value	Component ID	Precedence	Task Status
Task1	T2T_FCT_CAMPAIGN_DETAILS	T2T_FCT_CAMPAIGN_DETAILS	LOAD DATA		N
Task2	T2T_FCT_CAMP_EXEC_SUMMARY	T2T_FCT_CAMP_EXEC_SUMMARY	LOAD DATA		N
Task3	T2T_FCT_CAMPAIGN_SUMMARY	T2T_FCT_CAMPAIGN_SUMMARY	LOAD DATA		N
Task4	T2T_FCT_RESPONSE	T2T_FCT_RESPONSE	LOAD DATA		N
Task5	T2T_FCT_OVERLAPPING_CAMPAIGN	T2T_FCT_OVERLAPPING_CAMPAIGN	LOAD DATA		N

Figure 33. aCRM_CampaignAnalysis - Task4

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.

7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.
 - File Name - Select the T2T name 'T2T_FCT_RESPONSE', you want to process.
8. Data file name will be blank for any Table to Table Load mode. Default value refers to any parameter that has to be passed to T2T. If there is any need for currency conversion in T2T transactions, Default value has to be provided.
 For example, default value is [DRCY]='USD'
 Here, 'USD' acts as reporting currency parameter to T2T.
9. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: \$FIC_DB_HOME/log/t2t.

The file name will have the batch execution ID. The following tables can be queried for errors:

FCT_RESPONSE\$

Note: For more information on configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Overlapping Campaign

Fact Overlapping Campaign entity stores the summary information related to prospects who were targeted by multiple campaigns at a point in time.

The following table lists the seeded T2T Definitions with related Source Table and Destination tables:

Table 17. Fact Overlapping Campaign T2T Definitions

T2T Definition Name	Source Staging Table	Destination Table
T2T_OVERLAPPING_CAMPAIGN	STG_OVERLAPPING_CAMPAIGN	FCT_OVERLAPPING_CAMPAIGN

For more information, see *Erwin Data Model* to view the detailed structure of the earlier tables.

Prerequisites

Following are the lists of tables used in the population of Fact Overlapping Campaign and these tables are required to be loaded prior to running the T2T:

- DIM_DATES
- STG_OVERLAPPING_CAMPAIGN

For more information, see *Time Dimension Population* chapter for details on populating DIM_DATES dimension table.

See *Download Specification* for identifying fields required in Stage Customer Master and Stage Customer Details for the purpose of Customer Insight Application(s).

Executing the Fact Application Population T2T

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen) a seeded batch, <Infodom>_aCRM_CampaignAnalysis - Task5 has to be executed for the required MIS Date.

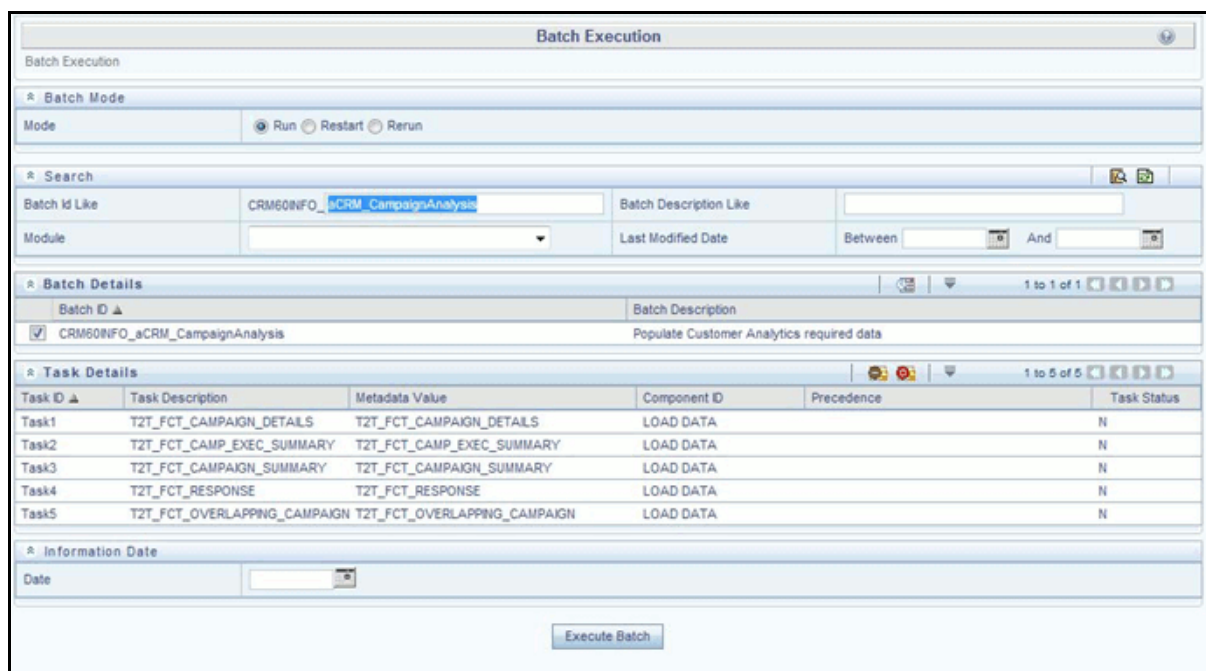

Figure 34. aCRM_CampaignAnalysis - Task5

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.

5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.
 - File Name - Select the T2T name 'T2T_OVERLAPPING_CAMPAIGN', you want to process.
8. Data file name will be blank for any Table to Table Load mode. Default value refers to any parameter that has to be passed to T2T. It has to be blank.
9. Execute the batch created in the preceding steps.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: \$FIC_DB_HOME/log/t2t.

The file name will have the batch execution ID. The following tables can be queried for errors:

FCT_OVERLAPPING_CAMPAIGN\$

Note: For more information on configuration and execution of a batch, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Cross Sell Score

Fact Cross Sell Score entity stores Cross Sell Scores of the customers between product types. This fact entity is loaded from Fact Common Account Summary table. The T2T loads data required for predictive models. The predictive models make use of this data for deriving the cross sell score between the product types for a customer and the cross sell scores are updated back in this fact.

The following table lists the seeded T2T Definitions with related Source Table and Destination table:

Table 18. Fact Cross Sell Score T2T Definitions

T2T Definition Name	Source Table	Destination Table
T2T_XSELL_CARDS_TO_CASA	FCT_COMMON_ACCOUNT_SUMMARY	FCT_XSELL_SCORE
T2T_XSELL_TD_TO_CARDS	FCT_COMMON_ACCOUNT_SUMMARY	FCT_XSELL_SCORE

Table 18. Fact Cross Sell Score T2T Definitions

T2T Definition Name	Source Table	Destination Table
T2T_XSELL_CARDS_T O_MORT	FCT_COMMON_ACCOUNT_SUMMARY	FCT_XSELL_SCORE
T2T_XSELL_CASA_TO_CARDS	FCT_COMMON_ACCOUNT_SUMMARY	FCT_XSELL_SCORE
T2T_XSELL_CASA_TO_MORT	FCT_COMMON_ACCOUNT_SUMMARY	FCT_XSELL_SCORE
T2T_XSELL_MORT_T O_CARDS	FCT_COMMON_ACCOUNT_SUMMARY	FCT_XSELL_SCORE

For detailed structure of the earlier tables, see *Customer Insight Erwin Data Model*.

Prerequisites

Following are the lists of tables used in the population of Fact Cross Sell Score and these tables are required to be loaded prior to running the T2T:

- FCT_COMMON_ACCOUNT_SUMMARY

For details on populating dimension tables like DIM_CUSTOMER, DIM_BANDS, and so on, refer to *Dimension Tables Population* section under *Dimension Loading Process* chapter.

For more information on populating account dimension, refer to *Account Dimension Population* chapter.

For details on populating DIM_DATES dimension table, refer to *Time Dimension Population* chapter .

Executing the Fact Cross Sell Score Population T2Ts

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through the application Batch Operations screen), a seeded batch, <Infodom>_ Xsell_Score has to be executed for the required MIS Date.

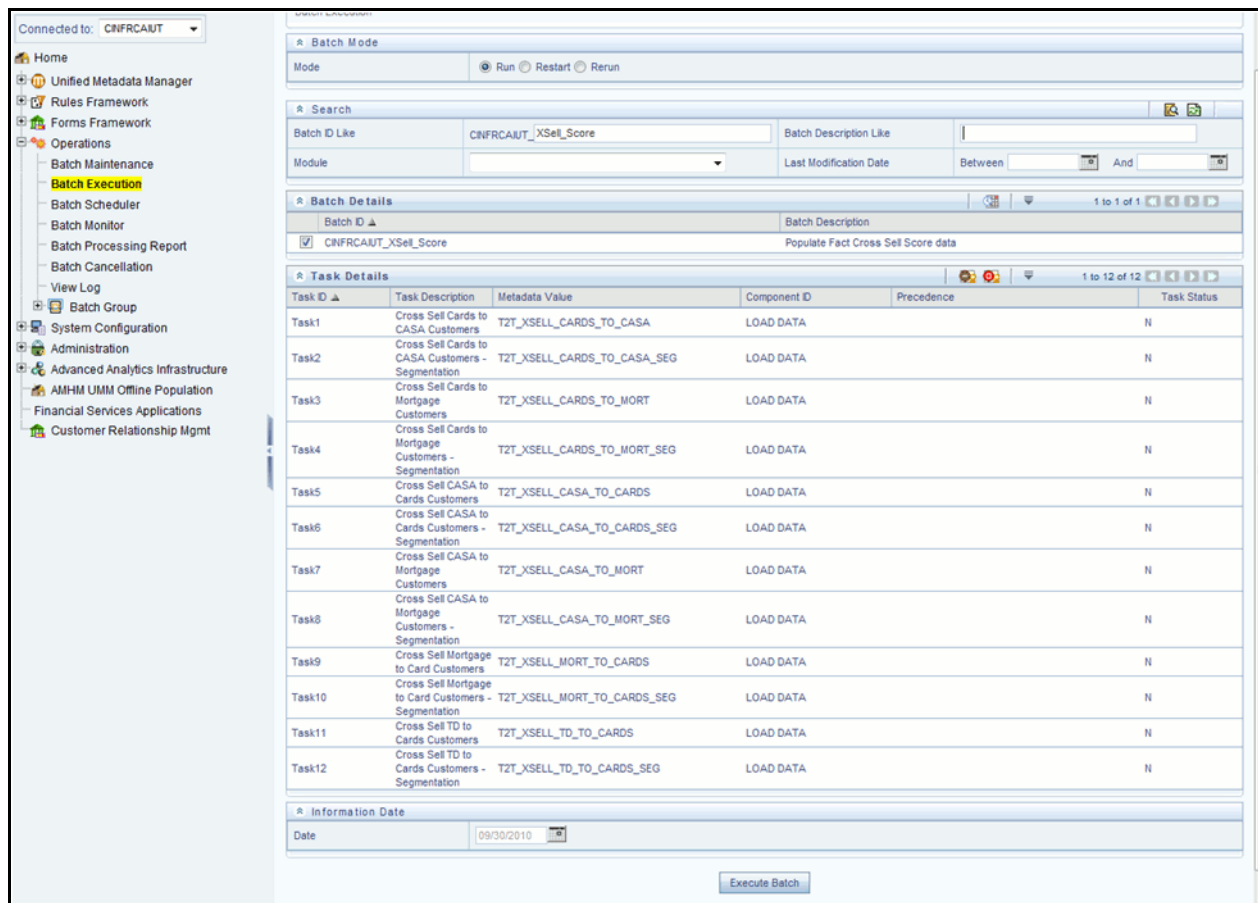

Figure 35. XSell_Score

Alternatively, following steps will help you create a new batch:

1. From the Home menu, click **Operations** and select **Batch Maintenance**.
2. Click **New Batch** ('+' symbol in Batch Name container). Enter the Batch Name and Description.
3. Click **Save**.
4. Click the check box in the Batch Name container to select the Batch, you created in the earlier step.
5. Enter the Task ID and Description.
6. Select **Load Data** from the Components list.
7. Select the following from the Dynamic Parameters List and click **Save**:
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Load Mode - Select Table to Table from the list.
 - Source Name - Select <T2T Source Name> from the list.
 - File Name - Select the T2T name for the source stage channel table you want to process. Data file name will be blank for any Table to Table Load mode and default value should be null.

8. Steps 4 to 8 must be repeated for adding the remaining 11 T2Ts within the same batch definition.
9. Execute the batch created in the preceding steps.

For more information, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: \$FIC_DB_HOME/log/t2t.

The file name will have the batch execution ID. The following tables can be queried for errors:

FCT_XSELL_SCORE

Note: For more information on configuration and execution of a batch, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Fact Account Profitability

Fact Account Profitability entity stores fact data for reporting line items of revenue, costs, and expense related to each customer account. The data into this table is populated from other fact tables like FCT_COMMON_ACCOUNT_SUMMARY, FCT_PFT_ACCOUNT_SUMMARY, FCT_FTP_ACCOUNT_SUMMARY, FCT_REG_CAP_ACCOUNT_SUMMARY, and FCT_ECO_CAP_ACCOUNT_SUMMARY.

The following table lists the seeded Post Load Transformation Definition with related Source Table and Destination tables

Table 19. Fact Account Profitability Definition

T2T Definition Name	Source Staging Table	Destination Table
FN_FCT_ACCOUNT_PFT	FCT_COMMON_ACCOUNT_SUMMARY FCT_PFT_ACCOUNT_SUMMARY FCT_FTP_ACCOUNT_SUMMARY FCT_REG_CAP_ACCOUNT_SUMMARY FCT_ECO_CAP_ACCOUNT_SUMMARY	FCT_ACCOUNT_PROFITABILITY

For more information and to view the detailed structure of the tables, see *Oracle Financial Services Analytical Applications Data Model Data Dictionary* and the *Erwin Data Model*.

Information from account summary fact tables are populated to Fact Account Profitability through a mapping process. Reporting line dimension is mapped to measures present in account summary. A PL/SQL procedure then populates the fact table by reading the mapping definition.

Reporting line dimension is created/maintained from Attribute Member Hierarchy Maintenance (AMHM) component of OFSAAI. A Reporting line item represents a revenue, costs, or expenses. Rollup signage is set as an

attribute for a reporting line item. To know more about AMHM, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

The Account summary tables contain the revenue, costs, or expenses measures pertaining to an Account. Map Maintenance component of OFSAAI is used to map the measures of account summary tables (represented in a measure hierarchy) to reporting line hierarchy. A pre-defined mapping "Reporting Line Mapping" is seeded along with the application installer. Reporting Line Hierarchy and Reporting Line Measure

Hierarchy are the two hierarchies which are used for the mapping. Reporting Line Hierarchy is a parent child hierarchy which is based on Reporting Line Dimension entity.

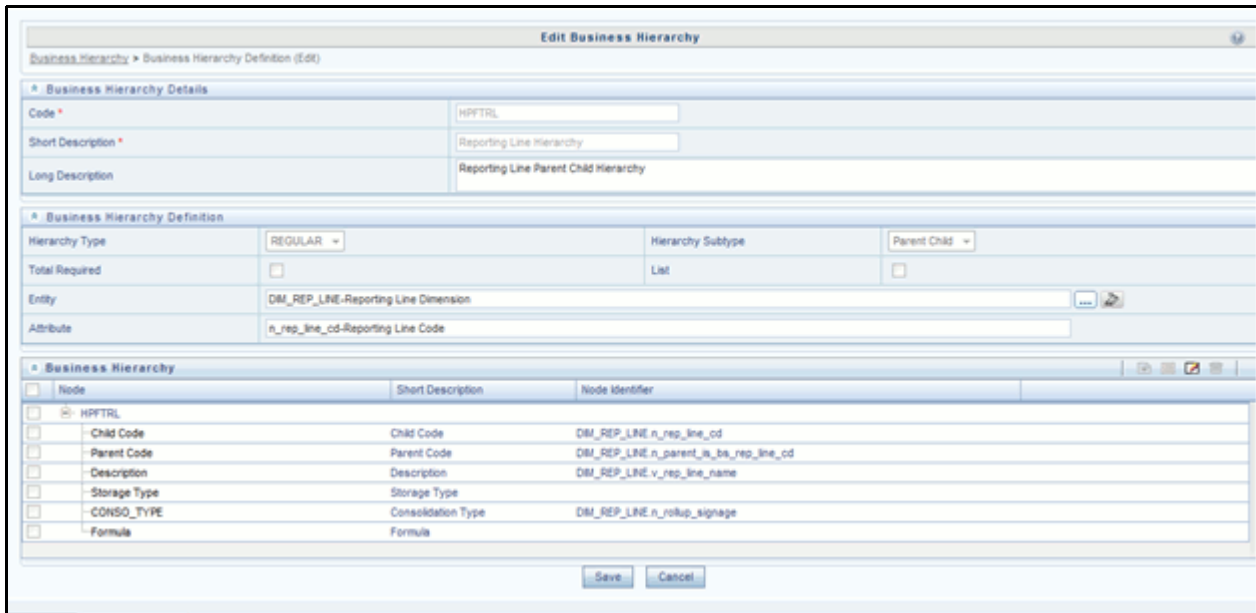

Figure 36. Reporting Line Hierarchy

Reporting Line Measure hierarchy is a Non Business Intelligence Enabled Hierarchy which is based on measures from the Account Summary tables.

