Preface

This document describes the steps to install the MICROS Gateway Device Handler (OGDH) and the Oracle Payment Interface (OPI) including:

- Installing OGDH
- Installing OPI
- POS configuration for OPI using OGDH
- Middleware mode vs Terminal mode
- Pay@Table.

The Oracle Payment Interface RES Native Driver Installation Guide contains more information.

Audience

This document is intended for installers of Oracle Payment Interface and OGDH.

Customer Support

To contact Oracle Customer Support, access My Oracle Support at the following URL: https://support.oracle.com

When contacting Customer Support, please provide the following:

- Product version and program/module name
- Functional and technical description of the problem (include business impact)
- Detailed step-by-step instructions to re-create
- Exact error message received and any associated log files
- Screenshots of each step you take

Documentation

Oracle Hospitality product documentation is available on the Oracle Help Center at http://docs.oracle.com/en/industries/hospitality/

Revision History

</tr>
</tbody>
</table>
1 Pre-Installation

Before Installing the OPI

IF UPGRADING OPI, YOU MUST READ THE UPGRADING THE OPI SECTION FIRST.

Complete the following tasks before installing:

- The OPI application requires Microsoft .NET Framework version 4.0 or higher.
- You must uninstall previous versions of MPG before installing OPI 6.2
- You cannot upgrade from previous versions of MPG to OPI 6.2
- You can upgrade from OPI 6.1 (6.1.0.9) and higher to OPI 6.2
- You can upgrade from MGDH 6.1 (6.1.0.9) and higher to OGDH 6.2
- You cannot upgrade from MGDH 6.1.1.X to Native Driver 6.2 (must upgrade then switch to Native configuration).
- You cannot run upgrade from 6.1.1.X to 6.2 as unattended/silent (due to 6.1.1.X installation program differences between 6.2).
- Verify with the merchant to setup table service (TSR) or quick service (QSR), or both. QSR does not support tips.
- Verify with the merchant if activating the Refund functionality, the merchant must control the privilege for this function.
- Verify with the merchant if they offer a guest the option to get cash back with their purchase, then activate the Sale & Cash option. This is only available for QSR.
- Confirm Microsoft Visual C++ 2010 is installed on the computer where OGDH and OPI are installed.
- Transactions from previous OPI versions will not settle or Void once system is upgraded to OPI 6.2
- Oracle Payment Interface requires at least 6 GB of free disk space.
- You must install both OGDH and OPI as a System Administrator.
- OPI 6.2 does not install a database. If doing a clean install of OPI, a database must be installed first.
- If upgrading from OPI 6.1 or higher, the existing MySQL database will be migrated to 6.2 but the old transaction data will not include

During the installation you must confirm the following:

- Merchant ID’s
- Receipt “Header” and “Trailer” details
- Tender Media numbers for each card type
- IP address of the OPI Server
- If there is an existing MySQL database installed, then the SQL root password is required.
- Workstation IDs and IPs that integrate with the PIN pad.
Consider the following points for the network:

- OPI listens on the TCP port 5098 for incoming messages from OGDH by default, this port must be open internally on the merchant’s network.

- The port for the PIN pad depends the partner, confirm with the partner and confirm the corresponding port is open.
3 Configuring the Simphony Server

Adding an Interface
To configure the server, you must add a new interface.

1. In the Enterprise Management Console, go to the Interfaces tab and select OGDH.
2. Define the following interface values on the General tab.

<table>
<thead>
<tr>
<th>Interface Value</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Name</td>
<td>OGDH</td>
</tr>
<tr>
<td>Communication Name</td>
<td>OGDH</td>
</tr>
<tr>
<td>Service Type</td>
<td>PMS/SIM</td>
</tr>
<tr>
<td>Communications Type</td>
<td>TCP/IP</td>
</tr>
<tr>
<td>Timeout</td>
<td>210</td>
</tr>
<tr>
<td>ISL Script Name</td>
<td>pms7</td>
</tr>
</tbody>
</table>

3. Click the Options tab, and then select Use 19 Digit Reference Entry for PMS Inquires.
4. Click the Properties tab, and then select the property that processes the credit and debit transactions for OPI to activate it.
5. Click the Service Host tab, and then select the server to host the OGDH interface.
Configuring the Simphony Server
Configuring the RVC

1. Link the interface for the OGDH to each RVC.
2. If the RVC uses QSR mode, then activate the following options. If using the TSR mode, do not activate these options.