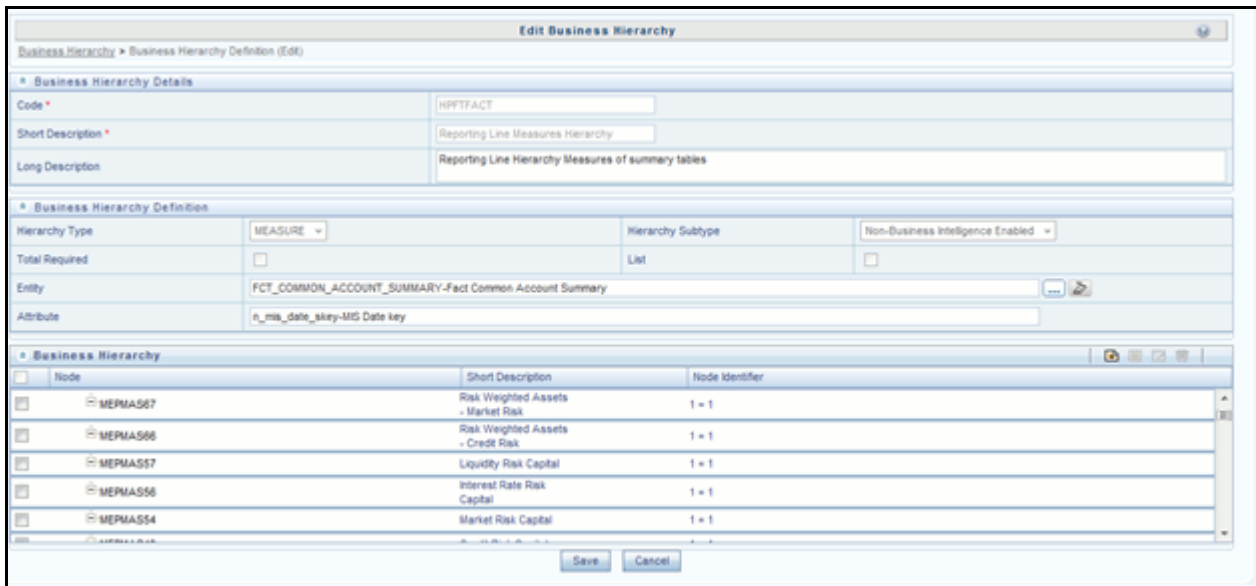

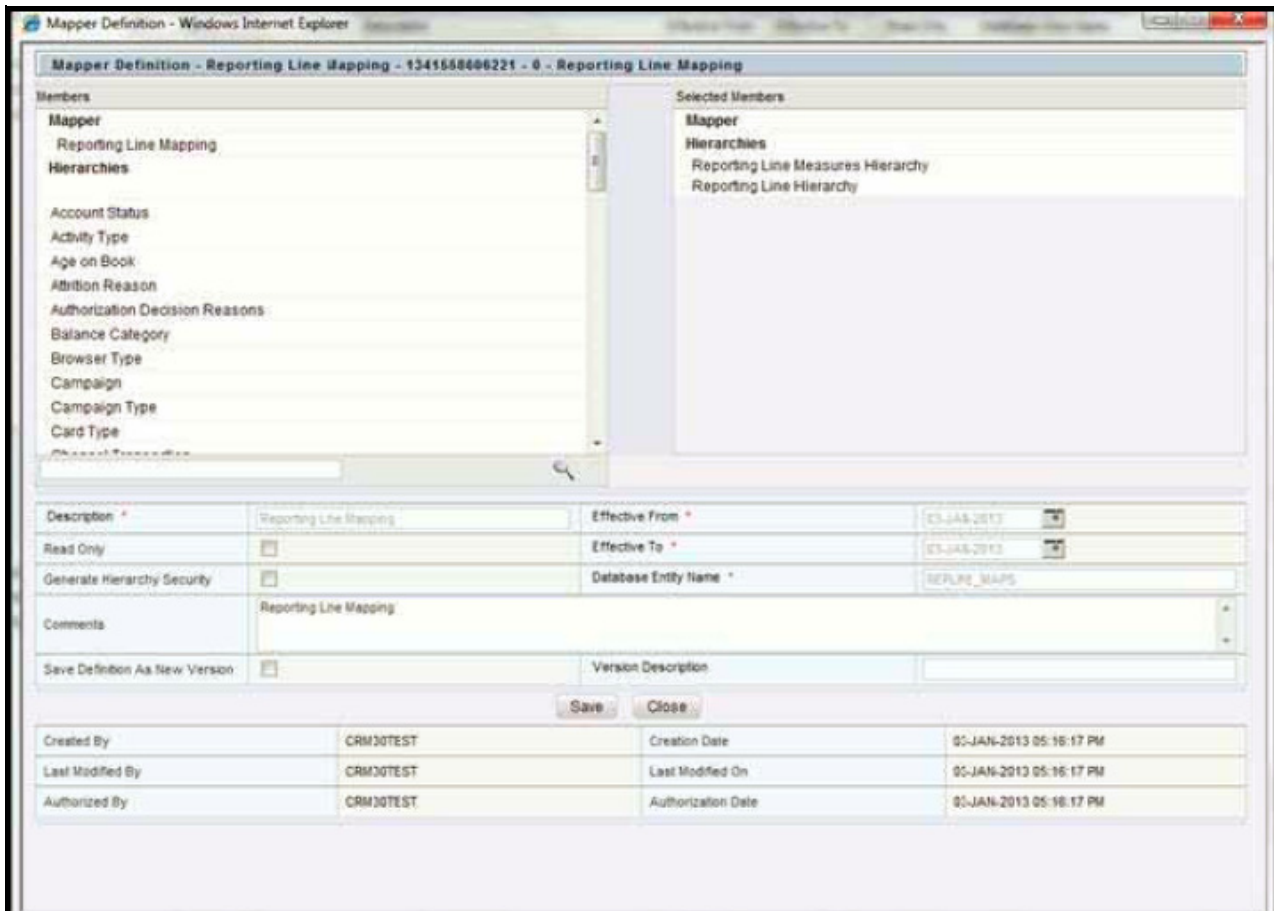

Figure 37. Reporting Line Measure hierarchy

A seeded map is configured between the Reporting Line Hierarchy and Reporting Line Measure Hierarchy from Map Maintenance of OFSAAL.

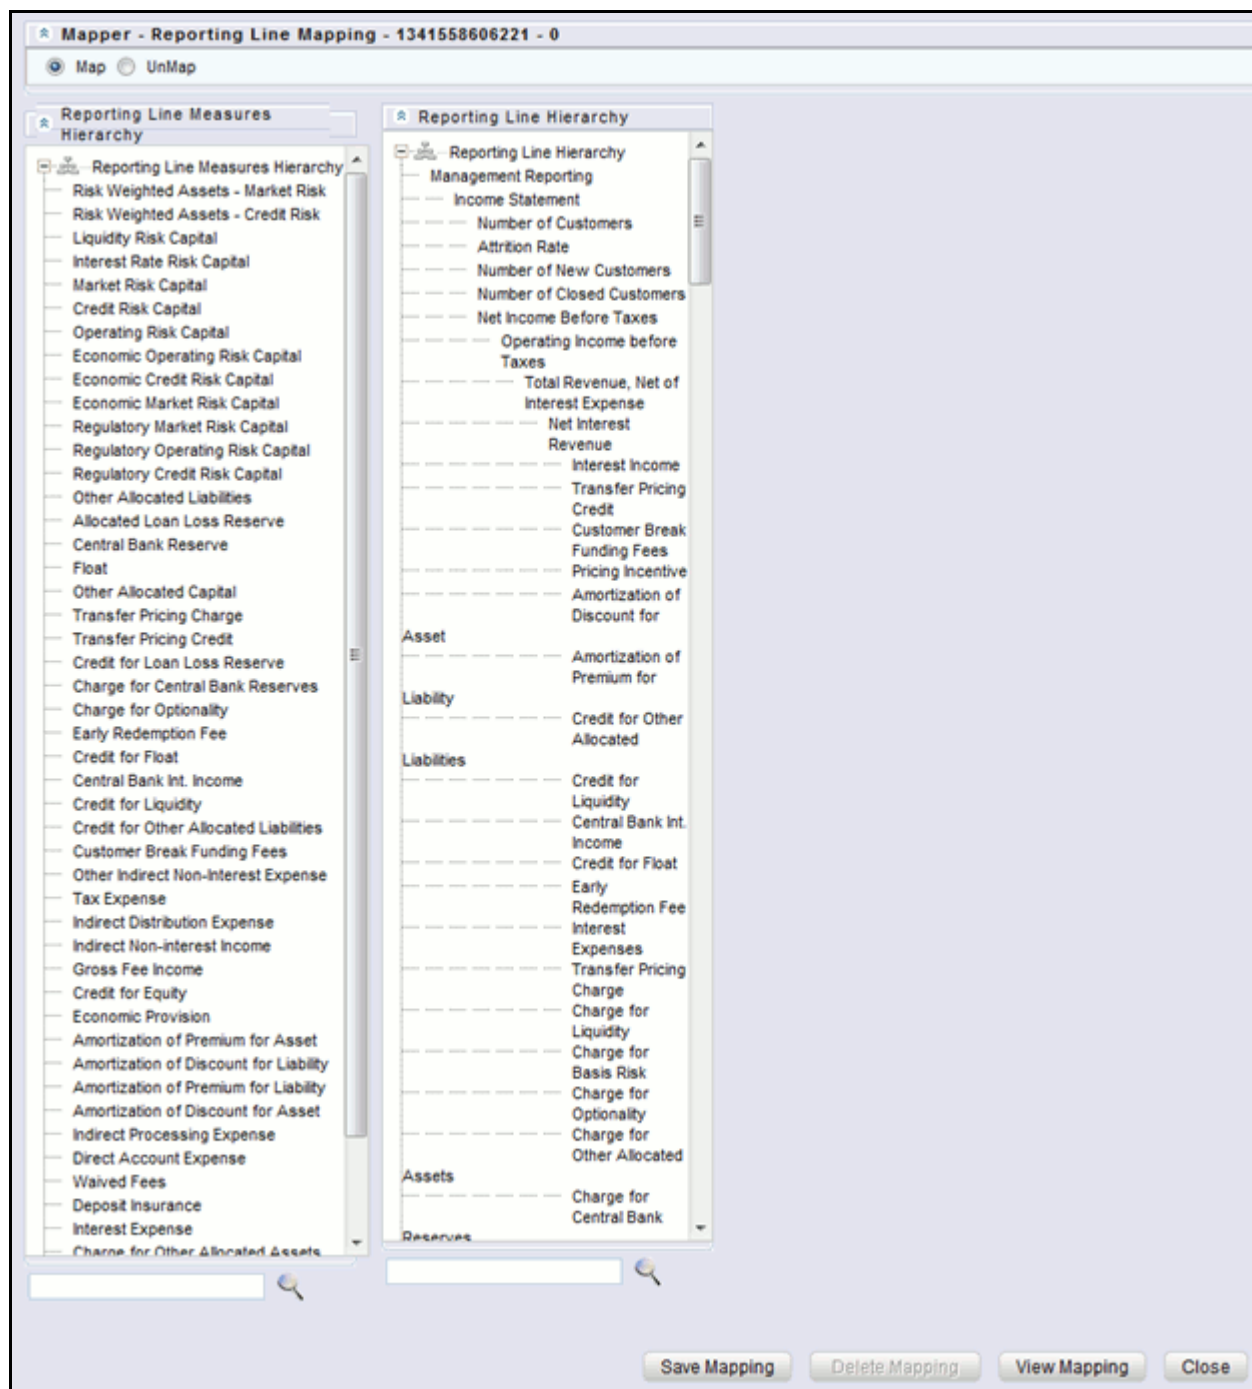

Figure 38. Reporting Line Measure Hierarchy

For more information on defining/maintaining Mapper, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Steps to Define Mapping for Custom Reporting Line Items

Follow the below steps to define mapping for Custom Reporting Line items:

1. Add Custom Reporting Line or Modify existing Reporting Line.
2. Add Custom Reporting Line Hierarchy or modify existing seeded reporting line hierarchy.
3. Execute the seeded Batch <INFODOM>_ Repline_Dimension_Update specifying the Reporting line hierarchy as parameter to Batch.
4. Modify the seeded Business Metadata.
5. Map Maintenance.

The following sections describe these steps.

Add Custom Reporting Line or Modify existing Reporting Line

Custom Reporting Lines can be added or modified from AMHM. Following are the seeded attributes of Reporting Line Dimension:

- Financial Element Code
- GL Account Code
- Rollup Signage

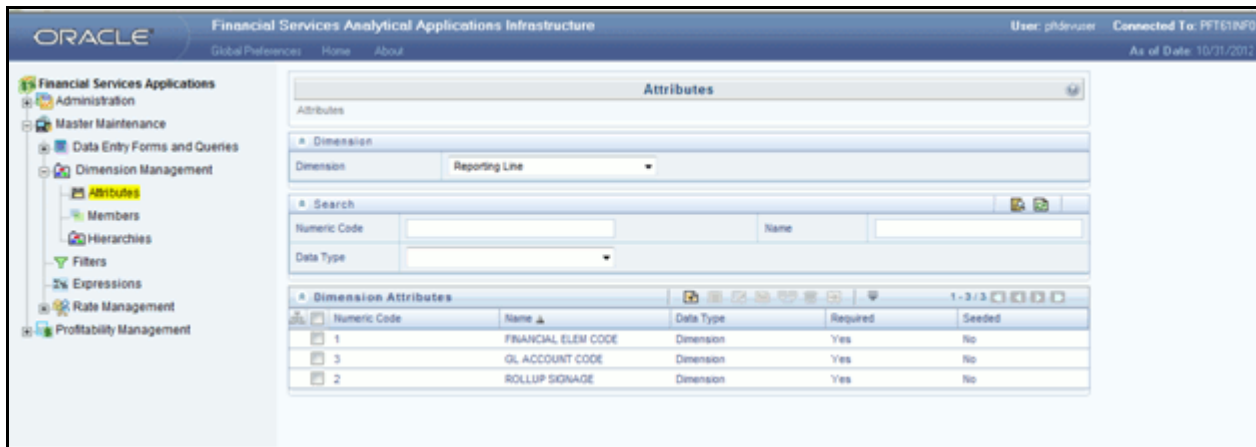

Figure 39. Reporting Line Attributes

A Reporting line can be added or modified from the Members screen as shown below. To modify the existing reporting line, select the member by selecting the adjacent check box and select the **Edit** button on the menu bar.

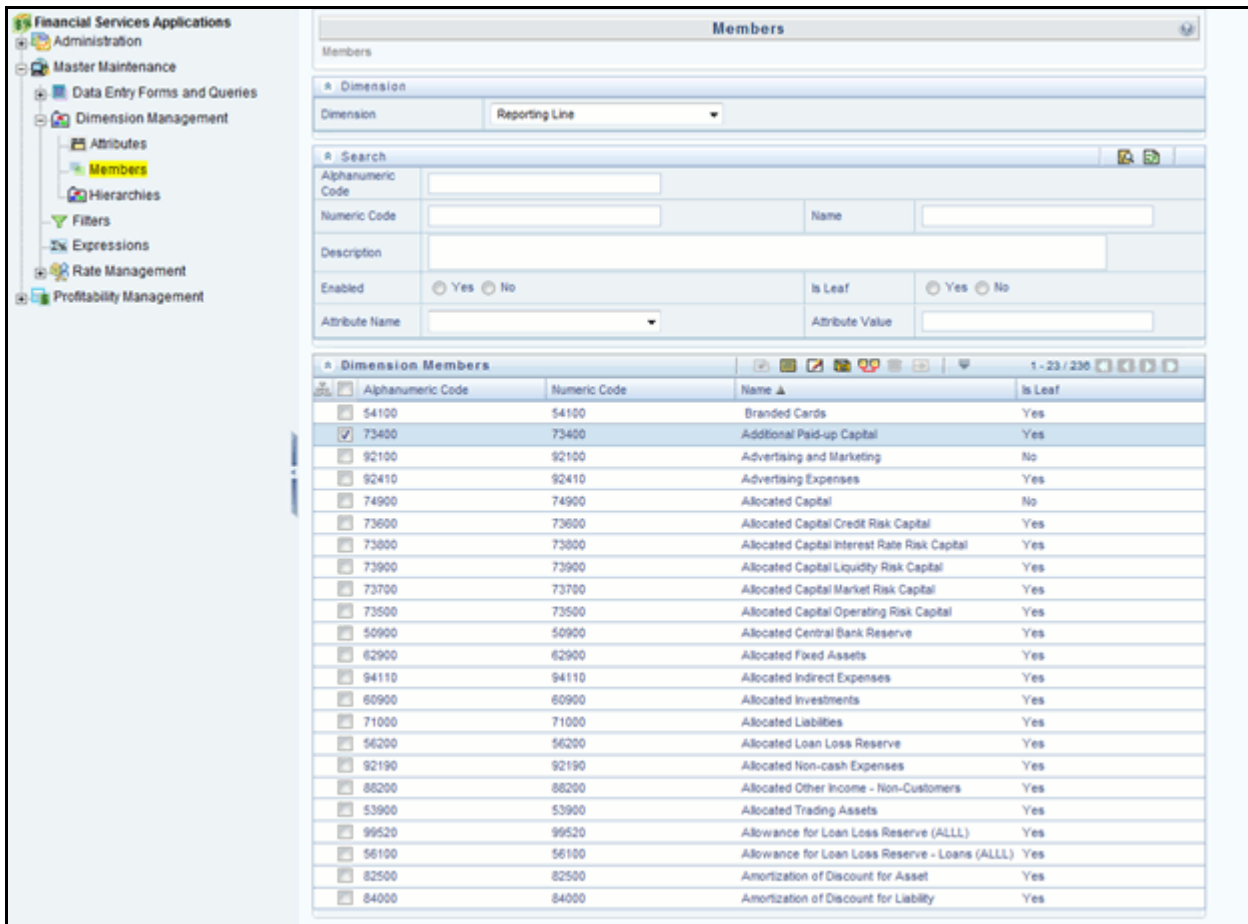

Figure 40. Reporting Line Members

To add a new reporting line:

1. Select **Add** button from the Members screen. The Member Definition (New Mode) screen is displayed.

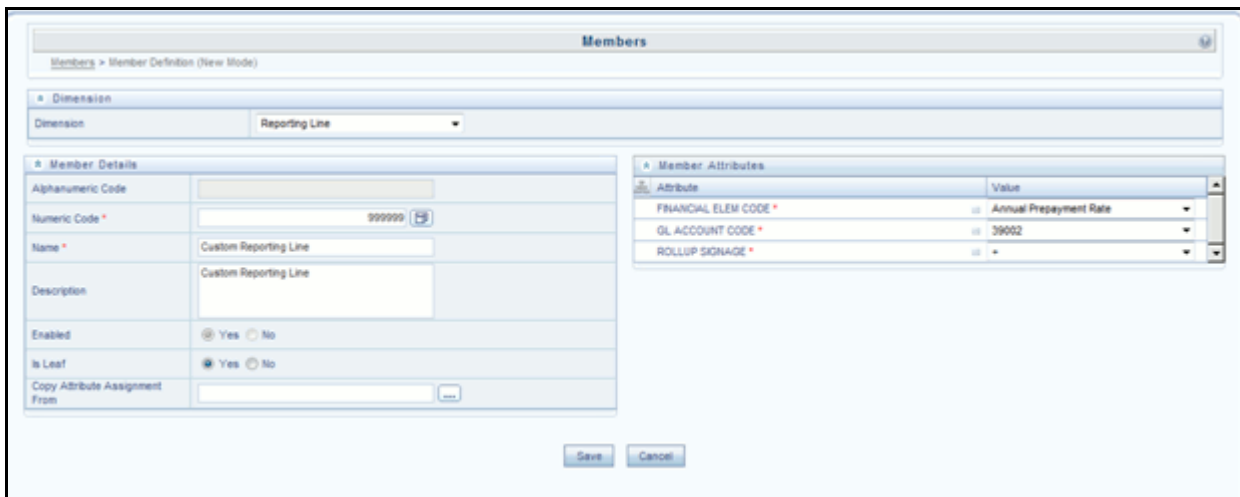

Figure 41. Member Definition (New Mode)

2. In the Member Definition (New Mode) screen:

- Enter Numeric Code.
- Enter the Name of the custom reporting line.
- Enter the Description of the custom reporting line.
- Select **Yes**, if the custom reporting line has to be Enabled or not.
- Select **Yes**, if the custom reporting line Is Leaf or not.
- Select the Attributes for the reporting line member.
- **Save** the Member definition.

To modify a reporting line:

1. Click **Edit** button from the Members screen. The Member Definition (Edit Mode) screen is displayed.

Member Details		Member Attributes	
Alphanumeric Code *	62900	Attribute	Value
Numeric Code *	62900	FINANCIAL ELEM CODE *	10006 - CC_OP_12801820
Name *	Allocated Fixed Assets	GL ACCOUNT CODE *	10 digit number
Description	Allocated Fixed Assets	ROLLUP SIGNAGE *	-
Enabled	<input checked="" type="radio"/> Yes <input type="radio"/> No		
Is Leaf	<input checked="" type="radio"/> Yes <input type="radio"/> No		
Copy Attribute Assignment From			

Figure 42. Member Definition (Edit Mode)

2. In the Member Definition (Edit Mode) screen, perform the following as required:

- Modify the Name of the custom reporting line.
- Modify the Description of the custom reporting line.
- Modify the selection of the radio button in the Enabled field.
- Modify the selection of the radio button in the Is Leaf field.
- Modify the Attributes for the reporting line member.
- Save the Member definition.

For more information, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Add Custom Reporting Line Hierarchy or Modify Existing Seeded Reporting Line Hierarchy

To create a new Reporting Line Hierarchy:

1. Click **Add** button from the menu. The Hierarchy Definition (New Mode) screen is displayed.

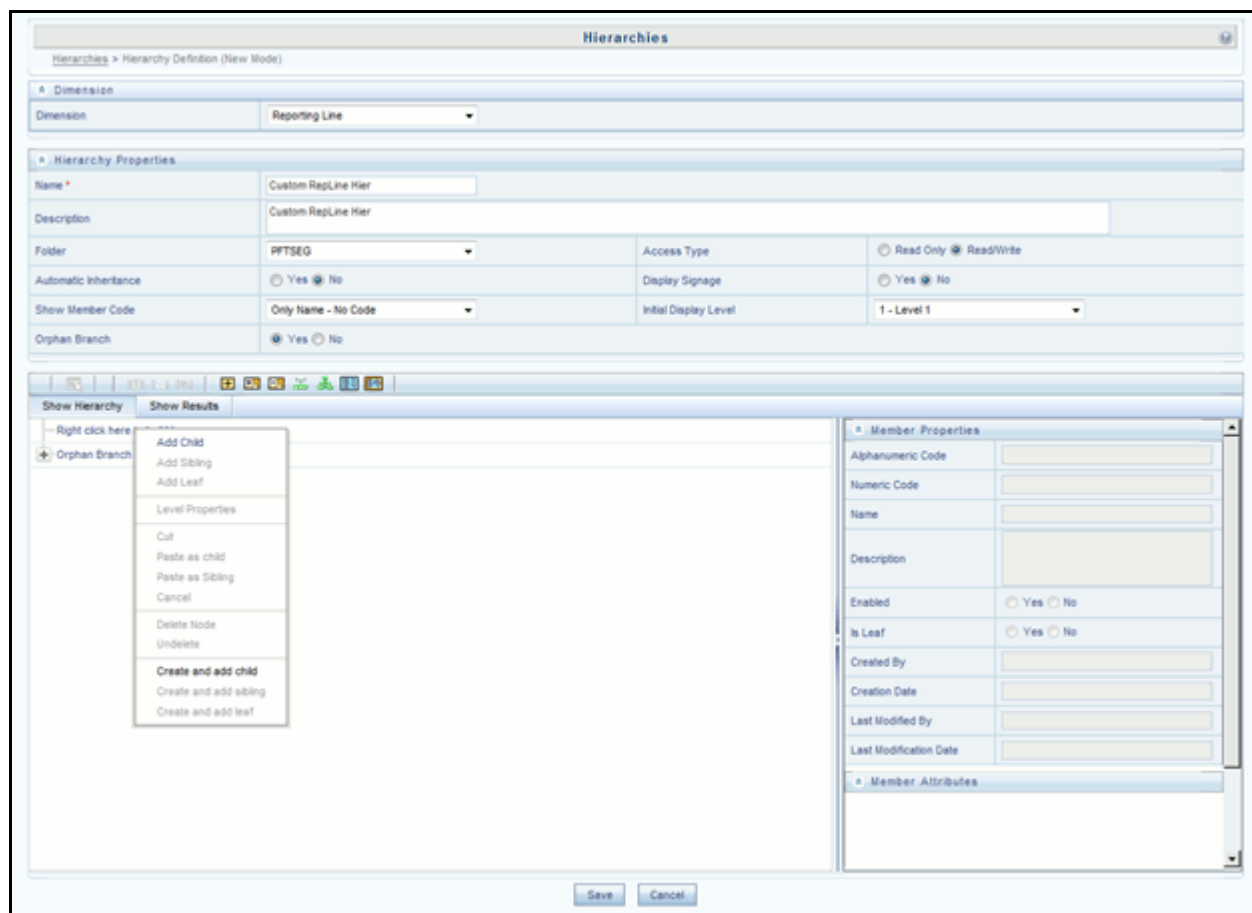

Figure 43. Hierarchy Definition (New Mode)

2. Enter the details in the required fields, and click **Save**.

Note: Alternatively, insert scripts and update scripts can be prepared into tables DIM_REPORTING_LINE_B, DIM_REPORTING_LINE_TL, DIM_REPORTING_LINE_ATTR, and DIM_REPORTING_LINE_HIER for adding any new custom reporting lines or modifying an existing reporting line.

3. Execute the seeded batch <Infodom>_ Repline_Dimension_Update specifying the Reporting line hierarchy as parameter to batch.
4. Execute the seeded batch <Infodom>_ Repline_Dimension_Update . It populates data into DIM_REP_LINE table.

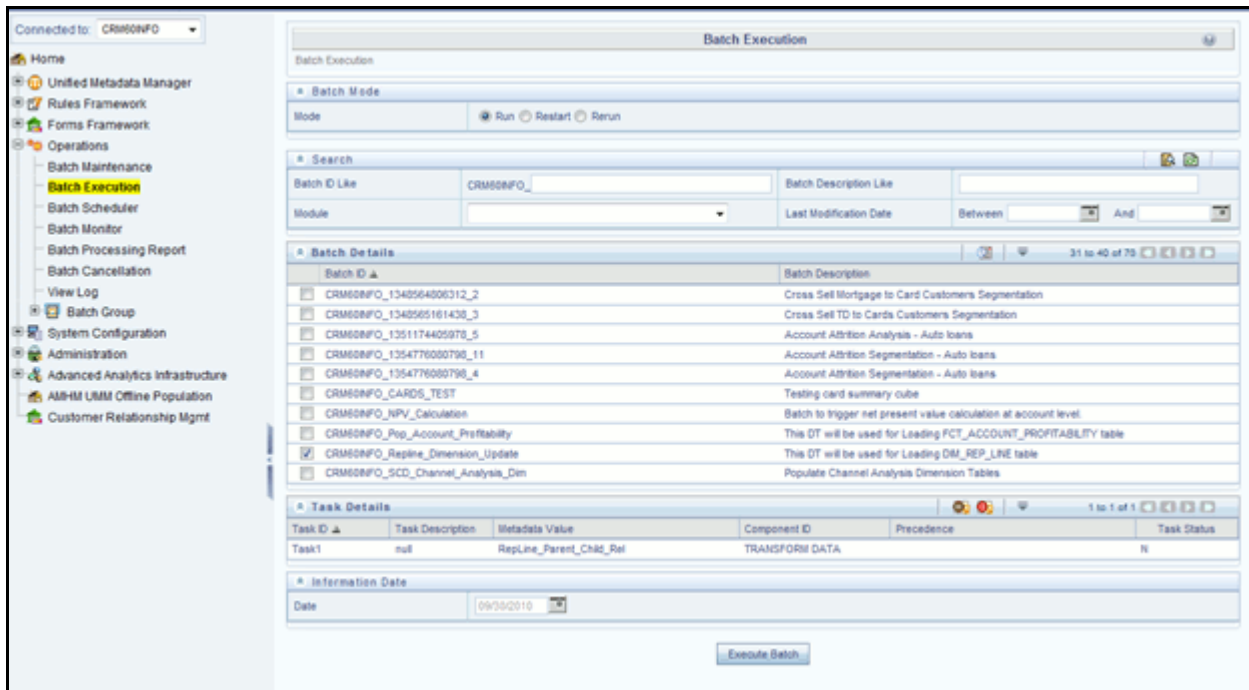

Figure 44. Execute Batch

To modify existing seeded Reporting Line Hierarchy:

1. Select the check box adjacent to the Reporting Line Hierarchy to be modified.
2. Click **Edit** button from the menu.
3. Modify the Hierarchy as required and click **Save**.

Figure 45. Modified Hierarchy

For more information, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Modify the Seeded Business Metadata

1. Resave the Seeded Business Metadata parent child hierarchy, "Reporting Line Hierarchy" (HPFTRL), so that the changes done are consolidated in the hierarchy as well.

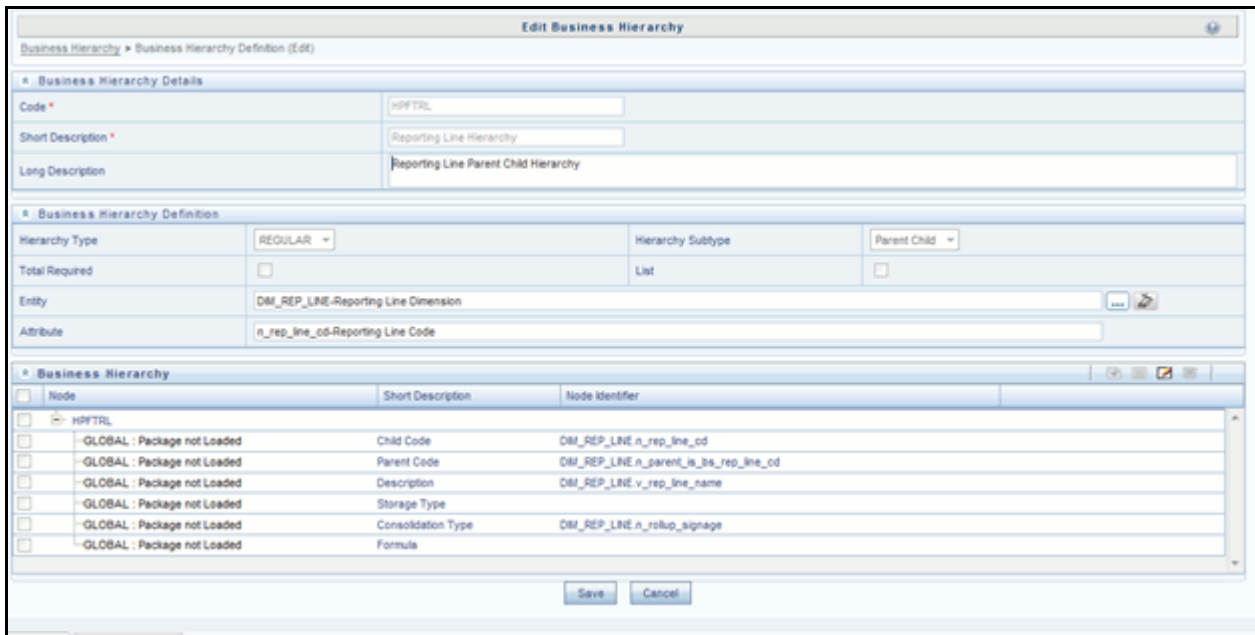

Figure 46. HPFTRL

2. (Optional) Create the Business Measures for the newly added reporting lines.
3. **Attach and Save** the defined Business Measures to the hierarchy "Reporting Line Measures".
4. Save the metadata.

For more information, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Map Maintenance

Once all the above steps are done, the seeded map configured between the Reporting Line Hierarchy and Reporting Line Measure Hierarchy has to be modified if required from Map Maintenance of OFSAAL.

For more information, refer to *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Rollup Signage and Operational Signage

In the context of Reporting Lines, the significance of Signage is that it indicates whether the Reporting Line Value in question will be an addition or a subtraction to the corresponding Parent Reporting Line. The reporting line values that are loaded to the Fact tables like FCT_ACCOUNT_PROFITABILITY or FCT_MGMT_REPORTING are leaf level reporting lines.

For example, consider the following hierarchy:

Reporting Line Hierarchy
▽ Income before Taxes
▷ Total Revenue
▷ Net Credit Losses
▽ Operating Expenses
Deposit Insurance
▽ Advertising and Marketing
Total Brand Management Expenses
Business Promotion Expenses
▷ Other Allocated Costs
▷ Processing Expenses
▷ Sales and Marketing Expenses
▷ Product Management Expenses
▷ Business Management Expenses
Indirect Processing Expense

The Fact table will not contain values for Advertising and Marketing as that value is expected to be calculated based on the "rollup" of the underlying leaf level values - Total Brand Management Expenses and Business Promotion Expenses. However, all the underlying values will not be added together. Some values will be expected as positive, and some will be expected as negative. For example:

Reporting Line Hierarchy	Rollup Signage
▽ Income before Taxes	1
▷ Total Revenue	1
▷ Net Credit Losses	-1
▽ Operating Expenses	-1
Deposit Insurance	-1
▽ Advertising and Marketing	1
Total Brand Management Expenses	1
Business Promotion Expenses	1
▷ Other Allocated Costs	1
▷ Processing Expenses	1
▷ Sales and Marketing Expenses	1
▷ Product Management Expenses	1

Hence, when Deposit Insurance rolls up into Operating Expenses, it is considered a subtraction. This rollup into the immediate parent is called Rollup Signage.

However, when rolling up further, (in this case, Income before Taxes), the signage of Deposit Insurance will be dependent on the rollup signage of Operating Expenses.

Operating Expenses = (-1) x Deposit Insurance

Income before Taxes = (-1) x Operating Expenses

Hence, when the leaf value Deposit Insurance rolls up into Income before Taxes,

Income before Taxes = (-1)x(-1) x Deposit Insurance = (+1) x Deposit Insurance

Hence, Rollup Signage of Deposit Insurance is -1 (or negative).

However, in relation to Income before Taxes, the Operational Signage of Deposit Insurance is +1 (or positive).

The effective signage of the leaf reporting line with respect to a parent reporting line is called Operational Signage.

Operational Signage of a reporting line is defined in relation to a parent reporting line. However, the Rollup Signage is always in relation to the immediate parent reporting line.

Prerequisites

Following are the lists of tables used in the population of of Fact Account Profitability. These tables are required to be loaded prior to running the DT.

- DIM_DATES - Mandatory
- DIM_REP_LINE - Mandatory
- FCT_COMMON_ACCOUNT_SUMMARY
- FCT_PFT_ACCOUNT_SUMMARY
- FCT_FTP_ACCOUNT_SUMMARY
- FCT_REG_CAP_ACCOUNT_SUMMARY
- FCT_ECO_CAP_ACCOUNT_SUMMARY

For more information on SCD, refer to the *Dimension Loading Process* chapter.

Executing the Fact Account Profitability Population DT

You can execute the the T2T component from the Operations (formerly Information Command Center (ICC) framework) module of OFSAAL.

Define a new Batch and an underlying Task definition from the Batch Maintenance window of OFSAAL. For more information on defining a new Batch, refer to the section How to Define a Batch.

To execute the T2T component from OFSAA Infrastructure ICC framework (accessed through Operations module), a seeded batch, <Infodom>_Pop_Account_Profitability has to be executed for the required MIS Date.

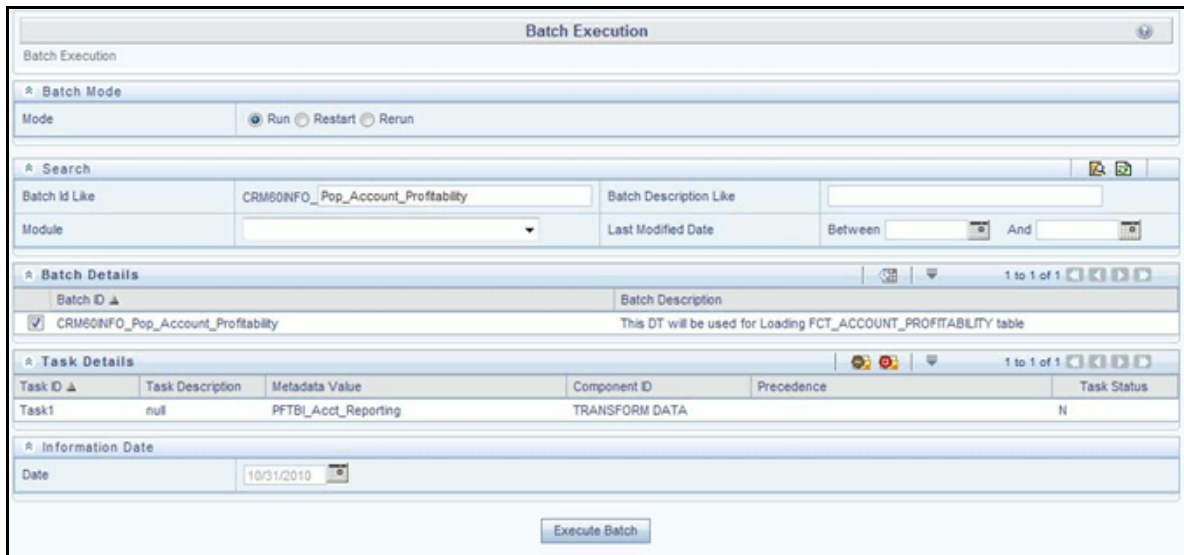

Figure 47. Pop_Account_Profitability

To define a new task for a Batch definition:

1. Click the check box in the Batch Name container to select the Batch.
2. Click **Add (+)** button from the Task Details grid. The Task Definition window is displayed.
3. Enter the Task ID and Description.
4. Select **TRANSFORM DATA** from the Components list.
5. Select the following from the Dynamic Parameters List and click **Save**.
 - Datastore Type - Select the appropriate datastore from the list.
 - Datastore Name - Select the appropriate name from the list.
 - IP address - Select the IP address from the list.
 - Rule Name - Select **FN_FCT_ACCOUNT_PFT** from the list.
6. Enter the Parameter List details as mentioned below:
 - Reload Account Profitability table for the given MIS Date flag - can be Y or N within single quotes.
 - Reporting Currency Code - This has to be enclosed within single quotes.
For Example, if reporting currency is in US Dollar, then 'USD' has to be specified.
Note: Batch run ID and As Of Date are passed internally by the batch to the Data Transformation task.

Property	Value
Dastore Type	EDW
Dastore Name	CRM60INFO
IP Address	10.184.134.18
Rule Name	PFTBL_Acct_Reporting
Parameter List	'Y','USD'

Figure 48. Data Transformation Task

7. Click **Save**. The Task definition is saved for the selected Batch.

You can execute a Batch definition from the Batch Execution section of OFSAAI Operations module.

For more information, see *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Checking the Execution Status

The status of execution can be monitored using the Batch Monitor screen. The status messages in Batch Monitor are:

- N - Not Started
- O - On Going
- F - Failure
- S - Success

The execution log can be accessed on the application server in the following directory: `$FIC_DB_HOME/log/t2t.`

The file name will have the batch executionID. The following tables can be queried for errors:

Update Bands in Fact Tables

You have to update the band values based on the scores in certain cases. For instance, a predictive models execution derive the score values, which are updated to the fact tables. Based on the new score values, it is necessary to have

the new band values updated in the fact tables. A Data Transformation "Update_Bands" is seeded to update the bands in fact tables. Update of bands in fact tables make use of a setup table FSI_BAND_SETUP_DETAILS.

Table 20. FSI_BAND_SETUP_DETAILS

Column Name	Data Type	Column Description
TABLE_NAME (PK)	VARCHAR2(30)	This stores the name of the table of the source and the target column.
SRC_COLUMN_NAME (PK)	VARCHAR2(30)	This stores the name of the source column based on which the bands would be updated in the target column.
TGT_COLUMN_NAME (PK)	VARCHAR2(30)	This stores the name of the target column where the bands are updated.
BAND_TYPE	VARCHAR2(30)	This stores the band type which has to be used from DIM_BANDS table.

Seeded entries into FSI_BAND_SETUP_DETAILS table are provided with the installer to update attrition score band in the table FCT_CRM_ACCOUNT_SUMMARY and product propensity score band & product propensity segment band in FCT_XSELL_SCORE table.

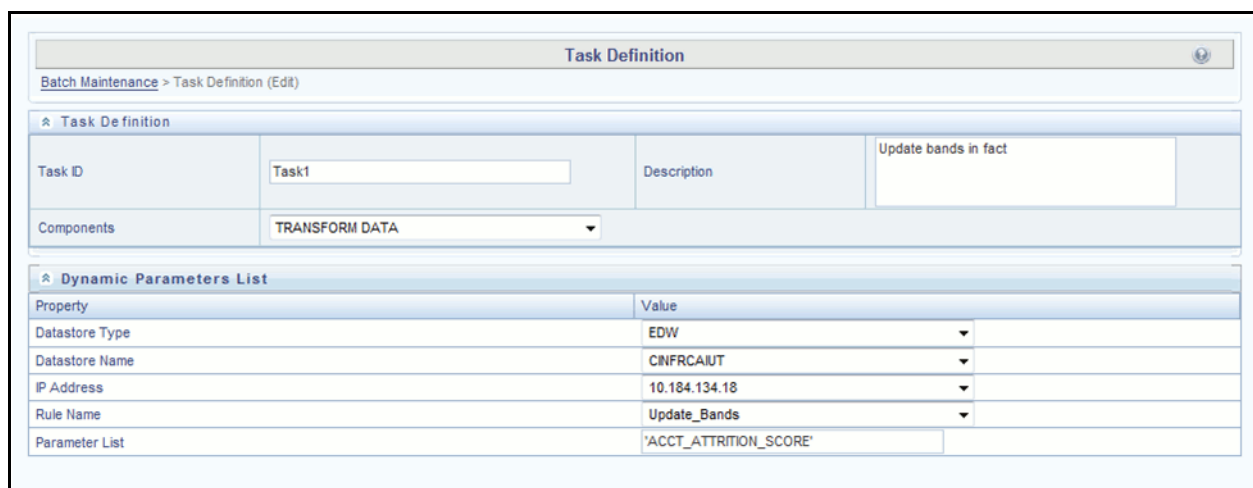

Figure 49. Update_Bands

Execute the seeded batch <Infodom>_Update_Bands. The parameters passed to DT " Update_Bands" are:

- Batch Run ID - This is passed internally to the DT from the Batch in Operations modules of OFSAAI.
- FIC MIS Date/As of Date - This is passed internally to the DT from the Batch in Operations modules of OFSAAI.
- Band Type - You have to provide the values in Parameter List of Batch Maintenance screen.

The following values can be entered:

Table 21. Band Type Parameters

Band Type to be updated	Parameter to be passed in DT
Account Attrition Score Band	ACCT_ATTRITION_SCORE
Product Propensity Score Band	PRODUCT_PROP_SCORE

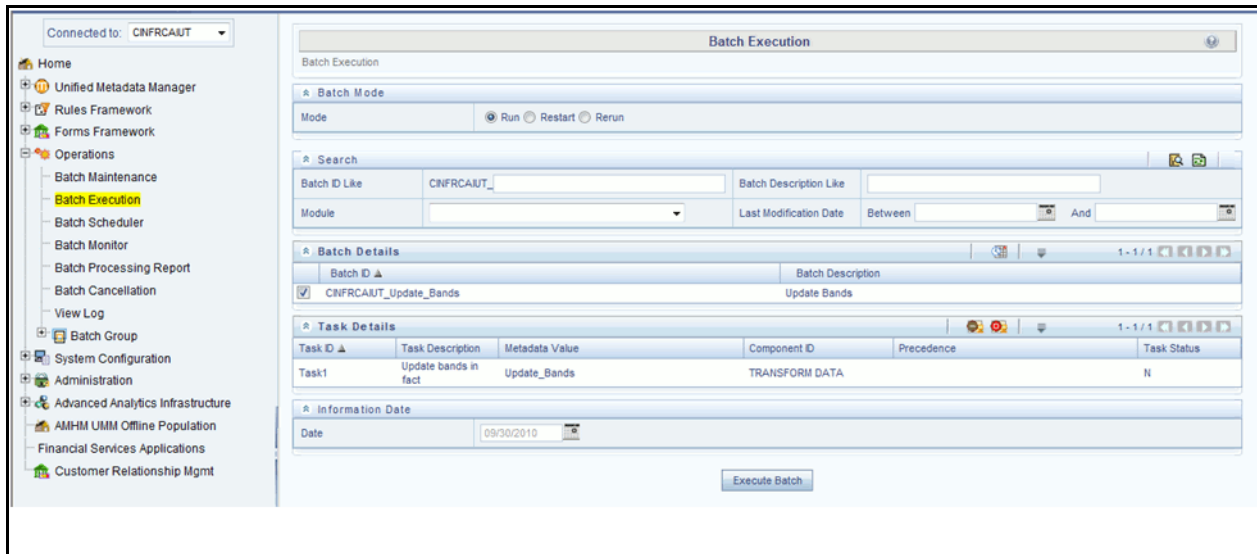

Figure 50. Define batch

You can also define a new Batch and an underlying Task definition from the Batch Maintenance window of OFSAAL.

For more information on defining a new Batch, refer to *How to Define a Batch*, section. To define a new task for a selected Batch definition:

1. Select the check box adjacent to the newly created Batch Name in the Batch Maintenance window.
2. Click **Add (+)** button from the Task Details grid. The Task Definition window is displayed.
3. Enter the Task ID and Description.
4. Select the **TRANSFORM DATA** component from the Components drop down list.
5. In the Dynamic Parameters List, select the appropriate **Datastore Type** from the drop down list
6. Select the appropriate Datastore Name from the drop down list. Usually it is the Information Domain name.
7. Select the IP Address from the drop down list.
8. Select the **Rule Name Update_Bands** from the drop down list.
9. Enter the Parameter List details as mentioned below:
 - Band Type - Refer above for the values which can be passed.

Note: Batch run ID and As Of Date are passed internally by the batch to the Data Transformation task.

10. Click **Save**. The Task definition is saved for the selected Batch.
11. Execute the Batch. You can execute a Batch definition from the Batch Execution section of OFSAAI Operations module.

OFS Retail Customer Analytics currently comprises of the following Predictive Models:

- [Cross Sell Model](#)
- [Attrition Model](#)
- [Pre Payment Analysis](#)
- [Channel Propensity Analysis](#)
- [Product Association Modeling](#)
- [Account Forecast Modeling](#)

Cross Sell Model

Cross Sell Model predicts the propensity of a Customer of a Source Product Type to purchase a product in the Target Product Type. The propensity is a probability value between 0 and 1.

Technique: Logistic Regression

Logistic regression is a statistical technique for predicting the outcome of a categorical dependent variable (a dependent variable that can take on a limited number of categories) based on one or more predictor variables (independent variables). The probabilities describing the possible outcome of a single trial are modeled, as a function of explanatory variables, using a logistic function. Logistic regression can be binomial or multinomial. In Cross Sell Model, binomial logistic regression is used.

Dependent Variable

The Dependent Variable for this model is defined as 1 if a customer who owned a product of the Source Product Type all through the historic period considered and just owned a product of the Target Product Type in the current period considered and 0 otherwise.

For example, a customer who owned a Platinum Credit Card (Product Type CARDS) all through the history (say 3 months) and opened a Savings Bank Account (Product Type CASA) 1 month ago (after the end of the historic period) falls in this category.

Data Considered

Historic Period to be considered is an input parameter to the model. The data on which prediction happens is the last available month for which data is available. The data on which the model fitting happens is all the data prior to the prediction period.

Independent Variables

Independent variables for these models are variables that describe Customer Demographics, Account/Customer Activity related information. The relevant variables for a specific Source - Target Combination are chosen appropriately.

The numerical independent variables are averaged over the entire historic calibration period. Categorical variables such as Gender, Product, Marital Status, and Profession are considered as segments and calibration for the model is done group-wise for each relevant combination of these segments.

Source Product Type - Target Product Type combinations

Following Source Product Type - Target Product Type combinations are currently modeled in OFS Customer Analytics:

- Cross Sell CASA to Cards
- Cross Sell Cards to CASA
- Cross Sell Cards to Mortgage
- Cross Sell CASA to Mortgage
- Cross Sell Mortgage to Cards
- Cross Sell TD to Cards

For detailed information on the technique and variables used, refer to the *Model Metadata Sheet*.

Attrition Model

Attrition Model predicts the probability of a Customer of a Product Type to churn i.e. close the account. The probability is a value between 0 and 1.

Note: Both ORE-R and ORA are used for the attrition model.

Technique: Logistic Regression

In Attrition Model, binomial logistic regression is used.

Dependent Variable

The Dependent Variable for this model is defined as 1 if an account of a Product Type has been open all through the historic period considered and has just been closed in the current period considered and 0 otherwise.

For example, a Platinum Credit Card account (Product Type CARDS) has been open all through the history (say 3 months) and has been closed 1 month ago (after the end of the historic period) falls in this category.

Data Considered

Historic Period to be considered is an input parameter to the model. The data on which prediction happens is the last available month for which data is available. The data on which the model fitting happens is all the data prior to the prediction period.

Independent Variables

Independent variables for these models are variables that describe Customer Demographics, Account/Customer Activity related information. The relevant variables for a specific Product Type are chosen appropriately.

The numerical independent variables are averaged over the entire historic calibration period. Categorical variables such as Gender, Product, Marital Status, Profession are considered as segments and calibration for the model is done group-wise for each relevant combination of these segments.

Weblog Variables

Weblog variables for these models are data elements that enhance the prediction of the models. The weblog variables are the recency and frequency of the event and the aggregate of the duration spent by the customer on the event for the entire day.

Following are the applicable list of events:

Table 22. List of Events

Event	Description
Fees and Charges	This category type lists all the fees and charges that are applicable for a product.
Terms and Conditions	This category type lists all the terms and conditions applicable for a product.
Application Start Page	This category type displays the first page of a multi-page activity, typically the opening of an account.
Application submission confirmation	This category type displays the last page of a multi-page activity, typically the confirmation of the opening of an account.
Calculator	This category type helps the customers to determine values such as EMI, Interest earned (in case of products like RD) and so on.
Product Details	This category type displays the page where product features are highlighted.
Customer Complaint	This category type displays the page where customers log their product or service complaints.
Financial Planning	This category type helps the customers to set and track financial goals.
Bill Payment	This category type displays the page after the customer logs in to pay bills.
Rewards/ Offers	This category type lists all the rewards and offers that are available from the bank.

Weblog Processing

Weblog processing involves processing the weblogs, which is basically data generated through user activity in the bank website. These weblogs are captured once a day using Apache Hadoop. The AAI platform then moves this data to the hive tables. Weblog variables for these models are data elements that enhance the prediction of the models. For more information, refer to the [Weblog Processing for RCA](#) section.

Product Types

Following Product Types are currently considered for Attrition in OFS Customer Analytics

- Account Attrition - Cards
- Account Attrition - TD
- Account Attrition - CASA

Following is a sample list of product types and corresponding products:

Product Type	Product Type Code	Product	Product Code
Auto Loans	AUTOLOAN	Car Loan	9039
Cards	CARDS	Cards	9007
Cards	CARDS	Gold Card	9026
Cards	CARDS	Platinum Card	9025
Cards	CARDS	Platinum Plus	9028
Cards	CARDS	Signature Card	9027
Contracts	CONTRACTS	Annuity Plus	9011
Contracts	CONTRACTS	Coporate Contracts	9003
Contracts	CONTRACTS	Leases	9013
Contracts	CONTRACTS	Other Contracts	9014
Current Savings	CASA	Family Savings Group Account	9032
Current Savings	CASA	Plus Current	9033
Current Savings	CASA	Regular Savings Account	9030
Current Savings	CASA	Savings(Corp)	9004
Current Savings	CASA	Savings(Ret)	9008
Current Savings	CASA	SavingsMaxAccount	9029
Current Savings	CASA	Senior Citizens Account	9031
Investments	INVEST	Corp Invest	9005
Investments	INVEST	Equi Plus (Ret)	9036
Investments	INVEST	Equity Plus	9020
Investments	INVEST	MF Long Gain	9021
Investments	INVEST	MF Regular	9037
Investments	INVEST	Retail Invest	9009
Loan	LOAN	Corp Loans	9006
Loan	LOAN	Gold Loan	9040
Loan	LOAN	Home Loan	9038
Loan	LOAN	Retail Loan	9010
Mortgages	MORTGAGE	Business Loans	9022
Mortgages	MORTGAGE	Government Loans	9024
Mortgages	MORTGAGE	Loans Against Assets	9023
Mortgages	MORTGAGE	Mortgage Plus	9012
Term Deposits	TD	Regular Fixed Deposit	9034
Term Deposits	TD	Super Saver Deposits	9035
Term Deposits	TD	Sweep In Deposits	9019

For detailed information on the technique and variables used, refer to the *Model Metadata Sheet*.