• Do Not Prompt for Tips (No Overtendering if Charge Tip is Required)
3. On the **Format** tab, configure and enable the following options for the TSR RVC.

- Enter 32 for the **Number of Guest Check Information Lines**.
- Select **Skip Blank Lines When Print or Display Guest Check Info Lines**.
Configuring the Employees

1. Go to the Employee Maintenance tab, and then select the Cashier option.
2. Select the check box to activate the ISL Employee Option #4 option to define the employee class that can process the refund.
Configuring Service Charges

1. If the merchant uses the cash back option, then you can add a new **Cashback** service charge. For the Service Charge for OPI tenders, use the same option as the open amount service charge. If merchant doesn’t activate the **SaleCash** function, then skip this step.

2. If the merchant uses the GC cashout option, then you can add a new GC cashout service charge. If merchant doesn’t activate the GC cashout function, then skip this step.
Configuring Tender Options

Configure the following options for the credit/debit tenders.

1. Select the Options tab, and then select the category Interface Options.
2. Select the PMS and Credit Card use 19 Digit Acct Number option.

To configure the credit card options:

1. Go to the Options tab and select Credit Card Options.
2. Deactivate all options and remove the floor limit/preambles list.
3. Enable the No Credit Card Length Check option.

To configure the Ops options:

1. Go to the Options tab, select Ops Behavior, and activate the following options:
   - Assume Paid in Full
   - Reference Entry Required
2. Deactivate the following options:
   - Mask Account Number
   - Encrypt Tender/Media Reference Entry
3. Link the tender to Service Charge for TSR environments.
4. Add the debit tender option the same way you would for normal credit card tenders.

5. Add a new tender **SaleCash** option the same way as a normal credit card tender. This is only available for QSR. Skip this step if the merchant does not activate the **SaleCash** function.

6. Add a new tender **Gift Card** option the same way as a normal credit card tender. Skip this step if the merchant does not activate the **Gift Card** function.
Configuring a CAL Package

1. Add a new CAL package for the Microsoft Win32 and Microsoft WinCE clients.

2. Add deployments, as shown in the following screen shot.
Designing the Touch Screen

Before beginning, you must first consult with the Oracle Consulting Team. If required, you can then add the following buttons to the payment screen. The key type is Function and you can link to the interface OGDH.

**TSR Payment Screen**

<table>
<thead>
<tr>
<th>Field</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>CC PAY</td>
<td>SIM INQ #2</td>
</tr>
<tr>
<td>CC REFUND</td>
<td>SIM INQ #4</td>
</tr>
<tr>
<td>CC AUTH</td>
<td>SIM INQ #8</td>
</tr>
<tr>
<td>CC FINAL</td>
<td>SIM INQ #9</td>
</tr>
<tr>
<td>TAB AUTH</td>
<td>SIM INQ #12</td>
</tr>
<tr>
<td>BALANCE INQUIRY</td>
<td>SIM INQ #14</td>
</tr>
<tr>
<td>CC REPRINT</td>
<td>SIM INQ #7</td>
</tr>
<tr>
<td>CC REPOST</td>
<td>SIM INQ #16</td>
</tr>
<tr>
<td>MANUAL AUTH</td>
<td>SIM INQ #15</td>

<td>SIM INQ #11</td>
</tr>
<tr>
<td>SALE CNP</td>
<td>SIM INQ #6</td>
</tr>
<tr>
<td>GC Function</td>
<td>SIM INQ #10</td>
</tr>
</tbody>
</table>

OPI shares the VOID touchscreen key with the Simphony POS. Using the VOID key you can:

- Void the transaction
- Add Tips (for TSR only)
Menu Item Configuration

The two open menu items need to be created for Gift Card activate transaction and Gift Card reload transaction.