Pre Payment Analysis

Pre Payment Model predicts the probability of a Customer to pre-pay on his/her loan . The probability is a value between 0 and 1.

Technique: Logistic Regression

In Pre Payment Model, binomial logistic regression is used.

Dependent Variable

The Dependent Variable for this model is defined as 1 if a loan account of a Product Type LOANS has been closed before completion of 95% of the maturity period in the historic period considered and 0 otherwise.

Data Considered

Historic Period to be considered is an input parameter to the model. The data on which prediction happens is the last available month for which data is available. The data on which the model fit.

Independent Variables

Independent variables for this models are variables that describe Customer Demographics, Account/Customer Activity related information. The numerical independent variables are averaged over the entire historic calibration period. Categorical variables such as Gender, Product, Marital Status, and Profession are considered as segments and calibration for the model is done group-wise for each relevant combination of these segments.

For detailed information on the technique and variables used, refer to the *Model Metadata Sheet*.

Channel Propensity Analysis

Channel Propensity Model predicts the relative probability of a Customer to respond through a particular response channel. The probability is obtained for a Customer of a particular Product Type who was part of a campaign of a particular Campaign Type. The probability is a value between 0 and 1. Since the result obtained is the set of relative probabilities, sum of the probabilities of all the channels together will be 1.

For example, a customer belonging to a particular product type who was part of a particular campaign type displayed Channel Propensities of 0.5 for Telemarketing, 0.3 for Email, and 0.2 for Direct Mail.

Note: Both ORE-R and ORA are used for the propensity model.

Technique : Multinomial Logistic Regression

Multinomial Logistic Regression is a classification method that generalizes logistic regression to multi-class problems, that is, with more than two possible discrete outcomes. That is, it is a model that is used to predict the probabilities of the different possible outcomes of a categorically distributed dependent variable.

Dependent Variable

The Dependent Variable for this model is defined as the response channel through which a customer has responded.

Data Considered

Historic Period to be considered is an input parameter to the model. The data on which prediction happens is the last available month for which data is available. The data on which the model fitting happens is all the data prior to the prediction period.

Independent Variables

Independent variables for this models are variables that describe Customer Demographics, Campaign/Channel related statistics, Account/Customer Activity related information. The numerical independent variables are averaged over the entire historic calibration period. Categorical variables such as Gender, Product, Marital Status, and Profession are considered as segments and calibration for the model is done group-wise for each relevant combination of these segments.

Weblog Variables

Weblog variables for these models are data elements that enhance the prediction of the models. The weblog variables are the recency and frequency of the event and the aggregate of the duration spent by the customer on the event for the entire day.

Following are the applicable list of events:

Table 23. List of Events

Event	Description
Fees and Charges	This category type lists all the fees and charges that are applicable for a product.
Terms and Conditions	This category type lists all the terms and conditions applicable for a product.
Application Start Page	This category type displays the first page of a multi-page activity, typically the opening of an account.
Application submission confirmation	This category type displays the last page of a multi-page activity, typically the confirmation of the opening of an account.
Calculator	This category type helps the customers to determine values such as EMI, Interest earned (in case of products like RD) and so on.
Product Details	This category type displays the page where product features are highlighted.
Customer Complaint	This category type displays the page where customers log their product or service complaints.
Financial Planning	This category type helps the customers to set and track financial goals.
Bill Payment	This category type displays the page after the customer logs in to pay bills.
Rewards/ Offers	This category type lists all the rewards and offers that are available from the bank.

Weblog Processing

Weblog processing involves processing the weblogs, which is basically data generated through user activity in the bank website. These weblogs are captured once a day using Apache Hadoop. The AAI platform then moves this data to the hive tables. Weblog variables for these models are data elements that enhance the prediction of the models. For more information, refer to the [Weblog Processing for RCA](#) section.

For detailed information on the technique and variables used, refer to the *Model Metadata Sheet*.

Product Association Modeling

Product Association Model provides a list of Product Basket - Target Product combinations that are most likely to occur based on historic data. For example, a Credit Card Product being sold to a customer who owns a Term Deposit account, a Mortgage account and a Autoloan account emerges as one of the most common combination of Product Basket - Target Product.

Technique : Apriori

Apriori is an algorithm for frequent item set mining and association rule learning over transactional databases. It proceeds by identifying the frequent individual items in the database and extending them to larger and larger item sets as long as those item sets appear sufficiently often in the database.

Data Considered

Complete historic data available is used. The number of significant itemsets obtained will vary based on the input parameters: Support Probability and Confidence Probability.

For detailed information on the technique and variables used, refer to the *Model Metadata Sheet*.

Account Forecast Modeling

Account Forecast Model estimates the future values of a time series. The future values are obtained for a desired number of lead periods considering a desired (but sufficient) amount of history.

Technique : ARIMA

Autoregressive Integrated Moving Average (ARIMA) model is fitted to a time series to predict future points in the series. The model is generally referred to as an ARIMA (p,d,q) model where parameters p, d, and q are non-negative integers that refer to the order of the autoregressive, integrated, and moving average parts of the model respectively.

Time Series

The Time Series for this model is the reporting line value for each reporting line of each account.

Data Considered

The accounts that are considered for ARIMA fall into one of the three categories:

- The account has sufficient historic data points to be considering its own history for future value estimation. (Typically this period is 2 years)

- The account has insufficient historic data points to consider its own data for forecasting, but has enough to be estimated based on other accounts that fall into its segment. Typically if an account has been open for at least 6
 - belong to the same segment as that account
 - fall into point 1 above
 - have been opened less than 24 months ago
- The account does not have significant historic data points to be considered for future values estimation. Typically, accounts that have been opened less than 6 months ago.

For detailed information on the technique and variables used, refer to the *Model Metadata Sheet*.

For seeded techniques of Advanced Analytics Infrastructure (AAAI), the models could be of the type NAG or R. Default is set to NAG. This configuration change needs to be done in a database table in the CONFIG schema of OFSAAI to be able to see the R models. The following query needs to be run:

```
UPDATE CONFIGURATION SET PARAMVALUE='R' WHERE PARAMNAME='F_MODEL_TYPE'  
/  
COMMIT  
/
```

This chapter contains the following topics:

- [Introduction](#)
- [Adding a New Model](#)
- [Model Execution](#)
- [Update Bands in Fact Tables](#)

Introduction

Models are built based on various techniques associated with executable and related parameters based on the business purpose. In the Infrastructure system models are defined in the metadata abstraction layer using the underlying metadata objects such as Measures, Hierarchies, and Datasets along with statistical techniques.

Model Creation in the Sandbox Tab of Infrastructure system facilitates you to construct multiple models based on the required parameters and output specifications.

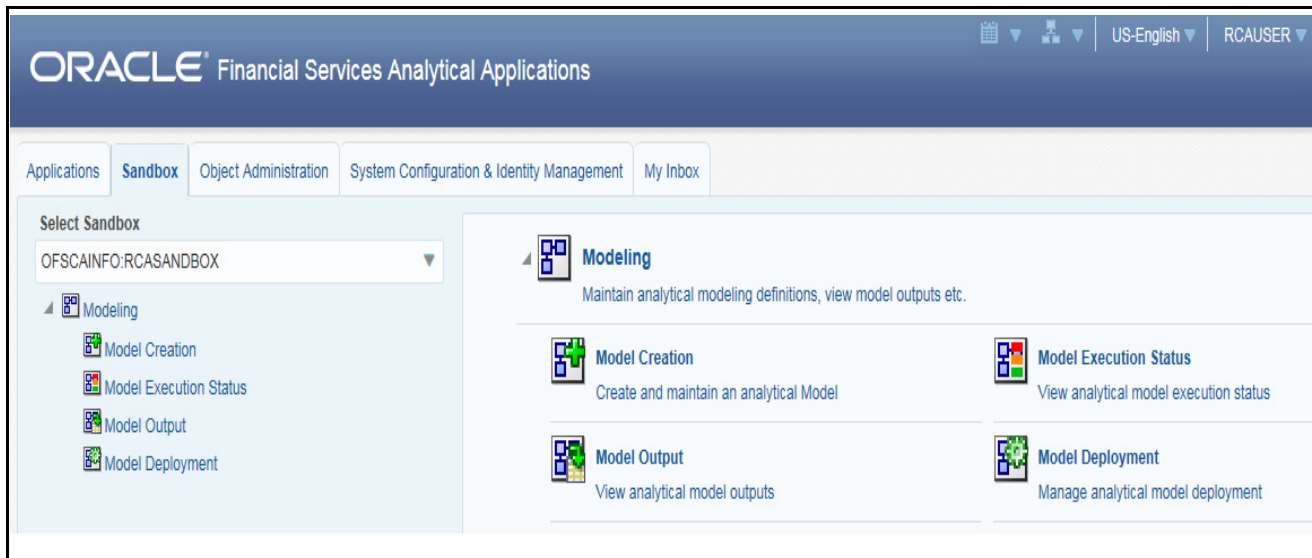

Figure 51. Model Creation page

The Model Creation screen displays model definition details such as Model ID, Model Name, Version, Model Objective, Created By and Created Date. You can also view, modify, and delete model definitions.

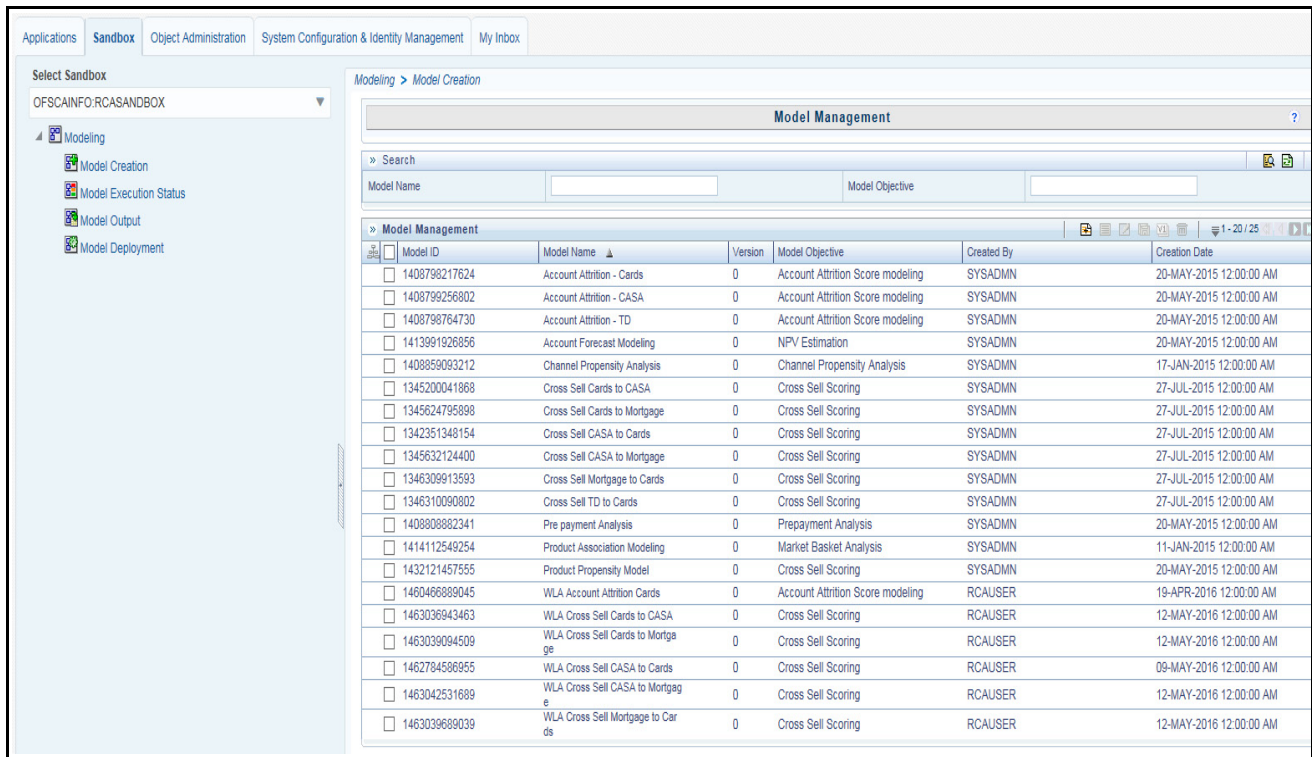

Figure 52. Model Management

You can also make use of Search and Pagination options to search for a specific model or view the list of existing model definitions within the system.

Adding a New Model

Refer to the following sections for adding a new model.

- Create Model Definition
- Modify Model Definition

Create Model Definition

To create a model definition in the Model Creation screen, follow these steps:

1. Select **Add** from the Model Management toolbar. This button is disabled if you have selected any Model ID in the grid. The Model Definition New screen is displayed.
2. Enter the details for the model:
 - Name
 - Description
 - Objective (to add a new objective, right click on the heading and add)

- Dataset
- Technique - Can be defined two ways
 - Write the technique in the Model Definition Screen itself in the Model Script section
 - Define a technique in the Technique Registration screen Navigate to Applications >Model Management>Technique Registration>Add>Script Console.
- 3. Write the script for technique in either the Model Script (Model Screen) / Script Console (Technique Registration) section.
- 4. Add the inputs and variables as applicable to the script

Note: For information on managing variables, refer to *Managing Variables in Oracle Financial Services Enterprise Modeling User Guide*.

5. Click **OK** and save the model.

Modify Model Definition

You can update the model definition details of an existing Model in the Model Definition screen.

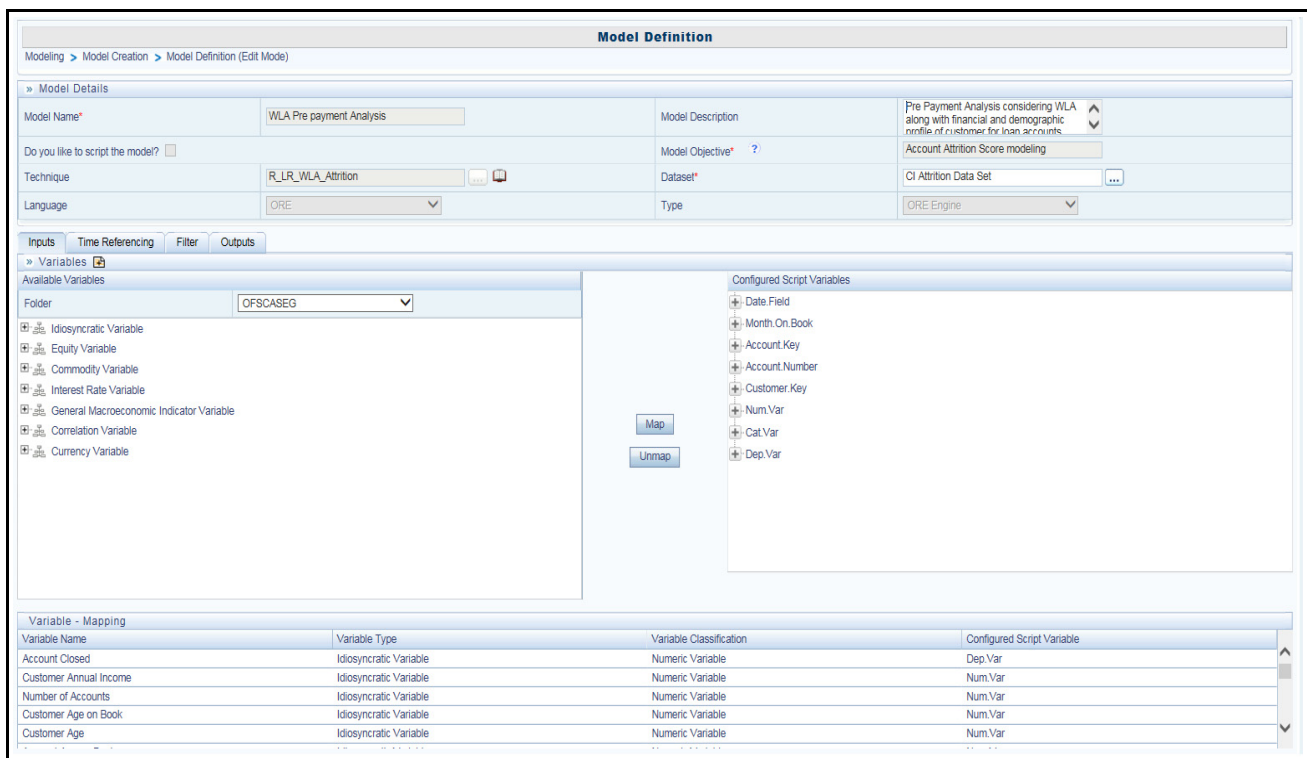

Figure 53. Model Definition - Edit Mode

1. Select the check box adjacent to the Model ID whose details are to be updated.
2. Click **Edit** in the Model Management toolbar. This button is disabled if you have selected multiple Model IDs.
3. Edit the Model Definition details as required. Model Name, Technique, and Model Objective are not editable. You can update the Model Description, Dataset, and variable parameters based on the technique selected.