The menu item class -- "GC Open Item"

Set up the following for the menu item class.
- Menu Item class name   - "GC Open Item"
- reference required
- Open-priced Menu Items

The menu item -- "GC Activate"

Set up the following for the menu item.
- Menu Item name   - "GC Activate"
- Menu Item class   - "GC Open Item"
Price - "0.00"

The menu item -- "GC Topup"

Set up the following for the menu item "GC Topup", which is same as "GC Activate".

- Menu Item name - "GC Topup"
- Menu Item class - "GC Open Item"
• Price - "$0.00"
4 OGDH Driver Installation

Installing OGDH on the Simphony Server

1. In Microsoft Windows, log in as an administrator, and then run the OGDH_OPI_6.2.0.0.exe file.
2. Click Next.
3. A Welcome screen displays. Click Next.
5. Select the install location, and then click **Next**.
6. On the **Ready to Install the OGDH** screen, click **Install**.
7. On the **Connect to Simphony database** screen, click **Connect** or **Skip DB Connection**.
   If you connect to **Simphony** database you need select the DB type, enter the Host or IP address, Port, DB name/SID, Username and Password.

![Connect to SIMPHONYFE database](image)

Connect to SIMPHONYFE database
This connection will be used to retrieve details like RUC List, Tender Mappings, etc.

- **DB System**
  - [Oracle]
  - [MS SQL Server]

- **Host / IP Address**
- **Port**
- **DB Name / SID**
- **Username**
- **Password**

[Connect] [Skip DB Connection]
8. Select a **currency** and property from the drop box. Click **Next**

9. In Configuration details for property, set the Device Merchant ID, Mode, Receipt Header/Trailer for each Revenue center
10. In Tender mapping configuration, Link the correct tender number for each tender. Leave unused tenders blank.
11. In Extra Tender mapping configuration, if you need to use extra tenders, please enable extra tender and link the correct tender number for each tender. Leave unused tenders blank.
12. In Transaction configuration, select the options required for the merchant, and then click Next.

Adjust Tip: Enable to allow the ability to adjust tip amount.
Adjust Tip 2: Enable if you need to adjust tip for a transaction that already includes tip.
Allow Tab Auth: Enable if initial authorizations are allowed.
Code 2Y on Simphony 1: Enable if you need specify SimphonyV1 as 2Y.
Gift Card Support: Enable if gift cards will be sold.
Use GC denominated value: Enable to determine gift card amount from customer card.
If disabled, the POS asks the cashier to input the amount of gift card when activated.
If cashier input amount is 0.0, the amount of the gift card will from customer.
Local Printer: Enable Local Printer
List Local Printer: List Local Printer
**Print Failed Receipt:** Enable if vouchers should print when a card is declined.

13. In configuration details, enter all the values.

![Configuration details](image)

**Host / IP Address:** Enter IP address of the OPI server PC.

**Port:** Port used to communicate to OPI.

**Tab Auth Amount:** Initial authorizations will default to this preset amount.

**Receipt Limit Amount:** Enter the amount, below which vouchers should not print.

**GC activation menu item:** Enter the GC activation menu item.

**GC top-up menu item:** Enter GC top-up menu item.

**POSEOD Device Merchant Id:** Make sure there are no duplicate merchant IDs.

14. Click **Next**.

15. Click **Save** on the **OPI Service Configuration** screen.
Point-of-Sale (POS) End-of-Day (EOD)

You can use the Microsoft Windows Task Scheduler to run the OPI POSEOD using the following configuration details.

<table>
<thead>
<tr>
<th>Temporary</th>
<th>Table</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>OPI POSEOD</td>
</tr>
<tr>
<td>Description</td>
<td>Generates the OPI transaction report</td>
</tr>
<tr>
<td>Trigger</td>
<td>Daily</td>
</tr>
<tr>
<td>Action</td>
<td>Start a program</td>
</tr>
<tr>
<td>Program/script</td>
<td>Browse to find <code>POSEOD.exe</code> in OGDHDriver directory</td>
</tr>
<tr>
<td>Add arguments( optional)</td>
<td>the upper level of the POSEOD.exe path</td>
</tr>
<tr>
<td>Start in (optional)</td>
<td>The upper level of the <code>POSEOD.exe</code> path</td>
</tr>
</tbody>
</table>

For more information on how to setup the Microsoft Windows Task scheduler visit the Microsoft website at the following URL: [http://www.microsoft.com](http://www.microsoft.com)
5 Installing the OPI

1. Copy Oracle Payment Interface-6.2.exe to the Server and double-click it to launch the install.

2. Select your language, and then click OK.

3. Click Next on the Welcome to the InstallShield Wizard for Oracle Payment Interface screen.

4. Click Next on the OPI Prerequisites screen.

The Setup Type screen appears.