- Once you have updated all the necessary details in the Model Definition Edit screen, you can:
 - Select **Preview Data** to view the new Model Definition details before upload.
 - Click **Save** to update the model definition details.
 - Click **Save** and select **Execute** to process the model execution. The status of which can be verified in Model Execution Status option by accessing Advanced Analytics Infrastructure>Modeling>Model>Model Execution Status.

An input called Model Code is added in the Input Parameters section to indicate a code which maps configurations to chose events for data models. Events relevant to a model are identified using a model code. Historic and prediction periods are also indicated in data model configuration.

Note: USE.WLA.DURATION /USE.WLA.FREQUENCY/USE.WLA.RECENCY can be used temporarily until the multiple data set functionality is provided.

For more information, see *Model Management* under *Advanced Analytics Infrastructure* Chapter in *Oracle Financial Services Analytical Applications Infrastructure User Guide*.

Model Execution

Model Execution happens in two stages: Sandbox Execution and Production Execution. Sandbox Execution of a model happens on the Sandbox Schema where the data is used to calibrate the model. Ideally the model fit in the Sandbox during Calibration is used to predict the results for the data found in Production Schema.

Model Execution (Sandbox)

- Click the **Execute** Button (as shown below) and select Baseline.

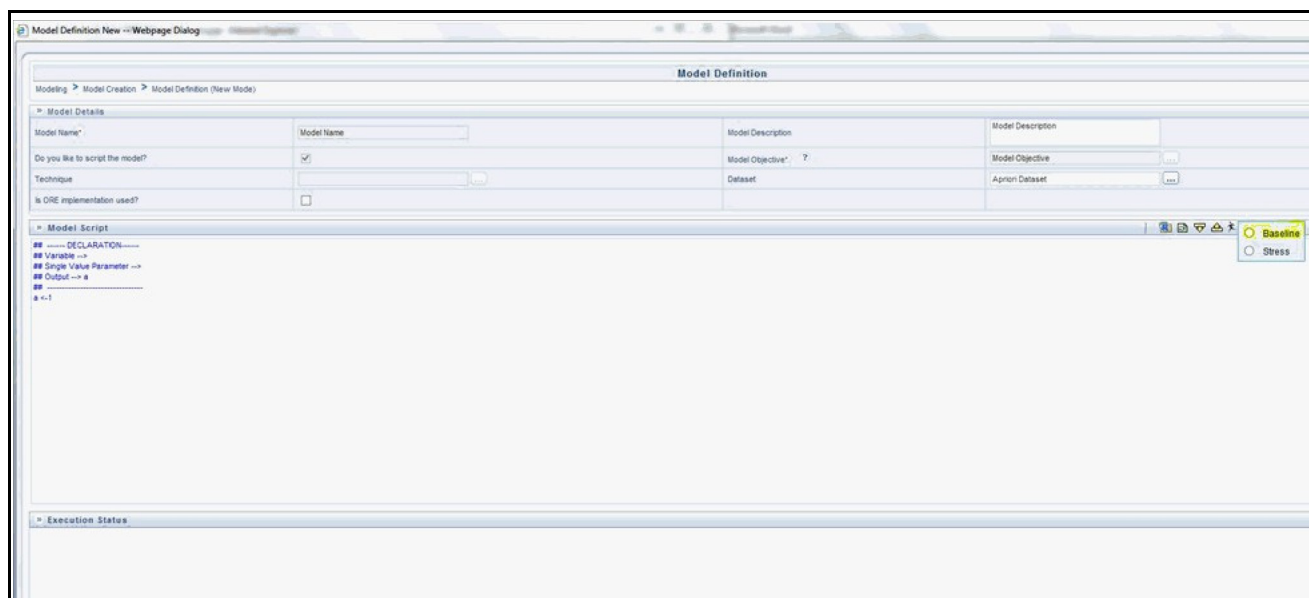

Figure 54. Baseline (when technique is directly written in the Modeling Screen)

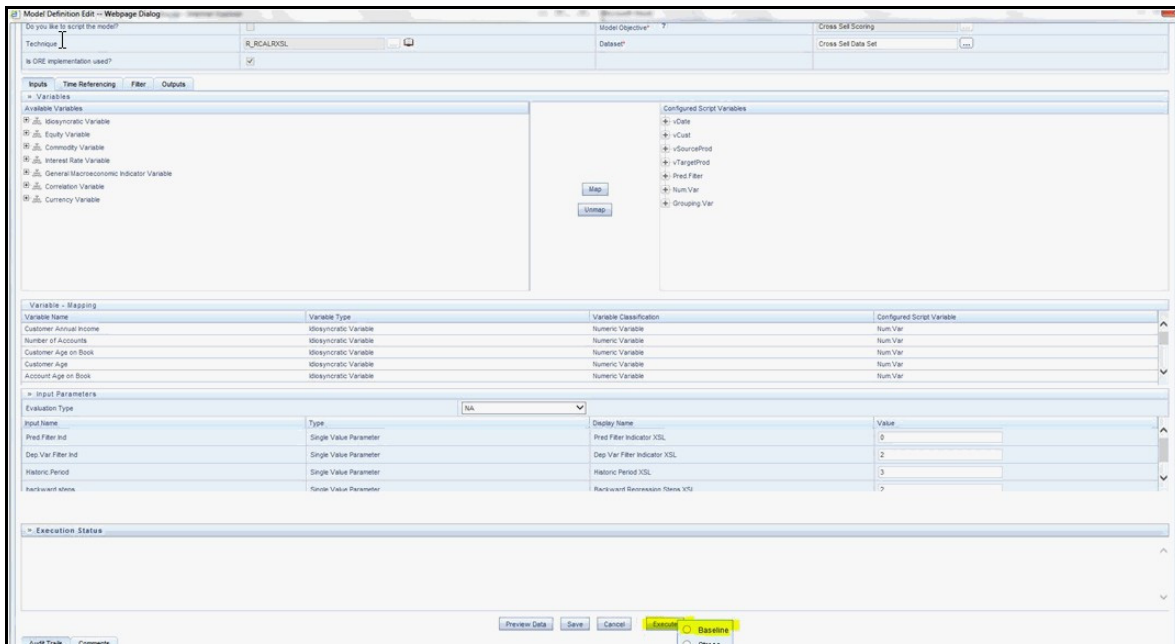

Figure 55. Baseline (when technique is written in Technique Registration and selected in the Technique screen)

2. After the model execution is successfully triggered, the following message appears: *Successfully triggered the model execution.*
3. Check the model execution status in the Model Execution Status window (sort descending by date for the status of the latest execution)

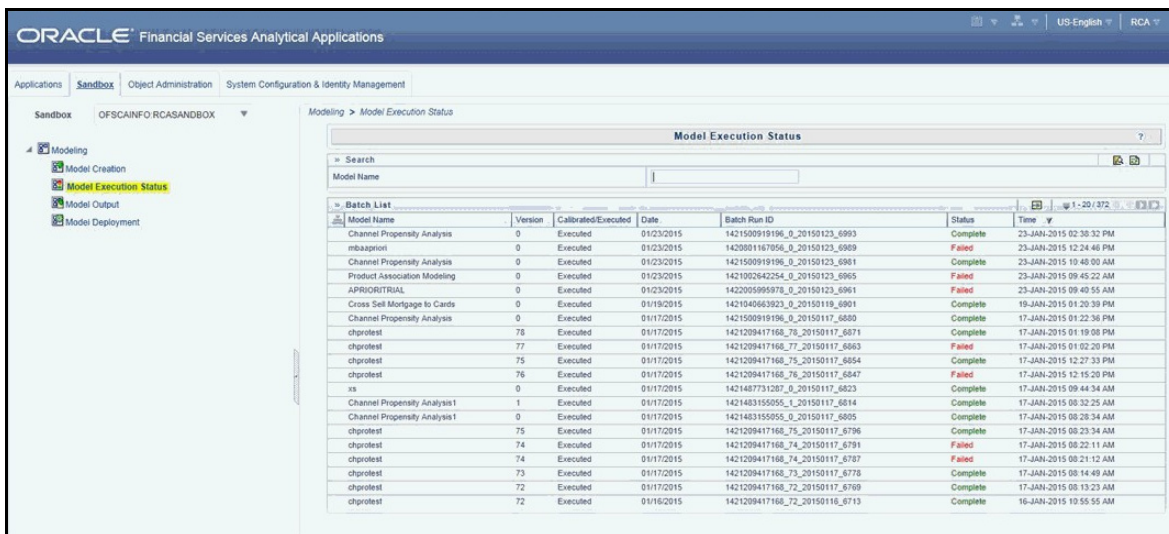

Figure 56. Model Execution Status

4. Once the model execution is successful, Model Output can be viewed in the Model Output screen.

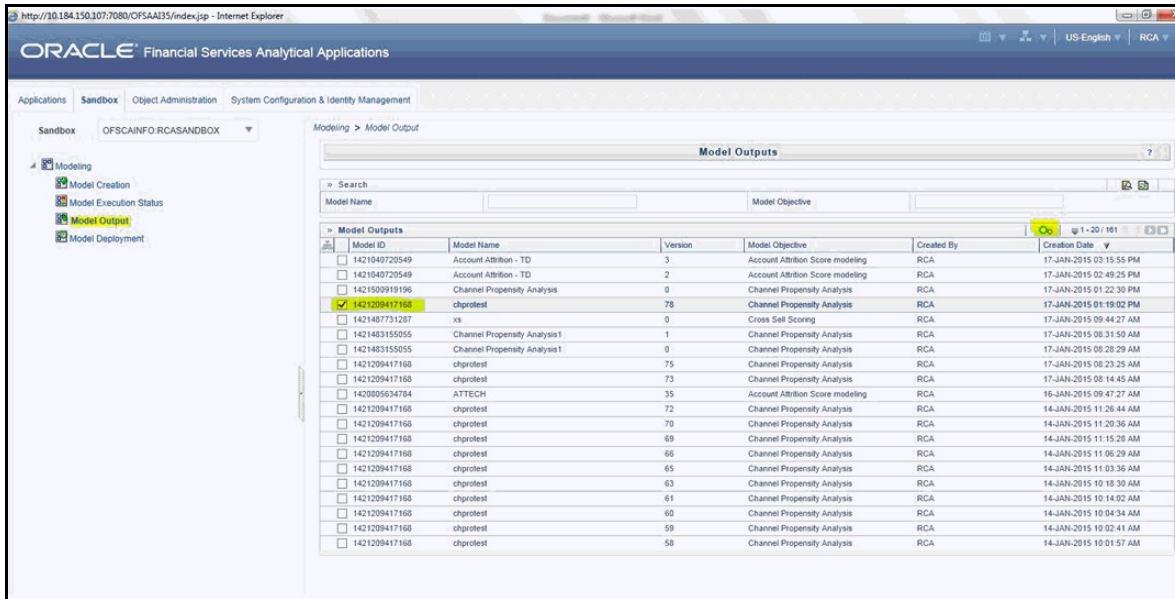

Figure 57. Model Output

5. Select the execution ID for which the Output is to be viewed.

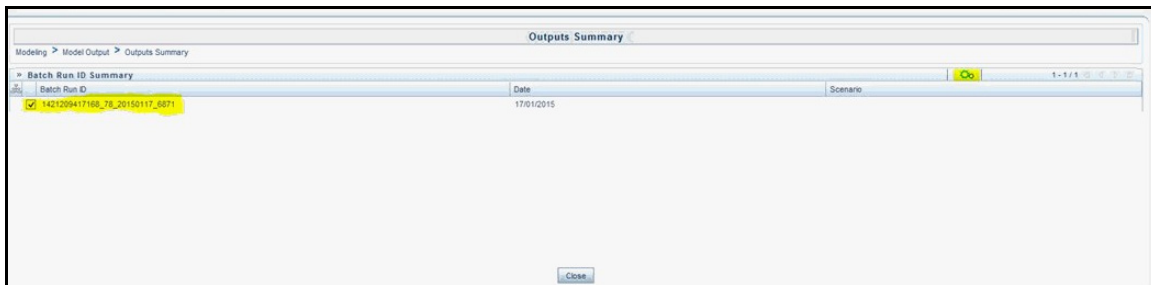

Figure 58. Outputs Summary

6. Click the Model Output desired to be viewed.

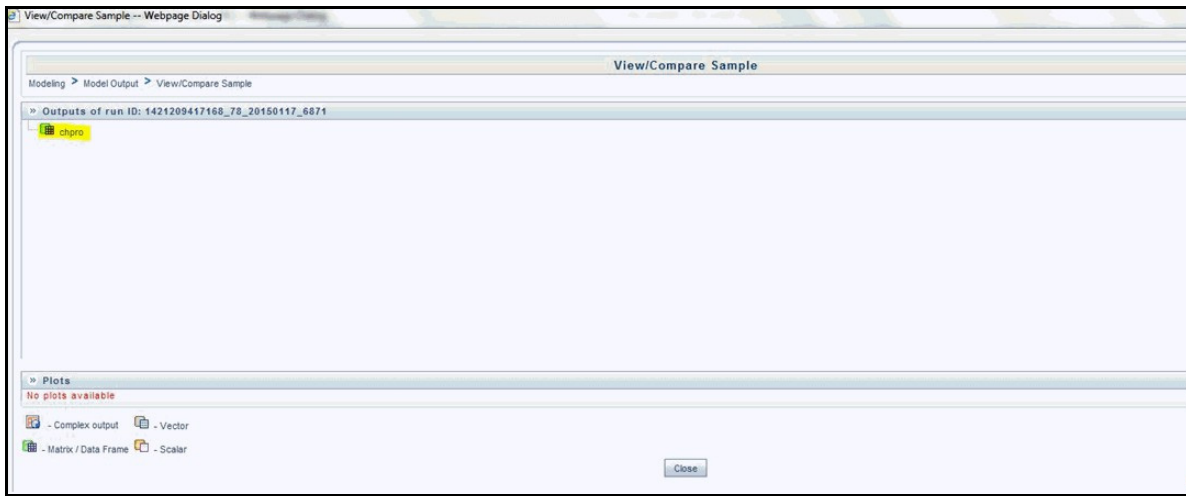

Figure 59. View Sample

- Once the model execution is successful and it is confirmed that the model scripted is ready to be executed in the Production Schema, navigate to Model Deployment.

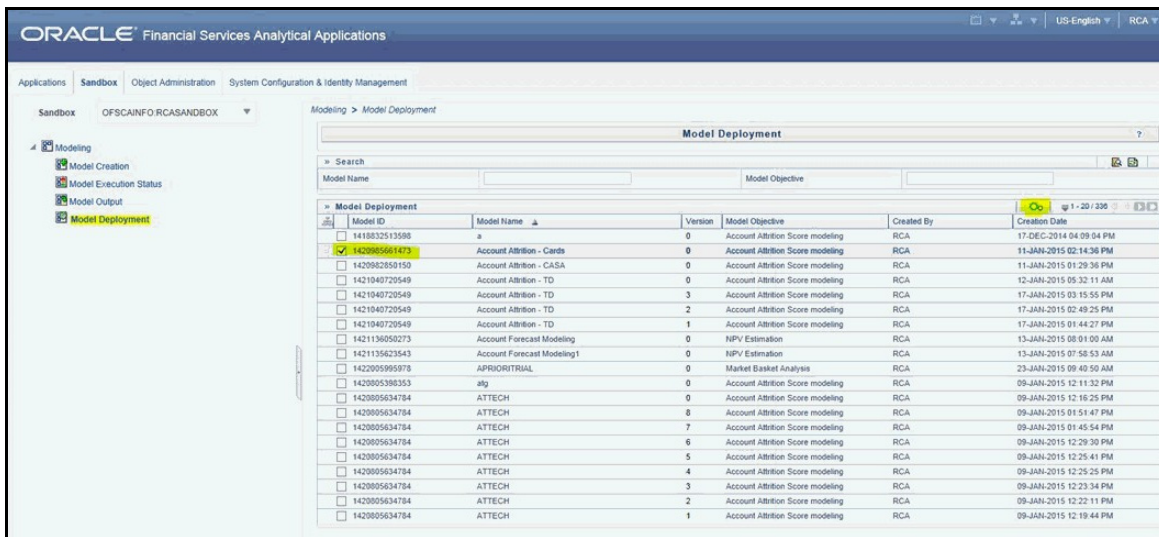

Figure 60. Model Deployment

- Authorize and Deploy the model to Production Schema.

Figure 61. Model Deployment Authorization

Model Execution (Production)

A Model becomes available for execution in the Production Infodomain after it has been authorized and deployed in the sandbox. Once a request is processed for the execution in the Production Infodomain, a Batch is registered for the Model. This relevant Batch can be executed to obtain the results.

1. Navigate to Applications>Model Execution>Request for Model Execution screen.

Figure 62. Request for Model Execution

2. Select the check box in the Register Batch field and click Save. A Batch ID is created for the Model Execution.

Batch Execution

1. Navigate to Operations>Batch Execution and select the module **Enterprise Modeling**.
2. Find the Batch ID beginning with the same name as the Model ID in the following format:
 <INFODOM>_<MODEL_ID>_<MODEL_VERSION>
3. Select the desired execution date and execute the batch.

Error Logging

To verify the status of the Model Execution, navigate to the following path:

ORACLE_HOME/dbs/

where ORACLE_HOME is the home of the database server hosting Oracle R Enterprise. A file is created with the batch execution ID of the batch.

Loading Data to the Target Table

Once the Infodom Execution is complete, the results are recorded in the following tables with sequence numbers leading back to the execution process:

- MF_MODEL_ORE_OUTPUT (Execution Summary)
- MF_MODEL_ORE_DETAILS (Actual Output Values/Queries to produce Output Values)

Based on the sequence and reference numbers in these tables, the target table is updated. For this purpose, a Batch is triggered. The Batch is built on a process that can backtrack the relevant combination of primary keys and update the relevant records in the target table's target column(s).

It is important to have the required records in FSI_MODEL_PARAMETERS. Refer to *Model Metadata Sheet>Techniques* sheets for information on what information to add to this table in case a new model is created.

There are two ways the results are expected in the Reporting Tables:

- All the required rows are already present and the column corresponding to the score/probability needs to be updated.
- The relevant rows are all supposed to be inserted into the table afresh.

Result Update

For updating result into the Fact table which already has the required rows, the name of the Batch registered for this purpose is ##INFODOM##_Model_Fact_Update - Task2. This batch accepts the input parameter list and based on this list it identifies the specific Model to update.

The list of parameters required are the following: (This is listed in the exact order)

Table 24. Input Parameters

Parameter	Sample Value/Column name from MF_MODEL_ORE_OUTPUT
Batch ID	'Sample_Batch'
Execution Date	FIC_MIS_DATE
Run ID	"
Process ID	"
Run Execution ID	V_BATCH_RUN_ID

Table 24. Input Parameters

Parameter	Sample Value/Column name from MF_MODEL_ORE_OUTPUT
Run Key	"
Model ID	V_MODEL_ID
Model Version	N_MODEL_VERSION
Sample ID	"
Object Name	V_OBJECT_NAME
Run Key	-1

Execute the Batch created to update data in the target table from the temporary table.

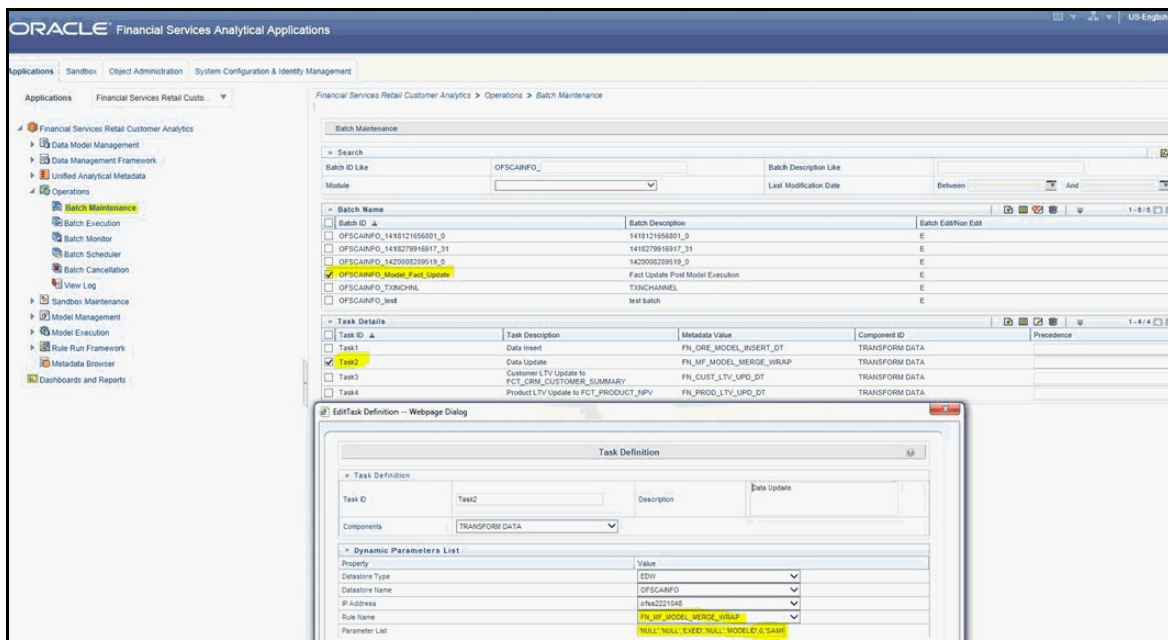

Figure 63. Batch Maintenance page

The parameters list must be updated with details relevant to the specific Model. These details are obtained from the temporary table - MF_MODEL_ORE_OUTPUT as mentioned in the table above.

Example

The following is an example of a successful model execution from MF_MODEL_ORE_OUTPUT

	PIC_MIS_DATE	V_MODEL_ID	V_MODEL_NAME	N_MODEL_VERSION	V_BATCH_RUN_ID	V_SAMPLE_ID	V_OBJECT_NAME	N_SEQUENCE	N_RUN_KEY	V_SUB_OBJECT_NAME	V_RESULTSET_ID
1	3/31/2013	1408798217624	Account Attrition - Cards	0	OFSCAINFO_1408798217624_0_20130331_10		ore.glm.fitting.results	109	-1	OFSDS_91	
2	3/31/2013	1408798217624	Account Attrition - Cards	0	OFSCAINFO_1408798217624_0_20130331_10		ore.glm.prediction.results	112	-1	OFSDS_91	
3	3/31/2013	1408798764730	Account Attrition - TD	0	OFSCAINFO_1408798764730_0_20130331_2		ore.glm.fitting.results	148	-1	OFSDS_130	
4	3/31/2013	1408798764730	Account Attrition - TD	0	OFSCAINFO_1408798764730_0_20130331_2		ore.glm.prediction.results	151	-1	OFSDS_130	

Figure 64. MF_MODEL_ORE_OUTPUT Example

Result Insert

For inserting result data into the Fact table afresh, the name of the Batch registered for this purpose is `##INFODOM##_Model_Fact_Update - Task1`. This batch accepts the input parameter list and based on this list it identifies the specific Model to update.

The list of parameters required are the following (This is listed in the exact order)

Table 25. Model_Fact_Update - Task1 Parameters

Parameter	Sample Value/Column name from MF_MODEL_ORE_OUTPUT
Batch ID	'Sample_Batch'
Execution Date	FIC_MIS_DATE
Run ID	"
Process ID	"
Run Execution ID	V_BATCH_RUN_ID
Run Key	"
Model ID	V_MODEL_ID
Model Version	N_MODEL_VERSION Run Key

Update Bands in Fact Tables

You have to update the band values based on the scores in certain cases. For instance, a predictive models execution derive the score values, which are updated to the fact tables. Based on the new score values, it is necessary to have the new band values updated in the fact tables. A Data Transformation "Update_Bands" is seeded to update the bands in fact tables. Update of bands in fact tables make use of a setup table `FSI_BAND_SETUP_DETAILS`.

Table 26. Update Bands

Column Name	Data Type	Column Description
TABLE_NAME (PK)	VARCHAR2(30)	This stores the name of the table of the source and the target column.
SRC_COLUMN_NAME (PK)	VARCHAR2(30)	This stores the name of the source column based on which the bands would be updated in the target column.
TGT_COLUMN_NAME (PK)	VARCHAR2(30)	This stores the name of the target column where the bands are updated
BAND_TYPE	VARCHAR2(30)	This stores the band type which has to be used from DIM_BANDS table.

Seeded entries into `FSI_BAND_SETUP_DETAILS` table are provided with the installer to update attrition score band in the table `FCT_CRM_ACCOUNT_SUMMARY` and product propensity score band & product propensity segment band in `FCT_XSELL_SCORE` table.

Figure 65. Task Definition

Execute the seeded batch <Infodom>_Update_Bands. The parameters passed to DT " Update_Bands" are:

- Batch Run ID - This is passed internally to the DT from the Batch in Operations modules of OFSAAI.
- FIC MIS Date/As of Date - This is passed internally to the DT from the Batch in Operations modules of OFSAAI.
- Band Type - You have to provide the values in Parameter List of Batch Maintenance screen.

The following values can be entered:

Table 27. Band Type Parameters

Band Type to be updated	Parameter to be passed in DT
Account Attrition Score Band	ACCT_ATTRITION_SCORE
Product Propensity Score Band	PRODUCT_PROP_SCORE
Product Propensity Segment Band	PRODUCT_PROP_SEG

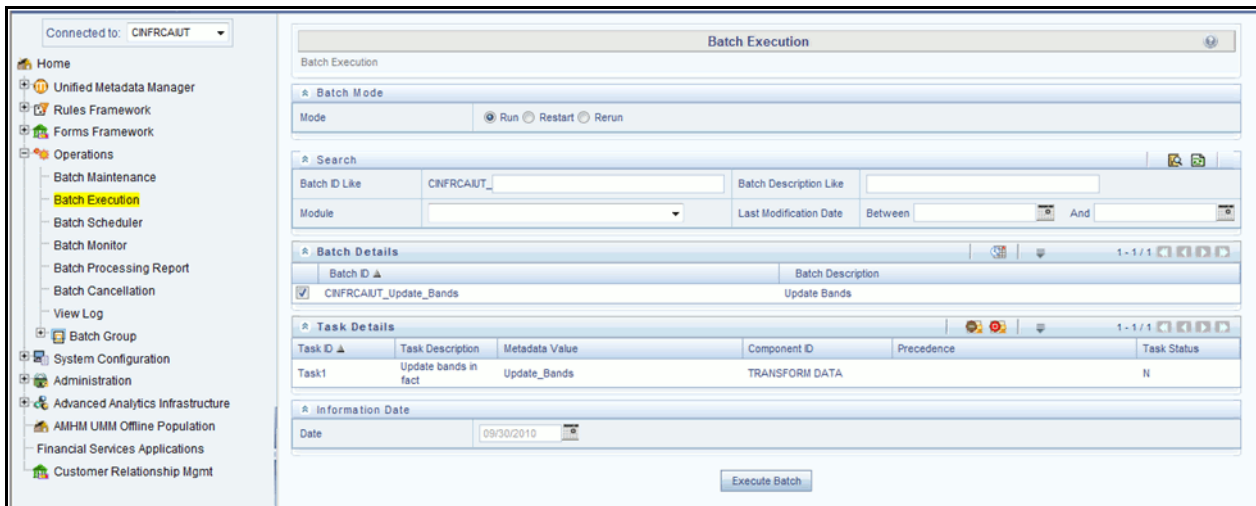

Figure 66. Batch Execution

You can also define a new Batch and an underlying Task definition from the Batch Maintenance window of OFSAAL.

For more information on defining a new Batch, refer to *How to Define a Batch*, section.

Oracle Financial Services Retail Customer Analytics (OFSRCA) offers the following dashboards that organize different kinds of reports by subject area.

These reports present:

- Predictive analysis to determine cross sell/up sell scores, product, and channel propensities leveraging transactional/behavioral data.
- ROI of campaigns over time (transaction performance needs to be measured for at least over 12 months for accurate LTV predictions)
- Prospect/list scoring leveraging any internal/bureau information, cluster analysis and projected NPV.
- Customer Segmentation.
- Wallet Share (spend diversity, activation, and so on) and Attrition analysis.
- Performance tracking of current campaigns across key measures like Sales, Asset and Liability balances, Fee-based product subscriptions and sustained performance over time, Credit score distribution of new accounts sourced, and early alerts on any negative skews.

Dashboards

OFSRCA has been segregated into four key dashboards and each of these dashboards contains several tabs.

- [Campaign Analytics](#)
- [Channel Analytics](#)
- [Customer View](#)
- [Predictive Models](#)
- [Sales Funnel](#)

Campaign Analytics

The following tabs are present in the Campaign Analytics dashboard:

- [Campaign Summary](#)
- [Response Tracking](#)
- [Campaign Performance](#)

The following sections describe the essential nature of the available reports as per each tab:

Campaign Summary

This tab contains the following reports:

- **Current Month Active Campaigns:** This report gives details of the effectiveness of active campaigns in terms response received from the target audience and the expected value to be generated.

Current Month Active Campaigns
Time run: 2/5/2015 3:35:18 PM

Amount in Millions (USD)

Campaign ID	Campaign Description	Start Date	End Date	Estimated Marketing Cost	Total Mail Base	No. of Responders	Response Rate (%)	Expected NPV	Actual NPV	Expected NPV/Expense Ratio (%)
CAMP3	Add on card free	01-Oct-2010	30-Jun-2013			0	0.00%			
CAMP4	Platinum card offer	15-Apr-2010	31-May-2013			0	0.00%			

[Analyze](#) - [Edit](#) - [Refresh](#)

Figure 67. Current Month Active Campaigns Report

- Future Campaigns:** This report gives details of the expected effectiveness and associated costs of future campaigns.

Future Campaigns
Time run: 2/5/2015 3:35:18 PM

Time	Campaign ID	Campaign Name	Product	Start Date	End Date	Fixed Cost	Variable Cost	Incentive Cost	No. of Accounts	Total Mail Base	Expected Response Rate (%)	Sales	New Balances	Other Income	Expected NPV
> 2010	CAMP01	New Car Loan Campaign	Auto Loan	01-Mar-2011	28-Jun-2011	11.68					0.00%				
			Cards	01-Mar-2011	28-Jun-2011	7.95				2	150.00%				6.82
			Car	01-Mar-2011	28-Jun-2011	8.80					0.00%				
			Mortgage	01-Mar-2011	28-Jun-2011	14.76					0.00%				
			Term Deposits	01-Mar-2011	28-Jun-2011	17.80					0.00%				

[Analyze](#) - [Edit](#) - [Refresh](#)

Figure 68. Future Campaigns Report

- Campaign Performance for Campaigns Ending in Last Two Quarters:** This report gives details of the effectiveness of campaigns conducted in last two quarters in terms response received from the target audience and the expected value to be generated.

Campaign Performance for Campaigns Ending in Last Two Quarters
Time run: 7/2/2014 6:42:16 PM

Amount in Millions (USD)

Quarter	Campaign ID	Campaign Description	Start Date	End Date	Actual Marketing Cost	Total Mail Base	No. of Responders	Response Rate	Expected NPV	Expected NPV / Expense Ratio

Figure 186. Stage Specific Conversion

This chapter discusses the following topics:

- [Introduction](#)
- [OBIEE Security](#)
- [Data Security](#)

Introduction

Visibility is implemented in order to restrict the user's access to the data and the metadata. The user can view based on the role and the privileges assigned to the user.

Visibility has been implemented using two security models:

- OBIEE Security
- Data Security

OBIEE Security

This has been implemented using the Roles and Privileges settings, the dashboard level, Report level, and the object level.

Data Security

This has been implemented with a sequence of tables used for controlling the data access to the user.

The set of tables are:

- FSI_M_USER - This table stores all the users who are not relationship managers and are business users who have access to data at different levels. The user id in this table should match the user's login id of OBIEE.
- FSI_M_USER_MANAER_MAP - This table stores all the users who are relation ship managers. V_User_name should hold the Obiee login Id of the user who is a relationship manager. The Manager Code column should match with the entry in dim_management.
- FCT_ACCT_MANAGER_REL - This table restricts the user who is a relationship manager to certain account of customer/Customers. This defines the user at the lowest granularity.
- DIM_CUSTOMER - This table is to define if the user has access to all the accounts the customer holds. This is again to define the relationship manager visibility. This data will be moved from dim_party . Dim_party will be sourced from stg_party_master.

- FSI_USER_DATA_ACCESS - This is a mapper table enabled on AAI Mapper that provides UI for the user to set the visibility. The visibility of the user can be set at the following levels using the mapper - Product, Branch, Legal Entity, and Line of Business.
- FSI_USR_CTRL_ACCESS - This table contains all the records for each user and the access available to the user for every date. The data is sourced from FSI_M_USER_MANAGER_MAP, FSI_USER_DATA_ACCESS, DIM_MANAGEMENT, FCT_COMMON_ACCOUNT_SUMMARY, FCT_ACCT_MANAGER_REL, and DIM_CUSTOMER. The Parent Child hierarchies (derived entities) need to be refreshed before this table load. The names of the hierarchies are MGRPC and CUSTPC. The User has access to all the child nodes in the manager Hierarchy and all the customer hierarchies the user is managing, and the customer hierarchies managed by the child node managers as well.
- CTRLACC - This is a materialized view on the table FSI_USR_CTRL_ACCESS giving the distinct user access to accounts, customers, products, line of business, and legal entity. This view is used for applying visibility on the rpd. This is created as a derived entity and there is a job to refresh this derived entity.

Note: Users insertion in FSI_M_USER and FSI_M_USER_MANAGER_MAP has to be done directly into the table. For example, in presence of Single Signon System, these tables need to be loaded with data from single signon system directly.

Requesting and Authorizing to Populate Sandbox

Note: This option is not available for logical sandbox.

To request and authorize to populate sandbox in the Sandbox Maintenance window, follow these steps:

1. Select the sandbox which you want to populate and click the **Edit** button in the Sandbox Maintenance toolbar. The Edit button is disabled if you have selected multiple checkboxes. The Sandbox Maintenance Edit window is displayed.
2. In the Request Action tab, select **Complete for Populate Sandbox** to copy the required table data from the Production infodomain to the Sandbox infodomain based on the sandbox definition.
3. Click the **Authorize** tab, and select the **Populate Sandbox - Complete/ Incremental** checkbox to authorize sandbox population. This tab will be enabled only if your user role is mapped to the function SANDBXAUTH.
4. Click **Save** to confirm changes.