- Complete: All program features will be installed.
- Custom: Select which program features you want installed. Recommended for advanced users only.

5. Make a selection, and then click Next.
If you selected the Custom install option, the Select Features screen appears with the following options:

a. Database Schema  
b. OPI Services  
c. Configuration Tool

All three of these features must be installed. It is just a matter of whether they are all installed on the same computer or on separate computers.

6. Select the features to install on this computer, and then click **Next**.

The Choose Destination Location screen appears.

7. Accept the default installation location or click **Change…** to choose a different location, and then click **Next**.

8. Click **Install** on the Ready to Install the Program screen.

The Setup Status screen displays for a few minutes.

9. The Setup Type screen appears.
10. Select the database type being used, and then click **Next**.

   Note: OPI does not install any database, so the database must already be installed.

   The Database Server screen appears.
The Name/IP: field defaults to localhost. This should be left as localhost if the OPI database is installed on the same computer. If the database is installed on another computer, the Name or IP address of that machine should be entered here.

Note: If the database type is MySQL, and you cannot use localhost for the Name/IP field, then some commands must be run manually on that MySQL database before proceeding. See MySQL Grant Permission in the OPI Installation and Reference Guide for instructions. Setup will not complete if this is not done.

11. Accept the default Port # of 3306 (for MySQL), and then click Next.

The Database Server Login screen appears.

12. Enter the credentials for the DBA user of the database type selected, and then click Next.

- For MySQL the Login ID: = root
- For other database types the DBA user name/Login ID may be different.
- Enter the correct password for the DBA user.

The Database User Credentials screen appears.
• User Name: Create a new user.
• Password: Create a password.
  - Password is case sensitive
  - Should be at least 8 characters in length
  - Must have at least one upper case letter, one lower case letter, one number and one special character from the following list: !@#$%^&*#

13. Confirm the password, and then click Next.
14. Click OK on the Database connection successful dialog.
15. Click OK on the Database Configuration operation successful dialog.
   The Configuration Tool Superuser Credentials screen appears.
• **User Name:** This can be any user name. It does not have to be a Windows account user.

• **Password:** Create a password.
  - Password is case sensitive
  - Should be at least 8 characters in length
  - Must have at least one upper case letter, one lower case letter, one number and one special character from the following list: !@#$%^&*

16. Confirm the password, and then click **Next**.

17. Click **OK** on the Create SuperUser operation successful dialog.

The Configuration Tool Connection Settings screen appears.
• Host: May be left at 127.0.0.1 if the OPI configuration server is installed on this PC. Otherwise, specify the name or IP address of the PC where the OPI configuration server will be installed.

• Leave the default Port of 8090.

18. Click Next.

The Configuration Tool Passphrase screen appears.
Passphrase: The passphrase is case sensitive, should be at least 15 characters in length and must have at least one upper case letter, one lower case letter, one number and one special character from the following list: !@#$%^&*.

19. Enter a passphrase, confirm it, and then click **Next**.

After a brief pause, the Configuration Wizard launches.

20. Select **POS**, Select **OGDH**, and then click **Next**.

21. Enter and confirm the passphrase, and then click **Next**.
22. OPI Payment interface

**Enable Mutual Authentication:** Enable this option only if the PSP has provided the certificates and passwords for it.

**Private Key Cert. Password:** Enter the password and confirm it.

**Root Certificate Password:** Enter the password and confirm it.

- **OPI Mode:** Select either Middleware or Terminal.
- **Middleware:** Fill in primary host connection information and the failover Host information (if provided).
- **Terminal:** Select correct Port.
- If using Mutual Authentication, see the **Mutual Authentication** section in the *Oracle Payment Interface Installation and Reference Guide.*
23. Add merchant and fill the field according Merchant information.