On authorization, a Sandbox-Populate batch is registered in the OFSAA Infrastructure Operations. The batch will be available in the Batch Scheduling window with the Sandbox ID. This batch must be triggered from the Batch Scheduling window to complete the data population.

How to Define a Batch

Batch refers to a set of executable processes based on a specified rule. Batch Maintenance framework within OFSAAI facilitates you to create and maintain the Batch Definitions. You can process the Batch scheduled for execution from Batch Maintenance and also from other modules.

You need to have Data Centre Manager function role mapped to access the Operations framework within OFSAAI. You can access Batch Maintenance by expanding Operations section within the tree structure of LHS menu. The Batch Maintenance window displays a list of Batches scheduled for maintenance with the other details such as Batch ID, Batch Description, and the editable state of the Batch.

Batch Creation

You can create a batch from the Batch Maintenance screen as mentioned below:

1. From the OFSAAI Home menu, navigate to **Operations>Batch Maintenance**.
2. In the Batch Maintenance window, Select '+' button from the Batch Name toolbar. The New Batch Definition window is displayed.
3. Enter the Batch details shown in the following table.

Table 28. Batch Details

Field	Description
Batch Name	The Batch Name is auto generated by the system. You can edit to specify a Batch name based on the following conditions: <ul style="list-style-type: none"> ● The Batch Name should be unique across the Information Domain. ● The Batch Name must be alpha-numeric and should not start with a number. ● The Batch Name should not exceed 41 characters in length. ● The Batch Name should not contain special characters "." and "-".
Batch Description	Enter a description for the Batch based on the Batch Name.
Duplicate Batch	(Optional) Select the checkbox to create a new Batch by duplicating the existing Batch details. On selection, the Batch ID field is enabled.
Batch ID (If duplicate Batch is selected)	It is mandatory to specify the Batch ID if Duplicate Batch option is selected. Select the required Batch ID from the list.
Sequential Batch	Select the check box if the Batch has to be created sequentially based on the task specified. For example, if there are 3 tasks defined in a Batch, task 3 should have precedence as task 2, and task 2 should have precedence as task 1.

Big data, in the form of weblog data, is used in RCA to enhance the predictive power of the attrition and propensity models. The big data functionality is an option within RCA and is included to analyze weblogs resulting from click-stream data, which are basically logs of user activity on a bank's website and internet banking.

Note: The propensity and attrition models enhanced with weblog variables have an option to run either or RDBMS or HDFS.

The following steps provide a high-level description of weblog processing:

1. Weblogs are captured from all the weblogs available in the MIS folder and moved to the staging table in HDFS using the L2H (log-to-hive) process.
2. Weblogs are moved from the staging table through a series of fact tables to the final fact table in HDFS using the H2H (hive-to-hive) process.
3. Weblogs are moved from the final fact table in HDFS to RDBMS using the H2T (hive-to-table) process

The data from RDBMS is calibrated using the propensity and attrition models.

Validating a Data Model Generated from a Log File

In order to generate meaningful data from weblog files, you need to validate a data model generated from the weblog file. Following are the steps to generate and validate the data model using the Source Model Generation (SMG) utility:

1. Create a weblog base folder and generate a source data model.

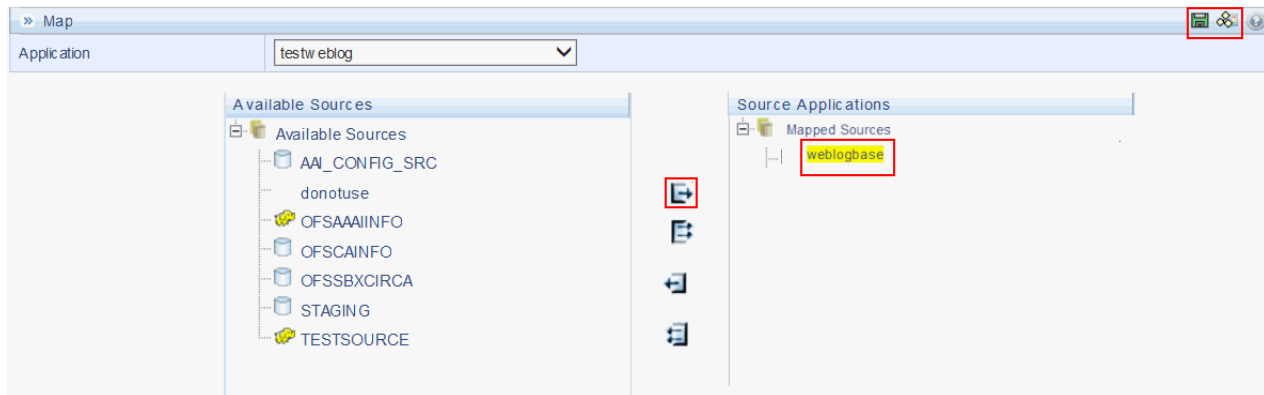

Figure 187. Source Data Model Generation

2. In the SMG utility, select a sample weblog file from the weblog base folder. Once the file is read, the utility maps the file to a known weblog type. The following weblog types are supported:

- Apache
- Nginx
- Microsoft-IIS
- LiteSpeed
- Google Servers

- Custom

Note: Select the custom option only if the data is delimited. You can then specify the delimiter by selecting the **Delimited** check box.

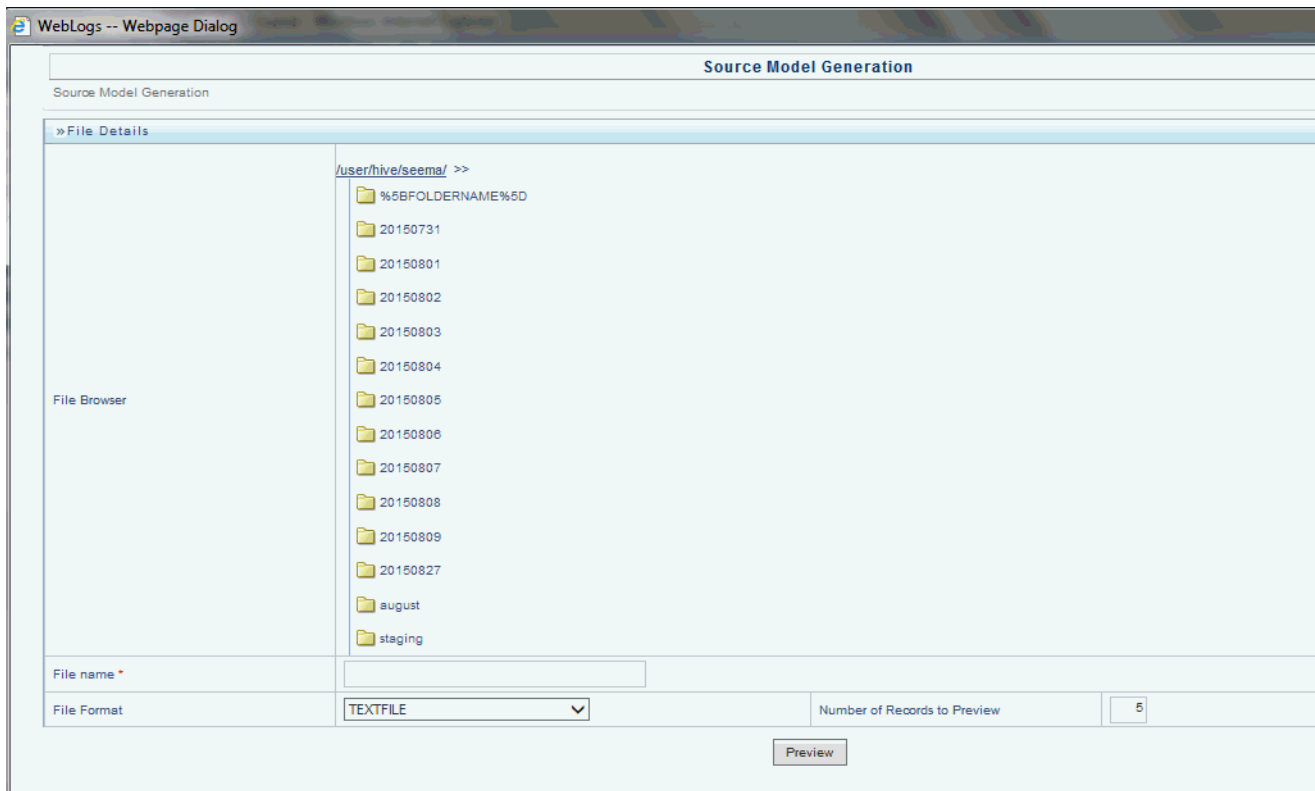

Figure 188. Sample Weblog File Selection

Note: If the source folder is hadoop-based, ensure that the weblog file is present in the hadoop folder before generating the source model.

Figure 189. Data Model Generation

You can also select the number of records that you want to use to validate the data model from the weblog file.

3. Generate a preview of the data model by clicking **Generate Data Model**. You can edit the column names and data types only for weblogs that are not of the custom type.

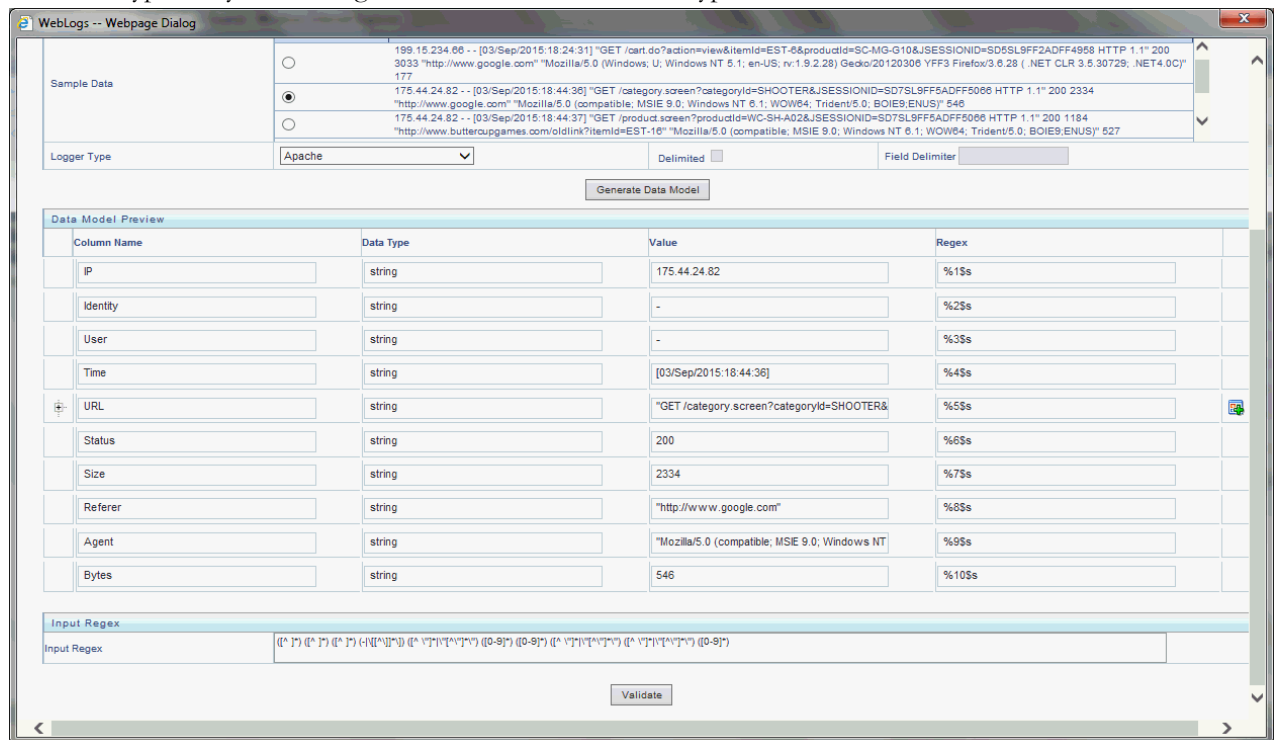

Figure 190. Data Model Validation

- Validate the data model by clicking **Validate**. The selected records are validated against the model, and the results are displayed in the **Data Validation** section.

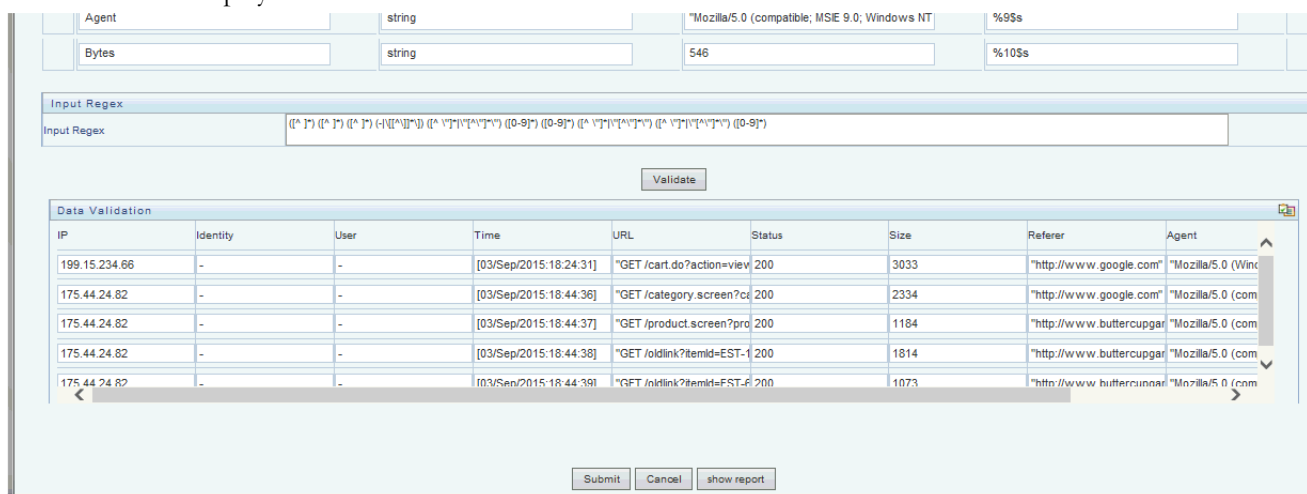

Figure 191. Data Validation Records

Note: You can save the data model even if some records cannot be validated, although this will lead to incorrect data being displayed. In this case, you can make necessary changes to the input expressions and re-validate the data model.

Customer Identification

Customers can be identified only if they log on to the netbanking portal of the bank’s website. When a customer logs on from a web browser or a device, a device cookie is created.

Following are the various scenarios involved in customer identification:

- If the customer logs on through a device, the resultant cookie contains the customer’s user ID. The user ID is then mapped to the account ID, which is then mapped to the customer ID.
- If the customer has not logged on through a device but the device cookie contains the user ID, the customer is mapped to the existing used ID and the MIS date, which is then mapped to the customer ID.
- If the customer has not logged on and there is no information in the device cookie, searches are done in a hierarchical manner for matching identifiers such as email IDs, mobile numbers, and social network IDs. If the searches do not provide any results, the customer is mapped to a random customer ID.
- To capture identifiers, the bank’s weblog capture tool is expected to capture weblogs as shown in the following example:

Note: The data provided should be included in the weblog as space-delimited in the same order.

Table 29. Sample Apache Valve Configuration

Attribute	Description	Sample Apache Valve Configuration
Client IP	Remote IP address	%a
Server IP	Local IP address	%A
Response size without header	Bytes sent, excluding HTTP headers, or '-' if zero	%b
Response size with header	Bytes sent, excluding HTTP headers	%B

Table 29. Sample Apache Valve Configuration

Attribute	Description	Sample Apache Valve Configuration
user name in cookie	User name provided with cookie with name 'name'	%{name}c
Process Duration millis	Time taken to process the request, in millis	%D
Client host name	Remote host name (or IP address if enableLookups for the connector is false)	%h
Request protocol	Request protocol	%H
User-Agent	Incoming header with name User-Agent	%{User-Agent}i
username identd	Remote logical username from identd	%l
Request method	Request method (GET, POST, etc.)	%m
Outgoing header	Outgoing header for server	%{Server}o
HTTP/s port	Local port on which this request was received	%p
URI*	Method and request URI	%r
HTTP status	HTTP status code of the response	%s
Request timestamp	Date and time, in Common Log Format [26/Feb/2016:11:26:14 +0530]	%t
Process Duration seconds	Time taken to process the request, in seconds	%T
username authenticated	Remote user that was authenticated (if any), else '-'	%u
URL path	Requested URL path	%U
Server name	Local server name	%v
session ID	User session ID	%S
uid	ServletRequest attribute for uid	%{uid}r
Domain name	Domain name as string	in.oracle.com

- The following attributes are needed in the query string:

Table 30. Attributes for Query String

Attribute	Query string key
Facebook Id	Facebook
Twitter Id	Twitter
Google Plus Id	Google Plus
Phone Number	PhoneNo
Email Id	EmailId

- Based on Apache tomcat 8.0.18, the following valve configuration needs to be done in the server.xml file so the seeded definitions can process the log data successfully:

```
<Valve className="org.apache.catalina.valves.AccessLogValve" directory="logs"
prefix="localhost_access_log" suffix=".txt"
```

```
pattern="%a %A %b %B %{name}c %D %h %H %{User-Agent}i %l %m %{Server}o %p %r %s %t  
%T %u %U %v %S %{uid}r in.oracle.com"/>
```

An L2H process is mentioned in the following example as a sample:

```
10.184.227.76 10.184.151.91 - 0 sroy 2 10.184.227.76 HTTP/1.1 Mozilla/5.0 (Windows NT 6.1;