24. Complete the following Merchant Terminal Configuration fields:
   
   **Workstation ID:** Enter the workstation number from the POS system.
   
   **Terminal IP:** Enter the IP address of the pinpad device

25. Click **Next**. The POS Merchants screen appears.

26. Click **Close** to advance to final screen.
27. Click **Finish** to reboot.

If a reboot cannot be done at the moment, you must stop and then start the OPI Service for current settings to take effect.
6 Upgrading the OPI

VERY IMPORTANT: Read and follow the upgrade directions.

Note: OPI 6.1 and higher can be upgraded to OPI 6.2.

OPI Upgrade Steps

1. Right-click and Run as Administrator the OraclePaymentInterfaceInstaller_6.2.0.0.exe file to perform an upgrade.

2. Select a language from the drop-down list, and then click OK.

3. Click Next on the Welcome screen to proceed with the installation.

   Prerequisites for the installation will be checked, including the required free drive space, details of the host environment, and the Java version that is present.

4. Click Next on the OPI Prerequisites screen.

5. Click OK on the OPI Upgrade screen.
6. **WARNING!** You must click **Yes**.

IF YOU CLICK **NO**, YOU WILL HAVE BOTH OPI 6.1 AND OPI 6.2 INSTALLED AND NEITHER WILL WORK.

Explanation: OPI will migrate the existing MySQL configuration information, but all previous OPI applications will be removed before the new files are installed.

7. Choose a Destination Location. Accept the default installation location or click **Change**... to choose a different location.

8. Click **Next**.

The **Ready to Install the Program** screen displays.

9. Click **Install**.

The **Setup Status** screen displays for a few minutes.

**Setup Type**

For database type, select **MySQL**. No other database type is supported for upgrades.

**Database Server**

Name/IP – The Hostname or IP Address used for communication to the MySQL database. This must be left at the default of localhost.

Port # – The Port number used for communication to the database

**Database Server Login**

DBA user
Login ID: root
Password: root user password for MySQL database.

**Database User Credentials**

User Name: This must be a new user name. It cannot be the same user from the 6.1 install.
Password: Password for the new database user.

**Configuration Tool Superuser Credentials**

User Name: This can be any user name. It does not have to be a Windows account user.
Password: Create a password, and then confirm it.
Configuration Tool Connection Settings

Host: May be left at 127.0.0.1 if the OPI configuration server is installed on this PC. Otherwise, specify the name or IP address of the PC where the OPI configuration server will be installed.
Port: Leave at 8090.

Configuration Tool Passphrase
Enter and confirm a passphrase.
Click Next.
The Configuration Wizard launches.
Continue to follow on-screen directions, verifying settings as you go.

POS Merchants

On the Merchants screen, click the wrench icon to the right of the existing merchant.
Verify the merchant settings are correct.

Merchant Pay At Table Configuration

If using Pay@Table, review the tender settings carefully as there are new fields that will not be pre-populated from the previous OPI install.
Continue to follow the on-screen directions.

InstallShield Wizard Complete

Click Finish to allow a reboot.
If you cannot immediately reboot, you must stop and then start the OPI Service for the current settings to take effect.
7 Not Supported Functionality

Not supported with RES Native OPI solution:
- Gift Cards (SVC works as usual thru workstation. Not thru OPI or PED.)
- Balance Inquiry
- Void a refund (RES limitation)
- Debit (RES Native OPI)
- SaleCashBack (RES Native OPI)
- Backup OPI Server

Not supported with RES OGDH:
- Incremental Auth
- Void a Refund (RES limitation)
- CC voice / Manual entry in QSR revenue center
- Backup OPI Server
- Voiding the tender from a SaleCashBack transaction.

Not supported in the e7 Native OPI driver solution:
- Gift Cards
- Balance Inquiry
- Void a refund (e7)
- Debit (e7)
- SaleCashBack (e7)
- Multiple Revenue Centers (e7)
- Memo Tender (e7)
- CC Voice/Manual CC for QSR (offline sale)
- Backup OPI Server
- Backup server mode (e7)
- Pay@Table
- Transaction Void (e7)
